Preface

When, at the Council of Clermont in 1095, Pope Urban II called for an armed pilgrimage to liberate the Holy Land, he brought into existence a movement that was to have profound consequences for the history of Europe, the Near East, and North Africa for centuries to come. Hundreds of thousands of men and women took part in crusade expeditions to various goals, a huge number of them dying in the process. Millions of people lived as subjects of states that were brought into existence as a direct consequence of crusades to Palestine and Syria, to the Baltic lands, and to Greece and the islands of the eastern Mediterranean. Others served as members of religious orders established to protect pilgrims or ransom captives, while many more supported crusades through taxes and voluntary donations, or by prayers and participation in the liturgy of the Christian Church. Many of the political, economic, religious, and artistic consequences of the crusades are still apparent in the world that we live in.

This encyclopedia is intended as a reference work on the crusades from their origins in the eleventh century up to the early modern period. It comprises one thousand signed articles and translated texts, with a historical introduction by Professor James Powell. Articles are accompanied by bibliographies, and are thus intended to function as a first point of reference and orientation for users who wish to proceed further with their enquiries. The scope of the work is intentionally wide: it has long been accepted that the crusades were neither purely heroic manifestations of Christian valour nor cynical wars of aggressive colonialism; in more recent years historians have also recognized the diverse and changing nature of crusading, which gradually developed in scope from campaigns to defend the Holy Land, to take in wars of conquest or reconquest against Muslims in Iberia and North Africa and pagans in northeastern Europe, as

well as heretics, Christians of the Orthodox faith, and even political enemies of the Roman Catholic Church.

The aim of the encyclopedia is to reflect the state of knowledge of the crusade movement as it is understood in historical scholarship at the beginning of the twenty-first century. It contains longer entries on the major crusade expeditions themselves; the various states that contributed to, were established by, or were targeted by crusading; sources for the history of the crusades; the main military religious orders; and key concepts and institutions connected with crusading. There are also a great number of shorter articles on persons and places. While an absolutely comprehensive treatment is not achievable in a work of this length, the reader will nevertheless find articles on all the major crusades of the eleventh to fourteenth centuries, on most of the military orders, and on all of the crusader states of Outremer, the Baltic lands, Frankish Greece, and Cyprus. There are also entries for all of the rulers of the kingdom of Jerusalem, the kingdom of Cyprus, the Latin Empire of Constantinople, the principality of Antioch, the county of Edessa, and (save one) the county of Tripoli. Within this overall framework, a particular emphasis has been given to the events, institutions, and personalities connected with crusade expeditions and the Frankish states of Outremer and their enemies in the period 1095–1291. Finally, it should be emphasized that in a publication bringing together the work of over a hundred scholars from some two dozen countries, the user should not expect a uniformity of approach or opinion, but will find a diversity of analysis and interpretation from different authors, even if the fortuitous nature of the A–Z sequence has permitted the editor, at least in one sense, to have the last word.

Many debts of gratitude are incurred in a work of the dimensions of this one. The encyclopedia first took shape

Preface

in a series of conversations with Professor James Powell of Syracuse University and Dr. Robert Neville, then of ABC-CLIO, and I am grateful to them for their advice, as well as to the members of the Editorial Advisory Board, who readily provided assistance and counsel whenever it was requested of them. The authors of articles deserve thanks, not only for sharing their scholarship, but also for their forbearance in dealing with numerous queries and requests for alterations or clarifications, and not least for their patience in waiting for the work to see the light of day. Several board members and other contributors also deserve thanks for their readiness to step into the breach by agreeing to write articles for which, for whatever reason, no other author could be found. Much of the attractiveness of a work such as this derives from its illustrations, and I am particularly grateful to Professors Alfred Andrea, Benjamin Z. Kedar, and Graham Loud for generously allowing the use of photographs from their own collections, and to Dr. Janus Møller Jensen, Dr. Kristian Molin, and Dr. Samantha Riches for their help and advice in procuring images.

Among the staff at ABC-CLIO, a great deal is owed to the energy and enthusiasm of Wendy Roseth and to the good sense and experience of Martha Whitt, who supported the project during its most crucial stages, while Anna Kaltenbach and Vicki Moran in turn provided the care that brought it to publication. Significant contributions to the final product were also provided by Ellen Rasmussen, who undertook picture research; Bill Nelson (cartographer) and George Zirfas (graphic artist), who drew maps and genealogical tables to the editor's specifications; as well as Silvine Farnell and Kathy Streckfus (copyeditors), Mary Kay Kozyra and Lori Kranz (proofreaders), Tim Giesen (typesetter), and Heather Jones (indexer). Thanks are also due to Alison Miller and Patience Melnik, who acted as development editors during the initial stages of the project.

Lastly, I am grateful to Martina Häcker and Rhiannon Lawrence-Francis for their assistance in proofreading the final text.

— *Alan V. Murray*
Leeds, 5 July 2006

How to Use This Encyclopedia

Scope

This encyclopedia covers the crusading movement, in its widest sense, from the late eleventh century to the early modern period, as well as the different states and settlements established in the course of the crusades in the eastern Mediterranean region, Greece, and the Baltic countries. Within this framework special emphasis has been given to the history of the crusades and the Latin East between 1095 and 1291, and the user will find considerably more detail on that period.

The entries comprise five distinct types according to their subject matter: (1) individual persons, (2) families and dynasties, (3) anonymous historiographical and literary works, (4) places and countries, and (5) subjects. In general the headings used for entries have been chosen to conform with established usages in English-language history writing. Cross-references from alternative forms have been given in a large number of cases. The general principles adopted with regard to the forms for entries can be summarized as follows:

1. Names of Individual Persons

Europeans in the Middle Ages were generally known by their forenames, and therefore medieval Europeans are listed under their forename, rather than a surname or title (e.g., Raymond of Saint-Gilles, Boniface of Montferrat), unless they are usually known by their surname (e.g., Caxton). Names are usually given in anglicized forms where these exist (e.g., Peter the Hermit, Conrad III of Germany). However, native forms have been used in a minority of cases where these are better known; these cases apply mostly to literary authors (e.g., Guillaume de Machaut, Friedrich von Hausen) and members of the Teutonic Order (e.g., Karl von Trier). Greek names are given in the forms now used by English-speaking Byzantinists rather than in the archaic Latinate forms (e.g., Alexios I Komnenos, not Alexius I Comnenus).

Arabic names are listed according to that part of the name by which the individuals are most generally known by historians. The Arabic definite article *al-* is ignored in the alphabetical order of entries; thus *al-Sulamī* is listed under *S*.

Turkish names from the Saljūq (Seljuk) period, that is, roughly to 1200, are given in Arabic form; for the Ottoman period they are spelled as in modern Turkish.

Dates of birth and/or death, where these are known, are given in parentheses following the entry headword. Parenthetical dates that appear after personal names in the texts of entries normally refer to reigns or periods of office.

2. Families and Dynasties

Group entries have been given for some families or dynasties where there is insufficient space to treat every individual member connected with the crusades. These groups are listed under the surname or title by which they are most commonly known in scholarship (e.g., Courtenay, Ibelins).

3. Anonymous Historiographical and Literary Works

Works whose authorship is unknown or debated are listed under the title of the work itself. This is normally given in the language in which the work was originally written (e.g., *Lignages d'Outremer*, *Devastatio Constantinopolitana*), except in cases where commonly used English forms exist (e.g., *Livonian Rhymed Chronicle*). Works whose authorship is known are treated in the entries under the names of their authors.

4. Places and Countries

The precise forms of place-names in areas of crusading activity constitute a major difficulty and are often a contentious issue. In many cases, particularly in the eastern Mediterranean and Baltic regions, the forms of names in use

How to Use This Encyclopedia

at the time of the crusades have been superseded by one or more different forms. Although the historical, crusade-period forms do not correspond to the place-names found on modern maps, they are nevertheless correct for the time described and are commonly used in almost all scholarship on the crusades. In the encyclopedia, the historical forms are used, but cross-references are given from modern forms, which can also be found within the entries themselves. Thus: Constantinople (mod. İstanbul, Turkey), Reval (mod. Tallinn, Estonia), Tyre (mod. Sôûr, Lebanon).

It should be noted that modern place-names in countries using the Arabic, Cyrillic, and Hebrew alphabets may be found in varying forms on maps, and in some cases may differ to some extent from the forms used in this encyclopedia.

5. Subjects

Subjects include individual crusades, battles, treaties, various institutions (such as military orders), concepts, and objects. These are invariably listed under their English forms unless no direct English equivalent exists (e.g., *dhimma*). The names applied to different crusades are explained in the next section ("The Crusades: Names and Numbers").

Format of Entries and Bibliography

In addition to its main text, each entry has a bibliography, which is intended to provide a guide to the most useful secondary literature on the topic. In the cases of entries relating to primary sources (whether listed under the names of persons or as anonymous works), the bibliography usually includes details of one or more editions of the source text, as well as information on translations where these exist. A full, synoptic table of all entries on sources is given at pp. \$\$\$.

Further Reading

In addition to the specific bibliographies provided with each individual entry, recommendations for further reading can be found in the general bibliography. It should also be emphasized that the Byzantine and Islamic worlds are treated primarily in connection with the crusades and crusade-period settlements. For more specific information on Byzantium and Islam, the reader is advised to consult the *Oxford Dictionary of Byzantium*, ed. Alexander P. Kazhdan, 3 vols. (New York: Oxford University Press, 1991) and the *Encyclopaedia of Islam*, ed. Hamilton A. R. Gibb, 10 vols. and supplements, new ed. (Leiden: Brill, 1960–2001).

The Crusades: Names and Numbers

From their inception at the Council of Clermont in 1095, crusades were referred to in various ways. Typical designations were “pilgrimage” (Lat. *peregrinatio*), “expedition to the Holy Land” (*iter in Terram Sanctam*), and “passage” (*passagium*), but other terms were used. It was only toward the end of the twelfth century that specific designations for “crusade” (*cruciata*) and “crusader” (m. *crucesignatus*, f. *crucesignata*) were devised. Individual crusade expeditions were referred to by a variety of descriptions involving their dates, main participants, and goals; they were not designated by numbers.

It was in the eighteenth century that historians evidently first allocated numbers to individual crusades, from the first to the ninth. However, these numbers are neither consistent nor accurate. Of the identity of the First Crusade (1096–1099) there can be no doubt, but there is no consensus about numbering after the Fourth Crusade (1202–1204). The Crusade of Emperor Frederick II (1227–1229) is sometimes regarded as part of the Fifth Crusade (1217–1221) and sometimes as a separate expedition. This means that the term *Sixth Crusade* may refer either to Frederick II’s crusade or to the first crusade of King Louis IX of France, which might also be called the Seventh Crusade. Consequently, each subsequent number after the fifth might refer to either of two different expeditions.

A much more fundamental objection to the traditional numbering of crusades is that the numbers are misleading. The historians who allocated and popularized numbers only took major expeditions to the Holy Land into account; smaller expeditions to the East and crusades to other destinations were simply not counted. Yet before the loss of the Holy Land in 1291 there had been other major expeditions

with goals elsewhere, such as the Albigensian Crusade (1209–1229), which were never fitted into a numerical scheme. Even if discussion is confined to the Holy Land, modern historical research has established that there were far more crusades than those distinguished by individual numbers. Thus, even if the Crusade of 1101 is considered a late wave of the First Crusade, as is done by some historians, there were still other substantial crusades to the Holy Land that took place after 1101 but before the so-called Second Crusade.

It is impossible to state with accuracy how many crusades took place. Often one proclamation and its associated privileges gave rise to different expeditions. Sometimes proclamations met with little or no response, or some responses may not have found resonance in the sources. How many of all these undertakings should be counted as crusades is a matter for debate.

The only absolutely clear method of designating individual crusades is by a combination of dates and descriptive terminology relating to participation, goals, or both, and this is the solution that has been adopted in this encyclopedia. However, the names of the First, Second, Third, Fourth, and Fifth Crusades, which are at least unambiguous (if not accurate), have been retained, as they are now established by long tradition. The full list of crusades separately treated in the encyclopedia is given in the following Chronology. However, information on numerous other crusades can be found in articles relating to individual countries or persons.

Chronology

Individual crusades with designations as used in this encyclopedia (entry headings are indicated in boldface).	1239–1241	Crusade of 1239–1241 of Thibaud IV of Champagne and Richard of Cornwall (sometimes known as Barons' Crusade)
1096–1099	First Crusade (including the People's Crusades)	1248–1254 Crusade of Louis IX of France to the East
1101	Crusade of 1101	1251 First Shepherds' Crusade
1106/1108–1110	Crusade of Sigurd Jorsalfar	1265–1266 Crusade of Odo of Burgundy
1107–1108	Crusade of Bohemund I of Antioch	1267 Crusade of 1267 from the Upper Rhine
1114–1115	Mallorca Crusade	1269 Crusade of Charles I of Anjou against Lucera
1122–1124	Venetian Crusade of 1122–1124	1269–1270 Crusade of James I of Aragon
1129	Crusade of 1129 against Damascus	1270 Crusade of Louis IX of France to Tunis
1147–1149	Second Crusade (including the Wendish Crusade)	1270–1272 Crusade of the Lord Edward of England
c. 1150–c. 1560	Baltic Crusades (against Livonia, Prussia, Finland, Lithuania, and Russia)	1309 Crusade of 1309
1151–1153	Crusade of Rognvald Kali Kolsson	1320 Second Shepherds' Crusade
1172	Pilgrimage of Henry the Lion	1344 Smyrna Crusade
1189–1192	Third Crusade	1346 Crusade of Humbert II of Viennois
1197–1198	Crusade of Emperor Henry VI	1347–1350 Crusade of Magnus II Eriksson of Sweden against Novgorod
1202–1204	Fourth Crusade	1366–1367 Crusade of Amadeus VI of Savoy
1209–1229	Albigensian Crusade	1383 Despenser's Crusade
1212	Children's Crusade	1390 Mahdia Crusade
1217–1221	Fifth Crusade	1396 Nikopolis Crusade
1225	Crusade of William VI of Montferrat	1420–1431 Crusades against the Hussites
1227–1229	Crusade of Emperor Frederick II	1444 Varna Crusade
1228–1232	Drenthe Crusade	
1233–1234	Stedinger Crusades

The Crusades: An Introduction

The study of the crusades touches many different aspects of history, from war, politics, and economics to religious and cultural diversity. From the late eleventh to the seventeenth centuries, the idea of crusade played a significant role in the history of European thought. Yet the term *crusade* itself only came into existence after the movement it described had achieved a clearly recognized identity. In the modern era the word *crusade* also carries a considerable amount of historical baggage, which makes the task of definition very hard. Still, from the beginning, what gave the movement a special character was the involvement of the church, especially the papacy, in warfare. Its defining moment occurred on 27 November 1095 at the church council held at Clermont in the Auvergne, when Pope Urban II (1088–1099) summoned the knights of western Europe to go to the aid of their fellow Christians subjected to Muslim rule in the Near East. Within a short time that summons also came to focus on the liberation of the city of Jerusalem and the holy places in Palestine.

The response to Urban II's appeal transformed what had been a long and often frustrating war against Muslim expansion into a war of liberation. Thus, what had been a struggle of individual rulers and their peoples in defense of their own lands took on a new purpose and found new means to achieve this end. Its principal objective lay in the East, in the lands sanctified by the life of Jesus Christ.

Christendom and Islam

The Mediterranean world was the cradle of Europe. It was the seat of the Roman Empire, which by the third century A.D. covered all of continental Europe south of the Rhine and the Danube and most of the island of Britain, as well as Asia Minor, Syria, Palestine, Egypt, parts of Arabia, and the

whole of Africa north of the Sahara. During the second and third centuries, this empire underwent a profound religious transformation. Christianity, which had originated among the Jews of Palestine, gradually spread through both Jewish and Gentile communities of the Greco-Roman world until, by the early fourth century, it gained legal status as a recognized religion under Emperor Constantine I (306–337); it later received official status as the religion of the empire under Emperor Theodosius (379–395).

To the east, the Roman Empire faced its ancient enemy, the Persian Empire. To the north, migrant Germanic peoples, many of them fleeing the Huns, nomadic warriors from central Asia, pressed against the Roman frontiers or sought refuge within the empire's borders. These factors had persuaded Constantine I to move his capital from Rome to the town of Byzantium on the Bosphorus, on the straits that formed the juncture of Europe and Asia. There he built a new Christian city, naming it after himself: Constantinople (mod. İstanbul, Turkey).

The next two centuries saw a continuing effort to preserve the empire, but control over the West was gradually slipping away. There was one mighty attempt to restore it under Emperor Justinian I (527–565): North Africa, a large part of Italy, and even part of Spain were taken back from their barbarian rulers, while the Persians were staved off mostly by diplomacy. By the late sixth century, however, Germanic kingdoms were already being formed throughout western Europe on the ruins of the empire. Yet the conquerors were not mere destroyers. They adopted Christianity and with it as much of late Roman culture as they could use and preserve. The clergy, who formed the largest educated class, were that culture's chief transmitters. From Lombard Italy, Frankish Gaul, and Visigothic Spain to Anglo-Saxon England, behind the chaos of rivalries and the

violence of anarchy there were efforts to build new local societies that, in some way or other, reflected the memory of the Roman Empire. In the meantime, the Roman Empire in the East fought to retain its position against Persia. The two great states fought one another to exhaustion in the early seventh century.

Destruction threatened both empires from an unexpected source. For centuries, the Arabian Peninsula had been a pathway of commerce to the East, a way around the Persian Empire, and the home of nomadic Bedouin tribes, who lived chiefly on their flocks and from raiding the caravans of merchants. Most were pagans, but a few were Christians, as were some of the people of the towns along the caravan route. Some of the towns also had Jewish communities. Mecca was one of the chief towns of Arabia and a religious center for many of the pagan Bedouins on account of a black meteoric rock there, the Ka'ba, that was believed to possess supernatural powers. It was in Mecca that Muḥammad, the future Prophet, was born around the year 570.

Muḥammad's leadership provided the catalyst that united the Arabian Peninsula. He combined a religious mission with a political program. Exiled from Mecca with some of his followers, he fled north to the town of Medina. There he built a power base, conquering Mecca and gradually uniting the Arabian Bedouins. He did not insist on conversion to Islam, the religion he founded, but within a short time religious conformity became the mark of those who followed him. The religion of Islam (submission to God) professed a rigid monotheism and prescribed prayer, fasting, and charitable acts as well as moral behavior. It owed much to Judaism, a religion with which Muḥammad had had close contact in Medina, but it also preserved some elements of pre-Islamic Arabian religion, notably reverence for the Ka'ba. It respected the prophets of the Old Testament and considered Jesus as another prophet, with Muḥammad as the last and greatest. The duty to spread the religion was incumbent on every Muslim. All these teachings were included in the sacred book of the Qur'ān (Koran). Military expansion and the benefits offered to those of the conquered who converted were effective in leading many to the new religion even during Muḥammad's lifetime. Islam's major conquests outside the Arabian Peninsula, however, occurred only after his death.

Following the death of Muḥammad in 632, his successors, known as caliphs, waged war against all unbelievers. They overthrew the Persian Empire, which had been worn

down by the long war with the eastern Roman, or Byzantine, Empire. At the battle of the Yarmuk in 637 the Muslims and their allies defeated a Byzantine army, and Syria fell into their hands. The conquest of Egypt followed. The Arab Muslim military elite found themselves ruling vast territories with populations diverse in both culture and religion. But the Prophet had already allowed for this in his conquests in Arabia, permitting "the People of the Book"—meaning chiefly Jews and Christians—to retain their religion by paying the *jizya*, a poll tax not levied on Muslims. Thus, in Syria, Palestine, and Egypt, as well as in other lands in North Africa, there remained very large Christian populations, chiefly among the rural population, for centuries after the Muslim conquests.

By the early eighth century the Muslim conquerors had reached Spain and had begun to raid along the coasts of Italy and France, establishing outposts even in the Alps. The Visigothic kingdoms of Iberia were virtually destroyed, with only a remnant surviving in northwestern Spain. In 732, near Poitiers, a large Muslim raiding party was turned back by Charles Martel, a magnate of the Austrasian Frankish kingdom who bore the title of mayor of the palace. This marked the furthest Muslim penetration into western Europe. For more than a century afterward, however, the West was under threat. Sicily, Sardinia, Corsica, and the Balearic Islands were lost. Muslim fleets raided coastal towns such as Bari and even penetrated to the suburbs of Rome itself. Meanwhile, in the East the Byzantine Empire also suffered severe setbacks, but in the tenth century it undertook a series of campaigns aimed at reestablishing its power in Syria. By the late tenth century, under Emperor John I Tzimiskes (969–976), the Byzantines had pushed as far as the towns of Caesarea Maritima (mod. Har Qesari, Israel) and Tiberias (mod. Teverya, Israel) in northern Palestine. They controlled Lebanon and much of northern Syria, either directly or through client rulers.

The tenth and eleventh centuries witnessed the beginnings of efforts to free lands in the West from Muslim rule. The most dramatic results were achieved in Sardinia, Corsica, the Balearic Islands, and Sicily. Adventurers from Normandy, who already ruled most of the Italian south, launched a campaign of reconquest that brought Sicily under their control by 1091. The island became the seat of the Norman kingdom founded by King Roger II (1130–1154). But the resurgence of the West was much more broadly based. In the tenth century, there already were

signs of growing population and increased political stability, especially in northern Italy and Germany under the leadership of the Ottonian dynasty. The Holy Roman Emperor Otto I (936–973) instilled new life into the imperial idea that had motivated his predecessor Charlemagne in the early ninth century. Increased demand for foodstuffs and the lure of trade stimulated the efforts of maritime cities such as Genoa and Pisa to expand their control of neighboring seas, lands, and islands. The Iberian kingdoms also began to go on the offensive. By the mid-eleventh century, Mediterranean Europe was a vital region, and northern Europe was entering a new phase of political and economic development. Not so in the East.

The once-mighty caliphate of the ‘Abbāsīd dynasty at Baghdad, whose authority had been recognized throughout the Islamic world from the Strait of Gibraltar to the frontiers of India, was by this time opposed by a rival Fāṭimid caliphate in Egypt, which upheld the minority, Shī‘ite branch of Islam. The eleventh-century Muslim world was much less tolerant of religious minorities than were its predecessors. In Egypt and North Africa there is evidence of considerable pressure on Christian minorities, which had remained quite sizable in many areas. The mad Fāṭimid caliph al-Ḥākīm ordered the destruction of the Church of the Holy Sepulchre in Jerusalem, which had been built by Emperor Constantine I.

More dangerous to Christendom, however, was the increasing power of the Turks, a nomadic people from central Asia. Originally pagan, the Turks converted to Islam, and in the course of the eleventh century, under the leadership of the Saljūq family, they conquered Khurasan, Persia, Iraq, and Armenia and effectively established a protectorate over the ‘Abbāsīd caliphate in Baghdad. The weakness of the Byzantines became evident when they were defeated by the Saljūqs at the battle of Mantzikert in 1071. This defeat deprived the Byzantine Empire of some of its richest recruiting grounds for the army, and it was followed by the loss of Syria, Palestine, and most of Asia Minor. It was unlikely that the empire could recover its losses without assistance from the West.

The Reform Papacy and the Inception of the Crusades

The long wars fought by Christians against Muslims from the seventh to the eleventh centuries did not constitute crusades:

they were a series of uncoordinated military operations, at first of a purely defensive nature but increasingly aimed at pushing the Muslims back from Europe and the islands of the Mediterranean and at freeing Christian populations under Muslim rule. Western Europe was fragmented politically, and for much of this period the papacy was chiefly concerned with missionary endeavors and affairs in Italy. Only after the middle of the eleventh century did popes begin to assume a role at the head of a movement to reform the Western church, to free it from the dominance of secular rulers and from entanglement in secular affairs. The resultant struggle is often known as the Investiture Controversy (or Investiture Contest), from its effort to sever ties between bishops and secular rulers, or as the Gregorian Reform, after its most vigorous proponent, Pope Gregory VII (1073–1085). The attempts to reform the church brought the papacy into conflict with Western monarchs and princes. Although Gregory, like his predecessors, was concerned about the threat posed by the Muslims, he was not able to respond with tangible aid to the requests that reached him from the East. Still, in the changing conditions of the eleventh century, we find the seeds that produced the crusade.

The events that set the crusade in motion were not in themselves different from much that had gone before. Popes had encouraged Christian rulers in Iberia and Sicily to recover those lands lost to the Muslims and to reestablish the churches there. Christians from the East and from North Africa had traveled in the West, and numerous Westerners had gone on pilgrimage to the Holy Land. There was certainly a body of informed opinion regarding the situation in the East. On at least one occasion, in 1074, the Eastern emperor, Michael VII, had appealed to Pope Gregory VII for aid. There is ample evidence that the situation in the East was becoming critical. Likewise, given the fragmented political situation in the West, the only practical way to channel support to the East was through the papacy. The popes of the late eleventh century more and more saw themselves as the leaders of Christendom. It was from the necessity of the East and the leadership of the reform papacy that the crusade came into existence.

We should not regard the summons issued by Pope Urban II at the Council of Clermont in 1095 as embodying a total vision of the crusade. That would evolve over the course of the next century. At Clermont Urban II set forth the main lines of his concern. He stressed the plight of Eastern churches. Interestingly, he made no direct appeal for aid

to the Byzantine Empire, at least as recorded in any of the surviving accounts of his sermon; he seems to have stressed the liberation of Jerusalem early on, though not perhaps at Clermont, and to have made reference to a penitential pilgrimage. To all those who would go on it, taking the badge of the cross as a sign of their undertaking, Urban II promised forgiveness of their sins, a full indulgence. Although his sermon clearly implied military action against the Turks and other Muslims, his emphasis was on the religious value of this work. He seems to have said little about Islam, although one report of his sermon written later suggests otherwise. For him, the offense of Muslims stemmed not from their religious beliefs but from their oppression of Christians.

Urban had been cardinal bishop of Ostia and a strong supporter of Pope Gregory VII. He reflected the monastic culture that was a major influence on the papal reform. He favored the Normans in Sicily, who had liberated the island from Muslim rule only a few years earlier, in their effort to establish a Latin Church hierarchy there. He was less passionate than Gregory VII, but he was a more effective administrator. For him, the idea of an expedition to the East appealed in part because it promised some relief from internal conflict and directed military activity to a religious end.

Though we cannot reconstruct Urban's sermon at Clermont with certainty from the reports that survive, its effect on its largely clerical audience was overwhelming. Urban could hardly have foreseen its impact. Clearly it touched a chord in the religious feeling of the time, igniting spontaneous preaching on the part of figures such as Peter the Hermit, that went well beyond the ideas of the pope. The response to the preaching of Peter and others rapidly outdistanced the careful planning undertaken by the pope and the members of the Western aristocracy who responded to his summons. The so-called People's Crusades, more properly a popular outburst that tapped into various currents of religious enthusiasm, were little encumbered by the need for preparations, since their leaders relied entirely on their sense of divine mission.

Among these disparate groups were some whose anti-Judaism found justification in their belief that they were carrying out a divine plan. To them it seemed only right to attack or forcibly convert infidels living within Christendom before carrying on the struggle against the infidels of the East. The Rhineland, where Jews had settled in the relatively recent past, often at the invitation of the rulers and bishops, was a principal center for persecutions. The main body of

the People's Crusades made its way eastward into the Byzantine Empire. As might be expected, these enthusiasts were little inclined to listen to anyone, even their own leaders. Unable to control them, Emperor Alexios I Komnenos permitted them to cross to the Asian shore of the Bosphorus. They launched an attack on the Turks, but they lacked sufficient forces for the task and were defeated. Peter and some of the other leaders managed to escape.

The main body of the First Crusade was composed of contingents recruited by some of the leading nobles of the West. Raymond of Saint-Gilles, count of Toulouse, was among the first to join. Godfrey of Bouillon, duke of Lower Lotharingia; Hugh of Vermandois, brother of the king of France; Robert II, count of Flanders; and Robert Curthose, duke of Normandy, the son of William the Conqueror, were also leaders, as was Count Stephen of Blois, husband of William's daughter Adela. One of the most prominent was a Norman from southern Italy: Bohemund, prince of Taranto, who was accompanied by his nephew Tancred.

At Clermont those who promised to go on the journey to the East had received cloth crosses to be sewn on their garments as a symbol of their commitment. Thus, the religious character of the campaign was reinforced. All who participated did so at their own expense or with the support of a noble patron. Many mortgaged or sold property, often to religious houses, in order to make the journey. Yet most indicated their intention to return home and resume their lives. Those who made the journey were more likely to be influenced by the new religious currents of the age than were their neighbors, but they represented only a minority of the Western aristocracy. Nevertheless, they were a diverse group whose motives were not always unswervingly religious or even easy to determine. As each contingent of crusaders arrived in Constantinople, their leaders were met by the demand of Emperor Alexios that they swear an oath to restore to the Byzantine Empire all the lands they would conquer that had belonged to the empire prior to the Turkish invasions. There was considerable resistance to this on the part of the crusaders, but Alexios was able to pressure each group into swearing the oath. With this question resolved, the crusaders moved across the Bosphorus with Byzantine support and advanced against Nicaea (mod. İznik, Turkey), which surrendered to the emperor after a short siege.

The road across Asia Minor was difficult. After defeating the forces of the Turkish sultanate of Rūm at the beginning of July 1097, the crusaders rested briefly before making a

slow and often hazardous passage that lasted four months. Baldwin of Boulogne, Godfrey of Bouillon's younger brother, pressed on and with the aid of local Armenians reached Edessa (mod. Şanlıurfa, Turkey), which he seized from its Armenian ruler, T'oros, who had invited him to become his partner. But Antioch (mod. Antakya, Turkey) was the major stumbling block in their path. This once-great city on the river Orontes was dominated by a citadel on the mountain above it. The crusaders undertook what was to be a long siege. Indeed, Antioch might never have fallen, save that Bohemund managed to enter into an arrangement for access with the captain of one of the towers, possibly an Armenian, who agreed to hand it over to him. Having gained agreement that the city should belong to the one who liberated it, Bohemund entered Antioch. But the citadel remained in Turkish hands, and a relief army under Karbughā, the ruler of Mosul, having failed to take Edessa, was approaching the city. Yet inspired by visions and by the finding of what some believed to be the Holy Lance that had pierced the side of Christ, the crusaders rallied. On 28 June 1098 they defeated the Turkish forces and the citadel surrendered, but they were worn out and decided to pass the summer in Antioch before setting out for Jerusalem.

There was a reluctance on the part of the leaders to press forward, but the rank and file had found new inspiration in their victory. It was only under pressure that the leaders began the move southward in early 1099, bypassing many of the coastal towns and arriving before Jerusalem on 7 June. The siege of Jerusalem was complicated by the lack of proper siege machines and by the difficult terrain surrounding the city. Only the arrival of Genoese and English ships at Jaffa (mod. Tel Aviv-Yafo, Israel) made it possible for the crusaders to obtain the timber needed for the siege. Still, it was not until 15 July that the crusaders breached the defenses and took the city, which was, according to the prevailing custom, sacked. Many of the inhabitants were killed, but some, including a part of the Jewish inhabitants of the city, were protected by some of the leaders of the crusade. Godfrey of Bouillon was elected to rule Jerusalem. The holy places were once again under Christian control.

The Development of the Crusading Movement and Latin Rule in Outremer

Traditionally, the major crusades that went to the East between 1096 and 1270 have been assigned numbers, giv-

ing the impression of a series of eight or nine discrete campaigns (there is no complete agreement as to numbering). However, this practice distorts the historical significance of crusading, as the concentration on these expeditions obscures the importance of other, equally significant forms of crusade: the numerous smaller (and unnumbered) expeditions that went to the East between the major crusades; the large number of expeditions that had objectives in Iberia, the Baltic lands, and elsewhere; and not least, the continuing importance of crusades to the eastern Mediterranean region, whether executed or merely planned, long after the last Christian strongholds in Palestine fell to the Muslims in 1291. The numbered crusades are merely one expression of a multifaceted movement that affected most of Christian Europe from the end of the eleventh century until well into the early modern era.

We must recognize that the crusade was a technique for raising troops to fight in a cause endorsed by the Christian church as justifiable and meritorious. As this technique evolved, it came to include not merely the crusade indulgence but also numerous other privileges aimed at protecting the families and property of the crusaders while they were away. By the late twelfth and early thirteenth centuries it was becoming clear that this technique could be applied to other pressing needs of the church and Christian society, such as the repression of heresy, the defense of newly converted peoples on the frontiers of Christendom, or the defense of the church from political enemies. None of these uses was without precedent, but the development of an effective technique for recruitment was at least partially new. Still, the crusade was never just a means of raising and protecting recruits and their families. It provided a military arm for the reform papacy, relieving to some degree its dependence on secular rulers as defenders of the church. As long as the crusade focused on the Muslim frontier, and particularly on the liberation of the holy places, its critics were few. Indeed, this aspect of crusading retained a certain compelling logic based on the circumstances in which Europe found itself throughout this period. Other "crusades" depended more on local circumstances and the particular reasons used to justify them. Support for them varied.

After the capture of Jerusalem in 1099 many crusaders returned to their homes, regarding their goal as having been achieved and their vows as having been fulfilled. Those who remained in the East controlled still-isolated pockets of ter-

ritory that formed the nuclei of new Christian-controlled territories: the county of Edessa, the principality of Antioch, and the Latin kingdom of Jerusalem, which were soon joined by the county of Tripoli, formed by Raymond of Saint-Gilles and his son. These states or principalities were dominated first by the original crusaders and later by their descendants and further immigrants. This dominant group, who never constituted more than a large minority among diverse native peoples, are variously known as Latins, from their “Latin,” or Roman Catholic, faith, or as Franks, from the name applied to them by Muslims and Byzantines alike. Their territories are thus known collectively as Latin states, Frankish states, or—less accurately—Crusader States, although in the Middle Ages they were usually referred to simply as Syria, the Holy Land, or Outremer, the last term meaning the “land beyond the sea” (that is, from the perspective of western Europe).

The most immediate task for the small number of Franks in Outremer was to secure their territories against the two main Muslim powers of the region, the Saljūq Turks and their satellites, and the Fāṭimids of Egypt. It was above all crucial to gain control of the ports of Syria and Palestine, which would guarantee communications with the West. The Frankish settlements developed strong ties with the maritime cities of the West, especially Genoa, Pisa, and Venice, in return for their naval support. Outremer continued to be heavily dependent on military support from the West in the form of numerous expeditions that enabled the rulers to undertake specific campaigns.

Godfrey of Bouillon died on 18 July 1100. He was succeeded by his brother, Baldwin I, count of Edessa, who took the title king of Jerusalem. Baldwin was confronted by the determined effort of the new papal legate, Archbishop Daibert of Pisa, to establish ecclesiastical control over Jerusalem after he had been installed as patriarch. Baldwin vigorously opposed Daibert’s claims because they would have left little for the monarchy, which was charged with the defense of the kingdom. Daibert was a dedicated prelate, but he failed to grasp the situation that confronted the kingdom. Ultimately he lost and was forced into exile. Baldwin vigorously pursued the policies of his brother. Despite the failure of the Crusade of 1101 to provide significant support for Outremer because of its losses during the crossing of Asia Minor, Baldwin made notable additions to the territory of the Latin kingdom.

In the meantime, Prince Bohemund I of Antioch did not fare so well. He was captured by the Turkish Dānishmen-

did emirs in 1100 and was only released in 1103. He returned to the West, where he launched a scheme to conquer the Byzantine Empire, but his attempt ended in his defeat in 1108 and the disgrace of the Treaty of Devol. He died in 1111.

In 1118 Baldwin II, count of Edessa, succeeded to the throne of Jerusalem. He proved to be a very able ruler. He saved the principality of Antioch after its disastrous defeat by the Turks at the battle known as the *Ager Sanguinis* (Field of Blood) in 1119 and acted as regent for the minor son of Bohemund until 1126. He was especially active in the north of Outremer, but in 1123 he was captured while defending Edessa and remained a prisoner until 1124. During his imprisonment the Franks of Jerusalem, with the help of a Venetian crusade, undertook the siege of Tyre (mod. *Soûr*, Lebanon). Following the death of Prince Bohemund II in battle in 1130, Baldwin again became regent of Antioch for Bohemund’s infant daughter. He died in 1131, having consolidated the principalities of Outremer and having withstood continuing pressure from the Turks.

One of the most important developments of this period was the foundation of the military religious orders. A knight named Hugh of Payns, with eight companions, founded the Knights Templar, or Order of the Temple, to protect pilgrims on the dangerous road from Jaffa to Jerusalem. They took their name from the Temple of Solomon, or *al-Aqṣā* mosque, granted to them by the Latin patriarch of Jerusalem. In 1128, with the aid of Bernard of Clairvaux, the famed Cistercian preacher, they drew up their rule and obtained its approval. The Knights Hospitallers, or Order of St. John, had a different origin. The order was founded by merchants from the Italian city of Amalfi prior to the First Crusade to provide care for pilgrims, and their rule reflected their dedication to this task. Only gradually in the course of the twelfth century did they take on a military role. By the late twelfth and early thirteenth centuries, these orders played a major part in the defense of Outremer. Other military orders were founded in this period both in the East and in Iberia, and somewhat later, in the Baltic region. The orders provided substantial support for the Latin settlements in the East and elsewhere, not merely in manpower but also in goods and money. They were among the largest landowners in Outremer and also held substantial property in the West, which they used to finance their military and charitable activities.

From the perspective of the Latin states in the East, the uncertain flow of men and supplies made it necessary to use

moments of crisis to rally support in the West. Appeals for aid were almost constant. But it was a major disaster, the fall of the city of Edessa to Zangī, the ruler of Mosul, on 24 December 1144, that brought home to the West the need for major help. For the first time a crowned head, Louis VII of France, took the crusade vow. Pope Eugenius III (1145–1153) issued an important crusade letter, *Quantum praedecessores*, that revealed the degree to which the papal ideology of the crusade had taken shape.

The foremost preacher of the age, Bernard of Clairvaux, drove home the message: “Now is the acceptable time . . .” Enthusiasm spread to Germany, where a Cistercian monk, Ralph, (or Rudolf) acting contrary to Bernard’s express instructions, stirred up the populace against the Jews. Bernard had little choice but to take action against Rudolf and to extend his preaching to Germany, where King Conrad III took the cross, although reluctantly. Some German crusaders sought to direct their efforts against the pagan Wends, Slavic tribes living beyond the river Elbe; Bernard endorsed these wishes in a letter that approved the use of military compulsion as a means to conversion. This was an unfortunate lapse on Bernard’s part, since in Christian tradition conversion was only possible through an act of the free will, though the use of force to compel acceptance was not new. The pope did not adopt Bernard’s position, though he approved the crusade against the Wends. Eugenius also approved a crusade against the Muslims in Iberia by King Alfonso VII of Castile. Nevertheless, the crusade to the East remained on track.

The armies of Louis VII of France and Conrad III of Germany made their way separately through the Byzantine Empire and into Asia Minor, while a seaborne contingent from England, Germany, and Flanders delayed in Portugal to assist in the conquest of Lisbon. Conrad and the Germans were defeated by the Turks at Dorylaion in October 1147. Retreating to Nicaea, Conrad and a remnant of his forces awaited the French king. The French joined Conrad and journeyed to Smyrna (mod. İzmir, Turkey), but Conrad was forced to return to Constantinople because of illness, and the French suffered a major defeat at Laodikeia in Phrygia. Strong feelings developed against the Byzantines, especially because Manuel I Komnenos, the Byzantine emperor, had entered into a treaty with the Turkish sultan of Rūm. Although this behavior may appear surprising, it stemmed from the fundamental insecurity of the Byzantines, their distrust of the crusaders, and their desire to protect their own possessions. Despite these setbacks, the crusaders

continued on to Palestine. Louis and Conrad, who had recovered and rejoined the crusade, agreed with the Franks of Jerusalem to undertake an attack on the Muslim city of Damascus. Although some modern historians consider this to have been an unwise decision, the plan had much to recommend it. Following the death of Zangī, his son Nūr al-Dīn had taken up his father’s project to create a powerful state in Muslim Syria. It was only a matter of time until Damascus became part of that state. A successful preemption of Nūr al-Dīn’s plan might compensate for the loss of Edessa. In addition, Damascus was the key link to the great caravan routes. But the effort to take the city failed, and Damascus was never taken.

The Second Crusade (1147–1149) had accomplished almost nothing. Bernard of Clairvaux bore the brunt of the criticism. His overenthusiastic promotion of the crusade made him sensitive to its failure. As a result, he and later preachers began to put more emphasis on the spiritual preparation of the crusaders. They argued that failure showed that the crusaders needed to make themselves more worthy of divine aid. Still, failure did not dampen ardor for the crusade.

The rulers of Outremer were well aware of the need to undertake serious action to protect their lands from Nūr al-Dīn. But times were difficult. King Baldwin II of Jerusalem had worked to ensure a strong succession by arranging the marriage of his daughter Melisende to Fulk of Anjou, and Fulk provided about a decade of stability prior to his death in 1143. But a period of turmoil ensued. Fulk and Melisende’s son, Baldwin III, was a minor, while Antioch too had lost its ruler. The city of Edessa remained in Muslim hands, and its count, Joscelin II, died a prisoner. Queen Melisende was caught up in the intrigues that often accompanied regencies. It was not until Baldwin was able to assert his own control in 1152 that the kingdom regained the initiative, which lasted until his death in 1163. Baldwin was succeeded by his brother Amalric, one of the most effective and ambitious of the rulers of Jerusalem. He worked to strengthen the control of the Crown over the aristocracy. His great plan was the conquest of Egypt, a policy that henceforth would remain a key to the effort to stabilize the position of the Latin kingdom of Jerusalem. But the growing power of Nūr al-Dīn and his effort to consolidate the rule of Syria and Egypt in his hands frustrated Amalric’s plans and led, ultimately, to the near overthrow of the Frankish settlements.

The twelfth century, despite the political difficulties sketched here, witnessed substantial developments in the constitutional, cultural, and religious life of Outremer. The monarchy had weathered its early crises and had achieved a central role in the governance of the Latin kingdom, though it was forced to rely heavily on support from the West. Defense was, of course, a primary concern. The first priority was the strengthening of the fortifications of the towns, usually by improving existing walls and towers. But the Franks also had to establish a defensive frontier, and during this period numerous castles were built to protect strategic points. Among the most famous were Montfort, which was held by the Teutonic Knights in the thirteenth century; Krak des Chevaliers, which controlled the north-south route to the east of the Jordan; and Beaufort in Lebanon.

Latin rule also brought about a revival of religious architecture. The most important achievement was the completion of the Church of the Holy Sepulchre in Jerusalem, dedicated in 1149, which united the various sites associated with the Crucifixion and burial of Christ. The tomb of Christ had been destroyed by the Fāṭimid caliph al-Ḥākim but was later rebuilt with support from the Byzantine emperor Constantine IX Monomachos (1042–1055). The new churches of this period were designed to meet the needs of the much larger groups of pilgrims who now flocked to the Holy Land. The city of Jerusalem, which had long sheltered Christian churches, saw a considerable increase in religious buildings. Important monasteries, such as St. Mary in the Valley of Jehosaphat, gained international fame and support. Acre (mod. 'Akko, Israel), the chief port of the kingdom, had no fewer than thirty-eight churches. At Caesarea Maritima, the main mosque was converted to a cathedral dedicated to St. Peter, while the cathedral in Hebron was built after 1120 above the newly discovered cave of the biblical patriarchs. Other types of construction included customs houses and warehouses, hospitals, and hospices. Taken together, these buildings provide evidence of an enormous building boom and demonstrate the resources needed to maintain the Frankish presence in the East.

Intellectual life in Outremer was fragile. The chief figure in the twelfth century was William, archbishop of Tyre and chancellor of the Latin kingdom (d. 1186). He was born in the East but educated in the West, and he later served as tutor for King Amalric's son, Baldwin IV. William's chief work was his history of the Latin kingdom, composed in the

third quarter of the century, which reveals a very considerable knowledge of the East. Recently, more attention has been given to other figures. Gerald of Nazareth possessed considerable knowledge of Greek Orthodox theology, and his writings show that some Westerners were working closely with their Eastern counterparts. Increasing interest in the East is also evident in the writings of James of Vitry, bishop of Acre in the early thirteenth century. Another area of interest is in the production of books. About 1135 King Fulk was responsible for the preparation of the *Melisende Psalter*, which he gave to his wife. It was the work of seven different hands, and, profusely illustrated, it represented a high state of the art of book illustration. The artwork produced in the East has suffered greatly through the destruction of churches and the dispersal of many objects to the West. Yet ample evidence has remained to demonstrate that local craftsmen were capable of producing high-quality work in painting, sculpture, and stained glass.

Much attention has been given to the economic impact of the crusades, chiefly on international trade. On balance, it now seems clear that commercial development played only a subsidiary role in the crusade movement. The major economic focus was on the need to sustain the Latin settlements of Outremer. Although there were continuous efforts to produce goods and incomes from lands, rents, and taxes in the East, it seems most likely that the Latin states were seldom capable of providing for their own needs over a lengthy period of time. They required massive infusions of aid from the West. The military orders, monasteries, churches, and military classes were often engaged in raising moneys in the West, both on their own lands and from sympathetic donors. This does not rule out the existence of some successful lordships or prosperous trading centers. Indeed, these were absolutely essential to the continuance of Outremer. Behind what must have seemed a thriving picture during the reign of King Amalric and even under the short reign of his son, the Leper King, Baldwin IV, disaster loomed.

Saladin and the Fall of Jerusalem

Nūr al-Dīn's goal of uniting Egypt and Syria was realized by Saladin, the nephew of his general Shirkūh. On the death of Nūr al-Dīn in 1174, Saladin, as his uncle's heir, moved from his base in Egypt to seize control of Muslim Syria. The realization of this goal posed the most serious threat ever to the

Latin settlements of Outremer, since Saladin was now in a position to challenge their very existence. Over the next decade he mounted repeated invasions of the Latin kingdom while using periods of truce to consolidate his control over the Muslim Near East. The most serious invasion occurred in the summer of 1187, when he moved his forces to Galilee and laid siege to the town of Tiberias. Guy of Lusignan, king of Jerusalem as consort to Baldwin IV's sister Sibyl, decided to move against Saladin. The forces met at the foot of the Horns of Hattin, an extinct volcano in Galilee. It was early July, and the heat was nearly unbearable. Already in a vulnerable position and short of water, the Frankish army was driven upward to the summit. The bulk of the Frankish forces, some 20,000 men, were killed or captured.

The defeat at Hattin removed the only force strong enough to prevent the fall of most of the cities and castles of Outremer. Jerusalem itself fell on 2 October 1187. Pope Urban III died from shock at the news. From the perspective of the West, this was the worst possible disaster. Yet all was not lost. Frankish forces held out in the cities of Tyre, Tripoli, and Antioch. King William II of Sicily sent a fleet to the aid of Tripoli, thus helping prevent its fall. The new pope, Gregory VIII, summoned the Western leaders to come to the aid of the Holy Land in a moving letter (*Audita tremendi*) that reflected his strong commitment to the crusade.

The response to this disaster, the Third Crusade (1189–1192), showed how deeply the West felt this emergency. The Holy Roman Emperor, Frederick I Barbarossa, enthusiastically took the cross, though he had had conflicts with the papacy over imperial interests in Italy. King Richard the Lionheart of England took up the crusade vow of his father Henry II, who had died in 1189, while King Philip II of France also took the cross. Frederick Barbarossa, at the head of a very large force of Germans, traveled by the land route to Constantinople in 1189, and despite numerous difficulties with the Byzantines, he struck out with his forces across Asia Minor, taking the city of Ikonion (mod. Konya, Turkey) by force on 18 May 1190. Although the Turks of Asia Minor now offered no further resistance, Frederick drowned while swimming in the river Göksu on June 10. His forces immediately split, with some deciding to return home. The rest made their way overland to Antioch or by sea to Acre, which King Guy of Jerusalem had been besieging since shortly after his release from captivity by Saladin.

Richard of England and Philip of France set out in July 1190, taking the sea route to the Holy Land. The siege of

Acre had been begun by Guy of Lusignan over the objections of Conrad of Montferrat, a new arrival from Europe who held Tyre, and most of the remaining nobles of the kingdom. It was only the dogged determination of Guy and the arrival of various contingents in advance of the main crusader bodies that forced Conrad and the other nobles to abandon their opposition and join the siege. But the affair was further complicated by the death of Queen Sibyl and her daughters. Richard continued to support Guy, but Philip and most of the Germans supported Conrad, who was now married to Isabella I, Sibyl's younger sister and the heir to the throne of Jerusalem. Despite these differences, the siege of Acre continued successfully. Saladin was unable to relieve the city, and it surrendered on terms. Soon afterward, Philip departed, and Richard decided to move the remaining crusader forces southward along the coast, winning a victory at Arsuf.

Richard had sufficient forces to take Jerusalem, but the leaders of the various contingents in the army were badly divided. Richard advanced to within 19 kilometers (12 miles) of the city. In all probability, he could have taken Jerusalem. In light of subsequent events, especially the assassination of Conrad of Montferrat by the Assassins and the death of Saladin, it seems that Jerusalem could probably have been held. But Richard decided to withdraw and to make a truce with Saladin, which left the Christians in control of the coast from Tyre to Jaffa. As a result, the Third Crusade has been judged by some a failure, but it salvaged what had been a lost cause and laid the foundation for further attempts to retake the Holy City. Still, the situation in western Europe would seldom be so favorable for a new crusade as it was in the aftermath of Hattin.

The much-reduced kingdom of Jerusalem, with its new capital at Acre, was left in the hands of Henry of Champagne, who had married Isabella I. Guy of Lusignan was compensated with Cyprus, which Richard had seized from its Greek ruler during the Third Crusade. The island would remain under the rule of the Lusignan family until 1489 and was one of the last Christian outposts in the East when it was conquered by the Ottoman Turks in 1573.

Pope Innocent III and the Apogee of Crusading

The setbacks suffered by the Third Crusade did not dampen enthusiasm for crusading. The election of a youthful pope,

Innocent III, in 1198 marked the beginning of a new effort to organize the crusade along more effective lines. Innocent, who was an able administrator, proclaimed his commitment to reform of the church and the crusade. In August 1198 Innocent called upon all Christian people to participate in a crusade. Times were not propitious for royal participation. The German Crown was in dispute. Philip II of France, who had repudiated his marriage to Ingeborg of Denmark, was under a papal interdict. Richard the Lionheart died in March 1199, to be succeeded by his brother John. By default, the crusade, which was received enthusiastically by many among the nobility, especially those whose families already had strong ties to the movement, found its leadership in their midst.

A seaborne expedition was planned in order to avoid the arduous journey overland and the attendant military risks. Agreement was reached with the republic of Venice to provide transport, which specified the number of crusaders (about 30,000) and the charges, as well as providing that the Venetians would themselves participate with fifty ships and would share equally in the conquest. The total price to the crusaders was 85,000 marks. There was also a secret codicil specifying that the goal of the crusade was to be Egypt: the main power base of the Ayyūbids, Saladin's successors, was increasingly seen as the key to the recovery of the Holy Land. The date for departure was set for late June 1202. Innocent ordered a general tax of a fortieth of all church incomes for one year and pledged that the Roman Church would pay a tenth of its income. He also issued a generous crusade indulgence to all who would take part in the crusade at their own expense.

The death of Count Thibaud III of Champagne deprived the crusade of its putative leader at a critical stage. His replacement was Boniface, marquis of Montferrat. Well connected to both the French and German royal houses, Boniface was a friend to one of the claimants to the German Crown, Philip of Swabia, who was married to a Byzantine princess, Irene. Her father, Emperor Isaac II Angelos, had been deposed and blinded by his brother, who had assumed the throne as Alexios III. Isaac's son, also named Alexios, escaped and came to the West seeking aid to restore his father, but he found no support from Innocent III, who was already negotiating with Alexios III.

The crusaders began to gather in Venice during the summer of 1202. Yet many had decided on alternative routes, and the number that appeared at Venice was insufficient to

raise the money needed to pay the Venetians for passage. After paying about 50,000 marks, almost 35,000 was still owed. The Venetians proposed that the crusaders should join them in retaking Zara (mod. Zadar, Croatia), a port on the Dalmatian coast, which had thrown off Venetian rule. The town was in the possession of King Emeric of Hungary, who had himself taken the crusade vow and was thus under the protection of the papacy. Despite the pope's prohibition and internal divisions among the crusaders, the majority of the crusaders agreed to help the Venetians. The leaders also listened to the younger Alexios, who promised to solve their economic problems with the Venetians and to provide aid for the crusade in return for their support. Behind Innocent's refusal to countenance this idea lay not only the fact that it represented a diversion of the crusade but also, in all likelihood, his hopes for cooperation with Alexios III and for a reunification of the Latin and Greek Orthodox churches.

Zara was captured after a short siege. Innocent's attempt to punish the Venetians with excommunication was thwarted by Boniface of Montferrat, who delayed publication of the pope's decree until the crusaders had moved on to Constantinople. There, the Venetians and their crusader allies met with quick success. After their initial attack on the city, Alexios III fled and Isaac was restored, with his son as coemperor. But it soon became clear that the newly crowned Alexios IV had promised more than he could deliver. As the winter of 1202–1203 came and went, the crusaders sought absolution from the pope and tried to persuade Alexios IV to further the reunification of the Greek and Latin churches. From the Greek side, however, opposition mounted, and Isaac II and Alexios IV were overthrown by a Greek nobleman, who seized the throne as Emperor Alexios V. The crusaders now decided to take the city: in April 1204 they breached the walls, and the great capital of the eastern Roman Empire fell. In the sack that followed, the riches of the empire were dispersed to the West. Religious relics found their way to Venice and to virtually every French homeland.

The Venetians and the crusaders had conquered not only the city of Constantinople but much of the European territory of the Byzantine Empire. Count Baldwin IX of Flanders was elected and crowned as emperor, to the disappointment of Boniface of Montferrat. For all practical purposes, the crusade was over. Only a few of the crusaders ever arrived in the Holy Land, and their presence there made no difference. Although some effort was made to view the con-

quest of Constantinople as a stepping-stone to further success, that expectation was doomed to disappointment. Reunification of the Latin and Greek churches, which had long proved to be elusive, was now still more remote. The energies of the crusaders and their supporters and an increasing amount of Western resources were devoted to defending and conquering lands and fending off the efforts of various Greek claimants to reconquer the empire. New Frankish principalities were established throughout Greece, but their existence did nothing to further the liberation of the Holy Land.

Even though the Greeks recaptured Constantinople in 1261, the restored Byzantine Empire was a shadow of its former self. Most of all, the events of 1204 gave rise to a deep distrust of the Latin West on the part of Greek Orthodox Christians that persisted for centuries and still finds its echoes today. Innocent III had suffered a severe setback in his dream of a successful crusade. He tried to make the best of things, but his letters reveal a bitterness, especially toward the Venetians, that never entirely receded. This experience undoubtedly helped shape the attitude of the pope to the crusade. It did not discourage him so much as act as a challenge. He would build on this experience.

The diversion of the Fourth Crusade did not dampen the enthusiasm of western Europeans for the crusade, though it may well have undermined the confidence of many in their leadership. If anything, the crusade increased in popularity. The crusade indulgence and the privileges attached to it proved a most effective instrument in the arsenal of both preachers and papal legates. In the mid-twelfth century the indulgence and other privileges had already been granted to those fighting for the interests of Christianity in other areas besides the East. The pontificate of Innocent III marked the further development of this tendency, building on the enthusiasm for the crusade to support papal efforts to aid the young king of Sicily, Frederick, the son of Henry VI of Germany and Constance of Sicily, who had been placed in the pope's care by his mother before her death. Part of the forces that had joined the Fourth Crusade but refused to attack Zara were devoted to this cause, though their leader, Walter III of Brienne, had family interests that drew him into the struggle as well.

The thirteenth century marked the culmination of religious currents that both influenced the crusade and drew sustenance from the movement. Lay piety flourished among the nobility and the urban middle and upper classes. The

deeply emotional note sounded in the sermons of Bernard of Clairvaux in the mid-twelfth century became integral to crusade preaching by such famous figures as Oliver of Paderborn and James of Vitry in the early thirteenth. The cross, the Passion of Christ, and a profound sense of identification with the life of Christ formed themes for preaching throughout the period that were codified by the former Dominican master general, Humbert of Romans. The powerful religious energy generated in this period was harnessed not merely for the crusade to the East but also for the defense and expansion of Latin Christianity.

The so-called Albigensian Crusade (1209–1229) against the Cathar heretics in southern France was precipitated by the assassination of the papal legate Peter of Castelnau, which led Innocent III to grant an indulgence to those who would fight against the Cathars (also known as Albigensians) and their supporters, who he believed were responsible for this act. For all practical purposes this meant a crusade against the lands of the great nobles of the Languedoc. Yet it had only limited success and was subordinated to the great crusade that Innocent began planning in 1213. Only later, when the French monarchy became involved, did the Albigensian Crusade achieve significant gains. The pope played an important role in the Albigensian Crusade, as he did in supporting King Alfonso VI of Castile and in the preparations leading up to the great victory against the Moors at Las Navas de Tolosa (1212). But to some extent Innocent was himself being drawn along by a deep swelling of popular feeling for the crusade to the East, a feeling that manifested itself in 1212 in the so-called Children's Crusade.

The term *Children's Crusade* is not entirely accurate, since many of those who took part in it were adults. Yet at least some of the leaders were youths, and many were drawn from the rural classes of peasants and shepherds. It was not a unified movement, but some of the groups may have been linked by some form of communication. A German group crossed the Alps into northern Italy and supposedly arrived in Rome, where they were received by Innocent III and encouraged to return home. A French group moved to Paris, where King Philip II and members of the clergy persuaded the adults to devote themselves to the Albigensian Crusade. In one account of the crusade, a group of children went to Marseilles, where they were promised passage to North Africa by Genoese merchants, only to be sold into slavery. Yet this account contains elements that raise serious doubts as to its veracity; it may in fact have

been a piece of propaganda directed against the prominent merchants whose names were given in this tale.

The Children's Crusade may have been a reaction on the part of the young and the frustrated to the failure of the Fourth Crusade. What is more important is that it provides evidence that understanding of the crusade movement and support for it reached down to the lowest levels of society. There was a much broader body of opinion than we might expect in a society that lacked efficient means of communication. The spoken word, especially sermons but also vernacular stories and songs, was an important source of information as well as a barometer of popular attitudes.

Innocent was probably planning a new crusade to the East about the time that the Children's Crusade was taking place. He started to make formal preparations in 1213. In April he issued one of the most important crusade letters to date, known as *Quia maior* (from the first two words of its Latin text). What is immediately evident is that Innocent had learned much from his previous experience. He was allowing two years for preparation before he would actually proclaim the crusade, which he planned to do at the Fourth Lateran Council, summoned for November 1215. *Quia maior* set forth detailed instructions for the preaching of the crusade. Innocent also established a network of crusade preachers, drawing on previous knowledge and experience. Several, including James of Vitry and Oliver of Paderborn, had been key figures in the preaching of the Albigensian Crusade. The pope ordered that the crusade should be preached to all, including women, regardless of their military suitability. Those not able to fulfill their vows in person might have them commuted for a money payment. Fund-raising was to begin immediately.

Innocent gave priority to this new crusade over the crusade against the Moors in Iberia or that against the Cathar heretics. He appointed legates with the task of resolving outstanding conflicts among European rulers, especially that between Philip II of France and John of England and their respective allies. He gave his own support to the young Frederick of Sicily to be crowned as king of Germany (as Frederick II) in place of Otto IV, the Holy Roman Emperor, whose policies in Italy had disappointed him. While some have suggested that Innocent did not want royal participation, this is an inference drawn from the fact that he did not at this time undertake final plans for the leadership of the crusade. He did, however, encourage Frederick to take the crusade vow in 1215. Frederick's ally Philip of France, who

did not take the crusade vow, played a key role in the selection of John of Brienne as the husband of Maria la Marquise, the heiress to the kingdom of Jerusalem.

The Fourth Lateran Council (1215) was the greatest meeting of its kind in the Middle Ages. More than 400 bishops and 800 heads of religious houses took part. Through Cardinal Pelagius of Albano, his legate to the East, Innocent had also tried to secure participation from the Eastern churches, but this effort was largely unsuccessful. There were representatives of the crowned heads of Europe. In addition to the reform decrees of the council, which were to have a lasting impact not only on the church but on European society as a whole, the important crusade appendix *Ad liberandam* provided for a crusade tax approved by the council and detailed regulations of virtually all aspects of the crusade, which was scheduled to depart on 1 June 1217. Drawing on themes he had already developed in *Quia maior*, Innocent provided a contemporary theology of the crusade, grounded in the theology of the cross. But the pope died on 16 July 1216.

The Crusades to the East in the Thirteenth Century

The implementation of what became known as the Fifth Crusade (1217–1221) fell to Innocent III's successor, Honorius III. He was an able administrator, mature, somewhat cautious, but deeply dedicated to both the crusade and the reform of the church. Honorius moved quickly to keep the crusade on its schedule. He also made increasingly clear that he was looking to Frederick II to play a leading role in it. But Frederick continued to be preoccupied in Germany, where the supporters of Otto IV remained active. The crusaders from the Rhineland and the Low Countries were ready to leave in 1217, as were some of the English, but Frederick was not. Nor were many of the French crusaders. King Andrew II of Hungary and Duke Leopold VI of Austria moved eastward in August 1217. Some of the Rhenish contingent delayed in Portugal to assist in the capture of Alcácer do Sal. The crusade armies were to meet at Acre in Palestine.

Andrew of Hungary arrived first and conducted a sweep through the area around Lake Tiberias before returning home. Other crusaders laid siege to the Muslim fortifications on Mount Tabor, southwest of Tiberias. They were not able to vanquish the Muslim forces, but after their withdrawal the Muslims left Mount Tabor and retired to Nablus.

The crusaders also strengthened fortifications along the coast in Caesarea and Château Pelerin ('Athlit). Although these operations have been criticized, they were probably necessary to ensure the security of the Frankish settlements while the crusade moved against its main objective, Egypt. Thus, the Fifth Crusade picked up on the task left undone by the Fourth Crusade.

As the main forces gathered, still without Frederick, the crusaders selected as their leader the king of Jerusalem, John of Brienne. They moved to the Damietta mouth of the Nile to begin the siege of this important port, the gateway to Egypt, as it was known. In September 1218 the papal legate, Cardinal Pelagius of Albano, arrived, followed by a large body of French crusaders. The attack on Damietta was made more difficult by a chain that stretched from the city wall to a tower near the opposite side of the river and blocked passage upriver. The historian Oliver of Paderborn planned and directed the building of siege machinery on two boats that enabled the crusaders to take the tower. The sultan of Egypt, al-'Ādil, brother of Saladin, is said to have died of shock at the news. He was succeeded by his son al-Kāmil. The capture of the Chain Tower enabled the crusaders to cross the Nile and lay siege to Damietta, while the new sultan consolidated his position. The Egyptians offered to surrender Jerusalem and other sites in return for the end of the siege. The crusade leadership was divided, but Cardinal Pelagius and the heads of the military orders pointed out that Jerusalem was indefensible without the possession of key fortresses in Transjordan. Damietta fell on 4 November 1219, and by the end of the month, the crusaders controlled most of the eastern Nile Delta.

Still Frederick had not arrived. He sought postponements from the pope while negotiations regarding his coronation as Holy Roman Emperor dragged on. He was determined to secure his rights before embarking on the crusade. Pope Honorius granted the postponements in the interest of the crusade, but events began to outrun the pace of the negotiations. After Frederick was crowned in Rome in November 1220, he entered his kingdom of Sicily and began to put matters there back into order. He had been in Germany for almost eight years. Many have criticized Frederick for his failure to go on crusade and Honorius for his laxity in pressing Frederick to fulfill his vow. Yet the problems that detained Frederick were real and weighty from his point of view, and Honorius was anxious to secure full cooperation. Neither could have anticipated what would even-

tually happen in Egypt. In fact, both tried to forestall just that kind of outcome. But events on the ground in the East could hardly be expected to wait on decisions in the West. King John left the crusader camp to meet what he regarded as a threat to the Latin kingdom from Syria as well as to pursue a personal claim to the Armenian throne. Pelagius was placed in a difficult position as the demand for action by rank-and-file crusaders mounted, which increased with the arrival of substantial reinforcements with Duke Ludwig I of Bavaria, the official representative of Emperor Frederick. In an attempt to placate those who wanted action, Pelagius and the duke decided to order a limited advance. They were joined shortly afterward by King John. But once begun, the advance became victim to its own success and, against the advice of John, moved toward Mansurah (mod. El-Mansūra, Egypt) at the point where a canal entered the Nile from the East. The Egyptians, reinforced by al-Kāmil's brothers, cut the crusaders' line of retreat and forced their surrender. In return for the surrender of Damietta, the crusaders were permitted to withdraw from Egypt. The Fifth Crusade had failed.

The blame for this defeat was shared by Frederick and the pope. Cardinal Pelagius has come under fire as well. But the failure of the Fifth Crusade chiefly illustrates the problem of conducting large-scale land operations far removed from western Europe. The immediate result of this defeat, however, was the determination by the pope to persuade Frederick to fulfill his vow. A marriage was arranged between Frederick and the young heiress to the Latin kingdom, Isabella II, the daughter of John of Brienne and Maria la Marquise. Frederick renewed his pledge to go on crusade, but before he was able to depart, Honorius died, in March 1227. The new pope was Cardinal Hugolino of Ostia, who took the name Gregory IX. When Frederick finally set out from Brindisi for the East in August 1227, there was an expectation that things would be different. But illness forced the emperor to turn back almost immediately. Gregory imposed the sentence of excommunication that had been agreed to by Frederick as part of the Treaty of San Germano in 1225.

Frederick, however, was determined to go on crusade. He now had a vital stake in the East from the fact that he was, through marriage, king of Jerusalem. Moreover, he had hopes of securing a treaty from al-Kāmil that would return Jerusalem and other holy sites to the Christians. It was, in fact, very close to the agreement that had been offered and rejected during the Fifth Crusade. But al-Kāmil had his eye on Syria,

ruled by his brother, al-Mu'azzam. Even after al-Mu'azzam's death, Frederick continued to push for an agreement.

When Frederick crossed to the East in June 1228, he once again demonstrated his strong determination to ensure what he regarded as his rights. Despite having few men and little money, he was able to secure the treaty, and on 17 March he entered Jerusalem. The treaty was denounced by Gerold of Lausanne, the Latin patriarch of Jerusalem, on the grounds that it provided no security for the city and left the lands of the patriarch and the Church of the Holy Sepulchre, on which they depended for income, in Muslim hands. Frederick's calculations were further upset by events in Italy, where Pope Gregory IX ordered an attack on the kingdom of Sicily, apparently in reprisal for the seizure of the March of Ancona by Rainald of Urslingen, duke of Spoleto, who had been a source of friction between the papacy and the emperor for some time. Frederick returned to Italy, where he defeated the papal forces. By the Treaty of Ceprano (1230), Frederick and the pope resolved their immediate differences. Frederick's achievement by his crusade was accepted, even if not welcomed.

There followed almost a decade of cooperation between pope and emperor. During this period, Frederick's representatives in the Latin kingdom attempted to dominate the politics that swirled around the various noble factions. Frederick himself was occupied with affairs in Sicily and Germany. In the East, Cypriot nobles led by John of Ibelin, the lord of Beirut, carried on a struggle against the imperial lieutenants that ended in the lieutenants' defeat in 1233. Likewise, on the mainland imperial administrators acting for Frederick as guardian of his son Conrad IV fared no better, though they held out until 1243 (the War of the Lombards). The only significant crusade in this period was led by Count Thibaud IV of Champagne in 1240, but it ended with only minor gains. With the expiration of Frederick's treaty with al-Kāmil, the Ayyūbids moved to occupy Jerusalem. With the loss of the city, the crusades entered a new phase.

Hopes for the recovery of Jerusalem were now vested in the king of France, Louis IX. The Capetian kings of France had a tradition of crusading, but they were also known as hardheaded and practical men of affairs. The leading French historian of Louis IX, Jean Richard, has argued that he did not make a decision to go on crusade without overcoming a certain reluctance on his own part as well as the opposition of his mother, Blanche of Castile. What decided him was a serious illness that nearly cost him his life. Once deter-

mined, he set himself to the task with great energy. He entrusted the government of the kingdom to his mother and devoted himself to raising the required funds and making the necessary preparations. Although he worked with the pope, Innocent IV, the entire initiative was in his hands. The thoroughness of his preparations is demonstrated by the fact that he improved the Mediterranean port of Aigues-Mortes to serve as a point of departure and made arrangements for supplies to be stored in Cyprus. His objective was Egypt, and specifically the same port of Damietta that had been attacked by the Fifth Crusade.

Although Louis's crusade was preached in various countries, it remained a French enterprise. Louis's army was not large, but it was quite respectable in medieval terms. Louis spent about six times his annual income on the crusade, but most of the money came from nonroyal sources. He left for the East on 25 August and landed near Damietta on 5 October, meeting almost no opposition. The garrison of the city fled, leaving it open to him. He immediately took over the city and made preparations to move inland. Some thought was given to the capture of Alexandria, but this was rejected in favor of an attack aimed at Cairo. On 20 November Louis moved south along the east bank of the Nile toward Mansurah. There the army stalled, unable to cross the canal that lay in its path, until a secret crossing place was made known to them. The king's brother Robert of Artois led an advance guard across the canal but rashly attacked the Muslim camp. Louis, who crossed to aid his brother with the bulk of the army, was stymied by the arrival of the Ayyūbid sultan with reinforcements. Forced to retreat, he suffered heavy losses and had to surrender. Louis was ransomed, but Damietta was once more returned to the Egyptians. Louis left for Acre, where he devoted himself to improving the coastal fortifications of the Latin kingdom.

Perhaps more than any previous crusade, Louis's expedition showed the magnitude of the task confronting those who desired to liberate the Holy Land. When the king returned home in 1254, he had accomplished little more than repairing some of the damage resultant from his failure at Damietta. He had not, however, lost his sense of commitment to the crusade, which, if anything, had been reinforced by the increasing depth of his personal piety.

The second half of the thirteenth century continued the story of military decline in the Latin states of Outremer. There were various efforts to provide support. Among the most important efforts was King Louis IX's second crusade,

launched on 2 July 1270. It was an impressive force. Lord Edward—the future King Edward I and son of Henry III of England—was due to join Louis. Although the goal of the crusade was to aid the Latin East, Louis had decided first of all to land at Tunis in North Africa. This landing was not, as some have thought, part of a plot against Tunis by Charles I of Anjou, the king's brother, but the result of Louis's belief that the ruler of Tunis was prepared to accept the Christian faith. But soon after the landing, dysentery swept through the camp. The king was one of its prominent victims and died from its effects. Edward, who arrived just as the crusaders were preparing to leave, continued to the East, where he conducted a limited campaign.

The second crusade of Louis IX was the last major crusade of the thirteenth century. Pope Gregory X, who had been elected pope while in Acre, worked zealously to promote the crusade to the East. On his instructions, the Dominican master general Humbert of Romans conducted an extensive survey to determine the depth of support for the crusade. At the Second Council of Lyons in 1274, Gregory issued a crusade document that not only codified previous experience but drew on the materials gathered by Humbert and others. His efforts bore fruit when the leading rulers of Europe took the cross, but the projected crusade did not get off the ground before the pope died in 1276. Thereafter, despite a growing awareness of the perils facing Outremer, no major crusade was mounted prior to the fall of Acre in 1291 to the Mamlūks of Egypt.

The Mamlūk victory at Acre was the culmination of a Muslim resurgence that had begun shortly after the First Crusade of King Louis IX, when the Mamlūks, military slaves who formed an elite guard in Egypt, overthrew the Ayyūbid sultan and took control of the government. The military state that they created directed its external energies against the Franks as part of its effort to prove its legitimacy. By August 1291 the Franks no longer had a toehold on the Palestinian mainland. Still, they were a power in the region by reason of their possession of the kingdom of Cyprus and the naval power of the Western maritime cities, as well as by virtue of the military and financial support afforded by the military orders.

The Later Middle Ages and the Diversification of Crusading

Why did the continuing failure of the crusades to the East in the thirteenth century not lead to greater opposition to

them? This question has often been posed and has been variously answered, with some observers even believing that the crusades did become less popular and that this unpopularity reflected on the medieval church. But there is little evidence that this was the case. In fact, the thirteenth century continued to be the great age of crusading. In part this was because the liberation of the holy places had captured the imaginations of western Europeans. Even rulers who were wrapped up in dynastic and territorial politics viewed the crusade as a higher duty to which they felt an obligation. Moreover, the East was no longer as remote as it had been in the late eleventh century. Many of the European aristocracy had relatives in the East. The ships of Venice, Pisa, Genoa, Marseilles, and Barcelona plied the Mediterranean Sea from one end to the other. Lands that had been remote were now brought closer. Even people who did not venture from their homes sent money to the East. Crusading had become an integral part of the European fiber. Nor was this attachment to crusading limited to those expeditions directed to the Holy Land.

While the crusade against the Muslims, or Moors, of the Iberian Peninsula did not command the attention that it had in the centuries before the victory at Las Navas de Tolosa had so decisively turned the tide in favor of the Christian kings in the early thirteenth century, Rhenish and English crusaders had participated in the liberation of Portugal at the time of the Fifth Crusade, and Spanish kings continued to carry out successful military campaigns. The middle decades of the thirteenth century were a period of renewed successes in both Castile and Aragon. Córdoba, the capital of the Moorish kingdom, was taken in 1236, and Seville was taken in 1248. King James I of Aragon conquered Muslim Valencia and the island of Mallorca, laying the foundations for an Aragonese Empire in the western Mediterranean.

The major arenas for crusading in the thirteenth century outside Iberia and the East were the lands inhabited by pagan peoples along the eastern and southern coasts of the Baltic Sea. The conquest and conversion of these lands were carried out by crusaders from Germany, Denmark, Sweden, and other countries, and in particular by two new military orders, the Sword Brethren and the Teutonic Knights. The latter erected a sovereign territory in Prussia and Livonia alongside lands controlled by bishops and by the Danish and Swedish crowns. The conquest of Prussia involved the immigration of Germans who were settled there to ensure the protection of the country, a policy that inevitably led to the

spread of German influence and the building of German religious and political institutions in the region. Efforts on the part of the Sword Brethren and Teutonic Knights to expand into Lithuania and the western parts of Christian Russia were repulsed. During this same period, there was increasing interest in the possibility of an alliance between the crusaders and the Mongols, some of whom were known to have Christian Nestorians in their courts. The papacy encouraged these efforts with missionaries from the mendicant orders, but they produced no direct benefit to the crusade. Nevertheless, Christian missionaries traveled as far as China, and an archbishopric was established briefly in Beijing.

The thirteenth century also witnessed further adaptation of the idea of crusade to the interests of the church. At times these policies were misdirected, as was the case with the crusade against the Stedinger peasants of northwestern Germany, who were the object of persecution by the archbishop of Bremen. The papacy also found the crusade vow a potent means of garnering military support in its political struggles. Given the complexity of political life in Italy and the long-standing alliances of the papacy with many northern Italian communes, as well as the efforts of the popes to establish their hegemony over central Italy, the reform papacy had developed a highly protective reaction against any expansion of the power of the Holy Roman Emperor in Italy that was not in the papal interest.

For their part, the emperors, especially those of the Staufen (or Hohenstaufen) dynasty, harbored dreams of a central European hereditary monarchy encompassing Germany and the entire Italian peninsula. Beginning in the late 1230s and extending through most of the thirteenth century, the popes carried on a campaign to prevent the Staufen rulers from realizing their dreams in Italy. Between 1239 and 1250, the crusade was employed against Emperor Frederick II, who was deposed at the First Council of Lyons in 1245. Following his death, various European houses were canvassed to find a suitable cadet to rule Frederick's kingdom of Sicily. The younger brother of King Louis IX of France, Charles I of Anjou, was finally offered the throne. Louis, who had long maintained the French alliance with the Staufen, abandoned it after the deaths of Frederick II and his son and successor, Conrad IV.

Charles, aided by a crusade indulgence, defeated another of Frederick's sons, Manfred, in the battle of Benevento (1266). When, in 1282, the Angevins were expelled from the island of Sicily and the Sicilians called in King Peter I of

Aragon to be their ruler, the papacy again supported the Angevins with the crusade indulgence. Although some modern critics have viewed this use of the indulgence as a perversion of its purpose, there is no question that it remained effective.

From the end of the thirteenth century onward the wars in the East became entirely defensive. The Hospitallers were able to conquer the island of Rhodes (mod. Rodos, Greece) in 1306 with Genoese assistance. The Templars had a different fate: King Philip IV of France carried out a violent campaign against the order, ending in its suppression by Pope Clement V. The Teutonic Order was occupied in the Baltic. All in all, this was a period of considerable disarray, with much energy devoted to plans for crusades and with considerable effort spent in dissecting the failures of the past in order to plan better for the future.

Gradually, the entire focus of military operations in the East was moved inexorably away from the Holy Land to the southeastern flank of Europe itself. A new Turkish dynasty, the Ottomans, directed its energies to the conquest of Anatolia and southeastern Europe. The most significant of the fourteenth-century crusades was the Crusade of Nikopolis in 1396. It took place at the time of the Great Schism, which divided the Latin Church into different loyalties, with some following the pope at Rome and others his rival at Avignon. Naturally, the power and influence of the papacy were weakened, but the urgency of the Ottoman threat, which jeopardized the existence of Hungary, required united action. A large military force under Sigismund, king of Hungary, advanced to the fortress of Nikopolis (mod. Nikopol, Bulgaria) on the Danube, where he was able to obtain naval support. The Ottoman sultan raised the siege of Christian Constantinople to move against the crusaders. The ensuing battle at Nikopolis was a major disaster for Christendom. Turkish power was now supreme in southeastern Europe. The fall of Constantinople and the extinction of the Byzantine Empire in 1453, for all their dramatic significance, were in fact an anticlimax. They brought about no major change in the character of naval and military operations. They did, however, remove a psychological obstacle to the completion of the Turkish conquest of southeastern Europe in the sixteenth century.

After the loss of Rhodes to the Ottomans in 1522, the Hospitallers moved west to the island of Malta, where they carried on naval warfare against the Turks and the Barbary Corsairs of North Africa until they were dispossessed by

Napoleon in 1798. The Venetians lost Cyprus in 1571 and Crete in 1670. Ottoman expansion helped shift European maritime interest toward the Atlantic Ocean. The early explorers of the African coast and Christopher Columbus himself never lost sight of the goal of the crusade. Columbus believed that the resources of the lands he discovered might provide the means for the conquest of Jerusalem. As long as the Ottoman Empire posed a threat to Europe, which was well into the seventeenth century, defensive war continued. The great Christian naval victory near Lepanto in 1571 symbolized the idea of crusade in the sixteenth century. Pope Pius V played a leading role in organizing the Holy Alliance, which brought about the crushing naval defeat of the Ottoman forces. But once the enemy was defeated, the pope was unable to hold the alliance together. Papal diplomacy continued to work in support of rulers in need, but the crusade was now subsidiary to political and military interests.

The Protestant Reformation did not witness an immediate change in the efforts of the papacy to support resistance to Ottoman expansion. Protestants even played a part in this defense, but the unity of Christendom was broken, and the popes did not exercise sufficient influence to make their leadership effective save for periods when urgent necessity dictated cooperation among rulers.

Conclusions

Historians looking back at the age of the crusades need to recognize that the movement changed substantially over its long history. The early period, which encompassed the twelfth century, was formative. By the early thirteenth century the idea of crusade reached maturity and was extended to meet the needs of the church within the West. In the fourteenth century, following the loss of Acre, the crusade took on a defensive character, chiefly aimed at protecting Christian holdings in the eastern Mediterranean and the southeastern flank of Europe. In the course of the sixteenth century the idea of crusade was subordinated to European political and military interests. It is this changing character that makes the crusade so difficult to define. Yet the role of the papacy remained central over most of the age of crusades. The idea of the crusade contains the notion that it was sanctioned by God and had a sacred, defensive character. This view helped provide a positive view of warfare and reinforced the idea of nobility of arms. But the very fact that

the crusade was a special kind of war demonstrated that Christian thought remained uncomfortable about the use of force. The crusade clearly tipped the balance toward the acceptance of just war. The difficulty of defining *just war* made virtually every war just in the eyes of its proponents.

Some have seen in the crusades a kind of proto-imperialism. It is easy to see how such an idea would have appeal. In the twelfth century the need to make the Latin states of Outremer more viable was already leading to more permanent settlements and to the exploitation of the local population. But we need to emphasize that these efforts never went beyond a rather rudimentary stage. Many of the settlements we know about were connected to religious foundations, which are better documented. The Latins of the East were attached to the West by a long umbilical cord on which they depended for supplies, manpower, and, during critical periods, their very existence. There is simply no way to calculate the amount of wealth transferred from the West to the East during the twelfth and thirteenth centuries, but the systematic records of the Hospitallers suggest that it was enormous. The role of the maritime cities of Venice, Genoa, Pisa, Marseilles, and Barcelona has received very considerable attention, but most scholars recognize that they probably lost as much as they gained from the crusades. Their commerce was disrupted, and they devoted considerable forces to supporting the Latin settlements in Outremer, Cyprus, and Frankish Greece. Moreover, their commerce with the Muslim world was mutually beneficial. We have only to see the degree to which the shift in trade routes to the Atlantic and the Indian Ocean in the sixteenth and seventeenth centuries contributed to the decline of the eastern Mediterranean trade and, ultimately, to the economic torpor of the region. At most, we might suggest that the crusade provided a sense of adventure and a base of experience for the future.

The employment of the crusade within Europe contributed eventually to its controversial meaning. By the late eighteenth century a negative understanding of the crusade was established. But it is interesting to note that this negative sense was first applied to the crusades against heretics and then, when this meaning was fixed, it was extended to the crusades to free the Holy Land. It is also fair to say that the negative image of the crusade, along with the Inquisition, contributed substantially to the view that religion is intolerant. In the case of the crusade, this has led to a greater emphasis on religious differences, rather than concerns

The Crusades: An Introduction

over Muslim expansion, as the crucial element behind the fighting. But at different times and under various circumstances, one or the other has predominated. In shaping the ideological image of the crusade, they are inseparable.

Still, the idea of crusade never lost its positive meaning. The notion that a crusade is undertaken to achieve a good end remains very much a part of the term's meaning, as we may note from its frequent use in the titles of books, such

as Dwight Eisenhower's *Crusade in Europe*. Obviously, there has been an unwillingness to reject the idea of crusade entirely. There may, after all, be something in the idea of crusade that transcends its imperfections. The idea of the struggle for justice will always have a certain appeal.

Preface

When, at the Council of Clermont in 1095, Pope Urban II called for an armed pilgrimage to liberate the Holy Land, he brought into existence a movement that was to have profound consequences for the history of Europe, the Near East, and North Africa for centuries to come. Hundreds of thousands of men and women took part in crusade expeditions to various goals, a huge number of them dying in the process. Millions of people lived as subjects of states that were brought into existence as a direct consequence of crusades to Palestine and Syria, to the Baltic lands, and to Greece and the islands of the eastern Mediterranean. Others served as members of religious orders established to protect pilgrims or ransom captives, while many more supported crusades through taxes and voluntary donations, or by prayers and participation in the liturgy of the Christian Church. Many of the political, economic, religious, and artistic consequences of the crusades are still apparent in the world that we live in.

This encyclopedia is intended as a reference work on the crusades from their origins in the eleventh century up to the early modern period. It comprises one thousand signed articles and translated texts, with a historical introduction by Professor James Powell. Articles are accompanied by bibliographies, and are thus intended to function as a first point of reference and orientation for users who wish to proceed further with their enquiries. The scope of the work is intentionally wide: it has long been accepted that the crusades were neither purely heroic manifestations of Christian valour nor cynical wars of aggressive colonialism; in more recent years historians have also recognized the diverse and changing nature of crusading, which gradually developed in scope from campaigns to defend the Holy Land, to take in wars of conquest or reconquest against Muslims in Iberia and North Africa and pagans in northeastern Europe, as

well as heretics, Christians of the Orthodox faith, and even political enemies of the Roman Catholic Church.

The aim of the encyclopedia is to reflect the state of knowledge of the crusade movement as it is understood in historical scholarship at the beginning of the twenty-first century. It contains longer entries on the major crusade expeditions themselves; the various states that contributed to, were established by, or were targeted by crusading; sources for the history of the crusades; the main military religious orders; and key concepts and institutions connected with crusading. There are also a great number of shorter articles on persons and places. While an absolutely comprehensive treatment is not achievable in a work of this length, the reader will nevertheless find articles on all the major crusades of the eleventh to fourteenth centuries, on most of the military orders, and on all of the crusader states of Outremer, the Baltic lands, Frankish Greece, and Cyprus. There are also entries for all of the rulers of the kingdom of Jerusalem, the kingdom of Cyprus, the Latin Empire of Constantinople, the principality of Antioch, the county of Edessa, and (save one) the county of Tripoli. Within this overall framework, a particular emphasis has been given to the events, institutions, and personalities connected with crusade expeditions and the Frankish states of Outremer and their enemies in the period 1095–1291. Finally, it should be emphasized that in a publication bringing together the work of over a hundred scholars from some two dozen countries, the user should not expect a uniformity of approach or opinion, but will find a diversity of analysis and interpretation from different authors, even if the fortuitous nature of the A–Z sequence has permitted the editor, at least in one sense, to have the last word.

Many debts of gratitude are incurred in a work of the dimensions of this one. The encyclopedia first took shape

Preface

in a series of conversations with Professor James Powell of Syracuse University and Dr. Robert Neville, then of ABC-CLIO, and I am grateful to them for their advice, as well as to the members of the Editorial Advisory Board, who readily provided assistance and counsel whenever it was requested of them. The authors of articles deserve thanks, not only for sharing their scholarship, but also for their forbearance in dealing with numerous queries and requests for alterations or clarifications, and not least for their patience in waiting for the work to see the light of day. Several board members and other contributors also deserve thanks for their readiness to step into the breach by agreeing to write articles for which, for whatever reason, no other author could be found. Much of the attractiveness of a work such as this derives from its illustrations, and I am particularly grateful to Professors Alfred Andrea, Benjamin Z. Kedar, and Graham Loud for generously allowing the use of photographs from their own collections, and to Dr. Janus Møller Jensen, Dr. Kristian Molin, and Dr. Samantha Riches for their help and advice in procuring images.

Among the staff at ABC-CLIO, a great deal is owed to the energy and enthusiasm of Wendy Roseth and to the good sense and experience of Martha Whitt, who supported the project during its most crucial stages, while Anna Kaltenbach and Vicki Moran in turn provided the care that brought it to publication. Significant contributions to the final product were also provided by Ellen Rasmussen, who undertook picture research; Bill Nelson (cartographer) and George Zirfas (graphic artist), who drew maps and genealogical tables to the editor's specifications; as well as Silvine Farnell and Kathy Streckfus (copyeditors), Mary Kay Kozyra and Lori Kranz (proofreaders), Tim Giesen (typesetter), and Heather Jones (indexer). Thanks are also due to Alison Miller and Patience Melnik, who acted as development editors during the initial stages of the project.

Lastly, I am grateful to Martina Häcker and Rhiannon Lawrence-Francis for their assistance in proofreading the final text.

Preface

When, at the Council of Clermont in 1095, Pope Urban II called for an armed pilgrimage to liberate the Holy Land, he brought into existence a movement that was to have profound consequences for the history of Europe, the Near East, and North Africa for centuries to come. Hundreds of thousands of men and women took part in crusade expeditions to various goals, a huge number of them dying in the process. Millions of people lived as subjects of states that were brought into existence as a direct consequence of crusades to Palestine and Syria, to the Baltic lands, and to Greece and the islands of the eastern Mediterranean. Others served as members of religious orders established to protect pilgrims or ransom captives, while many more supported crusades through taxes and voluntary donations, or by prayers and participation in the liturgy of the Christian Church. Many of the political, economic, religious, and artistic consequences of the crusades are still apparent in the world that we live in.

This encyclopedia is intended as a reference work on the crusades from their origins in the eleventh century up to the early modern period. It comprises one thousand signed articles and translated texts, with a historical introduction by Professor James Powell. Articles are accompanied by bibliographies, and are thus intended to function as a first point of reference and orientation for users who wish to proceed further with their enquiries. The scope of the work is intentionally wide: it has long been accepted that the crusades were neither purely heroic manifestations of Christian valour nor cynical wars of aggressive colonialism; in more recent years historians have also recognized the diverse and changing nature of crusading, which gradually developed in scope from campaigns to defend the Holy Land, to take in wars of conquest or reconquest against Muslims in Iberia and North Africa and pagans in northeastern Europe, as

well as heretics, Christians of the Orthodox faith, and even political enemies of the Roman Catholic Church.

The aim of the encyclopedia is to reflect the state of knowledge of the crusade movement as it is understood in historical scholarship at the beginning of the twenty-first century. It contains longer entries on the major crusade expeditions themselves; the various states that contributed to, were established by, or were targeted by crusading; sources for the history of the crusades; the main military religious orders; and key concepts and institutions connected with crusading. There are also a great number of shorter articles on persons and places. While an absolutely comprehensive treatment is not achievable in a work of this length, the reader will nevertheless find articles on all the major crusades of the eleventh to fourteenth centuries, on most of the military orders, and on all of the crusader states of Outremer, the Baltic lands, Frankish Greece, and Cyprus. There are also entries for all of the rulers of the kingdom of Jerusalem, the kingdom of Cyprus, the Latin Empire of Constantinople, the principality of Antioch, the county of Edessa, and (save one) the county of Tripoli. Within this overall framework, a particular emphasis has been given to the events, institutions, and personalities connected with crusade expeditions and the Frankish states of Outremer and their enemies in the period 1095–1291. Finally, it should be emphasized that in a publication bringing together the work of over a hundred scholars from some two dozen countries, the user should not expect a uniformity of approach or opinion, but will find a diversity of analysis and interpretation from different authors, even if the fortuitous nature of the A–Z sequence has permitted the editor, at least in one sense, to have the last word.

Many debts of gratitude are incurred in a work of the dimensions of this one. The encyclopedia first took shape

Preface

in a series of conversations with Professor James Powell of Syracuse University and Dr. Robert Neville, then of ABC-CLIO, and I am grateful to them for their advice, as well as to the members of the Editorial Advisory Board, who readily provided assistance and counsel whenever it was requested of them. The authors of articles deserve thanks, not only for sharing their scholarship, but also for their forbearance in dealing with numerous queries and requests for alterations or clarifications, and not least for their patience in waiting for the work to see the light of day. Several board members and other contributors also deserve thanks for their readiness to step into the breach by agreeing to write articles for which, for whatever reason, no other author could be found. Much of the attractiveness of a work such as this derives from its illustrations, and I am particularly grateful to Professors Alfred Andrea, Benjamin Z. Kedar, and Graham Loud for generously allowing the use of photographs from their own collections, and to Dr. Janus Møller Jensen, Dr. Kristian Molin, and Dr. Samantha Riches for their help and advice in procuring images.

Among the staff at ABC-CLIO, a great deal is owed to the energy and enthusiasm of Wendy Roseth and to the good sense and experience of Martha Whitt, who supported the project during its most crucial stages, while Anna Kaltenbach and Vicki Moran in turn provided the care that brought it to publication. Significant contributions to the final product were also provided by Ellen Rasmussen, who undertook picture research; Bill Nelson (cartographer) and George Zirfas (graphic artist), who drew maps and genealogical tables to the editor's specifications; as well as Silvine Farnell and Kathy Streckfus (copyeditors), Mary Kay Kozyra and Lori Kranz (proofreaders), Tim Giesen (typesetter), and Heather Jones (indexer). Thanks are also due to Alison Miller and Patience Melnik, who acted as development editors during the initial stages of the project.

Lastly, I am grateful to Martina Häcker and Rhiannon Lawrence-Francis for their assistance in proofreading the final text.

Preface

When, at the Council of Clermont in 1095, Pope Urban II called for an armed pilgrimage to liberate the Holy Land, he brought into existence a movement that was to have profound consequences for the history of Europe, the Near East, and North Africa for centuries to come. Hundreds of thousands of men and women took part in crusade expeditions to various goals, a huge number of them dying in the process. Millions of people lived as subjects of states that were brought into existence as a direct consequence of crusades to Palestine and Syria, to the Baltic lands, and to Greece and the islands of the eastern Mediterranean. Others served as members of religious orders established to protect pilgrims or ransom captives, while many more supported crusades through taxes and voluntary donations, or by prayers and participation in the liturgy of the Christian Church. Many of the political, economic, religious, and artistic consequences of the crusades are still apparent in the world that we live in.

This encyclopedia is intended as a reference work on the crusades from their origins in the eleventh century up to the early modern period. It comprises one thousand signed articles and translated texts, with a historical introduction by Professor James Powell. Articles are accompanied by bibliographies, and are thus intended to function as a first point of reference and orientation for users who wish to proceed further with their enquiries. The scope of the work is intentionally wide: it has long been accepted that the crusades were neither purely heroic manifestations of Christian valour nor cynical wars of aggressive colonialism; in more recent years historians have also recognized the diverse and changing nature of crusading, which gradually developed in scope from campaigns to defend the Holy Land, to take in wars of conquest or reconquest against Muslims in Iberia and North Africa and pagans in northeastern Europe, as

well as heretics, Christians of the Orthodox faith, and even political enemies of the Roman Catholic Church.

The aim of the encyclopedia is to reflect the state of knowledge of the crusade movement as it is understood in historical scholarship at the beginning of the twenty-first century. It contains longer entries on the major crusade expeditions themselves; the various states that contributed to, were established by, or were targeted by crusading; sources for the history of the crusades; the main military religious orders; and key concepts and institutions connected with crusading. There are also a great number of shorter articles on persons and places. While an absolutely comprehensive treatment is not achievable in a work of this length, the reader will nevertheless find articles on all the major crusades of the eleventh to fourteenth centuries, on most of the military orders, and on all of the crusader states of Outremer, the Baltic lands, Frankish Greece, and Cyprus. There are also entries for all of the rulers of the kingdom of Jerusalem, the kingdom of Cyprus, the Latin Empire of Constantinople, the principality of Antioch, the county of Edessa, and (save one) the county of Tripoli. Within this overall framework, a particular emphasis has been given to the events, institutions, and personalities connected with crusade expeditions and the Frankish states of Outremer and their enemies in the period 1095–1291. Finally, it should be emphasized that in a publication bringing together the work of over a hundred scholars from some two dozen countries, the user should not expect a uniformity of approach or opinion, but will find a diversity of analysis and interpretation from different authors, even if the fortuitous nature of the A–Z sequence has permitted the editor, at least in one sense, to have the last word.

Many debts of gratitude are incurred in a work of the dimensions of this one. The encyclopedia first took shape

Preface

in a series of conversations with Professor James Powell of Syracuse University and Dr. Robert Neville, then of ABC-CLIO, and I am grateful to them for their advice, as well as to the members of the Editorial Advisory Board, who readily provided assistance and counsel whenever it was requested of them. The authors of articles deserve thanks, not only for sharing their scholarship, but also for their forbearance in dealing with numerous queries and requests for alterations or clarifications, and not least for their patience in waiting for the work to see the light of day. Several board members and other contributors also deserve thanks for their readiness to step into the breach by agreeing to write articles for which, for whatever reason, no other author could be found. Much of the attractiveness of a work such as this derives from its illustrations, and I am particularly grateful to Professors Alfred Andrea, Benjamin Z. Kedar, and Graham Loud for generously allowing the use of photographs from their own collections, and to Dr. Janus Møller Jensen, Dr. Kristian Molin, and Dr. Samantha Riches for their help and advice in procuring images.

Among the staff at ABC-CLIO, a great deal is owed to the energy and enthusiasm of Wendy Roseth and to the good sense and experience of Martha Whitt, who supported the project during its most crucial stages, while Anna Kaltenbach and Vicki Moran in turn provided the care that brought it to publication. Significant contributions to the final product were also provided by Ellen Rasmussen, who undertook picture research; Bill Nelson (cartographer) and George Zirfas (graphic artist), who drew maps and genealogical tables to the editor's specifications; as well as Silvine Farnell and Kathy Streckfus (copyeditors), Mary Kay Kozyra and Lori Kranz (proofreaders), Tim Giesen (typesetter), and Heather Jones (indexer). Thanks are also due to Alison Miller and Patience Melnik, who acted as development editors during the initial stages of the project.

Lastly, I am grateful to Martina Häcker and Rhiannon Lawrence-Francis for their assistance in proofreading the final text.

— *Alan V. Murray*
Leeds, 5 July 2006

A

‘Abbāsids

An Arab dynasty that reigned in Iraq (749–1258) and Egypt (1261–1517). By the mid-eighth century the previous caliphal dynasty, the Umayyads (661–749), had made many enemies, including both Shī‘ites and other members of the Muslim community who felt that they were too concerned with worldly issues and not sufficiently focused on Islam itself. They were also weakened by rivalries among the tribes supporting them in their chosen power-base, Syria. Eventually a rebellion broke out in Khurasan (eastern Persia, Afghanistan, and other lands east of the Oxus River). This spread to Iraq, where a descendant of Muḥammad’s uncle al-‘Abbās was proclaimed caliph with the regnal title of al-Saffāḥ. The last Umayyad army was defeated in 750 in Egypt, with the Umayyad caliph, Marwān II, being killed in the fighting.

Al-Saffāḥ’s dynasty became known as the ‘Abbāsids after their ancestor. In succeeding to the caliphate, the ‘Abbāsids became, like their predecessors, both the religious and secular leaders of the Muslim world. Initially they based their particular claims to the caliphate on both their kinship with the Prophet Muḥammad and the fact that, unlike others, they had taken action against a regime that was perceived as being unjust. Later they also presented themselves as patrons of orthodoxy, stressing their position as guardians of Islam. They made their capital at Baghdad in Iraq, from which most of the caliphs reigned until 1258.

The reign of Hārūn al-Rashīd (786–809) is generally regarded as the high point of the ‘Abbāsīd caliphate, particularly when contrasted with later events. His death was followed by a civil war between his sons. This was soon fol-

lowed by a gradual decline in caliphal power, exacerbated by financial problems, increasing domination of the caliphs by their subordinates, and rebellions by Shī‘ites and other disaffected elements. During this period much of the Muslim world fragmented so that the provinces came to acknowledge only nominal allegiance to the caliphs. Finally in 945, Baghdad was taken by the Būyids (Buwayhids), a Shī‘ite dynasty from the mountains of Daylam in Persia. They maintained the existence of the Sunnī caliphate, ruling as the caliphs’ nominal subordinates until 1055. Meanwhile Egypt was taken by the Fāṭimids (969), who also temporarily extended their influence into parts of Palestine, Syria, and Arabia, although by the period of the crusades much of these gains had again been lost.

In 1055, Sunnī rule was restored in Baghdad when the Saljūqs took control of the city. This did little to change the situation in the city itself, for while the Saljūqs became embroiled in the struggle for the Levant with the Fāṭimids and crusaders, the caliphs remained largely impotent. However, the collapse of Saljūq authority enabled some of the more vigorous caliphs to exercise their own authority somewhat. In particular, al-Muqtafī (1136–1160) asserted caliphal independence from the Saljūqs in Iraq. His great-grandson al-Nāṣir (1180–1225) not only overthrew the Saljūqs but also, through a mixture of diplomacy, military action, and a little luck, extended caliphal territories and warded off potential attacks from other enemies, including the Mongols. He also made several other social, political, and religious reforms, emphasizing in particular the primacy of the caliph and even coming to a certain degree of understanding with the Shī‘ites. The resurgence of caliphal

authority was brief, however. The end came in 1258, when the Mongols took Baghdad and put the reigning caliph, al-Musta’şim, to death.

Not all of the caliph’s family died in the Mongol onslaught, and in 1261 the Mamlūk sultan Baybars restored the caliphate in Cairo. From here the ‘Abbāsīd caliphs reigned,

albeit in name only, until the Ottoman conquest. The last caliph died as a prisoner of war in İstanbul in 1517.

Abodrites

The Abodrites (Obodrites) were one of the many Slavic tribal confederations that in the late sixth or early seventh century settled in Germany east of the river Elbe. From the ninth to the thirteenth centuries they became the target of intense missionary and later crusading activity from the West.

The Abodrite confederation was composed of three major tribes: Wagrians, Polabians, and Eastern Abodrites. Nominally they had a king (Lat. *dux* or *rex* in the sources), but power largely resided in the hands of princes (Lat. *reguli* or *principes*), who were the heads of noble families. In the ninth century the Abodrites were politically oriented toward Denmark, a connection reflected in marriage bonds between the Danish and Abodrite ruling families. In the tenth century, however, the Holy Roman Emperors gained some ascendancy over the Abodrites, and in 967 Emperor Otto I (936–973) established a missionary bishopric at Oldenburg in Abodrite territory as part of the archbishopric of Hamburg-Bremen.

Although some of the Abodrite kings nominally accepted Christianity, the new religion made only little headway among the Abodrites for the next 200 years or so, and there were several pagan uprisings from the late tenth century until the early twelfth century; on a number of occasions churches were burned, priests murdered, and Christian ruling families expelled by their pagan foes. Renewed efforts in the 1120s by Archbishop Adalbero of Bremen (1123–1148) to Christianize the Abodrites also failed, and soon the princes forbade all missionary activities in their lands. Then in 1147, during the Second Crusade, Saxons and Danes took part in a campaign against the Abodrites and other Slavic peoples, an enterprise approved by Bernard of Clairvaux and sanctioned by Pope Eugenius III. Henry the Lion, duke of Saxony, was in overall command of the Saxon crusaders. Even though he and his followers agreed to leave the Abodrite lands after a crushing

defeat of the Danish crusader army, the crusade of 1147 marks a turning point in relations between the West and the Slavs: from that point the Abodrite lands were a target area for Saxon expansion and intense Christianization.

In 1159 King Valdemar I of Denmark (1157–1182) complained to Henry the Lion that the Slavs kept raiding the coasts of his realm, and so in 1160 Henry attacked the Abodrites once again, devastating parts of their territories with support from Valdemar. The Abodrite princes became vassals of the Saxon duke and nominally accepted Christianity. However, it was only after the Danish conquest of the island of Rügen in 1168 that the princes seem to have succeeded in extending Christianity throughout their lands by founding churches and monasteries. Now largely Christianized, and becoming increasingly Germanized, the Abodrite lands were integrated into the German kingdom as the duchy of Mecklenburg.

Absalon of Lund (d. 1201)

Archbishop of Lund and primate of the Danish church (1177–1201).

Absalon was born around 1128 into the Danish nobility. After studies in Paris, he became bishop of Roskilde (1158–1192), and he continued to occupy this bishopric in a legally questionable double episcopacy even after becoming archbishop of Lund.

As a stalwart supporter of King Valdemar I of Denmark (d. 1182), Absalon played a vital role in attempts to secure and enlarge the Danish realm by attacking the pagan Wends on the southwestern coasts of the Baltic Sea. The chronicler Saxo Grammaticus, whose *Gesta Danorum* is partly a eulogy of Absalon, describes about ten expeditions between 1158 and the conquest of Rügen in 1168, all of which saw Absalon in a leading role. The island of Rügen was incorporated

Acciaiuoli Family

into Absalon's bishopric of Roskilde, and thereafter Danish crusading activities targeted Pomerania. Two Cistercian houses were established in this area at Dargun and Colbatz in 1172–1174, probably on Absalon's initiative.

Absalon was a prominent member of the Danish royal council, and from 1170 he was joint head of the reorganized national coast guard. During the first ten years of the reign of Valdemar's successor, Knud VI (1182–1202), Absalon in effect functioned as the real ruler of Denmark. During this time further expeditions were undertaken against the nominally Christian Pomeranians, culminating in a victory over Bogislaw I, duke of Pomerania, in 1185. From 1191 Danish interest in the eastern Baltic region was renewed with crusades to Finland and Estonia, and support given to Albert of Buxhövdén, archbishop of Riga. From this period until his death, Absalon seems to have retired from active politics and warlike activities, leaving the governance of the Danish realm in the hands of the now adult King Knud VI and his brother and future king Valdemar (II), duke of Schleswig.

Acciaiuoli Family

A Florentine family of steel merchants and bankers, which rose to prominence in the fourteenth century at the Neapolitan court and in Frankish Greece. By tradition the family originated in Brescia and in 1160, following a dispute with Emperor Frederick I Barbarossa, moved to Florence, where it established itself in the Borgo Santo Apostolo. By the late thirteenth century, the Acciaiuoli were working with other banking families, such as the Bardi and Peruzzi, and came to prominence as the financial supporters of Charles I of

Anjou, establishing a bank in Naples sometime after he came to power there in 1266.

The Acciaiuoli Company's interest in Greece began when it made extensive loans to John of Gravina, who as younger brother of King Robert of Naples had been created prince of Achaia in 1322. The loans financed his expedition to the Morea and Epiros in 1325–1326, and in return the family received the fiefs of Lechaina and La Mandria in southwestern Greece. In 1334 the family passed these interests over to Niccolo (1310–1365), a member of a cadet branch of the family and soon to become its most distinguished scion as grand seneschal of Naples and a friend of Boccaccio and Petrarch; he also endowed the monastery of the Certosa outside Florence where he is commemorated in a magnificent tomb and frescoes. About 1335 Niccolo went to the court of Robert of Naples, where he became a close adviser (and rumored lover) of Catherine of Valois and tutor to her sons. He accompanied Catherine on an extended visit to the Morea (1338–1341). The visit was funded by loans from the Acciaiuoli Company, and Niccolo received many grants of land in the Morea, including the barony of Kalamata. In 1358 he was granted the town and castle of Corinth by his former tutee and now prince of Achaia, Robert of Taranto. On his death in November 1365, he left substantial interests in Greece, which were exploited by other family members.

Niccolo's adopted nephew Nerio Acciaiuoli became lord of Corinth by 1367 and from this base set about extending his territories at the expense of his Catalan neighbors in the duchy of Athens, seizing Megara, Thebes, and Neopatras. Finally, in 1388 Nerio was able to capture the Akropolis at Athens from his erstwhile Navarrese allies and make himself duke of Athens. Nerio worked with Theodore Palaiologos, despot of Morea (1380/1381–1407), to mount a concerted opposition to the Turks, and gave his eldest daughter, Bartolomea, in marriage to Theodore. In the same year, he married his second daughter, Francesca, to Carlo Tocco, lord of Cephalonia. Nerio died on 25 September 1394, leaving Corinth to his Tocco son-in-law. Athens he left to the clergy of the church of St. Mary on the Akropolis under the protection of Venice. His illegitimate son by his Greek mistress Maria Rendi, Antonio, was made lord of Thebes and Livadhia. In 1402 Antonio seized Athens from the Venetians and ruled there as duke until his death in 1435. The duchy was then divided between the grandsons of his uncle Donato: Nerio II (1435–1451) and Antonio II (d. 1441).

On Nerio II's death, his infant son Francesco I (Franco)

succeeded him with his mother Chiara Giorgio of Boudonitza as regent. They were forced to recognize Ottoman suzerainty as a condition of a peaceful succession. In 1452 Chiara married the Venetian Bartolomeo Contarini, whose high-handed behavior led to complaints from the Athenians to Sultan Mehmed II. In 1454 the sultan summoned Contarini and Francesco I to Istanbul, where he ordered their deposition. Francesco I was not heard of again. The sultan replaced him with Francesco II, the son of Antonio II, who had been brought up at the Ottoman court, where he was conveniently at hand in 1454. In 1456 the Turks occupied central Greece. Francesco II was deposed as duke of Athens in 1458 and became an Ottoman pensioner, with the title lord of Thebes. He was murdered in 1460 on the orders of Sultan Mehmed II. Thus ended the line of the Acciaiuoli in Greece.

Other relatives held important ecclesiastical positions in Greece, serving as archbishops of Patras (1360 and 1394–1400), archbishop of Thebes (1428–1450), and bishop of Kephallonia (1427–1445). The family also produced three cardinals: Angelo (1349–1409), Nicola (1630–1719), and Filippo (1700–1766).

Achaia

A Frankish principality in southern Greece established after the overthrow of the Byzantine Empire by the Fourth Crusade (1202–1204). The French nobles William of Champlitte and Geoffrey I of Villehardouin undertook the conquest of

the Peloponnese peninsula (known in the medieval period as the Morea) in 1205; the principality founded by them reached its greatest territorial extent and influence in 1258. However, following the capture of Prince William II of Villehardouin at the battle of Pelagonia (1259) and the subsequent cession of Mistra, Monemvasia, and Maina in order to secure his release (1262), Achaia continued to lose territory to the Byzantine despotate of Mistra. With the loss of Patras in 1429, it disappeared completely from the political map of medieval Greece.

Late in 1204 Geoffrey I of Villehardouin, nephew and namesake of the chronicler of the Fourth Crusade, was forced to winter in Modon as he traveled from the Holy Land to rejoin the forces of the Fourth Crusade at Constantinople. There he learned of the ease with which the Peloponnese might be conquered. Early in 1205 he sought out his friend and neighbor William of Champlitte, who was with the army of Boniface of Montferrat, then besieging Nauplia. With Boniface's agreement, and accompanied by 100 knights and 400 sergeants, William and Geoffrey set out to conquer the Peloponnese.

There are two principal sources for this campaign: the chronicle of Geoffrey of Villehardouin (the Marshal), uncle of Geoffrey I, and the French, Greek, and Aragonese versions of the *Chronicle of the Morea*; they give slightly differing accounts of the thrust and objectives of the conquerors and of the fighting involved. It is generally accepted that the Frankish army left Corinth and moved through Achaia and Elis to Messenia, securing what ports it could on the way. There were sieges at Patras, Kyparissia, Coron, and Kalamata, but only one pitched battle: this was against a force of Epirote Greeks at Koundoura and resulted in a decisive Frankish victory.

The sources agree that the conquest was swift and all emphasize the conciliatory approach of the conquerors toward the majority Greek population. The Greek *archontes* (magnates) in the region were assured of their status, property, inheritance customs, and the free practice of the Greek Orthodox faith. On this basis they seemed to have been prepared to accept Frankish overlordship and even to cooperate with their conquerors. William of Champlitte distributed lordships to his principal followers and was addressed by Pope Innocent III in a letter of 19 November 1205 as *princeps totius Achaie provinciae* (prince of the entire province of Achaia). In 1206/1207 a Latin bishop was installed in Modon and a new diocese at Andravida was created at the

Achaia

The Principality of Achaia

instigation of Champlitte. Yet in all this it is easy to overlook the fact that the conquest was still partial. The Greek garrisons at Corinth and Argos held out against the Franks until 1210 and 1212, respectively, and the Skorta region in the southeast of the peninsula was not reduced until the 1250s.

In 1208 William of Champlitte returned to France, where he died by early 1209. His partner in the conquest, Geoffrey I of Villehardouin, was acknowledged as prince of Achaia by Henry, the Latin emperor of Constantinople, at the parliament of Ravennika in May 1209. The following month he was also recognized by the Venetians in the Treaty of Sapienza, which confirmed their rights to the towns of Modon and Coron in the southwest of the Peloponnese. In 1210 Geoffrey I brought his wife and family from Champagne and subsequently captured Corinth (1210), Nauplia (1211), and Argos (1212) and extended his rule over Arcadia and Laconia. Castles played an important role in the holding of his conquests, which might indicate that not all was such plain sailing as might be implied by the *Chronicle of the Morea*. To defray the cost of the construction of one of these castles, Chlemoutsi (Clermont), Geoffrey seized ecclesiastical property; he was excommunicated by Pope Honorius III, a situation that was settled in 1223. This gives us the one secure date for the construction of any of these castles of the conquest period.

Geoffrey I returned to France in 1228, leaving the succession in Achaia to his two sons Geoffrey II (1228–1246) and William II (1246–1278). During these years, Achaia emerged as the dominant power in Frankish Greece. Its rulers provided military, naval, and financial support for the Latin emperors in Constantinople. They married into the ruling family of the Latin Empire and the higher Frankish and Greek families of the Morea. The culture and chivalry of their court were widely known in Western Christendom, and William joined the Crusade of Louis IX to the East in 1249–1250. Soon afterward he completed the conquest of the Peloponnese with the capture of Monemvasia and the Skorta region and the erection of castles at Mistra, Maina, and other sites in the Taygetos Mountains. The year 1258 and his victory over the lords of Athens and Thebes represented the high point of the fortunes and aspirations of the principality.

In 1259 William allied himself with Michael, ruler of Epiros, against the Empire of Nicaea. His defeat and capture at the battle of Pelagonia led to the destabilizing of the principality. In 1261, in return for his liberty, he was forced to concede Mistra, Monemvasia, and Maina to Michael VIII

Palaiologos, ruler of the restored Byzantine Empire. Thereafter, the principality was subject to continual wars and raids as it sought to reassert control of the Peloponnese; during this period, the princes appealed to outside interests in the hope of stopping the Greek reconquest.

The first such power was the Angevin dynasty of Naples, which had broader interests in attacking the Byzantine Empire. By the Treaty of Viterbo (24 May 1267), Prince William II ceded the principality to Charles I of Anjou, king of Naples, while retaining a life interest in his realm. The treaty was accompanied by a marriage agreement whereby William's daughter Isabella would marry Charles's son Philip of Taranto, who would succeed William and thus create rulers of the Morea with Villehardouin blood and powerful backing in the west. In June 1270 Charles sent a delegation to the Morea to receive oaths of loyalty from the principal baronage, and on 28 May 1271 the marriage took place in Trani. Philip died in 1277 leaving no heirs, and when William himself died on 1 May 1278 the title to the principality passed to Charles of Anjou. The Angevins ruled the Morea through a series of *baillis* (regents) with limited success until 1289, when the marriage of Philip's widow Isabella to Florent of Hainaut provided a resident prince of Achaia. Florent was popular in the Morea and successfully resisted the Byzantines and reasserted Villehardouin claims to suzerainty in Greece. He died unexpectedly in January 1297, leaving a widow and a three-year-old daughter, Mahaut, who was betrothed to Guy II, duke of Athens.

During the late 1290s, Angevin interests were turning to Epiros, and the principality was increasingly involved in Epirote affairs rather than its own defense. In 1301 Isabella married Philip of Savoy, and the couple were invested with the principality despite severe misgivings on the part of the Angevins as to the support Philip would provide in their wider interests. Charles II of Anjou deposed Philip after he lost the confidence of the Moreote barons and invested his own favorite son, Philip of Taranto, with the principality. In June 1306 Philip of Taranto made his only visit to Greece to campaign against the Greeks of Mistra. Before his return to southern Italy, he appointed Guy II of Athens (d. 1308) as his *bailli* in the Morea. Isabella maintained the claim that she and her husband had to the principality from Hainaut, where she died in 1311.

On 29 July 1313, a series of marriages took place that were orchestrated by the Angevins of Naples and designed to settle and reinforce Angevin ambitions in the Aegean. One of

these marriages was that of Mahaut, daughter of Isabella of Villehardouin and widow of Guy II of Athens, to Louis of Burgundy, who now became prince of Achaia. In 1314 Ferrando of Mallorca married Isabella of Sabran, first cousin to Mahaut and the daughter of Isabella's sister Margaret. In the summer of 1315, he landed at Glarenza to claim the principality in right of his wife. By August 1316 two battles had been fought between the claimants in the Morea, and both were dead. The territory of the principality had shrunk to the western coastal strip; Messenia was in Venetian hands, and the Byzantines held the rest.

In January 1322 King Robert of Naples granted the principality to his younger brother John of Gravina. This sixth Angevin proposal for the government of the Morea was the first that did not involve a Villehardouin descendant. Mahaut was imprisoned in Italy, where she died in 1331, bringing to an end the line of the Villehardouins of Achaia. In December 1332 John exchanged Achaia for Durazzo (Dyrrachion) and the title to the kingdom of Albania. The other party in this exchange was John's sister-in-law Catherine of Valois, the titular Latin empress of Constantinople and widow of Philip of Taranto, the former prince of Achaia.

Lords (1205–1260) and Princes of Achaia (1260–1432)

William I of Champlitte	1205–1209
Geoffrey I of Villehardouin	1209–1228
Geoffrey II of Villehardouin	1228–1246
William II of Villehardouin	1246–1278
Charles I of Anjou	1278–1285
Charles II of Anjou	1285–1289
Florent of Hainaut	1289–1297
Isabella of Villehardouin	1289–1307
Philip of Savoy	1301–1306
Philip of Taranto	1307–1313
Louis of Burgundy	1313–1316
Mahaut of Hainaut	1313–1318
Robert I of Naples	1318–1322
John of Gravina	1322–1332
Catherine of Valois	1332–1346
Robert of Taranto	1346–1364
Philip of Taranto	1364–1373
Joanna I of Naples	1373–1381
James of Les Baux	1381–1383
Peter of San Superan	1396–1402
Centurione II Zaccaria	1404–1432

Between November 1338 and June 1341, Catherine was in Achaia with her two sons and her close adviser Niccolo Acciaiuoli. Despite their best efforts, the situation in the Morea continued to deteriorate, and the principality became effectively reduced to a small area in the northwest of the Peloponnese. As princes of Achaia, Catherine's sons ruled through *baillis* and did not visit the Morea: Robert died in 1364, and Philip in 1373. The title then passed to Joanna I, queen of Naples, whose claim was disputed by James of Les Baux, the nephew of Philip of Taranto and titular Latin emperor of Constantinople. James remained in Taranto but hired Navarrese mercenaries to enforce his claims in Greece. Yet a resident prince, rather than a titular ruler, was required, as Turkish raids intensified and Byzantine military pressure was maintained.

Attempts to interest the house of Mallorca and the Hospitallers in the defense of the Morea during the 1370s proved abortive, as both found the defense and resuscitation of the principality of Achaia a task beyond their resources. Effective control passed to the Navarrese Companies, whose commander, Peter of San Superan, became captain and vicar general of the principality of Achaia (1386); he declared himself hereditary prince of Achaia (1396–1402) in the absence of any viable Angevin claimant, a title that was confirmed by King Ladislas of Naples and by Pope Boniface IX. His wife, Maria Zaccaria, took the title of regent until 1404, when she passed the claim to the principality to her nephew Centurione II Zaccaria, who became the twenty-first and last prince of Achaia, which was finally lost to the Byzantines in 1432. In 1460 the Peloponnese was conquered by the Ottoman Turks.

Acre

Acre (mod. 'Akko, Israel) was the main port of the Latin kingdom of Jerusalem after its capture by King Baldwin I in 1104. After four years of Muslim occupation (1187–1191),

the city was the capital of the kingdom until its fall to the Mamlūks in 1291. Acre formed part of the royal demesne, although from 1231 to 1242 it experienced self-government when it was ruled by a body including both noblemen and burgesses opposed to Frederick II, Holy Roman Emperor and regent of the kingdom of Jerusalem.

Acre's Muslim population was massacred soon after the crusader conquest, and there was no permanent Muslim community throughout the Frankish period, although a few Muslims resided there for some years. Most of the city's Eastern Christians and Jews apparently remained in the city after the conquest, but Frankish settlers rapidly became the dominant group within the population. By the second decade of the twelfth century, the city was the major Levantine destination of crusaders, Western immigrants, and merchants, and the exclusive port for pilgrims. The city's multiple economic functions as market and transit station

Capture of Acre by Richard I of England and Philip II of France. (Library of Congress)

Castle and moat of Acre. (Library of Congress)

offering logistical support to these groups fostered its economic and demographic growth.

The urban configuration inherited from the Fāṭimid period was largely maintained, despite some large-scale construction in the Frankish period. The city had an irregular layout within the wall protecting it on its northern and eastern flanks and lacked a center. Its artificial harbor, protected by two breakwaters, opened to the south into the Bay of Acre. The harbor remained unchanged during the Frankish period, despite the constant increase in maritime traffic. It could accommodate many ships, yet by the late twelfth century large vessels had to anchor in the bay, from which barks conveyed passengers and goods to the shore. By 1169 the Hospitallers had apparently built a large structure along the northern city wall, and the Templars had an even larger one in the southeastern corner of the city. The two military

orders enlarged their possessions in Acre by acquisitions and exchanges of real estate. However, their property lacked a quasi-extraterritorial status, in contrast to that granted by successive kings to the quarters belonging to Genoa (1104), Venice (1110), and Pisa (1168). The citizens of these maritime powers resident in Acre tended to live in their respective national quarters, which also offered accommodation to merchants and pilgrims.

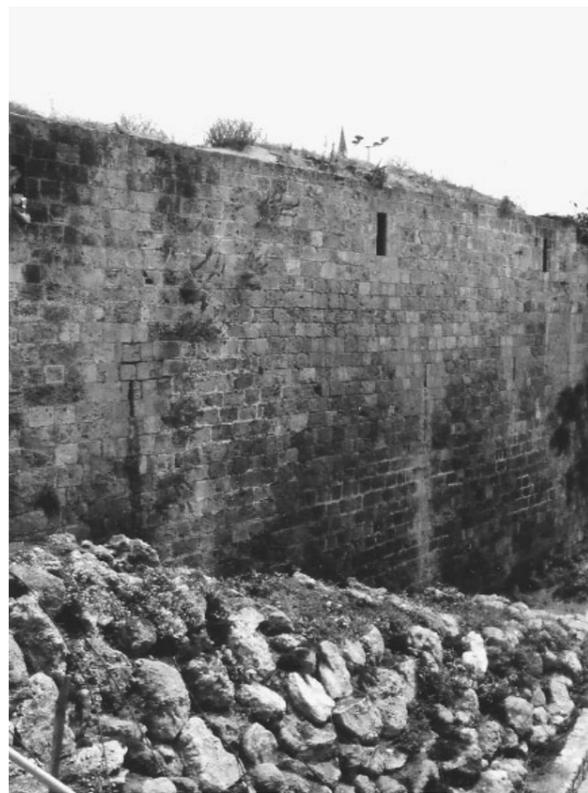

Acre reached the peak of its development between 1191, when it was recaptured by the Christian forces of the Third Crusade (1189–1192), and 1291, when it fell to the Mamlūks. During that century it replaced Jerusalem as the political, ecclesiastical, cultural, and artistic center of the kingdom, taking advantage of the growing Mediterranean trade. At the time of Saladin's conquest in 1187, there was still vacant space within the urban wall, yet this was no longer sufficient after 1191. The large-scale relocation of population from territories remaining under Muslim rule generated the rapid growth of a new suburb, called Montmusard, to the north of the Old City. The arrival of further individual refugees, the royal court and administration, and the Latin patriarch of Jerusalem and other ecclesiastical institutions, along with Western immigration, furthered the expansion of construction in the suburb. Between 1198 and 1212, Montmusard was enclosed along its northern and eastern flanks by two walls separated by a barbican, and the outer wall was extended in order to reinforce the defense of the Old City. After 1191 Marseilles obtained a quarter of its own, while the Teutonic Order, established in 1198, also acquired property in that urban region. The Order of Thomas of Canterbury was transferred in 1227–1228 to Montmusard, and new ecclesiastical and charitable institutions were established there. The Hospitallers, who enlarged their compound by massive construction until around 1235, were compelled by lack of space (around 1250 or somewhat later) to erect a large building in Montmusard to house the conventual brothers. Eventually the Old City became densely built up, yet the distribution of population within its walls was uneven. Close to the harbor, the royal quarter of the Chain, named after the chain that protected the harbor, had the heaviest concentration of inhabitants. By contrast, Montmusard was never completely built up and retained a semirural character. Two sets of maps, the models of which were drawn around 1320, reflect the urban configuration of Acre shortly before 1291.

Commercial life was concentrated in the Old City. The large-scale privileges and autonomy enjoyed by the maritime

powers did not exempt their citizens and their goods from the regular inspections carried out upon arrival or departure at the royal customs. The land toll station (Fr. *fonde*) was situated on the eastern side of the city. It controlled the passage of goods between the city, its rural hinterland, and emporia under Muslim rule such as Damascus. The maritime toll station was located within the royal quarter of the Chain. Eastern Christians served in both these offices. Especially in the *fonde*, they contributed in large measure to the continuity of the Fāṭimid commercial taxation system, although the latter underwent changes in the Frankish period. The main urban arteries joined the harbor to the royal *fonde*, and these installations to the Italian quarters.

The influx of immigrants from the West after 1191 enhanced the multi-ethnic and multilingual character of Acre's society. The Frankish population included speakers of French and Occitan (Provençal), in addition to a mercantile component of overwhelmingly Italian origin, mainly concentrated in the Genoese, Venetian, and Pisan quarters. These maritime powers established and consolidated permanent governmental institutions in their respective quarters after 1191. They strongly resisted the attempts of Acre's bishops to extend their authority over ecclesiastical bodies in their respective quarters. Their governmental and ecclesiastical institutions enhanced "national" attitudes. In addition, numerous ecclesiastical and charitable institutions acted as focuses of collective identity based on common origin or language for other settlers and pilgrims. Thus the Teutonic Order, established in the Old City, presumably attracted German speakers, while the northern tip of Montmusard was known as the English neighborhood. The Eastern Christians (called Syrians by the Franks) were divided among several religious communities, each of which retained its own churches and monasteries. The number of these institutions was small compared with the Latin ones, yet the location of several of them in Montmusard implies an influx of Eastern Christians after 1191. Some of them were attracted by economic opportunities, while others were presumably refugees, mostly from Frankish territories conquered by the Muslims in 1187 or in the thirteenth century, or else from Syrian cities threatened or attacked by the Mongols around 1260. Contrary to past claims, there was no official residential segregation between Franks and other inhabitants in Acre.

In the thirteenth century, the rivalry in the Mediterranean between the three major Italian maritime powers several

Walls of Acre, probably of Mamlūk or Ottoman construction. (Courtesy Alfred Andrea)

times led to warfare in Acre. Pisa and Venice built walls surrounding their respective quarters, and Genoa fortified the entrances to its own. In addition, the compounds of the Hospitallers and the Templars became self-contained urban entities clearly separated from their surroundings. As a result the Old City witnessed the physical partitioning of its space in the course of the thirteenth century. The so-called War of St. Sabas (1256–1258), the most severe clash between the Italian maritime powers, inflicted heavy damage upon Acre. The victory of Venice and Pisa over Genoa put an end to the existence of the Genoese quarter and community in the city.

The heterogeneous composition of Acre's population was mirrored by its hybrid material culture. Frankish buildings in Acre displayed the major trends in Western contemporary architecture and monumental sculpture and the passage from Romanesque to Gothic, as evidenced by the various

Acre, Siege of (1189–1191)

stages of construction in the Hospitaller compound. The presence of a Frankish clientele in the Levant and the constant stream of Western visitors called for commercial book production and the copying of popular historical and fictional works. The contribution of Eastern ecclesiastical institutions and communities in Acre to painting, the minor arts, and crafts has been underestimated so far. Icons, painted panels, and other devotional objects were certainly important, yet also many artifacts and mementos reflected Eastern culture and the artistic traditions of the Levant and regions further east. Their production, a major branch of the urban economy, was especially geared toward the numerous pilgrims, who were mostly from the West but also included Eastern Christians visiting Acre. Everyday life in the city was continuously reshaped by the dynamic interaction between its various communities, with their respective attitudes, culture, and artistic traditions, and by their collective encounter with a large transient population.

The geopolitical conditions resulting from the First Crusade (1096–1099) and the Christian conquest of Acre created a unique conjunction of favorable factors, which account for the city's development in the twelfth and thirteenth centuries. These factors were abruptly eliminated by the fall of the Frankish states in 1291, after which the city lay in ruins for several centuries.

Acre, Siege of (1189–1191)

The siege of Acre (mod. 'Akko, Israel) was the determinative military action of the Third Crusade (1189–1192). The Muslim leader Saladin had captured and garrisoned the port city in the aftermath of his great victory at Hattin in 1187. Guy of Lusignan, king of Jerusalem, was released from captivity in 1188 and began collecting forces from among the Franks of Jerusalem and new arrivals from the West. In August 1189 Guy marched to Acre and set up camp on the hill of Toron to the east of the city. Saladin marched to Acre's relief but was unable to either dislodge Guy or prevent fleets bringing reinforcements from all over western Europe. The Christians dug a double line of ditches across the Acre peninsula, protecting themselves from both Saladin's field army and the city garrison. A long struggle of attrition ensued, a combination of naval blockade, artillery duel, and trench warfare. Twice Egyptian galley fleets broke through, only to be immobilized in the harbor, their crews needed to man the walls. The remnant of the German expedition arrived in October 1190, that of Philip II Augustus of France in April 1191, and that of Richard I of England on 8 June. Early in July sections of the wall were brought down by mining.

Forced to stay permanently at arms and fearing the consequences if Acre were taken by storm, the heroic but now exhausted garrison surrendered on 12 July. They were to be ransomed in return for 200,000 dinars, the release of 1,500 prisoners held by Saladin, and the restoration of the relic of the True Cross, all to be handed over by 20 August. As the banners of the kings of France and England were raised over Acre, so too was the standard of Leopold V, duke of Austria, leader of the small German contingent. Richard's soldiers tore it down, as neither he nor Philip had any inten-

tion of letting Leopold claim a share of the booty. By 20 August Saladin had not paid even the first installment of the ransom; perhaps he could not, perhaps he was trying to delay things. The crusaders wished to advance toward Jerusalem and could not afford to leave 3,000 prisoners behind in Acre. In the afternoon the captives were slaughtered, only the garrison commanders being spared. According to the chronicler Ambroise, the Christian soldiers enjoyed the work of butchery.

For Saladin the loss of the city and the Egyptian fleet was a heavy blow. For nearly two years the siege gripped the attention of both Muslim and Christian worlds; Western contemporaries compared it to the siege of Troy. The fact that Saladin himself remained nearby throughout the siege demonstrates its importance in his eyes. Its outcome made possible the century-long survival of the coastal rump of the kingdom of Jerusalem.

Acre, Siege of (1291)

The siege of Acre (mod. 'Akko, Israel) by the Mamlūks of Egypt, lasting from 5/6 April to 28 May 1291, resulted in the Muslim conquest of the city and brought about the end of the Latin kingdom of Jerusalem.

Following an attack by Italian crusaders on the Muslim population of Acre in August 1290, the Egyptian sultan Qalāwūn repealed a ten-year truce that had been concluded with the kingdom in 1283 and moved against Acre, but died shortly after he had left Cairo (10 October 1290). His son al-Ashraf Khalīl arrived before Acre on 5 April 1291 with a large army. Acre had 30,000–40,000 inhabitants, who were joined in the defense of the city by 700–1,200 knights and 14,000–18,000 infantry, including the Italian crusaders, members of the military orders, and 200–300 knights brought in later by Henry II, king of Cyprus and Jerusalem.

The Mamlūk forces were considerably larger, and had many siege machines of varying sizes.

The siege began on 6 April. On its western and southern side, Acre was protected by the sea, the Templar castle at the southwestern point, and the harbor fortifications. The northeastern walls around the suburb of Montmusard were guarded by Templars and Hospitallers. The northeastern point and the eastern walls were defended by the troops of the kingdom commanded by Henry's brother Amalric of Lusignan, an English contingent led by Otto of Grandison, a French contingent under John of Grailly, and troops of Venice, Pisa, and the commune of Acre. The Mamlūks concentrated their attacks on the St. Anthony's Gate complex linking Montmusard with the old city and on the northeastern point, which was fortified by a barbican (King Hugh's Tower) and a tower (King Henry's Tower) at the outer wall and another tower (the Accursed Tower) at the inner wall.

Sorties by the Templars and Hospitallers in mid-April failed, resulting in heavy Frankish casualties. King Henry arrived at Acre on 4 May with reinforcements and asked for a truce, which Khalīl declined. On 8 May, King Hugh's Tower had to be abandoned. King Henry's Tower and parts of the outer wall collapsed on 15 May. The following day, as the Muslims attempted to storm the city, they were fended off by a sortie of the Hospitallers under the marshal Matthew of Clermont. On 18 May, the Mamlūks attacked the fortifications between St. Anthony's Gate and the Accursed Tower with full force and managed to enter the city. There were insufficient vessels for the inhabitants to escape by sea. The Templar Roger Flor supposedly sold the space on a galley he had seized for outrageous sums of money. King Henry, his brother Amalric, Otto of Grandison, John of Grailly, and the Hospitaller master John of Villiers escaped to Cyprus. The patriarch of Jerusalem, Nicholas of Hannapes, drowned after he allowed so many refugees on his boat that it sank. The Templar master William of Beaujeu and the Hospitaller marshal were killed fighting against the onrushing Mamlūks.

Those unable to escape found refuge in the Templar castle, and were offered unhindered retreat in exchange for its surrender. On 25 May, Muslim troops entered the castle to supervise the Franks' departure, but as they supposedly molested the Frankish women and children, they were killed by the Templar garrison. When the marshal Peter of Sevrey went to Khalīl to explain the incident, he was seized and beheaded. Meanwhile, the Muslims had undermined the

Adela of Blois (d. 1137)

castle walls, which collapsed on 28 May, ending the siege. The fall of Acre marked the end of the Frankish states in Outremer. The Mamlūks' systematic destruction of Acre and other coastal cities made any future return of the Frankish population unviable.

The main sources for the siege of Acre are the *Gestes des Chiprois*, the anonymous *De excidio urbis Acconis*, and the works of Thaddaeus of Naples, Marino Sanudo, Abu'l-Fidā', al-Jazarī, and al-Maqrīzī.

Adela of Blois (d. 1137)

Wife of the crusader Stephen (Stephen-Henry), count of Blois, and recipient of two surviving letters sent by her husband in the course of the First Crusade (1096–1099).

A daughter of William I, king of England, Adela was probably born between November 1067 and May 1068. Around 1083 she wed Stephen (originally named Henry), the designated heir to the counties of Blois, Chartres, and Meaux, who was some eighteen to twenty years her senior. Already a mother when her father-in-law died (1089), the young countess exercised comital lordship alongside her husband and was well placed to rule in his stead when he joined the First Crusade. As Stephen admitted in the second of the two extant letters he sent from the East, Adela underwrote that venture, doubtless by tapping the liquid assets she had received in dowry. The language and content of those letters speak both to the mutual trust and affection the couple had developed and to the count's confidence in his wife's capacity to rule. Any plans to entrust one of their five sons to Alexios I Komnenos (a possibility transmitted by Stephen) came to naught once the emperor's reputation plummeted in the West.

When Stephen returned to France with his reputation shaken, having left the crusade at Antioch (mod. Antakya, Turkey), Adela advised him to complete his pilgrimage to Jerusalem, if only to avoid excommunication. She resumed

her role as regent at the close of 1100, when Stephen (now in his early fifties) set out for the Holy Land at the head of a large host. Late in 1103, returning clerics well-known to the couple, such as Stephen's chaplain Alexander and Bishop Ingelran of Laon, confirmed Stephen's heroic death at the second battle of Ramla (May 1102); the countess, publicly affirming her status as a ruling widow, made a spate of bequests for his soul. Most significantly, she dedicated their youngest son to God at Cluny's priory of La Charité-sur-Loire, where the recently freed Odo Arpin, who had fought alongside Stephen in 1102, soon became prior.

After assisting her brother Henry as he worked to supplant Robert Curthose as duke of Normandy, in the spring of 1106 Adela hosted lavish nuptial celebrations for Bohemund I of Antioch and her former sister-in-law Constance "of France," during which Bohemund, mounting the pulpit of Chartres cathedral, outshone the legate, Bruno of Segni, as a preacher of crusade. Ironically, circulating at the time was a reworked version of the anonymous *Gesta Francorum*, which, in order to strengthen Bohemund's claims to Antioch, added damning attacks on Stephen, who had been largely favorable to Alexios. However, those to whom the count was well-known, such as Guibert of Nogent, Baldric of Dol, and Robert the Monk, were prompt to deflate such rhetorical recourse to invective. The next year (1107), Adela substituted her son Thibaud for William as their father's designated heir, generously assisted Pope Paschal II on his French tour, and prepared the way for her correspondent Baldric, abbot of Bourgueil, to be consecrated archbishop of Dol (1107).

Ruling until she took the veil at Marcigny (spring 1120), Adela proved a caring mother and able administrator, training her children (at least six, and possibly eight) for adult lives appropriate to their abilities and studiously increasing comital revenues in her husband's share of the Thibaudian family's domains. Most likely as prioress, she spent her final seventeen years securing her convent's domains, intervening in the counties she used to rule, and tracking the turbulent politics after Henry I's death that made her son Stephen king of England and duke of Normandy, with the help of his brothers Henry and Thibaud. Dying on 8 March 1137 and buried at Marcigny, Adela was commemorated widely across England and northern France.

Adelaide del Vasto (d. 1118)

Queen of Jerusalem (1113–1117) as third wife of King Baldwin I.

Born around 1075, Adelaide was a daughter of Manfred del Vasto (d. 1079), a member of the Aleramid dynasty of Liguria. After the death of her first husband, Count Roger I of Sicily (1101), she acted as regent for their sons Simon (d. 1105) and Roger II. In September 1113 she married Baldwin I of Jerusalem; the marriage brought a large cash dowry, but was contracted under the condition that if it produced no heirs, the kingdom of Jerusalem was to pass to Roger II on Baldwin’s death. With no heir having been born by the winter of 1116–1117, a serious illness of Baldwin raised the prospect of a Sicilian succession, and a section among the kingdom’s ruling class, led by the Patriarch Arnulf, forced the king to repudiate Adelaide, a move made easier by the fact that his second wife was still living. Adelaide returned to Sicily in April 1117, and died on 16 April 1118.

Adhemar of Le Puy (d. 1098)

Bishop of Le Puy and legate of Pope Urban II during the First Crusade (1096–1099).

Adhemar was born in France around 1045, the son of a nobleman from the Valentinois. He may have been a member of the cathedral chapter of Valence; he became known as an advocate of the Gregorian reform movement. About 1079/1080 he was elected bishop of Le Puy. Shortly after 1086, together with Raymond of Saint-Gilles, count of Toulouse, Adhemar called for reinforcements to fight in Spain against the Almoravid caliph Yūsuf.

Before Pope Urban II made his appeal for an expedition to the East at the Council of Clermont (27 November 1095), he had previously contacted Adhemar in the south of France and asked him to act as his representative with the status of legate (Lat. *legatus a latere*) to administer spiritual support to the crusaders on their expedition to Jerusalem. Adhemar took the cross at the conclusion of Urban’s crusade sermon at Clermont, and left for the East with Raymond of Saint-Gilles in October 1096.

By the time the crusade armies crossed into Asia Minor, Adhemar was recognized as their spiritual head. In addition, as the leading role of the Byzantine emperor in the crusade diminished, Adhemar increasingly came to figure as the military leader of the crusade. An encyclical letter to the West from Adhemar and the patriarch of Jerusalem, Symeon II, dating from the first weeks of the siege of Antioch (autumn 1097–June 1098), reported on the progress of the crusade and urged that all of those who had taken the cross but had failed to set out should be excommunicated unless they had fulfilled their vows by the following Easter. In all probability, Adhemar and Symeon discussed plans for the liberation of the Eastern churches. After the conquest of Antioch, Adhemar reinstated the Greek Orthodox patriarch, John IV Oxeites, and recognized his canonical authority over all clergy in his patriarchate, Latin as well as Greek. Adhemar’s early death on 1 August 1098 during an epidemic made him a near-legendary figure in the perception of his contemporaries. He was buried in the cathedral of Antioch. In 1125 his remains were translated back to a more splendid tomb at Le Puy on the initiative of his successor.

Adrianople, Battle of (1205)

A battle between the Bulgarians under their ruler, Kalojan, and an army of Franks under Baldwin I, the new Latin emperor of Constantinople, who was trying to suppress a revolt by the Greeks in Thrace.

Without waiting for the return of all the Franks then campaigning in Asia Minor, Baldwin led a small army (140 knights and their followers) from Constantinople (mod. İstanbul, Turkey), accompanied by Enrico Dandolo, doge of Venice, and Louis of Blois, duke of Nicaea, and joined up with a small force under Geoffrey of Villehardouin. The Frankish army took up a position outside Adrianople (mod. Edirne, Turkey) on 29 March 1205 but was able to blockade only two

gates and was very short of supplies. Kalojan arrived with a large army including 14,000 Cumans to help the besieged (13 April). The fighting on the first day (14 April) was inconclusive, but the crusaders suffered many losses when the Cumans feigned flight to draw their enemy into pursuit. That evening a war council issued strict orders that the army should await the enemy attack without moving. On 15 April the Cumans rode right up to the Franks’ lines, and, despite the agreed battle plan, Louis of Blois led his men in pursuit of them and called on Baldwin to follow. The Franks were picked off individually, and the battle ended in a disastrous defeat, with Louis dead and the emperor captive. The survivors joined the rearguard under Geoffrey of Villehardouin, who led a disciplined retreat to Rodosto.

The news of the battle provoked a mass flight of Latins from Constantinople (7,000 according to Villehardouin) and encouraged further revolts by the Greeks. The Latin Empire was seriously weakened by the loss of manpower and the interregnum, which lasted until news of the death of Emperor Baldwin in captivity reached Constantinople.

Aeneas Sylvius Piccolomini

See Pius II

Al-Afḍal (d. 1122)

Military vizier and effectively dictator of Fāṭimid Egypt (1094–1122).

A Muslim convert of Armenian origin, al-Afḍal was the son and successor of Badr al-Jamalī, whose military intervention in 1073 in the civil war that ravaged Egypt restored order in the country and kept the Fāṭimids in power. Al-Afḍal misjudged the aims of the First Crusade (1096–1099) and offered the crusaders cooperation against the Saljūqs. His military response to the advance of the crusaders on Jerusalem was slow, and the army he dispatched to Ascalon (mod. Tel Ashqelon, Israel) suffered a bitter defeat by the crusaders (12 August 1099).

In the wake of the defeat, al-Afdal introduced military reforms and incorporated Turkish military slaves into the Fatimid army. Under his rule Egypt enjoyed a period of stability and prosperity, but the privileged position of Ismā'ili Islam in the country was eroded. However, in 1122 al-Āmir, the ruling caliph, had al-Afdal assassinated and took the reins of power into his own hands.

King Afonso I of Portugal. (Hulton-Deutsch Collection/Corbis)

Afonso I Henriques of Portugal (c. 1109–1185)

First king of Portugal (1128–1185), best known for the capture of Lisbon from its Muslim inhabitants on 24 October 1147 with the aid of crusaders bound for the Holy Land.

The son of Henry of Burgundy (named count of Portugal around 1097) and Teresa, illegitimate daughter of Alfonso VI of Castile (1065–1109), Afonso Henriques was only five years old on the death of his father (1112). Following his mother's regency, Afonso began to exercise independent authority in 1128, styling himself king of Portugal after 1139. Four years later, he declared himself a liegeman of St. Peter, although the papacy did not formally recognize his kingship until 1179. During the 1140s Afonso worked to extend his authority into the Muslim-held regions south of the river Tagus. As part of his efforts, Afonso sought the support of the Templars, endowed by his mother with their first holdings in the region at Soure in 1128. The king's initial assault on Lisbon, made with the assistance of English ships in 1140 or 1142, was a failure, but in the spring of 1147 he captured the nearby town of Santarém in preparation for another assault on Lisbon.

Earlier that year, Afonso had exchanged letters with Bernard of Clairvaux, who may have sought support for his campaign while preaching in Germany and the Low Countries. It is not clear when Afonso became aware of the fleet of Anglo-Norman, Flemish, and German crusaders departing for the Holy Land from Dartmouth in England in May 1147. However, when the fleet arrived at Oporto, arrangements were made for a meeting outside Lisbon between

Afonso and the crusaders' representatives, who agreed to assist in an assault on the city. After months of siege, the Muslims surrendered to the Portuguese king on 24 October. Much of Afonso's subsequent reign was spent consolidating his gains and struggling against the Almohads. He died on 6 December 1185.

Afonso V of Portugal (1432–1481)

King of Portugal (1438–1481), known as “the African” (Port. *Afonso o Africano*) from his campaigns against Muslim North Africa.

The son of King Duarte of Portugal and Leonor of Aragon, Afonso was only six years old when his father died. The king's minority caused a conflict over the regency, which was controlled by a faction headed by his uncle, Prince Peter (1439), until the latter was finally overthrown and killed at the battle of Alfarrobeira (1449) at the hands of an army led by the king. The victory of the young monarch was contemporary with an attempt to relaunch the holy war against the Muslims of North Africa by promoting the writing of a chronicle describing the conquest of Ceuta (1449): this was the *Crónica da Tomada de Ceuta por El Rei D. João I* by Gomes Eanes de Zurara, which highlighted the crusading credentials of the Portuguese Crown by underlining the continuity of the campaigns in Africa with the peninsular Reconquest, and by stressing the presence of soldiers of several nations among the fighters. The same purpose also led the king to renew the memory of Prince Ferdinand, who had been martyred in Africa after the disaster of Tangier (1437), as well as the deeds of Prince Henry the Navigator in the conquest of the African coast.

The king's enthusiasm for holy war meant that he was receptive to proposals for a crusade against the Turks, advocated by his kinsmen Philip the Good, duke of Burgundy, and Frederick III, Holy Roman Emperor. By the end of 1455 the king declared his adherence to the project, taking his crusade vow on 25 July 1456, the feast day of St. James, the holy warrior and protector of the Iberian Peninsula. However, the failure of this initiative brought the king back to African projects, which culminated in the conquest of Alcacer-Ceguer (1458) and the campaigns against Tangier (1463–1464). In order to defend the Portuguese possessions in Africa, the king sought to gain the interest of the nobility and endorsed the writing of chronicles by Gomes Eanes de Zurara on the deeds of Pedro de Meneses and Duarte de Meneses, who held the cities of Ceuta and Alcacer-Ceguer in the name of the king. At the same time, he tried to make use of the men and resources of the military orders, by placing the administration of the Order of Christ under his own command and by obtaining two papal bulls (1456 and 1462), which obliged the military orders to build convents in Africa and to spend at least a third of their income there. The reactions of the Orders of Christ and Santiago were unfavorable to the king, since they obtained from Pope Paul II the revocation of the previous decisions (1464), while reminding the king that the military orders were founded to defend Portugal and not to fight in Morocco.

In spite of these adversities, the king continued his African campaigns with the conquest of Arzila and Tangier (1471), and developed a new interest in the western parts of Morocco, looting Casablanca (1468–1469) and taking control of Larache. It was only then that he finally abandoned his African plans. Responsibility for overseas policies was handed over to his heir, Prince John, while Afonso became involved in Castile's political crisis by making a claim to the throne of that kingdom (1474–1476). Unable to secure his rights, he traveled to France looking for an alliance with King Louis XI. While there he developed a desire to travel incognito on a pilgrimage to Jerusalem, which he never accomplished.

Africa

The Africa with which the crusaders were familiar stretched from Egypt to the Atlantic Ocean, divided between the Nile Valley to the east and the bloc of the Atlas to the west by the Sahara, which reaches the sea at the base of the Gulf of Syrtis. In the Middle Ages, Cyrenaica belonged as a rule to Egypt, while Tripolitania belonged to Ifriqiya. Ifriqiya, comprising Tripolitania, Tunisia, and eastern Algeria, was the former Byzantine province of Africa, which had become an independent state following the Arab conquest, with its capital at Qayrawān. By the middle of the eleventh century the former provinces of Mauretania in western Algeria and northern Morocco were occupied by a string of little Mus-

lim capitals of which the most important were Fès and Tlemcen, in the midst of a tribal Berber countryside. Ifriqiya enjoyed close relations with Muslim Sicily, while to the west the main connections were with Muslim Spain.

Together these lands formed the Maghrib, the Muslim West. They were bound together by routes running east and west, by land and sea, from Muslim Spain to Egypt. At various points these routes branched away southward across the Sahara to the *Bilād al-Sūdān* (Land of the Blacks). Exploited by North African merchants and the nomads of the desert, these Saharan routes brought gold and slaves from this largely pagan region. Within a predominantly rural Berber population, a literate Arabic population was centered on the cities. Under the rule of Islam, the native Christian population had been reduced to a small minority in the main cities and the oases of southern Ifriqiya, its five Roman bishoprics about to disappear.

The Crisis of the Eleventh Century

The middle of the eleventh century was a time of crisis. The dynastic state of the Zīrids in Ifriqiya disintegrated, while nomads from the Sahara captured both Fès and Tlemcen to found a new empire. The two events were not unconnected. The Zīrids at Kairouan owed their allegiance to the Shī'ite Fāṭimid caliphate in Egypt, but switched in 1048 to the Sunnī 'Abbāsīd caliphate at Baghdad. This was done to turn the tables on the Sunnī jurists who governed public opinion, on rebellious tribes in the south, and on their cousins the Ḥammādids in the highlands of Ifriqiya to the west. The attempt to build a new empire failed at the battle of Haydarān in 1052, when the Zirid army was ambushed by Arab Bedouin tribes of the Banū Hilāl, migrating into the country from the east. The Sultan Mu'izz ibn Bādīs was driven to take refuge in Mahdia on the Tunisian coast in 1057, and return to his Fāṭimid allegiance in 1058.

Over the next half century the Zīrid dominions were reduced to a collection of city-states and tribal lordships, while the Ḥammādids retreated from the highlands to their new city of Bejaïa (Bougie) on the coast. The countryside was occupied by the warrior tribes of the Banū Hilāl at the beginning of their expansion across North Africa to Morocco. Meanwhile the Sunnī jurists of Kairouan had inspired the mission of Ibn Yāsīn to the Berber tribes of the western Sahara, inciting them to form the Almoravids (Arab. *al-Murābiṭūn*), an army of believers "bound together" for an attack upon the enemies of Islam at home and abroad. Hav-

ing conquered the western Sahara in the 1050s, and taken control of the trans-Saharan trade from Sijilmasa in the north to Awdaghust in the south, the Almoravids crossed the High Atlas to found Marrakesh in 1070, and capture Fès and Tlemcen by 1085.

The outcome was a historic reversal of roles. Since the time of Carthage, the center of power in North Africa had lain, along with the center of civilization, in the far northeast. Roman power had mapped that civilization on the ground, confining the tribal Berbers (literally "the barbarians") to the mountains, or excluding them from the empire with the fortified line of the frontier. The Arabs had remained largely within this Roman boundary, simply substituting Kairouan for Carthage as their capital. But the Arabs' identification of the Berbers as a Muslim nation had opened the way to their entry into the new civilization, until the point at which the tribesmen of the desert, far beyond the Roman frontier, declared themselves the champions of that civilization. As Ifriqiya disintegrated, the Almoravid capital of Marrakesh in southern Morocco transferred the center of power in North Africa from the far northeast to the far southwest. There it remained for the next two hundred years, in the hands of peoples who had hitherto been beyond the pale.

The Empires of the Almoravids and Almohads

This destiny was assured, and its fate eventually determined, by confrontation with the Christian enemy in Spain and Sicily, where the second half of the eleventh century was equally critical. While the Normans slowly conquered Sicily between 1060 and 1095, the fall of Toledo to Castile in 1085 led to the invasion of Spain by the Almoravids; by the time of the death of their emir Yūsuf ibn Tāshfin (1105), Muslim Spain had been incorporated into his empire. The annexation of this highly civilized land in such a great cause gave that empire a grandeur and a substance that it otherwise lacked, and ensured the permanence of its achievement in North Africa. Under Yūsuf's son 'Alī, Marrakesh grew rich and cultivated in the Andalusian manner. But 'Alī himself was a pious prince, no warrior like his ferocious father. His government was fettered by the legalism of the jurists on whom he relied, while the Almoravids themselves remained foreign and unpopular. On both counts the Almoravids were challenged by yet another Berber prophet, Ibn Tūmart, a man from the Atlas to the south of Marrakesh, who formed the Berbers of the mountains into yet another militant Muslim community and army for the conquest of empire: the

Almohads (Arab. *al-Muwahhidūn*), “Unitarians” who proclaimed the Oneness of God.

The message of Ibn Tūmart was the opposite of that of Ibn Yāsin, the prophet of the Almoravids. He brought to the Maghrib the doctrine of the great revivalist al-Ghazālī, to the effect that the ramifications of the law elaborated by the Almoravid jurists of the Malikī school obscured the truth of the Qur’ān. In bringing this doctrine to the Berbers of the High Atlas, Ibn Tūmart declared himself to be the Mahdī, that is, the one sent from God with the divine light to restore the world to perfection. Denouncing the Almoravids at Marrakesh, he took refuge in the mountains to the south, where his community of regimented tribesmen was inherited after his death in 1130 by his chosen caliph, or successor, ‘Abd al-Mu’min. At the death of ‘Alī in 1142, Abd al-Mu’min opened a campaign that culminated in 1147 with the capture of Marrakesh and the massacre of its rulers. He then inherited their empire, and went on not only to recover but to enlarge it.

Not all of Muslim Spain submitted, and it was 1172 before his son finally reunited the country. ‘Abd al-Mu’min’s great achievement in the 1150s was to add Ifriqiya to the empire, and thus to unite the whole of North Africa. He did so as a man of destiny, with the added provocation of the occupation of the Ifriqyan coast by the Normans of Sicily. After the repulse of an attack upon Mahdia in 1123, the conquest of Ifriqiya took place between 1134–1135 and 1153–1154, beginning with the island of Jerba, going on to the Kerkenah islands and Tripoli (mod. Tarābulus, Libya) in 1145–1146, and ending at Bone (Annāba) in 1153–1154. It centered, however, on the capitulation of Mahdia in 1148, and the flight of the last Zirid sultan, Ḥasan, to Marrakesh. Only Tunis had escaped. After his conquest of the central Maghrib in 1152–1154, ‘Abd al-Mu’min came in 1159–1160 to take Tunis, drive the Normans from Mahdia, and annex the whole of Ifriqiya, which was reconstituted as a province of the empire with Tunis as its capital. What remained of native Christianity probably disappeared with the Normans. The unification of North Africa by the Islam of the Berbers was then complete, an achievement that survived the break-up of the empire in the middle of the thirteenth century.

Over such a distance from Marrakesh, Ifriqiya nevertheless remained a problem down to the eve of the empire’s decline and fall. For twenty years Almohad control was threatened by the last of the Almoravids, who invaded Ifriqiya from the Balearic islands in 1184, and by Qarāqush, one of Saladin’s *mamlūks* (slave soldiers) out to win a

dominion for himself in the west. A major expedition of the caliph al-Nāṣir was required to drive them down into the Sahara in 1205. Ifriqiya was then entrusted to one of the great Almohad princes, who finally defeated the Almoravids in 1209, and went on to found the Ḥafṣid dynasty at Tunis. This achievement, however, was almost immediately followed by the defeat of the Almohad army in Spain by the Christians at Las Navas de Tolosa (1212), which fatally undermined the power and authority of ‘Abd al-Mu’min’s dynasty. Its rule finally broke down after 1229 in conflict between the caliphs and the Almohad shaykhs. Spain was lost, while the establishment of the Marīnids at Fès confined the last of the dynasty to Marrakesh, until it too fell to the Marīnids in 1269. In 1236, the Ḥafṣid ruler of Tunis declared his independence, and in 1253 his successor claimed the caliphate, although neither was able to reconstitute its empire. Ifriqiya became a family dominion, with a second capital at Bejaïa. The Marīnids at Fès and the ‘Abd al-Wādids (Zayyānids) at Tlemcen divided Morocco and western Algeria between them.

The Later Middle Ages

The Marīnids and ‘Abd al-Wādids were both dynasties of nomadic Berber origin. From 1235, the latter turned Tlemcen into a capital that flourished on the transit trade in West African gold to Europe. The Marīnids at Fès, on the other hand, aspired with greater determination than the Ḥafṣids to re-create the old empire. At Fès they built a new citadel and a series of religious colleges to create an educated class of scholars in the tradition of the Mālikī school. Abroad, their imperialism dominated North Africa for the next hundred years. A series of expeditions to Spain between 1275 and 1285 was followed by a determined attempt to conquer Tlemcen between 1295 and 1307. The climax came in the middle of the fourteenth century, beginning with the capture of Tlemcen by the sultan Abu’l-Ḥasan in 1337, continuing with his defeat in Spain in 1340 and the loss of Algeciras in 1344, and culminating between 1347 and 1357 in successive invasions and retreats from Ifriqiya by Abu’l-Ḥasan and his son Abū ‘Inān. Disputed successions frustrated further adventures, and by the fifteenth century the Marīnid dominion had shrunk back to Fès. The power of the Ḥafṣids, by contrast, revived between 1394 and 1488 under two long-lived sultans, with the ironic result that under these heirs of the Almohads, the center of political gravity in North Africa returned to its former location in the northeast.

The best testimony to the interrelationship of the post-Almohad rulers of North Africa is that of the historian Ibn Khaldūn in the second half of the fourteenth century. A scion of the Spanish Muslim diaspora prompted by the Christian conquest of the greater part of Muslim Spain in the middle of the thirteenth century, he served all three dynasties in turn. At the same time he is the prime witness to the irony that under these great Berber dynasties, North Africa was being steadily Arabized. Partly this was because Arabic was the language of literacy; partly because of the prestige of an Arab and especially Sharifian genealogy, claiming descent from the Prophet himself; but increasingly because of the spread of a Bedouin Arabic vernacular across the countryside from east to west. This phenomenon was a consequence of the establishment of the warrior Arab tribes of the Banū Hilāl as an estate of the Almohad realm, joining the government of a *makhzan*, “magazine,” state of tax and rent collectors. Under this fiscal regime, poor Bedouin were forced into cultivation together with displaced or newly subjected peasants, forming new semitribal communities, frequently under some Sufi saint. With the population in flux, the old Berber languages shrank back toward the mountains where the Romans had confined their speakers. The Sufi saints, meanwhile, were colonists bringing the land under cultivation. Patronized by government, their residences grew into monastery-like ensembles of tombs, mosques, colleges, and hostels with important economic, social, and political functions. At the other extreme they were leaders of popular rebellions against fiscal oppression.

Relations with Europe

The commercial economy meanwhile profited from the growing markets of western Europe and the regions south of the Sahara. Manufactures, many from across the Mediterranean, were sent across the Sahara in exchange for slaves and gold, which then were largely exported to Europe, together with the produce of North Africa itself: wool (called Merino, from Marīnid), leather, and wax (from Bejaïa or Bougie, whence Fr. *bougie*, “wax candle”). Sea trade was in the hands of Italians and Catalans, as was sea power, except in the Strait of Gibraltar, kept by the Moroccan fleet until 1344. Commerce dictated generally good relations with Europe, governed by treaties that extended to churches for the Christian mercenaries employed at Tunis. North African piracy, however, was a major activity, and together with

Christian piracy contributed to intermittent hostilities. Ifriqiya in particular was once again exposed to invasion, first of all by King Louis IX of France in his crusade to Tunis in 1270, then by the Aragonese in Sicily, who for fifty years (1284/1285–1335) occupied Jerba and the Kerkennah islands. Piracy was the provocation for the brief recapture of Jerba by the Genoese and Pisans in 1388, and the siege of Mahdia by the French and Genoese in 1390.

In the fifteenth century the *Reconquista* (the Christian reconquest of Iberia from the Muslims) extended across the Strait of Gibraltar with the Castilian sack of Tetuan in 1399, and the Portuguese capture of Ceuta in 1415. As the Moroccan state weakened, Tangier, Arzila, and Larache were taken by the Portuguese in 1471, and Agadir, Agouz, Safi, Mazagan, and Azemmour further south on the Atlantic coast between 1505 and 1514; the motive was crusading zeal mixed with the commercial development of the route around Africa. Following the conquest of Granada in 1492, and the death of the last great Ḥafṣid sultan in 1488, the Spaniards took Melilla in 1497, and Mers el Kebir, Oran, Bejaïa, and Tripoli between 1505 and 1510, together with the Peñons, the offshore islets of Velez, Alhucemas, and Algiers; in their case, crusading zeal was specifically combined with defense against the piracy that their expulsion of the Moors from the peninsula had converted into a form of holy war. The outcome was the Ottoman conquest of the Ḥafṣid and ‘Abd al-Wādid dominions, and the creation of the Sharifian Empire of the Sa‘dians in Morocco, two revolutions that established the modern states of North Africa.

Ager Sanguinis, Battle of (1119)

A battle fought in the Ruj Valley (Syria) in 1119 between the Franks of Antioch, under Roger of Salerno, and a Turkish coalition led by the Artūqid leader ʿIlghāzī.

The name of the battle (*Ager Sanguinis* means “Field of Blood”) reflects its disastrous outcome for the Christian forces. The most detailed account of the fray was written by the chancellor of Antioch, Walter, who was an eyewitness to events. His account contrasts the defeat in 1119 with Roger’s successful campaign against the Turks in 1115, which had culminated in victory at Tell Danith. In 1119 ʿIlghāzī had collected a large army, said to have numbered 40,000, to attack Antioch as part of a campaign to secure Aleppo for himself. It is likely that Roger’s earlier success at Tell Danith had made him overconfident: although he appealed for help from King Baldwin II of Jerusalem and Count Pons of Tripoli when he heard of the threat, he did not wait for reinforcements to arrive, but on 20 June he led out the army of Antioch. ʿIlghāzī was informed by his scouts of the Antiochene army’s weakness, and he decided on an immediate attack. He surrounded the enemy camp and Roger was forced to give battle. Few of his knights escaped the slaughter, and Roger himself was killed.

The Christian prisoners of war were treated with brutality both on the battlefield and in Aleppo: most of them were

put to death in ways graphically described by Walter the Chancellor. However, the Turks did not follow up their victory as was undoubtedly expected. The principality of Antioch was effectively defenseless, with its army destroyed and its prince killed, but the Latin patriarch, Bernard of Valence, rallied the inhabitants and sent an urgent message to summon help from Baldwin II of Jerusalem. Meanwhile, ʿIlghāzī devoted himself to celebrating his victory, so much so (his detractors reported) that he became ill. This gave time for Baldwin to bring up his troops. He consulted Patriarch Bernard and Roger’s widow, Cecilia (Baldwin’s sister), and it was decided that the king of Jerusalem would act as regent of the principality during the minority of the acknowledged heir, Bohemund II, who was a boy of ten and still in Italy. Baldwin then brought the Turks to battle at Hab (1119); the outcome was ambiguous, but it ended the Turkish threat for the near future.

Agnes of Courtenay (d. c. 1185)

Daughter of Joscelin II, count of Edessa, and first wife of King Amalric of Jerusalem.

Agnes married Amalric (then count of Jaffa) around 1157, despite still being married to Hugh of Ibelin, lord of Ramla. When Amalric succeeded to the throne in 1163, opposition among the ruling class obliged him to divorce Agnes before his coronation, although their two children, Baldwin IV and Sibyl, were legitimized. Agnes remarried and withdrew from public life until Baldwin’s accession as king (1174). From that point, as queen mother, she used patronage in a way that aroused enmity and inspired rumors of illicit love affairs. Agnes improved the fortunes of one faction at the court of King Baldwin IV, often by acting against Count Raymond III of Tripoli. In 1179 she influenced the appointment of Aimery of Lusignan as constable,

and then in 1180 she advised her son to choose Guy of Lusignan as Sibyl's husband, Humphrey IV of Toron as Princess Isabella's husband, and Eraclius of Caesarea as patriarch of Jerusalem (thus passing over William of Tyre). She died probably in early 1185.

Aila and Ile de Graye

Fortified oasis (mod. al-ʿAqaba, Jordan) at the head of the Gulf of ʿAqaba, controlling the desert route between Cairo and Damascus during the time of the kingdom of Jerusalem.

The site was virtually deserted when King Baldwin I of Jerusalem reached the Red Sea in winter 1116; however, Aila was still in Muslim hands in 1154, and it was probably not until the 1160s that a Frankish castle was established. Although consistently referred to as *Ayla* in Arabic sources, this castle lay some 15 kilometers (c. 9½ mi.) southwest of the earlier Islamic town on an offshore island on the opposite side of the gulf, known since the nineteenth century as the Ile de Graye, or Pharaoh's Island (in mod. Egypt).

In December 1170 the island castle was taken by Saladin, who refortified it and installed a garrison. In November 1181 the lord of Transjordan, Reynald of Châtillon, raided Aila, and during the winter of 1182–1183 he attempted unsuccessfully to blockade the Muslim garrison with two ships. The castle was again attacked in April 1184. By 1217, however, when the pilgrim Thietmar passed along the shore, the island was occupied by a fishing village, inhabited by Muslims and captive Franks. The castle was finally abandoned

by its Mamlūk governor in favor of one in present-day al-ʿAqaba sometime in the 1320s.

Aimery of Limoges (d. 1196)

Latin patriarch of Antioch (1140–1165 and 1170–1193/1196), one of the longest serving senior clerics in the Latin Church of Outremer.

Aimery was born in France around 1110, and studied in Toledo. He was appointed archdeacon of Antioch after 1136, and elected patriarch of Antioch on the deposition of Ralph of Domfront (1140). Aimery's rapid rise owed much to the prince of Antioch, his fellow countryman Raymond of Poitiers, with whom he enjoyed good relations; after Raymond's death in battle (June 1149), Aimery played a major role in the regency government of Raymond's widow Constance. However, in 1153 the patriarch was imprisoned by the new prince, Constance's second husband, Reynald of Châtillon, who had tried to seize church property. Released on the intervention of King Baldwin III of Jerusalem, Aimery went into exile in Palestine. He conducted the marriage of Baldwin III to Theodora Komnene (1158) and accompanied Baldwin to Antioch when he went to meet the Byzantine emperor Manuel Komnenos (Easter 1159), and was restored by Reynald to the patriarchate shortly afterward.

Aimery was again called to play a role in government when the young prince Bohemund III was captured by Nūr al-Dīn (August 1164). Manuel secured Bohemund's release, but only on condition that the prince appoint a Greek to the patriarchate, and in 1165 Aimery withdrew to his castle at Cursat. In 1170 he was restored when the Greek patriarch,

Aimery of Lusignan (d. 1205)

Athanasios, died from injuries sustained in an earthquake. A fresh dispute broke out over Bohemund's repudiation of his Greek wife, Theodora (1180), leading to fighting in the principality until a compromise was brokered by Baldwin IV of Jerusalem. Although Aimery was able to fend off Greek claims to the patriarchate of Antioch, he could do little to prevent the loss of most of its territorial jurisdiction to the conquests of Zangī, Nūr al-Dīn, and Saladin.

He cultivated good relations with the Eastern churches, and paved the way for a settlement by which the Maronites accepted union with the Latin Church. He died between 1193 and 1196 and was buried in the cathedral of Antioch.

Aimery of Lusignan (d. 1205)

The second Frankish ruler of Cyprus (1194–1205) and, by his marriage to Queen Isabella I, also king of Jerusalem (1197–1205).

The eldest son of Hugh VIII, lord of Lusignan, Aimery arrived in Outremer around 1174 and married into the Ibelin clan. In 1180 he became constable of the kingdom and proposed his brother Guy as a second husband for the king's sister, Sibyl. Aimery supported his brother's claim to the throne against Count Raymond III of Tripoli in 1185 and against Conrad of Montferrat in 1190, but in 1192 he gave up his constableness and joined Guy on the island of Cyprus, which Guy had purchased from King Richard I of England.

Upon Guy's death (1194), Aimery took power over the

island. By 1197 he had received papal approval to establish a Latin episcopate in the Cypriot Church and obtained a royal title from Emperor Henry VI, who welcomed suzerainty over Cyprus as an extension of his own authority. Aimery was willing to recognize imperial overlordship as a protection against Byzantium, the former ruling power in Cyprus; Aimery's new title also forestalled any claims from the mainland. In fact, with new Muslim attacks on the kingdom of Jerusalem after 1196, the barons there urged their ruler, Henry of Champagne, to come to a rapprochement with Aimery. They reached an accord in 1197 by which Aimery gained control of Jaffa, now under attack, and sent men to hold the city.

On the death of Henry of Champagne (September 1197), Aimery was advanced by the nobles, the military orders, and the German crusaders as a husband for his widow, Queen Isabella I. Aimery ruled Cyprus as king and Jerusalem as king-consort until his death in 1205, governing each realm separately. Overall, both lands enjoyed relative peace. As king of Jerusalem, Aimery commissioned the *Livre au roi*, a treatise on legal practices from the twelfth-century kingdom that promoted the crown's power, although its claims were undermined by baronial jurists later in the thirteenth century.

Aintab

Aintab (mod. Gaziantep, Turkey) was a fortress in the Frankish county of Edessa, a strong defensive site on major lines

of communication between the city of Edessa (mod. Şanlıurfa, Turkey) and the West and between Marash (mod. Kahramanmaraş, Turkey) and Turbessel (mod. Tellbaşar Kalesi, Turkey).

The impressive surviving citadel, on a partly artificial high mound, is mostly late Mamlūk work but was important in the Frankish period. During the First Crusade (1096–1099) the crusader Baldwin of Boulogne marched past Aintab in the winter of 1097–1098, and it was certainly under Frankish control from 1116. It was attacked by Zangī's general Sawār in early 1136. In 1151 it was transferred to Byzantine control by Beatrix, wife of the captive Count Joscelin II of Edessa, but it was taken shortly afterward by Mas'ūd I, Saljūq sultan of Rūm. Captured by Nūr al-Dīn in 1155, Aintab was one of the last of the Zangid fortresses to be taken by Saladin in his campaign against Aleppo in 1183, and thereafter the town expanded greatly under the rule of the Ayyūbids and Mamlūks.

Alba Custodia

See Blanchegarde

Alberic of Troisfontaines (d. 1251/1252)

Monk and chronicler of Troisfontaines, a Cistercian monastery at Châlons-en-Champagne.

Alberic's universal chronicle provides an invaluable glimpse of how crusading and related activities were viewed from a minor French cloister. Written primarily between 1227 and 1240, it devotes substantial passages to the Fourth (1202–1204) and Fifth Crusades (1217–1221), the battle of Las Navas de Tolosa (1212), the Albigensian Crusade (1209–1229), and the so-called First Children's Crusade (1251). In general, his chronicle shows an evenhanded enthusiasm for crusading, whether against Muslims, schismatic Christians, or heretics. Undoubtedly informed by oral sources, Alberic's understanding of the period's crusading activity was also shaped by his exceptional use of available documents, including letters of Pope Innocent III and Bald-

win I, first Latin emperor of Constantinople, as well as Peter of Vaux-de-Cernay's *Hystoria Albigensis*. Alberic's detailed and occasionally confused presentation of events preceding and during the Fourth Crusade is of particular interest, given the tendency of modern scholars to single out the Latin capture of Constantinople (1204) as an especially egregious violation of the crusading ideal, sentiments that were foreign to his contemporary perspective. Alberic probably died around 1251 or 1252.

Albert of Aachen

Author of the *Historia Iherosolimitana*, a contemporary and influential account in Latin of the First Crusade (1096–1099) and the first generation of Frankish settlement in Outremer (1099–1119). The writer's name is not recorded before the fourteenth century, but there is textual evidence that he was based in the German city of Aachen (Fr. Aix-la-Chapelle), where Albert was a common name. Although he did not take part in the expedition or ever visit Outremer, Albert wrote a long, detailed narrative, using mainly the testimony of participants who returned to the Rhineland, with some admixture of legendary material, probably from vernacular poetry. His uncritical use of these partial sources means that his work has the strengths and weaknesses of oral history: at best it is colorful, immediate, and convincing; at worst it has errors and inconsistencies in topography and chronology and in reporting names, plus the distortions of personal reminiscences.

The first six books of the *Historia* recount the First Crusade, starting with the pilgrimage of Peter the Hermit to Jerusalem, his appeal to the pope, his preaching, and the movement known as the People's Crusades. This circumstantial and coherent account, which includes the attacks on the Jews of the Rhineland (1096), was responsible for Peter's acceptance as instigator of the crusade, an idea only chal-

Albert of Buxhövdn (d. 1229)

lenged in the nineteenth century. After book 1, Albert centers his *Historia* on Godfrey of Bouillon, his brother Baldwin, and their followers. Thus it complements the eyewitness accounts of Raymond of Aguilers, Fulcher of Chartres, and the anonymous *Gesta Francorum*, and gives unique detail about a range of greater and lesser characters and events for the period 1096–1099. Since Godfrey became ruler of the new state of Jerusalem (1099–1100) and his brother Baldwin I succeeded him as king (1100–1118), there is much of interest in books 7–12 as well, notably concerning the Crusade of 1101, the disputes between monarchy and patriarchate in Jerusalem, and the conquest by the Franks of the maritime cities of Palestine. Albert's information for this period was evidently fragmentary, reflecting his reliance on oral testimony, but where it can be checked against, for example, Fulcher of Chartres, Anna Komnene, or Ibn al-Qalānisi, it is found to be largely reliable. The last two books (11–12) cover more than a decade (1108–1119) in increasingly brief and annalistic style, and the work stops abruptly in the middle of an anecdote.

Albert's autograph text does not survive. The *Historia* was much copied in the twelfth century, and the part relating to the First Crusade was a major source for William of Tyre's chapters about the expedition. Thereafter Albert's work was eclipsed by William's, and in the later Middle Ages his reputation remained strongest in the Rhineland. In 1584 Reiner Reineck published the first printed edition, which was reprinted by Jacques Bongars (1611) and in the *Patrologia Latina* (1854). The *Historia* was subjected to critical scrutiny by Heinrich von Sybel in the nineteenth century and, in spite of a vigorous defense by Bernhard Kugler, for much of the succeeding century it was widely disparaged. Nonetheless, the *Historia* remains an indispensable source for the period. Where it disagrees with the participants' accounts of the First Crusade on matters of fact, then the eyewitnesses must be preferred. Where, however, it offers a different opinion or interpretation, then its status as an independent account written outside the circles of Frankish and papal influence should be respected. Most problematically, where its information is uncorroborated, there is a need for great critical caution.

Albert of Bekeshovede

See Albert of Buxhövdn

Albert of Buxhövdn (d. 1229)

The third bishop of Livonia (1199–1229).

Albert was born around the year 1165 into an influential, ministerial, knightly family of Buxhövdn (or Bekeshovede) in the archbishopric of Hamburg-Bremen. A close relative of Archbishop Hartwig II, as a young man Albert became a canon of the cathedral in Bremen. He also served as head of the cathedral school.

In March 1199 Albert was appointed as the new bishop of Livonia following the violent death of Bishop Bertold the previous year. However, it was only in the summer of 1200 that Albert visited Livonia for the first time. He used the intervening time very effectively to obtain papal support for the crusades in Livonia and also to make arrangements with the Danish king, Knud VI; his brother (and future king) Duke Valdemar of Schleswig; and Absalon, archbishop of

Lund. Albert also met with the king of Germany, Philip of Swabia, in Magdeburg during Christmas 1199 to ask for his support. Finally, Albert gathered a substantial army of crusaders in Lübeck and arrived in Livonia in the summer of 1200 accompanied by no less than twenty-three ships.

In Livonia the fighting between the crusaders and the Livs began at once. Bishop Albert soon found the village of Üxküll (mod. Iķškile, Latvia) unsuited as the seat of his diocese, as it was too far from the more accessible coastal regions. Instead he made plans for an entirely new ecclesiastical and urban center at Riga, founded in 1201.

In only a few years Riga became the most important religious and economic center in the region, while Albert installed German knights as vassals in the surrounding country to secure his position. Albert had thus secured a permanent and strong Christian presence in the region, creating a gateway for merchants, crusaders, and clerics alike. Also of great importance was the foundation in 1202 of a new knightly military order, the Sword Brethren, by a Cistercian monk called Theoderich, who was a close associate of Albert. Theoderich and Albert thus secured a permanent military force in the region but also paved the way for future disputes and conflict. In 1207 Albert met again with King Philip and persuaded him to accept Livonia as a principality of the empire.

From 1210 onward Albert was in continual conflict with the Sword Brethren over the government of the conquered territories. This also came to involve an ever-increasing conflict with Danish crusaders in the northern provinces of Estonia, where Albert's claims to supremacy were opposed by both the Sword Brethren and the Danes. In 1225 the papal legate William of Modena intervened and to some extent settled the dispute with the Sword Brethren.

During his episcopate Albert sought to loosen his dependency on the archbishopric of Hamburg-Bremen, orienting himself more toward Magdeburg; he evidently intended to have Riga raised to an archbishopric, but he did not realize this aspiration. Bishop Albert died on 17 January 1229 and was buried in the cathedral church of Riga.

Albert Suerbeer (d. 1272/1273)

Archbishop of Prussia (1246–1255) and Riga (1255–1272/1273).

Albert was born in Cologne (mod. Köln, Germany) in the late twelfth century. As a canon of the cathedral of Bremen, he was appointed bishop of Riga in 1229 by the archbishop of Hamburg-Bremen, Gerhard II; the cathedral chapter of Riga, however, chose a Premonstratensian canon from Magdeburg by the name of Nicholas, whose election was approved by Pope Gregory IX in 1231. Albert was made archbishop of Armagh in Ireland in 1240, but after taking part in the Council of Lyons (1245), he was appointed as archbishop of Prussia, Livonia, and Estonia by Pope Innocent IV (1246). A few months later he was also made papal legate for these lands and for Holstein, Rügen, Gotland, and Russia. The pope ordered the Prussians to hand over to the archbishop all the lands that had formerly belonged to the late Bishop Christian of Prussia, including a castle in what is believed to have been the newly founded town of Königsberg (mod. Kaliningrad, Russia), then in the hands of the Teutonic Order in Prussia. It is likely that Albert desired to control the order by establishing his archbishopric in the town.

The Teutonic Order refused to accept the archbishop's attempts to establish supremacy, and the conflict between them intensified in the following years. The order's diplomacy brought about the loss of Albert's position as legate, and eventually the pope was persuaded to move him to Livonia, appointing him as the first archbishop of Riga in 1255.

Albert of Vercelli (1149/1152–1214)

In his new see Albert continued his struggle against the military and political power of the order. In 1267 he allied himself with Gunzelin, count of Schwerin, in what was intended as a joint strike against both the order and the pagans in Livonia. The plan failed, however, and the following year Albert was taken prisoner by Otto von Lauterberg, the order's Livonian master. He was only released after promising not to make any complaints to the pope and to desist from opposing the order. Sometime between November 1272 and March 1273, Albert died, without having been able to reduce the power of the Teutonic Order in the Baltic lands.

Albert of Vercelli (1149/1152–1214)

Latin patriarch of Jerusalem (1205–1214). On the death of King Aimery of Jerusalem (1205), Pope Innocent III translated Albert, bishop of Vercelli, to Jerusalem to provide leadership for the Latin Church in Outremer at a time when the rulers of Jerusalem and Cyprus were minors, and the succession to Antioch was disputed.

Albert was already an experienced papal diplomat. As papal legate to the East, he excommunicated Prince Bohemund IV of Antioch in 1208 for his murder of Peter, the Latin patriarch there. In the same year, Albert initiated the search for a husband for Queen Maria of Jerusalem, and in 1210 he crowned John of Brienne as king. Before this, he had steered the barons of the kingdom in negotiations over a new treaty with Egypt. When Maria died in 1212, Albert's support for John against dissident barons proved decisive. Albert also mediated in the quarrel between Hugh I of Cyprus and his *bailli* (regent), and he used his legatine authority to oversee the election of a new archbishop for Nicosia.

Albert's interest in the regulation of devotional life, already demonstrated in the rule he had devised for the Humiliati, led a group of hermits living on Mount Carmel to ask him to write a rule for them. The resultant rule, a model

of conciseness marked by a strong penitential piety, formed the basis for the Carmelite Order. In 1214 Albert was assassinated during the Holy Cross Day procession in Acre by the former master of the Hospital of Santo Spirito in Ivrea, whom he had previously removed from office. He is celebrated as a saint in the Carmelite calendar.

Albigensian Crusade (1209–1229)

A crusade fought against heretics over a wide area of southern France, stretching from the delta of the Rhône in the east as far as Agen in the west and from the Pyrenees north as far as Cahors. The origins of the crusade lay in two differing but related areas: the political and social history of Languedoc in the twelfth century, and the growth of the Waldensian and Cathar heresies.

Political Background

In the absence of any influence by the kings of France, the region was divided between two great families that struggled for hegemony. The counts of Toulouse held territory that covered the whole diocese of Toulouse, Quercy, the Rouergue, the Agenais, and the marquisate of Provence. They also exercised overlordship in the Rhône delta and Valley, in parts of the Auvergne, and in part of the county of Foix. The other important family was the counts of Barcelona, who from 1137 were also kings of Aragon. They had very little territory in the region, apart from the county of Provence, which they had gained through marriage in 1112, on the eastern side of the Rhône. However, they often opposed the counts of Toulouse through the Trencavels, viscounts of Béziers and Carcassonne, who dominated the Béziers-Carcassonne-Albi region and were frequently clients and from 1179 vassals of the king of Aragon. Along the coastal strip were the small principalities of Montpellier and Narbonne, which maneuvered to maintain their independence during the twelfth century. A series of wars forced them into alliance

Areas of the Albigensian Crusade and the Inquisition in Southern France

Albigensian Crusade (1209–1229)

with Aragon, and in 1198 Count Raymond VI of Toulouse acknowledged his failure to control the coastal strip when he signed the Treaty of Perpignan with the king of Aragon. This left him with his lands divided between the Rhône delta and the Toulousain to the west. During the twelfth century Toulouse was an object of interest to the dukes of Aquitaine, who claimed the county through Philippa, daughter of William IV of Toulouse, who had married William IX, duke of Aquitaine. That claim was eventually transmitted to King Henry II of England by his marriage to Eleanor of Aquitaine and used as a pretext for interference.

Continual warfare and probably a lack of real resources meant that the counts of Toulouse were relatively weak rulers. Like other parts of western Europe, Languedoc experienced a wave of castle building, which began in the later tenth century and continued unabated until the thirteenth. Most of these castles were in the hands of minor members of the aristocracy, and during the twelfth century many of these men were able to behave like petty sovereigns. Such men ruled their territories from castles and lived surrounded by a court. Raymond of Termes, for example, “an avowed heretic . . . feared neither God nor man. He had such confidence in his fortress that he fought both the count of Toulouse, and his own suzerain, the viscount of Béziers” [*Histoire Albigeoise de Pierre des Vaux-de-Cernay*, pp. 71–72].

Origins of the Crusade

It was in these circumstances that both the Waldensian and Cathar heresies appeared and flourished. The Waldensians, named after their founder, Peter Valdes, a merchant of Lyons, were expelled from Lyons in 1182 for persistently preaching the Gospel to laymen without either formal education, holy orders, or authority. In addition they provided the Gospels in the vernacular.

Catharism seems to have been established in the Toulousain by about 1165 and between 1174 and 1177 was organized into a structure of dioceses with local bishops, as well as traveling *perfecti* (perfect ones) who preached and administered the *consolamentum* (the only sacrament among the Cathars, consisting of a transmission of the Holy Spirit by the laying on of hands) and deacons who acted somewhat like parish priests. In 1177 Count Raymond V of Toulouse made a dramatic appeal to the chapter-general of the Cistercian Order describing the spread of the heresy as like a disease. By the time of the crusade,

Catharism was widespread across Languedoc, but the greatest concentration was in the Toulousain, in Foix, and in the Carcassonnais. Strong in the many small towns, as well as in large centers such as Toulouse, it appealed to merchants and craftsmen in a society that was becoming industrialized in the towns, where the manufacture of cloth had become widespread and important. In the countryside it found sympathizers in a world where town merchants and bankers were involved in sheep-raising and from which the growing town populations were drawn. Among the nobility at all levels, both in towns and the castles of the countryside, Catharism was strong. It was an expression of independence as well as a sign of the problems many had in their relationships with local religious communities. Esclarmonde, sister of the count of Foix, was a *perfecta* and was consoled at Fanjeaux in the presence of a large gathering of nobility around 1204. The count appointed her head of a convent of Cathar *perfectae* at Pamiers and was certainly a sympathizer himself. Raymond VI, count of Toulouse, while perhaps not a believer in Catharism, was certainly tolerant of it and was not a fervent Catholic, living excommunicated for long periods. Thus the most senior prince in Languedoc was a lukewarm supporter of the church hierarchy, and more importantly, was unable to contemplate military action against so many of his own people.

The church in Languedoc found itself without the natural support it expected from secular authority in its attempts to suppress heresy. It was also hampered by uneven quality within its own ranks. The archbishop of Narbonne, Berenger (1191–1212), was a pluralist noted for his scandalous conduct, who retained his see for several years despite vigorous efforts to remove him. The bishop of Toulouse, Raymond of Rabastens, ruined the finances of his diocese by fighting a war against his vassals. Pope Innocent III (1198–1216) was anxious to see the heresy crushed and appointed a series of legates to carry out his policies in Languedoc. Although they were able to carry through some reforms, they were not able to influence the conduct and policies of Raymond VI of Toulouse. The legates blamed him for the deterioration of relations between the church and secular authorities. They became increasingly angry and intransigent as direct attempts to convert the heretics by preaching failed, and Raymond refused to implement the canons of the church that called for action against heretics and their supporters. The defining moment came with the murder of the pope’s legate, Peter of Castelnaud, by a follower of Raymond VI near

Saint-Gilles on 14 January 1208. For the pope, besides the natural anger at the insult to his authority of the murder of his own legate, there was an increasing concern about the challenge to the authority of the church from a well-organized group of heretics and equally the refusal of the local nobility to heed the calls to action.

The Course of the Crusade

The pope called a crusade, which was preached in northern France and surrounding areas by the Cistercians, led by Arnold Amalric, abbot of Cîteaux and head of the order. He received an enthusiastic response. Partly this was the result of a desire for loot, but there was also a fervent hatred of the unorthodox, the result of increasing definition of Catholic doctrines, which thereby also marked those who were outsiders. One consequence had already manifested itself in attacks made upon the Jews of northern France and England, and in the heretics of Languedoc the northerners perceived a contagion that they were anxious to eliminate.

The crusade attracted a large number of men of good family and prestigious connections. Among them were Odo, duke of Burgundy; Hervé, count of Nevers; Peter of Courtenay, count of Auxerre; and William of Roches, seneschal of Anjou; as well as many of slightly lesser rank such as Guy of Lévis; Gaucher of Joigny, lord of Beaujeu; and of course Simon of Montfort. Many senior churchmen, especially from Burgundy, also took part, among them the archbishop of Sens and the bishops of Autun, Nevers, and Clermont as well as members of monastic orders. The bulk of the army seems to have been recruited from Burgundy and other eastern parts of France, but there were contingents from the Saintonge, Poitou, and Gascony as well as Germany. Partly this may be explained as a result of the bias toward the East among the aristocratic recruits, who brought many followers with them; but the high density of Cistercian houses in that region had also resulted in more intensive preaching of the crusade.

The crusaders assembled at Lyons in June 1209 under the leadership of Arnold Amalric, and the very large force moved down the Rhône Valley and into the lands of Raymond VI. He offered himself to the church as a penitent and on 18 June 1209 was reconciled in a humiliating ceremony at Saint-Gilles. His lands were thus made safe from attack, and the crusaders turned their attentions to the lands of Raymond-Roger Trencavel, viscount of Béziers and Carcassonne. The first town to be assaulted was Béziers, which was sacked and

Saint Dominic and the Albigensians, by Pedro Berruguete, fifteenth century. (Archivo Iconográfico, S.A./Corbis)

the population massacred. This was the occasion on which a crusader, having asked Arnold Amalric how they should tell the Catholics from the heretics, was told, “Kill them all, God will know his own” [*Caesarius Heisterbacensis monachi ordinis Cisterciensis, Dialogus miraculorum*, 2:296–298]. The story is probably apocryphal. Nevertheless, the crusaders reported that they had slaughtered 20,000 people, and although this, too, is almost certainly a gross exaggeration, it is a sign of their intentions.

The army moved on to Carcassonne, to which the viscount and his court had fled and which was in a state of defense. The crusaders began their attack on 1 August, and on 15 August the town surrendered after the viscount had been seized while discussing terms under a safe conduct. He later died in prison. The townspeople were turned out, and the place became the headquarters of the crusaders, who

Albigensian Crusade (1209–1229)

elected Simon of Montfort as their leader and as viscount of Béziers and Carcassonne.

Simon of Montfort immediately received the surrender of other towns in the lands of the viscount and began to burn heretics where he could find them. During the winter of 1209–1210 he saw his position weaken as his crusaders returned home, but the following spring he regained lost ground as fresh crusaders arrived. He set out to reduce the great fortresses of Minèrve, Termes, and Cabaret, which controlled the surrounding countryside. The fall of Minèrve was followed by the burning alive of about 140 Cathar perfecti, both men and women, a pattern that was to be followed as other towns fell. Lavaur, a town quite close to Toulouse and part of the possessions of the viscount of Carcassonne, was stormed. The lord and his knights who had defended the town were hanged, and the lady Geralda, his sister, was thrown down a well and killed when stones were hurled down on top of her. Their deaths were followed by the burning of 400 heretics.

The next phase of the crusade extended the attack to the lands of Raymond VI of Toulouse, who was pressed to meet humiliating conditions and excommunicated when he refused. During the summers of 1211 and 1212 Simon of Montfort's forces campaigned across the whole of Languedoc. By the end of the 1212 season much of the countryside, as far to the west as the Agenais and south as far as Foix, was in his hands, although the major towns, Toulouse included, held out against him. At first Simon accepted the submission of southern noblemen and regranted towns and castles to them. When it became apparent that these men would throw off their allegiance as soon as they could, he began to grant lands to his followers. A parliament at Pamiers held on 1 December 1212 tried to introduce northern legal practices, such as inheritance rules, and to bar southerners from control of castles. It was a sign that the crusade had entered a new phase in which the northern soldiers would begin to make permanent settlements in the south.

The battle of Muret (12 September 1213) marked a turning point in the campaigning. Simon of Montfort's small force defeated a much larger army led by Raymond VI of Toulouse and King Peter II of Aragon. The king was killed and the southerners routed. Although Toulouse itself did not fall, Raymond VI was now a fugitive and all of the rest of the south was under Simon's control. He assumed the title of count of Toulouse and with the enthusiastic support of the local church hierarchy so reduced the area that only

Toulouse itself was outside his control. The pope now intervened, protecting Toulouse from further attack and calling the Fourth Lateran Council.

The council (November 1215) was primarily concerned with settling affairs inside Christendom in such a way that a new crusade to the Holy Land would be possible. A settlement for Languedoc, which the pope now ordered, was ancillary to the ecclesiastical work. The pope proposed to carry through his claim to be able to depose secular rulers by taking the county of Toulouse from Raymond VI, as punishment for his support of the heretics, and recognizing Simon of Montfort as count in his place. The new settlement was not accepted by the majority of southerners, and Raymond VI and his son, "the Young Raymond (VII)," returned to Languedoc from Rome determined to continue the war with new support. Both men were now active. The ensuing campaign continued to be a disaster for the south as Simon of Montfort took control of Toulouse for a while and destroyed its walls. In the autumn of 1217 Raymond VI was invited back to the city, which defied Simon. A long siege followed. Simon of Montfort was killed on 25 June 1218 when he was struck on the head by a stone fired from an engine, supposedly worked by women: according to a contemporary chronicler, "the stone arrived just where needed" [*La Chanson de la Croisade Albigeoise*, ed. and trans. E. Martin-Chabot, 3d ed. (Paris: Les Belles Lettres, 1976), 3:207]. His son Amalric was unable to continue the siege. Over the next few years he lost ground to the southerners, now led increasingly by Raymond VII, who succeeded to his father's claims when Raymond VI died in 1222. On 25 January 1224, the bankrupt Amalric of Montfort retired to the family lands near Paris, taking his father's body with him. Raymond Trencavel, the son of Raymond-Roger Trencavel, reentered Carcassonne as viscount.

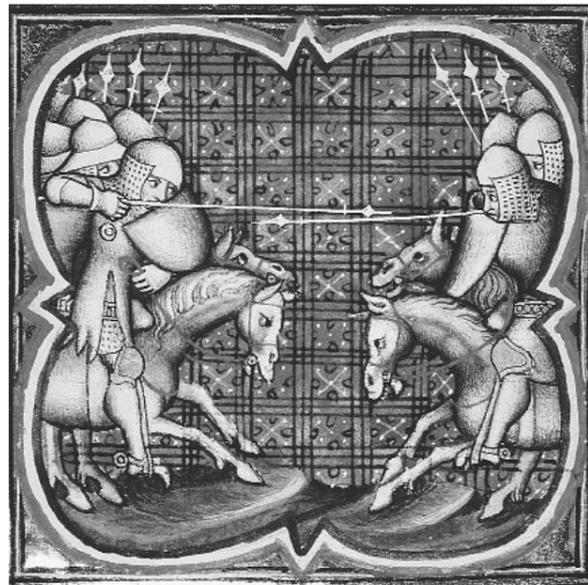

This was the sign for a determined intervention by the French king. During his father's lifetime, Prince Louis (VIII) had already made a formal entry to the crusade in 1219, when he had briefly campaigned as a crusader in the Toulousain. In January 1226 the legate Cardinal Romain excommunicated Raymond VII, and King Louis VIII immediately began a crusade in the Languedoc. He made progress through the region during the summer of 1226, and the exhausted towns and villages submitted: only Toulouse stood out against him. Carcassonne surrendered, and a seneschal was installed as the king's military governor in the area. Although Louis died unexpectedly in Languedoc in

November 1226, the regency government of Louis IX, led by his mother, Blanche of Castile, continued the policy of conquest. In April 1229 Raymond VII signed the Treaty of Meaux, by which he acknowledged the authority of the king of France. He also had to allow the church to pursue the heretics and had to agree for his heir, his only legitimate child, Jeanne, to marry the king's younger brother Alphonse of Poitiers. Thereafter, until his death in 1249, Raymond VII of Toulouse remained reluctant to cooperate with the church and used much energy seeking a new wife and a possible male heir. His one attempt at a rebellion, in 1242, collapsed when Henry III of England was defeated at the battle of Taillebourg (July) and failed to come to his aid.

The Inquisition

A consequence of the revolt was a determination by the French government to destroy the last major group of perfecti and their sympathizers, ensconced in the castle of Montségur, which had been refortified in 1204 by Raymond of Péreille, a member of a Cathar family. The hilltop, with its castle and village, had been a refuge for heretics for many years, and from 1232 the Cathar bishop of Carcassonne had lived there. It was besieged in the spring of 1243 by an army led by the seneschal of Carcassonne, and it finally surrendered in March 1244. The inhabitants and the professional garrison were allowed to leave, but the Cathar perfecti, including the bishop Bertrand Marty, remained behind. On 16 March 1244 they came quietly down the hill and allowed themselves to be consigned to the flames of a great fire built within a palisaded enclosure. About 200 people died.

The dramatic destruction of so many perfecti was the result of a coordinated campaign of persecution that had begun after the Treaty of Meaux. When it became apparent that local bishops could not deal adequately with the situation, Pope Gregory IX set up an Inquisition. It covered the whole of the Languedoc and was staffed by Dominican friars (April 1233). For the first time there was a permanent body in existence dedicated to the destruction of heresy and run by a body of well-trained men. Although they exercised a judicial function, they acted by questioning their suspects and all witnesses, on oath and in secret. There was no formal trial, and since no charges were brought against suspects, the suspects had no right to know the evidence alleged against them, no right to examine witnesses or to call witnesses in their defense, and no right to legal representation. There was no limit of time on their detention. Over the years

Battle of Muret (1213), from the *Grandes Chroniques de France* (1375–1379). (The Art Archive/Bibliothèque Nationale, Paris)

the Inquisition developed a body of expertise that was passed on in written manuals. With the backing of the secular authorities, enormous numbers of people were questioned. Starting in the larger towns, the inquisitors were aided by perfecti who converted to Catholicism. Gradually the net was widened to take in smaller towns and rural areas. It is likely that during 1245–1246 about 10,000 people were questioned in Toulouse, and a minimum of 203 condemnations were recorded. Similar activity occurred throughout the Languedoc. After the bull *Ad Extirpandum* of 1252, the inquisitors were authorized to use torture in their work. The Inquisition was active in the region until the end of the century.

The effect on the Cathars was immense. The system used by the Inquisition disrupted the functioning of groups of believers by introducing suspicion of those who had been questioned and then released. Those who were condemned faced a variety of punishments and disabilities. Perfecti were normally condemned to death if they refused to recant. Most refused and were burnt. The vast majority of Cathars were believers rather than perfecti, and most of them recanted when faced with death. Others were sympathizers or merely associated with Cathars, and they too faced punishment. Those who only recanted at the last moment and were adjudged reluctant converts were imprisoned for life

and lost their property. Others suffered a variety of penances. Some were sent on pilgrimages; many others were condemned to wear yellow crosses prominently displayed on their garments. Many Cathars were condemned after their deaths and their remains dug up and burnt. Their descendants were usually excluded from public office for two generations. Other Cathars fled, either to Aragon, which soon ceased to be a refuge, or to Italy, where Catharism continued to flourish for many years.

Although Catharism continued to exist as a belief throughout the thirteenth century and into the early years of the fourteenth, the unrelenting pressure of the Inquisition stopped the spread of the heresy and cut off its connections with the great nobility and the rural aristocracy. The heretics who were condemned in the village of Montailou in the early fourteenth century were mostly peasants, with only a debased understanding of the tenets of their faith. Between 1308 and 1321, twenty-five believers were burnt to death, mostly in Toulouse. The last *perfectus* to be executed was Guilhem Belibaste, burnt to death at Villerouge-Termenès in 1321.

Although the fighting of the crusade was long over, the work of the Inquisition was its logical extension. It was only once the secular authorities of the Languedoc were willing to aid the church, or at least not actively hinder it, that the work of extirpating the heresy could begin. The terrible deaths of the Cathars of Minerve, Lavaur, and Montségur were spectacular demonstrations of the fear and hatred that the heretics incited in the orthodox northerners, but they had little impact on the organization or the strength of the Cathars, who were initially fortified by persecution. It was the steady work of the Inquisition, rounding up and questioning thousands of men and women, that broke the organization. In the towns and to a lesser extent the countryside, the church gained a grip over the lives of the laity that it had never had in the twelfth century. What drove it to this gigantic task was a deep-rooted fear of the consequences for the church as an institution if it lost its monopoly of control over religious belief and activity. For many laymen there was probably a similar, though hardly articulated, feeling that the roots of society were in danger if unorthodox opinions were unchecked. The consequences of the crusade and Inquisition for the church were considerable. As one of the measures taken against the heretics, possession of the Bible (even in Latin) was forbidden to the laity, as were all translations into Occitan. Only a breviary, a psalter, and a book of hours were allowed. Thus the church placed a real barrier between itself

and the laity just as increasing wealth and literacy among the laity made it possible for more people to take an intelligent interest in the faith. Doctrinal and theological debate became something restricted only to the most trusted scholars. The church learned slowly that its relationship with the secular powers had changed. It had proved itself unable to defeat the heretics without the support of the kings of France and the power they wielded. From now on the king would be the leading partner in their relationship.

Albrecht von Brandenburg-Ansbach (1490–1568)

Grand master of the Teutonic Order (1511–1525), who secularized the state of the order in Prussia.

The third son of Frederick V (the elder), margrave of Brandenburg-Ansbach (d. 1536) and the Polish princess Sophia (d. 1512), Albrecht was destined for an ecclesiastical career. At the age of eleven he received minor orders. His family procured Albrecht's succession to Friedrich von Sachsen (d. 1510), grand master of the Teutonic Order. On 13 February 1511 he was received into the order and elected grand master on 6 July. In November 1512 he entered Prussia for the first time.

Albrecht's foremost aim was to revise the Second Peace of Thorn (1466), by which the order had lost the western territories of Prussia to Poland. He refused the oath of allegiance to the Polish king and sought allies in the empire and Russia, but gained only halfhearted support. After the so-called *Reiterkrieg* (War of the Riders) of 1519–1521, Albrecht had to accept a four-year truce. Attempts to achieve a peaceful settlement failed. Faced with a superior foe, no external assistance, a serious lack of money, and growing discontent among his Prussian subjects, Albrecht left Prussia. In the empire he became acquainted with the Reformation and sought advice from Martin Luther, who fundamentally questioned the ideological foundations of the order and its state, suggesting its dissolution. When it became clear that the truce with Poland could not be renewed, Albrecht submitted to King Sigismund of Poland in the Treaty of Kraków (1525), which granted him Prussia as a hereditary duchy under Polish suzerainty. Albrecht had already promoted the spread of the Reformation in Prussia and allowed many of the order's high offices to fall vacant. In May 1525 he

declared the dissolution of the order in Prussia. Its remaining brother knights were either secularized or forced to emigrate to other lands of the order.

Albrecht von Johansdorf

A German poet, composer of five recruitment songs in Middle High German, probably for the Third Crusade (1189–1192), and ministerial knight in the service of bishops of Passau between 1180 and 1206.

Albrecht's Song II borrows its form and melody from an Old French song by Conon de Béthune datable to 1189. References in Song V to the fall of Jerusalem, the capture of the Holy Sepulchre, and the loss of the True Cross (1187) also suggest that Albrecht was writing in 1189–1190, but possibly he went on crusade instead—or additionally—in 1197 with Wolfer von Erla, bishop of Passau. Albrecht belongs to the first generation of German lyric poets of the crusades. Like Hartmann von Aue, he voices, in Songs V and XIII, a profound commitment to crusading piety. Unlike Hartmann and Friedrich von Hausen, he insists that secular values and crusade are reconcilable. In Songs II, V, and XIII he lets the courtly lady speak her feelings and asserts that mutual fidelity between knight and lady earns the woman half of the crusader's reward.

Alcántara, Order of

A military religious order, originally founded in the kingdom of León in the later twelfth century. Alcántara undoubtedly remains the least well-known of all the military orders of the Iberian Peninsula. There are relatively few scholarly studies on the order, a fact traditionally attributed to the scarcity of original sources as a result of the disappearance of its major archives during Spain's struggle for independence in the Napoleonic Wars of the early nineteenth century. Nevertheless, recent efforts to assemble the documentary sources about the order have given rise to new historiographical interpretations; these have above all illuminated the origins of the institution, which had previously been both obscure and controversial.

It can now be stated that the Order of Alcántara originated as a confraternity of knights who had settled in the convent of San Julián del Pereiro, located near the banks of the river Coa, in the region of Beira Alta (in mod. Portugal). The first mention of the community dates from January 1176, when King Ferdinand II of León made a grant of the lands of Raigadas and confirmed the possession of El Pereiro to San Julián and its prior Gómez, who is described in the document as the founder of the house. In all likelihood the confraternity had been founded a little earlier (ten years before at most), but definitely not in 1156, as long claimed by Portuguese scholars who based their conclusions on a forgery that was published in the early seventeenth century by the Cistercian chronicler Bernardo de Brito.

The community gained papal approval from Alexander III in December 1176. However, it was slow to develop into a military order in the strict meaning of the term; it was only in 1183 that a bull of Pope Lucius III revealed a more complex and clearly militarized organization for the first time. After adopting the Cistercian rule, the new Leonese institution initially agreed to subordinate itself to the powerful Castilian Order of Calatrava (by 1187). However, this relationship soon gave rise to tensions, which were linked to the political rivalry between the kingdoms of Castile and León. These were settled in 1218, thanks to an agreement that committed the brethren of San Julián to obey Calatrava, whose master was allowed regular rights of visitation. In exchange,

they received the right to take part in the election of the master of Calatrava and also were given the possessions of the Castilian order in the kingdom of León. These included the fortress of Alcántara on the river Tagus, from which they took their name in 1218.

From this time the Order of Alcántara, consisting of knight brethren and clerics under the authority of a master elected by the former group, had a growing significance in the reconquest of Iberia from the Muslims, particularly after the union of the Crowns of Castile and León in 1230. After the seizures of Alange and Mérida by King Alfonso IX of León (1230), the order was constantly involved in fighting in the region of Extremadura. It remained closely associated with the campaigns of King Ferdinand III, who granted it various donations, not only in Extremadura, where most of its patrimony was situated, but also in Andalusia and even in the region of Murcia. In the course of its involvement in the reconquest, the order developed a policy of repopulation on the lands it was given, especially in Extremadura. This policy enabled it to grant numerous privileges (Sp. *fueros*) to its village communities, which came to be loosely organized in a system of commanderies.

The growing income of Alcántara meant that from the mid-thirteenth century it aroused the envy of competing seigneurial institutions, such as the dioceses of Coria and Badajoz or the Order of the Temple, with which tensions even degenerated into armed confrontation during the trials of the Templars (1307–1312). The monarchy of Castile attempted to manipulate and control Alcántara, as it also did in the cases of the other Iberian orders, encouraging the brethren to fight against Portugal or potential internal opponents. Alfonso XI was the first king to appoint one of his own officials to the head of the institution. Gonzalo Martínez de Oviedo, who had held the office of great dispenser for six years, was appointed master in 1337, but was executed the next year by order of the king. Yet the apparent failure of this policy was only superficial; the political stance of Alfonso XI was emulated by his successors, such as his son Peter I, who appointed trustworthy men like Gutier Gómez de Toledo in 1361, or Martín López de Córdoba three years later.

The Trastámara dynasty, who seized the Castilian throne in 1369, exploited the difficulties of the papacy during the Great Schism (1378–1417) to obtain from Pope Clement VII the right to nominate the masters of the Iberian military orders. In 1408 Fernando de Antequera, then acting as

regent of Castile in the name of his nephew John II, even managed to have his twelve-year-old son Sancho elected as master of Alcántara. Such interference was not necessarily negative; indeed, Sancho became famous, thanks to an ambitious reform project that was inaugurated at the general chapter of Ayllón in 1411. However, this attempt to restore (at least partially) the original religious observance remained as fruitless as previous attempts during the fourteenth century. In fact, from the second quarter of the fifteenth century, the order was repeatedly involved in internal struggles that largely reflected contemporary conflicts between monarchy and higher nobility concerning the control of the apparatus of government.

The masters and brethren of Alcántara were much involved in these wars. Several dignitaries even fought for the highest office of the order, as did Juan and Gutierre de Sotomayor in the reign of John II, or Alonso de Monroy and Juan de Zúñiga in the 1470s. The latter prevailed in 1479, thanks to the support of the “Catholic Monarchs,” Isabella I of Castile and Ferdinand II of Aragon, who were determined not to let the nobility control such an important source of income and power. In 1491, they obtained a bull from Pope Innocent VIII giving them the right to govern the Order of Alcántara whenever there was a vacancy in the mastership. From then on, they maintained pressure on Zúñiga who, in June 1494, agreed to renounce his office in exchange for the lifetime enjoyment of the richest lands of the order. When Zúñiga died in 1504, the Catholic Monarchs, who had meanwhile been recognized as governors of the order until their deaths, took possession of all of the resources of the institution.

Like its other Iberian counterparts, the Order of Alcántara was thus fundamentally altered. Even before 1523, when Pope Hadrian VI permanently united the estates of the military orders to the Spanish Crown, these institutions had lost most of their independence and become little more than closed noble corporations. Shattered by the French invasion in the early nineteenth century and then further weakened by the abolition of the laws on mortmain property in 1834 by the government of Juan Álvarez Mendizábal (1790–1853), the Order of Alcántara was abolished in 1874 by the First Spanish Republic, along with the other Spanish orders. Reestablished after the restoration of the Spanish monarchy, it was suppressed again in 1931. It now survives as a noble society with a purely honorific character.

Aleppo

Aleppo (mod. Ḥalab, Syria) was the second city of Muslim Syria (after Damascus) at the time of the crusades.

The city owed its importance to its seizure in 944 by Sayf al-Dawla, a prince of the Arab Ḥamdānid dynasty at Mosul in northern Iraq, who at the time of the breakup of the ‘Abbāsīd Empire detached it from the Syrian government of the Ikhshīdids in Egypt, and made it his capital for frontier warfare with Byzantium. From 956, however, he and his successors were on the defensive against the Byzantines, who took Antioch in 969, while from 979 they were threatened by the Fāṭimids, the successors of the Ikhshīdids in Egypt. Under the Ḥamdānids to 1016, and the Bedouin Mirdāsids to 1080, the city then alternated between dependence upon Constantinople and Cairo; but though it was occasionally taken by one or the other, it was never annexed, and remained a city-state under the rule of these successive dynasties down to the Saljūq conquest in 1080–1086.

Aleppo survived partly because of its strategic position between Egypt in the south, Iraq in the east, and Anatolia in the north; partly because of the defensive strength of the citadel on its isolated hill above the center of the city; and partly because of the resistance of its citizens to foreign conquest. As at Damascus, there was a city militia (Arab. *aḥdāth*), which by the time of the Mirdāsids was under the

Aleppo

command of a *raʿīs* or *shaykh al-balad* (head of the city). Meanwhile, in this mainly Shīʿite city, the family of Banuʾl-Khashshab held the post of *qāḍī* (judge), a position of hereditary authority and influence. Such leadership was all the more important in view of the foreign threats that repeatedly expelled the princes from the city, leaving the townsfolk with the burden of resistance or surrender. Paid as part of the army, the *aḥdāth* were equally decisive in the struggles for power that characterized the Mirdāsids down to the Saljūq conquest. This conquest was negotiated by the *raʿīs* al-Hutaytī, a member of the Shīʿite aristocracy of *sharīfs* (descendants of the Prophet Muḥammad), who kept Aleppo out of the clutches of Tutush I, the Saljūq ruler of Damascus, by turning first to the ʿUqaylid ruler of Mosul, and then to Sultan Malik Shāh I for the appointment of the *ghulām* (“slave soldier”; *mamlūk* in later usage) Aq Sunqūr in 1086.

Under Aq Sunqūr, a grand new minaret was added to the Great Mosque built by the Umayyads in the garden of the cathedral of St. Helena, itself built on the site of the ancient agora. This renewal of imperial patronage, however, was cut short by the death of Malik Shāh I in 1093, the prompt seizure of Aleppo by his brother Tutush I, and Tutush’s death in battle in 1095, leaving Aleppo to his son Riḍwān (d. 1113). Riḍwān ruled a territory of some hundred miles from ʿAzāz and Buzāʿa in the north to Hama (mod. Ḥamāh, Syria) in the south, but like the Mirdāsids was heavily dependent upon the city, where the *riyāsa* (command of the *aḥdāth*) had passed from al-Hutaytī and his successor the militiaman al-Mujann to a Sunnī Persian, Saʿīd ibn Badīʿ. Saʿīd was responsible for the massacre of members of the Ismāʿīli Assassin sect after Riḍwān’s death in 1113, and for the eviction of the regent Luʿluʾ in 1117. Four years after his

own eviction and assassination in 1118, Sa'īd was succeeded by his son al-Faḍā'il, who ruled the city down to the arrival of Zangī from Mosul in 1128. That was the culmination of a quite different strand in the politics of Aleppo, associated with the *qāḍī* Ibn al-Khashshāb, the long-standing protagonist of holy war against the Franks. Under Riḍwān and Lu'lu', Ibn al-Khashshāb had been obliged to see Aleppo aligned with Damascus and the Frankish states of Outremer against the atabegs of Mosul, who had been charged by the Saljūq sultan Muḥammad Tapar with organizing a coalition against the Franks. But between 1118 and his assassination in 1125, with Aleppo under threat from Frankish Antioch, Ibn al-Khashshāb was instrumental in offering the city, first to the Turcoman Artūqids at Diyar Bakr, then to Bursuqī, the atabeg of Mosul. When Bursuqī in turn was assassinated in 1126, the city welcomed his successor Zangī, the son of Malik Shāh's governor Aq Sunqūr; and the elements were at last in place for the gradual unification of Syria, both Muslim and Christian.

With Zangī, the *riyāsa* and the importance of the *ahdāth* came effectively to an end, as the prince took full control of the government, although Aleppo did not become a true capital until its inheritance by his son Nūr al-Dīn (1146). The monumental rebuilding of the city then resumed with work on the walls and the citadel, the rebuilding of the Great Mosque, and the construction of religious colleges, taking advantage of the appropriation of six churches (including the cathedral) by Ibn al-Khashshāb in retaliation for Frankish attacks. After Nūr al-Dīn's death at Damascus in 1174, Aleppo became the refuge of his son al-Malik al-Ṣāliḥ Ismā'īl against the advance of Saladin, who finally took it in 1183. From Saladin's own death in 1193, it became the capital of his son al-Ẓāhir Ghāzī as one among the several Ayyūbid principalities of Syria. Ghāzī (d. 1216) was responsible for the great rebuilding of the citadel with its glacis, and his son Mūsā for the palace within. The city failed, nevertheless, to hold out against the Mongols in 1260. Ghāzī's grandson, al-Nāṣir Yūsuf, who had annexed Damascus in 1250, then fled. After the Mongol retreat, the city was incorporated into the Mamlūk sultanate.

Until the Mongol threat finally disappeared at the beginning of the fourteenth century, however, Aleppo remained an undefended frontier city, the citadel and walls unrepaired until late in the century, and without the state expenditure to restore its prosperity. It recovered from the 1320s onward, when it became the base for the Mamlūk sul-

tanate's expansion into Anatolia and Armenia, and its Mamlūk amirs sufficiently powerful to profit from the succession struggles at Cairo and Damascus in the second half of the century. As a result, Aleppo prospered at a time when Damascus was in decline, and it continued to grow in the fifteenth century in spite of the invasion of Timur (Tamerlane) in 1400, and the century of disturbance that followed to the north and east. Prosperity then was commercial, derived from the caravan trade in silk, until the final crisis on the eve of the Ottoman conquest, and the urban renaissance that followed.

Alexander III (d. 1181)

Pope (1159–1181). Born around 1110 of Sieneese origin, the cardinal and papal chancellor Roland took the name Alexander when he was elected pope by a majority of cardinals on 7 September 1159. A minority chose a rival who took the name Victor IV.

The support given to Victor and three successive imperialist popes by the Holy Roman Emperor Frederick I Barbarossa brought about a schism in the papacy lasting until 1177. Alexander spent much of this time in exile, returning to Rome only in 1188. As pope, Alexander granted numerous privileges to the military orders and responded to appeals from Outremer for aid against the expansionist Nūr al-Dīn and Saladin by attempting to organize a crusade from 1165 onward. Although Henry II of England and Louis VII of France declared a crusade tax in 1166, their rivalry and the papal schism effectively sabotaged efforts to organize a

Alexander III (d. 1181)

grand general passage, moving Alexander and King Amalric of Jerusalem to win the Byzantine emperor Manuel I Komnenos as an ally, while multiple smaller expeditions departed in aid of the Holy Land. Papal negotiations with Manuel were marked by proposals for the reunion of the Greek and Latin churches in return for Manuel replacing Frederick Barbarossa as Holy Roman Emperor.

Although Alexander imposed the crusade vow upon Henry II of England as penance for his complicity in the murder of Thomas Becket, archbishop of Canterbury (1170),

a revolt of Henry's sons forestalled the king's departure. After the resolution of the conflict with Frederick Barbarossa (1177), Alexander extracted renewed crusading pledges from the kings of France and England and summoned the Third Lateran Council (1179), which was attended by representatives from Outremer and the Greek Orthodox Church. Alexander had already sent a delegation including Henry of Albano, abbot of Clairvaux, to preach against heresy in the Toulouse region. The delegation's reports led the council to urge bishops to excommunicate Cathar heretics and *routiers*

(mercenaries) and to grant papal protection and episcopal indulgences to those who fought them. Promoted to cardinal and papal legate, Henry of Albano exploited this new mandate to lead a military expedition to southern France, foreshadowing Innocent III's formal extension of the crusade to this region.

Alexander IV (d. 1261)

Pope (1254–1261). Born around 1180, Rainald of Segni was elected pope on 12 December 1254, taking the name Alexander.

Throughout his pontificate Alexander largely continued the policies of his predecessors Gregory IX and Innocent IV, including crusades against the Staufen dynasty, the Moors in North Africa, and pagans in Finland and the Baltic region. By granting the rulership of Sicily to Edmund, son of King Henry III of England (1255), he persuaded Henry to commute his crusading vow to a campaign against Manfred, son of the emperor Frederick II, who was attempting to gain control of the kingdom. However, papal armies' campaigns against Manfred were largely unsuccessful, while another initially promising crusade against the pro-Staufen Ezzelino of Romano and Oberto Pallavicini merely resulted in Pallavicini's elimination of his rival Ezzelino. Alexander also engaged in negotiations with Theodore II Laskaris, the Greek emperor of Nicaea, regarding the potential surrender of Latin-held Constantinople and restoration of the Greek Orthodox patriarchate there in return for acknowledgment of papal supremacy in doctrinal matters and the reunion of the Greek and Latin

churches. However, after Theodore died in 1258, his successor Michael VIII Palaiologos took Constantinople by storm shortly after Alexander's decease.

As a cardinal, Alexander had witnessed the Mongols' first incursions into eastern Europe and the missions sent by Innocent IV and Louis IX of France, which returned with letters calling for universal submission. During Alexander's pontificate, the Mongol army of Hülegü invaded Syria, forcing the submission of the princes of Antioch and Cilicia, and Alexander's attempts to forge a league to guard the eastern border of Christendom failed to prevent the Mongols' invasion of Poland and Lithuania. His calls for crusaders to aid both eastern Europe (1253–1254, 1259) and Outremer (1260–1261) led to the departure of minor contingents, but the pope's death prevented the materialization of a general passage, as well as of a council he had convoked to address threats to the Holy Land, Constantinople, Sicily, and eastern Europe.

Alexander VI (1431–1503)

Pope (1492–1503). Of Aragonese origin, Rodrigo Borja (Italianized as Borgia) was elected pope in succession to Innocent VIII.

Although the growth of the Ottoman Empire resuscitated interest in crusading, Alexander VI's attempts to counter the threat it represented were overshadowed by his desire to advance the career of his son, Cesare Borgia, and to counter attempts by Charles VIII, king of France, to conquer the kingdom of Naples, which Charles claimed was essential for his putative anti-Ottoman crusade. When the Ottoman Turks threatened Italy, Alexander's temporal power base, he persuaded the Sforza of Milan, Venice, the Holy Roman Emperor Maximilian, and the Spanish sover-

Bust of Pope Alexander VI. (Library of Congress)

eigns to form the League of Venice against France and the Ottomans. Yet when the Turks openly moved against Venice in 1499, Alexander's attempts to organize a crusade were largely ignored. The sale of indulgences for the Jubilee and the crusade netted large sums in Germany and other regions, but Alexander's pontificate remained dogged by opposition to the clerical tithes he proposed for an anti-Turkish crusade and criticism of the tactics used to raise money to support largely mercenary crusading armies, partly because of the suspicion that funds were being diverted to support the papal cause in Italy or appropriated by secular rulers when crusade preparations stalled. The crusade and European power struggles had become deeply entwined; Alexander's efforts to organize an anti-Turkish crusade involving Hungary, Bohemia, and Emperor Maximilian from 1493 onward were sabotaged by Charles VIII's planned conquest of Naples, which led the Italians to seek an alliance with the Turks in order to protect themselves.

Contemporary treatises written by Marino Sanudo and Stefano Taleazzi illuminate the continued commitment to the idea of the crusade, as well as the problems that vexed their organization in this period. Crusading theory and

issues that had arisen during the Spanish *Reconquista* (completed with the capture of Granada in 1492) also informed Alexander's *Inter caetera* (1493), which fused the concepts of the defense and expansion of the faith, while seeking to end the dispute between Portugal and Spain over the partitioning and conquest of northern Africa and the Americas, a project to which he granted privileges and funding previously reserved for the crusades.

Alexander Nevskii (1221–1263)

Prince of Novgorod (1236–1263) and grand prince of Vladimir (1252–1263); renowned for resisting the attacks of German and Swedish crusaders against northwestern Russia.

Alexander Yaroslavich belonged to the Vladimir-Suzdalian branch of the Rurikid dynasty, and was the second son of Yaroslav Vsevolodovich, prince of Novgorod (later grand prince of Vladimir). He had already served as his father's governor in Novgorod before becoming prince in 1236. The byname Nevskii (attested from the fifteenth century) derives from his great victory at the river Neva, when, thanks to Alexander's tactics, the outnumbered Novgorodian host smashed an invading Swedish army (15 July 1240).

At the end of 1240 Alexander left Novgorod after having quarreled with its citizens, and only returned a year later, when a great part of the Novgorodian state, including Pskov, had been occupied by the Teutonic Knights of Livonia and their allies. In the winter of 1241–1242, the Novgorodian troops with Alexander at their head expelled the crusaders from the land of the Votians, and in March 1242 they liberated Pskov and invaded the bishopric of Dorpat in Livonia. On 5 April 1242, the Novgorodians overcame the crusaders on the ice of Lake Peipus, after which the Livonians asked

Prince Alexander Yaroslavich of Novgorod, from the film *Alexander Nevsky*, by Sergei Eisenstein (1938). (Mosfilm/The Kobal Collection)

for peace and renounced all their claims to Russian lands. Alexander resisted the attempts of the pope and the archbishop of Riga to persuade him to accept the Latin form of Christianity, and he succeeded in avoiding war on two fronts, by keeping peace with the Mongol Great Khan and the khan of the Golden Horde.

In 1252 Alexander became grand prince of Vladimir, while remaining prince of Novgorod. In 1256 he was able to prevent the Swedes from building a fortress on the right bank of the river Narva. Alexander concluded a treaty against the Teutonic Order with Mindaugas, king of Lithuania, in 1261, but a planned joint attack on Livonia the next year failed, as Alexander was obliged to journey to the Golden

Horde; there he fell ill, and he died while returning to Vladimir. He was the subject of a memorable Russian film made in 1938 by Sergei Eisenstein.

Alexandretta

Alexandretta (mod. İskenderun, Turkey) was a minor port in Syria. Tancred, nephew of Bohemund of Taranto, captured the town with the aid of the ships of Guynemer of Boulogne in 1097. By 1099, however, a Byzantine garrison had seized the town, basing its authority on Byzantine control of the area in the tenth and eleventh centuries. Tancred retook it in the course of his conquest of Cilicia in 1101, and it remained under Antiochene rule, apart from brief periods under the control of the Byzantines (1137–1143) and the Armenian Rupenid dynasty (1152–1155), until it was assigned to the Templars.

In 1188 Saladin captured Alexandretta, but it was soon seized by Leon II, prince of Cilicia, along with the important castle of Baghras. The city’s thirteenth-century history is obscure. Baghras returned to Templar control around 1212, and it is likely that Alexandretta did, too. The town was probably conquered by the Mamlūks in 1268.

Alexandria, Capture of (1365)

The capture of the port of Alexandria (mod. El-Iskanderiyya, Egypt) was the culmination of a crusade mounted by King Peter I of Cyprus. It had no long-term strategic benefits because the city could not be held for more than a few days.

Peter, along with his chancellor, Philippe de Mézières, and the papal legate Peter Thomas were ardent proponents of renewed crusading in the mid-fourteenth century. Scholars debate whether the king’s enthusiasm stemmed from genuine interest in the recovery of the Holy Land or from a more practical concern for Cyprus’s economy and security, but there is no doubt that his enthusiasm was sincere (despite

suffering acutely from seasickness, he spent many months traveling by ship in pursuit of his goals).

There had been much talk of a major crusade in the decades following the fall of Acre (mod. ‘Akko, Israel), the last major Christian stronghold in the Holy Land, to the Mamlūk sultanate in 1291. However, only lesser expeditions had actually been conducted. Peter had shown interest in a crusade from his youth, and when he inherited the throne of Cyprus in 1359, he began a series of raids along the coasts of Anatolia, Cilicia, Syria, and Palestine. In 1362 he set out on an extended tour of Western courts seeking support for a major crusade, a task made somewhat easier by the lull in the Hundred Years’ War following the Treaty of Brétigny between the French and English monarchies in 1360. Peter’s party was lavishly entertained and showered with promises of aid, few of which were kept. Nevertheless, in 1365 Peter amassed French, English, Cypriot, Hospitaller, and other forces amounting to perhaps 165 ships, 10,000 men, and 1,400 horses, which assembled off the island of Rhodes. This was large considering the circumstances, but almost certainly too small to make a serious long-term impact. The expedition’s destination was kept secret until after it left Rhodes on 4 October.

The crusaders arrived at Alexandria on 9 October. They mounted major attacks throughout the next day and found a portion of the wall undefended, an oversight they exploited so effectively that the city was in their hands by the evening. A great sack and massacre resulted, continuing for three days. Seventy or more ships were filled with booty, and 5,000 captives were placed on other vessels. Two of the three land gates of the city were apparently also destroyed, a misjudgment that impaired the ability of the crusaders to defend their prize.

As the crusaders met to determine what to do next, a large Mamlūk army was approaching. King Peter, together with Peter Thomas and Philippe de Mézières, argued passionately for remaining and defending the city, which he may have hoped to use as a base to conquer all of Egypt and then the Holy Land. But others, including most of the crusaders from the West, argued for flight. Even the Hospitallers and Peter’s own brothers were against staying. The latter party, whose opinion prevailed, has been accused of cowardice ever since, but it is difficult to fault their reasoning. Previous crusades against Egypt had foundered because of their leaders’ unwillingness to limit their gains or to withdraw before they were trapped. The crusaders had just struck a devastating blow, at

least temporarily, at the major center of Mamlūk economic activity, garnering enormous resources that could, at least theoretically, be used to finance further operations. According to the poet Guillaume de Machaut, whose *Prise d'Alexandre* is a major source for the crusade, the king and his entourage were among the last to leave, withdrawing from the beach only as Mamlūk troops were pouring into the city.

This expedition was the last significant crusade to mount an actual attack on a major target in or near the Holy Land. Peter may have hoped to keep his force together and strike again, but this proved impossible. Many westerners, including the noted French knight Bertrand du Guesclin, were inspired by the capture of Alexandria and began to prepare for a new expedition, a scheme that collapsed when the Venetians, who were unhappy at the way the crusade had seriously disrupted their trade with Egypt, spread the false rumor that Cyprus and the Mamlūks had come to terms. Peter continued raiding the surrounding Muslim-held coasts and in 1368 traveled again to Rome in search of support. He was murdered by a disgruntled subject in 1369, however, and his plans came to nothing, leaving the capture of Alexandria as his main, albeit temporary, achievement.

Alexios I Komnenos (d. 1118)

Byzantine emperor (1081–1118) and ally of the earliest crusaders.

Alexios was born around 1057, the third son of the nobleman John Komnenos and his wife, Anna Dalassene. He served as a general under the emperors Michael VII Doukas (1071–1078) and Nikephoros III Botaneiates (1078–1081) before rebelling in 1081 and seizing the throne with the aid of the Doukas family (he had married Irene Doukaina in

1078). Alexios developed a system of "family government" that concentrated power in the hands of the great aristocratic families related to him and rewarded them for their support; the Doukas, Palaiologos, and Melissenos kinship groups received high posts and titles in the imperial government and were allocated the revenues of the regions they governed.

The first ten years of Alexios's reign were characterized by serious military threats. In 1081–1083 the western Balkans were attacked by Normans from southern Italy under the leadership of Robert Guiscard and his son, Bohemund. After a series of defeats, Alexios was able to recapture Dyrrachion (mod. Durrës, Albania) and Kastoria and secure control of northern and central Greece. He enlisted the help of the Venetian navy to attack the Normans in the Adriatic, in return granting Venice considerable trading privileges in all parts of the empire (except the ports of the Black Sea, Crete, and Cyprus) as well as a trading wharf in Constantinople (c. 1082). In the northern Balkans, the attacks of the nomadic steppe peoples were finally halted by Alexios's victory over the Pechenegs at the battle of Mount Lebonion (1091) and his defeat of the Cumans in 1094. In Asia Minor, the situation was even more serious. By 1084, Antioch (mod. Antakya, Turkey), Edessa (mod. Şanlıurfa, Turkey), and Melitene (mod. Malatya, Turkey) had all been lost to the Turks. In 1081, Alexios had made peace with Süleyman, the Saljūq sultan of Rūm, but the Aegean islands were subject to naval attack from Chaka, the emir of Smyrna (mod. İzmir, Turkey), who had even attempted to ally with the Pechenegs.

Alexios's control of the empire was by no means assured; in 1091, John the Oxite, patriarch of Antioch, criticized the emperor for his harsh taxation and for favoring his relatives rather than more able men, and blamed him for the parlous state of the empire. A debased coinage, not reformed by Alexios until the end of his reign, meant that the imperial administration was being deprived of much of its true monetary revenues, while much income was spent on hiring mercenaries. Turks helped fight the Normans and, in 1089, 500 Flemish knights arrived to fight for the emperor, sent as a result of an oath of loyalty to Alexios taken by Robert I, count of Flanders, on his way home from a pilgrimage to Jerusalem.

By 1095 warfare among the different Saljūq rulers had weakened their power in Asia Minor, and Alexios, now familiar with the valuable fighting power of Western knights, sent emissaries to the Council of Piacenza to ask the

Alexios III Angelos (d. 1211)

pope and Western leaders for help in his projected campaigns against the Turks. Particular mention was probably made of the fate of the Holy Sepulchre in Jerusalem, now in Muslim hands.

Alexios's treatment of the forces of the First Crusade (1096–1099), though much criticized by contemporary Western sources, was consistent with his aim of making the best use of skilled Western knights in his projected reconquest of Byzantine lands in Asia Minor. Thus he exacted oaths of loyalty from the Western leaders; even Raymond of Saint-Gilles, initially reluctant to take an oath, eventually swore to respect the life and honor of the emperor. Alexios provided the leaders with money, food, and military support, and his close adviser, Tatikios, was deputed to accompany the crusaders. Alexios's policy was initially rewarded by the recapture of Nicaea (mod. İznik, Turkey) in May 1097, although Westerners were critical that the city passed directly into imperial hands, despite the fact this was in accordance with the agreements made in Constantinople that all reconquered lands should revert to the empire.

However, it was Alexios's actions at the time of the siege of Antioch (1097–1098) that ultimately served to blacken his reputation with the crusaders. In February 1098 Tatikios abandoned the siege in order to fetch reinforcements. Alexios set out from Constantinople with these, but at Philomelion (mod. Akşehir, Turkey) in the summer of 1098 he was informed by crusaders who had abandoned the city that Antioch could not hold out against an expected Muslim counterattack. The emperor therefore retreated to Constantinople, but as a consequence of his perceived betrayal of his "vassals," Bohemund refused to hand the city over to the Byzantines, even though he was formally asked to do so in March 1099. By the Treaty of Devol (1108), Alexios later compelled Bohemund to agree that Antioch should revert to imperial control after his death; in fact it never did. Thus one of Alexios's major aims remained unachieved.

Although Alexios supported the Crusade of 1101 with money and men, its ultimate failure was blamed on "Greek treachery" by Westerners, and the emperor's image in the West remained that of a man who could not keep his word. By the time of his death (15 August 1118), however, Alexios had succeeded in reconquering parts of western Asia Minor and had been accepted as overlord by some Saljūq groups. Alexios's internal government was marked by its suppression of dissent in both political and religious spheres. Accusations of heresy were made against those, like John Italos,

who too openly admired the work of secular ancient philosophers; dualists such as the Bogomils were hunted down. Alexios further emphasized his personal orthodoxy by visiting holy men such as St. Cyril of Philea and by carrying out philanthropic works, such as founding an orphanage in Constantinople. His reign is described in a eulogistic history, the *Alexiad*, written by his daughter, Anna Komnene, who portrays her father as a Homeric hero overcoming all odds. Other Byzantine historians, such as John Zonaras, bitterly criticized his autocratic tendencies and his family's ruthless pursuit of power.

Alexios III Angelos (d. 1211)

Byzantine emperor (1195–1203). Alexios was born around 1153, the elder brother of Isaac II, first ruler of the Angelos dynasty, whom he deposed on 8 April 1195 and subsequently had blinded and imprisoned.

Generally ranked among the most incompetent Byzantine sovereigns, Alexios III oppressed his people through extravagance and heavy taxes, among them a "German tax" (Gr. *alamanikon*) in 1197, reputedly required to ward off the German emperor Henry VI's crusading plans against Byzantium. Several Greek and Balkan local rulers rebelled against Alexios, among them Leo Sgouros and Manuel Kammytzes, who proclaimed their independence in the northeastern Peloponnese and northern Thessaly, while Alexios almost lost his throne in a court coup led by John Axouchos Komnenos Pachys (1200/1201).

In the summer of 1203 the Fourth Crusade arrived before the walls of Constantinople, and on 17/18 July Alexios ignominiously fled from his capital with the imperial treasury and crown jewels, escaping to Mosynopolis in Thrace, while the crusaders installed Isaac II and the latter's son Alexios

IV as co-emperors. In the summer of 1204, Alexios III allied himself with Alexios V Doukas Mourtzouphlos, who had overthrown the co-emperors (January 1204), but fled again after the second capture of Constantinople by the crusaders (12–13 April). Alexios III gave his daughter Eudokia Angelina to Mourtzouphlos in marriage, but aspired to regain the throne for himself; in August 1204 he had Mourtzouphlos blinded, and Eudokia was married to the nobleman Leo Sgouros, whose power was still in the ascendant. Soon afterward Alexios III and his wife Euphrosyne Doukaina were captured by Boniface of Montferrat (late 1204) and detained in Thessaly. Ransomed in 1209/1210 by his relative Michael I of Epiros, Alexios was sent to the Saljūq sultan of Rūm, Kay-Khusraw I, with whose help he hoped to regain his crown. However, after the defeat of the Saljūqs by Theodore I Laskaris in spring 1211, Alexios was seized and incarcerated in the Hyakinthos monastery in Nicaea, where he died soon after.

Alexios IV Angelos (1182/1183–1204)

Byzantine emperor (1203–1204).

The son of Emperor Isaac II Angelos, Alexios was incarcerated when his father was overthrown and blinded by his uncle, Isaac's brother, Alexios III Angelos (8 April 1195). In late 1201 the young Alexios escaped to Italy and made his way to the court of Philip of Swabia, king of Germany, the husband of his sister Irene Angelina. Philip supported Alexios's claims to the Byzantine throne and put him in contact with the republic of Venice, which had supplied the fleet that was intended to transport the Fourth Crusade to Egypt. By January 1203 Alexios had joined the crusaders at Zara,

promising them large sums of money and the submission of the Greek Orthodox Church to the papacy in exchange for their assistance in restoring him to the throne of Byzantium, and a pact between Alexios and the crusaders was agreed on at Corfu in May 1203. On 17/18 July 1203, Alexios III was ousted from the Byzantine capital, and Isaac II was restored, with Alexios IV as co-emperor and effective ruler (August 1203). The pro-Latin attitude of the young Alexios estranged him from his own subjects, yet he soon proved incapable of fulfilling his promises to the crusaders. Unable to settle his enormous debts, he was compelled to increase the already cumbersome taxation set by his predecessor, and growing discontent gave way to open rebellion under the nobleman Alexios (V) Doukas Mourtzouphlos, who seized power (28/29 January 1204) and had Alexios IV strangled in prison ten days later (8 February 1204).

Alexios V Doukas Mourtzouphlos (d. 1204)

Byzantine emperor (January–April 1204); the last ruler of the empire before the conquest of Constantinople by the Fourth Crusade (1202–1204).

A scion of the noble Doukas family, Alexios was nicknamed Mourtzouphlos (Gr. “bushy-browed,” “sullen,” “morose”) and joined the abortive coup (1200/1201) of John Axouchos Komnenos against Alexios III Angelos, for which

Alfonso I of Aragon (d. 1134)

he was incarcerated until July 1203, when Isaac II and Alexios IV were jointly brought to the throne with crusader help. On his release, Mourtzouphlos was given the title of *protovestiarios*, which did not, however, prevent him from manifesting his anti-Latin feelings, thus undermining the pro-Latin policies of Alexios IV. On 27 January 1204, Byzantine popular discontent against Alexios IV resulted in the brief proclamation of the unwilling Nicholas Kanabos as emperor, a development exploited by Mourtzouphlos, who encouraged Alexios IV to seek crusader aid to oust Kanabos and then used this as a pretext to overthrow him (28/29 January 1204).

After being crowned (5 February), Mourtzouphlos tried to fortify parts of his capital and dictate demands for an immediate crusader withdrawal, which soon provoked an attack. He and his supporters repelled a first crusader assault (9 February) but were eventually overwhelmed, and he fled just before Constantinople was stormed and captured (12/13 April). During the summer of 1204 Mourtzouphlos sought refuge at Mosynopolis in Thrace with Alexios III, who gave him in marriage his daughter Eudokia Angelina; however, Alexios III had evidently not forgiven his new son-in-law's previous plots against him, and had him blinded (August 1204). Mourtzouphlos ended up in the hands of the Franks, who had him tried and found guilty of treason against Alexios IV; he was cast to his death from the heights of the Theodosian Column in Constantinople.

Alfama, Order

See St. George of Alfama, Order of

Alfonso I of Aragon (d. 1134)

King of Aragon and Navarre (1109–1134), known as “the Battler” (Sp. *el Batallador*).

Alfonso was born around 1073, the second son of Sancho I. He succeeded to the throne on the death of his childless elder brother, Peter I (1109). The same year, Alfonso married the Castilian princess and heiress Urraca, but despite several diplomatic and military initiatives, he ultimately failed in his attempt to gain control of Castile and León. Known for his military prowess (hence his nickname), the Aragonese king succeeded in moving the Christian-Muslim frontier south by conquering Zaragoza in 1118, Tudela and Tarazona in 1119, and Daroca and Calatayud in 1120. These campaigns were fostered by ecclesiastical indulgences and attracted some fighters from areas north of the Pyrenees. The king was clearly influenced by crusading ideals, as best illustrated by his design to open a land route to Jerusalem via the Iberian Peninsula and North Africa. In 1125–1126, he led a campaign to Valencia and Andalusia, returning with many thousand Mozarabs (Arabic-speaking Christians), who were settled on the Ebro frontier. The later years of his life were dedicated to the vain attempt to conquer the Muslim towns of Lleida (Lérida) and Fraga. In 1134, Alfonso was mortally wounded at the battle of Fraga; on his deathbed, he confirmed his last will of 1131. In this much discussed document, the king left his realm to the Knights Templar, the Hospitallers, and the Canons of the Holy Sepulchre. His wish, however, was never fulfilled, for both the Navarrese and the Aragonese nobles preferred to ignore the will and offered the crown to local magnates of their choice (García IV and Ramiro II respectively).

Alfonso IV of Aragon (1299–1336)

King of Aragon and Valencia and count of Barcelona (1327–1336).

Known as “the Benign,” Alfonso was the son of King James II. Although Alfonso is best known for his conquest of Sardinia, his campaigns against Genoa, and the incorporation of the county of Urgell into his realm, among his driving ambitions was the crusade against the Naṣrid realm of Granada and the Marīnids of northwest Africa. Shortly after his coronation, the king sent one of his most able diplomats, Ramón de Melany, to several European courts and to Pope John XXII in quest of support for his crusade, and received pledges from a number of rulers (including the kings of France and Bohemia). The king of Castile, however, probably fearing Christian competition on the frontier with al-Andalus, withdrew his initial cooperation, and Pope John’s enthusiasm waned. Most foreign crusaders consequently decided not to participate, and the summer campaign of 1330 against Granada became a largely Catalan-Aragonese venture of very limited scope and success. After some local skirmishes, a peace treaty was signed in 1335. Alfonso died on 24 January 1336 and was succeeded by his son Peter IV.

Alfonso VI of Castile and León (1040–1109)

King of León (1065–1109) and Castile (1072–1109).

Alfonso VI was the son of Ferdinand I, king of León. He inherited León on the death of his father and succeeded to Castile on the death of his elder brother, Sancho II. It was Alfonso’s foremost policy to spread the concept of *Reconquista* (reconquest) in order to convert the struggle against Islam into an Iberian crusade. Alfonso VI established his rule upon this ideological basis, which was ratified by the church by means of both his alliance with the Cluniac Order and his imposition of the Roman rite in Castile and León instead of the traditional Spanish Mozarabic liturgy.

By 1077, Alfonso VI proclaimed himself “Emperor of all Spain” (Lat. *imperator totius Hispaniae*), and, following his expansionist policy, in 1085 he carried out the military occupation of the Islamic Taifa kingdom of Toledo. This victory broke the balance of power between Christians and

Muslims in the Iberian Peninsula. It also led to a reaction not only from the *alfaquíes* (the most intransigent religious sections among Andalusians) but also from the rising Almoravid Empire, which inflicted defeats upon him at Sagrajas (1086) and Uclés (1108). He was succeeded in both kingdoms by his daughter Urraca.

Alfonso VII of Castile and León (1105–1157)

King of Castile and León (1126–1157); the son of Urraca, queen of Castile and León, and Raymond of Burgundy, count of Galicia.

After Urraca’s troubled reign, Alfonso VII helped restore both social peace and political stability in León and Castile. It was his policy to strengthen the idea of the “Hispanic Empire” by means of imposing feudal links of dependency in order to guarantee the predominance of Castile and León over the other Christian kingdoms of the Iberian Peninsula. Their rulers, as well as numerous princes of the south of France, attended Alfonso’s imperial coronation at León (1135). However, Alfonso was forced to concede the independence of Portugal (1143).

The imperial idea further motivated Alfonso to pursue the struggle against Islam. Both the collapse of the Almoravid Empire and political division in Islamic Spain facilitated his offensive: he took Oreja (1139), Coria (1142), and Calatrava (1147), the latter being a key stronghold in the route between Toledo and Córdoba. Later, he took Almería (1147), in collaboration with Aragon, Genoa, and Pisa. The rising Almohad Empire, which had replaced that of the Almoravids in North Africa, launched an Islamic counteroffensive. Alfonso VII died while on his way to relieve Almería, which had been recaptured by the Almohad army. His death clearly showed the failure of his imperial aspirations, for his realm was divided between his sons, Sancho III receiving Castile, and Ferdinand II receiving León.

Alfonso VIII of Castile (1155–1214)

King of Castile (1158–1214).

Alfonso was born at Soria on 11 November 1155, the son of King Sancho III of Castile and Blanca of Navarre. He inherited from his father the kingdom of Castile, which had been separated from that of León as a consequence of the testament of Alfonso VII. As he was underage, there was a troubled regency until 1169, during which the mightiest noble families (such as the Castros and the Laras) contended for power and thus allowed the intervention of the kingdoms of León and Navarre.

Once he came of age, Alfonso VIII started to pursue three main political objectives: the strengthening of the kingdom, the consolidation of its frontiers, and the struggle against Islam. In regard to the first, the king showed a keen interest in urban development, as well as in standardizing the various law codes coexisting in his kingdom. He also helped strengthen representative institutions such as the *curia regia* (the court council), in which some members of the city councils probably took part. The frontiers of the kingdom were consolidated by means of treaties with León, Aragon, and Navarre, by which Alfonso VIII annexed Álava and Guipúzcoa (1200). He also had expectations with regard to Gascony, as a consequence of his marriage to Eleanor, daughter of King Henry II of England.

Alfonso fought the Almohad Empire, which had grown stronger since 1172 after it had controlled the disunity and internal strife of Muslim Spain. To this end, Alfonso asked the military orders for help and favored them in return: he granted goods and privileges to the Order of Calatrava and introduced the Order of Santiago into Castile, granting it the town of Uclés (1174). In 1177 he conquered Cuenca, supported by the military orders and the king of Aragon. Later, however, he was seriously defeated at Alarcos (1195), as a result of the lack of unity among the Iberian Christian principalities. Due to the pope's preaching of the crusade, Alfonso

VIII obtained not only the aid of his former Christian enemies, but also that of numerous French knights, as well as the prelates of Narbonne, Bordeaux, and Nantes. He led them all to the crucial victory over the Almohads at the battle of Las Navas de Tolosa (1212). Thereafter, Alfonso VIII successfully secured the Castilian frontier at the Sierra Morena.

Alfonso X of Castile and León (1221–1284)

King of Castile and León (1252–1282).

The son of King Ferdinand III, Alfonso X was a pioneer in his attempts to strengthen the Castilian-Leonese monarchy by basing his kingship on the concept of royal sovereignty. He subordinated his two important, complementary political concerns to this objective. One of these was to obtain the imperial title; the other was to impose his authority throughout the whole of his united realm.

As the son of Beatrix, daughter of Philip of Swabia, Alfonso aspired to become Holy Roman Emperor. Elected as king of Germany in opposition to the English candidate Richard of Cornwall in 1257, Alfonso opposed the Franco-papal Guelph cause led by Charles I of Anjou. The king wanted to make use of the authority inherent in the imperial title in order to affirm the hegemony of Castile over all the Christian kingdoms in the Iberian Peninsula. This involved the exercise of a strong, centralized power, and he dedicated his principal governing initiatives to the consolidation of this power. His initiatives related to four main areas of activity: legislative work, territorial uniformity, definition of stable frontiers, and cultural control.

The king's legislative work consisted in the codification of a corpus of common law, called *Espéculo*, which was later integrated into another more copious work, the *Partidas*. The Roman, homologizing principles that dominated this endeavor materialized in the promulgation of a *Fuero Real* (royal privilege) granted to many cities in the kingdom. The king's fundamental preoccupation was the legal unification of his territory; this centralizing tendency affected the autonomous status of some of the subjugated Islamic com-

munities, which responded by rebelling. Thus in 1264 a significant uprising occurred in the Muslim communities of Andalusia and Murcia with the connivance of the king of Granada.

Another of the great challenges of King Alfonso was to create stable, defined frontiers. For this reason, he maintained complex relations with the neighboring Christian kingdoms and established customs duties that helped to define the political map of the kingdom. But, above all, the frontier policies were part of the reconquest, which severely reduced the Islamic presence in the Peninsula, limiting it to the Nasrid kingdom of Granada. The aim of the monarch was to take the crusade to North Africa so as to control the Strait of Gibraltar, and although this never came about, between 1261 and 1263 he subjugated Niebla, repopulated Cádiz, and expelled the Muslims from Écija and other border towns.

Alfonso's final main aim was to confer on the kingdom a feeling of community, in an attempt to form a coherent society as a support for effective governmental action. To achieve this aim, he made use of two instruments: language and history. He imposed Castilian as the official mode of expression, and he stimulated the writing of historiographical works (the *Estoria de Espanna* and the *General Estoria*) reconstructing the common past of all the kingdoms in the Peninsula so as to justify his aspirations of hegemony. Initiatives such as these and his work of cultural sponsorship brought him the nickname of the Learned King. This complex political program aroused serious opposition, not only from the Muslims, but from those who regarded the centralist attitude of the monarch as a threat to their economic and social privileges. Bishops and territorial nobles rose up against the king in 1271, and some ten years later (1282), led by the crown prince, the future Sancho IV, they provoked a civil war, which brought about the dethronement of the king. He died at Seville on 4 April 1284.

Alfonso XI of Castile (1311–1350)

King of Castile (1312–1350).

The son of King Ferdinand IV of Castile and Constance of Portugal, Alfonso came to the throne as a minor. During his adolescence, the political turbulence of the preceding reign continued. In 1325 he came of age, and from then on was extremely active in his attempts to restore the authority of the monarchy and to neutralize the threat from the Marīnid dynasty of North Africa. In respect of the former aim, he was a worthy continuator of the centralizing politics of his great-grandfather Alfonso X: by promulgating the *Ordenamiento de Alcalá* in 1348, he established Roman-canonical law in the kingdom. Against the Marīnid sultan, who had been sending troops to the Iberian Peninsula since 1338, Alfonso concluded an alliance with the kingdom of Aragon and also with Genoa, which put ships at his disposition to block the Strait of Gibraltar; there was a further alliance with Portugal, which participated actively in the battle of the river Salado, near Tarifa (1340). In this campaign, declared a crusade by Pope Benedict XII, the allied troops, helped by an impressive participation of the military orders, defeated the Marīnids and their Granadan allies. This victory meant the end of the African invasions of the Peninsula, although the Marīnids retained a presence in Algeciras and Gibraltar. In 1343 Alfonso conquered Algeciras, taking advantage of the new artillery technology, but died seven years later while besieging Gibraltar. He was succeeded by his son Peter I “the Cruel.”

Algeciras, Siege of (1342–1344)

The siege of the Muslim-held city of Algeciras in Andalusia (in mod. Spain) culminated in its capture by Castilian forces under King Alfonso XI in March 1344.

The astounding victory of the combined forces of the kings of Castile and Portugal at the river Salado (October 1340) broke the joint Marīnid-Nasrid siege of Tarifa but did not significantly reduce the presence of the Muslim forces in

Algirdas (d. 1377)

the region. The impetus of that triumph allowed King Alfonso XI of Castile to carry out another successful campaign on his southern frontier in 1341. In the autumn of that year, the king contemplated a bolder goal: the city of Algeciras. Any lasting territorial gain had become dependent on the control of the Strait of Gibraltar, which would prevent the kings of Granada from gaining help from the Marīnid sultans of Morocco. Tarifa, the natural landing base for North African Muslims since 711, had been conquered by Castile in 1292, but Algeciras, a privileged harbor in a bay protected from uncomfortable eastern winds by the Rock of Gibraltar, was still in Moorish hands. Alfonso XI began to besiege the city in August 1342. He had to resort to extraordinary fiscal expedients: the *alcabala* (a new sales tax), as well as widespread borrowing and conversion of his own personal silver into money in order to meet the expenses of a campaign that lasted twenty-one months. The Castilian troops were augmented by other peninsular forces. The crusading spirit drove King Philip III of Navarre to take part in the siege, and small contingents from as far away as Germany and England (including the earls of Derby and Salisbury) also took part. The Castilian navy had experienced heavy losses in previous years, and Alfonso XI had to resort to unreliable Genoese and Aragonese ships under the nominal command of the Genoese Egidio Bocanegra.

The siege progressively tightened, especially by sea, the only means of supply left to the inhabitants of Algeciras. After the defeat of a Muslim relief army at the river Palmones in December 1343, both Marīnids and Naṣrīds realized that Algeciras could not be saved. On 22 March 1344 King Yūsuf I of Granada offered to surrender the place on terms that were accepted by Alfonso XI. Five days later, the Castilian king made his entry into the town. The long siege was the last great example of a medieval assault before artillery became widely used in the second half of the fourteenth century.

Algirdas (d. 1377)

Grand duke of Lithuania (1345–1377) and major opponent of the Teutonic Order.

A few years after the death of his father, Grand Duke Gediminas (1341/1342), Algirdas (Ger. Olgerd, Pol. Olgierd, Russ. Ol’gerd) seized power with the help of his brother Kęstutis. Although he cooperated so closely with Kęstutis and other brothers or nephews that these are often called *reges* (kings) in the sources, Algirdas held supreme power in Lithuania. Through war and marriage alliances, he expanded his rule over the western part of Russia and most of present-day Ukraine. Tribute and soldiers from such conquests helped the pagan Lithuanians to resist the Teutonic Order’s crusade, and made Lithuania for a time the largest state in Europe. Algirdas often played a leading role in battles with the Teutonic Order and its allies, for example in 1345, when Lithuanian forces took the fortress of Mitau, and in 1348, when he and Kęstutis were defeated in the battle of Strėva. Despite successive marriages to Orthodox Russian princesses (Maria of Vitebsk and Juliana of Tver), Algirdas remained a pagan, characterized as evil and godless by the same Russian chroniclers who praised his intelligence and prudence. He allowed Latin and Greek Orthodox churches in Vilnius and encouraged Christian merchants, yet he did not permit insult to pagan ways or any questioning of his own power, attitudes that probably explain why he executed three Lithuanian converts to Greek Orthodox Christianity at his court.

Algirdas knew how to use diplomacy rather than force in matters of religion. He twice obtained from the patriarch of Constantinople a separate metropolitan of Lithuania for the Orthodox population of Lithuanian-ruled lands to counteract the pro-Muscovite policies of the metropolitan of Russia. In 1358 he negotiated with Emperor Charles IV about conversion to the Roman faith, but after obtaining useful peace treaties, he suddenly made new demands, refusing to convert unless the Teutonic Order ceded most of its lands in Prussia to Lithuania and transferred its activities to the Russian steppes. The baptism negotiations collapsed, prob-

ably as intended. When Algirdas died in 1377, he was cremated with grave goods and horses in grand pagan fashion. He had at least seven daughters and twelve sons, including Jogaila, who became king of Poland as Władysław II Jagiełło.

Almohads

A political movement and dynasty that ruled North Africa and al-Andalus from the mid-twelfth to mid-thirteenth centuries. The name is derived from the Arabic *al-Muwahhidūn* (those who assert the unity of God).

The founder of the movement was Muḥammad ibn Tūmart, who began to preach a message of Islamic revival among the Maṣmūda Berbers of the Atlas Mountains in the 1120s. An attack on Marrakesh in 1130 failed, and he died soon after. The movement was taken over by his lieutenant ‘Abd al-Mu’min, who established his control by ruthless purges of any opponents. In 1147 he conquered Marrakesh and destroyed the remnants of the Almoravid regime.

In 1147 the first Almohad troops entered al-Andalus, and in 1148 Seville was taken, but progress was halted by Almohad campaigns in North Africa, which led to the conquest of Constantine and Bejaïa (Bougie) in 1152–1153. Following this triumph, ‘Abd al-Mu’min set about consolidating his control over the Almohad political apparatus. His sons were appointed governors of provincial cities in both North Africa and al-Andalus, and the descendants of the original Council of Ten who had dominated the movement in its early days became a sort of hereditary aristocracy, a privileged ruling class. ‘Abd al-Mu’min himself took the title of caliph, implying both political independence and religious leadership.

The core of the Almohad army consisted of the original Berber supporters of the dynasty, who were said to have numbered 10,000 and were usually quartered in Marrakesh,

except when they were on campaign with the caliph. Unlike the Almoravids, the Almohads coopted native Andalusī military leaders, and families like the Banū Azzun of Jerez were to play an important role in Almohad campaigns in the Iberian Peninsula.

In 1155 the Almohads took Granada from the last of the Almoravid governors, but Valencia and Murcia remained independent under the control of Ibn Mardaniṣh, a local Muslim ruler closely allied to the Castilians. The caliph meanwhile was busy with the struggle against the Normans of Sicily in Tunisia, where Tunis was taken by the Almohads in 1159, and the last Norman outpost at Mahdia in January 1160. In 1163 the caliph assembled a vast army at his new fortress city of Rabat, intending to cross to al-Andalus, but he died before the expedition could set out.

He was succeeded by his son Abū Yūsuf Ya‘qūb (1163–1184). He was a cultured and bookish man, who built up a large library and entertained leading intellectuals like Ibn Ṭufayl and Ibn Rushd (known to Christendom as Averroes) at his court. He was not, however, a great warrior, and the Almohad position in al-Andalus was continually threatened, by Giraldo Sempavor in the west, who took Trujillo and Evora, and by Ibn Mardaniṣh of Murcia in the East.

In 1172 the caliph launched a major military expedition against Castile. Morale was boosted by the death (from natural causes) of Ibn Mardaniṣh. After an unsuccessful attempt to take the small Castilian town of Huete, the Almohad army descended on Ibn Mardaniṣh’s heartlands around Murcia. Ibn Mardaniṣh’s family were received into the caliph’s favor and, for the first time, all the Muslims of al-Andalus (except for the Balearic Islands) were under Almohad rule. However, the great expedition had failed to recover any territory from the Christians.

When the caliph left al-Andalus in 1176, the security position began to decline immediately. In 1177 Cuenca fell to the Castilians, while the Portuguese sacked Beja in 1178 and began raiding the Algarve at will. In 1180 the caliph decided that Tunisia, where the Bedouin Arabs presented a continuing problem, was the most pressing concern, and he did not return to Marrakesh until 1182. In 1184 he led an attack on Santarém on the river Tagus but was surprised in his tent and killed.

His son and successor, Abū Yūsuf, who took the title of al-Manṣūr (the one granted victory), was a robust military man. His first task was to cross the Strait of Gibraltar and secure his position in Marrakesh. He may have intended to

Almoravids

return to al-Andalus and avenge his father's humiliating death, but he first had to deal with problems in North Africa. It was not until 1188 that some sort of Almohad control was reestablished.

In 1190 he turned his attention to al-Andalus and led an expedition against the Portuguese fortresses in the Tagus Valley, but he failed to take the Templar castle at Tomar, and disease in the army forced him to retreat to Seville and then to Morocco. In 1195 he set out to al-Andalus again. He led his army north from Córdoba, and on July 17 he met and defeated the troops of Alfonso VIII of Castile at Alarcos in the plain of Calatrava. In 1196 he led his army through Extremadura and sacked the newly settled city of Plasencia. In 1197 he raided around Madrid and Guadalajara, but though the countryside was ravaged, no strong points were captured.

In 1198 al-Manṣūr returned to Marrakesh, where he died in January 1199. He was succeeded by his son al-Naṣīr (1199–1213). In 1203 the Almohads enjoyed a success when a naval expedition of 130 ships took the Balearic Islands from the Banū Ghāniya dynasty. In 1209 the Christians in al-Andalus began raiding the area around Córdoba, and in 1211 the caliph gathered his forces at Rabat and crossed the strait. He captured the castle of Salvatierra, used as a base by the military Order of Calatrava. The next year Alfonso VIII of Castile marched south with a force that included the king of Aragon and contingents from all the kingdoms of Spain. Al-Naṣīr went to meet him but was decisively defeated at the battle of Las Navas de Tolosa (12 July 1212). The caliph fled ignominiously back to Marrakesh, where he died the next year.

The caliph was succeeded by his young son al-Mustanṣir (1213–1224), whose death led to a series of succession disputes that effectively paralyzed the Almohad caliphate. Meanwhile the Almohad governors in al-Andalus had to try to defend themselves. From 1230, Ferdinand III of Castile began the series of campaigns that were to result in the conquest of the whole of al-Andalus apart from the kingdom of Granada, but by this time the Almohads were largely irrelevant, their last rulers engaged in succession disputes in Marrakesh and vain attempts to resist the rise of the Marinid Berbers.

Almoravids

The name Almoravids, from Arabic *al-Murābiṭūn* (fighters for the faith), is conventionally given to the religious movement and dynastic state that dominated al-Andalus and modern Morocco from the late eleventh century to the 1140s.

The movement was founded by ‘Abd Allāh ibn Yāsīn in the 1050s. He preached a harsh and literalist version of Islam, which was easy to comprehend but left little scope for imagination or intellectual discussion. He found an audience among the Lamtuna tribe, a section of the Berber Ṣānhaja confederation that dominated the western Sahara. He was welcomed by Yaḥyā ibn ‘Umar and his brother Abū Bakr, whose descendants were to provide the dynastic leadership of the Almoravid Empire.

By 1054 they had secured control of the trade route that led from Sijilmassa in southern Morocco to the gold-producing areas of ancient Ghana, on the upper Niger River. Ibn Yāsīn then began to preach in Morocco, but after some initial success, he was killed in 1059. Leadership of the movement was assumed by Yūsuf ibn Tāshfīn. In 1070 the Almoravids founded the city of Marrakesh, which was to be the effective capital of both the Almoravids and their Almohad successors.

Ibn Tāshfīn took the title of *amīr al-Muslimīn* (prince of the Muslims) but not the title of caliph; the Almoravids professed their loyalty to the Sunnī ‘Abbāsīd caliphs in distant Baghdad. In 1083 Ibn Tāshfīn took Ceuta on the Strait of Gibraltar and so effectively completed his control of Morocco. Al-Mu‘tamīd of Seville (1069–1091) and other Taifa rulers invited Ibn Tāshfīn to cross the straits to help them to resist the Christian advance. On 23 October 1086, their combined armies defeated Alfonso VI, king of Castile, at Sagrajas (Zallaqa), northeast of Badajoz. The Almoravids then returned to Morocco.

In the summer of 1088 Ibn Tāshfīn and the Almoravids crossed to Spain again and joined forces with the Taifa kings to besiege Aledo, between Granada and Murcia. Rivalries between the Taifa kings undermined the military effort,

and Ibn Tāshfīn and his men were obliged to return to Morocco without having achieved anything.

When Ibn Tāshfīn came again in 1090, he was determined to act on his own. Between 1090 and 1094, he and his nephew Sīr ibn Abī Bakr took over Granada in 1090, Seville in 1091, and Badajoz in 1094. Only Valencia, taken by El Cid in the summer of 1094, and Zaragoza eluded Almoravid control. Until around 1117, Almoravid influence in the Iberian Peninsula continued to expand. In 1102 the Almoravids took Valencia from El Cid's widow Jimena. On the death of Ibn Tāshfīn in 1106, power passed easily to his son 'Alī, while the death of Alfonso VI in 1109 led to prolonged disputes among his heirs. In 1110 al-Musta'in, ruler of the last independent Taifa kingdom (Zaragoza), was killed fighting the Aragonese at Valtierra, and the pro-Almoravid party in the city expelled his son and handed the city over. In 1112 and 1114 Almoravid armies were able to use their new base in the Ebro Valley to raid Catalonia and reach the foothills of the Pyrenees.

The Almoravids never formed more than a small ruling military elite in al-Andalus, distinguished from the local people by their Berber language and their veils. Ibn Tāshfīn advised his son to maintain 17,000 horsemen in the country, including 4,000 in Seville, the Almoravid capital, and 1,000 in Córdoba and Granada. Power was concentrated in the hands of the ruling dynasty and a small number of related families, all from the Lamtūna tribe. No native Andalusī Muslims played an important role in the military. The Almoravids ruled in cooperation with Andalusī civilian elites, notably the *qāḍīs* (judges) of the main cities, who became increasingly influential political figures at this time.

From 1118 the Almoravids' power began to wane as their prestige was undermined by military failure. Their armies had proved their ability to defeat the Christians in battle at Sagradas in 1086 and Ucles in 1108, but they proved much less effective at siege warfare. This showed most obviously in the failure to retake Toledo from the Castilians. In 1109 Almoravid forces moved up the Tagus Valley, and Talavera was taken. The lands around Toledo were ravaged, but the city held out.

From 1118 the military balance began to tilt in favor of the Christians. This shift began first in the Ebro Valley, where the dynamic king of Aragon, Alfonso I "the Battler," took Tudela in 1114 and Zaragoza in 1118. In the winter of 1125–1126, Alfonso led a raid deep into Muslim territory, and his army wintered in the countryside around Granada while the Almoravid forces looked on helplessly.

Under the leadership of Tāshfīn ibn 'Alī, the Almoravids recovered something of their military initiative in the 1130s and in 1136–1137 Muslim forces were able to operate north of the Tagus and capture the castle at Escalona. However, the urban militias of Christian towns such as Avila and Toledo raided far into Muslim territory: in 1133 the army of Toledo reached the walls of Seville and killed the governor.

Meanwhile, the Almoravids were threatened by the rise of a rival movement in Morocco, the Almohads. In 1130 the Almohads attacked Marrakesh, and by the early 1140s they controlled most of Morocco. From 1132, 'Alī ibn Yūsuf became increasingly reliant on a Christian military commander, Reverter the Catalan, and his Christian troops. In the 1140s the position of the Almoravids declined rapidly. In 1143 the ineffective 'Alī ibn Yūsuf died and was succeeded by his much more competent son Tāshfīn. In 1144 Reverter was killed in action, and Tāshfīn himself suffered the same fate in March 1145. His shadowy successors could do little, and in March 1147 the Almohads stormed Marrakesh, massacring the remnants of the Almoravid elite. With the fall of Tangier and Ceuta in May–June 1148, Almoravid rule in North Africa was over.

In al-Andalus, Almoravid military failure led to popular revolts. Almoravid rule survived in Granada until 1155, while the Banū Ghāniya, a branch of the Almoravids, held the Balearic Islands until 1203.

The Almoravid nomad warriors were effective in open warfare, but much less so in sieges or garrison duty. They also failed to recruit military support among the Andalusī Muslims. When the first generation had passed on and the regime was challenged in both Morocco and the Iberian Peninsula, Almoravid rule soon vanished.

Alp Arslān (d. 1072)

Second Great Saljūq sultan (1063–1072). Abū Shujā' 'Aḍud al-Dawla Diyā' al-Dīn Muḥammad Alp Arslān was the son of the Saljūq leader Chaghri Beg Dāwūd.

Alp Arslān ibn Riḍwān (d. 1114)

Alp Arslān was proclaimed sultan on the death of his uncle Ṭughril Beg in preference to his younger brother Sulaymān, whose mentor al-Kundurī, the vizier of Ṭughril Beg, he executed. In his place Alp Arslān promoted his own vizier, the great Nizām al-Mulk, on whom he relied to manage the empire. Alp Arslān's position as ruler of Islam on behalf of the 'Abbāsīd caliphate was confirmed by the Caliph al-Qā'im in 1064. It was reinforced in 1066 when his son Malik Shāh I was recognized as his heir, and again in 1071–1072, when his daughter married the caliph's son. As ruler of a family empire, however, he was immediately obliged to defeat the challenge of an uncle, Qutlumush, at the head of the Turcomans in northern Persia. In 1064 he had to deal with the rebellion of his uncle Mūsā Yabghu at Herat and in 1067 with the secession of his elder brother Qāwurd in Kirman. Eastern Persia was nevertheless distributed among his brothers and other relatives on the occasion of the designation of Malik Shāh as heir in 1066. Iraq was left in the hands of local Arab dynasties, notably the 'Uqaylids of Mosul. In the east, the sultan imposed a dynastic alliance upon the Qarakhānids in Transoxania, but his imperial ambitions were in the west.

Between 1064 and 1068, Alp Arslān campaigned through Armenia as far as Georgia to bring the Caucasus region under control. He was then drawn into conflict with Byzantium by the nomadic Turcoman tribesmen, whose raids into Anatolia as far as Ikonion (mod. Konya, Turkey) in 1069 provoked a Byzantine invasion of northern Syria. This conflict ended in 1070 in a truce with Alp Arslān, but the Turcomans were unaffected, and hostilities were bound to resume. In 1071 the emperor Romanos IV Diogenes moved into the disputed territory of Armenia, a *casus belli* that drew the sultan away from the conquest of Syria to meet him at Mantzikert. The great Saljūq victory, with a smaller but more compact army, was followed by yet another truce, but unchecked Turcoman inroads into Anatolia. In 1072, instead of pursuing the dynastic ambition to conquer Syria and Egypt from the Fāṭimids, Alp Arslān himself went east to settle with the Qarakhānids of Transoxania, but never returned, murdered by a captive in mid-career.

Alp Arslān ibn Riḍwān (d. 1114)

Saljūq ruler of Aleppo (1113–1114), the eldest son of Riḍwān (d. 1114).

Alp Arslān succeeded his father at the age of sixteen, with the *mamlūk* (slave soldier) Lu'Lu' acting as his regent. He immediately had his brothers Malik Shāh ibn Riḍwān and Mubārak ibn Riḍwān executed to eliminate them as potential rivals. He went on to take action against the Ismā'īli Assassin sect, which had been favored by his father: in concert with Sa'īd ibn Badī', the *ra'īs* (head of the city), he arrested all of the Assassins in the city, and had them either executed or expelled. In view of Aleppo's military weakness, Alp Arslān continued to pay tribute to the Franks of Antioch and also sought the alliance of Ṭughtakin, the ruler of Damascus. This policy, as well as arrests and dismissals carried out by Alp Arslān, aroused considerable resentment among his own officers. On 4 September 1114 Lu'Lu' had him murdered and replaced by his younger brother Sulṭān Shāh.

Ältere Hochmeisterchronik

A German prose chronicle that describes the history of the Teutonic Order from its foundation in 1190 until 1433, the *Ältere Hochmeisterchronik* can be regarded as the single most useful account of the order's history of that period and of the crusades to, and early history of, Prussia.

Twenty-one manuscripts survive, of which ten date from the fifteenth century, originating from Prussia and from the Teutonic Order's centers in the empire, notably Cologne and Mergentheim. The chronicle was written between 1433 and 1440; its author's identity is unknown, but he is thought to

have been a cleric in the order and certainly had access to its archives at Marienburg in Prussia. Sources used for the earlier section include Nicolaus von Jeroschin's *Kronike von Pruzinlant*, the *Livonian Rhymed Chronicle*, Henry of Livonia's *Chronicon Livoniae*, and the list of the grand masters of the order. From the second half of the fourteenth century the account relies on eyewitness testimony and official reports and documents. The single most important source is Jeroschin's chronicle, which forms the basis of three-quarters of the text.

The *Ältere Hochmeisterchronik* is continued in three separate sections. The first, written by a supporter of the Teutonic Order, gives an account of battles fought in 1454 and 1455. The second, which is much shorter, was written by a member of the order and is critical of the grand masters, but also of the role of the Polish kings and Prussian cities. The third was written in 1472 by a cleric from Warmia. The first version was the most widely distributed. Four manuscripts survive, of which three date from the fifteenth century.

Amadeus VI of Savoy (1334–1383)

Count of Savoy (1343–1383), known as the Green Count, who led a crusade against the Ottoman Turks in 1366–1367. Amadeus (Fr. Amedée, It. Amadeo) was the son of Count Aymo of Savoy (d. 1343) and Yolande of Montferrat.

The count's decision to go on crusade dates from January 1364. It occurred in the wake of the journey to western Europe of King Peter I of Cyprus, after Amadeus had met the crusade propagandist Philippe de Mézières. The threat to Savoy from roaming mercenary companies meant that he was unable to take part in Peter's crusade, which captured Alexandria in 1365. Amadeus finally set off for Venice in February 1366, although some of his army embarked at Genoa. He arrived at the island of Negroponte (Euboia) off eastern Greece on 2 August.

The plan of the crusade was to expel the Turks from Europe through a joint attack with King Louis I of Hungary

and Emperor John V Palaiologos of Byzantium. John had gone to meet Louis to ask for his help, but was taken prisoner by the Bulgarians on his way back. Amadeus sailed to Thrace and on 26 August attacked and captured the Ottoman stronghold of Gallipoli (mod. Gelibolu, Turkey) on the Dardanelles, which served as the Turks' main crossing point into Europe.

The Savoyards reached Constantinople on 4 September. With financial assistance from the Byzantine empress and naval support from the Genoese, Amadeus led an expedition against the Bulgarians, entering the Black Sea a month later. He seized Sozopolis and Mesembria after a battle on 20 October. Varna, however, was too fortified to be taken by siege; a period of diplomatic exchanges with Sisman ensued in order to secure the release of Emperor John V, and the Savoyards returned to Sozopolis to winter. After his release, John V arrived there on 28 January 1367. The two cousins came back to Constantinople at the beginning of April. By that time Amadeus had spent all his funds and was unable to consider a further campaign against the Turks. He left Pera on 9 June, returning to his lands via Venice and Rome.

Amalfi

A port on the western coast of southern Italy, Amalfi survived as an independent duchy until 1131, when it was incorporated into the kingdom of Sicily. It was an important trading center in the early and central Middle Ages. Amalfitan merchants were already present at Constantinople by 944, and were trading with Egypt by the late tenth century. Around 1080, Amalfitans founded a hospice for pilgrims in Jerusalem, from which the Order of the Hospital (St. John of Jerusalem) later developed, but they appear to have played no part in the First Crusade (1096–1099), and consequently did not receive commercial privileges in the Holy Land, unlike the ports of northern Italy. Although they held property in Outremer during the twelfth century, their role in Western trade with the Holy Land was relatively minor, and they never possessed quarters in its ports. In 1190 Guy of Lusignan, king of Jerusalem, granted Amalfi a customs exemption at Acre and the right to its own officials there, but this appears to have remained a dead letter.

During the twelfth century, the Amalfitans seem to have increasingly concentrated their attention on the internal trade of the Sicilian kingdom, and the city's maritime power suffered both from the attacks of the Pisans (who sacked Amalfi in 1137) and competition from other south Italian ports, notably Salerno and Naples. After 1200 Amalfitan commercial activity was very much in decline. Although Amalfitans were still occasionally found in the Holy Land in the thirteenth century, and in Cyprus even after 1291, they were very few and usually associated with the Genoese.

Amalric of Jerusalem (1136–1174)

King of Jerusalem (1163–1174) and the younger son of Queen Melisende and Fulk of Anjou.

Amalric seems to have been less well educated than his elder brother Baldwin (III), although he had an outstanding grasp of law and history. Baldwin III made him count of Jaffa (mod. Tel Aviv–Yafo, Israel) in 1151; Amalric seems to have lost these lands in 1152 because he sided with Melisende in the civil dispute between king and queen mother. The brothers evidently became friendly again by 1154, for at that time Baldwin III restored Jaffa and also made Amalric count of Ascalon (mod. Tel Ashqelon, Israel). In 1157 Amalric married Agnes of Courtenay, daughter of Count Joscelin II of Edessa. She bore him two children, Sibyl (before 1161) and Baldwin (in 1161). Amalric succeeded to the throne in 1163 when his brother died childless, but the magnates and patriarch of Jerusalem, fearing that Agnes's family would grow too powerful, insisted that he divorce her before he could be crowned. Amalric agreed to do so on the condition that their children remain legitimate.

The king's policies aimed at strengthening the Crown legislatively and financially. In judicial matters, his most famous achievement was the *Assise sur la ligèce*, which determined that all fief-holders in the kingdom had to take an oath of homage to the king. Amalric may have hoped to strengthen royal power through these connections with the lower nobility. In fact, after 1198 court decisions based on this assize favored the upper nobility rather than the Crown. The same held true of Amalric's fiscal ambitions: his campaigns in Egypt, though creatively financed, ultimately ended in military and economic losses.

Fāṭimid Egypt made a tempting target after Amalric's accession, owing to its immense wealth and shaky political situation where two viziers vied for control. Nūr al-Dīn, the ruler of Muslim Syria, might intervene there if Jerusalem failed to do so, but equally, he could not allow the Franks to dominate Egypt. In 1163 Nūr al-Dīn sent his general Shīrkūh to assist one of the viziers, Shāwar, who, however, soon sought military aid against him from Amalric. The king invaded Lower Egypt, and Nūr al-Dīn countered with campaigns against Christian Syria. He captured Prince Bohemund III of Antioch and Count Raymond III of Tripoli while seizing Harenc, Banyas, and parts of the principality of Antioch in 1164. Expeditions in 1167 turned the tables. Nūr al-Dīn sent Shīrkūh back to Egypt, which meant that Amalric also had to launch a campaign. The king sum-

moned the High Court but could not convince his nobles to support an attack outside the kingdom. He obtained finance through a 10 percent tax paid by the church and vassals who would not go to Egypt. Shāwar greeted the Frankish army with 400,000 dinars in exchange for an alliance. They besieged Alexandria until Shīrkūh came to terms, and he and the Franks withdrew from Egypt. Amalric's agreement with Shāwar remained in force: Amalric would offer assistance as long as Shāwar paid an annual tribute of 100,000 dinars. The royal treasury benefited from this arrangement, and as long as Amalric remained content with a nominal protectorship over Egypt, Nūr al-Dīn probably would not have reacted.

The king, however, dreamed of conquering Egypt with Byzantine help. In 1167 Amalric cemented his alliance with Manuel I Komnenos by marrying the emperor's niece, Maria. The following year, Amalric planned a joint assault on Egypt in which the Byzantine fleet would blockade Mediterranean ports while the Franks invaded by land. The king moved too quickly, though, and marched out before the Byzantine navy could provide backup. He could not convince the Templars to join him, despite the inducement of rich lands. Shāwar turned to Nūr al-Dīn for help, and Shīrkūh returned to Egypt for the last time. Although Amalric won some important victories at first, he could not take Cairo and finally withdrew. Shīrkūh then marched in, killed Shāwar, and installed himself as vizier. He died two months later, to be succeeded by his nephew Saladin, who quickly built up a strong government in the name of the Fāṭimids. Amalric marched into Egypt once more in 1168, this time waiting for Byzantine ships to support his attack on Damietta, but withdrew without having received Byzantine support and having gained nothing. Once back in Jerusalem, Amalric patched up his relationship with Manuel Komnenos, culminating in a state visit to Constantinople in 1171.

Saladin was able to topple the Fāṭimids in 1171, restoring Sunnī Islam in Egypt, and Nūr al-Dīn's death in May 1174 allowed Saladin to move into Syria. The military orders were increasingly acting as free agents within Outremer, negotiating or overturning truces with Islamic powers. Amalric died on 11 July 1174. His heir, Baldwin IV, came to the throne as a minor suffering from leprosy, and Baldwin's sisters Sibyl and Isabella (Maria's daughter) became pawns in the hands of rival factions at court.

Amalric of Montfort (d. 1241)

Duke of Narbonne (1218–1241), earl of Leicester (1218–1239), and constable of France (1230–1241).

Amalric was the eldest son of Simon of Montfort, who had been elected military leader of the Albigensian Crusade (1209–1229). After his father's death during the siege of Toulouse (1218), Amalric inherited the lands Simon had

Amalric of Nesle (d. 1180)

conquered in southern France, along with the leadership of a crusading army, which melted away at forty-day intervals. Before and after the demise of an eastern crusade that diverted recruits and funding from the Albigensian Crusade, Pope Honorius III urged King Philip II Augustus of France and his son Louis VIII to aid Amalric and reassigned funds originally intended for the eastern crusade to subsidize Amalric's increasingly mercenary army. Nevertheless, Amalric's gradual loss of territory to Count Raymond VII of Toulouse and other southern noblemen remained largely unstemmed by Louis VIII's desultory crusading expedition in 1219. Despite Honorius's attempts to organize a new crusade in the early 1220s, an increasingly bankrupt Amalric sought to cede his lands in southern France to Louis VIII. In 1226, he succeeded in his goal when Louis VIII once again took the crusade vow. Amalric played a leading role in the king's triumphant military tour of Languedoc, although Louis's death in 1226 meant the resumption of the negotiations that led to the Peace of Paris in 1229. By 1239, the debt-ridden Amalric had formalized the cession of his claims to the earldom of Leicester to his younger brother, the infamous future rebel Simon (the Younger) of Montfort. Amalric's services to Louis VIII earned him high favor with Louis IX, who subsidized his participation in the Crusade of 1239–1241. Captured by Muslim forces in Gaza in 1239, Amalric died in Otranto, Italy, while returning to France in 1241.

Amalric of Nesle (d. 1180)

Latin patriarch of Jerusalem (1157–1180). Amalric came to Outremer from France, but nothing is known of his early career except that he became prior of the Holy Sepulchre in 1151. Queen Melisende, her sister Yveta, and her cousin Sibyl of Flanders seem to have engineered Amalric's election as patriarch in 1157 without involvement from King Baldwin III. But it was the king, rather than the patriarch, who

ordered the Latin Church's official stance of neutrality in the disputed papal election of 1159.

Patriarch Amalric took more of a leading role in 1163, when he and the magnates of Outremer insisted that King Amalric divorce Agnes of Courtenay before assuming the throne. Only the patriarch could have ruled on the legitimacy of this marriage, and his decision barred him from royal favor. King Amalric took the initiative in creating new dioceses that cut into patriarchal revenues. The patriarch became even more of a nonentity after the king's death in 1174, since Agnes of Courtenay dominated Baldwin IV's court.

Ambroise

Author of *L'Estoire de la Guerre Sainte*, an Old French verse history of the Third Crusade (1189–1192) over 12,000 lines long. Ambroise gave a pious fighting man's view of the crusade, in which King Richard I of England and Earl Robert of Leicester were the great heroes. His work brings the reader close to individual acts of prowess and courage, and to the swings of mood in the crusader camp. Capable of admiring Muslim bravery, he was fiercely critical of the conduct of King Philip II of France and Hugh III, duke of Burgundy. For the early history of the siege of Acre, he embellished the narrative in the chronicle known as the *Itinerarium Peregrinorum*, but for events from the time of Richard I's landing in Sicily (September 1190), Ambroise may himself have been the eyewitness on whose account *L'Estoire* is based. In its extant form, the text was probably completed in the late 1190s. It was known to, and extensively used by, Richard de Templo, author of the *Itinerarium Peregrinorum et Gesta Regis Ricardi*, though today, apart from one short fragment, it survives in just a single manuscript (MS Città del Vaticano, Biblioteca Apostolica Vaticana, Reg.lat.1659).

Anders Sunesen (d. 1228)

Archbishop of Lund (1201–1223) and proponent of the crusade in the Baltic region.

Born around 1160 into the Danish nobility, Anders Sunesen studied in Paris, Bologna, and England, becoming a teacher of theology in Paris around 1193–1194. Shortly after this he became royal chancellor of Denmark, an office he held until 1201. In that year he was elected archbishop of Lund.

As archbishop, Anders Sunesen crowned King Valdemar II (1202), with whom he subsequently cooperated in attempting to subjugate and Christianize the eastern Baltic region. In 1204 he was named papal legate and primate of the Swedish church, and in 1206 he led a crusade against the island of Ösel (mod. Saaremaa, Estonia). According to the chronicler Henry

of Livonia, both the Danish king and archbishop took part in the expedition; however, royal participation remains doubtful. After leaving Ösel, Anders Sunesen visited Riga and spent the winter giving theological lectures, which inspired the provost of Riga to send out priests to preach, baptize, erect churches, and lay out parishes. This activity was in accordance with a papal bull from 1206 permitting Anders Sunesen to ordain bishops in areas recently won for Christianity. In 1212 Anders was appointed papal legate with specific reference to mission and conversion, and the next year Pope Innocent III allowed him to install a bishop in a newly organized bishopric covering Sakkala and Ugaunia in Estonia, thus placing the archbishop in a key position between Bishop Albert of Riga, the Sword Brethren, and Danish royal interests. Shortly after the Fourth Lateran Council (1215), in which both Anders Sunesen and Albert of Riga participated, Innocent III issued the bull *Alto divine dispositiones*, ordering the Danish people to take part in a crusade against the pagans threatening Livonia. In 1219 a crusade led by the archbishop and King Valdemar II conquered the northern parts of Estonia and established Reval (mod. Tallinn, Estonia) as a Danish stronghold. Anders Sunesen may have spent considerable time there before his resignation in 1223 due to illness.

Andrew II of Hungary (d. 1235)

King of Hungary (1205–1235) and first Hungarian ruler to take an active part in the crusading movement.

Andrew of Montbard (d. 1156)

Andrew was born around 1177, the second son of King Béla III (1172–1196) and Anne (Agnes) of Châtillon. Around 1200 he married Gertrude of Andechs-Meran (d. 1213); they had five children, including Elisabeth, who was engaged (1211) and later married (1221) to Ludwig IV, son of Landgrave Hermann I of Thuringia. Partly because of his dynastic relations with Thuringia, in 1211 Andrew settled the Teutonic Order in a border region called Burzenland, but in 1225 he forcibly expelled it for allegedly pursuing independence from the kingdom of Hungary. In 1215 he married Yolande, daughter of Peter of Courtenay. After the death of Peter's brother-in-law Henry, Latin emperor of Constantinople (1216), Andrew unsuccessfully endeavored to obtain the vacant imperial throne in order to further Hungarian expansion toward the Balkans and Byzantium. He participated in the first part of the Fifth Crusade (1217–1218) in order to fulfill a crusade vow inherited from his father, and during his journey back from the Holy Land, Andrew arranged political-diplomatic ties by means of dynastic marriages between members of his family and those of other ruling dynasties, notably those of Theodore I Laskaris, emperor of Nicaea; King Leo II of Armenia; and Ivan Asen II, tsar of Bulgaria. He donated a great deal to the Templars and Hospitallers and later left a copy of the Golden Bull of 1222, his charter of privileges for the Hungarian nobility, in their custody. He died on 21 September 1235 and was buried in the Cistercian abbey of Egres.

Andrew of Montbard (d. 1156)

Master of the Templars (1153–1156). Andrew, a son of Bernard I of Montbard, was born in Burgundy before 1105; his sister Aleth was the mother of Bernard of Clairvaux. He probably joined the Templars in the West before 1129, and between 1130 and 1135 carried out missions between the West and Outremer for Bernard of Clairvaux and the king of Jerusalem (either Baldwin II or Fulk). After the death of Fulk (1143), Bernard recommended Andrew to Queen Melisende, and by 1148 he had been appointed seneschal of the Templars. He was in charge of the central convent of the order

while Master Robert Burgundio took part in the Second Crusade (1148) and while Robert's successor, Everard of Barres, traveled to France (1149–1151). On the death of Master Bernard of Tremelay during the siege of Ascalon (1153), Andrew was elected master. His career illustrates the strong ties between the Templars' leadership and the royal court of Jerusalem. Andrew died in 1156 and was succeeded by Bertrand of Blancfort.

Ankara, Battle of (1402)

A decisive confrontation in the period of the later crusades between the huge armies of the Ottoman sultan Bayezid I and the Mongol ruler of central Asia, Timur Lenk (Tamerlane), who eventually carried the day, thus putting a temporary halt to the expanding Ottoman sultanate and indirectly giving the beleaguered Byzantine Empire breathing space for another half century.

The battle was hotly contested in the plain of the river Chubuk (Turk. Çubuk-ovasi) north of Ankara on 28 July 1402. From its defensive hilly position, the heterogeneous Ottoman army sustained a fierce attack by the Mongol cavalry and was eventually overrun on account of the defection of its Turcoman vassals (whose emirs took Timur's side) and despite the heroic defense of Bayezid's Christian vassals, particularly the Serbs who held the sultan's left flank. Timur, reputedly in a secret plot with the Byzantine regent John VII Palaiologos, seized Bayezid (who was to die in captivity in 1403) and one of his sons, Musa Çelebi; he then captured the town of Brusa, along with Bayezid's treasures, and consequently shattered Ottoman domination over much of northwestern and southern Anatolia, reestablishing several of the Turcoman emirates (beyliks), while a fierce civil war began among Bayezid's sons (1402/1403–1413).

Anna Komnene (1083–1153/1154)

The eldest child of the Byzantine emperor Alexios I Komnenos and Irene Doukaina, Anna Komnene wrote the *Alexiad*, an epic history in Greek of her father's life and times, probably after the year 1138.

The *Alexiad*, an important source for the First Crusade (1096–1099), was composed with a large degree of hindsight; Anna was concerned to preserve her father's reputation by praising his cautious treatment of the Franks at a time when her nephew, Emperor Manuel Komnenos, was following a much more pro-Western policy. Anna's work contains vivid pen-portraits of crusading leaders, particularly Bohemund I of Antioch, but she reveals little information about the preaching of the crusade, even though Alexios's appeals to the West for military help against the Turks were known in her day. She concluded that the crusaders' real aim was not to liberate the Holy Sepulchre, but to conquer Byzantium.

Anna played an important part in the "family politics" of the Komnenian era. As a baby, she had been betrothed to a maternal relative, Constantine Doukas, but after his premature death, she was married around 1097 to Nikephoros Bryennios (d. 1136/1137), a military man who also wrote history. After her father's death and with her mother's support, Anna attempted to gain the throne for her husband, but she was thwarted by her brother John and subsequently forced to live in seclusion in the convent of the Theotokos Kecharitomene in Constantinople (mod. İstanbul, Turkey). She was extremely well-read and was the patroness of a circle of scholars that particularly concerned itself with the works of Aristotle.

Anno von Sangerhausen (d. 1273)

Grand master of the Teutonic Order (1256–1273) during one of the order's most difficult periods.

Anno was probably born into the lower nobility of the Thuringian town of Sangerhausen between 1210 and 1220. Nothing is known about his early career within the Teutonic Order. From 1254 (or perhaps late 1253), he was master of the order's Livonian branch, until the chapter general elected him grand master in 1256. During his mastership, Anno traveled extensively between the Holy Land, Rome, Germany, and the Baltic lands. He struggled to secure crusader aid against the Curonians and Prussians, who had started a great insurrection in 1260 that lasted until 1273. In Palestine the advance of Sultan Baybars of Egypt threatened the

Anonymous Syriac Chronicle

order's possessions: Montfort, the order's main castle, fell in 1271. Both the Baltic region and the Holy Land demanded Anno's commitment, which led to tension within the order. While Anno was in the West between 1261 and 1267, the chapter general in Acre decreed that the master should not leave the Holy Land for extended periods in the future (1264). Soon after the loss of Montfort, however, Anno left for the empire, where he died on 8 July 1273.

Anonymous Syriac Chronicle

A bipartite Syriac chronicle of ecclesiastical and secular history, written by an unknown and enigmatic author who was probably a member of the higher clergy of the Syrian Orthodox (Jacobite) Church, and may have been one of the figures mentioned in the work. If the entire chronicle was indeed written by one person, the author was probably born in the second half of the twelfth century. Many scholars assume an Edessan origin. The chronicle consists of an ecclesiastical history up to the year 1207 and a secular history up to 1234. Both books are mutilated at the end. Rather large lacunae, especially in the ecclesiastical history, have considerably reduced the relevant sections from the year 1098 onward.

The chronicle was inspired by the historiography of the Syrian Orthodox patriarch Dionysius of Tell-Mahre (d. 845). It is generally assumed that the Anonymous did not use the work of Michael I the Great (d. 1199), but his work covers the same horizon, although it reveals more interest in Arabic civilization (both Christian and Muslim) than Michael. Instead of dealing with the high levels of secular or ecclesiastical administration, he concentrates on the repercussions for the population and on regional events in Syria and Mesopotamia, including detailed information about Edessa (mod. Şanlıurfa, Turkey) and environs under Frankish and Zangid rule. The Anonymous admired the urban

Arabic intellectual culture shared by Christians and Muslims in Mesopotamia.

Among other Syriac and Arabic sources, the author used the lost work of a well-informed eyewitness, the metropolitan Basil (d. 1169), and largely shared his fierce critique of the Syrian Orthodox clergy of Edessa. In 1187 the author became a witness to the conquest of Jerusalem by Saladin. Later he joined the entourage of Gregory, the maphrian (primate) of the eastern part of the Syrian Orthodox Church.

See Tortosa (Syria)

Antioch (on the Orontes), City of

Antioch (mod. Antakya, Turkey) was a city situated on the river Orontes (Asi Nehri) in Syria. It was captured from the Saljūq Turks in 1098 by the armies of the First Crusade (1096–1099) and thereafter became the capital of the Frankish principality of Antioch until it was taken by the Mamlūks of Egypt in 1268.

One of the greatest cities of the ancient world, Antioch was famous for the antiquity of its Christian community and its rank as one of the four patriarchates of the Christian Church. It was in this city that Christians were first called by that name, and its theological school had a profound impact on the development of Christianity. A series of disasters struck the city in the sixth and seventh centuries; the Persians pillaged the city in 540, removing much of the population to Mesopotamia, and again held the city from 611 to 628. After briefly recapturing the city under Emperor Heraclius, the Byzantines lost the city again to the Arabs in 638. The his-

Ruins of the walls of Antioch. (Courtesy Alfred Andrea)

tory of Antioch under Arab rule is obscure, but the city was recovered by the Byzantines in 969. The collapse of Byzantine authority in Syria and Anatolia in the mid-eleventh century left Antioch under the rule of the Armenian warlord Philaretos, but in 1084 the city fell to the Saljūqs.

Antioch's strategic location ensured that it would be one of the principal targets of the First Crusade. The city fell on 3 June 1098 when Bohemund of Taranto induced a disaffected member of the Turkish forces to admit the crusaders into the city through a postern gate. Bohemund's fellow crusaders acceded to his claim to the city, thus breaking their policy of restoring former Byzantine territories to the empire. This decision set in motion a half-century of conflict between Antioch and Byzantium. Within weeks of capturing the city, the crusaders were themselves besieged by a large Turkish army led by Karbughā of Mosul. The crusaders won a decisive victory on 28 June, and Antioch was theirs. The city became the capital of a Frankish principality established by Bohemund and his descendants.

The city was located on the east bank of the Orontes and surrounded by high mountains to the east and west. River silt now covers much of the ancient and medieval city, and the few excavations in the city have focused on its ancient and late antique periods. Latin, Greek, and Arabic sources testify to the impressive walls that surrounded the city, relics of Emperor Justinian's rebuilding of the city after the Persian invasion of 540. The walls themselves are more than 12 kilometers (7½ mi.) long. A citadel, dating to the early Byzantine era, was located on the eastern walls high on Mount Silipios. The city had six main gates. The northern gate, named after the monastery of St. Paul, led to Aleppo. The southern gate of St. George, named after an adjacent Jacobite church, led south to Laodikeia (mod. al-Lādhiqīyah, Syria). On the western side were the Dog Gate, the Duke's Gate, and the Bridge Gate, and on the mountainous eastern side was the Iron Gate.

On the eve of the crusader siege, the city was predominantly populated by Christians of the Greek Orthodox,

Armenian Orthodox, and Syrian Orthodox faiths, and the conquest of the city likely drove out or massacred much of the Muslim population. It is likely that most of the inhabitants spoke Greek. A Greek Orthodox patriarch remained the leader of both the Latin and Greek communities until 1100, when Bohemund I expelled the venerable John of Oxeia on suspicion of collaborating with his Byzantine enemies, replacing him with the Latin Bernard of Valence.

The cathedral of St. Peter was probably the church built by Justinian. Its sanctuary collapsed in the earthquake of 1170, killing the Orthodox patriarch Athanasios I Manasses. St. Peter's served as the tomb for the princes and patriarchs of the city; it was also the burial place of Adhemar of Le Puy, the papal legate on the First Crusade, and Frederick I Barbarossa, leader of one of the armies of the Third Crusade (1189–1192). Also located within the city were the churches of St. Andrew, founded by Raymond of Saint-Gilles, and St. Leonard, founded by Bohemund I in thanksgiving for his release from Turkish captivity. A Frankish nobleman built a church dedicated to the Syrian Orthodox (Jacobite) saint Barsauma after his child was healed by the saint's relics; both Latins and Syrian Orthodox Christians attended its consecration. Surrounding the city were a number of important sites. The important Syrian Orthodox monastery of Dovair was established outside the city near the ancient suburb of Daphne.

The princes of Antioch ruled the city through a *dux* (duke) second only to the prince in authority over the city, who presided over a city council. The offices of duke and judge may well derive from Byzantine precedents.

Antioch faced various threats to its survival as a Frankish possession. During the early twelfth century, the Byzantines made concerted efforts to reintegrate the city into the empire. However, Emperor Manuel I Komnenos embarked on a policy of cooperation, joining the Franks in opposing the attacks of Nūr al-Dīn. Antioch was one of the only major cities of Outremer not captured by Saladin in 1187. The city itself prospered economically under the Norman dynasty. It continued to have a substantial Greek population, which expressed its political voice through a commune formed in the late twelfth century. The commune was particularly opposed to Armenian domination of Antioch, a threat that hung over the city during the War of the Antiochene Succession in the early thirteenth century. The city was captured by Baybars I, Mamlūk sultan of Egypt, on 18 May 1268. The city's population was massacred, and Antioch never

reclaimed the importance it had known in ancient and medieval times.

Antioch, Greek Orthodox Patriarchate of

The patriarchate of Antioch (mod. Antakya, Turkey) was one of the four ancient patriarchates of the Greek Orthodox (Melkite) Church. After the conquest of Antioch by the First Crusade (1096–1099), the patriarch was exiled to Constantinople and replaced by a Latin in 1100, but the Byzantine emperors maintained a parallel Greek Orthodox patriarchate throughout the period of Frankish rule.

According to a sixth-century episcopal list, this patriarchate comprised 153 bishoprics in the Near East and beyond, although its organization and Christian community came to be greatly reduced in the course of doctrinal disputes and the Muslim invasions. Antioch itself and much of the territory of the patriarchate were overrun by the Arabs in the seventh century. However, with the Byzantine reconquest of Antioch (28 October 969), the patriarchate was reintegrated into the Byzantine Church. In 970 Emperor John I Tzimiskes appointed as patriarch of Antioch his confessor Theodore of Koloneia, who was then ordained by Patriarch Polyuktos of Constantinople (956–970). The emperor confirmed the traditional privileges of the patriarch of Antioch; restored his territorial jurisdiction over the ecclesiastical provinces of Isauria, Cilicia I, and Cilicia II; and granted him and his successors the monastery of the Theotokos ton Hodegon as a patriarchal residence in Constantinople.

From 970 to 1204 and also during the second half of the thirteenth century, all Greek Orthodox patriarchs of Antioch were usually nominated by the Byzantine emperor. In January 978 Agapios, the bishop of Aleppo, was appointed patriarch by Emperor Basil II. After his forced abdication in September 996, the emperors chose only members of the clergy of the Hagia Sophia or monks from the leading

monasteries of Constantinople and western Asia Minor, for example Nikolaos II Stoudites (1025–1030) and Theodosios III Chrysoberges (c. 1057–c. 1060). Their ordination by the patriarch of Constantinople in the capital was interpreted in Antioch as a violation of the autocephaly of the Antiochene church.

In the mid-eleventh century, the patriarch of Antioch had jurisdiction over twenty ecclesiastical provinces from Syria to Central Asia. From literary and sigillographic sources and information in the colophons of many Melkite manuscripts, we can prove the presence of Greek Orthodox metropolitans and bishops in some fifty cities of the Near East. From 960 the six ecclesiastical provinces in Iraq, Persia, and central Asia were supervised by the *catholicoi* (in the Greek Orthodox patriarchate of Antioch, a *catholicos* was a primate with jurisdiction over more than two metropolitans in the regions east of the Euphrates) of Eirenupolis (mod. Baghdad, Iraq) and Romagyris (probably mod. Tashkent, Uzbekistan). The catholicosate of Georgia had been autocephalous since 744/745, but the patriarch of Antioch had the right to intervene in the internal affairs of the Georgian church in cases of doctrinal controversy.

In December 1084 Sulaymān ibn Kutlumush, the Saljūq sultan of Rūm, conquered Antioch and ended Byzantine rule over the city. Patriarch Nikephoros Maurois (1079/1080–1089), who was in Constantinople at that time, could not go to Antioch, but his successor, John V Oxeites (ca. 1089–1100), went there via Cyprus in autumn 1091. During the siege of Antioch by the army of the First Crusade from October 1097 to June 1098, John V suffered greatly at the hands of the Turks. After the conquest of the city (4 June 1098), he was at first accepted as legal patriarch by the crusaders. However, after Prince Bohemund I of Antioch was captured by Malik Ghazī, the Dānishmendid emir (August 1100), John V was forced by the Franks to withdraw to Constantinople, where he abdicated in October 1100. In Antioch he was replaced by a Latin, Bernard of Valence. This turn of events was not accepted by the Byzantine emperor, Alexios I Komnenos, or the Orthodox Church. In 1106 Alexios appointed a new patriarch, John VI Haploucheir (1106–after 1134). When Bohemund I was forced to make peace with Byzantium in the Treaty of Devol (1108), he was obliged to accept imperial nomination of the patriarch of Antioch, but Tancred, his regent in the principality, refused to fulfill the terms of the treaty.

The appointment of Latin patriarchs in Antioch meant

that John VI Haploucheir and his successors Luke (after 1134–1156), Soterichos Panteugenos (1156–1157), and Athanasios I Manasses (1157–1170) had to reside in the Hodegon monastery in Constantinople. Yet they had intensive relations with the churches in the Near East, where most metropolitan sees and bishoprics were located in Islamic territory and thus beyond the control of the Franks and the Latin Church in Outremer. The commemoration of the patriarchs in the colophons of Melkite manuscripts written in the Near East shows that the local Orthodox clergy and monks accepted the patriarchs in exile as their legal heads. In Constantinople, the patriarchs ordained metropolitans and bishops and sent pastoral letters to Antioch and other parts of the patriarchate.

The restoration of a Greek patriarch in Antioch continued to be an important aim of the foreign policy of the Byzantine emperors. As a condition of a treaty between Manuel I Komnenos and Prince Bohemund III, Patriarch Athanasios I Manasses was finally admitted to Antioch in place of the deposed Latin, Aimery of Limoges. He remained in residence until his death as a result of the earthquake of 29 June 1170, when Aimery was restored.

Athanasios and his successors Cyril II (1170–1183) and Theodore IV Balsamon (1183–before 1204), the leading canonist of the Greek Orthodox Church, participated in the Constantinopolitan synods of 1166, 1173, 1186, 1192, and 1195, and in the negotiations for union with the Armenian church. Theodore IV Balsamon probably died before the capture of Constantinople by the Fourth Crusade (April 1204). His successor, Symeon II (c. 1207–c. 1240), a native of Syria, was the first patriarch since 960 who was elected and ordained in Antioch (with the consent of Prince Bohemund IV). In 1212 he emigrated to Armenian Cilicia, and then in 1217/1218 to Nicaea, the residence of Emperor Theodore I Laskaris. In 1233 he was resident in Antioch, where St. Sava of Serbia visited him. In 1234, again in Nicaea, he participated in the negotiations concerning church union with the legates of Pope Gregory IX. His successor David came to Antioch in 1242, and in 1246 Pope Innocent IV tried to win his approval for a union with the Roman church. Patriarch Euthymios I (before 1258–1273) was elected in Constantinople, but visited Antioch in 1260 with the support of the Mongol Il-Khan Hülägü (1256–1265), suzerain of the principality of Antioch and ally of Emperor Michael VIII Palaiologos. During the destruction of Antioch by the Mamlūks in May 1268, Euthymios was not in the city.

Over the next hundred years the Greek Orthodox patriarchs of Antioch had no fixed residence, but resided variously in Constantinople, Cilicia, Cyprus, or elsewhere in the Near East. A letter of Patriarch Pachomios I of Antioch (1365–c. 1375) to Patriarch Philotheos I of Constantinople, written in 1365 in Damascus, is signed by the catholicos of Romagyris and the metropolitans and bishops of Pompeiupolis, Mopsuestia, Edessa, Apameia, Homs, Beirut, Helioupolis (Baalbek), Tripoli, and Bostra. This letter shows that after the destruction of Antioch the center of gravity of the patriarchate had shifted to southern Syria. From that time the Greek Orthodox patriarchs of Antioch resided in Damascus.

Antioch, Latin Patriarchate of

The hierarchy of the Latin Church as established by the Franks in the states of Antioch, Edessa, and Tripoli after the conquest of Syria by the First Crusade (1096–1099).

When the city of Antioch (mod. Antakya, Turkey) in Syria was captured by the armies of the First Crusade in 1098, Adhemar of Le Puy, Pope Urban II’s legate, recognized the Greek Orthodox patriarch John V of Oxeia as having canonical authority over Latin as well as Orthodox Christians in his territories; but when, after Adhemar’s death, war broke out between the Frankish ruler of Antioch, Bohemund I, and the Byzantine emperor Alexios I Komnenos, this settlement could not be sustained. John was exiled in 1100 and replaced by Adhemar’s former chaplain, Bernard of Valence, and Antioch became a Latin patriarchate. The Franks also expelled the other Greek Orthodox bishops from their lands and appropriated their cathedrals and endowments. Pope Paschal II accepted this change of policy, but though Antioch, like Rome, claimed to be a foundation of St. Peter, the popes treated the Latin patriarchs as their subordinates. Only Ralph of Domfront challenged this view, and he was unable to sustain his claim to parity with the papacy for long. Ralph also induced Prince Raymond of Antioch to do liege-homage to him for the principality in 1136, but this attempt to establish a theocracy was unsuccessful, as was the patriarch Peter II’s attempt to make Prince Raymond-Rupen his vassal in 1215.

Diocesan Organization

The territory of the Latin patriarchate was divided between the Frankish states of Antioch, Edessa, and Tripoli. The Franks sited many, though not all, of their bishoprics in former Greek Orthodox sees, but because Latin bishops were expected to assist in the work of secular administration and military organization, those factors largely determined where Latin dioceses were founded.

In the principality of Antioch, in addition to the patriarchal see, the following dioceses existed: (1) Albara (mod. al-

Diocesan organization of the Latin Patriarchate of Antioch

Bārah, Syria), founded in 1098 to administer that newly conquered city, and raised in 1111 to an archiepiscopal see and united with the former Orthodox see of Apamea (mod. Afāmiyah, Syria), in order to control a vulnerable frontier region; the archbishoprics of (2) Tarsos (mod. Tarsus, Turkey), established in 1099, and (3) Mamistra (mod. Misis, Turkey) in 1099, which both controlled Cilicia and the main approach roads to Antioch from the west; (4) the bishopric of Artah (mod. ‘Artāh, Syria), founded in 1099, controlling the approach road to Antioch from Aleppo; (5) the bishopric of Marash (mod. Kahramanmaraş, Turkey), founded before 1114, the center of a Byzantine lordship annexed by the Franks in 1104; (6) the bishopric of Jabala (mod. Jabalah, Syria), founded before 1115 in a port captured in 1109; (7) the bishopric of Laodikeia in Syria (mod. al-Lādhiqiyah, Syria), founded before 1139, in a city captured in 1108 that formed part of the prince’s domain until around 1135, when it passed to the dowager princess Alice; (8) the bishopric of Valania (mod. Bāniyās, Syria), founded before 1163 in a coastal town conquered in 1109.

In the county of Edessa the following foundations were made: (1) the archbishopric of Edessa (mod. Şanlıurfa, Turkey) in 1099, initially with jurisdiction over the whole county; (2) the archbishopric of Hierapolis, founded before 1134 to serve the western half of the county (the titular see [mod. Manbij, Syria] remained in Muslim hands, and the archbishops lived at Duluk (mod. Dülük, Turkey)); (3) the archbishopric of Coricium (mod. Quris, Syria), founded before 1140, in the former Armenian lordship of Bagrat, annexed by Count Baldwin II of Edessa in 1117/1118; (4) the bishopric of Kesoun (mod. Keysun, Turkey), founded before 1149 in the former Armenian lordship of Dgha Vasil, annexed by Baldwin II of Edessa in 1115.

In the county of Tripoli there were four bishoprics: (1) that of the city of Tripoli (mod. Trāblous, Lebanon) itself, initially serving the whole county from around 1110; (2) Raphanea (mod. Rafaniyah, Syria), a suffragan of Apamea, founded by Count Pons in 1126 as soon as he captured this city, and considered as the key to the defense of Tripoli; (3) Tortosa (mod. Tartūs, Syria), an important fortress, captured in 1102, not a bishopric until 1128; (4) Gibelet (mod. Jubail, Lebanon), a port captured in 1104, not made a bishopric until around 1138.

These delays occurred because of the disputed status of the ecclesiastical province of Tyre (mod. Soûr, Lebanon), which included the coastal dioceses from Acre (mod. ‘Akko,

Israel) to Tortosa. Under the Greek Orthodox Church it had been subject to the patriarchs of Antioch, but the kings of Jerusalem wished all their lands to be subject to the Latin patriarch of Jerusalem. Popes gave different rulings about this, but political considerations proved paramount. Tyre and its suffragan sees of Acre, Sidon (mod. Saïda, Lebanon), and Beirut remained subject to the patriarchs of Jerusalem, while Gibelet, Tripoli, and Tortosa came directly under the authority of Antioch.

The Secular Church to 1303

From around 1135, the Latin patriarchate began to decline in size. In 1137 the Muslim ruler Zangī captured Raphanea. In 1138 Emperor John II Komnenos restored Byzantine rule in Cilicia and expelled the Latin archbishops of Tarsos and Mamistra. In 1144 Zangī seized Edessa, and in 1147–1151 his son Nūr al-Dīn captured Artah, Apamea and Albara, and Quris and Duluk. In 1149–1150 the sultan of Rūm took Marash and Kesoun. Only the coastal bishoprics of Gibelet, Tripoli, Tortosa, Valania, Jabala, and Laodikeia remained under Frankish control, though titular archbishops of Apamea also continued to be appointed. In the mid-1180s Latin archbishops were restored in Tarsos and Mamistra. In 1188 Saladin seized Laodikeia, Jabala, and Gibelet, although the Franks recovered the latter in 1197. In 1224 the Armenian rulers expelled the Latin archbishops of Tarsos and Mamistra. The Franks continued to appoint titular archbishops of Mamistra, who lived at Antioch, until 1259, but no more titular archbishops of Apamea were appointed after 1244.

After the murder of Patriarch Peter I in 1208, the papacy took a more active role in Antiochene affairs. Subsequent patriarchs were normally nominated by the popes, who also scrutinized episcopal elections in Frankish Syria. Papal intervention was a mixed blessing: devout and learned members of the mendicant orders were appointed to some Syrian sees from the 1250s; but the popes also provided nonresident Western clergy with Antiochene benefices, particularly with canonries in the churches of Tripoli and Antioch, despite the precarious financial position of the Latin patriarchate. There was a temporary improvement in the affairs of the patriarchate in 1260 when Prince Bohemund VI did homage to the Mongols and received back the lands west of the Orontes lost in 1188, which included Laodikeia and Jabala, where Latin bishops were restored by 1265, but this good fortune proved short-lived. The Mamlūks of Egypt, having driven the Mon-

gols from Syria, turned against their Frankish vassals, capturing Antioch, and probably also Jabala, in 1268. The Latin patriarch, Opizo dei Fieschi, was in Italy when Antioch fell and remained there, appointing Archdeacon Bartholomew, who became bishop of Tortosa in 1272, as his vicar. The Mamlūks captured the castle of Margat (mod. Qal'at Marqab, Syria), where the bishops of Valania had resided since 1188, in 1265, Laodikeia in 1287, and Tripoli in 1289. On 3 August 1291 the Templars surrendered Tortosa to them, and Bishop Bartholomew withdrew to Tarsos. He and the patriarch Opizo both died in 1292, but King Het'um II of Cilicia allowed a Latin archbishopric to be restored in Tarsos to minister to the large number of Frankish refugees in his kingdom. The Latin see of Tarsos, together with the island of Ruad (mod. Arwād, Syria), held by the Templars until 1303, and the fief of Gibelet (held by the Embriaci lords as vassals of the Mamlūks for some years after 1291) were the last vestiges of the Latin patriarchate of Antioch.

The paucity of evidence makes it difficult to reconstruct the history of the patriarchate at a local level. Antioch cathedral was served by eighteen canons and Tripoli by twelve, an indication of how prosperous those cities were, but the other Frankish cathedrals were poorer and had chapters of only four or five canons. In all Frankish cities there were some Latin-rite churches: at Edessa, for example, there were two in addition to the cathedral. In some ports the Italian maritime communes had churches to minister to their own citizens, whose clergy were directly subject to the bishops of the mother churches. Because no systematic study has yet been made of Frankish rural settlement in the northern states, it is impossible to establish how many Latin churches there were in the countryside. All Frankish landowners had at least one domestic chaplain, but chapels of the Latin rite also existed in some of the chief rural settlements in Frankish lordships and at some administrative centers.

Regular Clergy

Some of the shrine churches of Jerusalem possessed endowments in the northern states and established priories to administer them, but comparatively few other Latin monastic foundations were made in the turbulent lands of northern Syria. The Benedictine abbey of St. Paul was established in Antioch by 1108, and a Benedictine convent, St. Crux de Carpita, was also later founded there. By 1140 the community of St. George, a house of Augustinian Canons, existed in the city. In twelfth-century Tripoli there was the priory of St.

Michael, as well as St. James, a house belonging to the canons regular of St. Ruf at Avignon.

In 1157 the first Cistercian house in the Latin East was founded at Belmont in the Lebanon, and in 1214 the order was given the monastery of Jubin in the Black Mountain of Antioch by Patriarch Peter II of Ivrea, himself a Cistercian. The Cistercian monastery of St. Sergius at Gibelet was founded by 1233, and there was also a convent of Cistercian nuns dedicated to St. Mary Magdalene at Tripoli.

During the thirteenth century, the Franciscan Order founded houses at Antioch, Tripoli, and Tortosa, and also at Sis (mod. Kozan, Turkey) in Cilicia, while the Dominicans established communities at Tripoli and Antioch.

The Black Mountain of Antioch, which for centuries had been settled by Eastern-rite monks, attracted large numbers of Latin hermits. Some of them lived in community in the monastery of Machanath, but some were solitaries, and Aimery of Limoges appointed a minister to oversee their spiritual direction.

Military Orders

From the 1140s, the military orders took a major part in the defense of the northern Frankish states. In 1144 Raymond II of Tripoli granted the castle of Krak des Chevaliers, together with the march of Raphanea (much of it in Muslim hands), to the Hospitallers. In 1152 the bishop of Tortosa placed the castle and fief of Tortosa in the hands of the Templars, to whom, in 1154, Prince Reynald of Antioch gave the newly conquered castles in the Amanus Mountains. In 1186 Reynald Mazoir sold the fief of Margat, which included the diocese of Valania, to the Hospitallers. The two orders also owned many lesser properties in Antioch and Tripoli, and in many cases were granted the right to appoint Latin priests to serve the churches on their estates. Because the orders were exempt from episcopal jurisdiction, the powers of the patriarch and his suffragans were diminished. For example, in 1152 the bishop of Tortosa granted the Templars control over all the Latin churches in his fief except those in his cathedral city, while after 1188 the bishops of Valania were normally members of the Order of the Hospital.

Relations with Eastern Christians

Eastern Christians who were not members of the Greek Orthodox Church were granted religious autonomy under their own prelates. Relations between the Latins and the Jacobites (Syrian Orthodox) were, on the whole, very cor-

Antioch, Principality of

dial. The Maronites, from around 1182, and the Armenian Orthodox Church, from 1198, were drawn into union with the Latin Church, but retained their corporate identity and were directly subject to the pope, not to the Latin patriarch. Relations with Greek Orthodox Christians, who were found in large numbers in northern Syria, particularly in the cities, were always strained. The Latins regarded them as members of their own confession, and, while allowing them to preserve their own churches, monasteries, liturgy, and canon law, made them subject to the Latin hierarchy. The Byzantine emperors continued to appoint titular Orthodox patriarchs of Antioch, who resided in Constantinople, and whom they periodically tried to restore to power (successfully in the case of Athanasios Manasses, 1165–1170). In 1206, the Orthodox of Antioch elected their own patriarch, Symeon II, and although he was later exiled from the city, many of them remained faithful to him until his death in 1239. This led to a schism between Latins and Orthodox in the patriarchate, which was not healed before Latin rule came to an end.

Latin Patriarchs of Antioch

Bernard of Valence	1100–1135
Ralph of Domfront	1135–1140
Aimery of Limoges	1140–1165
(Athanasios Manasses, Greek patriarch)	1165–1170
Aimery of Limoges	1170–1193/1196
Peter I of Angoulême	1196–1208
Peter II of Ivrea	1209–1217
Peter of Capua (elect)	1219
Rainier	1219–1225
Albert of Rizzato	1227–1246
Opizo dei Fieschi	1247–1268 (d. 1292)

Antioch, Principality of

A Frankish state in northern Syria, established in 1098 by the armies of the First Crusade (1096–1099), and surviving until 1268. With its capital at the city of Antioch (mod. Antakya, Turkey), the principality of the same name comprised much of the northwest of the modern state of Syria, as well as the province of Hatay in the southeastern part of Turkey.

Foundation

The prospect of material gain, in addition to the spiritual reward offered by Pope Urban II at the Council of Clermont, was a strong motivating factor for the leaders of the First Crusade from southern Italy, Bohemund of Taranto (son of Robert Guiscard) and his nephew Tancred of Lecce. Upon his arrival in Constantinople in 1097, Bohemund took the oath required by the Byzantine emperor, Alexios I Komnenos, and promised not to lay claim to any former part of the empire that the crusade might conquer. However, during the siege of the city of Antioch (1097–1098), Bohemund obtained a pledge from the other crusade leaders that he would be allowed to keep Antioch if he could take it and if Alexios would not come in person to reclaim it. Bohemund then used his contacts with Firuz, a military commander in Antioch, to enter and take the city except for the citadel. After the crusaders' victory over Karbughā of Mosul (28 June 1098), the citadel surrendered. On 5 November 1098, the council of the crusade leaders confirmed Bohemund's claim to Antioch, and when the main army of the crusade resumed its march south in January 1099, Bohemund stayed in Antioch.

Bohemund's new territory, the second Frankish state

The principality of Antioch in the earlier twelfth century

established in the East after the county of Edessa (1098), had been a Byzantine province until the Arab conquest of the seventh century, and in 1085 the Saljūqs had seized the region. In the north, the principality of Antioch was bordered by the plains of Cilicia and the Taurus Mountains; in the west by the Mediterranean Sea; in the south by the future county of Tripoli, the Muslim emirate of Homs, and the lands of the Assassins; and in the east by the county of Edessa and the Muslim emirate of Aleppo. The principality remained the target of Muslim reconquest until the 1170s, when Saladin shifted his attention to the south. Antioch, the capital city, was well fortified, with its 360 towers dating back to the Byzantine period. It was connected to the Mediterranean Sea through the port of St. Simeon (mod. Süveydiye, Turkey). As a commercial center Antioch was not as important as Acre or the coastal cities of Cilicia, but it was famous for its aqueducts, gardens, baths, and sewers, as well as for the good relationship between its various ethnic and religious groups: Franks, Syrians, Greeks, Jews, Armenians, and Muslim Arabs. Bohemund I's court resembled that of most Western rulers and featured the typical household officers: constable, marshal, chamberlain, and chancellor. The Italo-Norman laws of the principality, known as the *Assizes of Antioch*, have survived in a thirteenth-century Armenian translation, since Cilician Armenia later adopted these same laws.

History, 1099–1149

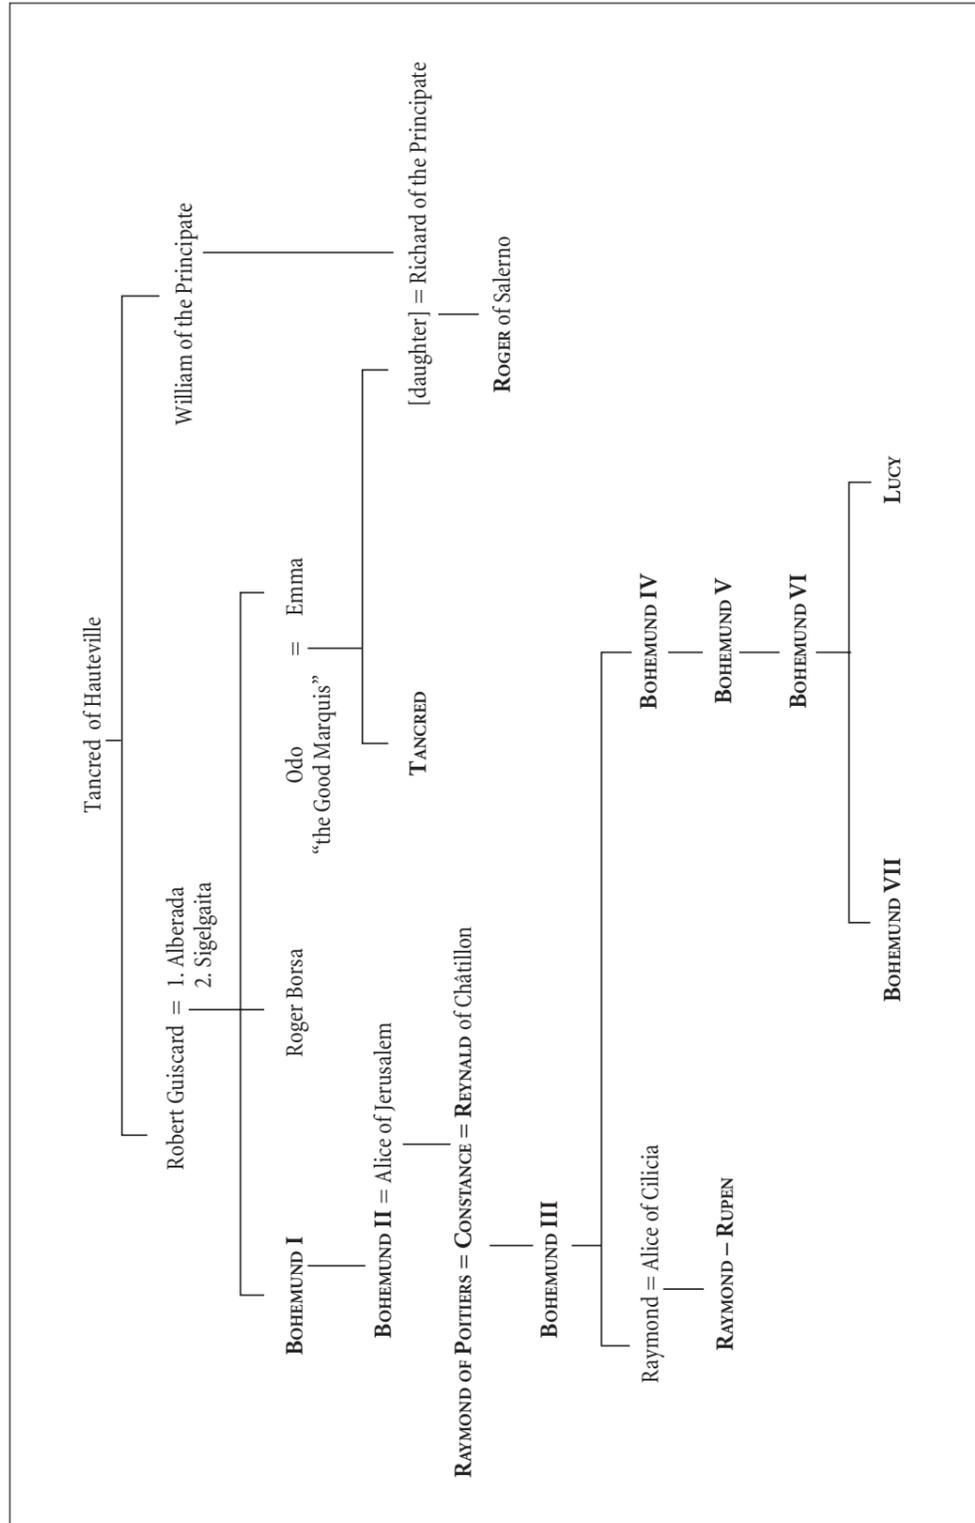

On Christmas 1099, when Bohemund was in Jerusalem to fulfill his pilgrim's vow, Patriarch Daibert of Jerusalem invested him with the principality of Antioch, thus completely disregarding the oath that Bohemund had taken before Emperor Alexios. Bohemund had tolerated a Greek Orthodox patriarch in Antioch, but Daibert insisted on installing Latin prelates in Tarsos, Artah, and Mamistra. Consequently, the Greek patriarch, John of Oxeia, retired to Constantinople, and Bernard of Valence became the first Latin patriarch of Antioch. After the death of Godfrey of Bouillon (1100), Daibert tried to prevent Baldwin I (of Boulogne), count of Edessa, from assuming the rulership over Jerusalem by calling on Bohemund to intercept Baldwin's travel; however, Daibert's message never reached Bohemund. In August 1100, during an attempt to secure the northern borders of his principality, Bohemund was captured by the Dānishmendids under Malik Ghāzī of Sebasteia.

As early as September 1100, a newly arrived papal legate, Maurice of Porto, offered the regency of the principality to

Tancred, who was then ruling Galilee. However, Tancred only agreed on 8 March 1101, after he had received guarantees for his possessions in the kingdom of Jerusalem from King Baldwin I. The Lombard expedition in the Crusade of 1101 intended to free Bohemund I, who was imprisoned at Niksar, but it was crushed east of the Halys River, near Merzifon, by the Turks. As regent of Antioch, Tancred conquered Cilicia from Byzantium and managed to take Laodikeia in Syria in the spring of 1103 after a siege of a year and a half. He was, however, unable to stop Raymond of Saint-Gilles from taking Tortosa, south of Laodikeia, and from beginning the siege of Tripoli. Tancred did not actively pursue Bohemund's release from captivity, which was accomplished in 1103 after Baldwin II (of Bourcq), count of Edessa, concerned about Tancred's increasing power, successfully raised the money for the ransom.

In 1104, as part of a campaign against Riḍwān of Aleppo, Bohemund, together with Tancred, Baldwin II of Edessa, and Joscelin I of Courtenay, attacked the fortress of Harran, southeast of Edessa, in order to establish a buffer that would separate eastern Anatolia, Syria, and Iraq. The combined Frankish army suffered a complete defeat, and Baldwin and Joscelin were captured. Tancred became regent in Edessa. The Byzantines took the opportunity to reconquer Cilicia and take the port and lower city (though not the citadel) of Laodikeia. Bohemund saw his principality in danger and decided to return to the West to assemble allies and supplies. He entrusted Tancred with Antioch, who in turn left the regency of Edessa to his cousin Richard of the Principate. In 1107, Bohemund crossed the Adriatic Sea and laid siege to the Byzantine port of Dyrrachion (mod. Durrë, Albania). However, he lacked a fleet that could match that of the Byzantine Empire, and the siege failed. In 1108, in the Treaty of Devol (whose text is given in Anna Komnene's *Alexiad*), Bohemund had to agree to return Laodikeia and Cilicia to Alexios, to receive his principality as a vassal of the Byzantine Empire, and to restore the Greek patriarch of Antioch to his see. In return, Alexios promised him the yet-to-be-conquered territories around Aleppo. After this treaty, Bohemund did not dare to show his face in the East and returned to Apulia.

Tancred continued his regency over Antioch, ignoring the Treaty of Devol, and he expanded the principality by conquering Artah (1105), Apamea (1106), Mamistra (1107/1108), Laodikeia (1108), Valania, and Jabala (1109). In 1108, when Baldwin II of Edessa and Joscelin I of Courte-

Succession to the Principality of Antioch, 1098–1268

may were released from captivity, a quarrel began between them and Tancred over Edessa. For the first time, the Franks entered into opposing alliances with the Turkish emirs of northern Syria. Militarily, Tancred prevailed, but Baldwin II was able to regain control over Edessa. After Bohemund's death in Apulia in 1111, Tancred continued to rule Antioch on behalf of Bohemund's son (Bohemund II), who was still a minor. When Tancred died in 1112, Roger of Salerno, the son of Tancred's cousin Richard of the Principate, succeeded him as regent of Antioch.

At least initially, Roger seems to have continued Tancred's successful military activities. In 1115, the principality was threatened by Bursuq ibn Bursuq of Hamadan, a Turkish general in the service of the Saljūq sultan Muḥammad. In a spectacular military expedition, Roger ambushed and defeated Bursuq's army at Tell Danith, between Apamea and Aleppo (14 September 1115). When Lu'Lu', the *atabeg* of Aleppo, was murdered in 1117, Roger tried to prevent the takeover of Aleppo by the city's Muslim neighbors. In 1119, the Artūqid prince Ḫghāzī of Mardin first paid for a truce with Antioch but then allied himself with Tughtigin of Damascus and returned to attack the principality. Rather than waiting for help from Jerusalem and Tripoli, Roger decided to respond on his own. He met Ḫghāzī near al-Balat, west of Aleppo, with 700 knights and 3,000 foot soldiers. On 27 June 1119, the Franks were thoroughly defeated, and almost all, including Roger, were killed. Contemporaries referred to the battle and its site as the *Ager Sanguinis* (Field of Blood). Details of the campaign are related in Walter the Chancellor's *Bella Antiochena*.

The Antiochene nobles called upon King Baldwin II of Jerusalem (the former count of Edessa) to assume the regency. The contract of regency ensured that the principality and its lordships would remain under Antiochene control, held in trust on behalf of Bohemund I's son, and not be handed over to the nobility of the kingdom of Jerusalem. In April 1123, Baldwin II himself was captured in northern Syria while trying to aid Edessa against Aleppo. In Antioch, the patriarch, Bernard of Valence, took over as regent until the summer of 1124 when the king was released from captivity. In Baldwin's absence, the Franks allied with the Venetians had managed to conquer Tyre, which brought about new problems between Jerusalem and Antioch. Traditionally, the archdiocese of Tyre had formed part of the patriarchate of Antioch. However, it was the position of the papacy that political and ecclesiastical boundaries should coincide;

the problem was that some of the bishoprics in the archdiocese of Tyre were in the territory of the kingdom of Jerusalem, while others were not. The pope decided in favor of Jerusalem, and the archbishop of Tyre became a subordinate of the patriarch of Jerusalem, while the bishoprics remained divided between Jerusalem and the states of northern Syria.

In 1126, Bohemund II arrived from Apulia to take over his father's inheritance. The following year, he married Alice of Jerusalem, one of Baldwin II's daughters. Only four years after his arrival in the east, Bohemund II died fighting in Cilicia (February 1130). In the following years, his widow Alice, left with their infant daughter Constance, repeatedly tried to take over the government. However, her father Baldwin II resumed the regency until his own death (1131). When Alice made an attempt to become regent in 1131, she was aided by Edessa and Tripoli, but the new king of Jerusalem, Fulk, came to Antioch almost instantly to take over the regency (1132). Fulk entrusted the affairs of the principality to one of its chief barons, Reynald Mazoir. In 1133, the Antiochene nobility asked Fulk to select a husband for Constance, and the king's choice fell upon Raymond of Poitiers, a son of William IX of Aquitaine, but it was three years before he arrived in the East. In 1135, Alice made another attempt to gain control over Antioch. Her ally was the new, uncanonically elected patriarch, Ralph of Domfront. However, when Alice offered her daughter Constance as a bride to Prince Manuel Komnenos of Byzantium, she encountered resistance from the patriarch, who feared he could be replaced by a Greek. Raymond of Poitiers arrived at Antioch in 1136, and Ralph saw to it that he was married to Constance. Alice retreated to Laodikeia. A few years later (1140), Patriarch Ralph, whose intrigues continued, was deposed by a council and succeeded by Aimery of Limoges. Raymond of Poitiers's court at Antioch was a cultural center: *Les Chétifs*, an Old French verse epic, was composed there shortly before 1149.

The Byzantine emperors continued to hope that they could assert their overlordship over the principality, or possibly even annex it outright. As they regarded themselves as protectors of the sizable Greek Orthodox population, another Byzantine aim was to restore a Greek patriarch in the city of Antioch. In 1137, Emperor John II Komnenos intervened to press his claims with regard to the principality. Raymond was forced to negotiate: he had to do homage to John and to agree to hand Antioch over to the emperor should John man-

age to conquer Aleppo, Shaizar, and Homs, and thus carve out a new territory for Raymond. In 1138, aided by Edessa and Antioch, John launched an attack against 'Imād al-Dīn Zangī, ruler of Mosul and Aleppo. When it became evident that the Franks were only lending lukewarm support, John returned to Antioch and laid claim to the city. However, Joscelin II of Edessa orchestrated a popular uprising that forced John to leave the city. He retreated to Constantinople, but returned in 1142. This time, the bishop of Jabala, acting on behalf of the pope and the Western emperor, rejected the Byzantine claims, an indication that the states of Outremer were considered the business of Christendom as a whole. In the following year, John died as a result of a hunting accident, and Raymond invaded Cilicia, but in 1144 the new Byzantine emperor, John's son Manuel I Komnenos, retaliated by invading the principality; Raymond was forced to travel to Constantinople and do homage. With the conquest of the city of Edessa by Zangī on 25 December 1144, Antioch's eastern border lay open to invasions from its Muslim neighbors. In 1148, during the Second Crusade (1147–1149), Raymond tried to convince King Louis VII of France to join him in a campaign against Zangī's son and successor, Nūr al-Dīn. However, Louis did not consider their joint forces strong enough, and the alleged affair of his wife, Eleanor of Aquitaine, with Raymond, her uncle, did not help to build trust. The crusade's attack on Damascus temporarily distracted Nūr al-Dīn, but in the summer of 1149, he appeared before the Antiochene castle of Inab. Raymond confronted him in battle on 29 June 1149 and was defeated and killed.

History, 1149–1192

Raymond's widow Constance assumed the regency for their children, who were still minors. Her main advisor was the Latin patriarch, Aimery of Limoges. Despite considerable pressure from King Baldwin III of Jerusalem, Constance refused to take a new husband until 1153, when she married Reynald of Châtillon, a French nobleman. Reynald turned against the patriarch (who may have objected to the marriage), had him imprisoned, and only released him when King Baldwin intervened on his behalf. In 1156, Reynald and Prince T'oros II of Cilicia attacked the Byzantine island of Cyprus, which they pillaged thoroughly. In February 1158, Reynald, aided by Baldwin III and Count Thierry of Flanders, captured the fortress of Harenc, an important stronghold on the river Orontes. In the fall of 1158, Manuel I Komnenos decided to renew his pressure on Antioch and moved with

his troops into Cilicia. In order to preempt the impending humiliation, Reynald traveled to Manuel and promised both to surrender the citadel of Antioch to him and to install a Greek patriarch (the latter did not come to pass). On 12 April 1159, Manuel entered Antioch in triumph. But then, to the shock of the Frankish states, Manuel and Nūr al-Dīn concluded an agreement, an alliance that from Byzantium's perspective was intended to provide a check to the Franks of Outremer and to keep the Anatolian Turks under control. On 23 November 1161, during a raid against Nūr al-Dīn's territory, Reynald was captured. He spent the following sixteen years in prison in Aleppo. Instead of turning to Byzantium, the Antiochene barons asked the king of Jerusalem for assistance. Baldwin III entrusted Patriarch Aimery with the regency, which pleased neither Byzantium nor Constance. To strengthen his claim over Antioch, Manuel married Constance's daughter Maria. However, in 1163/1164, the Antiochene barons expelled Constance and installed Bohemund III, the son of Constance and Raymond of Poitiers, as prince of Antioch.

Bohemund at first only controlled Laodikeia, but by March 1164 he was successfully established in Antioch. In August 1164, Nūr al-Dīn defeated the armies of Antioch and Tripoli near Artah, capturing Bohemund and Count Raymond III of Tripoli, and regained the fortress of Harenc, thus turning the Orontes into the definite eastern border of the principality. It seems that Manuel was instrumental in bringing about Bohemund's release from captivity (1165). In return, Bohemund had to install a Greek patriarch in Antioch. The ties between Antioch and Constantinople were further strengthened when Bohemund married Theodora, Manuel's great-niece. However, after Manuel's death (1180), Bohemund separated from her and married his mistress Sibylla. Consequently, Patriarch Aimery excommunicated him and placed Antioch under an interdict, whereupon Bohemund laid siege to the castle of Qusair to which Aimery had retreated; an agreement was mediated by Patriarch Eraclius of Jerusalem. Bohemund then turned on the Antiochene nobles who had supported Aimery, but most of them seem to have fled to Cilicia.

Bohemund III's son Raymond fought at the battle of Hattin (1187), where the Franks of Outremer were defeated by Saladin, and managed to escape, together with Raymond III of Tripoli. As Saladin continued his conquests, Bohemund was among the first who called on the West for help. Saladin was unable to take the important Antiochene castle of Mar-

gat, which the Hospitallers had just acquired from the Mazoir family. However, since the Muslim reconquest of Laodikeia in 1187, the principality of Antioch had been physically separated from the Frankish states to the south (Tripoli and Jerusalem). The city of Antioch was only saved because a Sicilian fleet arrived just in time. In 1190, the body of the Holy Roman Emperor Frederick I Barbarossa was buried in the cathedral of Antioch, and his son Duke Frederick V of Swabia, who was married to Constance, a great-granddaughter of Bohemund II, left a contingent of 300 knights and his treasure in Antioch. It seems that Bohemund III entered into a feudal relationship with the Western empire, maybe with the intention of establishing a *regnum Antiochenum* (kingdom of Antioch); after all, Emperor Henry VI would soon elevate Cyprus (1197) and Cilicia (1198) to the rank of kingdoms. During the Third Crusade (1189–1192), the principality of Antioch as well as the county of Tripoli remained neutral; they were, however, included in the truce between Saladin and King Richard the Lionheart of England (1192).

History, 1192–1268

Count Raymond III of Tripoli died shortly after the battle of Hattin. He had designated his godchild Raymond of Antioch, Bohemund III's oldest son, as his successor; Bohemund, however, decided to give Tripoli to his youngest son and namesake, Bohemund IV. In 1194, Leon II of Cilicia captured Bohemund III, but was unable to seize the city of Antioch because of the successful resistance of the newly formed commune there. The Antiochenes called on Henry of Champagne, the ruler of the kingdom of Jerusalem, for help, and Henry traveled to Cilicia, where he successfully negotiated Bohemund III's freedom in exchange for Cilicia's release from its vassal status toward Antioch. As a token of their reconciliation, Raymond of Antioch married Alice, Leon's niece, but Raymond died shortly after Alice had given birth to their son, Raymond-Rupen.

When Bohemund III died in 1201, both his youngest son Bohemund IV, count of Tripoli, and Leon of Cilicia, acting on behalf of Raymond-Rupen, his great-nephew as well as Bohemund III's grandson, laid claim to the principality of Antioch. Raymond-Rupen was supported by Pope Innocent III, who intended to preserve the fragile union between the Roman and Armenian churches (since 1198); the high nobility of Antioch, who emphasized the rule of primogeniture customary in the principality, and Sultan al-'Ādil of Egypt

and Syria supported Raymond-Rupen. Bohemund IV had the endorsement of Aleppo (until Innocent III's call for a new crusade in 1213) and of the commune of Antioch, particularly because its Greek members resented the Armenians. Bohemund IV was able to establish himself in Antioch. Since the overthrow of the Byzantine Empire by the Fourth Crusade in 1204 now made Greek claims on the church of Antioch unlikely, Bohemund lent his support to a Greek patriarch in the city (1207–1213). This and the commune's taxation plans so antagonized the Latin clergy that they switched over to Leon's side. Leon then agreed to a marriage between his daughter Stephanie and Raymond-Rupen. In 1216, Raymond-Rupen was able to supplant Bohemund in Antioch. Bohemund then participated in the Fifth Crusade (1217–1221). Raymond-Rupen did not hold Antioch for long. In 1219, he was dethroned by a revolt, whereupon Bohemund IV returned and ruled until his death in 1233. From this time, the county of Tripoli and the principality of Antioch remained under joint rule.

After the death of Leon II (1219), Cilicia was shaken by a succession crisis, and between 1222 and 1224, Philip of Antioch, a son of Bohemund IV, was even married to Isabella, one of Leon's daughters. The marriage was, however, dissolved when the regent of Cilicia, Constantine of Lampron, decided to have his own son marry Isabella. In 1228, when Emperor Frederick II demanded an oath of homage from Bohemund IV, the latter pretended insanity and thus avoided the oath. Antioch remained neutral in the dispute between Frederick and the Ibelin family that occurred in the kingdom of Jerusalem in the 1230s. For the next three decades, northern Syria nearly disappears from the historical record, and it seems that there was a significant economic decline. Bohemund IV's son, Bohemund V, who ruled the principality between 1233 and 1251, found himself entangled in the military expeditions of the Templars and Hospitallers who controlled significant portions of the Antiochene frontier. The nobility of Antioch and Tripoli also participated in the battle of La Forbie (1244), the most catastrophic defeat of the Franks of Outremer since Hattin. Bohemund V rarely visited Antioch and preferred Tripoli as his residence.

At the behest of King Louis IX of France, Bohemund V's son, Bohemund VI, married Sibyl, a daughter of King Het'um of Cilicia. This marriage alliance drew Antioch into Cilicia's allegiance to the Mongols. Both Het'um and Bohemund VI assisted with the Mongol conquest of Aleppo and

Damascus (1260). In the shadow of the Mongol advance, Bohemund was able to regain Laodikeia, but—since the Mongols realized the importance of the Greeks—he had to accept a Greek patriarch in Antioch; this earned him an excommunication from Rome. Opizo, the Latin patriarch of Antioch, left his see and moved to the West, where he continued to reside with a titular claim until 1292. When the Mamlūks defeated the Mongols at Ayn Jālūt (1260), Antioch lost a powerful ally and became one of the next objectives of Mamlūk retaliation. On 19 May 1268, after a four-day siege, Sultan Baybars I conquered the city of Antioch, destroyed it, and deported its population. In the same year, the Templars abandoned their castles in the Antiochene Amanus march.

Both Bohemund VI (d. 1275) and his son Bohemund VII (d. 1287), who continued to rule Tripoli, maintained their titular claims to the principality of Antioch. The Hospitaller castle of Margat held out until 1285, when it was conquered by Sultan Qalāwūn. Finally, on 20 April 1287, Qalāwūn's army took Laodikeia, the last significant city of the former principality.

Princes of Antioch

Bohemund I	1098–1111
Roger of Salerno	1112–1119
Bohemund II	1126–1130
Raymond of Poitiers	1136–1149
Reynald of Châtillon	1153–1161
Bohemund III	1163/1164–1201
Raymond-Rupen	1201–1219
Bohemund IV	1201–1233
Bohemund V	1233–1251
Bohemund VI	1251–1275 (titular rule 1268–1275) (loss of the principality) 1268

Antioch, Sieges of (1097–1098)

Two consecutive sieges of the city of Antioch (mod. Antakya, Turkey) during the First Crusade (1096–1099). In the course of these sieges, the crusaders invested and captured the Turkish-held city (20 October 1097–3 June 1098) but were then themselves besieged by a relieving Turkish army, which they defeated four weeks later (2–28 June 1098).

The crusaders seem always to have recognized the importance of Antioch: Stephen of Blois, one of their leaders, wrote to his wife from Nicaea (mod. İzmit, Turkey) that they were only five weeks' march from Jerusalem, "unless Antioch resists us" [Heinrich Hagenmeyer, *Epistulae et chartae ad historiam primi belli sacri spectantes* (Innsbruck: Wagner'sche Universitäts-Buchhandlung, 1901), 140]. The hope of speedy progress sprang from their knowledge of the fragmentation of the Saljūq sultanate after the death of Tutush I, ruler of Syria (1095), which left his territories divided between his sons Riḳwān at Aleppo and Duḳāq at Damascus. Their rivalry enabled men like Yaghisiyan, Saljūq governor of Antioch, to enjoy great independence, while the sultan, Barkyāruq (1095–1105), was viewed with deep suspicion by all the powers of Syria.

The crusaders could count on support from the Armenian lands to the north, east, and west that they had liberated during their march, a process solidified when Baldwin of Boulogne seized Edessa (mod. Şanlıurfa, Turkey) in March 1098. An English fleet had captured St. Symeon, the port for Antioch, and Laodikeia in Syria, a major maritime city to the south, establishing close connections with Byzantine Cyprus that would serve as a supply base throughout the siege. When a Genoese fleet put into St. Symeon on 17 November, the skills and equipment it brought enabled the army to

build a fortified bridge of boats across the river Orontes and a fortress called Malregard to protect their camp north of the city. On 4 March 1098, another English fleet arrived, enabling the besiegers to build the crucial Mahommeries Tower, which blockaded the Bridge Gate. Yet, when the crusade first reached Antioch, the idea was floated (perhaps by the imperial representative, Tatikios) of a distant blockade, the method used when the Byzantines reconquered it from the Arab Ḥamdānid dynasty in 969. However, the crusaders rejected this idea, probably because of the need to keep the army together, and established themselves along the north wall in front of the gates between Mount Staurin and the Bridge Gate. Communications with St. Symeon were precarious, depending on the bridge of boats and subject to attack from the Bridge Gate.

Although the Western sources present the siege as a noble and continuous struggle, it was effectively a close blockade, probably punctuated by a series of truces, and there was never a general assault. The crusader army had suffered badly crossing Asia Minor, and its cavalry was reduced to about 700 in number. It had been attacked from enemy outposts to the north and feared relief expeditions. By December 1097 the army was starving and a foraging expedition was mounted into Syria. On 31 December it encountered a relief expedition sent by Duqāq of Damascus in an effort to undermine Riḍwān. In a drawn battle near Albara, the crusaders halted this expedition, but their failure to gather booty plunged the army into a profound crisis of supply, prompting Tatikios to return to Constantinople to hasten imperial assistance. Riḍwān moved to reassert his control over Antioch, but on 9 February 1098 Bohemund led all the surviving crusader cavalry and successfully ambushed Riḍwān's great army as it approached the city. The crusaders thus survived a great crisis and by early March had built the Mahommeries Tower outside the Bridge Gate and blockaded the St. George Gate to the south. Under this severe pressure, one of the tower commanders, Piruz, agreed to betray his section of the wall to Bohemund (late May). At the same time, news arrived of the approach of a huge relief army sent by the sultan under Karbughā of Mosul; this enabled Bohemund to extort a promise from the other leaders that he could have possession of the city if the Byzantine emperor did not come to their relief. On the night of 2/3 June, the crusaders entered the city, which was sacked, although the citadel held out under its Turkish garrison.

The very next day, Karbughā appeared before Antioch,

having wasted time in a fruitless three-week siege of Edessa designed to please some of his allies. He established a camp 5 km (c. 3 mi.) north of the city and drove in all the crusader outposts. Another camp was then set up close to the citadel and an effort made to storm the city through the citadel, but the attempt failed because the crusaders were able to block the narrow route down to the city. The crusaders were starving and frightened, to such an extent that there were substantial desertions, including that of Stephen of Blois, and Bohemund set part of the city on fire to flush out the timorous. However, in this hour of crisis a series of visionaries came forward proclaiming God's trust in his people; these events culminated in the discovery of the Holy Lance in the cathedral by a Provençal pilgrim named Peter Bartholomew on 14 June, which greatly lifted crusader morale.

On 28 June the army broke out from the Bridge Gate escorted by so many clergy that it seemed like a religious procession. Religious ardor played a major role in the ensuing victory, but so did the military prudence of Bohemund, who had been placed in command and who held back his own men as a reserve. But the decisive factor was that Karbughā had dispersed his forces: as his troops near the Bridge Gate were pushed back, those from outside other gates were drawn piecemeal into the battle. It took time for Karbughā to realize what was happening and mobilize his massive cavalry forces in the main camp; by the time they arrived the battle was lost, and the bulk of his forces never engaged. The siege of Antioch had been an enormous strain on the crusader army, but its capture ensured the continuation of the crusade. The city remained in Christian hands until 1268.

Arabic Sources

Although many Arabic sources dating from the period of the crusades have survived to the modern day, there are a number of important texts that have been lost over time. Of those that have survived, a considerable number have been edited and published, but many are still extant only in manuscript form. Translations of the Arabic sources are even fewer, making it difficult for scholars who do not read Arabic to make effective use of this material. In addition, as with any primary source, one must always attempt to understand the motivations of the authors of the Arabic sources and how these might affect their writing. A further complication (and here one must acknowledge that the applicability of the term *crusade* to the Christian reconquest of Spain is debatable) is the fact that the Christian concept of crusade was one that was alien to medieval Muslims, and in many cases the Europeans invading Muslim territory were viewed as being merely one among many groups of enemies. Few Muslims truly understood the motives of the Christians invading their territories, and most often they ascribed their enemies’ actions to greed for booty. As a result, few Muslim works give detailed consideration to the crusading phenomenon. Accounts of the actions of the Christian enemy often form part of larger narratives of events, mentioned only in an occasional fashion and sometimes lacking details that might be considered important by modern scholars.

Genres

A number of genres of Arabic writing existed during the crusading period. Most of the authors of the texts that make up these genres were Muslims (and it is on their works in particular that this entry focuses); however, it is important to note that there are also Arabic works written by Christian and Jewish writers, some of which are mentioned below. It also should be noted that the various genres of Arabic writing occasionally overlap. For example, the universal chron-

icle of the Coptic Christian writer al-Mākin ibn al-‘Amīd (d. 1273) entitled *al-Majmū‘ al-Mubārak* (*The Blessed Collection*) takes the form of a series of biographies.

Most of the authors of the period wrote in Classical Arabic, but it is also important to note a variant of Arabic found in sources from the Jewish communities of the time, Judeo-Arabic (Arabic written in Hebrew characters). The best-known examples of Judeo-Arabic are some of the documents recovered in 1896–1897 from the Ben Ezra synagogue in Cairo, commonly known as the Cairo Genizah documents, which include works from a wide variety of genres.

Chronicles

The most important genre of texts that have passed down to modern historians from the period of the crusades is the universal chronicle. A number of annalistic histories were compiled during the period, of which the best known is *al-Kāmil fī l-Ta’rīkh* (*The Universal History*) of the Mosuli writer Ibn al-Athīr (d. 1233), which covers history from the Creation up to 1230–1231, two years before the author’s death. Later chronicles of this type include *Mir’āt al-Zamān fī Ta’rīkh al-A’yān* (*The Mirror of Time Concerning the History of Notables*), by the Turkish preacher and writer Sibṭ ibn al-Jawzī (d. 1256), and *Ta’rīkh al-Duwal wa’l-Mulūk* (*The History of States and Kings*), by the Egyptian Ibn al-Furāt (d. 1405). At the other end of the Mediterranean, one of the most influential chroniclers of the period was Aḥmad ibn Mūsā al-Rāzī (d. 955), much of whose writings, although written before the beginnings of the Christian expansion into al-Andalus and now mostly lost, were later incorporated into the (also mostly lost) works of the compiler Ibn Ḥayyān (d. 1076), and later into *al-Bayān al-Mughrib fī Akhbār al-Andalus wa’l-Maghrib* (*The Amazing Explanation of the Reports of al-Andalus and the Maghrib*), by Ibn Idhārī (d. 1312).

Related to the universal chronicles are the local histories, adopting a similar form but centered on a particular city or country. Among the earliest such texts from the crusading period are *Dhayl Ta’rīkh Dimashq* (*The Continuation of the History of Damascus*), by the Damascene notable Ibn al-Qalānisī (d. 1160), and *Ta’rīkh Ḥalab* (*The History of Aleppo*), by al-Aẓīmī (d. after 1161). Other examples of this genre include *Zubdat al-Ḥalab min Ta’rīkh Ḥalab* (*The Crème de la Crème of the History of Aleppo*), by the Aleppan teacher, historian, and statesman Kamāl al-Dīn ibn al-‘Adīm (d. 1262), and *al-Nujūm al-Zāhira fī Mulūk Miṣr wa’l-*

Arabic Sources

Qāhira (*The Shining Stars of the Kings of Egypt and Cairo*), by the Mamlūk historian Ibn Taghribirdī (d. 1470).

Another related genre is the dynastic history. Ibn al-Athīr, mentioned above, wrote a history of the Zangids entitled *al-Ta'rikh al-Bāhir fī 'l-Dawla al-Atabākīyya* (*The Dazzling History of the State of the Atabegs*). In a similar vein, the Syrian *qāḍī* (judge) and historian Ibn Wāsil (d. 1298) wrote a history of the Ayyūbids, *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb* (*The Remover of Worries about Reports of the Scions of Ayyūb*). Both Zangids and Ayyūbids are described in another important work of this type by the Damascene scholar Abū Shāma (d. 1268) entitled *Kitāb al-Rawḍatayn fī Akhbār al-Dawlatayn al-Nūrīyya wa'l-Ṣalāhīyya* (*The Book of the Two Gardens, Giving Reports of the States of Nūr al-Dīn and Saladin*). Another work of this type, this time from al-Andalus, is the history of the Zīrid dynasty of Granada, *al-Tibyān* (*The Explanation*), by its last representative, 'Abd Allāh ibn Buluggīn (d. after 1090). Finally, although not strictly a dynastic history, another Arabic work written in a similar vein is the history of the patriarchs of the Coptic church of Egypt, *Siyar al-Bay'a al-Muqaddasa* (*Biographies of the Holy Patriarchs*). This was begun by the bishop of al-Ashmunayn, Sāwīrus (Severus) ibn al-Muqaffa' (d. 979/1003), and then continued by a number of unknown writers up to the fifteenth century.

Biographies and Autobiographies

Related to the dynastic histories are biographical works. These take, broadly speaking, two forms: biographies of single individuals and biographical dictionaries. Probably the best-known biographies of a single individual are three biographies of Saladin: *al-Nawādir al-Sultānīyya wa'l-Mahāsīn al-Yūsufīyya* (*The Rare Qualities of the Sultan and the Merits of Yūsuf*), by the *qāḍī* Bahā' al-Dīn ibn Shaddād (d. 1234), and two works by the *kātib* (secretary-scholar) 'Imād al-Dīn al-Iṣfahānī (d. 1201), entitled *al-Faṭḥ al-Qussī fī 'l-Faṭḥ al-Qudsī* (*Qussian Eloquence on the Conquest of Jerusalem*) and *al-Barq al-Shāmī* (*The Syrian Lightning*). A number of later writers also wrote biographies of sultans. There are three biographies of al-Zāhir Baybars I, the Mamlūk sultan (d. 1277), all written by chancery officials: *al-Rawḍ al-āhir fī Sīrat al-Malik al-āhir* (*The Radiant Garden on the Life of al-Malik al-āhir*), by Ibn 'Abd al-Zāhir (d. 1292), another work apparently bearing the same title by 'Izz al-Dīn ibn Shaddād (d. 1285), and an abridgement of Ibn 'Abd al-Zāhir's work, *Ḥusn al-Manāqib al-*

Sirrīyya al-Muntaza'a min al-Sīra al-āhirīyya (*The Excellence of the Secret Virtues Taken from the Biography of al-āhir*), made by his nephew, Shāfi' ibn 'Alī (d. 1330). Ibn 'Abd al-Zāhir also wrote biographies of al-Manṣūr Qalāwūn (d. 1290) and al-Ashraf Khalīl (d. 1293). His nephew wrote a biography of Qalāwūn.

A number of authors compiled biographical dictionaries during the period. Among the most important are Ibn 'Asākir (d. 1176), a prolific historian and preacher from Damascus, who produced a biographical dictionary entitled *Ta'rikh Madīnat Dimashq* (*History of the City of Damascus*). Kamāl al-Dīn ibn al-'Adīm, the chronicler of Aleppo mentioned above, also produced a biographical dictionary based on the inhabitants of the city, *Bughyat al-Ṭalab fī Ta'rikh Halab* (*The Object of Desire in the History of Aleppo*). Some interesting information on Frankish rule in Palestine is contained in a collection of biographies of Muslim shaykhs by Ḍiyā' al-Dīn al-Maqdisī (d. 1245) entitled *Karāmāt Mashāyikh al-Arḍ al-Muqaddasa* (*The Wondrous Deeds of the Shaykhs of the Holy Land*). Other important biographical dictionaries from the period include the *Wafayāt al-A'yān* (*Death Notices of Notables*) of Ibn Khallikān (d. 1282), a continuation of Ibn Khallikān's work by the Christian official al-Suqā'ī (d. 1328) entitled *Talī Kitāb Wafayāt al-A'yān* (*Continuation of the Death Notices of Notables*), and the *Kitāb al-Wafī bi'l-Wafayāt* (*Book of Complete Death Notices*) of the chancery official al-Ṣafādī (d. 1363).

Many of the works mentioned so far contain autobiographical elements; however, few contain detailed accounts of the authors' lives. The main exception to this is the *Tibyān* of 'Abd Allāh ibn Buluggīn, much of which is specifically dedicated to an account of his own life. Another autobiographical work, this time from the Levant, is the much-celebrated memoir of the Syrian emir and poet Usāma ibn Munqidh (d. 1188) entitled *Kitāb al-I'tibār* (*The Book of Learning by Example*). Usāma was at times an associate of both Saladin and Nūr al-Dīn and has left an account of his life that contains numerous stories of interactions between Franks and Muslims. Indeed, he himself claimed friendship with a number of important Frankish figures. However, Usāma wrote his book with a didactic purpose in mind, and at times one has to suspect that his veracity suffered as a consequence. It remains, nonetheless, an important source, giving the reader insights into Muslim relations with the Franks that are absent from most of the other works from the period.

Poetry

During his lifetime Usāma was actually more famous for his poetry, and poetry forms another important genre of Arabic writing from the period. A number of poets were active during the crusading era, including the Syrians Ibn al-Khayyāt (d. 1120s), Ibn Munīr (d. 1153), and Ibn al-Qaysarānī (d. 1154), as well as al-Abīwardī (d. 1113) from Khurasan. ‘Imād al-Dīn al-Ḥafāhānī, the biographer of Saladin mentioned above, also both composed and collected poetry. Many of the poems from the period are panegyrics of sultans and exhortations to the *jihād* (holy war). However, one also finds other works: for example, Ibn al-Qaysarānī also wrote poems extolling the beauty of Frankish women.

Religious Texts

Another form of encouragement to the *jihād* came, not surprisingly, from the religious classes. A particularly important text here is the *Kitāb al-Jihād (Book of the Holy War)* by ‘Alī ibn Ṭāhir al-Sulamī (d. 1106), which the author dictated in 1105 as a series of public lectures in two mosques in Damascus. Other important preachers and writers of judicial texts from the period include Ibn ‘Asākir, mentioned above, and the controversial theologian and jurist Ibn Taymiyya (d. 1328). In addition to its function as a preaching script, al-Sulamī’s work forms part of a tradition of books devoted specifically to the *jihād*. This genre particularly flourished during the reigns of Nūr al-Dīn and Saladin. At the same time there was a marked growth of another genre, known as *faḍā’il* (merits) literature. These works include, in particular, texts extolling the merits of particular cities, including Mecca, Medina, Damascus, and Jerusalem. One of the most influential texts of this type is the *Faḍā’il al-Bayt al-Muqaddas (Merits of Jerusalem)* of the preacher al-Wāṣitī (fl. c. 1019). His work was copied, quoted from, and summarized throughout the twelfth and thirteenth centuries. Another important work of this type is the *Faḍā’il Bayt al-Maqdis (Merits of Jerusalem)* of Ibn al-Murajja (fl. 1130s).

Geographical Works and Travel Literature

The tenth century saw a flourishing of geographies of the known world in both Arabic and Persian, and such works continued to be written throughout the crusading period. One particularly important work of this type is *al-Masālik wa’l-Mamālik (The Roads and Kings)*, written by the Andalusian polymath Abū ‘Ubayd al-Bakrī (d. 1094). Another equally important work from further east is *Kitāb Nuzhat al-*

Mushtāq fī Ikhtirāq al-Āfāq (The Book of Desired Amusement in Crossing the Horizons), by al-Idrīsī (d. c. 1165). Al-Idrīsī lived under Norman rule in the kingdom of Sicily and wrote his work as a key to a large silver planisphere that he had made at the behest of the Norman king Roger II, for which reason it is also often known as *Kitāb Rujār (The Book of Roger)*. Related to these wide-ranging geographies are smaller-scale topographical surveys, of which the best known is a survey of Egypt, *Kitāb al-Mawā’iz wa’l-’Iṭibār bi-Dhikr al-Khiṭaṭ wa’l-Āthār (The Book of Exhortations and Learning by Example in Mentioning Districts and Remains)*, often referred to simply as the *Khiṭaṭ* by the scholar and teacher al-Maqrīzī (d. 1442).

Another important genre of Arabic literature from the period is travel literature. A number of travelers active at the time left accounts of their experiences on their journeys. The Spanish traveler Ibn Jubayr (d. 1217) made the *ḥajj* (greater pilgrimage) to Mecca in 1183–1185 and left an account of his journey through Egypt, Arabia, Iraq, Syria, and the Latin kingdom of Jerusalem, entitled *al-Riḥla (The Journey)*. Another traveler, this time from Tangiers, named Ibn Baṭṭūta (d. 1368/1369 or 1377), traveled further east and south, reaching the lands of the Golden Horde, India, and (possibly) China and Niger. His work, *Tuḥfat al-Nuẓẓār fī Gharā’ib al-Amṣār wa ‘Ajā’ib al-Asfār (The Curiosity of Spectators about the Marvels of Cities and the Wonders of Journeys)*, is both a travelogue and a description of the world.

Popular Folk Literature

A genre that gives some insights into Muslim views of the crusades is the folk literature popular during the period. This literature remains relatively unstudied, but it is of particular value because it reveals attitudes of ordinary people, whereas most writing from the period was composed by and for the elites of society. The best-known such literature is the *Arabian Nights*, in which important Muslim figures from the crusading period appear, including Saladin and Sultan Baybars I. Baybars himself was also the subject of an epic cycle, *Sīrat Baybars (The Biography of Baybars)*. Another important epic from the period is *Sīrat Dhāt al-Himma (The Biography of Dhāt al-Himma)*. In addition to the names of Muslim rulers, one finds in these works figures with Frankish names, and the texts convey much about Muslim attitudes toward Christianity and the Franks and crusaders.

Legal Texts and Treaties

In addition to the genres mentioned above, there are a number of legal documents and treaties that survive from the period, particularly from the Middle East. There are many archives of original legal documents in the Middle East, and most of these documents have not yet been edited and translated, even though they provide great insight into the actual administration of the Muslim states. In addition, there are surviving treaties from both ends of the Mediterranean, preserved either in their original form or in compilations, most particularly chancery manuals, as models for future use. The most important such chancery manual from the period is the *Ṣubḥ al-A'shā fī Ṣinā'at al-Inshā'* (*The Dawn for the Dim-Sighted on the Art of Correspondence*) by the chancery clerk al-Qalqashandī (d. 1418).

Suffixed Curses

A distinctive feature of the Arabic sources of the period merits particular mention. It is common for authors to suffix a curse, such as *khadhalahum Allāh* (may God forsake them) or *la'anahum Allāh* (may God curse them), to their mentions of the Franks. Uses of suffixed invocations of both God's blessing and God's curse may be found in the earliest Muslim sources, and the Qur'ān itself clearly inspired most of the vocabulary that was used for them, but it is only with the onset of the crusades that a widespread tradition of using suffixed curses in this way for a specific enemy emerges. Unfortunately, due to the distribution of the sources, the precise circumstances under which this practice began are murky. Some cursing of the Franks is found in the *Kitāb al-Jihād* of 'Alī ibn Ṭāhir al-Sulamī, but it is not until midway through the *Dhayl Ta'rīkh Dimashq* of Ibn al-Qalānīsī, in his account of the Islamic year 552 (1157–1158), that clear and consistent use of these curses against the Franks first appears. It is also not evident what provoked his adoption of this usage, as it does not occur during an account of a particularly heinous act by the Franks, nor does he or any other source describe a particularly moving sermon or decree enunciated at the time that might be viewed as the stimulus.

Whatever the original motivation, suffixed invocations of this type continued to be applied to the Franks by many Muslim writers of the crusading period, and it is clear that they became a "label," probably applied more often out of what soon became standard procedure than from particularly vengeful sentiments toward the Franks. When the Mongol invasions began in the early thirteenth century, the

usage was also extended to them, probably because they, like the Franks, were non-Muslims who invaded Muslim territory, settled on the lands they invaded, and continued thereafter to pose a threat to the Muslim world.

Aragon

The name Aragon can refer to two different realms in the Middle Ages: on the one hand, the county (later kingdom) of Aragon; on the other hand the larger polity formed by the dynastic union of Aragon and the county of Barcelona in 1137. In order to distinguish between them, the latter is more

appropriately referred to as the Aragonese-Catalan Crown or the Crown of Aragon.

The county of Aragon was established as a Carolingian border region at the turn of the ninth century, but it soon fell under the supremacy of Navarre. Only after 1035 did it achieve independence, and under its first king, Sancho Ramírez (1063–1094), the neighboring counties of Sobrarbe and Ribagorza were incorporated into the territory. During the reigns of Peter I (1094–1104), and Alfonso I the Battler (1104–1134), Aragon expanded south toward the pre-Pyrenees and the upper Ebro Valley, which was wrested from the Muslims in a series of campaigns culminating in the conquest of Zaragoza in 1118. Alfonso died without heirs shortly after the disastrous defeat by Muslim forces at Fraga (1134), and in 1137 the kingdom was unified—but never amalgamated—with the expanding county of Barcelona. The latter had emerged since the ninth century as the leading force among the Carolingian counties of the eastern Pyrenees. Practically independent of Frankish rule since the turn of the eleventh century, the counts of Barcelona had acquired a hegemonic position that enabled them to successively incorporate practically all other Catalonian counties by the end of the twelfth century.

Aragon and the Aragonese-Catalan Crown formed part of the crusading movement in three different ways. First, arms bearers from the eastern Pyrenees participated in crusades to the Levant. Second and most importantly, both polities were crusading areas in their own right, expanding to the south against Muslim al-Andalus during the process known as the *Reconquista* (reconquest). And third, in the later Middle Ages the Aragonese-Catalan Crown itself became the object of a short-lived crusade mounted by rival Christian powers.

Long before the First Crusade (1096–1099), Catalan and Aragonese pilgrims made their way to Jerusalem, as many extant wills demonstrate. Despite papal prohibitions against joining the campaigns in the Levant, Pyrenean warriors can also be traced among crusaders to the East in the twelfth and thirteenth centuries, and an entire Aragonese-Catalan expedition in aid of the kingdom of Jerusalem was undertaken by King James I in 1269–1270, even though its success was rather limited. Catalans in particular also migrated to the Frankish states of Outremer as settlers, and during the entire Middle Ages, arms bearers from both regions entered the Palestinian military orders, where knights such as Arnold of Torroja or Juan Fernández de Heredia rose to high positions.

But it is as a crusading theater that the Aragonese-Catalan Crown acquired major importance for the history of the crusades. For two centuries, the kings of Aragon extended their dominions south in a series of crusading thrusts that interrupted longer spells of peace, until their expansion came to a halt at the Christian-dominated territory of Murcia in the middle of the thirteenth century. These campaigns assumed the character of crusades at the beginning of the twelfth century, when a series of papal bulls equated the struggle against Muslims in the Iberian Peninsula with the crusades to the Holy Land. Some of the Iberian crusades were formally proclaimed or even monitored by Rome, and identical indulgences were promised for combat in either region. This also holds true for the Aragonese expansion, which was not only fostered by the popes, but also attracted some, albeit not many, foreign crusaders. Among the Aragonese-Catalan warriors, the concept of religious, spiritually meritorious warfare was well-known, and the struggle against the Muslims of al-Andalus was sometimes depicted as an attempt to reestablish the Christian rule abolished as a result of the Muslim invasion of 711. The concept of restoring the vanished Visigothic Empire so important to the early *Reconquista* in León and Castile was, however, less pronounced in the eastern part of the Iberian Peninsula.

Aragonese-Catalan warfare against Islamic Spain can be divided into four phases, the first of which roughly comprises the eleventh century. During this period, the collapse of the caliphate of Córdoba enabled Aragonese magnates to expand their territories south to the borders of the upper Ebro Valley, conquering the defensive sites of Huesca and Barbastro in 1096 and 1064/1100 respectively. In Catalonia the eleventh century brought a less spectacular advance in the *Reconquista*. After the sack of Barcelona in 985, the counts undertook expeditions against Córdoba (1010 and 1017) and levied tribute from Muslim lordships, but the decades between roughly 1020 and 1060 were marked by inner turmoil, which only ended when Raymond Berengar I (1035–1076) succeeded in reestablishing order under the leadership of the house of Barcelona. Only toward the end of the century was the military advance resumed and the town of Tarragona taken (around 1100). At this time, the crusades to the East changed the character of these attacks, and both military theaters began to be put into correlation. A clear sign of this shift was Pope Urban's II exhortations from 1089 and 1096–1099 to reestablish the see of Tarragona: by explicitly stating that this was as laudable a service

Aragon

The Crown of Aragon

as the *iter Hierosolimitanum* (crusade to Jerusalem), the pope linked the two areas.

The beginning of the twelfth century heralded the second phase of the Aragonese reconquest, which lasted until c. 1180. Under King Alfonso I (fittingly named “the Battler”), the strategically and economically important upper Ebro Valley and plain were conquered: Zaragoza, the center of a powerful Taifa kingdom, fell on 18 December 1118, and during the following years, other lordships such as Tudela, Tarazona, and Calatayud were also taken. The Taifas of Lleida (Lérida) and Tortosa, however, eluded the Battler’s grasp. Although Alfonso tried to bind his realm to the papacy and the crusades to the East by bequeathing it to the Templars, the Hospitallers, and the Canons of the Holy Sepulchre in 1131/1134, his true heirs were to be the counts of Barcelona. Count Raymond Berengar III had reassumed the Catalan expansion with the brief occupation of the island of Mallorca (1114–1116) and the reestablishment of the metropolitanate of Tarragona in 1118, and after the Aragonese-Catalan union of 1137, Count Raymond Berengar IV of Barcelona completed the Battler’s projected conquests with a major campaign at the end of the 1140s. Contemporary sources reveal that this operation was heavily influenced by crusading ideals. Pope Eugenius III, who considered the Iberian Peninsula as only one front of a large-scale offensive that was waged simultaneously on the coasts of the Baltic Sea, the Mediterranean, and the Atlantic, promised the crusaders indulgences. Consequently, the Christian army assembled by the count comprised not only Occitan, Aragonese, Italian, and Catalan forces, aided by members of the military orders, but also a crusader contingent from northwestern Europe on its way to Palestine. On 30 December Tortosa surrendered, and on 24 October 1149, Lleida was taken. Thus, at the middle of the twelfth century the Aragonese-Catalan Crown formed a coherent territory that included the entire Ebro Valley as well as neighboring Lower Aragon in the west. The following decades brought a hiatus in expansion due to the rise of the Muslim Almohads, but the resettlement (Sp. *re población*) of the newly conquered areas was effectively promoted. New towns such as Teruel were founded on the Christian-Muslim border and furnished with attractive privileges in the form of foundational charters (Sp. *fueros*) to attract new settlers, while both Palestinian and Iberian military orders were granted castles and extensive possessions. In some of the conquered areas (particularly in the Ebro Valley and Valencia), the subjected

Muslims (Mudejars) were allowed to remain and maintain their religious practices, although they were segregated and legally discriminated against. The Christian rulers of medieval Iberia, their eyes set on a continuation of the *Reconquista*, also partitioned and assigned areas for future expansion. The Treaty of Tudillén between Count Raymond Berengar IV and King Alfonso VII of Castile (1151) and the Treaty of Cazola (1179) between Alfonso II of Aragon and Alfonso VIII of Castile delimited such zones, while the latter contract implicitly established the equality of the realms of Castile and Aragon. But it would take nearly a century until these expansionist plans could be carried out.

The third phase of the Aragonese-Catalan reconquest comprises the reign of King James I, known as the Conqueror (1214–1276). During the half century after his coming of age in the early 1220s, James undertook a series of crusades against Muslim lordships. Backed by papal indulgences, the wealthy Catalan port towns, and the barons of upland Aragon, the king mounted a crusade against the Balearic Islands in 1229. The island of Mallorca was subdued between September 1229 and July 1231, but it took an additional four years until Menorca and Ibiza fell to the Christians. By then campaigning against Muslim Valencia had already commenced. After the conquest of Burriana in 1233, crusading indulgences were promised, and the Valencian crusade was preached as far east as Arles and Aix-en-Provence. The conquest of the town of Valencia on 28 September 1238 marked the high point, though not the end, of the crusade, for even after the Muslim realm had been subdued in 1245, a series of ultimately futile Mudejar uprisings meant that the fighting dragged on intermittently until 1277. With the kingdom of Valencia finally conquered, the limits marked by the Treaty of Cazola (redrawn in the Treaty of Almisra in 1244) had been reached. King James II annexed the northern part of Murcia in 1304, which was lost again to Castile in the course of the fifteenth century, but the Aragonese-Catalan monarchs saw no further means to incorporate Muslim territories into their realm.

The fourth and final phase of the Aragonese *Reconquista* was marked by the participation of contingents in campaigns led by Castile during the fourteenth and fifteenth centuries. Such was the case at the battle of Salado in 1340 and during the War of Granada (1482–1492), in which troops from the Iberian northeast played an important role. But in the meantime, Aragonese interests had shifted from military expansion on the Iberian Peninsula to political, economic, and mil-

Archipelago, Duchy of the

itary hegemony of the western Mediterranean. Even during the twelfth and thirteenth centuries, political interests in Provence and other areas of southern France had diverted the monarchs' interest from Iberian affairs. For example, dynastic ties and fear of French expansionism had led King Peter II to side with the excommunicated count of Toulouse during the Albigensian Crusade (1209–1229), a decision that cost the king his life at the battle of Muret on 12 September 1212. The conquest of the Balearic Islands directed the Crown's focus toward the Mediterranean, and in 1282 the uprising known as the Sicilian Vespers catapulted the house of Barcelona onto the throne of Sicily.

The Aragonese-Catalan Crown had become a decidedly Mediterranean power, which further expanded by acquiring the island of Sardinia and lordships in the eastern Mediterranean in the course of the fourteenth century, as well as southern Italy in the middle of the fifteenth century. This expansion, however, also created conflicts with ecclesiastical powers. The Sicilian war in particular brought the Aragonese-Catalan rulers into direct conflict with the papacy, which championed the position of their rivals, the house of Anjou. Consequently, at the end of the thirteenth century a crusade was preached against the Christian ruler Peter III of Aragon, the son of a crusading king (James I). The campaign, led by King Philip III of France, came to an inglorious end in 1285, and subsequent peace treaties reduced the invasion of 1285 to a singular event and an interlude in the long crusading history of the Aragonese-Catalan Crown.

Archipelago, Duchy of the

A duchy in the Cyclades Islands (mod. Kyklades, Greece) with its capital on Naxos, established after the Frankish-Venetian overthrow of the Byzantine Empire and ruled by Venetian families until its conquest by the Ottoman Turks in 1566.

The sources for the conquests of the Aegean islands in the wake of the Fourth Crusade (1202–1204) are late in date and vague in content. They are agreed that there was little opposition to the Latin newcomers, but their focus of attention was upon lords and lordships. The chronicle of Andrea Dandolo (1309–1354) concentrates on the titles acquired by various Venetian families in the Aegean, giving no details of the size, progress, and nature of the Venetian conquest. This source implies that there was one leader, Marco Sanudo, the nephew of the doge Enrico Dandolo, but that leading participants had their own ships and presumably a fairly free hand. The chronicler Daniele Barbaro (1511–1570) drew a distinction between Sanudo's expedition to Naxos, which he placed in the winter of 1204–1205 and regarded as having been undertaken with the backing of his uncle, but without the knowledge of the Latin emperor, and the more general conquest of 1206–1207. Both chroniclers assumed that Venetian rulers of the Archipelago in their own day could trace their roots back to the original Latin conquerors.

The names of the six ruling families of the Archipelago around 1212 are derived from Barbaro's chronicle and from various Venetian family histories. Marco Sanudo (d. 1227), duke of the Archipelago, occupied Naxos, Paros,

Antiparos, Milos, Siphnos Kythnos (Thermia), Ios (Nio) Amorgos, Kimilos, Sikinos, Syra, and Pholegandros. Marino Dandolo, perhaps the elder brother of Marco, received Andros. The Ghisi brothers, Andrea and Geremia, ruled on Tinos, Mykonos, Skyros, Skopelos, Seriphos, and Kea. The other beneficiaries were Jacopo Barozzi on Thera (Santorini), Leonardo Foscolo on Anaphe, Marco Venier on Kythera (Cerigo), and Jacopo Viaro on Cerigotto. Whether they held these islands from Marco Sanudo or by retrospective grant of the Latin emperor is unclear, but they were expected to exercise their lordship in the Venetian interest. The Venier family on Kythera followed an overtly philhellenic stance, marrying brides from Greek families in 1238 and 1295. By 1363 they lost their island to direct rule from Venice when they became involved in a revolt of Venetian settlers on Crete. Inter-marriage between the island families and the wider Venetian community in the Aegean, the subdivision of island lordships to accommodate younger sons, and the occasional leases of islands resulted in the increase and sometimes replacement of some of the original island families.

The first Turkish attacks on the islands were noted in 1318 with raids on Santorini and Karpathos. Raiding intensified in the 1330s and continued throughout the fifteenth century. Some of the islands, such as Andros, were virtually depopulated: the resettlement of Albanians on some of the islands was the remedy adopted by Venice to prevent this. The Turks occupied the island of Naxos for a time in 1344, which resulted in the enslavement of 6,000 of the islanders and the flight of many to Crete. The dukes drew closer to Venice, assisting it in its wars with Genoa and in the suppression of the revolt on Crete but at the same time seeking accommodation with the Turks whenever necessary. In 1566, Chios, and soon after Naxos, fell to the Turks, and with this event came the effective end of the duchy of the Archipelago. The Turkish seizure of Naxos was in part ascribed to a petition to the sultan Selim from the Orthodox Christians of the island begging his help to remove the debauched duke Giacomo IV Sommaripa. The tax farm of the island was granted to the sultan's favorite, Jacopo Nasi (d. 1579), and the Venetians restored Giacomo briefly in 1571. The last duke of the Archipelago sought accommodation with Sultan Murad III and died in Istanbul in 1576. Thereafter the islands passed under direct Ottoman administration.

The significance of the islands was at once strategic and commercial. During the frequent naval wars in the Aegean

between Venice and Genoa between 1260 and 1360, the islands were both harbors for succor and bases for state-sponsored piracy. At the time of the conquest, the Greek inhabitants seemed to have looked upon the Latins as a source for stability and an outlet for island produce, especially products such as corundum from Naxos and the mastic of Chios, which had ready markets in the West.

The limited population of the islands, together with scarce food and water resources and communications restricted by tides and winds, did not intensify aggression between Greeks and Latins. Latin settlement was limited to the towns of the larger islands and seems to have constituted less than 10 percent of the population. However, 20 percent of the Cycladic islanders followed the Latin rite, a remarkably high proportion compared to the legacy of the Latin Church in other territories occupied by the Latins. The increase in Turkish raiding during the fourteenth century led to the relocation of settlements inland. The towers and fortifications that the Latins built were designed to protect the inhabitants rather than to overawe them.

Armenian Sources

In the late tenth and eleventh centuries, as the Byzantine Empire annexed the Armenian-inhabited lands on its eastern frontier, many Armenians were encouraged to leave their ancestral homelands to settle in Cappadocia, Cilicia, and Mesopotamia, territories that sometimes themselves had only recently been occupied by the Byzantines. After the invasion of Armenia by the Saljūq Turks, their capture of Ani (1064), and their defeat of the Byzantines at Mantzikert (1071), this emigration accelerated. Armenian governors controlled important Byzantine frontier cities, and some eventually sought to establish independent lordships. By the time of the arrival of the First Crusade (1096–1099), there was a very significant Armenian presence across Cilicia, the Taurus Mountain region, northern Syria, and northern Mesopotamia: a very strategic region for crusaders and their Muslim opponents alike. The county of Edessa was from its origins a Franco-Armenian territory; the twelfth century saw the rise of an Armenian state in Cilicia, and the Frankish principality of Antioch itself came under significant Armenian influence. The impact of the Franks on the Armenians in this region was also great, however, and not merely in political terms: there were significant changes in social institutions and even religious attitudes. There was a long tradition of history writing in Armenia, and this was continued in the new settlements: it is inevitable that Armenian sources will have much to say about the history of the Franks in the Near East.

The majority of the Armenian historical works from the crusading period are not focused exclusively on Armenian

matters but make comments on non-Armenian and other affairs. They have indeed long been recognized as of use to scholars of all the surrounding states, Byzantine, Muslim, and Frankish alike. There has, however, been an understandable tendency for scholars from other fields to merely use individual sources to select or confirm "relevant" facts but to ignore the work as a whole, and this can be misleading. Armenian historical texts are representative of a long tradition and often require careful handling and analysis. It is unfortunate, then, that scholars of Armenian historiography have not given full attention to works from this period: more in-depth analysis of these sources is needed. One major problem with these sources is that few have modern scholarly editions, and where works have been translated into western European languages, these translations often suffer from deficiencies. The available translations are often based on poor or incomplete editions or are themselves incomplete, filleted for "relevance"; some lack the necessary commentary and scholarly criticism.

Nevertheless, given these caveats, the potential utility of these sources is undeniable, and it has even been possible for modern scholars to begin an analysis of their interrelationship. One can divide the Armenian historical sources geographically. On the one hand there are those writing in the area of the new settlements: Matthew of Edessa in the city of the same name (mod. Şanlıurfa, Turkey), Gregory the Priest in Kesoun (mod. Kaysun, Turkey), and Constable Smpad in Cilicia (Lesser Armenia); on the other are those based in or around the old Armenian capital at Ani, notably Samuel of Ani, and Vardan. The relationship between these sources can, however, cross these boundaries. Even the sources written in Armenia proper, to the north, can provide information relevant to the settlements in the south.

These more obviously historiographical sources can be supplemented by others from different genres. Among these are certain laments, inscriptions, and manuscript colophons. The colophons in particular can provide a wealth of interesting information, not just about the circumstances of the copying of a manuscript, but also about its ownership over time and about current events, and some of these are of relevance for scholars of the crusades. For example, colophons written near Antioch (mod. Antakya, Turkey) in 1098 and in Alexandria in 1099 give information about the First Crusade; later colophons refer to the fall of Edessa (1144) and of Jerusalem (1187) and to the Third Crusade (1189–1192). Unfortunately, although some collections of these Armenian

colophons have been edited, no translations of those relating to the main crusading period have as yet been published in western European languages.

Clearly much work remains to be done on the Armenian sources from the crusading period. However, one can make some general statements about the attitudes demonstrated toward the crusaders, while keeping in mind that there was certainly no monolithic Armenian opinion. It seems that the immediate impressions of the Franks were positive, as the crusaders were seen as a force come to liberate the Armenians from Muslim rule, or its threat. Yet after the Franks showed themselves just as willing to dispossess Armenian lords as Muslim ones, their popularity could decline; a colophon from the county of Edessa from 1130 shows a markedly more skeptical attitude toward the Franks than the colophons of 1098–1099. While some later Armenian sources, primarily from Cilicia, reflect a very pro-Frankish, and even pro-papal, point of view, other sources, especially those from Armenia proper, reveal mistrust of any “westernizing” programs. It is noticeable that several writers attempted to fit the irruption of the Franks into traditional frameworks of Armenian historiography. The crusades were presented, from an early date, as fulfilling ancient Armenian prophecies; the arrival of the Franks, it was declared, would mark a return to the glorious days of the early Christian period, and not only a revival of friendly Armenian relations with the (western) Roman Empire and its papacy, but also a revival of Armenia itself and the Armenian state.

Foremost among the Armenian historical works for the early years of the crusades and the Frankish settlement is that of Matthew of Edessa, whose chronicle covers the period from 951 to 1129; although the early part of his work is often derivative, he was a witness to many of the events he describes in the later part of the work, a period covering the establishment of the Frankish county of Edessa. Given its obvious relevance to crusade studies, Matthew’s work has received more attention from Western scholars than many other Armenian works, but proper analysis of its sources and content is still largely lacking. Nevertheless, this is undeniably a work of great importance and was certainly used by many later Armenian writers, both in the southern regions of settlement and in Armenia proper.

Matthew’s work was continued, with a short gap, by one Gregory the Priest, whose work covers the period from 1136 to 1162. In this continuation, the focus shifts from the region around Edessa further west to the region of Kesoun. For

example, included in Gregory’s work is a funeral oration for the Frankish count Baldwin of Marash, who died fighting in the short-lived reconquest of Edessa in 1146, written by the count’s Armenian chaplain, Basil. Baldwin was also lord of Kesoun and had refortified it; Gregory’s work gives us an insight into his Frankish marcher county that is unavailable from Frankish sources. Gregory’s is not a long work, but he seems to have had access to otherwise unknown sources, and it is of considerable interest.

In about 1150–1151 the seat of the catholicos, the head of the Armenian church, moved to Hromgla (mod. Rumkale, Turkey). Two of these catholicos in the later twelfth century (well-known scholars in other fields) wrote short texts, both laments, of interest to historians of the crusades. Nerses Snorhali (d. 1173) wrote an *Elegy on the Fall of Edessa*; and his successor, Gregory IV (d. 1193), wrote an *Elegy on the Fall of Jerusalem*.

Of much greater importance is the chronicle attributed to Constable Smpad (Smbat Sparapet), the brother of King Het’um I. There is some doubt over the authorship of and precise relationship between the manuscripts of this chronicle, but it is clear that it originates in the kingdom of Cilicia from a source close to the royal court. It not only follows earlier Armenian sources but seems to have had access to Frankish and even Byzantine material; it is a key text for the thirteenth century, and it was also continued by later anonymous writers. Smpad was certainly the author of certain other works of relevance, such as his translation of the *Assizes of Antioch*, which only survive through their Armenian version.

An Armenian source in terms of the nationality of its author if not its language is the work of Count Het’um of Gorigos (Korikos), dictated in French as *La Flor des estoires de la Terre d’Orient* and then translated into Latin by its scribe in 1307. This highly tendentious work describes the lands of the “Orient” and then the history of the Mongols for the benefit of Pope Clement V.

Of the several important historical writers active in the Armenian homeland in this period, foremost is Samuel of Ani, whose chronicle ends in 1180. In the middle of the thirteenth century a group of scholars based around Ani produced several historical works of occasional interest for historians of the crusades; one of these, Vardan Arewelc’i, not only produced a *Historical Compilation* but also was involved in the influential translation into Armenian of an extremely significant twelfth-century Syriac source, that of Michael the

Arms and Armor

Syrian. Other Armenian sources, such as Kirakos of Ganjak and Grigor of Akanc', provide excellent information on the Mongols, who were, of course, of much greater relevance for the inhabitants of Armenia proper than were the Franks.

Although it certainly requires much further investigation and analysis, the body of Armenian source material is of great actual and potential value for students of the crusades.

Arms and Armor

The arms and armor of the Christian West, Outremer, and Byzantium had a great deal in common from the eleventh to the thirteenth centuries, while those of the Islamic world varied considerably.

Weapons

The composite bows that dominated archery throughout the Muslim world came in a variety of forms. These ranged from early types with angled tips that acted as levers to produce

an easy draw but that wasted kinetic energy and were difficult to use on horseback, to the smoothly recurved Turkish-style composite bow, which has been described as the ultimate cavalry weapon before the invention of firearms. An "arms race" involving the Turkish horseman's composite bow and the Western infantryman's crossbow was, in fact, a minor epic in the history of the crusades.

The impact of the crossbow on later medieval warfare on land and at sea is, in fact, difficult to overstate. Crossbows were used by most settled rather than tribal armies in the Near and Middle East, including crusader and Frankish armies, those of the Byzantine Empire, and several Muslim states. The Byzantines certainly knew of this weapon before the crusaders arrived; their word for it (Grk. *tzaggra*) derives from the Persian-Turkish term *jarkh* or *charkh* rather than from any Western source. Bearing in mind the widespread assumption that crossbows were essentially western European weapons, it should also be noted that the earliest reference to a belt and hook to span more powerful forms of handheld crossbow is found in a twelfth-century manual written for Saladin, just as the clip to keep a crossbow bolt in place when shooting on horseback or aiming downward first appeared in a mid-fourteenth-century Egyptian military manual.

Although straight swords continued to be more common than curved sabers in most areas throughout this period, the similarity between Christian and Islamic blades was often superficial. For example, two twelfth-century swords found in a cave in Gibraltar look remarkably European, although their all-iron hilts are made in a way not seen elsewhere in western Europe. The Gibraltar swords are, in fact, early versions of a relatively light weapon that evolved into the distinctive Grenadine swords of the later fourteenth and fifteenth centuries. Light swords were also associated with a fencing technique of much earlier Indian or Persian origin that came to be known in Europe as the Italian Grip.

By the late eleventh century, the use of the baldric, or shoulder strap, rather than the sword belt was rare as a way of carrying a sword. However, the baldric was apparently readopted in thirteenth-century Outremer, perhaps because it was suitable for fighting on foot in defensive siege warfare. In contrast the Frankish cavalry elite were among the first Christian warriors to copy the long-established Middle Eastern fashion of carrying two swords: one on a belt and the other attached to the saddle.

Although the curved saber was already widespread among Turkish-speaking peoples, this weapon had started

to spread beyond the Turco-Mongol heartlands of central Asia. It reached the Middle East by the tenth century, if not earlier. The saber did not, however, spread to western Europe until early modern times. The *faussó* (heavy bladed sword with a single curved edge) of mid- to late twelfth-century Spain was in some respects similar. Though not considered a sword, it was wielded with one hand, and mention of it may have been an early reference to a weapon later known as a falchion in thirteenth- to fourteenth-century western Europe.

For reasons that are not entirely clear, the twelfth century saw considerable variation and experimentation in cavalry spears. The lances used by western European armored cavalry may have been relatively uniform, but those used by Almohad horsemen in Morocco were described as notably shorter than those of their Almoravid enemies in the same country. Light javelins (called *ausconas* or *azconas*) remained characteristic of twelfth- to thirteenth-century Navarrese infantry in northern Spain. *Dardos* (light javelins) were similarly used in Castile, while javelins largely made of iron were used by North African Berbers throughout this period.

Sophisticated maces were popular among Muslim troops in the Middle East, where Turkish maces (possibly war booty or based upon Muslim models) were also listed among equipment used by the military orders in Outremer. From there they spread to Europe. The early popularity of a large dagger called a *couteau d'armes* (literally "knife of arms") may similarly have reflected Islamic military influence. Firearms appeared at a very early date in the Muslim world but were not adopted as enthusiastically as in western Europe. Meanwhile Byzantium's apparent lack of firearms until the 1390s may have reflected its relative poverty rather than an unwillingness to use these new weapons. In contrast various Anatolian Turkish forces may have used *tüfenk* (handguns) by the mid-fourteenth century.

Shields and Helmets

There were fewer changes in the shapes and sizes of shields used in the Muslim world than in Christian Europe between the late eleventh and late fourteenth centuries. Nevertheless, there was still considerable variety within existing traditions. According to one late twelfth-century Egyptian source, shields could be made of spiral cane bound with cotton, or be kite-shaped like those used by Frankish cavalry, or be flat-bottomed infantry mantlets comparable to those seen in twelfth- to fourteenth-century Italy. The spiral cane shield

was particularly associated with Turks and Mongols, although it actually seems to have developed in Iraq several centuries earlier. A completely different sort of shield continued to be used in the Sahara, North Africa, and al-Andalus, this being the large and expensive leather *lamt*, described as ten hand-spans across, three cubits long, and capable of protecting both rider and horse.

Helmets underwent several important changes, most clearly in Byzantium and western Europe, where facial protection became increasingly important. Nine anthropomorphic helmet visors were found in association with a coin of the Byzantine emperor Manuel I Komnenos when the Great Palace of Constantinople was excavated. These face masks were comparable to those found in greater numbers in grave sites associated with the Kipchak Turks and Volga Bulgars in southern and eastern Russia. Helmets that covered the wearer's entire face similarly appeared quite suddenly in twelfth-century Christian Iberia; some of them were almost certainly predecessors of the western European great helm.

Another type of European helmet that may have first appeared, or more properly reappeared, in Byzantium was the brimmed form subsequently known in western Europe as the *chapel de fer* (war hat). Comparable helmets had been seen in eleventh-century northern China and may actually have been brought west by the Mongols or their immediate Turkish predecessors. They then became popular in thirteenth-century Outremer, presumably because they were more suitable in the Middle Eastern climate than were the enclosed helmets increasingly seen in western Europe. Several remarkable helmets of hardened leather and/or wooden construction have recently been excavated in the citadel of Damascus. They are clearly Islamic and appear to date from the thirteenth- to fifteenth-century Mamlūk period.

During the thirteenth century the separate head-protecting mail coif (close-fitting hood) had largely replaced an earlier style in which the coif formed an integral part of the mail hauberk. Despite the fact that Christian Iberian armor looked basically the same as that of the rest of Mediterranean western Europe, much of it had names that derived from Arabic rather than French or Latin. One example was the mail coif (Sp. *almofar*), a term that came from the Arabic *al-mighfar*. Meanwhile, by the mid-fourteenth century, low, domed helmets with long, mail *aventails* (flaps) covering the entire face and shoulders had been adopted in Turkey and Persia. This style was probably of Mongol origin. Several sources maintain that many Muslim soldiers

protected their heads by wearing large turbans rather than proper helmets. During the fourteenth century, a form of helmet popularly known as a turban helmet because of its increasingly bulbous shape also appeared, first in Turkish Anatolia and then in some neighboring Islamic countries. It is said to have been worn over a small closely wound turban, though in reality it was probably worn over a form of arming cap. One of the most distinctive pieces of Christian Iberian armor was a stiff gorget around the neck. This first appeared in the late thirteenth century, later spreading to other parts of Europe, and may have evolved out of the earlier *espalière*, a thickly quilted shoulder-and-neck defense. In fact most pieces of medieval European quilted armor including the padded *jupeau d'armer* (arming coat) had Middle Eastern origins.

Body Armor

Hauberks (coats of mail, often incorrectly called chain mail) remained the standard form of body protection until the fourteenth century. The European hauberks were worn over thickly padded soft armor; the eastern Islamic *kazaghand* was a form of padded, cloth-covered, mail armor known in Outremer as *jaserant* mail. Otherwise the overwhelming bulk of armor used in Outremer was in purely western European style, mostly imported from Europe itself. The will of an Italian crusader who died at Damietta in 1219 mentioned a "*panceriam* with one long sleeve and a coif" [W. S. Morris, "A Crusader's Testament," *Speculum* 27 (1952), 197–198]; such armor, with a single mitten for the right hand, had also been illustrated in late twelfth-century Italian art. Meanwhile an early thirteenth-century French crusader recalled that a "jousting" hauberk, rather than an ordinary hauberk, proved particularly effective against Egyptian archery. In contrast, relatively light mail armor was preferred by most Anatolian Turkish soldiers.

Another form of thirteenth- to fourteenth-century Turkish Anatolian armor was the *çuqal*, which seems to have been secured by hooks or buckles. It was clearly comparable to the late fourteenth-century Mamluk *qarqal*, which was a form of scale-lined, cloth-covered armor based upon the Mongol *khatangku dehel*. The Islamic *qarqal* was also comparable to the western European coat of plates or even to early forms of brigandine (close-fitting body armor lined with much smaller scales than the coat of plates), which, like the *qarqal* itself, probably owed a great deal to Mongol-Chinese technological influence. Like the *kazag-*

hand and the *khatangku dehel*, the European coat of plates was covered in fabric. The *coirasses* or *corazas* (cuirasses) worn by Iberian infantry rather than cavalry during this period appear to have been heavy forms of probably leather-based scale armor, sometimes with a colored *xamete* (covering). The term *foja* (scale-lined "girdle") was used to describe another form of early thirteenth-century Spanish body protection worn with an ordinary mail hauberk. It had a raised throat protection incorporating metallic elements and was probably an early form of coat of plates. In fact some of the earliest European illustrations of coats of plates come from late twelfth- or early thirteenth-century northern Spain.

Lamellar armor remained an essentially Asian and Middle Eastern form of construction. During this period the *jawshan* (lamellar cuirass) could be made of metal, horn, or hardened leather, some being laced with gut and others with silk cords. As in earlier centuries, some *jawshans* were so heavy that only the strongest soldiers could wear them, these perhaps being of the extensive fashion worn by Mongol and Mamlūk heavy cavalry. The latter was known in fourteenth-century Turkish countries as the *cebe cevsen* ("complete cuirass").

The main technological advance in armor construction in the later medieval Middle East was, however, the invention of what is called mail-and-plate armor. Here relatively small pieces of iron plate armor were linked by larger or smaller areas of mail, a system that probably first appeared in the mid-fourteenth century. Even though it offered considerable protection and great flexibility, mail-and-plate armor never caught on in western Europe, perhaps because it was more suitable for light rather than heavy cavalry. The otherwise obscure *bürüme* armor mentioned in late fourteenth-century Ottoman Turkish sources was associated with richer fief-holding cavalry and may have been a form of mail-and-plate, though the term may have meant an European plate-armor cuirass.

Various forms of soft or fabric armor had always been widespread in western Asia and the Middle East. In late twelfth- to early thirteenth-century Byzantium, for example, the *linothorax* was made of linen, though it may merely have been an unpadded surcoat. In Syria felt was used as soft armor or padding beneath a mail hauberk. The Templars' *jupeau d'armer* (quilted arming coat) was similarly worn beneath a mail hauberk. The Berber troops of fourteenth-century Tunisia were again known for their quilted cloth or

soft leather armor, while comparable protections were used by the famous *almogavar* light infantry and light cavalry of Christian Iberia. Even more distinctive was the fireproof clothing, impregnated with talc, silicate of magnesium, and powdered mica, worn by specialist fire troops in twelfth-century Syria.

The reasons for a sudden revival in the use of separate limb defenses during this period are unclear. Perhaps the first clear illustrations of separate gauntlets in medieval European art appear in late thirteenth-century manuscripts from the Byzantine Empire and Outremer. In contrast, the earlier Arab-Islamic *kaff* form of arm defenses seems to have dropped out of use, to be replaced by a rigid *vambrace* for the lower arm, probably as a result of Sino-Mongol influence. Comparable arm defenses in late twelfth- and thirteenth-century Europe apparently developed separately, though it is interesting to note that Spanish examples remain among the earliest.

Whereas separate leg protections developed into elaborate pieces of armor in western Europe between the twelfth and fourteenth centuries, this trend was far less apparent in the Middle East. *Solerets* for the feet, mentioned in the Rule of the Templars, appear to have been protective and were among the earliest references to a specific form of foot armor. The obscure *sidera gonatia* of fourteenth-century Byzantine sources may have been old-style mail *chausses* (legpieces) or a form of leg protection imported from the West, while the fourteenth-century Turkish *budluq* seems to have been a mail or mail-and-plate *cuisse* (upper leg protection) covering only the front of the thigh and knee.

Horse Armor

Horse armor had long been used in both Byzantium and the Islamic world, and was adopted in western Europe during the later twelfth century. Nevertheless horse armor remained rare in Outremer, even in the thirteenth century. According to a thirteenth- or fourteenth-century Turkish literary source, some Byzantine cavalry used horse armor that only covered the front of the animal. This sounds like a reversion to a much earlier style seen in the seventh century, but it is more likely to have reflected Iberian influence via large numbers of Catalan mercenaries in the Aegean area. Within Iberia itself, horse armor was generally referred to as a *peytral*, meaning the front part of a *bard* (complete set of horse armor), and had again been mentioned since the late twelfth century. One of the oldest surviving examples of a medieval

rather than Roman iron *chamfron* (armor for a horse's head) was, however, discovered in an eighth- to fourteenth-century site near Khartoum in Sudan. It was almost certainly imported from Egypt, probably for parade purposes. In more practical terms, horse armor of probable mail construction was used by the heavy cavalry of late thirteenth-century al-Andalus, while lamellar horse armor was more characteristic of Middle Eastern Muslim heavy cavalry from the eleventh century onward.

Arnold Amalric (d. 1225)

As abbot of Cîteaux (1200–1212), Arnold Amalric encouraged Cistercian involvement in the Fourth Crusade (1202–1204). Previously familiar with heterodoxy as abbot

Arnold of Lübeck (d. 1211/1214)

of Grandseve (1198–1200), he was commissioned to combat heresy in southern France as one of three legates, and by 1207 he had recruited many Cistercian abbots and monks for this project. Appointed primary legate after the death of Peter of Castelnau in 1208, Arnold believed that the renewal of the church in Languedoc and the suppression of heresy could be achieved only by the systematic replacement of recalcitrant noblemen and prelates with orthodox magnates via a crusade. Nevertheless, historians' typical depiction of him as a draconian zealot obsessed with stamping out heretics and their protectors by military force ought to be tempered by the pastoral tone of the sermon collection he requested from Pope Innocent III. For as legate and archbishop of Narbonne (1212–1225), Arnold combined the organization of multiple military expeditions with dogged preaching against vice and heresy and with active participation in councils intended to reform the local clergy and extirpate heresy. Convinced that the threats of heterodoxy, schism, and Islam were interlinked, Arnold also responded to papal appeals for an Iberian crusade by leading 100 knights to the crucial battle of Las Navas de Tolosa in 1212. Once relieved of his legatine duties in 1214, Arnold squabbled with the Montfort family over the duchy of Narbonne, leading him to oppose the dispossession of the counts of Toulouse at the Fourth Lateran Council (1215). Yet after Simon of Montfort's death (1218), Arnold supported Amalric of Montfort's claims to the lands conquered by the crusaders in Languedoc and King Louis VIII's military intervention in the south.

Arnold of Lübeck (d. 1211/1214)

Abbot of the monastery of St. John in Lübeck from 1177 until his death, and author of the *Chronica Slavorum*, intended as a continuation of the earlier work of Helmold of Bosau, and covering the years 1172–1209.

The *Chronica* is an important source not only for German and Danish operations against the Slavs and the advance of Christianity in the region to the east of the river Elbe, but also for the crusade in the Holy Land. It gives lengthy accounts of the pilgrimage to Jerusalem in 1172 of Henry the Lion, duke of Saxony (to which much of Book 1 is devoted), of Saladin's capture of Jerusalem in 1187 (stressing the divisive effects of the quarrel between Guy of Lusignan and Raymond III of Tripoli), and of the Third Crusade (1189–1192), the Crusade of Henry VI of Germany (1197–1198), and the Fourth Crusade (1202–1204). This last section includes a long letter from Baldwin IX, count of Flanders (one of several versions sent to the West), describing the siege and capture of Constantinople (mod. İstanbul, Turkey). There is also a description (out of sequence toward the end of the work) of an embassy sent by Frederick I Barbarossa, Holy Roman Emperor, to Saladin in 1175.

Arnold was a supporter of the Welf family, praised its leader Henry the Lion as another Solomon, and in his account of the duke's pilgrimage portrayed him as an influential figure who was treated with respect even by the Byzantine emperor Manuel Komnenos. Arnold also translated the *Gregorius* of Hartmann von Aue from Middle High German into Latin for Henry's son William of Brunswick.

Arnold of Torroja (d. 1184)

Ninth master of the Order of the Temple (1180–1184).

Arnold (Arnau) was a member of a powerful family that maintained excellent relations with the royal house of

Aragon. He joined the Order of the Temple in 1163 and became its master of Spain and Provence three years later. Arnold was repeatedly sent on diplomatic missions by Iberian monarchs and was elected master of the order in 1180. In Outremer he does not seem to have openly sided with any of the court parties; rather he mediated in a series of disputes. In 1184 Arnold was sent to the West together with the Hospitaller master Roger of Les Moulins and Patriarch Eraclius of Jerusalem, but died in Verona (31 October) before he was able to muster any assistance.

Arnulf of Chocques (d. 1118)

Latin patriarch of Jerusalem (1099 and 1112–1118).

Allegedly the son of a priest, Arnulf was in minor orders when he accompanied Duke Robert Curthose of Normandy on the First Crusade (1096–1099). He was related to Siger and Gunfrid, lords of Chocques (diocese of Thérouanne), who are both known as landholders in England in 1086. A learned man and gifted popular preacher, he had been tutor to Robert’s sister Cecilia, abbess of Caen.

Despite his lack of a bishopric, Arnulf was elected patriarch of Jerusalem on 1 August 1099. Subsequently Daibert of Pisa, Adhemar’s successor as legate, refused to ratify Arnulf’s election and assumed the patriarchate himself. Compensated with the office of archdeacon, Arnulf served three patriarchs before being elected patriarch for the second time in 1112. He was close to King Baldwin I of Jerusalem, whom he advised in secular as well as religious affairs, although he had his detractors, who complained of his moral turpitude. His arrangement of Baldwin’s bigamous marriage to Adelaide of Sicily led to his deposition in 1115; the price of his reinstatement by Pope Paschal II was the annulment of this marriage (in 1117).

Arnulf loyally and capably served the nascent kingdom of Jerusalem and its Latin clergy (to the detriment of the Greek Orthodox), but in sacrificing Adelaide he provoked the lasting hostility of Sicily, the nearest Western power to Out-

remer. He helped ensure the succession of Baldwin II in 1118 and died soon afterward.

Arsuf

A coastal town in central Palestine (situated north of mod. Herzliyya, Israel). It was known in the ancient period as Apollonia-Sozusa and was called Arsur by the Franks.

In 1099, while still under Fāṭimid rule, the town was granted tributary status by Godfrey of Bouillon, the first Frankish ruler of Palestine; but in April 1101 Arsuf fell to his successor King Baldwin I of Jerusalem, assisted by a Genoese fleet, and its population was expelled. The town and the surrounding land remained part of the royal domain until around 1163, when John of Arsuf appears as its first independent lord. The lordship extended north to the Nahr al-Faliq, south to the Nahr al-Auja (river Yarqon), and east to the foothills of Samaria. In the twelfth century, the town was required to provide the military service of fifty sergeants. In 1261, the lord’s vassals comprised six knights and twenty-one sergeants.

Walter of Arsuf was captured at the battle of Hattin in July 1187, and the town fell into Muslim hands in August. Three years later Saladin dismantled its fortifications. The town was retaken following his defeat by Richard I of England northeast of the town on 7 September 1191, and the slain

Arsuf, Battle of (1191)

knight James of Avesnes was buried in its principal church of St. Mary. On the death of Walter's successor, John (in or before 1198), the lordship passed to Thierry of Orca, the husband of John's sister Melisende; but after Thierry's death, in 1207 she married John of Ibelin, lord of Beirut. His son John began fortifying Arsuf in 1241, but on his death in 1258 it passed to his son Balian. Unable to defend his lordship against the Mamlūks, Balian rented it to the Order of the Hospital in 1261 for 4,000 bezants a year.

In 1263, Muslim sources record that the Hospitallers were building up the *rabad* (walled town), contrary to an agreement made with Sultan Baybars, who consequently laid siege in 1265. After forty days, on 26 April 1265, the defenders abandoned the town and retreated to the castle, which fell three days later when its gate was undermined. Some 1,000 defenders were captured or killed. The castle and town walls were then demolished.

Arsuf has been under archaeological excavation since 1977. The medieval town, enclosed by walls and a ditch, extends some 120–160 meters (393–525 feet) east to west by 345 meters (1132 feet) north to south, with sandstone sea cliffs on the west. The walls, market street, and houses appear to have been laid out in the reign of Caliph 'Abd al-Malik (685–705). In the Frankish period, the walls were strengthened with an external sloping masonry batter (*talus*), while on the east a new section of walling contained a town gate flanked by a pair of rounded turrets. Many of the earlier houses were demolished and replaced by open paved areas.

The castle stood in the northwest corner, on a rounded eminence surrounded by a dry moat. Much of the earlier, west range has been undermined by the sea. In the thirteenth century, however, a D-shaped enclosure was built to the east, lined with buildings facing onto a central courtyard and strengthened by two projecting rounded towers and a massive gatehouse with an entry flanked by a pair of rounded turrets. This was enclosed in turn by an apron wall, or *barbican*, reached from the town across a timber bridge. The Mamlūk assault is attested archaeologically by the discovery of mines and countermines, numerous iron arrowheads, and more than 600 trebuchet stones. The castle overlooked an artificial harbor or quay of trapezoidal plan, which was built in medieval times on Roman foundations.

Arsuf, Battle of (1191)

A battle between the armies of the Third Crusade (1189–1192), commanded by King Richard I of England, and the Muslims under Saladin.

After the capture of Acre (mod. 'Akko, Israel) in July 1191, Richard's next objective was Jaffa (mod. Tel Aviv-Yafo,

Richard the Lionheart leads his crusaders in battle against Saladin. (Pixel That)

Israel), the port nearest Jerusalem. The crusaders' march began on 25 August and became the classic demonstration of the tactic known as the fighting march. The crusaders' right was protected by the sea and by their fleet, which included Egyptian galleys captured in Acre. Half their infantry screened the left flank of the knights, alternating with the other half, which marched with the baggage train between the knights and the sea. Heat and incessant harassing by Saladin's mounted archers meant that the pace was painfully slow, but so long as the crusaders stayed in formation they could not be halted. Eventually Saladin realized that he would have to risk committing the main body of his own troops. At Arsuf (north of mod. Herzliyya, Israel) on 7 September his action finally provoked the crusader rear-guard into launching a premature charge. Only Richard's reaction, immediately and massively reinforcing the rear-guard's attack, while still managing to hold other contingents in reserve, conjured victory out of imminent chaos.

Three days later the crusaders reached Jaffa, where they had to make the choice between an advance toward Ascalon (Tel Ashqelon, Israel), as Saladin feared, and turning inland, toward Jerusalem.

Art of Outremer and Cyprus

Having conquered Syria and Palestine and gained control of the holy places in the course of the First Crusade (1096–1099), the crusaders were determined to restore and refurbish them, as well as to reconstruct Jerusalem and the other major cities of Outremer. The Church of the Holy Sepulchre in Jerusalem was an obvious focus, both with its regular services and its pilgrim traffic, especially at the time of the great feasts, but several other churches and monasteries too were restored or rebuilt with the patronage of the Frankish kings and Frankish baronage, as well as with endowments from western Europe. Religious houses were usually attached to holy sites, and some sites were under the protection of the military orders, who themselves stimulated building activity and the commissioning of works of art. Accounts given by pilgrims visiting from the West in the

twelfth century and, later, in the fourteenth, fifteenth, and sixteenth centuries, provide much information about the shrines, and their decoration and works of art.

Mosaics

The key image in the Church of the Holy Sepulchre was the great Easter picture of the Anastasis (Christ's Descent into Hell), representing his triumph over death as he trampled the gates of Hell to retrieve his Old Testament ancestors. This was depicted in the apse located in the rotunda within the Byzantine mid-eleventh-century mosaic program. So revered was it that the Franks moved it to the new apse of their enlarged church, dedicated in 1149. The image can be envisaged through the same scene painted in the Queen Melisende Psalter. The rest of the Byzantine mosaics were retained in the rotunda, including the images of Constantine the Great and St. Helena. Several Byzantine mosaics were also retained in the remodeled Chapel of Calvary, above the Chapel of Golgotha, also with mosaics. In Calvary, appropriately, the scenes of the Crucifixion and the Deposition retained pride of place on the eastern walls of the two sections of the chapel. To these and other remaining figural mosaics were added other mosaics (depicting prophets and kings) before 1149. One small fragment of the Ascension of Christ in the vault of the southeast bay and inscribed in Latin is preserved. At this time mosaics were also added, with inscriptions, to the aedicule (small building) over the tomb of Christ, sited below the rotunda. These depicted the Entombment and the Three Maries at the tomb, both images that again can be envisaged from the Melisende Psalter.

Existing mosaics, this time dating to the Umayyad period in the late seventh century, were retained in the Dome of the Rock on the Temple Mount when it was converted into the church known as the Templum Domini (Temple of the Lord) and consecrated in 1142. The Franks added an inscribed mosaic frieze to the outside of the building and added a painting of the scene of the Presentation in the Temple to the dome.

A major program of mosaic work is partially preserved at the Church of the Nativity in Bethlehem. An inscription in the apse indicates that the main mosaicist was Ephraim, a monk, who completed the work in 1169 under the Byzantine emperor Manuel I Komnenos and King Amalric of Jerusalem during the episcopacy of Ralph, bishop of Bethlehem. Another inscription (bilingual Latin and Syriac) in the nave gives the name of Basilius, a deacon, and it is likely that a

third artist undertook the transept mosaics. The implication of Basilius's inscription is that indigenous Christians played a major role in such a politically charged artistic project. As a unity, the program is concerned with the Incarnation. The Nativity is shown in mosaic in the grotto beneath the church. The genealogy, life, and passion of Christ are spelled out, culminating in the Virgin and Child image in the apse (now lost). In the nave, the ancestors of Christ were depicted beneath the church councils and processing angels. The mosaics represent an attempt by Manuel Komnenos to effect ecumenical unity among the Greek Orthodox (Melkite), Latin, and Eastern Christian communities. This initiative to bring the indigenous Christian churches into communion with the Greek and Latin churches was part of both a wider theological agenda and a concerted political plan to unite Christians against the Islamic threat. The style of the mosaics, especially those that depict the councils, has much in common with the seventh-century mosaics of the Dome of the Rock in Jerusalem and other Umayyad monuments, especially in the coloring of gold, green, and red with silver and mother-of-pearl.

Wall Paintings

Surviving twelfth-century wall paintings still in situ bear out the witness of Western pilgrim accounts that several of the monuments at the holy places were decorated with wall paintings. We now know that the Church of St. Anne in Jerusalem was painted, as were the crypt chapel of the tomb of the Virgin, St. Mary of Jehosaphat in the Kidron Valley, St. Lazarus at Bethany, St. John the Baptist in 'Ain Karem, and churches on Mount Zion. An inscription from a wall painting is preserved from the Church of St. Mary Latin. In addition, Greek Orthodox monasteries in Jerusalem and the Judean desert retain wall paintings. Paintings have survived at the monastery of the Holy Cross in Jerusalem, as well as monasteries of St. Sabas, Euthymios, Kalamon, and Theoktistos, in addition to the monasteries of Choziba and Kastelion.

The nave columns of the Church of the Nativity in Bethlehem include Eastern monastic saints among a very diverse group indicative of its crusading milieu. These include saints to which crusaders particularly related, such as St. George and St. Leonard; the bishops Leo, Blasius, and Catald; and two Scandinavian kings, St. Knud IV of Denmark (d. 1086) and St. Olaf II Haraldson, king of Norway (d. 1030). Pictures of donors are themselves depicted on some of the column

paintings. The paintings were probably painted over a wide time span. One of the Virgin and Child panels (the affectionate panel of the *Gykophilousa*) can be dated to 1130, and it has been suggested that some may have been added as late as the 1170s.

The Church of St. John the Baptist at Sebastea in Samaria retains wall-painting fragments in the niche of its crypt, from after the mid-twelfth century. These show the saint's martyrdom by decapitation above and the burial of the saint's head below, while angels flank the upper scene. The 1170s saw the decoration of the church at Emmaus (Abu Ghosh), the place where Christ met the two disciples after his resurrection. Appropriately, the imagery is that of salvation, with the Anastasis, inscribed in Latin in the main apse, echoing the image in mosaic at the Holy Sepulchre. The *Deisis* (intercessory picture), inscribed in Greek, occupies the north apse, while the scene of the three patriarchs holding souls, inscribed in Latin, is located in the south apse. It has been shown that one of the painters at Abu Ghosh was working in the highest Byzantine style of the day, reflecting the high priority that Manuel Komnenos put on the refurbishment of the holy places. This use of Komnenian style is most clearly seen in the painting of the mourning apostles in the Dormition (the Death of the Virgin), on the north wall of the nave. Also attributed to the 1170s are the now heavily restored paintings on a large stone at Bethphage, originally erected to mark the site from which Christ left Bethphage for Jerusalem. It depicts the remnants of scenes of Matthew 21:6 and 8, with the Raising of Lazarus. Also attributed to the 1170s is the painting, on a block of stone, of an angel from the Church of the Agony at Gethsemane, which is in the Museum of the Flagellation in Jerusalem.

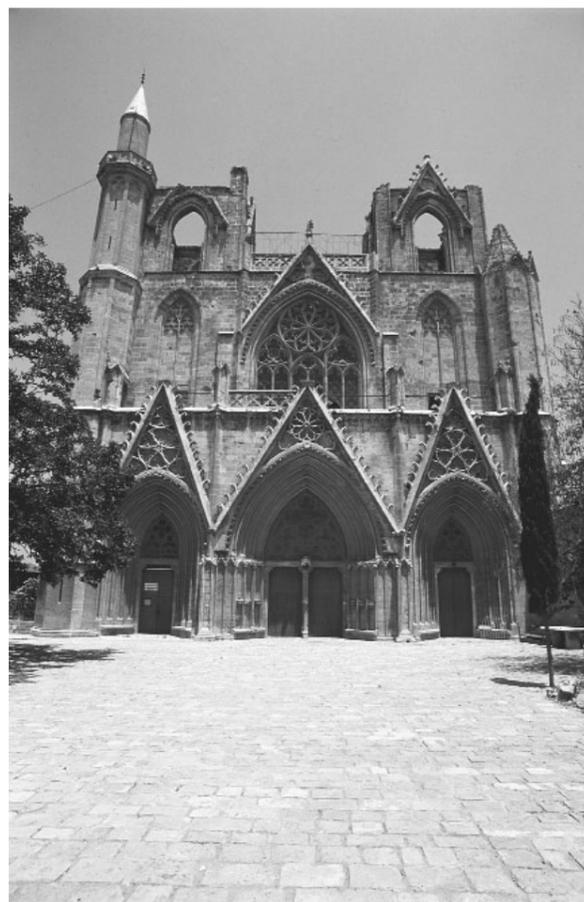

Military chapels and secular palaces were also decorated. Fragments from a scene of the Annunciation from a military chapel dedicated to the Virgin at the Damascus Gate in Jerusalem are preserved in the Rockefeller Museum in Jerusalem. Fragments of wall painting at the castle of Krak des Chevaliers in the county of Tripoli date from different periods and were painted by artists from different backgrounds. Paintings done in the external, baptismal chapel depict St. Panteleimon, and the Virgin and Child *Hodegetria* (i.e., with the Virgin pointing toward the Child) in a Byzantine-influenced style, dating to around 1170. A fresco depicting the Presentation in the Temple painted by a Syrian Orthodox artist in a style resembling that of the area of present-day Lebanon dates to around 1200. It is known from a

description of the German pilgrim Willibrand of Oldenburg that the palace of the Ibelin family in Beirut in the early thirteenth century was decorated with the zodiac on the ceiling, alongside marbled walls and pavement. This is recorded as being the work of Syrians, Saracens, and Greeks.

Manuscript Illumination

The scriptorium at the Church of the Holy Sepulchre in Jerusalem, founded in the second quarter of the twelfth century, was the focus for the production of several illustrated manuscripts, made for members of the monarchy, the aristocracy, and ecclesiastics. It is assumed that the scriptorium was located in the monastery attached to the church. An example of a manuscript made for royal patronage is the *Melisende Psalter*, datable to 1131/1143.

Two surviving Latin service books were probably made for ecclesiastics. One is a sacramentary (a liturgical manuscript containing the prayers and texts recited in the Mass), which is now divided between MS Rome, *Biblioteca Angelica*, D.7.3, and MS Cambridge, Fitzwilliam Museum, Maclean 49. The sacramentary is illustrated with decorated initials, as is also a missal (the service book of the Mass), now MS Paris, *Bibliothèque Nationale de France*, lat. 12056. Both service books are ornamented with foliage, interlace, and geometric motifs. The Cambridge and Paris manuscripts probably both also had full-page miniatures of Christ in Majesty, and the Crucifixion. Figural initials in both include Christ between two adoring angels, and kneeling angels. Additionally, the Paris manuscript has initials with small scenes of the Virgin and Child, St. John the Baptist, Christ, the Death of the Virgin, St. Peter, and the Holy Women at the Tomb. It has been suggested that some of these scenes give an impression of the mosaics that once decorated the rotunda and the Chapel of Calvary at the Holy Sepulchre at the time. The sources for the illustration of the manuscripts are more diverse; they have been traced to English, French, and Italian books that would have been brought to Jerusalem, together with Byzantine sources that would have been available through the Greek Orthodox community in the city. As to the English books, a key role has been proposed for Prior William, later archbishop of Tyre from 1127, who may even have established the scriptorium. But there was a clear local input. The quires of the missal are numbered in Armenian letters, indicating the involvement of at least one indigenous Christian, the scribe, an Armenian who knew Latin. While the scriptorium of the Holy Sepul-

Gothic cathedral of St. Nicholas in Famagusta, now a mosque. (Richard List/Corbis)

chre was the major center in the twelfth century, it may not have been the only one. Edessa before its fall in 1144 and Antioch too would probably have been centers of production, both of which had substantial indigenous Christian populations.

A single illustrated manuscript is attributed to the period of the rule of Emperor Frederick II as king and regent of Jerusalem in the early thirteenth century. This is a psalter (MS Florence, *Biblioteca Riccardiana*, 323) datable to the second quarter of the thirteenth century, and made for a noble lady according to its litany and prayers. Though many of the saints invoked are from northwest France, St. Benedict, St. Giles, and St. Anne are given a prominence that associates the litany with the Benedictine convent in Jerusalem on the site where Joachim and Anne, the parents of St. Mary

Noah's Ark, illustration from the *Universal History from the Creation of the World until the Time of Caesar*. Painted by an anonymous monk between 1260 and 1270 in Acre. MS Dijon, Bibliothèque Municipale, 562. (Erich Lessing/Art Resource)

the Virgin, lived and where the Virgin herself was born. However, since this convent had been appropriated by Saladin in 1187, it is more likely that this association is at one degree remote, that is, that the litany on which this manuscript is based is from St. Anne's. The manuscript displays New Testament scenes of the life of Christ, illustrating initials at the beginning of the eight divisions of the text. These are in historical order rather than having any bearing on the text they accompany, a feature of German manuscripts. The illustration also displays several Byzantine features, as well as elements derived from Sicilian manuscript and mosaics. This range of references has prompted the suggestion that the manuscript was commissioned as a wedding present

from the emperor Frederick II to his third wife, Isabella, sister of King Henry II of England.

After the loss of Jerusalem in 1187, much of the impetus for the production of manuscripts moved north to Acre, which was the center of government for the next century and the seat of the Latin patriarchate of Jerusalem for most of that time. The identification of Acre as the center of production arose from the reference to Acre in the liturgical calendar of a missal (MS Perugia, Biblioteca Capitolare, 6). This manuscript has one full-page illustration, one half-page illustration, and initials. The full-page illustration (of the Crucifixion) is related to Venetian panel painting. This had proved influential in the attribution of icons to Outremer.

But the Byzantine influence that foregrounds so much of the manuscript illumination of Outremer is still evident here in two of the illustrated initials.

The major manuscript of the mid-thirteenth century is the Arsenal Old Testament (MS Paris, Bibliothèque de l' Arsenal, 5211), a lavishly illustrated manuscript of Old Testament excerpts in Old French. It is attributed to the patronage of King Louis IX of France during his time on crusade in Acre in 1250–1254. From the time that Louis took the cross in 1244 to the time he left on crusade, he was involved in the building of the Sainte-Chapelle in Paris, which functioned both as palace chapel and as a shrine for the Passion relics he had recently acquired from Constantinople: the Crown of Thorns and parts of the True Cross, as well as the lance and sponge. The Old Testament manuscript is evidence of Louis's continuing interest in artistic projects and his concern to associate biblical and French kingship. The manuscript is illustrated with twenty miniatures, each acting as a frontispiece to one of the individual books. Most of these are full-page illustrations, illustrating a cycle of scenes subdivided into rectangles, roundels, or lobed shapes. The sources of the illustration combine the art of France, available through manuscripts in the royal collection, with Byzantine models.

As well as service books and biblical manuscripts, there was a strong demand at Acre for new types of books in the vernacular as in the West. These included manuscripts of history and law, catering to a wider clientele than previously, including knights and members of the military orders as well as royalty and the aristocracy and ecclesiastics. Amongst these were lavishly decorated copies of the *Histoire Universelle* (a history of the world from the Creation to Julius Caesar) and William of Tyre's chronicle translated from Latin into French, as well as works by Cicero. One of these (MS Chantilly, Bibliothèque du Château, 590) was commissioned by William of St. Stephen, a lawyer and Hospitaller knight at Acre. A translator named John of Antioch translated Cicero's *De Inventione* and *Rhetorica ad Herennium* into Old French, adding at the end of the prologue that this project was undertaken in Acre in 1282. The artist employed to create the decorated initials in the manuscript (known as the Hospitaller Master) here introduced a contemporary French Gothic style. This style proved influential on manuscript illumination until the fall of Acre. In addition, artists in Acre were by this time giving prominence not only to Byzantine modes but also turning to more contemporary

Arabic illumination and depicting local customs. One *Histoire universelle* manuscript (MS London, British Library, Add. 15268) is an example of this last flowering; it was probably made to commemorate the coronation of Henry II, king of Jerusalem (1286).

Icon Painting

Icons served several purposes. Small icons were frequently for personal use, by both religious and laypeople. Others were made for liturgical use, to be displayed on the *templon*, or iconostasis, either between the columns or at the top (*epistyle*). Others were made to be displayed on stands or used in processions. The imagery employed was extensive. Individual saints were venerated through some icons, while others displayed feast scenes. Images of the Virgin and Child or Christ played a special role. Although icons were predominantly associated with Byzantine and Eastern Christian religious practice, Westerners came to venerate and commission them in Outremer. The icon collection of the Greek Orthodox monastery of St. Catherine on Mount Sinai houses several that display Western features and iconography, some of which also have Latin inscriptions. Some were commissioned by Western pilgrims and other visitors, and some were for special purposes, notably for liturgical practices and for particular chapels at Sinai. Several icons with Western features have been attributed to French, Italian, or Cypriot painters. Yet there is a growing recognition that many may have been made by indigenous artists, or monk-artists, especially since the community at the monastery at the time was both multicultural and multilingual. Sinai was also a cult center, visited as the site of the Burning Bush and the giving of the Law to Moses. The Virgin was also venerated here, as was St. Catherine, whose relics were brought here in the tenth century and in whose name the monastery came to be known from the thirteenth century. As a martyr saint she was particularly revered by Western pilgrims. The Chapel of the Burning Bush was also visited by Muslims, according to pilgrim accounts.

One icon at Sinai, inscribed in Latin, is usually attributed to Jerusalem before its fall in 1187, although it can in fact probably be reattributed to the early Ayyūbid period. It shows six frontally facing saints of whom two, St. James the Greater and St. Stephen, are associated with Jerusalem. Two Western saints are also included, St. Martin of Tours and St. Leonard. The latter is shown holding manacles, appropriate to his status as the patron saint of prisoners. But the vast

majority of the inadequately named “crusader” icons are from the thirteenth century. Among their characteristics are the appearance of Western iconographical elements, beaded haies, decorated borders, the use of the raised gesso plasterwork technique to imitate metalwork coverings, and certain stylistic features, including the appearance of bulging “spectacle” eyes. Some, such as a small icon of St. Marina (now in the Menil Collection in Houston, Texas), are attributed to the area of Tripoli, where the saint’s cult was particularly strong. Likewise, a small icon at Sinai portraying a veiled woman praying to the equestrian St. Sergios has been attributed to the same area, commissioned by a Frankish woman who may have been a member of a Cistercian lay confraternity. Such equestrian saints were especially favored by Frankish patrons because of the protection they were believed to afford. It has been argued that an icon in the British Museum in London, of St. George riding a white horse and rescuing the serving boy from Mytilene, was made at Lydda, where the saint was martyred and buried in the early Christian period. The belief that St. George fought for the crusader army at Antioch in 1098 stimulated further Frankish veneration of this saint. But images of the Virgin and Child retained an abiding popularity, and one special icon, taken from Jerusalem, was preserved at Saidnaya, a Greek Orthodox shrine in Muslim-held territory north of Damascus. Here both Eastern and Western Christians mingled with Muslims to venerate the icon.

Sculpture

Sculpture was produced both by indigenous sculptors, working in the traditional Byzantine manner, and by incoming French and Italian artists, or their settled descendants, working in Romanesque Levantine style in the twelfth century and Gothic in the thirteenth. After Jerusalem was retaken by Saladin in 1187, Arab writers described the beauty of the marble used in the buildings of Jerusalem. Much was broken up and destroyed then, but it is not surprising that some is found reused in Muslim buildings such as the al-Aqsa mosque and the Dome of the Rock. Frankish building work at the Church of the Holy Sepulchre from the second quarter of the twelfth century in particular would have required considerable resources in terms of the numbers of masons and sculptors required for the extensive masonry work, as well as the decorated capitals throughout the building. Several of the sculptors may well have worked elsewhere in Jerusalem, including the Church

of St. Anne, where carved capitals adorn the church, whose crypt was visited by pilgrims as being the birthplace of the Virgin. The Holy Sepulchre ambulatory with its radiating chapels is deemed to be the earliest part of the Frankish remodeling of the church, judging from the spiky-leaf acanthus capitals and masons’ marks.

One of the most important (and debated) ensembles of sculpture in the kingdom of Jerusalem comprises the west façade and the lintels of the Church of the Holy Sepulchre. While the cornices on the façade are recognized to be derived from local early Christian prototypes (and indeed some may be Roman sculpture reused), there is no consensus as to the lintels of the doors themselves. Now believed to have been erected about a decade after the dedication of part of the church in 1149, the lintels were removed in 1929 to what is now the Rockefeller Museum in Jerusalem, because of the damage that was taking place to the sculpture through decay. They have been injected below the surface, which has caused blistering and impedes both the reading and the study of the style of the panels. The former west (left) lintel is figural. The scenes are usually identified as, from left to right: (1) the Raising of Lazarus, (2) Jesus met by Mary and Martha on the road to Bethany, (3) Jesus sending the two disciples to fetch the ass and the colt, with, below, two disciples preparing the Paschal Lamb. The last two scenes are (4) the Entry into Jerusalem, and (5) the Last Supper. Attributed to different sculptors, they have been interpreted in different ways. One interpretation posits the lintel as representing the procession of pilgrims on Palm Sunday, reversing the first two scenes in accord with the itinerary from Bethany to Jerusalem. Another view is that the scenes should be read from the center outward, with the third scene interpreted as the Cleansing of the Temple, a prefiguration of the crusaders’ acts in liberating the Church of the Holy Sepulchre from the infidels. The lintels become a metaphor for salvation, in the west lintel, and sin and seduction in the east, with the latter’s swirling scrolls and naked figures. A third view interprets the scenes in the light of decoration within the church and the way in which pilgrims visited the church.

Sculpture was commissioned for particular shrines or complexes of buildings. A considerable amount of work was undertaken before the mid-twelfth century. Vivid carved capitals, with a variety of acanthus, palmette, and scroll patterns, as well as animal and bird motifs, were carved on the former baptistery, now the Qubbat al-Mi’raj on the Temple platform, as well as at the Church of the Ascension. These

Jesus and His Spouse, the Church, Beset by Devils. A capital for a column at the Church of the Annunciation, Nazareth. This and five other capitals were sculpted in northern France and transported to the East around 1186–1187. Saladin's victories prevented their being placed in the church. They were hidden away for safety and uncovered in the 1950s. (Courtesy Alfred Andrea)

were most likely undertaken after the dedication of the Temple of the Lord in 1142. The discovery of sculptural pieces was reported between 1900 and 1903 in the western, Greek part of the Mauristan (Hospital of St. John) to the south of the Holy Sepulchre, which are now in the Museum of the Greek Orthodox Patriarchate and the Convent of the Flagellation. These included a bowman with an attacking animal, probably a wolf, believed to be from the façade of the church of St. Mary the Great and probably carved in the 1160s.

The “wet leaf acanthus” style of sculpture, evocatively so called by art historians because of its characteristically long, spiky acanthus leaves that droop as if moistened, dominates sculpture found at the Temple area. This is associated with the major building campaign initiated here in the 1160s at the Dome of the Rock and the Temple of Solomon (al-Aqsa), which continued up to the fall of Jerusalem in 1187. These included the buildings associated with the Knights

Templar: a church, cloisters, shrines, and house with service buildings. Much of this sculpture was reused in al-Aqsa and elsewhere. It has been suggested that there was a group of sculptors who constituted a “Temple Area Workshop” or “Templar Workshop.” However, it is difficult to be categorical about the existence of such a workshop when the material is both scattered and has affinities with sculpture beyond the Temple area. Wet-leaf sculpture is also found on fragments of carved marble with animals and men in scrolls from the Holy Sepulchre, which are believed to have formed part of the formerly painted decoration of the aedicule. Also formerly in the Church of the Holy Sepulchre (with fragments now in the Museum of the Greek Orthodox Patriarchate) were the tombs of Baldwin IV and Baldwin V with sculpture of this type. This style is also represented in the church of St. Mary of Jehosaphat, as well as in the Church of the Nativity in Bethlehem.

The main sculptural program outside Jerusalem in the twelfth century was that planned for the enlarged Church of the Annunciation in Nazareth, work on which was initiated by Archbishop Letard II of Nazareth in the 1170s. Five pristine capitals, four polygonal ones with scenes of the Mission of the Apostles and the fifth with a rectangular top, the latter with a female figure (the Virgin or Ecclesia, personification of the Church) leading a reluctant apostle or believer through territory attacked by demons, were found in excavations undertaken during 1907–1909, with further sculpture uncovered during excavations in the 1950s and 1960. An aedicule of the House of the Virgin inside the church was planned as the focus of the church's interior, in addition to the decorated west portal on the exterior. Some portal fragments can be reconstructed, including Christ Enthroned in the tympanum as the Lord Incarnate, with archivolt above, and column figures on either side. These include St. Peter holding his keys and a model of the church, and a prophet figure, the latter now in the collection of Chatsworth House (Derbyshire, U.K.). The four polygonal capitals were intended to decorate a baldachino above the aedicule planned to house an altar over the shrine-grotto. They display scenes from the lives of the apostles St. Thomas, St. Peter, St. James, and St. Matthew. Other capitals may well have been placed on the cruciform piers north and south of the nave, as well as used on the engaged columns on the nave arcade. There may well have been links between sculptors here and elsewhere in the Latin kingdom, again suggesting that sculptors moved from one project to the next. An affinity has been suggested between work in Nazareth and at the Church of the Holy Sepulchre (including a capital of Solomon in the north gallery), as well as sculpture at the castle of Belvoir.

Thirteenth-century sculpture in Outremer displays Gothic features. An example of a portal is that removed from a church in Acre and reused as the main portal of the fourteenth-century madrasa (school) and mausoleum of the Mamlūk sultan al-Nāṣir Muḥammad in Cairo. It is characterized by its slender arches with foliage capitals, over which is a refoil arch beneath point de arches above. Foliage capitals also feature in the thirteenth-century section of the cathedral of Notre Dame at Tortosa. Other capitals are preserved in the Hospitaller complex at Acre, as well as fragments of figural sculpture in the Municipal Museum at Acre. Consols carved with human heads, as well as others with foliage, are preserved on the north tower at Château Pèlerin.

Applied Arts

Metalwork played a part in both monumental and small-scale work. When the Dome of the Rock in Jerusalem was converted into a church, an octagonal iron screen (still preserved, although dismantled) was added around the sacred rock, which was covered with marble casing and used as the choir. There was also a gilded cross above the dome. Metalworkers also produced seals, and information about Frankish coinage largely comes from excavations and coin hoards. Treasuries contained reliquaries, of which those with fragments of the True Cross were particularly venerated. These reliquaries frequently took the form of a double-armed cross of wood, encased in silver gilt and jeweled. Pilgrim tokens and votive objects were made of metal and mother-of-pearl, often shaped in the form of a cross. Ampullae for holy oil were also commonly used by pilgrims. Other portable objects were decorated with sacred figural imagery. Ecclesiastical objects, including bells, have been found in excavations in Bethlehem. Secular objects, including belt buckles and jewelry, have been found in excavations, including that at Athlit, where glass fragments were also found. Tyre, Antioch, and Acre are named in textual sources as places where glass was produced. Ivory carving is represented by the covers of the Queen Melisende Psalter. Glazed sgraffito pottery with figural designs and colored in green, yellow, and brown has been found at St. Simeon (the port of Antioch), the castle of Château Pèlerin, and elsewhere.

Art in Cyprus

The prosperity of Cyprus during the earlier twelfth century continued in the early part of Lusignan rule (1192–1489), following the capture of the island by King Richard I of England in 1191 during the Third Crusade (1189–1192). This prosperity is reflected in the extensive building program that ensued.

The two main urban centers in Lusignan Cyprus were Nicosia (mod. Lefkosia) and Famagusta (mod. Ammochostos), the latter gaining special prominence as a major emporium of the eastern Mediterranean after the fall of Acre in 1291. One of the major ecclesiastical buildings in Nicosia was the cathedral of St. Sophia (now the Selimiye mosque). Although much of the work was undertaken in the first half of the thirteenth century, the cathedral was not dedicated until 1326. Fragments also betray work of an earlier date, indicating that the all-important links with the mainland of Outremer were retained. The doorway to the north transept,

for example, has capitals and a frieze carved in a style comparable to late twelfth-century carving characteristic of Jerusalem and often associated with the Temple area. It is highly likely that work from another project was diverted for use in the construction of the cathedral. Other aspects of the sculptural decoration are classically Gothic, including the stiff-leaf capitals of the exterior of the nave. Inside, the windows of the nave clerestory contain trefoil tracery in circles. With the west-end window, they are datable to around 1300. The west porch was added in the fourteenth century, comprising three vaulted bays with gables above each of the entrances. The foliage capitals of the doorways are typical of much Cypriot sculptural work. The voussoirs of the arch of the main tympanum of the porch show figures of ecclesiastics, prophets, kings, and queens. Sculptural fragments at the base of the tympanum suggest that the tympanum once contained the scene of the Transfiguration and that there must have been a *trumeau* figure between the doors. Each of the three doorways is flanked by niches that probably contained painted panels. The church of the nunnery of Our Lady of Tyre (now an Armenian church), a Jerusalem foundation from the late thirteenth or early fourteenth century, displays flat-leaved foliage capitals on its former south door. From the later fourteenth century, sculpted foliage decoration adorned several churches, including the western porch of the former Church of St. Mary of the Augustinians (now the Omeriyeh mosque), and the Church of St. Catherine (now the Haydarpaşa mosque), to the northeast of St. Sophia. To the south, the covered market (the Bedestan) comprises the remains of two churches of the fourteenth and sixteenth centuries, with Gothic-style doorways, lintels, capitals, and carved reliefs. Finally, the royal palace of Nicosia, destroyed by the Venetians in the sixteenth century, was famous for its lavish decoration.

The Latin cathedral of St. Nicholas of Famagusta (now the Lala Mustafa Paşa mosque), where the kings of Cyprus were crowned as kings of Jerusalem, was begun around 1300. The west façade is based purely on French Gothic style. This is apparent in its design of balancing towers, decorated with gables, as well as in its traceried windows, in the gabling above each of three lower porches on the ground story, and in the central rose window above a triad of vertical lights. The figural sculpture was destroyed after the Turkish occupation in 1571, but it is evident that the central doorway had column figures and a central *trumeau*. The voussoirs retain their leaved ornament, similar to that of St.

Sophia at Nicosia and elsewhere. Other sculpture preserved in Nicosia includes the foliage capitals in the nave and traceried gable of the north porch of St. George of the Latins. The Franciscan Church dating from around 1300 and the Carmelite Church of St. Mary from later in the fourteenth century also retain Gothic-style tracery and carving. In addition, these churches were decorated with wall paintings. Under Venetian rule (1489–1571), the royal palace at Famagusta was rebuilt with a Renaissance façade. Other carved work on Cyprus included incised stone funerary slabs of the fourteenth and fifteenth centuries, continuing a tradition known on the mainland of Outremer in the thirteenth century. The tombstone of Arnato Visconti (d. 1341) in St. Sophia shows him standing below a canopy that mirrors the decoration on the exterior porch.

The island's Byzantine cultural traditions were retained in wall paintings and painted icons. Examples include the wall paintings in the Church of the Panagia Arakiotissa at Lagoudera in 1192, attributed to the painter Theodore Apseudis, who signed his work at the Encyleistra of the hermit Neophytus at Paphos (1183), as well as the early thirteenth-century wall paintings from the Church of St. Theonianos near Lysi (now in the Menil Collection in Houston, Texas). But other thirteenth-century work shows features of acculturation between East and West, which by this stage was common throughout the eastern Mediterranean. The wall paintings at the Church of the Virgin at Moutoullas (1280) are a good example. Icon painting developed along similar lines. Particularly characteristic is the raised gesso technique, imitative of the golden metalwork that decorated certain Byzantine icons. An early example using this technique is an icon of an angel from the Chrysostomos monastery near Koutsouvendis, which probably originally formed part of a larger ensemble. Bright colors were also used, particularly scarlet red. Latin patrons commissioned indigenous painters to produce icons of various types, several of which in the second half of the thirteenth century were large-scale panels, probably made for altarpieces in Latin churches. A panel with the seated Virgin and Child, with scenes from the life of the Virgin on either side, from the Church of St. Cassianos includes portraits of the donors. These were apparently Dominican monks, indicating that it was probably made for a monastery of the Dominican Order.

Other panels with Eastern saints and Greek inscriptions would have been made for Greek Orthodox or other Eastern churches. An example is a very large panel of St. Nicholas

from, and made for, the Church of St. Nicholas (Nikolaos tis Stegis) near Kakopetria, which is now in the Byzantine Museum of the Archbishop Makarios III Foundation in Nicosia; in it the saint is flanked by scenes of his life, with figures of the donors praying to him. They include a Western knight, his wife, and their daughter. There is no contradiction here, especially given that intermarriage was common between Franks and indigenous Greeks, a practice documented from the fourteenth century. Portraits in church wall paintings give further information about these families. Several were of women, as in the narthex portraits in the church at Asinou from around 1333. Donor portraits became particularly popular on icons from the fourteenth century: the earliest dated example is that of a Greek donor on an icon at Moutoullas of St. John the Baptist conversing with Christ; this individual has been identified as the donor of the wall paintings of the church at Moutoullas in 1280.

Sites of veneration were developed in Cyprus, some with links with the Holy Land and Syria, and these provided a focus for works of art. These included the cult center of St. Marina, a saint from Antioch. Also famous was the miracle-working icon of the Mother of God at the monastery of Kykkos. Although covered over today, the icon is known from numerous copies of the same type in Cyprus, Sinai, Sicily, and southern Italy, from the late thirteenth and fourteenth centuries. They proliferated in Cyprus in the Marathasa Valley following the rebuilding of Kykkos after the fire of 1365, with the help of the Lusignan ruler Queen Eleanor of Aragon. The type shows the bare-legged kicking Christ child in the arms of his mother, holding a scroll in his right hand and the scarlet veil that falls over his mother's head in the other. The oldest version (from Sinai) has Christ in Glory with saints and prophets around the central figure of the Virgin and Child. It dates from the early twelfth century and is probably from Constantinople.

Cyprus saw an influx of refugees fleeing from the mainland after the fall of Acre to the Mamlūks in 1291. The multicultural community of the island retained links with the mainland, as is evidenced by links with wall paintings in churches in Syria and Lebanon. More refugees arrived after the fall of Constantinople in 1453, which affected the last phase of Lusignan rule on the island (1374–1489). Painting in the royal chapel at Pyrga of 1421, built by King Janus and his wife Charlotte of Bourbon, is based on Cypriot Byzantine models. But those in the Church of St. Herakleidos in the

monastery of St. John Lampadistes at Kalopanagiotis, which can be dated to shortly after 1453, show the impact of the newcomers. The nave paintings are attributable to an artist from a Byzantine center who adapted his work to suit a Western patron who had probably recently converted to Greek Orthodoxy. The paintings in the narthex, of the same or slightly later date, are probably by a painter from Constantinople. The shift to Byzantine style in this later church is in line with the influence of Helena Palaiologina, a niece of Emperor Constantine IX Palaiologos and wife of King John II of Cyprus.

Other arts flourished in Cyprus. One example of manuscript illumination is the so-called Hamilton Psalter (MS Berlin, Kupferstichkabinett 78 A.9), which is a bilingual Latin and Greek psalter of the late thirteenth or early fourteenth century, with early Palaiologan Byzantine-style illustrations at the beginning of the book, and marginal illustrations throughout the text.

Textiles were manufactured in Cyprus. One example is an antependium (now in the Museo dell'Opera del Duomo, Pisa), that is, a panel of lavishly embroidered cloth to be placed in front of the altar, which has recently been dated to 1325 and attributed to Nicosia, depicting the Coronation of the Virgin flanked with other scenes.

Locally produced glazed pottery appeared in Cyprus from the early thirteenth century and remained common during the fourteenth and fifteenth centuries, being produced at workshops at Paphos until the end of the fourteenth century and at the Lapithos workshops thereafter. It is likely that such glazed ware was originally introduced from the Syrian mainland.

Artah, Battle of (1164)

A defeat of the Franks of northern Outremer and their allies by Nūr al-Dīn, Muslim ruler of Aleppo. After Nūr al-Dīn sent part of his forces to Egypt under his general Shikūh in order to counter the invasion mounted by King Amalric of Jerusalem, he opened up a second front by besieging the town of Harenc, which had been retaken by the Franks in 1158. A large Christian relieving army was assembled from the troops of Bohemund III of Antioch, Raymond III of Tripoli, Joscelin III of Courtenay, and the military orders, together with Armenian and Byzantine contingents, amounting to some 600 knights plus infantry. Nūr al-Dīn's numerically superior forces retreated and then gave battle in the plain of Artah on 11 August 1164, his troops employing a feigned flight to split the Christian forces, most of whom were killed or captured. The captives included Bohemund, who was ransomed shortly after, and Raymond and Joscelin, who were to remain prisoners for a decade. Harenc capitulated the day after the battle, and the frontier of Antioch was once more pushed back to the line of the river Orontes.

Artāsh

Artāsh (Irtash) ibn Tutush was nominal Saljūq ruler of Damascus in October–December 1104, with the honorific

Artāsh

title Muḥyī al-Dīn (Reviver of Religion).

A son of Tutush I, king of Syria, Artāsh was imprisoned at Baalbek during the reign of his nephew, Tutush's son Duqāq, in Damascus. At the age of twelve he was freed at the instigation of Zāhir al-Dīn Ṭughtigin, Duqāq's *atabeg* of Damascus, who had just removed Duqāq's infant son Tutush II (1104). Artāsh was appointed ruler under Ṭughtigin's tutelage on 10 October 1104, but evidently feared for his life and in December fled to take refuge with Aytakīn al-Ḥalabī, the governor of Bosra. He attempted to persuade King Baldwin I of Jerusalem to attack Damascus in his support, but the king was fully preoccupied with an Egyptian invasion in August 1105. In September Ṭughtigin's troops took Bosra, and Artāsh and Aytakīn fled to Iraq. Artāsh was the last member of the Saljūq dynasty to occupy the throne of Damascus.

Artūqids

A Turcoman dynasty in eastern Anatolia and Iraq, founded by Artūq, a chief of the Döger clan of the Oghuz tribe. Artūq fought for the Saljūq sultan Malik Shāh, established a power base in Upper Mesopotamia, and governed Palestine from 1086 until his death in 1091. In the early twelfth century, the Artūqids split into two branches: Artūq's son, Suqmān, took power in Hisn Kayfa in 1102, and his direct line ruled there until 1232. This branch was eventually extinguished by the Ayyūbids. Another descended from Suqmān's brother, Ḥāzī; members of this branch governed Mardin and Mayyafariqin until 1408, when their rule was terminated by the Turcoman Qarakoyunlu confederation. A third, short-lived branch of the Artūqids (1185–1234) ruled at Kharput (mod. Harput, Turkey).

Between 1100 and 1130 Suqmān, his brother Ḥāzī, and their nephew Balak ibn Bahrām stood out as redoubtable opponents of the Franks. These nomadic Turcoman chiefs were still under the nominal suzerainty of the Saljūq sultan, whose main power base was in Persia and Iraq. The threat of punitive action from the sultan prevented them from operating as independently as they might have wished.

Shortly before the arrival of the First Crusade (1096–1099), Suqmān and Ḥāzī were governing the city of Jerusalem on behalf of the Saljūqs. Suqmān rallied to Karbughā, the *atabeg* of Mosul, in his attempt to relieve Antioch in 1098. That same year the Fātimid vizier, al-Afdal, captured Jerusalem from Suqmān and Ḥāzī, who withdrew to Mesopotamia. Suqmān then became active against the Franks. In 1101 he tried unsuccessfully to take the town of Saruj from Baldwin I, count of Edessa. In May 1104, he joined Jekermish, the governor of Mosul, in defeating the combined Frankish forces of northern Syria in a battle near Harran. Although disunity between the two commanders prevented an expected attack on Edessa, their victory at Harran halted Frankish momentum and was a boost to Muslim morale. In 1105 Suqmān again proceeded to Syria, but he died suddenly, allegedly of quinsy, but possibly poisoned by Ṭughtigin, the *atabeg* of Damascus. Thus a vigorous opponent had been removed too early in the conflict with the Franks for him to make a real impact.

Ḥāzī, however, came to the fore almost immediately after his brother's death and had a much longer career. In April 1110, in the first military campaign sponsored by the Saljūq sultan Muḥammad against the Franks, Ḥāzī accompanied its commander Mawdūd to Edessa. The following year Mawdūd led a second expedition against the Franks with a new coalition, including Ayāz, Ḥāzī's son, but not Ḥāzī himself. His neighbor, Suqmān al-Qutbī of Akhlat, died suddenly in the Syrian campaign, and Ḥāzī, attracted by the short-term prospect of gain, attacked his funeral cortege on its route home, a deed that earned him opprobrium. In 1114, Ḥāzī again refused to join the next campaign from the east under Aq-Sunqūr al-Bursuqī.

In 1115 Ḥāzī's disobedience to the Saljūq sultan became open hostility. When another campaign from the east came to Syria under Bursuq ibn Bursuq, it faced a Muslim-Frankish alliance among Ḥāzī, Ṭughtigin, and Prince Roger of Antioch, forged to defend local territorial interests. Roger's subsequent victory over Bursuq at Tell Danith made this the last expedition sent by the Saljūq sultan. The cessation of this threat, and the death of Sultan Muḥammad in April 1118, emboldened Ḥāzī to take more personal initiatives against the Franks and to expand his power base. He followed his capture of Mardin and Mayyafariqin in 1118 by seizing Aleppo the following year. He then descended into the Orontes Valley. Ṭughtigin promised to join him, but in the event Ḥāzī did not wait for him. Nor did Roger of Anti-

och wait for other Frankish princes. In the ensuing battle in May 1119, Ḫāzī won a resounding victory at the battle of the Field of Blood (Lat. *Ager Sanguinis*), and the Franks sustained considerable losses. This triumph over Roger was the crowning moment of Ḫāzī's career, gaining him great prestige in the Muslim world. The caliph bestowed on him the honorific title Najm al-Dīn (Star of Religion); he had succeeded where semi-official Saljūq campaigns had not, and the glory fell exclusively to him. Yet the short attention span of his Turcomans, who, once satisfied with the plunder from a battle, were reluctant to embark straightaway on further fighting, and his own prolonged alcoholic celebration (which lasted three weeks), prevented him from following up this triumph in the obvious way with an attack on Antioch.

Ḫāzī was, above all, opportunistic and would pursue whatever chances for plunder presented themselves. Accordingly, in 1121 he struck northward into the Caucasus. There he was roundly defeated by the Christian Georgian king, David II, and was lucky to escape to Mardin. He died in November 1122, but there was a dramatic epilogue to follow. His widow ordered two men to hold his corpse upright on his horse as it entered Mayyafariqin so as to secure the citadel for his son Sulaymān before his death was announced publicly.

The Artūqid threat to the Franks of Syria was not, however, finished. Ḫāzī's dynamic but overextended energies were now replaced by those of his intrepid nephew, Balak, who controlled Melitene (mod. Malatya, Turkey) and Kharput. Balak captured Count Joscelin I of Edessa in 1122 and King Baldwin II of Jerusalem in 1123; both languished in his pit at Kharput. The seizure of the Frankish king gave Balak great prestige. He then took Aleppo, but on hearing that Joscelin had escaped from prison, he hastened to Kharput, seized the castle, and threw all the inhabitants, except for Baldwin, over the battlements. Balak was killed by a stray arrow while besieging Manbij in May 1124. He had indeed been a formidable opponent of the Franks in the north. The inscription on his tomb speaks of him as a martyr and carries a quotation from the Qur'ān (3/169): "Think not of those who are slain in the way of God as dead. Nay, they are living" [J. Sauvaget, "La tombe de l'Ortokide Balak," *Ars Islamica* 5 (1938), 207–215].

The strength of the early Artūqids had lain in the raiding skills of their bellicose Turcoman cavalry, and Ḫāzī had relied latterly on his alliance with Ṭughtigin of Damascus.

Between 1100 and 1130, the northern Syrian towns were under constant pressure; threatened by vigorous Frankish expansion, they turned for protection to Muslim commanders such as the Artūqids. But such protection was a mixed blessing. The proximity of the undisciplined Turcomans, whom the Artūqids could not always control, threatened the safety of the cities. Indeed, Ḫāzī's troops had previously terrorized the citizens of Baghdad, and Balak's lieutenant in Aleppo forcibly (and illegally) turned churches into mosques.

With Balak's death, the Artūqids relinquished Aleppo and ceased to operate as vigorous, independent opponents of the Franks in northern Syria. Henceforth their role would be to answer calls to arms from more powerful Muslim rulers in Syria and Egypt. Otherwise, they entrenched themselves in their lands in Upper Mesopotamia, involved in local power struggles. Once the career of the Muslim leader Zangī, governor of Mosul, was fully launched in the 1130s, both Ḫāzī's son Timūrtash, who succeeded him at Mardin, and his Artūqid cousins at Hisn Kayfa lived in Zangī's shadow, threatened by his growing power and fearsome reputation. They had a stark choice: send troops to reinforce Zangī or risk his personal reprisals in their own territories. Their perceived misdemeanors were dealt with firmly on several occasions; for example, just before besieging Edessa in 1144, Zangī attacked the Artūqid ruler of Hisn Kayfa, Qara Arslān, who had allied himself with Joscelin II of Edessa.

By the time of Nūr al-Dīn, Zangī's son, the Artūqids had learned their lesson, and they knew their place. When called upon, they provided troops for Nūr al-Dīn, as, for example, at Artah in 1164. Saladin too relied on his Artūqid vassals, whom he kept under tight control and in whose domestic squabbles he sometimes intervened. In 1182, Saladin captured Amid, handing it to Nūr al-Dīn Muḥammad, the Artūqid ruler of Hisn Kayfa (d.1185). When Saladin unsuccessfully attacked Kerak in Transjordan in 1184, Artūqid troops were with him. Under Saladin's direct successors, the Ayyūbids, Artūqid power was further reduced, and they lost Amid, Hisn Kayfa, and Mayyafariqin in turn. In the thirteenth century the sole remaining Artūqids of the Mardin branch were successively vassals to the Saljūqs of Rūm, the Khwarazm-Shāh Jalāl-Dīn, and finally the Mongols.

Muslim medieval sources rarely mention the crucial fact that the Artūqids ruled predominantly Christian towns. However, as a small military elite, they established a modus

vivendi with local notables, giving the citizens military protection in exchange for the payment of taxes. Beginning as nomadic chiefs, the Artūqids, as early as the second generation, became attached to the territories they governed. In administration, they ruled a Saljūq successor state in microcosm. Timūrtash was more interested in peace than war, and he invited scholars to Mardin. That witty observer of Frankish mores, Usāma ibn Munqidh, speaks warmly of the three years he spent at the Artūqid court in Hisn Kayfa (1170–1173), and Timūrtash's son, Najm al-Dīn Alpī (d. 1176), ordered a translation of the Syriac version of Dioscorides's *De materia medica*. Artūqid copper coins, with figural imagery, based inter alia on ancient Greek, Roman, and Byzantine models, have suggested a classical revival to some scholars. Moreover, the Artūqids were vigorous patrons of architecture, building mosques, bridges, tombs, and caravanserais, and renovating the walls of their cities.

After the Artūqids lost Aleppo, their territories were situated too far from Outremer to pose a serious threat to the Frankish territories. But their early leaders had indeed proved tough opponents for the Franks, and the simulated cavalry flights and sudden raids of their Turcomans were justifiably feared. However, Ilghāzī and Balak lacked the iron discipline of Zangī, and they came too early to benefit from the heightened atmosphere of *jihād* (holy war) and the support of the religious classes later enjoyed by Nūr al-Dīn and Saladin.

Ascalon

Ascalon (mod. Tel Ashqelon, Israel) was a coastal town in southern Palestine, the center of a lordship in the kingdom

of Jerusalem. It was held by the Fāṭimids at the time of the First Crusade (1096–1099), but rivalry between Godfrey of Bouillon and Raymond of Saint-Gilles resulted in the crusaders failing to take the town in August 1099. The town was well supplied and garrisoned from Egypt and remained in Fāṭimid hands for over half a century, during which time the Franks erected a ring of fortresses around it. Ascalon finally surrendered to Baldwin III of Jerusalem on 19 August 1153 after a sustained siege of almost eight months. The following year it was granted to the king's brother Amalric, along with the county of Jaffa, returning to the royal domain when Amalric became king in 1163. The county of Jaffa and Ascalon was subsequently held by William of Montferrat (1176), Guy of Lusignan (1180), and his brother Geoffrey of Lusignan (1191).

William of Tyre describes Ascalon at the time of its capture as having a semicircular form, with the sea representing the chord and double walls strengthened by towers and outworks extending landward. Four principal gates faced Jaffa, Jerusalem, Gaza, and the sea respectively, while the towers included two especially massive ones, known as the Towers of the Hospital and of the Maidens (Burj al-Banat), located at the south end of the enceinte. An inscription testifies to Fāṭimid rebuilding of the walls in progress as late as 1151. Eleven churches are attested in Frankish Ascalon (three by surviving remains). Four of them had formerly been mosques, including the Church of St. Paul (formerly St. John), which from 1163 to 1168 served as pro-cathedral of the bishop of Bethlehem.

Ascalon remained Frankish until 4 September 1187, when it fell to Saladin after a two-week siege. In 1191 he dismantled its defenses and buildings and expelled its population. During the first three months of 1192, however, Richard I of England, assisted by Hugh III, duke of Burgundy, rebuilt the towers and gates and refurbished the defenses, work that is confirmed by archaeological analysis of the surviving structures and by the survival of an inscription referring to Richard and his clerk of the chamber, Philip of Poitiers. In August, however, both sides agreed to dismantle the defenses once more.

Ascalon lay derelict until November 1239, when it was reoccupied by Thibaud IV of Champagne. In 1240 Richard of Cornwall completed construction of a castle in the northern corner of the town, whose custody was granted to the Hospitallers by Emperor Frederick II in 1243. Although they held it successfully against the Egyptians after the battle of

Forbie (1244), it was finally taken by Fakhr al-Dīn in October 1247. Sultan Baybars I completed its destruction in 1270.

Ascalon, Battle of (1099)

A battle fought near Ascalon (mod. Tel Ashqelon, Israel) between the armies of the First Crusade and the Fātimid caliphate of Egypt, resulting from the attempt by al-Afḍal, vizier of Egypt, to recapture the Fātimid territory in Palestine lost to the crusade in July 1099.

The Egyptian army was commanded by al-Afḍal and may have comprised as many as 20,000 soldiers, with a core of heavily armored Ethiopian infantry, and large numbers of Bedouin light horse and more heavily armored Turkish cavalry. On 25 July the new Frankish ruler of Jerusalem, Godfrey of Bouillon, sent word to Tancred and Eustace of Boulogne that a large Egyptian army was gathering at the Fātimid-held coastal city of Ascalon. All three crusaders made for Caesarea and then pushed south, arriving at Ramla on 7 August, where they were later joined by Robert of Normandy and Raymond of Saint-Gilles. On 11 August the combined crusader army, amounting to perhaps 1,200 knights and 9,000 infantry, marched toward Ascalon and captured a large number of the enemy's cattle; these cattle played an influential role in subsequent battle, as the Egyptians mistook them for soldiers and consequently believed the crusader army to be much larger than it really was.

The main battle was fought on 12 August 1099, approximately 5 kilometers (c. 3 mi.) north of the city. Raymond commanded the crusaders right alongside the sea, Robert

the center, and Godfrey the left flank. They were able to surprise the numerically superior Egyptians; al-Afḍal pushed forward his heavy infantry into the center to allow time for his heavy cavalry to deploy and tried to outflank the crusader left with his Bedouin cavalry. Both attacks were beaten off, and as the Ethiopian infantry tired, Robert of Normandy led a charge that captured the Egyptian battle standard and overran their camp. Godfrey repulsed a counterattack, and thousands of Egyptian soldiers were killed trying to escape into Ascalon. The crusaders had won a decisive victory, but this did not prevent al-Afḍal from returning in successive years in a bid to recover Jerusalem.

Assassins

"Assassins" (Arab. *Ḥashīshīyya*) is a pejorative term applied to the Nizārīs, a sect of the Ismā'īlī branch of Shī'a Islam in the Middle Ages. In 1094 the Nizārīs broke away from the main body of the Ismā'īlīs in Egypt in the course of a dispute between two rivals for the succession to the Fātimid caliphate, al-Musta'li and Nizār. Although al-Musta'li was invested as caliph in Cairo, Ḥasan al-Ṣabbāḥ, an Ismā'īlī anti-Saljūq agitator in Persia, declared his support for the cause of Nizār, who had disappeared under mysterious circumstances. In the late eleventh and early twelfth centuries the Nizārīs enjoyed considerable support in the great towns of the Syrian interior and made determined attempts to take control in Damascus and Aleppo.

The Assassins frequently resorted to political murder in the furtherance of their aims; indeed, the English word *assassin* derives from the Arabic term *ḥashīshīyya*. It was once thought that the Ḥashīshīyya were so called by their enemies either because their leader, "the Old Man of the Mountains," used drugs (hashish) to delude his followers into believing that they were being given a foretaste of Paradise in his garden or because the Assassins resorted to taking drugs in order to steel themselves to perform their

bloody acts. However, on balance it seems more probable that those who called them Ḥashīshīya meant more vaguely to insinuate that the Assassins were the sort of low-life riff-raff who might take drugs; in this period hashish-taking tended to be confined to city slums.

By the 1130s the Assassins' attempts to take control in the Syrian cities could be seen to have failed, and they withdrew to a mountainous part of northwestern Syria, where they took possession of a group of fortresses in the Jabal Bahra region: Masyaf, al-Kahf, Qadmus, Khariba, Khawabi, Rusafa, Qulay'a, and Maniqua. Masyaf was the headquarters of the Syrian Assassins. In 1126 they were given the town of Banyas by Ṭughtigin, *atabeg* of Damascus, but they held it for only a few years, an Assassin attempt to seize power in Damascus having failed in the meantime. Although the Assassins also harbored the ambition to take control of Shaizar, several of their attacks on the place were unsuccessful; they held it only briefly in 1157 after an earthquake had leveled its walls. In 1090 the radical Ismā'īlī preacher Ḥasan al-Ṣabbāḥ had established himself at Alamut, a strong fortress in the northwestern Persian province of Daylam, and a few years later, when the succession dispute broke out in Cairo, he declared his support for the Nizārī line.

From their bases in Syria and Persia the leaders of the Assassins masterminded a program of political murders. The impressive list of their victims included Sunnī, Shī'ite, and Frankish leaders. They included Nizām al-Mulk, the Saljūq vizier (1092); Janāḥ al-Dawla, emir of Homs (1103); the Fātimid vizier al-Afḍal (1121); al-Bursuqī, governor of Mosul and Aleppo (1126); the 'Abbāsīd caliph al-Manṣūr ibn al-Mustarshid (1135); and Count Raymond II of Tripoli (1152). The assassination of Raymond and other Franks notwithstanding, in general Assassin outrages and the divisions they caused worked to the advantage of the Frankish principalities. They posed a major threat to Saladin, and in 1174 a couple of Assassins reached the sultan's tent before being struck down. In 1176 Assassins made another attempt on Saladin's life. He launched an abortive siege of Masyaf before reluctantly coming to terms with Sinān, the leader of the Syrian Assassins.

In 1192, for reasons that remain mysterious, Assassins struck down Conrad of Montferrat in Tyre (mod. Sūr, Lebanon). It is conceivable that they acted at the behest of Henry of Champagne. In 1194 the latter visited al-Kahf in order to confirm the alliance between what was left of the kingdom of Jerusalem and the sect. Other thirteenth-century

assassinations include the deaths of Raymond, son of Prince Bohemund III of Antioch, in 1213, and Philip of Montfort, in 1270, at the behest of the sultan Baybars, and the wounding of Prince Edward of England in 1272. Joinville provided the most vivid account of the Syrian Assassins in the thirteenth century, as he related a visit of Brother Yves the Breton as an emissary of King Louis IX of France in 1252 to their leader, known to the westerners as the "Old Man of the Mountains" (the term *Old Man* is a literal translation of the Arabic *shaykh*). According to Yves, when the Old Man of the Mountains went out riding, he was preceded by a man bearing an axe, to the haft of which many knives were attached, and the bearer of the axe would cry out, "Turn out of the way of him who bears in his hands the death of kings!" [Joinville and Villehardouin, *Chronicles of the Crusades*, trans. Margaret R. B. Shaw (Harmondsworth: Penguin, 1963), p. 280].

During the thirteenth century the Assassins paid tribute to both the Hospitallers and the Templars in northern Syria. According to Joinville, this was because the masters of those orders did not fear assassination, for the Nizārīs knew they would be replaced by masters just as good. It is more likely that the tributary relationship reflected the strength on the ground of the orders based in Margat (mod. Marqab, Syria) and Tortosa (mod. Tartūs, Syria). In a series of campaigns from 1265 to 1271, the Mamlūk sultan Baybars captured the Assassin castles and made the sect his tributaries. He and his successors also employed them as a kind of state assassination bureau, using them, among other things, to attack enemies in the Mongol Ilkhanate of Persia. However, after the fourteenth century this practice seems to have been discontinued, and one hears little of what had become a remote, rustic group of villages inhabited by harmless sectarians.

The end of the Assassins in Persia happened earlier. They were unwise enough to challenge the growing power of the Mongols, and in 1256 the general Hülegü was dispatched by the great Mongol khan Möngke in Qaraqorum to capture Alamut and the other Assassin castles nearby. The grand master Rukn al-Dīn surrendered to safe conduct but was subsequently put to death. Alamut had been a major center of Ismā'īlī learning and the place possessed an impressive library of esoterica, which the Persian historian Juvayni inspected on Hülegü's orders. Although the Nizārī Ismā'īlīs were quite widely feared and detested throughout the Muslim world, they survive today in India and elsewhere as a respectable and prosperous community whose leader is the Agha Khan.

The folklore of the Assassins in Western literature is at least as interesting as their real history. Writers like Marco Polo, John Mandeville, and Felix Fabri produced the most fantastical stories about a paradise of drugs and houris in a mountain fastness presided over by the sinister Old Man of the Mountains. Their stories in turn inspired poetry and romances produced in the eighteenth and nineteenth centuries.

Assizes of Jerusalem

The *Assizes of Jerusalem* (Fr. *Assises de Jérusalem*) are a collection of French legal texts that originated at the courts of the kings of Jerusalem and Cyprus between the end of the twelfth and the second half of the thirteenth century.

The collection consists of a number of different works: the *Livres* (i.e., law books) of John of Ibelin (Jaffa), Geoffrey Le Tor, James of Ibelin, and Philip of Novara, as well as the *Clef des Assises*, the *Livre au Roi*, the *Livre du Plédéant*, the *Livre du Plaidoyer*, the *Assises de la Cour des Bourgeois*, and the *Lignages d'Outremer*. All of these were originally autonomous works, without any official character, and were only later brought together under the title *Assizes of Jerusalem*. This title is misleading, according to Maurice Grandclaude, since it implies the creation of a single corpus of laws.

According to tradition, a number of laws (Fr. *assises*) were recorded on the order of the first ruler of Jerusalem, Godfrey of Bouillon (d. 1100), as claimed by John of Ibelin in his

Livre. In fact, the earliest laws were almost certainly compiled under Godfrey's successors. They were supposed to have been written down on loose leaves of parchment and deposited in the Church of the Holy Sepulchre (whence they derive their name, *Letres dou Sepulchre*), but they were lost after the battle of Hattin in 1187.

The *Assizes of Jerusalem* resulted from an attempt by later jurists to fix in writing the memory of these old laws, by bringing together various written records concerning governance. The *Assizes* are preserved in about thirty more or less complete manuscripts (some of which are of a later date) dispersed in different libraries. These texts were so important that they inspired the compilation of other law codes in Frankish Greece, Antioch, and Cilicia (Lesser Armenia), and were also translated into Italian and Greek.

The *Assizes of Jerusalem* constitute an important witness to the law of Outremer and a precious source of information on the functioning of institutions in the states of the Latin East.

Assizes of Romania

The *Assizes of Romania* (Fr. *Assises de Romanie*) are a law code representing the legal practice of the Frankish states in Greece established after the overthrow of the Byzantine Empire by the Fourth Crusade (1202–1204).

The 219 clauses of the *Assizes* are a fusion of feudal custom, pre-1204 Byzantine law, and the traditions of the Latin kingdom of Jerusalem. Although effectively the code that regulated the relationship of the prince of Achaia with his feudatories at some stage, the *Assizes* were also consciously identified with both the kingdom of Jerusalem and the Latin Empire of Constantinople ("Romania," Fr. *Romanie*). The

Atabeg

law code survives in ten manuscripts (all in Italian) that derive from a decision by the Venetian senate in 1452 to commission an official translation for use in Venice's Aegean possessions. This would suggest the wider acceptance of the code in the Frankish states of the Aegean region, rather than merely in the lands of the princes of Achaia, although it is only in those lands that there is an independent record of its use.

The Italian translation was based on an official compilation made by an unknown French jurist sometime between 1333 and 1346, possibly for the visit of Catherine of Valois to the Morea as princess of Achaia in the period 1338–1341. The compilation reflected the *Assizes* as they were known in the early fourteenth century, a time when the Angevin kings of Naples ruled in Achaia and were concerned with their relationship as absentees to the local Frankish baronage. However, the *Assizes* existed in some form by 1276, when they were cited in the French version of the *Chronicle of the Morea* in the account of a lawsuit brought by Margaret of Neuilly to claim the barony of Akova. Like all feudal customs, the *Assizes* were a developing body of law. However, in the texts that have survived it is impossible to distinguish which clauses existed before 1276 (that is, before the commencement of Angevin rule) and which were original to the first Frankish rulers of Achaia.

The majority of the clauses deal with the fief, and issues of investiture, service, forfeiture, escheat, relief, and wardship connected with it. There are eighteen clauses that deal with the place of Greeks in a society now ordered by a minority group of Western lords, and nineteen that deal with women. Interesting light is shed on Latin literacy, relations between Franks and Greeks, and various categories of unfree Greek serfs only recorded in the *Assizes*. Regrettably the chronological context of all of this information is lacking.

Atabeg

Atabeg (or *atabek*) was the title of an officeholder who acted as regent or guardian to a prince in the Saljūq, Zangid, Ayyūbid, and Mamlūk dynasties. It is derived from the Turkish words *ata* (father) and *beg/bek* (prince). It was first introduced by the Saljūqs of Persia and Syria in the second half of the eleventh century. The Saljūqs who ruled Syria between 1070 and 1154 depended on atabegs in their rule, and the institution was subsequently taken up and developed by other ruling dynasties of Turkish or Kurdish origin.

As early as the eighth century, the Saljūqs, while still in central Asia, used to designate an atabeg as a tutor to a young prince, and continued to employ the office after the foundation of their empire in Persia in the eleventh century. In Saljūq-ruled Syria, the character of the atabegate differed from the original institution, in that the atabeg was selected from a ruler's most trusted and capable commanders, and had to be a Turk; the ruler would divorce the wife who was the prince's mother and then marry her to the atabeg, who would thus become stepfather to the young prince and have the authority and proximity to bring him up according to Turkish tradition. The atabeg was supposed to assist the prince in the duties of government, but by the beginning of the twelfth century it was often the atabegs who exercised real power in Saljūq Syria, particularly during minorities. Tutush I, king of Syria (1078–1095), had five sons, and during his quest to gain the sultanate he appointed atabegs for two of his sons to whom he had allocated provinces: Ṭughtgin for Duqāq in Damascus (1093) and Aytagin for Riḍwan in Aleppo (1094). After the death of Duqāq (1104), Ṭughtgin, who was also commander of the army of Damascus, manipulated and removed two consecutive Saljūq successors, Tutush II and Artāsh. From 1105 he continued to rule with the title atabeg, but without any recognition by the Great Saljūq sultan, allying himself with the Franks against Saljūq armies sent against him in 1114 and 1115. The sultan finally recognized his independent rule in 1115 and granted his dynasty the right of inheritance. This was the first case of a heritable atabegate in the Saljūq Empire. It set a pattern

for others to follow and thus contributed to the decline of the empire.

In 1127 the Turkish commander Zangī was appointed by the Saljūq sultan Muḥammad as lord of Mosul and atabeg to his two sons. Zangī expanded his power in Syria, taking Aleppo in 1128 and Edessa in 1144. His own son Nūr al-Dīn succeeded to these dominions and in 1154 took over Damascus from its atabeg. Nūr al-Dīn never granted the title of atabeg to any of his men, but after his death in 1174, three military commanders fought to gain the atabegate for his young son al-Ṣāliḥ (d. 1181). One of them, Saladin, wanted to be regent in order to gain legitimacy for his own rule, but it was Shams al-Dīn ibn al-Muqaddam who declared himself as atabeg. The atabegate for al-Ṣāliḥ eventually passed to Gūmūshtagīn, who ruled in Aleppo until he was executed on the orders of al-Ṣāliḥ in 1177.

Saladin, who had already conquered Damascus, took Aleppo two years after the death of al-Ṣāliḥ. His Ayyūbid successors who ruled Egypt and Syria continued to use the office, though with several changes. The Turkish monopoly on the atabegate was broken, and atabegs of Slavic or Greek origin held office. Atabegs might also be eunuchs or even royal princes, as in the case of al-Afḍal, son of Saladin, who in 1199 was appointed atabeg for his nephew al-Manṣūr in Egypt. The range of their responsibilities varied. Some atabegs were essentially tutors in the manner of the original Saljūq institution, while others exercised considerable power. The last atabeg during Ayyūbid rule, the eunuch Ṭughril (d. 1231/1233), governed Aleppo for sixteen years as regent and eventually handed over power peacefully to the Ayyūbid prince al-ʿAzīz in 1231. Ṭughril also created a new subordinate office of *atābeg al-ʿaskar* (commander of the army), which became the most powerful position after the sultan during the Mamlūk regime that replaced the Ayyūbids in Egypt. Its holder could combine the duties of regent and commander of the army, and as the most powerful person in the realm, often became the new ruler on the death of a sultan.

Athanasios I of Antioch (d. 1170)

Greek Orthodox patriarch of Antioch (1157–1170). Before his appointment as patriarch, Athanasios was a monk in the monastery of St. John the Theologian in Patmos, but it seems that he lived in its *metochion* (dependency) in Constantinople. Between 1143 and 1157, he composed a eulogy on St. Christodoulos, the founder of his monastery, a text that shows him as an educated man with knowledge of classical literature and rhetoric.

Athanasios was appointed patriarch of Antioch by Emperor Manuel I Komnenos, probably in 1157, although he could not take up his appointment because of the hostility of the Franks of Antioch, who supported a Latin patriarch. On 25 December 1162, together with the patriarchs Luke Chrysoberges of Constantinople and Sophronios of Alexandria, Athanasios blessed the marriage of Emperor Manuel I and Maria of Antioch. In 1165 Athanasios was finally accepted as patriarch as part of an agreement with Bohemund III of Antioch, whose release from Turkish captivity had been secured by Manuel. The Latin patriarch, Aimery of Limoges, was deposed and had to withdraw to his castle of Cursat. In March 1166 Athanasios attended the first two sessions of a synod in the Hagia Sophia in Constantinople, convoked by the emperor to discuss the meaning of Christ’s words “The Father is greater than I” (John 14:28). The patriarch was fatally injured in the cathedral of Antioch during the earthquake of June 1170 and died on 29 June 1170.

Athens, Lordship and Duchy of

A Frankish principality in central Greece, established after the overthrow of the Byzantine Empire in 1204 by the Fourth Crusade (1202–1204).

The conquest of central Greece by a small army under

Ancient Athens viewed from the port of Piraeus. (John Clark Ridpath, *Ridpath's History of the World*, 1901)

Boniface, marquis of Montferrat, took place between October 1204 and February 1205. The Greek chronicler Niketas Choniates was shocked by the ease of the conquest and the way in which the conquered people had looked upon the Franks as liberators. This suggests that the new rulers had brought a promise of stability to the region. The La Roche family became lords of Athens and half of Thebes, and these two cities emerged as the centers of the lordship, with a palace and an archbishop in each town, although, regrettably, little is known about what was actually there in terms of Frankish buildings in the early years of the thirteenth century.

It was in the period 1260–1311 that the La Roche family and their heirs emerged as players on the broader political scene of Frankish Greece, a process that initially began with an unsuccessful resistance to the ambitions of the rulers of Achaia. According to the *Chronicle of the Morea*, at the time of the conquest of central Greece Boniface of Montferrat had granted the lordship of Athens to William of Champlitte, the future ruler of Achaia. However, nothing was heard of this claim until a dispute between William of La Roche and

William, prince of Achaia, in the late 1250s. Its occurrence at this time may well have ensured its entry into the *Chronicle of the Morea*. The dispute concerned the inheritance of Carintana dalle Carceri (the second wife of William of La Roche, who had died in 1255), which included the northern part of the island of Negroponte (Euboea). In the years 1255 to 1258, there was virtual civil war in Frankish Greece between the rulers of Athens, backed by the Venetians, and William of Villehardouin.

In May 1258 the La Roche family was signally defeated at the battle of Mount Karydi, between Megara and Thebes, and blockaded in Thebes. The subsequent compromise peace obliged Guy I of La Roche to visit the court of King Louis IX of France in Paris in order to receive judgment on his action against the Villehardouin family. While he was absent from Greece the political situation changed dramatically: William II of Achaia was defeated at the battle of Pelagonia and imprisoned in Constantinople, and Guy returned to become *bailli* (regent) of Achaia in William's absence. In Paris Guy may have been granted the formal title

The Duchy of Athens and its neighbors

of duke and the right to mint money modeled on the French *denier tournois* (penny of the standard of Tours). However, there is no numismatic evidence to show that either the title or the right of coinage was exercised before 1280. Nonetheless, the 1260s marked a distinct shift in the role of the (now) dukes of Athens. They became rulers who were prepared to assume the mantle of the Villehardouin family as the suzerains of Greece and at the same time proponents of the Frankish rulers of Greece against the demands and ambitions of the Angevin rulers of Naples. The latter, since the battle of Pelagonia, had sought to exploit the political and military difficulties of the Villehardouins in order to establish their own power base in Greece as part of a larger claim to the Byzantine Empire.

During the 1290s there was a second dispute between the rulers of Achaia and Athens, once again concerning the status and independence of the duchy with regard to the principality of Achaia. It was Florent of Hainaut, the consort of Isabella of Villehardouin, who reasserted the Achaian claims, soon after their marriage in 1289. The claims dated back no further than the late 1250s but were embellished with a longer pedigree. At the time, Guy II (Guyot) of La Roche was a minor, and the regent of Athens—his mother, Helena Angela Doukaina—was forced to concede Florent's claims.

Lords and Dukes of Athens

Otho of La Roche	1205–1225
Guy I of La Roche	1225–1263
John of La Roche	1263–1280
William of La Roche	1280–1287
Guy II of La Roche	1287–1308
Walter I of Brienne	1308–1311
Manfred of Aragon	1312–1317
William of Randazzo	1317–1338
John of Randazzo	1338–1348
Frederick of Randazzo	1348–1355
Frederick III of Sicily	1355–1377
Maria of Sicily	1377–1381
Peter IV of Aragon	1381–1388
Nerio I Acciaiuoli	1388–1394
Antonio I Acciaiuoli	1402–1435
Nerio II Acciaiuoli	1435–1439
Antonio II Acciaiuoli	1439–1441
Nerio II Acciaiuoli (again)	1441–1451
Francesco I (Franco) Acciaiuoli	1451–1454
Francesco II Acciaiuoli	1454–1458

However, the situation eased when Florent died in 1297 and seemed to be reversed in 1301, when Guy II became betrothed to Florent's daughter Mahaut, heiress to Achaia. They were married in 1305, and two years later Guy was appointed bailli of the Morea, but he died on 5 October 1308, bringing the La Roche line to an end.

The duchy passed to Guy's cousin Walter I of Brienne, who in 1310 employed the Catalan Grand Company, a band of mercenaries that had served various employers in the Aegean region since 1303. The Catalans obtained a number of striking successes for Walter in Thessaly, but when he proposed to disband them without arrears of pay he had to resort to force. Walter's army of mounted knights was annihilated by the Catalans at Halmyros on 15 March 1311, and he was killed, leaving his claims to his young son Walter (II). After a number of unsuccessful attempts to recover the duchy, Walter II was himself killed at the battle of Poitiers during the Hundred Years' War in 1356.

The Catalans took over the duchy, giving the title of duke to the king of Aragon, but in practice remaining their own masters under warlords such as Alfons Fadrique, who was vicar general for the absent king. Under Fadrique the Catalans gained control of territory in southern Thessaly, setting up the duchy of Neopatras. The Catalans were perceived as a serious military and economic threat by their Venetian neighbors on Negroponte. The Venetians used their influence in Rome to secure frequent papal bans of excommunication against the Catalans for employing Turkish mercenaries or for failing to respond to calls for a crusade against the Turks. During the 1360s, various Catalan leaders in the duchy warred among themselves, but they were able to resist an attempt to recover the duchy by the Enghien brothers, nephews of Walter II of Brienne, in 1370–1371. The affairs of the duchy passed into obscurity and apparent dissolution as the Catalans lost ground to another band of mercenaries, the so-called Navarrese Companies, which captured Thebes in 1379 and Livadhia in the following year. In 1388 Nerio Acciaiuoli took control of the Akropolis at Athens. The duchy was ruled by his descendants until Francesco II Acciaiuoli was deposed by the Ottomans in 1458.

Avis, Order of

A Portuguese military religious order, originally known as the Order of Évora. The first definite information about the order dates from 1176; it did not adopt the name of Avis until 1215.

The claims of medieval chroniclers that date the foundation of the order to the mid-twelfth century are unfounded. The conclusions of Rui Pinto de Azevedo are now held to be the most authoritative: he demonstrated that the origins of the order should be situated in Évora, and should be placed between March 1175 and April 1176 [Azevedo, "As origens da ordem de Évora ou de Avis"]. At this time King Afonso I Henriques of Portugal, thanks to a truce with the Almohads, was attempting to elaborate a defensive strategy that would ensure the advanced positions of his kingdom against al-Andalus in the Alto Alentejo region (mod. central Portugal). In 1211 the brethren of Évora were given the fortress of Avis, from which they took their new name a few years later. It is unclear why the brethren left their original Benedictine obedience in 1187 and sought association with the Castilian Order of Calatrava, which followed the Cistercian rule. This new dependence was evident in the prerogatives given to the master of Calatrava: he had rights of visitation over the Order of Avis and was also allowed to govern the institution whenever a vacancy in its mastership occurred, which he did until the mid-fourteenth century.

The Order of Avis was composed of knight brethren and clerics. They wore a scapular, which from 1404 bore a green cross on the left side. Under the aegis of its master, the institution gradually gained strength during the first part of the

thirteenth century. Supported by the Portuguese monarchy, the brethren were active in the reconquest of the Iberian Peninsula from the Moors, acquiring lands in the process. By the late thirteenth century these properties were organized in a network of no fewer than twenty-five commanderies: the richest of these were concentrated on the left bank of the river Tagus (Port. Tejo) near Avis, and also further south in the newly conquered areas, where the brethren had settled in Évora, Alandroal, Juromenha, Noudar, and Albufeira.

Such extensive land-ownership alarmed the Portuguese monarchy, which felt threatened by the potential power of the order. In the reign of King Dinis (1279–1325), royal policy toward Avis changed radically: the king put an end to donations and began supporting urban oligarchies and Muslim minorities in jurisdictional disputes, even in the town of Avis itself, thus deliberately harming the order's interests. The masters of Avis were increasingly selected from among the king's followers, or even his relatives. This can be seen in the case of the Infante John (Port. João), a natural son of King Peter I who was made the master of the order in 1364 at the age of seven, twenty years before ascending the throne of Portugal.

John became king after a two-year civil war, an event that could only reinforce royal interference in the order. After defeating his Castilian rival in 1385 in the battle of Aljubarrota, John I tried to maintain control by appointing a faithful follower, Fernão Rodrigues de Sequeira, as master of Avis. When the latter died in 1433, John decided that a master of royal blood would be best able to control the order, and appointed his own son, the Infante Fernão (Ferdinand). This master had to relinquish his position just before his death (1443) after being captured in Tangier. His successor was Pedro, his own nephew and son of Infante Pedro, the regent of the kingdom. Despite a period of exile, Pedro succeeded in keeping his office until his death in 1466. The mastership was then given to the Infante John, the elder son of King Afonso V; he remained master after ascending the throne in 1481. Nine years later John II gave the mastership to his heir, the Infante Afonso, and then to the Infante Jorge, his own natural son. The latter paved the way for the eventual absorption of the order by the Portuguese Crown, which occurred in 1550.

Ayas

Ayas or Lajazzo (mod. Yumurtalık, Turkey), located on the Gulf of Alexandretta, was the busiest port in the Armenian kingdom of Cilicia in the thirteenth century.

As the Mamlūks conquered the Frankish ports of Syria and Palestine, Ayas gradually became the main entrepôt for trade between Asia and the Mediterranean, and by the end of the thirteenth century it housed trading companies from Venice, Genoa, Marseilles, and elsewhere. The city took advantage of a small headland to create a harbor, whose protection was artificially increased by an artificial mole, and around 1282 a sea castle was built to protect the harbor. In 1261 King Het'um I of Cilicia granted the Venetians an area within the city to house their merchants and goods, and King Leon II extended trading privileges to the Genoese in 1288. Disagreements between the two Italian republics led to a naval battle outside Ayas in 1293, which the Venetians won, seizing 500,000 bezants' worth of goods from the Genoese.

The Mamlūk victory over the Cilician kingdom in 1285 frequently left Ayas and the Cilician plain vulnerable to Mamlūk raids: a large-scale attack on the city was fought off in 1320, but it fell only two years later (23 April 1322). Negotiations with the Mamlūk sultan al-Naṣīr in 1323 led to the return of the city to Armenian control, on condition that the sea castle was not rebuilt, although Pope John XXII helped to pay for the reconstruction of the land castle. In 1337 Ayas was again taken by the Mamlūks, and after the Cilician kingdom was entirely conquered in 1375, it became the capital of a Mamlūk province. Constantine IV of Cilicia and Peter I of Cyprus attempted to recapture the city in September 1367 but succeeded only in temporarily seizing the suburbs. In contrast to their policy with regard to the seaports

of Syria and Palestine, the Mamlūks did not entirely destroy the city or its harbor, and it continued to function, though largely without the participation of Western merchants, and ceased to be the main port of trans-Asian trade.

An Armenian bishop is first recorded for the city in the mid-thirteenth century. The sources also mention the churches of St. Lazarus (Armenian), St. Mark (Venetian), and St. Laurence (Genoese). Four parts of the medieval city remain today: the land castle (largely dating from the Ottoman period); the sea castle, now some 400 meters (c. 1300 ft.) offshore; the harbor; and part of the medieval settlement.

'Ayn Jālūt, Battle of (1260)

A major military engagement in which a Mongol army commanded by Kitbuga Noyon was decisively defeated by a Mamlūk army from Egypt near 'Ayn Jālūt (the Spring of Goliath), a village situated between the towns of Bethsan and Nablus (in mod. West Bank), on 3 September 1260.

The Mongols under Chinggis (Genghis) Khan, his sons, and his senior commanders had invaded the northeastern regions of the Islamic world in 1220. During the next forty years they swept all before them, overthrowing or reducing to submission virtually every Muslim ruling dynasty in central Asia, Persia, Afghanistan, and Anatolia, culminating in Hülegü's conquest and virtual destruction of Baghdad in 1258. In January 1260 a Mongol army seized Aleppo in northern Syria and on 1 March that year entered Damascus, the governing center of Mamlūk Syria. In response a substantial Mamlūk army was sent from Egypt to halt the Mongol advance. It was commanded by Sultan Qutuz, while its vanguard was led by Baybars al-Bunduqdāri, who himself became sultan later that year.

Most sources agree that the Mongol army was outnumbered by that of the Mamlūks, although the widely accepted figures of 120,000 Mamlūks fighting a mere 10,000 Mongols are probably a great exaggeration. The Mongols were also supported by numerous Christian allies or auxiliaries. Kit-

buga Noyon attacked and drove back the Mamlūks' left wing, perhaps relying on the Mongols' reputation for invincibility. The Mamlūks were, however, a disciplined foe who knew that they were the last Islamic power capable of halting the Mongol advance. Most of the Mamlūk army then swept around to attack the advancing Mongols in the flank or rear, perhaps having lured them into a preplanned trap. As a result the Mongol army in Syria was crushed, its commander Kitbuga Noyon being captured and executed by the Mamlūks.

Hülegü, the Mongol khan of Persia and other conquered Islamic territories in the Middle East, was infuriated by this unprecedented reverse and prepared a major punitive expedition. However, political problems at the heart of the Mongol Empire, following the death of the Great Khan Möngke almost exactly a year earlier, prevented this plan from being carried through.

Ayyūbids

A Muslim dynasty of Kurdish origin. Its name derives from Saladin's father, Ayyūb, although it was the successes of Saladin himself that established it. After Saladin's death in 1193, the Ayyūbids ruled Egypt until 1250 and Syria for

another decade. They also had cadet branches in Mesopotamia and Yemen. Like the Būyids and Saljūqs of Persia before them, they governed as a loose-knit and often discordant confederacy.

The Establishment of Ayyūbid Power

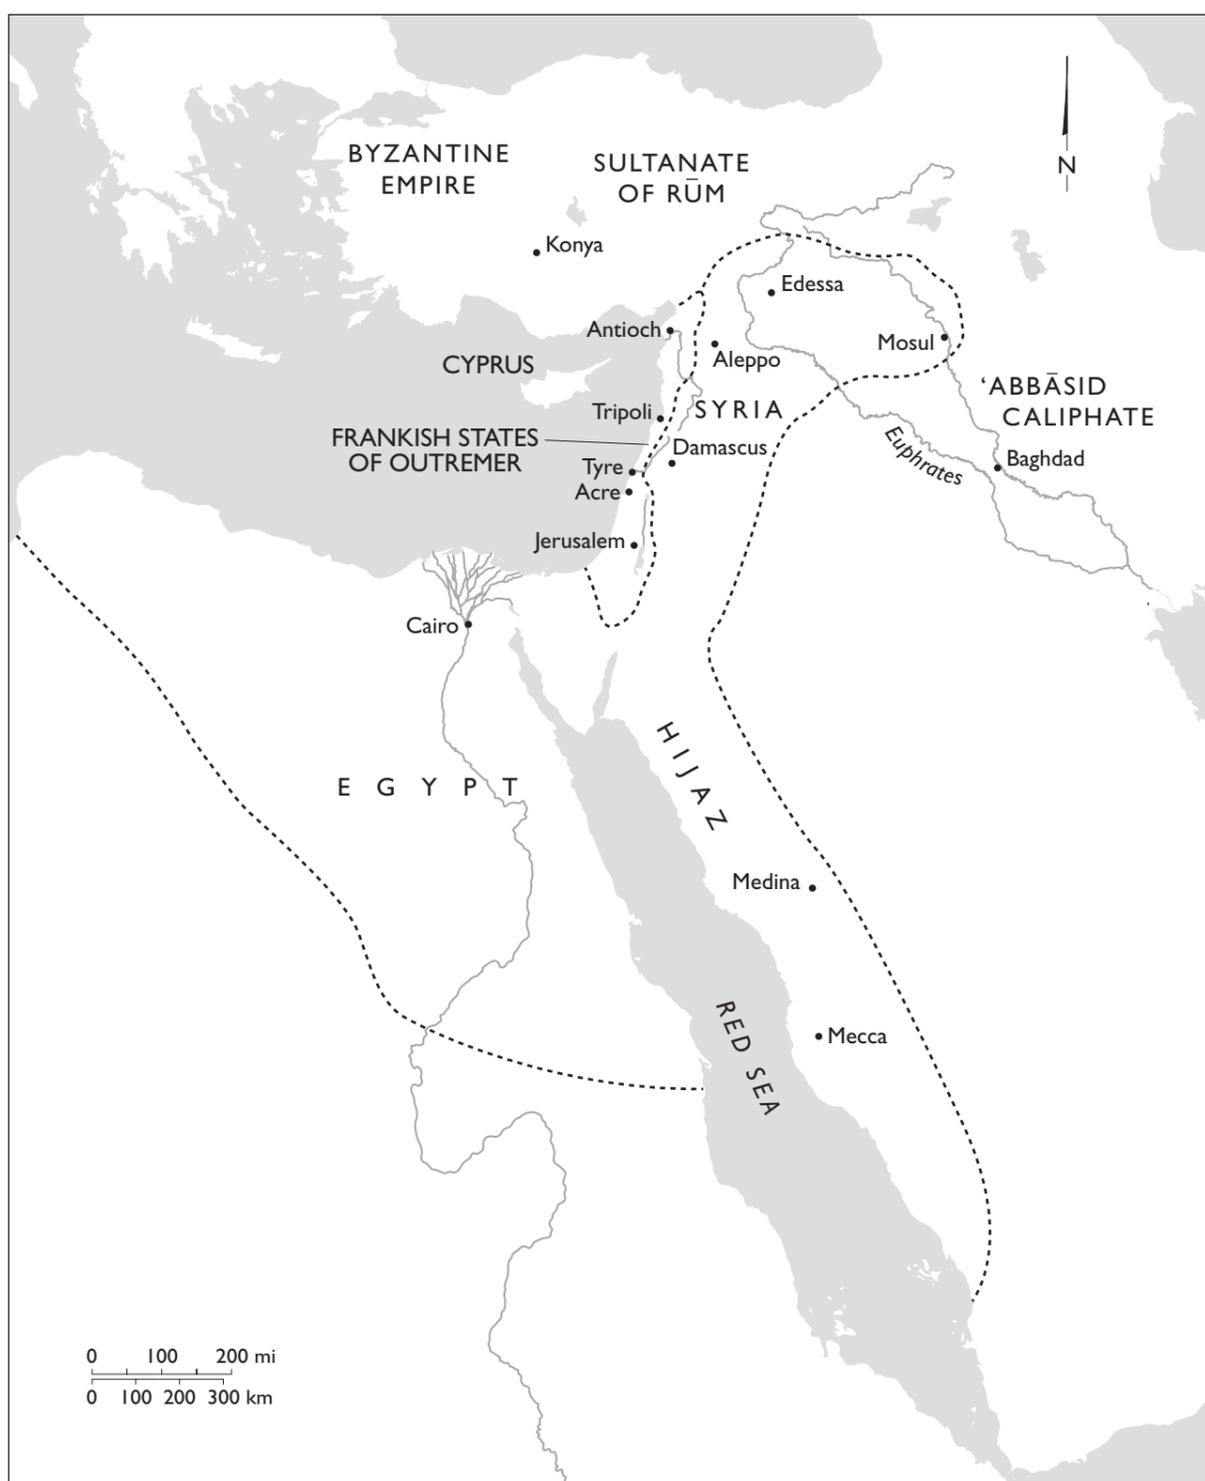

Ayyūb and his brother Shīrkūh both hailed from Dvin in Armenia; they fought for the Turkish warlords Zangī and his son Nūr al-Dīn, Saladin's two great predecessors in the fight against the Franks. Saladin accompanied Shīrkūh on three expeditions to Egypt in the 1160s. After Shīrkūh's death in 1169, Saladin assumed power in Egypt in the name of Nūr al-Dīn and overthrew the Shī'ite Fāṭimid regime there. Although a rift developed between the two men, it never developed into open warfare because of the death of Nūr al-Dīn in 1174. That same year Saladin dispatched his brother Tūrān Shāh to conquer Yemen.

During much of Saladin's first decade as an independent ruler (c. 1174–1184), he was occupied with subjugating his Muslim opponents and creating a secure power base in Egypt and Syria for himself and his family. Then from 1185 onward he turned his full attention to the Franks. In 1187 he achieved his famous victory against the army of the kingdom of Jerusalem at the battle of Hattin and reconquered the city of Jerusalem for Islam. The Third Crusade (1189–1192), launched in response to this loss, ended in truce and stalemate. Saladin died a year later; despite his prestigious successes, he had failed to rid the Levant of the Franks, who regrouped at their new capital of Acre and still controlled crucial Mediterranean ports. Saladin's brother, the austere Sayf al-Dīn al-'Ādil (known to the Franks as Saphadin), had acted as his principal, indeed indispensable, helper in governing his empire, both administratively and militarily. His involvement in drawing up the peace treaty with Richard the Lionheart in 1192 was especially valuable.

The Ayyūbids after Saladin

Saladin did not envisage a centralized state as his legacy. Instead, he bequeathed the three main provinces of his empire (Cairo, Damascus, and Aleppo) to his sons, hoping that this arrangement would ensure lasting Ayyūbid power. But his desired father-son succession did not take root, nor did primogeniture prevail among Saladin's successors. Within the clan, might was right. After Saladin's death, al-'Ādil's role as senior family member asserted itself; indeed, Saladin's sons were no match for al-'Ādil's long experience

Ayyūbids

The Ayyūbid Territories in 1187

and diplomatic skills. By 1200 he had reorganized Saladin's inheritance plans in favor of his own sons, deposed Saladin's son al-'Azīz 'Uthmān in Cairo, and secured the overall position of sultan for himself. Only in Aleppo did Saladin's direct descendants continue to rule: Saladin's son al-Ẓāhir, after submitting to al-'Ādil, was allowed to keep his territory, which remained in his family until the Mongol invasion of 1260. In this complicated power struggle after Saladin's death, a key role was played by the regiments of *mamlūks* (slave soldiers) recruited by Saladin (the Ṣālahiyya) and his uncle Shīrkūh (the Asadiyya). Al-'Ādil was greatly assisted by the Ṣālahiyya. Saladin's expansionist aims were continued under al-'Ādil, who masterminded the Ayyūbid acquisition of more Zangid and Artuqid territories. He secured his northeastern frontier in 1209–1210, established truces with the Franks that lasted for most of his reign, and traded with the Italian maritime states.

In 1218, shortly after the arrival of the Fifth Crusade (1217–1221), al-'Ādil died, allegedly of shock. He was succeeded by his son al-Kāmil, whose brothers, al-Mu'azzam and al-Ashraf, supported him in this crisis, but after Damietta was recovered, this short-lived family solidarity gave way to disunity and conflict. The main contenders in the long and convoluted power struggle that followed were al-Kāmil and his brother al-Mu'azzam at Damascus. By 1229 al-Kāmil, with the help of al-Ashraf in Mesopotamia, emerged as principal ruler of the Ayyūbids. Already in 1226, al-Kāmil, an astute politician, had begun negotiations with Frederick II, Holy Roman Emperor, to bolster himself against al-Mu'azzam and to deflect the imminent crusade. However, by the time Frederick arrived in Acre in 1228, al-Mu'azzam had already died. Secret negotiations between al-Kāmil and Frederick resulted in the Treaty of Jaffa (1229); in it al-Kāmil ceded Jerusalem to Frederick, who was permitted to fortify the city, but al-Kāmil kept a Muslim enclave, including the Aqsa Mosque and the Dome of the Rock. This piece of realpolitik caused widespread disapproval on both sides, and even al-Kāmil's own preachers protested outside his tent. The Muslim chronicler Sibṭ Ibn al-Jawzī recorded that when al-Kāmil gave Jerusalem to Frederick "all hell broke loose in the lands of Islam" [Sibṭ Ibn al-Jawzī, *Mir'āt al-Zamān fī Ta'rīkh al-A'yān*, 2 vols. (Hyderabad: Dayrat al-Ma'ārif al-Uthmāniyyaḥ, 1951–1952), 2: 653]. However, some modern scholars have interpreted the Treaty of Jaffa more positively, viewing al-'Ādil and Frederick as farsighted in their attempts to obtain a more lasting peace and to main-

tain the holy sites of both Islam and Christianity under the protection of their own adherents.

The death of al-Kāmil in 1238 ushered in another turbulent period. His dispossessed eldest son, al-Ṣāliḥ Ayyūb, who had been sent to rule Upper Mesopotamia, disputed the succession in Egypt. He deposed his brother al-'Ādil II and took power in Cairo in 1240. While he was in Hisn Kayfa, al-Ṣāliḥ Ayyūb had allied himself with a group of Qipchaq Turks: they were known as the Khwārazmians because they had fought in central Asia for the ill-fated ruler of Khwārazm, Jalāl al-Dīn, against the Mongols in 1220s. After his death (1231), the Khwārazmians joined the service of al-Ṣāliḥ Ayyūb as mercenaries. In 1244, under their infamous leader Berke Khān, they sacked Jerusalem, to general condemnation. They then joined Ayyūb's army near Gaza and fought that same year against three Ayyūbid princes, as well as Frankish forces. The battle of La Forbie (Harbiyya) was a clear victory for al-Ṣāliḥ Ayyūb and his Khwārazmian allies. Ayyūb took Jerusalem (August 1244) and then Damascus (1245). The Ayyūbid prince of Homs destroyed the Khwārazmians in 1246.

Al-Ṣāliḥ Ayyūb fell ill at the time of the crusade to the East of Louis IX, king of France (1248–1254). The crusaders occupied the city of Damietta in 1249; later that year al-Ṣāliḥ Ayyūb died while encamped at Mansura on the delta. In 1250 the crusaders were defeated by the sultan's own slave troops (the Baḥriyya *mamlūks*). Then in a coup d'état they murdered Tūrān Shāh, the son and heir of al-Ṣāliḥ, and terminated Ayyūbid rule, raising one of their own number to the rank of sultan and thus inaugurating the Mamlūk sultanate.

Religious Policies

In their religio-political discourse, the Ayyūbids called themselves *mujahids*, that is, fighters of the *jihād* (holy war). However, they were criticized, even in their own time, for their lukewarm prosecution of *jihād*. As the chronicler Ibn al-Athīr (d. 1233) remarked: "Amongst the rulers of Islam we do not see one who wishes to wage *jihād*" [Ibn al-Athīr, *Al-Kāmil fī'l tarīkh*, ed. C. J. Tornberg, 12 vols. (Uppsala: Hefler, 1851–1876), 12: 7]. But the circumstances in which the Ayyūbids found themselves had changed from Saladin's last years. Jerusalem, which had been a unique focus for *jihād* for Nūr al-Dīn and Saladin, had been reconquered. The resources to finance more military enterprises were limited, and Ayyūbid engagement with the Franks would, it was

Ayyūbids

Main entrance to the citadel of Aleppo. (Corel)

feared, engender more crusades from Europe. Even Saladin had preferred to exercise diplomatic means with the Franks until the period immediately preceding the battle of Hattin.

Despite their pious stance toward Jerusalem, the Ayyūbids were prepared, when necessary, as the Treaty of Jaffa showed, to use it as a pawn on the Levantine chessboard. Several Ayyūbid rulers sponsored religious monuments in the Holy City, but the dynasty never chose it as a capital, preferring Cairo or Damascus. During the Fifth Crusade in 1219, the Ayyūbid prince al-Mu‘azzam (d. 1226), who had beautified the Holy City only a few years earlier, dismantled its fortifications lest it should fall into Frankish hands again. This action, justified as sorrowful necessity by al-Mu‘azzam, provoked widespread condemnation among the local Muslim population, many of whom fled the city. Worse was to come in 1229 when al-Kāmil actually ceded Jerusalem to Emperor Frederick II. The Holy City remained

a bargaining counter, being controlled again by the Ayyūbids in 1239 and then handed back to the Franks five years later before its sack by the Khwārazmians and its return to Muslim control.

In other respects, the Ayyūbids, as Kurdish outsiders and usurpers, were keen to prove their good Sunnī Muslim credentials, building religious monuments in all their domains and insisting on grandiose *jihād* pretensions in their correspondence, coins, and monumental inscriptions. They founded no less than sixty-three religious colleges (Arab. *madrāsas*) in Damascus alone. They welcomed Muslim mystics (Sufis), for whom they founded cloisters (Arab. *khanqahs*). Saladin had acquired great prestige by abolishing the 200-year-old rival Isma‘īlī Shī‘ite caliphate of Cairo. But the relationship of his successors with the ‘Abbāsīd caliphate was complex. On the one hand, like earlier military dynasties such as the Saljūq Turks, the Ayyūbids sought public legitimization from the ‘Abbāsīd caliph in Baghdad. Caliphal ambassadors mediated in inter-Ayyūbid disputes. In his efforts to renew the ‘Abbāsīd caliphate, the caliph al-Nāṣir (d. 1225) created around himself a network of spiritual alliances with Muslim rulers, including the Ayyūbids. Yet, such symbolic links did not remove mutual suspicion. Both sides feared each other’s expansionist aims. Saladin complained of the caliph’s lack of zeal in *jihād* against the Franks. Nor did Saladin’s descendants offer help to the caliph against a possible attack from the Mongols in 1221–1222.

Government and Institutions

Ayyūbid government was an amalgam of Saljūq and Fāṭimid practices. Saladin inherited bureaucratic traditions brought from the east to Syria by Saljūq rulers and commanders. His family had worked for such Turkish leaders and assimilated their military and administrative traditions. In Egypt continuity also existed between Fāṭimid and Ayyūbid practice, especially in taxation. The Ayyūbids expanded the existing system of *iqṭā‘* (allotments of land given to high-ranking army officers in exchange for military and administrative duties) to the benefit of their kinsmen and commanders. Armed with the revenues of Egypt, Saladin built up a strong army, which included his own contingents (Arab. *askars*) as well as *iqṭā‘* holders, Turcoman troops sent by his vassals, and auxiliary forces. The Ayyūbid armies were composed of Kurds and Turks, with the latter predominating. The recruitment of slave soldiers (Arab. *mamlūks*), always a feature of Ayyūbid military policy, intensified under al-Ṣāliḥ Ayyūb. He

focused his power on Egypt and centralized his administration on Cairo, thus foreshadowing the preeminence of that city for the Ayyūbids' successors, the Mamlūk dynasty. Apart from Saladin's brief attempt to build a navy, the Ayyūbids were not interested in fighting the Franks at sea. The Ayyūbids did not construct castles in the Frankish manner, preferring instead to build or strengthen city fortifications. Thus they improved the city walls in Cairo, as well as building the citadel, and they did likewise in Damascus, Aleppo, Hims, Aleppo, Harran, Amid, and elsewhere.

The Ayyūbids preferred détente rather than *jihād* with the Franks. During the Ayyūbid period, the remaining Frankish states became fully integrated as local Levantine polities. The Ayyūbids allied with them and sometimes fought alongside them against fellow Muslims. Trade, which had prospered from the 1180s onward in their lands, was important for the Ayyūbids, and they granted trading privileges to Venetian and Pisan merchants in 1207–1208. The fragmented nature of Ayyūbid power led to a proliferation of small courts based on individual cities, such as Cairo, Damascus, and Hama, where the Ayyūbid princes patronized the arts. Some, such as al-Amjad Bahrām Shāh and Abu'l Fidā', were themselves men of letters. Al-Kāmil also composed poetry and enjoyed intellectual discussions, asking scholars searching questions on a range of subjects. He and his father, al-'Ādil, involved themselves in the precise details of administration. Yet the generous architectural patronage that transformed the faces of a few cities had severe side effects. Other centers were starved of resources, as their minimal heritage of Ayyūbid buildings suggests.

A linchpin of Ayyūbid rule was the maintenance of a united Syro-Egyptian polity. The two key Ayyūbid principalities were Cairo and Damascus; the other Ayyūbid states never enjoyed as much power and prestige. When Damascus and Cairo were united under one ruler, equilibrium and stability prevailed. Each time an overarching leader appeared (and some rulers of the dynasty were clearly exceptional—not only Saladin but also al-'Ādil, al-Kāmil, and al-Şāliḥ Ayyūb), this was the hard-won result of personal charisma and diplomacy as well as a show of military strength. The ensuing tenuous unity would dissipate at that ruler's death.

Traditionally, the Ayyūbids have been cast as opportunistic, wily, and self-serving politicians. This image emerges, for example, from an emphasis on their attitude to Jerusalem. Saladin had been the exception in his focus on

jihād aimed at the reconquest of Jerusalem. For his successors, Jerusalem was dispensable. Egypt was their most valuable possession, and they were ready to sacrifice the Holy Land to safeguard Egypt. Moreover, Ayyūbid history was much less concerned with the loss or gain of Jerusalem than with the survival of individual princelings and fiefdoms in an atmosphere of mutual rivalry and in the face of grave external threats. Indeed, at that time, the Islamic world was assailed simultaneously by the Mongol invasions and by continuing crusader attacks. The Arab chronicler Ibn al-Athīr (d. 1233), reflecting with unusual emotion on the Mongol threat, called the Muslim year 617 (1219–1220 A.D.) the most dangerous that Islam had ever experienced. Externally, then, the Ayyūbids had to contend with grave dangers, familiar and unfamiliar. The enemy came from east and west; the double impact was hard to repel. Between 1240 and 1245, the Mongol threat came ever closer. After the Mongol invasion of Anatolia (the battle of Köse Dag, 1243), Muslim anxiety in northern Syria grew. Although the Ayyūbids were spared the full onslaught of the Mongols, they had to suffer the demographic fallout from the Mongol invasions of central Asia and Iran. The Khwārazmians, driven out by the Mongols, became a loose cannon in Ayyūbid territories, terrifying and undisciplined; they could be recruited into the Ayyūbid armies when required, but they were out of control when they sacked Jerusalem in 1244. Their savage strength contributed to the victory at the key battle of La Forbie.

What threat did the Ayyūbids pose for the Franks after Saladin's death? Clearly the Ayyūbids were beset with a multiplicity of enemies both inside and outside their realms, and this situation helped the Franks to stay on in the Levant and slowly to marshal their resources again. Indeed, in the early decades of the thirteenth century, the Franks gradually recovered, and despite their reduced lands they still held the ports and were a force to be reckoned with. Moreover, the Ayyūbids had to deal with a steady stream of crusades and campaigns coming from the West after the loss of Jerusalem; these were aimed at the heart of their power, Cairo. In the event, they did not press home their obvious advantages and were not sufficiently strong, united, or motivated to rid the Muslim world of the Franks. The Franks, for their part, enjoyed a brief intermezzo in the Ayyūbid period, positioned as it was between the intense campaigns conducted by Saladin in his last years and the blistering attacks of the Mamlūks of Egypt that awaited them after 1250. However, the Ayyūbid victory at La Forbie was a devastating blow to

Frankish manpower, and was as serious a military defeat as Hattin. On this occasion the Franks had unwisely abandoned their strategy of avoiding pitched battles, and thus their steady recovery after the Third Crusade had been jeopardized. La Forbie destroyed the campaign army of the Frankish kingdom.

It is also important to view the Ayyūbids within a wider medieval Islamic context. They had to contend with other neighboring states: the Saljūqs of Rūm, now in full efflorescence; the Turkish dynasties of Mesopotamia, including the Artūqids and the Zangids; and the Christian kingdoms of the Caucasus. Given all these external dangers, the fragmented nature of Ayyūbid rule, and periodic episodes of extreme internal insecurity, it is perhaps surprising that the Ayyūbids managed to exercise stable government for as long as they did.

Azaz

Azaz (mod. A'zāz, Syria) was a fortress on a key route between Antioch (mod. Antakya, Turkey) and Turbessel (mod. Tellbaşar Kalesi, Turkey) in the period of the crusades, meeting roads to Aleppo and Marash (mod. Kahramanmaraş, Turkey).

Despite its being a poorly watered site, frequent struggles over the possession of Azaz are testimony to its strategic importance: for the Muslims, as a means of disrupting communications between Antioch and Edessa (mod. Şanlıurfa, Turkey); for the Franks, as a means of putting pressure on Aleppo, some 45 kilometers (28 mi.) to the south. Azaz was eventually taken from İlghāzī of Aleppo by Prince Roger of Antioch in late 1118, in alliance with an Armenian prince, Leon, and was given as dowry to Count Joscelin I of Edessa on his marriage to Roger's sister Maria in 1122. The region and castle were attacked repeatedly, and Timurtash of Aleppo claimed it as Baldwin II's ransom in 1124. A major siege was beaten off and the Muslim army defeated in battle in June 1125. It was finally taken by Nūr al-Dīn in 1150. The mud and brick castle high on a mound was rebuilt in stone by the Ayyūbids, but it was destroyed by the Mongols in 1260.

B

Bacon, Roger (d. c. 1294)

Philosopher, theologian, and critic of the crusades.

Born in Somerset (England) around 1214, Bacon entered the Franciscan Order between 1240 and 1257 as a professor at the university at Oxford. He was soon famed as a polymath whose inquisitive mind took him into regions that most contemporaries either could not imagine or did not dare to enter. Enemies accused him of practicing the black arts and astrology, of dabbling in heresy and alchemy. Modern scholars, in contrast, see him as a courageous pioneer of science, education, and the study of classical and modern languages. Bacon's opposition to the crusades rested on Christian principles, astrological concepts, and practical politics, and they made him a center of polemical debate. His statement that Christ had urged his followers to abstain from violence was widely acknowledged as sound doctrine, but numerous popes had declared the crusades lawful wars. Bacon's assertion that each of the six major religions could be identified with one of the planets and thus might be approached by appropriate methods at the right moment for converting its followers was more contentious, but at the time Franciscan missionaries were arguing that pagans could be persuaded of their errors by skilled missionaries (Muslims would be more difficult, because they had skilled philosophers). His pragmatic arguments were difficult to refute, because the Franks in the Holy Land were obviously on the defensive; moreover, Bacon was better acquainted with Arab thought than almost any contemporary. A man of strong opinions, with ability to defend them, Bacon provides modern scholars of

the crusades with insights into medieval scholastic arguments on the concept of holy war.

Bahā' al-Dīn

See Ibn Shaddād

Balak (d. 1124)

Nūr al-Dawla Balak ibn Bahrām was a chieftain of the Turcoman Artūqid dynasty, whose members had arrived in the Near East with the Saljūqs.

Balak was the nephew of ʿĪlghāzī (d. 1122), lord of Mardin

Baldric of Dol (1046–1130)

and later of Aleppo (1118–1122), and served with him in many campaigns against Frankish and Muslim powers alike in the first two decades of the twelfth century. In 1113 Balak made his headquarters at Kharput (mod. Harput, Turkey) in the area of Diyar Bakr, controlling a vital route for the Turcoman recruits who provided much of the military strength of the Muslim dynasties of Syria, Mesopotamia, and Iraq. In 1122 Balak besieged Edessa without success, but on 13 September of that year near Saruj, he defeated and captured Joscelin I, count of Edessa, and Waleran, lord of Bira. Balak also seized Aleppo from his cousin Sulaymān ibn Ḫghāzī and ruled there ruthlessly (1123–1124), callously killing hundreds of its inhabitants.

In April 1123 Balak's troops surprised King Baldwin II of Jerusalem, who had come north with an army in an attempt to rescue Joscelin and his comrades. This was a major blow against the Franks, since Baldwin was not only the ruler of Jerusalem, but was also acting as regent of the northern Frankish states of Antioch and Edessa. The king was sent to join the other Frankish captives in Kharput. While Balak was away, some Armenians seized control of Kharput, and Joscelin escaped. However, Balak was able to recapture the city and massacre most of the Franks, sparing their leaders, who were transferred to Harran. In October 1123 Joscelin attacked Aleppan territory. Balak united with the forces of Damascus and Mosul and attacked the town of Azaz, but was defeated by the Frankish forces during the winter. He was killed on 6 May 1124 while besieging the castle of Manbij, fearing the alliance of its Turcoman lord with Joscelin of Edessa. Aleppo passed to his cousin Timūrtash ibn Ḫghāzī.

Baldric of Dol (1046–1130)

Author of an account of the First Crusade (1096–1099). Born at Meung-sur-Loire, Baldric became abbot of Bourgueil in 1089. Leader of a classicizing circle of poets, he systematized the use of parallel biblical and antique exemplary figures. His

learning and piety earned him promotion to the controversial "archdiocese" of Dol in northeast Brittany in May 1107.

Baldric's *Historia Hierosolimitana* was a more literary and dramatic rewriting of the anonymous *Gesta Francorum* in a formal Latin style. It added limited but nonetheless valuable additional information from oral sources, including information about some of those in the contingent led by Alan IV of Brittany. His work was extensively used by the Anglo-Norman chronicler Orderic Vitalis, who added further information about Breton crusaders after 1101.

Baldric wrote beautiful Latin but had weaknesses as a historian; although interested in the moral or exemplary aspects of the past, he paid scant attention to practical matters, such as dates. He also wrote an important life of his contemporary Robert of Arbrissel.

Baldwin I of Constantinople (1171–1206)

One of the leaders of the Fourth Crusade (1202–1204) and subsequently first Latin emperor of Constantinople (1204–1206).

Baldwin was born in July 1171, the son of Baldwin V, count of Hainaut, and Margaret, countess of Flanders. He married Mary, sister of Count Thibaud III of Champagne, by whom he had two daughters, Jeanne and Margaret. In 1192 he succeeded to Flanders and Hainaut (he is usually numbered as Baldwin IX and VI in this context). He gave proof of his ability as a politician by changing the direction of the foreign policy of Flanders: by allying himself with King Richard I of England he succeeded in resisting the encroachments of Philip II Augustus of France, whom he defeated in a series of battles, and then negotiated the Treaty of Péronne,

in which he recovered much of the territory annexed by Philip some years earlier.

Baldwin took the cross on 23 February 1200 together with his wife, Mary; his brother, Henry; and many knights. He was represented at Venice in the negotiations concerning the transport of the crusade army by Conon of Béthune and Alard Maquereau. In 1201 he organized a fleet under the command of John of Nesle and left Flanders (on 14 April, Easter) by the land route. He was one of the first crusaders to reach Venice (probably in July) and was also one of those who contributed plate and money to try to meet the debt to the Venetians before the fleet could sail. Baldwin is not mentioned in connection with the attack on Zara (mod. Zadar, Croatia), but at Corfu (mod. Kerkira, Greece) he joined with the other leaders in trying to convince the army to accept the offer of the exiled Byzantine prince Alexios Angelos.

When the crusade arrived at Constantinople (mod. İstanbul, Turkey), Baldwin was put in command of the vanguard, according to the chronicler Geoffrey of Villehardouin, because of the number of archers and crossbowmen in his troop. He led the vanguard in the abortive encounter with Alexios III Angelos and his army outside the gates of Constantinople; when his troops halted their advance at the sight of the much larger Greek army, he was accused of cowardice by the squadron of Hugh, count of Saint-Pol, and was told by his own men that they would no longer acknowledge him unless the advance continued. The Greeks withdrew while the crusaders were still in some confusion, but the incident shows that Baldwin had difficulty controlling his troops. Baldwin does not seem to have had a prominent role during the reign of the co-emperors Isaac II and Alexius IV, but he was among those who negotiated the agreement with the Venetians on how to divide the empire once the crusaders had decided to attack Constantinople a second time.

Baldwin quickly emerged as the leading rival to Boniface of Montferrat in the election for a new emperor; on 9 May 1204 he was elected as Latin emperor, largely because the Venetians had no intention of allowing any increase in the power of their Italian neighbor Boniface. Eight days later Baldwin was crowned in the Church of St. Sophia in a ceremony that included as much of the traditional Byzantine pomp and ceremony as possible, which made him the rightful emperor in the eyes of many Greeks. He reluctantly agreed to the request of Boniface that he should have Thessalonica (mod. Thessaloniki, Greece) and its environs instead of Asia Minor. Baldwin then set out to campaign against Alexios V

Doukas Mourtzouphlos and marched to Adrianople (mod. Edirne, Turkey), where his brother, Henry, had preceded him. As Baldwin advanced on to Mosynopolis, his advisers made trouble between him and Boniface by advising that he should insist on his right to go to Thessalonica, despite Boniface's request that he should not. On arriving in Thessalonica, Baldwin acted as overlord, renewing the privileges of the Greeks while a furious Boniface campaigned in Thrace for the recognition of his stepson Manuel (the son of Isaac II and Margaret of Hungary) as the rightful emperor. Open warfare was only avoided by the intervention of the other leaders of the crusaders and the tact of Geoffrey of Villehardouin.

With peace restored, Baldwin gave some attention at the beginning of 1205 to the administration of Flanders, while many of the knights departed to try to conquer the fiefs that had been granted to them in Thrace and across the straits in Asia Minor. At this point there was an influx of Franks from Palestine who came to join the crusaders, bringing the news that Baldwin's wife, Mary, had died (9 August 1204), which distressed him greatly. In March 1205 the Greeks in Thrace rebelled, supported by an invasion by Kalojan, the ruler of Bulgaria, whose overtures the crusading leaders had unwisely rejected. Baldwin summoned his men back to Constantinople, but the crisis in Thrace seemed so serious that he did not wait for the return of all of them and set off with whatever reinforcements he could muster. He besieged Adrianople with an inadequate number of men, and even the arrival of the doge of Venice with reinforcements added only a few to the army. Kalojan meanwhile was hastening to attack the besiegers, and the Cumans, his nomadic cavalry, lured the Franks into a disorderly attack in which they suffered severely and from which they had great difficulty extricating themselves (13 April). After the battle Baldwin held a council at which new battle orders were agreed on. No one was to leave the ranks to charge, but the knights were to keep their formation. Battle was resumed the next day (14 April), but the orders were ignored by Louis of Blois, who charged the Cumans, calling on Baldwin to follow him. Louis was fatally wounded, and Baldwin, who refused to escape, as it would be dishonorable, was captured and badly wounded. There was no definite news of him thereafter, but by 1206 the Franks were sufficiently certain that he was dead in captivity to crown his brother, Henry, as the new emperor. Rumors about Baldwin continued to circulate; in the 1220s an impostor had considerable success in Flanders, which had been misgoverned by Baldwin's daughter Jeanne, and where his

Baldwin I of Jerusalem (d. 1118)

reign was remembered with affection. The impostor was exposed and executed by Jeanne.

Baldwin is depicted in contemporary sources as a brave and honorable man, but his behavior in Greece lacked the skill and finesse that he had shown when confronting Philip Augustus in the 1190s. He had exemplary piety and morality; the Greek chronicler Niketas Choniates commented admiringly on his fidelity to Mary even when they were separated. Yet he lacked any tact or flexibility when negotiating with the Greeks. His rigid insistence on his rights as overlord in his dealings with Boniface of Montferrat almost brought about a civil war among the crusaders, although Villehardouin, who certainly knew more than he said, put all the blame on Baldwin's advisers. Baldwin's position as emperor was fatally weakened by the presence of fellow crusaders like Louis of Blois and Boniface, who in the West had been his equals in rank and were reluctant to accept his orders. The power of the Venetians also hindered his freedom to maneuver. He showed little of the military and political skill of his successor, Henry, and during his brief reign the new Latin Empire was almost constantly under very serious threat of extinction.

Baldwin I of Edessa

See Baldwin I of Jerusalem

Baldwin I of Jerusalem (d. 1118)

A participant in the First Crusade (1096–1099) and subsequently count of Edessa (1097–1100) and first king of

Jerusalem (1100–1118).

Baldwin was the third son of Eustace II, count of Boulogne, and Ida of Bouillon, born sometime between 1061 and 1070. He was originally educated for a clerical career and held benefices in the dioceses of Liège, Reims, and Cambrai, but by 1090 he had become a knight and married Godehilde, daughter of the Norman nobleman Ralph of Tosny. When his elder brother Godfrey of Bouillon decided to take part in the First Crusade, Baldwin and his wife accompanied him.

Baldwin played an important role as one of the leaders of Godfrey's contingent, but when the main crusading armies reached Cilicia in late 1097, he left them, with a military force recruited primarily from his brothers' followers, evidently intending to conquer lands for himself. He contested the possession of the coastal town of Tarsos with Tancred, but in early 1098 he moved further east to conquer the area around Turbessel (mod. Tellbaşar Kalesi, Turkey) and Edessa (mod. Şanlıurfa, Turkey) in northern Syria, whose Armenian population had risen in revolt against the Turks. He initially shared the government of the city of Edessa with the Armenian nobleman T'oros, but soon supplanted him, and by 1100 had extended Frankish rule for over 100 kilometers (c. 60 mi.) on either bank of the Euphrates. The county of Edessa—the first Frankish state to be established by the First Crusade—constituted an important buffer against the Turks of the Saljūq Empire, and was in a position to provide logistical help for the main crusade armies during their campaigns in the environs of Antioch during 1098. As Godehilde had died at Marash in 1097, Baldwin married the daughter of the Armenian prince Taphnuz.

When Godfrey of Bouillon died (18 July 1100), his knights summoned Baldwin to succeed to the throne of Jerusalem. He bestowed the county of Edessa on his kinsman Baldwin of Bourcq and hurried south with a small force, which reached Jerusalem in November. Unlike his brother, Baldwin insisted on a royal coronation, which was performed in the Church of the Nativity at Bethlehem at Christmas 1100 by the patriarch of Jerusalem, Daibert of Pisa, who had initially attempted to prevent Baldwin's succession. Two years later the king managed to have Daibert deposed, and thereafter he exercised an iron rule over the Latin Church in his kingdom, although it was not until 1112 that he was able to secure the appointment of his main clerical supporter, Arnulf of Chocques, as patriarch of Jerusalem. Baldwin's followers were predominantly Lotharingians, Normans, Picards, and Flemings, and it was from this group that most

key appointments in the church and administration were made, although he created few lordships, preferring to reward his nobles with fiefs of revenues rather than land.

Some time after his accession Baldwin had set aside his Armenian wife, and in 1113 he married Adelaide del Vasto, widow of Roger I of Sicily, agreeing to the condition that if they had no children, the throne would pass to Adelaide's son Roger II of Sicily. The nobility and clergy of the kingdom were largely legitimist in sentiment and favored the succession of Baldwin's brother Eustace. When the king was thought to be in danger of dying during an illness in the winter of 1116–1117, opposition forced him to repudiate Adelaide and the marriage treaty.

Baldwin secured and greatly expanded the territory that he had inherited, defeating three major Fātimid invasions (1101, 1102, 1105) and capturing the coastal towns of Arsuf and Caesarea (1101), Acre (1104), Beirut, and Sidon (1110); his own forces were small, but he was regularly able to enlist the military support of pilgrims from the West as well as the Italian merchant republics, which he rewarded with quarters and privileges in the conquered cities, thus bringing their trading interests to the new kingdom. Baldwin's status as the senior Frankish ruler in Outremer was manifested through his arbitration in the dispute over the county of Tripoli (1109), which recognized the claims of Bertrand of Toulouse and imposed a reconciliation on the rival parties. In 1113 Baldwin managed to repulse an invasion of Galilee by the Turks of Mosul and Damascus, despite sustaining a defeat at al-Sinnabrah; in the period of relative peace that followed he attempted to secure the eastern and southern frontiers of the kingdom, which he had already explored with reconnaissances in force in 1100 and 1107; in 1115–1116 he constructed a great castle at Shaubak in the region of Edom, which he named Montréal, and he subsequently explored the country to the south as far as the Red Sea.

The king's last campaign (1118) was directed against Egypt, but although the army captured the coastal town of Farama (22 March), it was unwilling to advance on Cairo. Baldwin became severely ill due to the opening of an old wound, which worsened as the Franks withdrew toward Palestine. He died at El-'Arish on 2 April, having named his brother Eustace as his heir, but recommending Baldwin of Bourcq as a successor if Eustace refused the inheritance. On 7 April Baldwin I was buried alongside his brother Godfrey in the Church of the Holy Sepulchre in Jerusalem.

Baldwin II of Constantinople (1217–1271)

The last ruling Latin emperor of Constantinople (1240–1261).

Baldwin II of Constantinople (1217–1271)

Baldwin was born in Constantinople in 1217, the son of Peter of Courtenay and Yolande of Flanders. He was only a child of eleven when his brother Emperor Robert died (1228). The Latin barons of Constantinople appointed as regent first Baldwin's older sister Marie and then Narjot of Toucy, before coming to an agreement with John of Brienne (d. 1237), the former king of Jerusalem. According to this agreement (March 1229), Baldwin was to marry Marie, John's daughter, and was to receive the "kingdom of Nicaea" at the age of twenty-one; John was to be emperor until the end of his life. Baldwin was sent by John as his representative to the French royal court. A number of documents have survived referring to Baldwin's activities in the Low Countries and France (from 1237 onward). They concern mostly cessions of land or relics, pious foundations, sales, and debt contracts. In 1238–1239, he mortgaged the relic of the Crown of Thorns, along with the castle and marquise of Namur and the county of Auxerre, to Louis IX, king of France, in order to raise much needed funds for his empire.

In July 1239 Baldwin returned with a small army to Constantinople, where he was crowned emperor, probably at Easter 1240. On his way to the capital, Baldwin made an alliance in Bulgaria with the Cumans (second half of 1239). He went back to the West in 1244, traveling around to recruit further support, and returned to Constantinople in 1248. In 1249 Baldwin accompanied Louis IX to Damietta during the French king's unsuccessful attempt to conquer Egypt. During that time, his wife Marie visited Cyprus and France, where she spent several years, in order to seek financial support. Nine years later, the impoverished emperor was obliged to mortgage his own son Philip to the Venetian merchants John and Angelo Ferro (1258).

On the political and military fronts, the reign of Baldwin was as disastrous as the empire's financial situation. Nevertheless, in June 1241 Baldwin succeeded in obtaining a truce from John III Vatatzes, emperor of Nicaea, for a period of two years. In 1244 he renewed this truce for another year. During 1240–1243 Baldwin also tried to build up an alliance with the Saljūqs of Rūm, and in August 1243 he even asked Blanche of Castile, queen of France, to give one of her nieces in marriage to the Saljūq sultan. In May 1246 he contacted King Alfonso X of Castile in order to obtain troops for Constantinople and in August of the same year made an agreement with Don Pelayo Pérez Correa, master of the Order of Santiago, to the same effect. However, the situation changed

dramatically when after the deaths of John Vatatzes (1254) and Theodore II Laskaris (1258), the usurper Michael VIII Palaiologos became emperor of Nicaea. Michael's policy was decidedly both more shrewd and more aggressive, having as final purpose the recovery of Constantinople, to which the Frankish defeat at Pelagonia (1259) was a prelude. Michael played for time in July 1261, agreeing to another truce with Baldwin, while preparing the final onslaught. As a result, the same month (25 July), Michael's general Alexios Strategopoulos unexpectedly recaptured Constantinople. Baldwin fled via the Peloponnese to Italy, where he agreed to the Treaties of Viterbo (24 and 27 May 1267), which granted the suzerainty of the Frankish Peloponnese and other regions to Charles I of Anjou, king of Naples. Baldwin died in Sicily (October 1273). His son Philip succeeded as titular emperor (1273–1285).

Queen Blanche characterized Baldwin as a young man without wisdom or energy. Baldwin's naïveté is perhaps best illustrated by an incident in 1258, when he sent ambassadors to Nicaea, asking Michael Palaiologos to cede him Thessalonica and some other regions. But Baldwin's travels in the West and his relentless search for support from France, Castile, the Morea, the papacy, the Venetians, and even the Saljūqs and Mongols show that the last emperor of "Romania" was not entirely devoid of the tenacity of some of his predecessors.

Baldwin II of Edessa

See Baldwin II of Jerusalem

Baldwin II of Jerusalem (d. 1131)

Count of Edessa (1100–1118) and second king of Jerusalem (1118–1131).

Baldwin was a son of Hugh I, count of Rethel, and Melisende of Montlhéry, through whom he was related to many of the noble families of Ile-de-France, Champagne, the Orléanais, and Lotharingia. As Hugh is also known to have had a son called Manasses, the name traditionally given to eldest sons of the counts of Rethel, it is likely that Baldwin was a younger son; the name most commonly applied to him by contemporary chroniclers (Lat. *Balduinus de Burgo*) derived from the castle of Bourcq (dép. Ardennes, France), which may have been his portion of the family lands. In 1096 he joined the First Crusade (1096–1099), travelling in the army of his kinsman, Godfrey of Bouillon, and later took service with Godfrey’s brother Baldwin (later Baldwin I of Jerusalem), who had established himself as count of Edessa in 1097–1098, and who appointed him as his successor there when he left to become ruler of Jerusalem after Godfrey’s death (1100). Soon after his accession as count, Baldwin II married Morphia, daughter of the Armenian lord Gabriel of Melitene, by whom he was to have four daughters.

Most of Baldwin’s reign in Edessa was spent in defending the county from Turkish attacks. In 1104 he was captured by the Turks of Mosul while besieging the Muslim city of Harran; during his subsequent four-year captivity in Mosul, the county was governed by the Antiochene Normans Tancred (until late 1104) and Richard of the Principate (1104–1108), neither of whom attempted to ransom him. Baldwin’s release in 1108 was secured through the efforts of his cousin and vassal Joscelin of Courtenay, lord of Turbessel. However, his restoration to Edessa only came about after a short but intensive war against Richard and Tancred, in which each side

enlisted the aid of Turkish allies against their Christian opponents. Hostility between Baldwin and Tancred persisted until 1110, when a reconciliation was imposed by King Baldwin I of Jerusalem. From around this time Count Baldwin was forced to abandon much of his territory east of the river Euphrates in the face of intensifying Turkish pressure; fresh strife occurred in 1112, when he accused Joscelin of Courtenay (whose lands, situated west of the river, were safer from attack) of making insufficient contributions to the defense of the county. Joscelin surrendered his fiefs and went to Jerusalem, where Baldwin I made him lord of Tiberias. In 1114 the city of Edessa itself was besieged by a Turkish army led by Aq Sunqūr al-Bursuqī, *atabeg* of Mosul, but the Turkish threat was averted through the victory of Roger of Antioch over a coalition organized by the Saljūq sultan Muḥammad at the battle of Tell Danith (14 September 1115). Baldwin used this opportunity to expand his territory through the conquest of several of the independent Armenian principalities to the north, including the strongholds of Raban, Kesoun, Bira, and Gargar (1115–1117).

By 1118 the security of the county of Edessa had been sufficiently established that Count Baldwin was able to visit Jerusalem, where he arrived to find that King Baldwin I had died while on campaign in Egypt (2 April), having named his elder brother Eustace of Boulogne as successor. However, a powerful party led by the patriarch Arnulf and Joscelin of Courtenay promoted Count Baldwin’s candidature and succeeded in having him consecrated as king on 14 April 1118. As it was possible that Eustace or one of his descendants would claim the throne at a future date, Baldwin II attempted to secure his position through new appointments within the clergy and nobility of the kingdom. He favored men originating in Ile-de-France and surrounding areas who were linked by ties of kinship and vassalage to Baldwin’s family; he rewarded Joscelin for his support by naming him as his successor in Edessa.

Much of the first half of Baldwin II’s reign was taken up with the defense of the principality of Antioch after the defeat of Prince Roger at the Ager Sanguinis (Field of Blood) in June 1119. Baldwin marched north in August, winning the victory of Zerdana against the Turks of Mardin and Damascus, only returning to Jerusalem for his coronation at Christmas. Until 1126 he governed Antioch as regent for its underage heir, Bohemund II, and led further campaigns to defend the Frankish north in 1120, 1122, and 1123. During the last of these he was captured by the Turks and

remained a prisoner until August 1124. The repeated campaigning in the north and the consequent disruption to government, as well as the granting of lordships and offices to the king's relatives and their vassals, led to opposition among the Jerusalem nobility, some of whom made an abortive attempt to depose Baldwin during his absence in favor of Count Charles of Flanders.

After his release from captivity, Baldwin devoted himself to the defense of his kingdom, undertaking major campaigns against Damascene territory in 1126 and 1129. During this time he also arranged for his eldest daughter Melisende to marry Fulk V, count of Anjou; they and their son Baldwin III (born 1130) succeeded as joint rulers on the king's death (21 August 1131). Baldwin II's second daughter, Alice, married Prince Bohemund II of Antioch, and the third, Hodierna, married Count Raymond II of Tripoli; the youngest, Yveta, who had served as a hostage for him after his second captivity, became a nun, ending her life as abbess of the convent of St. Lazarus at Bethany.

Baldwin III of Jerusalem (1130–1163)

King of Jerusalem (1145–1163) and the eldest son of Queen Melisende and King Fulk.

Baldwin was still an infant when his grandfather Baldwin II died in 1131, having arranged that Fulk would have to share power with his wife and son. As a minor, Baldwin III seems to have done nothing beyond consenting to some royal charters. The chronicler William of Tyre noted that he was well educated in history, law, and war, as befitting a future king.

When Fulk died in 1143, Baldwin III was still a minor and Melisende became his regent. Clearly Melisende wanted to retain the power she had wielded since Fulk's reign, but she could not lead troops into battle, whereas military success would strengthen Baldwin III's hand. In 1144 the young king led his first campaign, at Wadi Musa in Transjordan. Yet at the end of that year, when Zangī, ruler of Mosul, besieged Edessa (mod. Şanlıurfa, Turkey), Melisende did not allow her son to head north. Instead, she sent men loyal to her, including the constable Manasses of Hierges. The queen had already built up a party of great lords by dispensing lands, offices, and other privileges. Now these men could help her circumscribe Baldwin III's independence, even though they could not prevent Zangī from taking Edessa. Zangī's victory eventually prompted the Second Crusade (1147–1149), led by Conrad III of Germany and Louis VII of France. When these rulers arrived in Outremer in 1148, Baldwin III convinced Conrad to attack Muslim Damascus, a plan approved by the crusade leaders and Jerusalem's High Court in June of that year (although it is not clear that Melisende agreed to the proposal). The campaign failed miserably, and Damascus increasingly turned toward Nūr al-Dīn, Zangī's younger son and lord of Aleppo from 1146. Nūr al-Dīn became the foremost enemy of the Franks of Outremer, unifying Muslims under the banner of *jihād* (holy war).

Nūr al-Dīn's success contrasted markedly with power struggles in Jerusalem. Although Baldwin III had attained his majority in 1145, Melisende continued their joint rule with the support of her younger son Amalric, the higher clergy, and several great lords. Baldwin had some lesser nobles on his side, and he had to help both Antioch and the last Christian strongholds in Edessa. From 1149 until 1152, Outremer had to face the problems posed by Nūr al-Dīn and essentially separate governments in Jerusalem run by the queen mother and the young king. Matters came to a head at Easter 1152, when the king forced Melisende to give up her formal role

in government and retire to her lands in Nablus. In the following years, according to William of Tyre, Baldwin became undisputed overlord of all Outremer. Count Joscelin II of Edessa was captured by the Turks in 1150, Count Raymond II of Tripoli was murdered in 1152, and Princess Constance of Antioch, widowed in 1149, did not remarry until 1153. The king headed north when danger threatened, simultaneously trying to prevent attack from the south by building a castle at Gaza. In 1153 he was finally free to besiege Ascalon. His victory after a nine-month siege brought vast amounts of plunder into the kingdom and toppled the last Fāṭimid stronghold in Palestine.

Baldwin III now set his sights on Egypt, although Nūr al-Dīn's annexation of Damascus in 1154 and his subsequent attacks on the kingdom prevented an Egyptian campaign. Yet it seems likely that the king did not give up his designs there. He came to terms with the Byzantine emperor Manuel Komnenos after Reynald, the new prince of Antioch, and T'oros of Armenia attacked Byzantine-controlled Cyprus in 1156. By 1157, the rulers agreed that Baldwin III would allow Manuel to punish Reynald, while Manuel would lend aid against Nūr al-Dīn. Manuel also provided his niece Theodora, along with a rich dowry, as queen; the marriage took place in 1158. Manuel himself traveled to Antioch, where he humbled Reynald and treated with Baldwin III. Then Manuel made a truce with Nūr al-Dīn. These arrangements among Jerusalem, Byzantium, and Aleppo changed the balance of power in the eastern Mediterranean. Nūr al-Dīn no longer had to fear an imperial attack and in return promised to aid Manuel against the Saljūq Turks. Manuel also managed to exert influence over northern Syria for about twenty years, which would not have been possible if Nūr al-Dīn had not threatened the Latin Christians. In this new situation, neither Christians nor Muslims could wipe the other out.

Despite heightened imperial claims over Antioch, the status quo did not change, at least for the chronicler William of Tyre. For him, Baldwin III was still undisputed sovereign over all Outremer, and the chronicler carefully preserved this portrait. William's description of the meeting between Baldwin III and Manuel at Antioch demonstrated that they were equals. Thus when Manuel sought a wife in 1161, but ultimately rejected the candidate named by Baldwin, William downplayed the incident. Even in death, the king stood alone. Taken ill in Tripoli, he insisted on being carried within his own borders before he died childless on 10 Feb-

ruary 1163. He was succeeded by his brother Amalric, count of Jaffa and Ascalon.

William of Tyre described Baldwin's funeral in more grandiose terms than he employed for any other king of Jerusalem. William of Tyre's magnificent narrative provides more information about Outremer than any other extant source, yet the chronicler's fundamental purpose—the successful continuation of holy war—greatly shaped the way he represented Jerusalem's kings and their activities. William depicted Baldwin III as the focal point of power amongst all of the Frankish states in Outremer; he also saw Baldwin III as the greatest king Jerusalem ever knew. However, this meant that later kings could only represent a decline. Neither Amalric nor Baldwin IV could match Baldwin III, and someone from outside the royal family would have to step in if Outremer were to survive. The pattern William imposed on kings of Jerusalem required him to jettison the royal line in the end, since he cared more about Outremer's existence than about its ruling family.

Baldwin IV of Jerusalem (1161–1185)

King of Jerusalem (1174–1185); known as the Leper King.

Baldwin was born in early summer 1161, the son of Amalric, then count of Jaffa, and his first wife, Agnes of Courtenay. Although Amalric's marriage was annulled when he became king in 1163, Baldwin and his sister Sibyl were legitimized by Pope Alexander III. In 1170 the chronicler William of Tyre was appointed Baldwin's tutor and observed that the prince suffered from a loss of feeling in his right hand and arm. Although leprosy could have been considered as a possible cause, there would have been no visible symptoms during Baldwin's childhood, so no positive diagnosis could have been made then. When King Amalric died, Baldwin was thirteen, and he was crowned king on 15 July 1174. At first the seneschal Miles of Plancy ruled in Baldwin's name, but when Miles was assassinated in October 1174, the High Court of the kingdom appointed Amalric's cousin Raymond III of Tripoli as regent. Because of these crises in Jerusalem, Saladin, ruler of Egypt, was able to annex Damascus without any opposition from the Franks. In 1175 Raymond made peace with Saladin, thus leaving him free to make further gains in Muslim Syria. Consequently Outremer faced the prospect of encirclement by a single Islamic power.

Baldwin assumed direct rule in the summer of 1176 at the age of fifteen. He was beginning to show the symptoms of lepromatous leprosy, perhaps triggered by the onset of puberty: his hands and feet and face were disfigured by nodules. Because of his illness, Baldwin could not marry, and his mother, Agnes of Courtenay, took on the role of queen mother and became an influential member of his court. The king's chief advisers were his uncle, Joscelin III of Courtenay, who was made seneschal, and Reynald of Châtillon, former prince of Antioch. Baldwin was alarmed by the growth of Saladin's power and refused to renew the peace that Raymond III of Tripoli had made with him when regent. Whenever his health permitted, the king took an active part in the wars that followed. Despite his disabilities, he was a skilled rider, and he had been taught to fight left-handed. On 25 November 1177 his forces inflicted a crushing defeat on Saladin's invading army at the battle of Mont Gisard, at which Baldwin was present, and during which he relied heavily on the military expertise of Prince Reynald.

In 1176 Baldwin's sister Sibyl had married William Longsword, son of William V of Montferrat, a union arranged by Raymond of Tripoli while regent. However, William died a few months later, leaving his wife pregnant. Their posthu-

mous son was called Baldwin after the king, and the succession was thus assured, but it was essential that Sibyl should marry again so that a new husband could take over the government when the king became too ill to rule. In 1179 Hugh III, duke of Burgundy, agreed (with the assent of King Louis VII of France) to resign his duchy to his son and come to Jerusalem to marry Sibyl. In Holy Week 1180, before Hugh's arrival, the king's cousins Bohemund III of Antioch and Raymond III of Tripoli invaded the kingdom with an army, intending to depose Baldwin and marry Sibyl to a husband of their choice. The king outwitted them by arranging Sibyl's marriage to the French nobleman Guy of Lusignan, who was present in Jerusalem, before his cousins reached the city. This decision, made without consulting the High Court, caused resentment in the long term, but frustrated the attempted coup. Baldwin then arranged a two-year truce with Saladin and used the time to try to restore unity among the Franks.

When the truce expired in 1182, Saladin launched a series of attacks on the kingdom but met with determined opposition and withdrew his forces to campaign against the Zangid princes of Iraq. During his absence Baldwin led a raid on the desert city of Bosra, during which he recaptured the great cave fortress of Cave de Suète east of the Jordan. During 1183 his health deteriorated severely: the leprosy attacked his hands and feet so that he could no longer ride, but had to be carried in a litter, and he became functionally blind. Saladin returned to Damascus in August 1183 and prepared to invade Galilee. Baldwin mustered the host there but ran a high fever and could not accompany it, so he appointed his official heir, Guy of Lusignan, as his regent. The host under Guy's command did not offer battle, and Saladin's forces were free to plunder at will. Nevertheless, because the Frankish army was undefeated, Saladin had no option but to withdraw to Damascus, having made no territorial gains.

Although Guy's strategy had been effective, Baldwin was informed that he had only adopted it because many of the crown vassals refused to obey his orders. The king considered this too dangerous a situation to tolerate, and he convened the High Court, dismissed Guy as regent, and resumed power himself. In order to bar Guy from the succession, Baldwin had his five-year-old nephew Baldwin (V) crowned as co-king. Saladin attacked Prince Reynald's chief castle, Kerak, at this time, and the king accompanied the host in his litter to aid the defenders. As the royal army approached, Saladin's forces withdrew. Baldwin then tried to have the marriage of Sibyl and Guy annulled, but they refused to cooper-

ate and withdrew to Guy's county of Ascalon, where they defied the king. For most of the year 1184, Baldwin lived in seclusion; his uncle, Joscelin the Seneschal, ruled in his name. Early in 1185 he developed a high fever that proved fatal. He summoned the High Court to his deathbed and on its advice appointed Raymond III of Tripoli as regent for the eight-year-old co-king, Baldwin V, to whom the crown vassals did homage. Baldwin IV died before 16 May 1185 and was buried in the Church of the Holy Sepulchre at the foot of Mount Calvary, the most holy place in Christendom, which he had spent his life defending.

Baldwin V of Jerusalem (d. 1186)

The son of William Longsword of Montferrat and Sibyl, daughter of King Amalric of Jerusalem, co-ruler with his uncle King Baldwin IV (1183–1185) and sole king until his premature death (1185–1186).

Born in the winter of 1177–1178, for most of his short life the young Baldwin V was a pawn in factional struggles during the last days of the kingdom of Jerusalem before its overthrow by Saladin in 1187. By 1178, Baldwin IV had desig-

nated his sister Sibyl and her family as heirs apparent. In 1183, he named Sibyl's second husband, Guy of Lusignan, as regent, but then removed him and had the child Baldwin V crowned as an indication that Guy had been barred from the succession. Before Baldwin IV died (1185), he named Count Raymond III of Tripoli as regent for Baldwin V, again to prevent Guy from claiming authority over his stepson. However, Baldwin V's unexpected death in 1186 again threw open the question of the succession.

Baldwin VI of Hainaut

See Baldwin I of Constantinople

Baldwin IX of Flanders

See Baldwin I of Constantinople

Baldwin of Aulne (d. 1243)

A Cistercian monk from the abbey of Aulne in Flanders who acted as papal representative in the Baltic countries in 1230–1234, having been sent to resolve the dispute about the succession to the bishopric of Riga that had arisen after the death of Albert of Buxhövdén. His activities, however, went beyond this task, and he negotiated a settlement for the conversion and subjection of the pagan Curonians. Yet because this agreement conflicted with the interests of the town of Riga, the Order of the Sword Brethren, and Nicholas, the new bishop of Riga, opposition to Baldwin gained ground. In 1232 Baldwin secured support for his actions at the court of Pope Gregory IX. He was named bishop of Sempgallia, given authority over northern Estonia, and nominated as papal legate for Gotland, Finland, Estonia, Curonia, and Sempgallia, but on returning to Livonia in 1233, he was unable to find sufficient support among the various crusader institutions. The conflict took an especially violent turn in Reval (mod. Tallinn, Estonia), where many of the supporters of Baldwin

Baldwin of Marash (d. 1146)

were killed by the Sword Brethren. Baldwin left the country forever, and the duties of papal legate passed to William of Modena, who managed to settle the disputes. In 1236 Baldwin gave up the title of bishop of Sengallia.

Baldwin is one of the most controversial figures in scholarship on medieval Livonia. Although his exact aims remain unclear because of the lack of sources, they could be characterized as an (unsuccessful) intervention in Livonian affairs under papal authority.

Baldwin of Courtenay

See Baldwin II of Constantinople

Baldwin of Marash (d. 1146)

Lord of a powerful Franco-Armenian principality centered on the town of Marash (mod. Kahramanmaraş, Turkey) in eastern Cilicia from around 1136. Baldwin was probably a brother or half-brother of Raymond of Poitiers, prince of Antioch. In 1146 he died in the unsuccessful attempt of Count Joscelin II of Edessa to recapture the city of Edessa from Nūr al-Dīn. His life was commemorated in a funeral oration by his Armenian chaplain Basil, who emphasized his fluency in the Armenian language and attachment to Armenian customs.

Balearic Islands

The Balearic Islands (Sp. Islas Baleares) were the commercial crossroads of the western Mediterranean and, whether

under Muslim or Christian domination, were coveted by a wide variety of people from the Mediterranean littoral. In the late Middle Ages, Mallorca’s merchants were as aggressive and acquisitive as any in Europe; its Jewish quarter, until the riots of 1391 and the community’s destruction in 1435, was large, prosperous, and renowned, especially for its cartographers, such as Abraham Cresques; and although its importance as an intellectual center was not on a par with its strategic and commercial importance, it was by no means a cultural backwater. The mystic and philosopher Ramon Llull was born on the island around 1232, learned Arabic from one of his Muslim slaves, assisted the Franciscans in founding a college at Miramar for the training of Christian missionaries, and wrote many of his several hundred Catalan (and apparently Arabic) works while resident there.

The Islands under Muslim Rule

The Balearic Islands form, geologically speaking, two separate groups of islands: a western group, the Balearics proper, comprising Mallorca (Majorca), Menorca (Minorca), and Cabrera; and an eastern group, the Pitusians, comprising Ibiza (Eivissa), Formentera, and nearby islets. The island of Mallorca, equidistant from Barcelona and Valencia at some 160 kilometers (100 mi.) from the Iberian coastline, occupies over three-quarters of the total landmass of the Balearics. Mallorca’s dominant physical feature is 300 kilometers (c. 188 mi.) of coastline, with several notable bays in the north and south and a number of other serviceable ports, as well as a scenically stunning northwest coastline where a chain of mountains falls steeply into the sea.

Many of the qualities and elements that made Mallorca attractive in the medieval and modern worlds were no less apparent in the ancient world, and evidence points to considerable penetration by Greek and Phoenician traders. All the islands were under Roman domination by 123 B.C., and the Vandals and subsequently the Byzantines left their marks. The most lasting mark for the medieval world was made in 902 (the same year that Sicily was conquered by Muslims from Tunis) when troops of the emir (later caliph) of Córdoba conquered the island. After the collapse of the caliphate, Mallorca was joined politically with Cartagena, Murcia, Alicante, and Denia to form one of the more than twenty independent Islamic states (the so-called Taifa kingdoms) then present in al-Andalus (Muslim Spain). The emirate of Denia achieved considerable notoriety under Mujāhid (d. 1045), who attracted considerable talent to his court and

The Kingdom of Mallorca and the Crown of Aragon

raided Sardinia. For a brief period (1075–1115) after the end of the Denia emirate, the Balearic Islands constituted an independent Islamic state, two of its rulers even minting coins. In 1109 the islands successfully fended off Norse crusaders on their way to the Holy Land, but they were captured by a crusade consisting of forces from Pisa and Catalonia in 1114–1115, which, however, did not attempt to hold its conquests and withdrew.

Muslim control was reestablished in 1116 under the Banū Ghāniya family, who ruled in the name of the Almoravids. At mid-century, when political hegemony in Muslim Spain passed from the Almoravids to the Almohads, yet another North African Berber tribe, the Ghāniya, along with independent peninsular rulers such as Ibn Mardanish (d. 1172), resisted; and in 1185 the Ghāniya attacked and captured Bejaïa (Bougie) and Algiers in North Africa. The Almohads, however, conquered Mallorca in 1203, and the final years of Muslim domination were under a *wāli* (governor) appointed from Marrakesh. Mallorca was a thoroughly Islamic state, inhabited by Muslims, with its dominant land-use patterns and human geography thoroughly Islamic; when the Pisans and Catalans arrived for their brief stay in 1114–1115, although they found an Arabized Jewish population living among the Muslims, they found no remnants of Mozarabs, or native, Arabized Christians living under Muslim rule. There can be little doubt that the vicissitudes of political leadership and the collapse of Almohad power, following the Almohads' surprising defeat by Christian crusaders at the battle of Las Navas de Tolosa in 1212, offered propitious conditions for that rarest of overseas Christian crusades: a successful one.

The Aragonese-Catalan Conquest

The definitive Christian conquest of Mallorca took place in the years 1229–1232. James I, king of Aragon, count of Barcelona, and lord of Montpellier, won fame throughout Christendom and earned his sobriquet *el Conqueridor* (the Conqueror) by his conquests of Islamic Mallorca and Valencia. James was five years old when his father Peter II, a hero at Las Navas de Tolosa, fell on the battlefield at Muret (1213) in Occitania fighting the forces of the Albigensian Crusade (1209–1229), and James's minority was both protracted and difficult. When he summoned the Catalan *corts* (parliament) to Barcelona in December 1228, announced his intention to conquer Mallorca, and was granted an extraordinary *bovatge* (a general tax, normally granted only once to a monarch upon ascension to the throne), these events

marked James's coming of age and his recovery from an earlier failed attempt to conquer Penyscola.

The Mallorcan crusade was enthusiastically sanctioned by Pope Gregory IX; as early as 1203 his predecessor Innocent III had promised to establish a new diocese upon conquest. The crusade was preached and partially financed by international crusade mechanisms and led by the papal legate Cardinal John of Abbéville, who offered crusade indulgences to all who took the cross. It included troops and galleys from the archbishop of Tarragona, the bishops of Barcelona and Girona, and the abbot of San Feliu de Guixols. The most detailed primary account of the conquest is found in the *Libre dels Feys* of James I, the first known autobiography by a European Christian monarch. The fleet of 150 ships and force of 1,300 knights made this the largest single military campaign mustered by the Crown of Aragon in the thirteenth century. The fleet set sail from Cape Salou on 5 September 1229 and arrived at what is today Sant Elm on the southwest coast a few days later. Part of the force disembarked with the king at Santa Ponça on 11 September, and won a costly battle at Coll de Sa Batalla the next day, while the rest of the fleet proceeded to Porto Pi and fought Muslims there on 13 September. By 15 September the city of Mayurqa (mod. Palma de Mallorca) was under siege by land and sea, and on 31 December the crusaders successfully stormed the walls in a bloody assault that led to widespread slaughter and enslavement of Muslims. By the spring of 1230 all of the eastern sections of the island had been overrun, save Cabo Ferrutx in the north, incorporated the following spring in 1231, and the castle of Santueri, not taken until the autumn of 1231. In the northern sierra between Sóller and present-day Lluch, the Muslims held off the crusaders until June 1232, when they were finally subjugated. In June 1231, before final operations in the mountainous regions of Mallorca, James led a small fleet to Muslim Menorca, which agreed to pay tribute and homage to its new neighboring sovereign.

The first major act of James was to oversee the division of spoils. By right of conquest the king received half the land of the island: principally Montuiri in the southeast, Sineu and Petra in the center, Artà in the northeast, and Inca, Muntanyes, and Pollença in the north. He also took half of the houses, workshops, ovens, and baths in Mallorca City. The *repartiment* (land division) that survives describes the subdivision and distribution of this royal half. The major beneficiaries of royal largesse were nobles such as Ramon Aleman, Ramon de Plegaman, Guillem de Claramunt, and

surviving scions of the Montcada family; citizens of Barcelona, Marseilles, Tarragona, Lleida (Lérida), and Montpellier, who received farms in the countryside and houses and shops in the city; and religious orders, especially the Templars, who were endowed with land in Mallorca City and in Inca and Pollença. The royal distribution was primarily to a large number of small proprietors. Little is yet known about the subdivision of the seigneurial lands that comprised the other half of the island. Nunyo Sanç, lord of Roussillon and Cerdanya, was given Bunyola and Valldemossa in the northwest and Manacor in the east; the count of Empúries (Ampurias) received Muro in the northeast, and part of Sóller in the northwest; the bishop of Barcelona was given Andratx in the southwest corner of the island; and the viscount of Béarn obtained Canarossa in the center of the island, including the key castle of Alaró.

More complex than the military enterprise that seized the island or the politics dictating division of spoils was the government of the island, the importation of Christian settlers and institutions, and the transformation of this Islamic frontier. A key role was played by the church, especially by the pope, Gregory IX, who renewed indulgences, and eventually established Mallorca as an independent diocese, that is, not under a metropolitan but directly subject to the Holy See. James I, for his part, saw his opportunities on the Peninsula following the precipitous collapse of Almohad power. He pawned off many of his Mallorcan rights to Prince Peter of Portugal, granted the right of conquest for Ibiza and Formentera to him and to Nunyo Sanç, and reallocated this right in early 1235 to Guillem de Montgrí, sacristan of Girona cathedral and archbishop-elect of Tarragona; then he resolutely turned his attention from Mallorca to his lifelong project of conquering and settling Valencia.

Peter of Portugal eventually exchanged his Mallorcan lordship for a fief in Valencia, and when James's firstborn heir died in 1260, the royal patrimony was divided in two: his son Peter III was to receive Valencia, Aragon, and Catalonia, while his son James was to receive the Balearic Islands, Roussillon, Cerdanya, and Montpellier. On the death of James I (1276), James II became king of Mallorca, though he was forced to pay homage to his brother in 1279. In 1285 James II took sides against his brother by giving support to French invaders; these had the status of crusaders, owing to the Aragonese role in the uprising known as the Sicilian Vespers, which expelled the Angevin dynasty from Sicily. Thereupon Peter III vowed to conquer the Balearic Islands in retal-

iation, but fell ill and died shortly after setting out from Barcelona in November 1285. His heir Alfonso III continued the expedition, and the city of Mallorca surrendered within days, as did Ibiza, though nominal resistance continued for years. In January 1287 Alfonso conquered Menorca, enslaved the majority of the Muslim population there, which the chronicler Ramon Muntaner, describing the whole adventure, inflates to 40,000, and thereafter styled himself king of the Balearic Islands. In 1298 James II of Aragon, successor to Alfonso III after 1291, returned the Balearics to James II of Mallorca, who had held on to his southern French lands, which he ruled from his royal palace at Perpignan. This was done at papal insistence and as part of the agreement that brought the War of the Sicilian Vespers to a close. Mallorca's greatest period of prosperity dates from after 1298, when the kingdom was ruled by James II for the second time (1298–1311) and his successors Sancho (1311–1324) and James III (1324–1343), before it was permanently reincorporated into the Crown of Aragon by Peter IV of Aragon.

Institutions, Economy, and Society

None of the political, diplomatic, and constitutional upset and oscillation hampered Mallorca's colonial progress; the reasons for this remain to be detailed, but the confined space of the island, the active role of the church, the peninsular successes of the crusades (almost the diametric opposite of the failures in the East), and a brutal colonialist regime characterized by slavery and apparently much conversion were certainly contributing factors, as were Mallorca's demographic growth and economic development. By the early fourteenth century, the much-travelled writer Ramon Muntaner considered Mallorcans among the most prosperous peoples anywhere. In addition to Mallorcan consulates being located in ten North African ports, they are found in the early fourteenth century in Seville, Málaga, Naşrid Granada, Naples, Pisa, Genoa, Constantinople, and Bruges. Figs, raisins, honey, almonds, and olive oil were exported from Mallorca, as were cheese from Menorca and salt from Ibiza; slaves were both exported from and imported to all three islands in great abundance. During the reign of James II, Mallorca began minting its own coinage, including gold coins later at Perpignan. James also laid the foundations for or reorganization of eleven inland towns on the island, which he hoped would encourage agricultural development and the production of raw wool for Mallorca's fledgling textile industry.

Balian of Sidon (d. 1240)

Mallorcan enthusiasm for crusading activity remained high throughout the Middle Ages. It was the papacy, in recognition of one of the causes for failure in the East, that accorded crusading status to settlers and acknowledged work that consolidated military conquests. In the thirteenth and early fourteenth centuries, Mallorcans participated aggressively in the never-ending “crusade” at sea between Christendom and Islam. But over time Mallorcan energies were increasingly devoted to fortifying and defending their coastline. Mallorcans were well aware of Ottoman prowess at sea, and villages were occasionally attacked by raiders from the sea as late as the sixteenth and seventeenth centuries. Mallorcans were, for strategic and commercial reasons, covetous of the North African coast. They followed with enormous interest the Mahdia Crusade of 1390; the designs on North Africa of Alfonso V “el Magnánimo” (1416–1458), the Aragonese king of Naples; and the designs on and conquests in North Africa of Ferdinand II of Aragon (1474–1516) after completion of the Granadan crusade of 1492. Two little-known, almost “lost” crusades were joint ventures by Valencians and Mallorcans. In 1398 the latter outfitted thirty-nine ships, including five galleys, and were led in their failed attack on Tedellis in North Africa (located almost due south of Menorca) by Viceroy Hug de Anglesola, who died in the operation. Nevertheless, in the following year, 1399, a joint Valencian-Mallorcan flotilla, the Mallorcans under the command of Berenguer de Montagut, sailed against Bona (located farther east along the African coast, almost due south of Sardinia), with almost equally dismal results, a fact contributing no doubt to the obscurity of the operation. The conquest and successful colonization of Mallorca had already secured its prominence in crusading annals.

Balian of Sidon (d. 1240)

Descended from the twelfth-century lords of Sidon, Balian was born around 1198, the son of Reynald of Sidon and Helvis of Ibelin, and was thus the nephew of John of Ibelin, the “Old Lord” of Beirut.

In the early 1220s Balian was a trusted adviser of John of Brienne, king of Jerusalem, and when John’s daughter Isabella II married Frederick II, Holy Roman Emperor and king of Sicily, in 1225, he was a member of the party that accompanied her to the West. The German crusaders of 1227 succeeded in restoring Sidon (mod. Saïda, Lebanon) to full Christian control, and on Frederick II’s arrival in the East in 1228, Balian, unlike his Ibelin kinsmen, cooperated with him. Frederick appointed him as his lieutenant in the kingdom of Jerusalem, and at the emperor’s behest he then attempted to confiscate his kinsmen’s fiefs. It would appear that it was only after the arrival of Frederick’s Italian commander, Richard Filangieri, in the East in 1231 that Balian joined the opposition to the Staufien regime. An accomplished lawyer, Balian survived the battle of Gaza in 1239, dying the following year.

Baltic Crusades

General term applied to a series of expeditions aimed at the conquest and conversion of the lands on the southern and eastern coast of the Baltic Sea (Prussia, Livonia, Finland, and Lithuania) from the late twelfth century up to the Reformation.

The peoples living along the Baltic coasts had once all been pagans, but although the Scandinavian Norse gods were not identical to the deities worshipped on the eastern shores, these different religions nevertheless had significant characteristics in common. Most importantly, they endorsed a militaristic ethos based on feuds, pirate raids, and overland attacks upon weaker peoples, and the incomes thus generated supported local economies. When Scandinavian monarchs accepted Christianity and brought an end to the freebooting era, ethical concerns may have been less important than the desire to prevent the rise of charismatic competitors for power. The tribes on the eastern shore, in contrast, were insufficiently organized for powerful nobles to make themselves kings; hence, those tribes continued the traditions of piracy and raiding until crusaders put an end to their activities.

Origins, Aims, and Motivation

The first efforts to convert the pagans to Latin Christianity were made by Scandinavian, German, Polish, and Bohemian missionaries in the eleventh and twelfth centuries. These efforts failed, partly because the pagan priests feared competition, partly because an organized church needed the financial contributions of the entire community, especially if the churchmen were to assume responsibility for protecting converts from attack by neighboring tribes. Although taxes were the people's most obvious objection, they also considered subjection to any lord, local or foreign, abominable. Pagan unwillingness to adopt the feudal practices that would organize their societies for war put them at a great disadvantage in any combat with Western knights, who possessed not only technology and military expertise far superior to those of the tribal elders but also impressive administrative and leadership skills.

Crusaders from Gotland and Saxony came to Livonia in the late twelfth century, and within a quarter of a century they had conquered most of what is today Latvia and Estonia. Scandinavians were also active, with Swedes pushing east into Finland, and King Valdemar II Sejr of Denmark (1170–1241) conquering Reval (mod. Tallinn) and most of northern Estonia. One military order, the Sword Brethren,

provided a permanent occupation force through the long winters after the summer fleets of crusaders to Livonia had sailed home. The Sword Brethren soon acquired the knowledge of the land, the native languages, and customs, as well as the ambition, to make themselves independent or superior to the newly established bishops in Riga, Dorpat (mod. Tartu, Estonia), and Leal (mod. Lihula, Estonia). Their ambitions extended to the conquest of Lithuania and Russia, but those efforts met military defeats at the battles of Saule (1236) and Lake Peipus (1242). In 1237 Pope Gregory IX approved the absorption of the Sword Brethren into the Teutonic Order, but it was several years before this was accomplished. Thereafter the members of the Livonian branch of the order cooperated with the Prussian master and acknowledged being subordinate to the grand master; however, they refused to surrender their autonomy completely. The Teutonic Knights had been founded as a hospital order during the Third Crusade (1189–1192), and in 1198 were reorganized as a military order, but they were never as important in the Holy Land as the Templars and Hospitallers. Instead, the order found its true calling in the Baltic, making war against the enemies of the Roman church: pagan Baltic and Finnic peoples and Orthodox Russians.

The motives of those who organized the crusades and those who participated in them were decidedly mixed. Some wanted only to open the country to missionaries, others to protect converts; some wanted to acquire new lands and to extend their dioceses; yet others—especially the many burgesses who took the cross—wanted to open new markets, eliminate piracy, and reduce highway robbery. Some were doubtless in search of adventure, others of winning renown and honor; a few probably just wanted to get away from home. They rarely considered the rights of the native peoples for long; certainly they did not grant them the right to choose paganism as a religion, since that would condemn their souls to hellfire; and those who saw the corpses and burned villages left behind by pagan raiders had reason to consider the perpetrators as the personification of evil. As for the misdeeds of the crusaders, their armies were not populated with saints, and many atrocities were committed by native converts taking revenge for long years of oppression by their neighbors. Lastly, who was to quarrel with the popes, who urged true believers to take up the cross in defense of their faith, and who awarded crusaders the same spiritual benefits as those who made the far more expensive and arduous journey to the Holy Land?

The Baltic region

The Teutonic Order in Prussia and Livonia

The Teutonic Order had enjoyed such great popularity in Germany under the direction of Grand Master Hermann von Salza (1210–1239) that it had more knights and money than could be employed usefully in the Holy Land. Consequently, when Conrad, duke of Mazovia in Poland, asked for assistance against pagan Prussians who were raiding his lands in retaliation for his efforts to conquer them, in 1228–1230 the grand master sent a handful of knights to fight alongside Polish and German volunteers. When the other crusaders went home, the order garrisoned castles at Thorn (mod. Toruń, Poland) and Kulm (mod. Chełmno, Poland). With the help of regular crusading expeditions, they worked their way north, then eastward along the coast, until in 1254, King Ottokar II of Bohemia led a great army into the province of Sambia and overawed pagan resistance; in the monarch's honor the Teutonic Knights gave the name Königsberg (mod. Kaliningrad, Russia) to their great fortress on the Pregel River. By the end of the century they had conquered the last Prussians and begun attacks on the Lithuanians. This new war was to be much more difficult, since the Lithuanians were harder to reach, more numerous, and better organized and were already expanding into Russia and Russian areas claimed by Poland.

Throughout the thirteenth century Polish crusaders had supported the crusades against these pagans, at first serving in Prussia, later applying pressure from Mazovia. Royal authority, however, had never been strong, and real power had already come into the hands of regional dukes when the Mongols invaded in 1241 and sacked Kraków; afterward, while the dukes concentrated on their own mutual jealousies, the Teutonic Knights began recruiting German lords, knights, and burgesses for their periodic offensives. As was the case in Livonia, crusading armies were most effective in the winter, when the lakes, rivers, and swamps were frozen, but it was easiest to recruit volunteers for summer campaigns. In 1294 the last duke of Pomerelia (later West Prussia) died, leaving his lands to the duke of Great Poland, who, unable to take effective possession, left governance to the most prominent local lords; these lords swore allegiance to each of the claimants to the Polish Crown who rapidly succeeded one another. When Władysław I Łokietek became ruler of Poland in 1306, he made his new vassals aware that they had made a serious mistake in having supported his rivals. In 1308 the duke of Brandenburg, the overlord of Pomerelia, responded to the vassals' appeals for help by

sending armies to seize the principal towns. Władysław I, distracted by more pressing matters, asked the Teutonic Order to drive away the Brandenburg forces. After the Prussian master had done so, he presented Władysław I with a bill for services rendered (10,000 marks), which Władysław refused to pay; the order then purchased the Brandenburg rights for the same price. Since possession of West Prussia guaranteed crusaders safe passage to East Prussia, the order decided to hold on to that land no matter what objections the Poles raised; and when the grand master transferred his headquarters to Prussia in 1309, it was evident that the order was making the lands along the southern Baltic coast into a very unusual clerical state.

In addition to its own mainly German knight brothers and men-at-arms stationed in regional convents, the Teutonic Order could rely on secular knights and gentry in several provinces, particularly West Prussia and the episcopal territories, which included many individuals whose mother tongue was Polish. It also had native knights of Prussian ancestry and native militias led by officers of the order, as well as urban militias. The order promoted agriculture and commerce, permitted burgesses and secular knights a limited voice in government, and made merchants from the Hanseatic League welcome in its ports. Immigration was encouraged, but only into the cities or into rural areas that had been depopulated by war or never settled. The knights oversaw law and order, economic activity, and military preparedness, but it would be a mistake to see them as early modern bureaucrats. Their role in religion was minimal—that they left to the bishops, most of whom were priests of the order and could therefore be more or less trusted; and they did no missionary work at all—that was the duty of the preaching orders, most importantly the Dominicans. Almost all their subjects understood that peace and protection were more important than sharing in government, and therefore they did not demand a greater role in making decisions until the fifteenth century, when the grand masters exacted ever higher taxes without being able to defend their citizens from attack. Besides, the order's army was masterfully equipped and led.

The Crusade against Poland, Lithuania, and Russia

When the Prussian master took Danzig (mod. Gdańsk, Poland) in 1308, his troops slew many citizens of that German-speaking community; Polish propagandists quickly exaggerated this into a massacre of several times the popu-

lation of the city and appealed to the pope to punish the Teutonic Knights and return the territory to the king of Poland. Investigations into this matter and the conflicts of the Livonian masters with the archbishop and citizens of Riga would last for decades and serve to justify claims on the order's territories for many more decades to come.

The suppression of the Order of the Temple in 1312 was the culmination of a five-year process that frightened all the military orders. Since many observers had concluded that the Templars had failed in their obligation to maintain a foothold in the Holy Land, were arrogant toward their betters, and were more interested in a comfortable life and money than in religious services and warfare, they thought the suppression was deserved. It would be easy to transfer those opinions to the Teutonic Order, about which they knew less.

There were two important Christian enemies of the Teutonic Order. The most dangerous, the kingdom of Poland, claimed Danzig and Pomerelia on the somewhat shaky historical argument that these were a traditional part of the kingdom, as well as on the better grounds that they were in the diocese of a Polish bishop, that they paid Peter's Pence, and that the last will of the deceased duke had named the Polish ruler as his heir. Władysław I, however, went beyond the immediate issue to claim the province of Kulm as well, and thus implicitly all of Prussia. That may have been a bargaining chip in the beginning, but once it had been put on the table, public opinion prevented him from doing anything short of playing it to the end. The order's second foe was the archbishop of Riga, who was spokesman for the citizens of Riga in a long-running dispute with the Livonian branch of the order, and who brought in Lithuanian pagans as a garrison. Although the immediate issues concerned trade with the Lithuanian enemy and travel on the Dūna (Latv. Daugava; Russ. Dvina), the fundamental problem was the order's desire to organize all of Livonia's resources in support of the crusade. The Livonian knights were doubtless arrogant, ruthless, and unsympathetic to the interests of the burgesses and the prelate, but a careful reading of the records shows that their enemies were ambitious, unfair, and mean-spirited as well. In these and other conflicts, the order's tactics were to refuse cooperation with the papal legates sent to investigate the matters, and then to concentrate all its formidable resources at the papal court, where there were experienced men who understood the realities of power and who would be reluctant to destroy a valuable arm of the

church militant. This tactic was a practical means that avoided placing the fate of the crusade in the hands of individuals who might well be biased or ambitious, but it was ruinous in the court of public opinion, both in the minds of contemporaries and among modern historians, who accept with few questions the highly prejudiced testimonies collected by the legates. The Teutonic Knights were aware of the dangers of not responding to the charges, but they were better at war than debate, and were too mindful of their sorrowful past experiences with energetic and ambitious churchmen to trust any of them. Similarly, the Teutonic Knights mistrusted secular rulers, particularly those with a claim on their lands, Władysław I of Poland especially. His reputation was less than saintly even among his countrymen, but he was masterful at handling political propaganda and ruthless in his employment of intrigue and force. Even more resourceful and dangerous was Gediminas, grand duke of Lithuania (1316–1341), a pagan who raised diplomacy to new levels of sophistication and duplicity. Seated in the middle of competing powers—Russia, Poland, the Golden Horde, and the Teutonic Order—Gediminas knew their strengths and weaknesses and how to play them against one another. In 1322, for example, he allowed the papacy to believe that he was ready to convert to Roman Catholicism. The Teutonic Knights, who knew better, learned that arguments to the contrary only made them appear to be lacking in goodwill and faith.

As Poles changed from crusader allies to enemies, the grand masters looked about for replacements. At first they recruited important lords from the Holy Roman Empire, John of Luxembourg, king of Bohemia, being the most important. Upon John's death, however, this strategy ceased to work, since his more practical son, Charles IV, king of Bohemia and Holy Roman Emperor, was fully occupied with German and Bohemian affairs. It was at this time that Grand Master Winrich von Kniprode began to recruit French, Burgundian, Netherlandish, English, and Scottish knights for forays (Ger. *reysen*) into Samogitia and Lithuania. Although the rationale for these campaigns was the defense of Christendom, their form was increasing chivalric values and noble display. The figure of the Knight in the *Canterbury Tales* was portrayed by Geoffrey Chaucer as a participant, honored three times as the most valiant warrior present. Contemporaries understood that this was a high honor indeed, generally reserved only for the highest nobility of Europe (who were expected to pay the banquet costs).

Battle of Tannenberg (Grunwald), in which a Polish-Lithuanian army, led by King Władysław II Jagiełło of Poland, defeated the knights of the Teutonic Order, 1410. By Jan Matejko (1838–1893), National Museum, Warsaw, Poland. (Erich Lessing/Art Resource)

This *Ehrentisch* (Table of Honor) was very popular, and squires flocked to the crusade hoping to be dubbed at this ceremony and thus obtain knightly status in a prestigious event at relatively low cost.

The Teutonic Order's patron was St. Mary. It thus combined the most popular religious trend of the era, the veneration of the Virgin, with chivalry. The grand master's palace was in the huge fortress of Marienburg (mod. Malbork, Poland) in Prussia, and numerous other localities bore her name. Thus, although the Teutonic Knights were masters of practical politics, never hesitating to circumvent direct instructions from prelates, legates, and even popes, they were also generally pious, conventional Roman Christians who believed in fasts, prayer, penance, pilgrimages, and, of course, miracles. The history of the order was a series of miracles, a fact that made it all the harder on its members when victories ended and a seemingly endless series of defeats began.

Conventionally, historians see the battle of Tannenberg (1410) as the turning point. This view may mistake the dramatic for the important, but certainly it was one of the greatest clashes of armed forces in the late Middle Ages. It was also among the least necessary. Poland had been at peace with the Teutonic Order since 1343, Lithuania since 1398. The Lithuanians had been Roman Catholics since 1386,

when Grand Duke Jogaila married Jadwiga, heiress to the Polish throne, ordered his subjects to undergo baptism, and installed a bishop to oversee the handful of parishes that were being organized; Jogaila then left his cousin Vytautas (1350–1430) to rule Lithuania, while he, crowned king of Poland as Władysław II Jagiełło, concentrated on defending Polish interests in the south. The Teutonic Knights were reluctant at first to acknowledge that this conversion was genuine, having been betrayed repeatedly by both Jogaila and Vytautas, but in time their armies served alongside Vytautas's boyars against the Mongols and the grand duke of Moscow. They occupied Samogitia, thanks to Władysław II and Vytautas, who brought their armies to the area in 1398 to subdue the last resistance, then signed over their rights in the Treaty of Sallinwerder. Similarly, the Livonian Order made peace with Vytautas, thus ameliorating the long-standing conflicts with Pskov and other Russian cities ruled by Lithuanian princes. Peace allowed the Teutonic Knights to concentrate on eliminating the pirate base on Gotland, unifying Livonia, and addressing the advance of the Turks into the Balkans. The crusade meanwhile slowly faded from public consciousness.

Many members of the order must have wondered what their future role was to be. Such reflection probably came most often in the context of the incomplete Christianization

of the Samogitians. The policy of Grand Master Konrad von Jungingen (1393–1407) was to open that country to commerce, encourage modern farming methods, and create out of the many petty nobles a smaller but more important class of gentry. Once the country was Westernized, then missionaries could begin their work. His successor, his brother Ulrich von Jungingen (1407–1410), was less patient, wanting to introduce clergy and raise taxes. Equally impatient now were Vytautas and Władysław II, who had been spreading the word among the Samogitians that help was nearby, should they rebel. When war broke out in midsummer of 1410, the Teutonic Knights did not worry excessively; no enemy had invaded their lands for decades. The catastrophic outcome of the battle of Tannenberg thus came as a shock to everyone. If a relatively minor officer, Heinrich von Plauen, had not acted swiftly, all the major fortresses would have fallen into Polish hands. Help from Germany and Livonia, combined with the desire of Polish and Lithuanian warriors to go home, allowed Plauen to recover all the lost territories within a year.

Peace was not easily negotiated. Heinrich von Plauen was reluctant to surrender Samogitia, but he was not an autocrat, and in the end he had to accede to his officers' demands for peace. A year later, when he ordered an attack on Władysław II for his failure to live up to the agreements, his health failed at a critical moment, and he was removed from office by his subordinates. His successor, Michael Küchmeister (1413–1422), dismissed the mercenaries that Plauen had collected and went to Władysław II for peace talks. There he realized the awful truth that the Polish king was determined to ruin the order, and that he no longer had the means to prevent it. Küchmeister could only drive away the invaders by systematically destroying everything there was to eat, and the end of the "Hunger War" (1414) left Prussia exhausted and starving. For years thereafter Władysław II would threaten war almost every year; relying on a feudal levy, his expenses were minimal, whereas the Teutonic Order had to waste its slender resources on expensive mercenaries. In this way the order declined to a shadow of its former gigantic presence, while the Polish kingdom flourished. Seeing no way of saving Prussia, the German master declined to give the grand master obedience or assistance but instead assisted Sigismund, king of Hungary and Holy Roman Emperor, in his crusading efforts against the Hussite heretics in Bohemia. What had promised to be an easy victory became a series of humiliating disasters, and in the end it was the Bohemians

who ravaged German lands, not the other way around. At one point a Hussite army ravaged West Prussia (1434), collected seawater in souvenir bottles, and returned safely home.

The Livonian branch of the Teutonic Order had also declined. Urged on secretly by the grand master to harass the Lithuanian state, the Livonian master intervened in a succession dispute that led it to disaster in 1435 at the battle of the Swienta River. The effort to use Hussite tactics failed miserably when the master's Mongol and Russian allies fled ahead of the charge of Polish cavalry, disorganizing efforts to fire the cannons from the wagon laager. The cities, nobles, and prelates of Livonia took advantage of the situation to demand that the Livonian Order acknowledge their rights to approve all laws and foreign policy decisions, and in 1453 the Livonian Confederation supplanted the master as the ruler of Livonia. However, the confederation had all the weaknesses of a deliberative body that lacked coercive powers: it could negotiate matters of trade and determine how to regulate the growing institution of serfdom, but it could not lead in a crisis. Only the Livonian Order could, but only when led by an inspired leader. It had only one moment of greatness: after the attack in 1501 of Ivan III, tsar of Muscovy (1460–1505). Wolter von Plettenberg, the Livonian master (1494–1535), did not await attack a second time but invaded Russia in 1502; in a desperate battle fought near Pskov, his landsknechts, artillery, and cavalry slaughtered the Russians until they were completely exhausted. Then Plettenberg made peace swiftly, not wanting to risk another encounter against what might be a better general. This gained Livonia half a century of peace.

Decline and End of the Baltic Crusades

The Reformation swept through the Baltic region without provoking civil war, but only because almost everyone realized that neighbors were waiting and watching for an opportunity to swoop down on their lands. The comparative wealth of the crusader territories was fragile and to a certain extent illusory. The northern climate, the sandy soil, the swamps, and the forests were challenges to agriculture, and only peace, hard work, and good administration were able to wring more than a modest prosperity out of either Prussia or Livonia. The governments had sufficient revenues only because they encouraged commerce and managed agriculture and trade effectively; it was not because the lands were naturally rich.

Prussia was the first to become Protestant. In 1525 the last grand master, Albrecht von Brandenburg-Ansbach (1511–1525), saw secularization as the only means of resolving a variety of political dilemmas, the most important being the order's relationship with Poland. As a Lutheran duke of Prussia (1525–1568), he could swear fealty to the king, thereby escaping the threat of immediate war. The title of grand master eventually passed to the German master (Ger. *Deutschmeister*), who devoted the order's resources inside the Holy Roman Empire to the war against the Ottoman Turks. The Livonian Order remained Roman Catholic even as most of the burgesses and peasants of Livonia became Protestants. Wolter von Plettenberg could have become duke of Livonia, but his conscience would not allow him to betray his oath. Only as the order faced aggression from Ivan IV of Muscovy (1533–1584) did the Protestants become dominant in the membership. After the Livonian army was crushed by the Russians at the battle of Ermes in 1560, Master Gotthard Kettler secularized the order in 1561, giving some lands to the king of Poland, abandoning others to the kings of Sweden and Denmark, and remaining content to become duke of Courland (1561–1587). Local bishops became Lutherans, then sold their lands to more powerful figures. The order's lands in central Livonia and Estonia were divided up to reward the captains of the mercenary forces that eventually drove the Russians back across the border or favorites of the Swedish and Polish monarchs.

A similarly indecisive result was all that came of the many contests of Swedes, Danes, and Russians for control of the mouth of the Neva River and the Finnish coastline. The most memorable battle was in 1240, in which Prince Alexander Yaroslavich of Novgorod earned his title Nevskii (from the name of the river) for routing the Swedish forces. Other campaigns across the next three centuries languish in historical limbo for lack of poets and historians to celebrate them. The chronicles and histories of the Russian cities and the Teutonic Order are now available even in English-language translations, but not even St. Birgitta of Sweden (1303–1373) could stir up much interest in these holy wars, even among contemporaries.

What ultimately caused the Baltic Crusades to fail were changing social values and priorities. Individuals ceased to think of crusading as a means of earning salvation or even as likely to have much effect on the kind of wars being waged in the Baltic. The enemies were no longer pagan pirates, but well-organized empires, and victory could not be achieved

even in long campaigns, much less in the course of a summer. For Germans, the Turk was a more plausible threat than the tsar, and a life piously lived was more to be praised than one lost on a distant battlefield.

Banyas

Banyas (mod. Bāniyās, Syria), also known as Belinas or Paneas (the ancient Caesarea Philippi), was a town situated on the main road between Damascus and Tyre.

At the time of the Frankish conquest of Palestine Banyas formed part of the domains of Damascus, but in 1126 it was given by the *atabeg* Ṭughtigin to the Ismāʿīlī Assassin sect, who fortified it with a citadel and walls. After an Ismāʿīlī conspiracy against Ṭughtigīn's son, Tāj al-Mulūk Būrī, was

Bar Ebroyo (1226–1286)

bloodily suppressed, the Assassins handed over the town to King Baldwin II of Jerusalem, who granted it to the nobleman Rainier Brus (1129). As a strategically placed, well-fortified town with plentiful water supplies, Banyas was now the most forward stronghold of the Franks against Damascene territory, and its possession was a factor in Baldwin's attempt to capture Damascus later that year. In 1132, however, it was retaken by the atabeg Ismā'il ibn Būrī, passing into the control of Zangī, amir of Mosul, in 1137.

In 1140 King Fulk of Jerusalem was able to capture the town with Damascene assistance, and it remained under Frankish control until 1168. During this period a Latin bishopric was established, and the town passed to Humphrey II of Toron, who undertook a major reconstruction of its fortifications after a lengthy siege by Nūr al-Dīn, which almost captured the town (1157). In 1168 Nūr al-Dīn exploited the absence of Humphrey and much of his retinue on King Amalric's invasion of Egypt to attack again, and the town's reduced garrison surrendered to him on 18 October 1168. The capture of Banyas was regarded as a major loss by the Franks, who were obliged to embark on a new program of castle building further west to ensure the security of Galilee.

Bar Ebroyo (1226–1286)

Gregory (baptismal name John) Bar Ebroyo, known in Arabic as Abu'l-Faraj ibn al-'Ibrī and in Latin as Bar Hebraeus, was the author of a universal Syriac chronicle, especially illustrative of Syria and Mesopotamia in the thirteenth century.

Bar Ebroyo was born in Melitene (mod. Malatya, Turkey); his alleged Jewish descent has been shown to be a misconception of his name in Syriac. Around 1244 he moved with his family to the principality of Antioch. He later went to Tripoli (mod. Trāblous, Lebanon), where he continued his studies, notably with an East Syrian (Nestorian) rhetor. After

serving as a Syrian Orthodox (Jacobite) bishop in Muslim Syria he was elected *maphrian* (primate) of the eastern part of the church in 1264. He moved to Mesopotamia, then under the control of the Mongols, where he died in 1286.

Bar Ebroyo was one of the most learned Syrian Orthodox authors of all times, having mastered theology, philosophy, linguistics, medicine, and natural science. The influence of his numerous writings on Syrian Orthodox societies can hardly be overestimated. His world chronicle divides secular history into a series of eleven dynastic sections, the last two of which deal with Muslim rule, beginning with the years 622 and 1258 respectively. Bar Ebroyo excerpted the chronicle of Michael the Great, patriarch of Antioch, which is why his work partly helps to fill the lacunae of the latter. Bar Ebroyo added material of Muslim origin, and thus (like the author of the *Anonymous Syriac Chronicle*) renders the battles involving the Franks more often from a Muslim perspective than does Michael. Compared with Michael, Bar Ebroyo's focus shifts east, leaving Byzantium on the periphery, whereas extensive notes feature Cilicia and Egypt, as well as the rule of the Franks and the Turks. Besides the succession of kings and their conquests, which forms the internal structure of the history, Bar Ebroyo includes information on great scholars such as physicians and philosophers and often relates events of cultural interest. He also wrote an abbreviated Arabic version of his chronicle, for which he drew on different sources.

Barbarossa Hoard

An important hoard of coins, unminted silver, and treasure, discovered in Turkey between 1982 and 1985. The find comprised around 7,700 coins (including halves and fragments), as well as several ingots of unminted silver and broken silver jewelry, evidently of Saljūq provenance.

The coins are almost all of German origin: over half are pennies of the archbishopric of Cologne and of the royal mint at Aachen, with over a hundred examples each from the ecclesiastical principalities of Strasbourg, Toul, Metz, Basel, Würzburg, Worms, and Salzburg, and smaller numbers from other German territories, France, England, and Italy. None of the coins can be dated to later than 1190, indicating that the hoard was buried by the army of Frederick Barbarossa during the Third Crusade (1189–1192). The composition of the hoard gives valuable information as to the form in which money was carried by crusaders (the coins and ingots) and on plunder acquired from the Saljūq sultanate of Rūm.

Barbary Corsairs

A corsair was a private individual who commanded an armed vessel and sailed the seas against the enemy of his country and his faith at his own risk and profit, covered by letters-patent issued by his government. There was a legal distinction between a corsair and a pirate. In theory, the former acted within the limits of the law; the latter outside it. In everyday practice there was hardly any difference in their performance. Nor was there any dissimilarity between Muslim and Christian corsairs. Both sought the same prey: the commercial trading vessel, flying any flag, friend or foe. Prizes were made by both: at sea by seizing other vessels, on land by raiding coastal towns and villages. Such were the Barbary corsairs. Their states, as their name suggests, lay in the Barbary region on the North African coast.

Algiers (mod. Alger, Algeria), Tripoli (mod. Tarābulus, Libya), and Tunis were the leading Barbary Regencies. They owe their origin to two closely related factors. First, there was the corsairs' reaction to Spain's systematic conquest of strategic points on the North African coast: Melilla (1497),

Barbastro

Mers el-Kebir (1505), Oran (1509), Algiers, Bejaïa (Bougie), and Tripoli (1510). Second, there was the same corsairs' resort to the increasingly powerful Ottoman sultan at Constantinople for aid and protection in their war against imperial Spain. In return they recognized him as their religious and political leader, from whose expanding empire they were now allowed to recruit armies that helped maintain internal political stability in the Barbary States and defended them from foreign invasion. They also made their wide corsairing activity possible.

The Barbary corsairs succeeded in conquering and exploiting the fertile hinterlands of the cities of Algiers, Tripoli, and Tunis, upon which they built strong military states, a prosperous economy, and a flourishing trade in agricultural products. The latter were exchanged for manufactured goods (such as war matériel and shipbuilding) from friends and foes alike in Christian Europe. Each state (with Algiers leading the way) soon developed into a semi-autonomous Muslim base, from which the Barbary corsairs operated in the endless holy war between Islam and Christianity. The corsairs also had long-term effects on the Christian Mediterranean. Their widespread activities necessitated sounder defenses on both land and sea on the part of Christian governments. On land they dictated the building of coastal towers, massive walls, and other structures; on sea merchant fleets became more strongly armed and preferred to sail in convoy. But the Barbary corsairs also encouraged Christian states (such as the Papal States, Livorno, and Hospitaller Malta) to send their own navies to seek them out and capture them. The slave trade flourished.

The history of the Barbary corsairs is generally divided into three distinct phases. The first is known as the grand heroic phase (1520s–1580), the period of their participation alongside the Turkish armada in the Ottoman Empire's struggle against Spain and its allies for mastery of the Mediterranean. Charles V's full-scale Spanish crusade against Tunis (1535), his disaster at Algiers (1541), the Ottoman reconquest of Tripoli from the Hospitallers (1551), the long unsuccessful Muslim siege of Malta (1565), and the battle of Lepanto (1571) were successive stages punctuating this crusading phase. The second is known as the mercantile phase (1580–c. 1650). By now, corsair activity had been allowed to develop into an economic *jihād* (holy war) an important industry with the pursuit of gain as its main driving force. Galley fleets sailed out to raid Christian commerce. Spain's shipping and that of its European colonies

(such as Naples, Sardinia, and Sicily) were potential targets, and so was the shipping of Hospitaller Malta and of states at formal war with the Ottoman Empire. England, France, and Holland were generally not among the corsairs' enemies. This in part reflected these trading nations' greater military and naval capacity, which could impose truces and peace treaties on the Barbary corsair states at will; in part, it depended on their often changing perceptions of the "Turk." About one-seventh of the value of the booty (human and material) made by the Barbary corsairs was assigned, in harmony with precepts in the Qur'an, to the state that had covered the corsairs with letters-patent. Other fixed proportions went to port officials and brokers, and to finance the upkeep of the harbor. The rest was shared equally between the ship owners and the crew. The third phase, known as the declining phase, was marked by the increasing, almost exclusive, participation of the state. The activity of the Barbary corsairs was brought to an end in 1830 with the French conquest of Algiers.

Barbastro

A prosperous town set in the foothills of the Pyrenees, some 50 kilometers (c. 31 mi.) east of Huesca in Spain. Under Muslim rule, Barbastro (Arab. Barbashtura) was a district capital of one of the marches of the caliphate, and later a Taifa kingdom belonging to the Banū Hūd family.

In 1064 Barbastro was the object of a “proto-crusade” when a force of Aragonese and Normans (led by the Norman nobleman Robert Crispin), fortified with an indulgence granted by Pope Alexander II, laid siege to the town. Starved out, the defenders capitulated once they had been assured of safe passage from the city for themselves and their goods. As they were leaving, however, the Christian forces fell on the refugees, massacring them and carrying women and booty into the town, where they installed themselves and lived in reputed decadence. Western Islam was shocked by the episode, which was attributed to the Taifa rulers’ conciliatory policies toward Christian states, fueling the discontent among the *ulamā* (the Muslim learned elite). This unrest eventually led to Almoravid intervention in the Iberian Peninsula. Nine months after its conquest, a Muslim coalition retook Barbastro and massacred the occupiers.

The town fell definitively into Christian hands when it was captured by King Peter I of Aragon in 1101. At this point it became an episcopal see. It became a quiet backwater after the conquests of King Alfonso I (1109–1134).

Barkyārūq (d. 1105)

Sultan of the Great Saljūq Empire (1094–1105). The eldest son of Sultan Malik Shāh I, Barkyārūq came to power at the age of thirteen after defeating his brother Sultan Maḥmūd I (d. 1094). His reign was characterized by continuous civil wars with his uncles and brothers throughout his vast empire, which took place while the First Crusade (1096–1099) was penetrating his dominions in Syria.

Barkyārūq’s uncle Tutush I, king of Syria, disputed his claim to the sultanate and occupied western Persia, having won the recognition of the ‘Abbāsīd caliph in Baghdad. However, in February 1095 Barkyārūq killed Tutush in battle at Dashlu in Persia, which had devastating consequences for Saljūq unity in Syria. A long civil war broke out between

Tutush’s sons, Riḍwan, who ruled Aleppo and northern Syria, and Duqāq, who ruled Damascus and southern Syria. Barkyārūq himself was occupied by another rebellion led by his uncle, Arslan Arghun, in Khurasan in 1097. This was followed by another challenge to power by the sultan’s younger brother Muḥammad Tapar in 1098, which continued for the rest of the reign, exhausting Saljūq military power and crippling the economy of the empire. The struggle between Barkyārūq and Muḥammad took place mostly in Iraq, Persia, and Transoxania. Saljūq Syria was neglected to such an extent that when a Syrian delegation traveled to Baghdad to urge the sultan and caliph to intervene after Jerusalem fell to the crusaders, the caliph pleaded helplessness, as Barkyārūq was fighting in Khurasan. When his cousin Duqāq was killed in 1104, Barkyārūq was unable to prevent the *atabeg* Ṭughtigin from seizing control of Damascus from the Saljūq dynasty. Barkyārūq died of tuberculosis in January 1105 after nominating his four-year-old son Malik Shāh II as successor.

Basian, Battle of (1203)

A decisive battle fought between the Georgians and a Muslim coalition at Basian (near Erzurum in mod. Turkey).

The reign of Queen Tamar of Georgia (1178–1213) underscored Georgian might after a large Muslim coalition was crushed in battle at Shamkhor in 1195. Alarmed by the Georgian success, Rukn al-Dīn Sulaymān Shah II, sultan of Rūm (1196–1204), rallied the Muslim principalities of Asia Minor against Georgia. A massive Muslim army advanced toward the Georgian borders in 1203 and was met at Basian by a much smaller Georgian force under David Soslani, king consort to Tamar. The Georgians initially made an unexpected attack with their advance guard and spread

Baybars I (d. 1277)

confusion among the enemy troops. The sultan managed to rally his forces and counterattacked, but was surprised by coordinated flanking attacks, which routed his forces. The bitterly contested battle caused heavy casualties on both sides. The victory at Basian secured Georgian preeminence in the region. Exploiting her success in this battle, Queen Tamar annexed Arran and Duin in 1203, and subdued the emirate of Kars, the Armen-Shahs, and the emirs of Erzurum and Erzincan. In 1204, she provided military and political support to Alexios Komnenos in establishing the empire of Trebizond. The Georgians then invaded Azerbaijan, advancing as far as Ardabil and Tabriz in 1208 and Qazvin and Khoy in 1210. These victories brought Georgia to the summit of its power and glory, establishing a pan-Caucasian Georgian Empire stretching from the Black Sea to the Caspian and from the Caucasus Mountains to Lake Van.

Baybars I (d. 1277)

Al-Malik al-Zāhir Baybars I al-Bunduqdārī, Mamlūk sultan of Egypt and Syria (1260–1277).

Baybars was by origin a Qipchāq Turk, born in the southern Russian steppe in the 1220s. As a fourteen-year-old boy, he was enslaved and sold to Aydaḳīn al-Bunduqdār, an emir of the Ayyūbid sultan al-Ṣāliḥ Ayyūb, after whom he was called “al-Bunduqdārī.” In 1246 his master fell into disgrace, and Baybars became one of the *mamlūks* (military slaves) of al-Ṣāliḥ Ayyūb. This personal regiment was originally garrisoned on an island in the Nile and known subsequently as the Baḥriyya (from Arab. *Baḥr al-Nīl*, i.e., river Nile).

After the death of al-Ṣāliḥ Ayyūb, the *mamlūks* of the Baḥriyya killed his successor Tūrān-Shāh, and seized power

in 1250, establishing the Mamlūk sultanate. The new Mamlūk sultan built up his own military household, so that from this point the history of the sultanate was marked by continuing power struggles of the different Mamlūk groups. When the Mongols invaded Syria in 1260, the Baḥriyya had for some years been in exile in the service of the Ayyūbid lords of Kerak and Damascus. Now the leader of the regiment, Baybars, came to an agreement with the Mamlūk sultan Quṭuz and returned to Egypt. After the victory of the Mamlūk regime over the Mongols at the battle of ‘Ayn Jālūt (1260), the old factional hostility between the Baḥriyya and the *mamlūks* of Quṭuz reemerged. Together with a group of conspirators, Baybars killed the sultan in the same year and was elected by the leading officers of the Baḥriyya as the new sultan.

Having usurped the sultanate from the Ayyūbids, the Mamlūk regime suffered from a problem of legitimation from the beginning. Thus, when descendants of the ‘Abbāsīd family arrived in Cairo in 1261, Baybars took the opportunity to revive the caliphate, which had been ended by the Mongols when they conquered Baghdad in 1258. The newly installed caliph, al-Mustaṣir Billāh, invested Baybars as the sole universal sultan of all Islamic territories and of lands yet to be conquered. This investiture not only served him as a means of legitimating his rule but was also the announcement and authorization of a program of expansion. The religious classes (Arab. ‘*ulamā*’) also tried to bolster Baybars’s authority by highlighting his services to Islam, since he supported them financially by the establishment of pious foundations for mosques and schools. Thus, the Turkish war leader was presented by his biographers as the spiritual heir of his former master, al-Ṣāliḥ Ayyūb, and the ideal champion of *jihād* (holy war), who repelled the pagan Mongols and zealously continued the war against the Franks of Outremer. His legendary exploits lived on in the popular folk epic *Sīrat Baybars*. The sultan supported especially the Sufi *shaykh* (leader) Khaḍir ibn Abī Bakr al-Mihrānī, who acted not only as his spiritual director but also as his personal adviser, until he was imprisoned in 1273 as a result of a conspiracy of leading emirs.

After the battle of ‘Ayn Jālūt, the Mongols had fled back across the river Euphrates, and Baybars’s predecessor Quṭuz made the first arrangements for Mamlūk rule in Syria and Palestine. While the Ayyūbid emirs of Hama, Homs, and Kerak were confirmed in their principalities, governors were appointed for the two most important cities, Aleppo and Damascus. Yet since the Mongols had not given up their

aspirations of conquering Syria, Baybars had to strengthen his regime internally and to integrate his conquests into his domains. Thus in 1263 he placed Homs and Kerak under direct Mamlūk control. He continued the Ayyūbid policy of destroying the fortifications of the conquered Frankish cities of Outremer on the coast to prevent their being used as bridgeheads by future crusades. Further inland he captured the Frankish strongholds one after another. The former Frankish or Ayyūbid fortresses served as fortified regional centers and were either intended to contain the Franks still on the coast (as in the case of Saphet) or to act as bulwarks against the Mongols (as in the case of Bira on the banks of the Euphrates).

The Mamlūk regime was based mainly on its powerful army, which had been built up by Baybars. During his reign the Egyptian army was greatly enlarged by the purchase of large numbers of slaves for the sultan's military household (the so-called Royal Mamlūks) and the households of the emirs. Baybars also took care of the quality of the army, putting emphasis on military training and inspecting his troops regularly. By 1260–1261, Baybars had organized a postal system (Arab. *barīd*) with post stations set up at regular intervals along the routes between Egypt and Syria, where horses could be changed. This service was primarily meant for military purposes and was restricted to use by the sultan. Since the Mamlūk army was concentrated in Cairo when not on campaign, it was necessary to be informed quickly of any Mongol or Frankish attack in order to be able to react. Baybars also restored and built roads and bridges in Syria and Palestine to improve the infrastructure of his realm.

Another important means of consolidating his regime was Baybars's far-reaching diplomatic activities. The Mamlūks were always on the lookout for allies and tried to create a second front in order to weaken their opponents. Baybars formed an alliance with Berke, the khan of the Golden Horde, against their mutual enemy, the Ilkhanate of Persia. He also established good relations with the Byzantine emperor Michael VIII Palaiologos in order to prevent any threat to the import of military slaves from the northern Caucasus.

In 1261, Mamlūk rule in Syria and Palestine was still unstable, so that the Franks at Acre tried to take advantage of this situation and set out to attack a group of Turcomans on the Golan. They were severely beaten and thereafter did not dare launch a major attack against the Mamlūks. Nevertheless, in the first years of his reign, Baybars had to come

to some kind of understanding with the Franks in order to pursue his war against the Mongols. For this reason, a treaty was concluded in 1261 with the Franks of Acre. It was largely a renewal of the agreement of 1254 between the ruler of Damascus, al-Nāṣir Yūsuf, and the Franks. According to this treaty, the lands extending to the river Jordan were tributary to the Franks. However, Baybars pursued a quite different policy toward the principality of Antioch. Prince Bohemund VI had remained a close ally of the Mongols even after the battle of 'Ayn Jālūt, and so Baybars raided his territory regularly to punish him for his cooperation with the Mongols and to wear down his military strength.

In 1265, having repulsed another Mongol attack on Bira, Baybars had averted the danger from the Mongols for the time being, and he turned his attention to the Frankish states. He conquered Caesarea and Arsuf, destroying their fortifications and harbors. From that point on, Baybars launched attacks against the Franks nearly every year to systematically reduce their power and territory. In 1266, the Mamlūk army invaded Cilicia as a punishment for its support of the Mongols. They inflicted a heavy defeat on the Armenians, devastating their capital of Sis: this defeat marked the end of the political importance of the kingdom of Cilicia. In 1268 Antioch was conquered, and the Frankish states of Outremer were reduced to the county of Tripoli and the residual kingdom of Jerusalem around Acre.

In 1271 Baybars was now at the height of his power and undertook his last great campaign against the Frankish states. He conquered Krak des Chevaliers from the Hospitallers and was about to attack Tripoli (mod. Trāblous, Lebanon). At this moment, the last crusade army arrived in Palestine, led by Prince Edward of England, who had made plans with Abagha, the Ilkhan of Persia, for a joint attack against Baybars. However, Edward's contingent consisted of only a few hundred men, and the force sent by Abagha was also modest in size. As soon as Baybars offered a truce to Bohemund VI of Antioch and sent an army against the Mongols, they withdrew from Syria. Thus ended the only attempt of Franks and Mongols to act together against the Mamlūks. Edward stayed in Outremer until 1272 without achieving anything, and left Acre after narrowly escaping the assault of an assassin sent by Baybars.

At the end of his reign, Baybars tried to gain a decisive advantage over the Ilkhanate by conquering the Saljūq sultanate of Rūm, which was a Mongol protectorate. He

Bayezid I (d. 1403)

defeated the Mongols heavily in the battle of Elbistan (April 1277) and was enthroned as sultan of Rüm. However, lacking local support, he had to withdraw only a few days later. On 1 July 1277, he died in Damascus.

Bayezid I (d. 1403)

Ottoman sultan (1389–1402).

Bayezid I came to the throne on the death of his father, Murad I, who was killed at the battle of Kosovo Polje (23 June 1389) fighting against the Serbian leader Lazar. His reign was one of great territorial expansion. The Byzantines were reduced to a position of dependency, Emperor Manuel II Palaiologos being forced to accompany Bayezid on campaign, while the Ottoman state continued to be a center of commerce, particularly with Genoa and Venice, with whom there was constant diplomatic contact. Bayezid campaigned effectively against his various Turkish rivals in Anatolia, annexing the states of Aydin and Menteşe on the western coast, defeating the İsfendiyaroğlari in the north and successfully defeating his major rival, the state of Karaman, based round Konya (Ikonion). Further east, Bayezid defeated Burhān al-Dīn, the ruler of Sivas (Sebasteia), and took Malatya (Melitene) from the Mamlüks, the rulers of Egypt and Syria. For the Byzantines, whose capital Constantinople was now under Ottoman threat, and for the

European powers, in particular King Sigismund of Hungary, Bayezid represented a major danger. A crusader force, composed of troops from Hungary, England, Germany, and France, was assembled but was crushingly defeated in 1396 at the battle of Nikopolis on the Danube, west of Ruse (in mod. Bulgaria).

By the end of Bayezid’s reign, the Ottomans had taken Bulgaria, controlled Wallachia, advanced into Hungary, and moved into Albania, Epiros, and southern Greece. Their advance was greatly helped by the divisions between the Frankish and Greek lords in the Peloponnese. In the east, Ottoman control stretched over most of what is modern Turkey. Bayezid’s whirlwind conquests were not to last, for in 1402 he was defeated at the battle of Ankara by Timur, the founder of the Timurid dynasty in eastern Persia and central Asia, invading from the east. Bayezid was captured (dying later in captivity), and the Ottoman state was plunged into a period of civil war.

Bayezid II (d. 1512)

Ottoman sultan (1481–1512).

On his accession, Bayezid II was faced with discontent caused by the fiscal rule of his father, Mehmed II, and by civil war with his brother Cem (or Djem). Cem, once defeated, fled to the Hospitallers on Rhodes, who later moved him to France and then, in 1489, handed him over to the pope. From 1483 Bayezid paid an annual sum, first to the Hospitallers and then to the pope, to ensure that Cem was kept in safe custody. With Cem in Christian hands, Bayezid was forced to adopt a pacific policy toward the West, ratifying the 1479 treaty with Venice, making a five-year truce in 1482 with King Matthias Corvinus of Hungary, and, in 1490, undertaking not to attack the Papal States, Venice, or Rhodes. This was not entirely a period of peace,

however. In 1483 the Ottomans annexed Hercegovina, in 1484 invaded Moldavia, and, from 1485 to 1491, were at war with the Mamlūk sultanate.

In 1494 Cem fell into the hands of King Charles VIII of France, who, after his invasion of Italy and capture of Rome, announced a crusade against the Ottomans in January 1485. Cem, however, died in February, and Charles's crusade came to nothing. From this time Bayezid was freer in his dealings with the West. In 1498 the Ottomans raided into Poland and in 1499 attacked Venetian territories, taking Naupaktos (1499), Modon, Coron and Navarino (1500), and Durrës (1502), all of which remained lost to Venice under the peace treaty of 1503. From that point on, Ottoman attention turned to the east and to the Safavids of Persia.

Bayezid's reign ended in April 1512 when he was forced to abdicate by his son Selim. Not a warlike man, Bayezid tended to be more conciliatory than his father. He established the Ottomans as a major Mediterranean naval power, introduced a systematic codification of customary law, and instituted fiscal reform.

Beaufort

Beaufort, or Belfort (mod. Qal'at al-Shaqif Arnun, Lebanon) is a castle in the mountains of northern Palestine. It occupies the eastern edge of a rocky plateau overlooking the valley of the Litani. The castle was captured by Fulk of Anjou, king of Jerusalem, in 1139 and added to the royal domain. By 1158, however, it formed part of the lordship of Sidon and was the seat of a burgess and justice court. After the battle of Hattin (1187), it endured a year's siege by Saladin's forces before surrendering in 1190. It was ceded once more to the Franks in 1240 and returned to Julian, lord of Sidon. In 1260, however, following the sack of Sidon by the Mongols, Julian was forced to sell (or lease) his entire lordship

to the Templars. Beaufort fell to the Mamlūk sultan Baybars I in 1268.

The castle has a roughly triangular plan, measuring some 150 meters (492 ft.) north to south by up to 100 meters (328 ft.) east to west, with a rock-cut ditch on the south and west and a sheer 300-meter (984-ft.) cliff on the east. From the outer gate in the southeast, a path leads up by a zigzag route into the upper bailey, which contains the earliest Frankish feature, a square tower-keep, and the latest, a two-bay rib-vaulted hall dating from the 1260s. South of the castle lie the remains of a walled suburb.

Bedouin

The Bedouin were the Arabic-speaking nomads of the Middle East, engaged mainly in the herding of camels, sheep, and goats. As a people, their original home was in the Arabian Peninsula; however, tribes had inhabited the Fertile Crescent area since at least the sixth century. During the crusades, the Bedouin, although Muslim, did not always take an active part against the Franks, and sometimes even made alliances with them. Both Frankish and Muslim settled peoples also feared the Bedouin because of their reputation as raiders.

Bedouin social organization was tribal, and the three most important broad tribal groups in the area of Outremer were the Banū Kalb, Banū Tayy, and Banū Kilāb. During the eleventh century, these three groups had made an agreement to divide the uncultivated areas of Syria and Palestine (Arab. al-Sham) between them; the Banū Kilāb took the region from Aleppo to Ana, the Banū Tayy occupied the area from Ramla to Egypt, and the Banū Kalb held the vicinity of Damascus. Although this agreement was short-lived, the tribes continued to occupy those basic regions throughout the crusader period. However, such tribes remained fluid, as smaller tribal groups achieved greater or lesser degrees of inde-

pendence or shifted their genealogical alliances in response to changing circumstances.

The Franks and Muslims each had their own *modus vivendi* with the Bedouin. In Outremer, the Bedouin were known by the Franks as “Arabs,” in contrast to the “Saracens,” the settled Arabic-speaking Muslim population. For legal purposes they were classed by the Franks as property. The Bedouin paid horses and livestock in exchange for grazing rights, and because their lifestyle required them to move over a wide territory, these rights were usually held by the king rather than the local lord. There were, however, some cases of Bedouin under the jurisdiction of the military orders.

The Muslims for their part sought to use important tribal leaders as intermediaries with the Bedouin by recognizing them with a title such as *amīr al-‘Arab* (commander of the Bedouin). Urban rulers gave these men *iqṭā‘* (grants of revenues) that enhanced their wealth, and hence their ability to influence other tribes. The loyalty of these leaders, however, was not always dependable. For example, shortly after the battle of ‘Ayn Jālūt, the Mamlūk sultan Qūṭuz named one ‘Īsā ibn Muhannā (of the al-Faḍl family from the Rabī‘a branch of the Banū Tayy), as *amīr al-‘Arab* and gave him an *iqṭā‘* near Hama. Later, however, ‘Īsā supported a rebel against Qalāwūn and even considered an alliance with the Mongols against the Mamlūk sultanate during the reigns of both Baybars I and Qalāwūn. Before the second battle of Homs (1281), Qalāwūn had divided ‘Īsā’s *iqṭā‘* among several chiefs, but Qalāwūn judged ‘Īsā’s support as important against the Mongols, and so returned him to his former status.

The Bedouin also played a role in a number of military engagements during the crusades, in which tribes served whichever side best served their interests. The Tha‘ālabā branch of the Banū Tayy became notorious for their cooperation with the Franks, while during the time of Baybars the Banū Zubayd made agreements with the Franks to provide them with intelligence concerning Muslim positions. The Ayyūbid sultan al-Kāmil is also known to have allied with Bedouin tribes during the Fifth Crusade (1217–1221).

Belchite, Confraternity of

A religious confraternity of the militia of Zaragoza in Aragon, named after its castle. The confraternity of Belchite was one of several confraternities of militia that existed in Christian Spain; others were located in Ávila, Toledo, Alava, Tudela, Tarragona, and Valencia. More is known about the customs of Belchite than these other military confraternities, due to the survival of its foundation charter, originally granted by King Alfonso I of Aragon in 1122 and confirmed by King Alfonso VII of Castile-Léon in 1136.

The first leader (Lat. *princeps*) of the militia was Galin Sanz, lord of Belchite, around 1121–1125. His brother, Lop Sanz, lord of Belchite (c. 1132–c. 1147), was named as leader in the confirmation of Alfonso VII. Historians have suggested that these short-lived confraternities of militia were precursors to the military religious orders and have debated the influence of the *riḥāṭ*, a comparable Muslim association of warriors. The customs defined in Alfonso VII’s charter describe cultural similarities, but there is no written evidence supporting parallel institutional development. The confraternity of Belchite was a laic military religious organization, whose members were committed to the defense of Christendom and forbidden to make peace with Muslims. Members of the confraternity could keep the lands they captured from the Muslims. The charter, unlike the rule of an order, did not define a common religious life. Instead, it conferred upon members a series of financial and spiritual privileges, including an indulgence to anyone who fought the Muslims, went on pilgrimage, gave alms, or left bequests of horses and weapons to the confraternity. Donations of a horse or weapons earned the same indulgence as similar donations to the Hospitallers or Templars. A cleric or lay brother who joined the confraternity for life received the same remission of sins as a monk or hermit, while anyone who remained a year received the same indulgence as if he had gone to Jerusalem.

Based on the slim evidence, the confraternity of Belchite appears to be a manifestation of knightly spirituality, of the sort that led to the foundation of the Order of the Temple (whose primitive rule also permitted brothers to serve for

a limited period of time) and that inspired Alfonso I of Aragon to bequeath his kingdom to the Templars, the Hospitallers, and the Order of the Holy Sepulchre. The confraternity of Belchite disappeared sometime after 1136, and its surviving members were probably absorbed into the military religious orders.

Belvoir

A castle in Palestine, also known as Belveir, Coquet, and Kawkab al-Hawa (mod. Kokhav ha-Yarden, Israel), belonging to the Order of the Hospital.

Belvoir was situated on the eastern edge of the Jordan Valley, some 12 kilometers (c. 7½ mi.) south of Lake Tiberias. Construction must have begun as soon as the Hospital

Ruins of Belvoir, a twelfth-century Hospitaller castle that commanded the Jordan Valley. (Courtesy Alfred Andrea)

Bernard of Clairvaux (1090–1153)

acquired the estate from the knight Ivo Velos in April 1168, for the castle was described as very strong and very large by the pilgrim Theoderic in 1169 or 1172 and as a new castle by the chronicler William of Tyre in 1182. The garrison surrendered to Saladin on 5 January 1189, eighteen months after the battle of Hattin. Thereafter the castle appears to have been refurbished by the Ayyūbids and was occupied until 1219, when it was finally dismantled by al-Mu‘azzam ‘Īsā, ruler of Damascus.

The site was excavated in 1963–1968. The castle was found to comprise two roughly square wards, one inside the other. The inner ward, containing the knights’ quarters, was 50 meters (164 ft.) square, with rectangular corner towers and a gate tower on the east containing a bent entrance below a chapel. The outer ward, some 100 meters (328 ft.) north–south by 110 meters (361 ft.) east–west, was also defended by rectangular towers and was enclosed by a rock-cut ditch on three sides, with the plateau’s edge giving protection on the east. It was entered by a ramped barbican accessed from the southeast. Belvoir represents the earliest documented example of a medieval “concentric” castle.

Berk-Yaruk

See Barkyārūq

Bernard of Clairvaux (1090–1153)

Abbot of the Cistercian monastery of Clairvaux, theologian, and preacher of the crusade.

Born at Fontaines-les-Dijon in Burgundy 1090 into a family of the lower nobility, Bernard was educated by the canons of St. Vorles at Châtillon-sur-Seine. He entered the new monastery at Cîteaux in 1113 with numerous compan-

ions. In 1115 Abbot Stephen Harding sent Bernard to establish a new house at Clairvaux, Cîteaux’s third foundation, where he was installed as abbot by William of Champeaux, bishop of Châlons-sur-Marne.

Bernard began his writing career early, composing his great spiritual treatise *De gradibus humilitatis et superbiae* in 1118–1119, although the publication of his works did not begin until the next decade. In the 1130s he became increasingly involved in affairs outside the monastery, notably when he defended the claims of Innocent II to the papacy against his rival Anacletus and became embroiled in controversy with the theologian Peter Abelard, whose condemnation at the Council of Sens (1140) he secured. In 1139 Bernard was offered the archbishopric of Rheims but refused it. When a monk of Clairvaux called Bernard Paganelli was elected pope, taking the name Eugenius III, Bernard’s involvement in ecclesiastical affairs accelerated. In 1145 he set out to preach in southern France against the heresiarch Henry, who had been condemned at the Council of Pisa (1135) but resumed his dissident preaching in the 1140s.

Bernard began to preach the Second Crusade (1147–1149) at Vézelay in Burgundy in March 1146. The same month Eugenius III reissued the encyclical *Quantum praedecessores* (December 1145), which echoed the themes of Bernard’s writings and urged knights to take the cross as a service of sacrifice and liberate the Holy Land. The sermon at Vézelay, which is not extant, reportedly aroused such enthusiasm that the abbot had to tear up his own clothing to meet the crowd’s demand for crosses. Bernard wrote to Eugenius III about the successful impact of his preaching in France and Flanders. In Speyer at Christmas 1146, the abbot preached to King Conrad III of Germany and convinced him, his nephew Fredrick Barbarossa, and others to undertake a crusade. The German barons feared that the pagan Wends would attack Christian lands beyond the Elbe after the knights had departed for the East. Consequently, in 1147 Bernard advocated a crusade with the aim of imposing baptism on the Wends.

Bernard influenced the crusading movement through his preaching and sermonlike letters advocating the crusade, which were disseminated and read aloud throughout Europe; his drive for the Cistercian Order’s rapid expansion; and his treatise in support of the Order of the Temple: *De laude novae militiae*. In this influential treatise Bernard justified the Templars and developed the theological foundations for crusading and crusader knights. *De laude novae*

militiae, literally “In Praise of the New Knighthood,” espoused Bernard’s views on the holiness of fighting for Christ and the necessity of force to recapture the Holy Land. Bernard assured knights that dying or inflicting death for Christ’s sake was not a sin but grounds for glory. The Christian knight served the Lord when he killed; he slew evil and avenged Christ on evildoers. Bernard stepped back somewhat from the boldness of these statements about the rightness of killing but ultimately justified slaying the enemies of Christendom: “I do not mean to say that the pagans are to be slaughtered when there is any other way to prevent them from harassing and persecuting the faithful, but only that it now seems better to destroy them than that the rod of sinners be lifted over the lot of the just, and the righteous perhaps put forth their hands into iniquity.” Countering the argument that no Christian should kill, Bernard restated his defense of force: “Certainly it is proper that the nations who love war should be scattered, that those who trouble us should be cut off, and that all the workers of iniquity should be dispersed from the city of the Lord. . . . Let both swords of the faithful fall upon the necks of the foe, in order to destroy every high thing exalting itself against the knowledge of God, which is the Christian faith, lest the Gentiles should then say, ‘Where is their God?’” [*In Praise of the New Knighthood*, p. 135]. However, the contradictory character of the Templars as both monks and soldiers, praised by Bernard, only contributed to blurring of the boundaries that the abbot delineated against violence.

Bernard and the Cistercian Order became the targets of criticism because of their advocacy of the failed Second Crusade. In *De consideratione libri quinque* (1149–1152), Bernard refers to himself as a shield protecting God from the “scurrilous tongues of detractors and the poisoned darts of blasphemers” [*Five Books on Consideration*, p. 51]. Other Cistercian writers rose to the defense, casting blame on the crusaders’ sinfulness and pointing out that the dead were delivered from further sin. In *De consideratione*, Bernard lamented the death of so many Christians and recalled biblical precedents for God’s severe judgment: the Hebrews’ suffering as described in the Book of Exodus and their initial defeats at the hands of the tribe of Benjamin (Judges 20). Bernard asserted that the Hebrews’ eventual victory after a third battle should serve as a model for the crusaders and motivate them to renew their fight against the Muslims [*Five Books on Consideration*, p. 50]. In the same work the abbot drew a clear line on clerical use of force, advising Eugenius III that the

Bernard of Clairvaux preaching the Second Crusade (1147–1149) in the presence of Louis VII, king of France. From the fifteenth-century manuscript *Les Passages d'Outre-Mer*. MS Paris, Bibliothèque Nationale de France, Fr. 5594. (Snark/Art Resource)

“spiritual sword should be drawn by the hand of the priest, the material sword by the hand of the knight, but clearly at the bidding of the priest and at the command of the emperor” [*Five Books on Consideration*, p. 118].

Bernard’s opinions on the use of force against heretics contained ambiguities. His Sermons 65 and 66 (1143/1144) on Song of Songs 2:15, regarding little foxes ravaging the Lord’s vineyard, constituted a reply to the Premonstratensian prior Evervin of Steinfeld, who had written in alarm over heresy in the Rhineland. Bernard urged that arguments, not arms, be used to trap the foxes, that is, the heretics; and he asserted that faith was a matter for persuasion and not force. Nonetheless, in Sermon 66, Bernard reproached a mob’s violent reprisal against heretics but still commended

Bernard of Valence (d. 1135)

its fervor, alluding to Romans 13:4. The call for the crusade against the Wends resounded more harshly, as Bernard ordered that no truce should be made with them “until such a time as, by God’s help, they shall be either converted or wiped out” [*The Letters of St. Bernard of Clairvaux*, p. 467].

In spite of what may seem unlimited support of crusading, Bernard articulated and enforced boundaries on clerical participation in crusading activities. Monks required authorization to preach in any context, and violations of that restriction resulted in disciplinary action. Bernard himself pursued the disobedient monk Ralph, whose crusade sermons provoked violence against Jews in Germany. Monks who joined the Second Crusade were reprimanded and threatened with excommunication. When Bernard called strongly for another crusade, he firmly rejected the nomination from the Council of Chartres (1150) to lead the expedition himself. He died at Clairvaux on 20 August 1153 and was canonized in 1174.

Bernard’s advocacy of force leaves him a problematic figure. Brian Patrick McGuire calls him the “difficult saint,” referring to the seemingly opposite characters of abbot and church politician. Bernard described himself as a chimera, “neither cleric nor layman,” who kept “the habit of a monk” but “long ago abandoned the life” [*The Letters of St Bernard of Clairvaux*, p. 402]. Thus Bernard of Clairvaux demonstrated some degree of awareness of the contradictions in his public role, a microcosm of the Cistercian Order and the church’s involvement in crusading.

Bernard of Valence (d. 1135)

First Latin patriarch of Antioch (1100–1135) after its conquest by the crusaders.

Bernard came from the town of Valence in the Rhône Valley and accompanied Bishop Adhemar of Le Puy on the First Crusade (1096–1099) as one of his chaplains. He was advanced to the see of Artah in Syria in 1100, but after only six months he was appointed by Prince Bohemund I to the patriarchate of Antioch (mod. Antakya, Turkey) following the abdication of John of Oxeia, a Byzantine Greek.

Little is known about Bernard’s character or spirituality, but he was prominent in secular affairs. He arranged for the ransom of his patron Bohemund from the Dānishmendid Turks in 1103 against the wishes of Bohemund’s nephew Tancred, who was regent at the time. After the death of Bohemund’s successor, Roger, and the destruction of the entire Antiochene army at the battle of the Ager Sanguinis (1119), Bernard took charge of the defense of Antioch until Baldwin II of Jerusalem arrived with reinforcements. During Baldwin’s regency (1119–1126) of Antioch, Bernard exercised considerable influence, since the king was necessarily often absent. Even after Bohemund II arrived to take over the principality, Bernard commanded respect: he assisted Baldwin II in negotiating peace between Bohemund II and Joscelin I of Edessa in 1128. Following Bohemund II’s death (1130) he continued to be influential during the minority of Constance. Much earlier in his patriarchate Bernard had also accompanied the armies of Antioch on campaign.

By the time Bernard died in 1135, he had exerted a lasting influence over ecclesiastical affairs in Christian Syria: there had been five Latin bishoprics in the patriarchate of Antioch in 1100; now there were fourteen.

Bertold of Loccum (d. 1198)

The second missionary bishop of Livonia (1196–1198), Bertold was abbot of the Cistercian monastery of Loccum in Saxony before going to Livonia to commit himself to missionary work during the later years of Bishop Meinhard.

After Meinhard's death, Bertold was appointed as new bishop of Livonia by Hartwig II, archbishopric of Hamburg-Bremen, and he returned to Livonia during the spring or summer of 1197. At the episcopal centers of Üxküll (mod. Iķškile, Latvia) and Holme (mod. Martinsala, Latvia), Bertold met with fierce opposition from the local pagans, who threatened to kill him and rid themselves of Christianity. Consequently Bertold fled back to Germany, appealing for help to the pope, his archbishop, and the people of Saxony. Pope Celestine III willingly issued a crusading bull promising indulgence to those who would take up the cross and follow Bertold back to Livonia to fight the opposition and protect the remaining Christians.

In the spring of 1198 Bertold again returned to Livonia, having gathered a substantial army of crusaders in Lübeck from Saxony, Westphalia, and Friesland. On their arrival in Livonia, a truce was agreed on between the crusaders and the Livs, and a peaceful acceptance of Christianity was negotiated. This truce, however, was violated by the Livs when they killed several crusaders who were foraging in the countryside. In the ensuing battle the crusaders were victorious, but Bishop Bertold was killed when he apparently placed himself in the forefront of the attacking crusader army. According to the chronicler Henry of Livonia, Bertold thus became the first martyr of the young Livonian church. He was initially buried at Üxküll, but some years later his body was transferred to the cathedral church of Riga, where he seems to have been locally venerated for his alleged saintly virtues.

Bertrand of Tripoli (d. 1112)

Count of Tripoli (1109–1112).

Bertrand was the elder son of Raymond of Saint-Gilles, count of Toulouse, by a marriage later dissolved on grounds of consanguinity. His father left Bertrand in charge of the county of Toulouse and his other lands when he left on the First Crusade in 1096, but when Raymond died at Mont-Pèlerin while besieging Tripoli (1105), his vassals insisted that his Western lands should pass to his younger son, Alphonse-Jordan, born in the East in 1102. Thus deprived of his expected inheritance, Bertrand sailed to Tortosa with substantial forces, conveyed by a Genoese fleet (1109), and laid claim to his father's possessions on the Syrian coast as well as the future dominion of the Muslim-held city of Tripoli (mod. Trāblous, Lebanon). Although opposed by William-Jordan of Cerdagne, the leader of Raymond's forces, and Tancred of Antioch, Bertrand was awarded half his father's lands in a settlement imposed by King Baldwin I of Jerusalem. The murder of William-Jordan shortly afterward and the capture of Tripoli by the assembled Christian coalition on 12 July 1109 left Bertrand as undisputed ruler of the county of Tripoli, which by the end of his reign had expanded as far east as the mountain ranges of the Lebanon and the Jabal Anṣārīyah. He died in January 1112, and was succeeded by his son, Pons.

Bertrandon de la Broquière (d. 1459)

A diplomat in the service of Philip the Good, duke of Burgundy. Bertrandon entered the Burgundian service in 1421

Bessarion (d. 1472)

and was used mostly in diplomatic relations with France up to 1444.

In 1432 he was sent to the East with the mission of spying on those lands (primarily the Ottoman Empire) that had not been visited by Gilbert de Lannoy, who had previously undertaken a similar mission for Philip. From the Holy Land Bertrandon proceeded through Syria and Anatolia to Constantinople (mod. İstanbul, Turkey), and then (in the company of the Milanese ambassador) to the court of Sultan Murad II at Adrianople (mod. Erdine, Turkey), returning in 1439. From the chaplain of the Venetians at Damascus he obtained a Latin translation of the Qurʾān and of the deeds of Muḥammad, which Duke Philip gave to Jean Germain, chancellor of the Order of the Golden Fleece.

Around 1455, after Philip the Good announced his intention to fight the Turks at the occasion known as the Vow of the Pheasant, Bertrandon gave advice to the duke regarding a crusade project devised by Giovanni Torzello in 1439. He also wrote up the intelligence gained on his travels as *Le Voyage d'Outre-Mer*.

Bessarion (d. 1472)

Greek scholar, cardinal, and promoter of crusade projects.

Born around 1400, Bessarion, then archbishop of Nicaea (mod. İznik, Turkey), accompanied the Byzantine emperor, John VIII Palaiologos, to the Council of Florence, where he led the party from the Greek church in favor of ending the schism with Rome (1438). From about 1442 he was resident in Rome as a cardinal, and after 1453 he was at the forefront of plans to launch a crusade to recapture Constantinople (mod. İstanbul, Turkey) from the Ottoman Turks.

Although originally opposed to the election of Pope Pius II because he thought him too old, Bessarion later loyally supported Pius's crusade project. In the summer of 1453 he undertook a legatine mission to Venice, where he addressed a heartfelt appeal to the doge on the danger that now threatened Italy, and during 1460–1461 he toured Germany in an

attempt to persuade the princes to unite against the common enemy. In 1471 he published his *Oration to the Leaders of Italy Regarding the Imminent Perils*, which conveyed much the same message to the rulers of the Italian city-states.

In his efforts to promote the crusade, Bessarion showed an astute appreciation of how to manipulate public opinion. His instructions to crusade preachers included advice on how to describe and exploit Turkish atrocities, and he seems to have encouraged refugees from Constantinople to tour western Europe giving firsthand accounts of their sufferings.

Bethlehem

A town in Judaea (in mod. West Bank), famous as the birthplace of Christ; the seat of a Latin bishopric in the kingdom of Jerusalem.

In the fourth century Bethlehem became one of Christendom's most important pilgrimage sites. The Church of the Nativity was built by Emperor Constantine the Great at the behest of his mother Helena; it was dedicated in 339 and rebuilt for the first time under Emperor Justinian I in the sixth century. St. Jerome, one of the fathers of the church, settled in Bethlehem in 384. Under Muslim rule, the town seems to have escaped the destruction of Christian sites ordered by the Fāṭimid Caliph al-Hākīm in 1009.

Bethlehem again came under Christian control with the arrival in Palestine of the First Crusade (1096–1099). On 6/7 June 1099, following an invitation by the town's Christian inhabitants, Tancred of Lecce and Baldwin of Bourcq left the crusade army and took possession of the city. Tancred even hoisted his banner over the Church of the Nativity. After the foundation of the Latin kingdom of Jerusalem, Bethlehem became part of the royal demesne. Arnulf, bishop of Marturano in Calabria, who had traveled to the East with the First Crusade, seems to have had ambitions to become the first bishop of Bethlehem, even though under Byzantine rule the town had not had episcopal status but belonged to the bish-

opric of Ascalon (mod. Tel Ashqelon, Israel); however, Arnulf disappeared in August 1099.

Both Baldwin I (1100) and his successor Baldwin II (1118) were crowned as kings of Jerusalem in the Church of the Nativity. To the Latin conquerors of Palestine it seemed unreasonable that the birthplace of Christ should not have the rank of a bishopric, and so in 1107, following a request of Baldwin I, Pope Paschal II elevated Bethlehem to episcopal status. After the Frankish conquest of Ascalon (1153), the bishoprics of Ascalon and Bethlehem were united.

During the reign of King Amalric of Jerusalem, the Church of the Nativity received a new marble floor, roof, and wall mosaics with the financial support of the Byzantine emperor Manuel I Komnenos; this was probably the most famous example of joint Greek-Latin sponsorship of the arts. Throughout the twelfth and thirteenth centuries, the Latin bishops of Bethlehem served in a variety of functions. In 1115, Bishop Anshetin traveled to Rome on behalf of the Latin patriarch of Jerusalem. In 1148 the bishop of Bethlehem, together with other prelates of the kingdom, attended the meeting of the leaders of the Second Crusade (1147–1149) held at Acre (mod. 'Akko, Israel). Bishop Ralph served as chancellor during the reign of King Baldwin III, and in 1153 functioned as the king's envoy to admonish Prince Reynald of Antioch to release the Latin patriarch of Antioch, Aimery of Limoges, whom Reynald had imprisoned. In 1179 Bishop Albert participated in the Third Lateran Council. In 1218, Bishop Renier, one of the participants in the Fifth Crusade (1217–1221), was instrumental in motivating the outnumbered Christians to successfully repel a Muslim attack near Burah.

Bethlehem was conquered and plundered by Saladin after the battle of Hattin (1187), and its bishop first moved to Tyre (mod. Soûr, Lebanon), then to Acre. However, in 1192, following a special favor granted to Hubert Walter, bishop of Salisbury, Saladin permitted two Latin priests and two Latin deacons to serve at the Church of the Nativity. The city itself was placed under the rule of a Muslim emir. As part of the treaty of 1229 between the Ayyübid sultan al-Kāmil and the Holy Roman Emperor Frederick II, Bethlehem was restored to the Christians; there is, however, no evidence that its bishop returned to his see. During the crusade of 1239–1241, which coincided with the Ayyübid wars of succession, al-Şaliḥ Ismā'īl of Damascus promised to restore Bethlehem (and other places) to the Franks in exchange for their support against Egypt, even though the city belonged to al-Nāşir

Dāwūd, the ruler of Kerak. In 1241 al-Şaliḥ Ayyüb of Egypt convinced the crusaders to abandon their alliance with Damascus, but agreed to honor Ismā'īl's territorial promises (including Bethlehem). In 1244, the town and the Church of the Nativity were severely damaged by Khwārazmian invaders from northern Syria. However, according to a legendary report in several later pilgrim accounts, a snake appeared to frighten the invaders from removing the church's marble tablets. In 1252 King Louis IX of France tried to negotiate a treaty that would have restored Bethlehem and other places to the Franks; this attempt failed when Egypt and the Muslim states of Syria came to an agreement of their own in 1253. In 1263, Baybars I, the Mamlūk sultan of Egypt, carried out destruction in Bethlehem, which probably included the Augustinian cloisters.

From 1187 the bishop of Bethlehem was resident in Acre until that city fell to the Mamlūks in 1291. Thereafter the church continued to nominate titular bishops (Lat. *in partibus*). The cathedral chapter relocated to Clamecy in the diocese of Auxerre, and was eventually integrated into the French church. The Order of the Bethlehemites (Lat. *Fratres stellati*), which considered the bishop of Bethlehem as its superior, had its origins in the early thirteenth century and followed the rule of St. Augustine; a female branch of this order was founded in 1231.

Bira

Bira (mod. Birecik, Turkey) was an ancient fortress occupying an isolated rock rising on the east bank of the

Birgitta Birgersdotter (1302/1303–1373)

Euphrates where it flows out of the Taurus Mountains into the Syrian-Mesopotamian plain. From the eleventh century it was the most important crossing place on the route from northern Syria to Edessa (mod. Şanlıurfa, Turkey), some 80 kilometers (50 mi.) to the east.

Around the time of the First Crusade (1096–1099), the fortress and its town were under Armenian control. In 1116, after a long siege, its lord, Ablgharib, agreed with Baldwin II, count of Edessa, to give his daughter in marriage to Waleran of Le Puiset, a cousin of Joscelin I of Courtenay, giving the town as her dowry. Waleran was captured by the Turks along with Joscelin in 1122 and executed in 1124. Bira was briefly held by the Artuqid ruler İlghāzī; regained after his death in 1122 by the Franks, it was besieged by Zangī in 1145 and taken by Timurtash of Mardin in 1150. The present remains are largely Mamlūk work: in the later thirteenth century Bira assumed great importance as a “fortress of Islam against the Tatars,” withstanding several Mongol sieges.

Birgitta Birgersdotter (1302/1303–1373)

Swedish mystic and founder of the Birgittine Order, also known as St. Bridget of Sweden, who persuaded King Magnus II Eriksson of Sweden to launch a crusade against Russia.

Birgitta was born into a wealthy noble family in Finsta near Uppsala and in 1316 married Ulf Gudmarsson. In 1341–1342 Birgitta, by now the mother of eight children, went with her husband on a pilgrimage to Santiago de Compostela in Spain. At the town of Arras, they were inspired by a vision to take mutual vows of chastity. In 1344 Ulf died at the Cistercian monastery of Alvastra in East Gotland, and Birgitta started her early monastic experience. She repeatedly received prophetic and mystical visions of Jesus, among which was a complete rule for a new monastic order, known as the Rule of the Savior. The main task of this new order was the reform of Christianity and of the church itself. Birgitta was involved in the reform movement in Sweden until 1349 and then moved to Italy, where she resided until her death (23 July 1373), trying to persuade ecclesiastical and lay officials of the need for church reform. In 1370 Pope Urban V confirmed the rule, and the mother house of the order was

established in Valdstena, Sweden. Birgitta was canonized on 7 October 1391 by Pope Boniface IX.

The revelations of St. Birgitta were written down by her confessors, Peter Olofsson of Alvastra and Peter Olofsson of Skönninge, and later translated from Swedish into Latin and revised in 1378 by Alfonso Pecha de Vadaterra, bishop of Jaén (1359–1368). Chapter 2 of book 8 dealt with the moral obligations of a Christian ruler and directly influenced King Magnus II Eriksson of Sweden (1319–1363), who led an ill-fated crusade to the Neva region in 1348. A year previously, on Birgitta's instructions, he invited the representatives of the Orthodox Novgorodian clergy to discuss theological issues. The Novgorodians, however, suggested that only the patriarch of Constantinople was able to discuss such topics and refused to accept the Roman Catholic form of Christianity. Magnus invaded Karelia and started to baptize its inhabitants. He subsequently received bulls from Pope Clement VI that authorized him to fight against the still pagan Karelians and Izhorians as well as against Orthodox Russians. Although Magnus managed to capture the important fortress of Nöteborg, the Swedes were forced to retreat in 1350, without having converted the pagan Karelians and Izhorians or brought about a reunification of the Orthodox Novgorodians with the Roman Catholic Church.

St. Birgitta had greater success in establishing double monasteries (for monks and nuns) for her order, which spread through Scandinavia, Estonia, Poland, Germany, Holland, and Italy.

Black Mountain

Situated just outside the town of Antioch on the Orontes (mod. Antakya, Turkey), the Black Mountain was the center of monasticism in the principality of Antioch. Once part of the Greek Orthodox see of Seleukeia Pieria, it was placed under direct control of the patriarch of Antioch after 1098. A number of the Greek monasteries were still functioning at the time of the First Crusade (1096–1099), and Bohemund I, prince of Antioch, is reported as having confirmed their possessions. St. Symeon's, the most important, is mentioned by the Syriac chronicler Michael the Great as still functioning toward the end of the twelfth century. Latin houses were founded to replace those that had fallen into disuse before 1098. Some of these Latin houses were influenced by the wave of monastic reform sweeping the West. Gerard of Nazareth, writing in the mid-twelfth century, described the new houses of Machanath and Jubin (before 1123) and the careers of some individual Latin hermits on the Black Mountain. Aimery of Limoges, Latin patriarch of Antioch, tried to regulate eremitic life on the Black Mountain after 1140 by compelling hermits to accept religious supervision. His successor Peter of Ivrea (1209–1217) revived Jubin by incorporating it into the Cistercian Order. There was also an Armenian monastery on the Black Mountain, which served as the seat of the Armenian bishop of Antioch.

Blanchegarde

A castle in southern Palestine, some 25 kilometers (15 1/2 mi.) northeast of Ascalon (mod. Tel Ashqelon, Israel), also known as Alba Custodia or Alba Specula.

Blanchegarde was established in 1142 by Fulk of Anjou, king of Jerusalem, as one of a group of castles enclosing the Muslim-held city of Ascalon. Its territory, carved from the county of Jaffa, was administered as a royal castellany, returning to Jaffa during the tenure of the county by Amalric, younger brother of King Baldwin III, from 1151. Known castellans include Holmund Gillebert (mentioned retrospectively in 1185) and Arnulf (1165). Around 1165, it became a lordship when Walter Brisebarre, lord of Beirut, exchanged Beirut for Blanchegarde and sufficient money to ransom his mother from the Muslims, including an annual forty bezants from the port of Acre. The territory of Blanchegarde appears to have been very small, and the attachment of Walter of Blanchegarde's service of nine knights to the royal domain of Acre, attested by John of Jaffa, suggests that the lordship's income was supplemented from there. The castle was taken by the Ayyūbids in 1187 and dismantled in 1191.

The chronicler William of Tyre describes the castle as having "four towers of suitable height" [Guillaume de Tyr, *Chronique*, ed. Robert B. C. Huygens, 2 vols. (Turnhout: Brepols, 1986), 2:707–709]. This observation is supported by the plan made by Baron Rey in 1871, which shows an enclosure some 60 meters (197 ft.) square with rectangular towers at the corners and traces of an outer enceinte to the southwest. Excavations in 1899–1900 were unable to provide much further elucidation on account of the establishment of a Muslim shrine and cemetery on the site in the intervening period; however, they established the northwest tower as measuring 7.6 by 6.4 meters (25 by 21 ft.) and located a 3-meter (9 3/4 ft.) wide gate, besides unearthing architectural fragments, coins, pottery, and a signet ring. Excavations were resumed in 1996.

Bodrum

A Hospitaller castle on the southwestern coast of Anatolia (in mod. Turkey), constructed on the site of the ancient mausoleum of Halikarnassos.

The Order of the Hospital built Bodrum, also known as the castle of St. Peter, after the Mongols destroyed its fortification at Smyrna (mod. İzmir, Turkey) in 1402. The construction of Bodrum began in 1406/1407, with the first phase continuing until the death of Philibert de Naillac, master of the order (1421). Additions and repair of the castle continued through the fifteenth century in response to pressures from the Ottoman Turks and advances in military technology. A new phase of construction began in 1454, following the Ottoman conquest of Constantinople, and intensifying prior to the siege of Rhodes in 1480. Construction stopped between 1480 and 1489, during the period of truce that existed while the Hospitallers and the papacy held Cem, Sultan Bayezid II's brother, in custody. The Hospitallers began to fortify Bodrum again in 1494, when King Charles VIII of France planned a crusade to make Cem sultan in place of his brother. They abandoned the castle in 1523, after the loss of Rhodes.

Historians of the order have questioned Bodrum's military utility as a base in Anatolia, arguing that it was too far from any Turkish center to pose a military threat. In classical times, Halikarnassos had served as a base for attacks upon the island of Rhodes, but there is little archaeological evidence that the Turks had fortified the site. The Hospitaller selection of Bodrum stemmed from the earlier loss of Smyrna. After the Hospitallers participated in the capture of that city in 1344, the papacy made them responsible for its garrisoning and fortification. The order received indulgences for the defense of Smyrna, and its harbor also generated revenues. After its loss, the order sought a new foothold in Anatolia. The site of Bodrum was acquired through an agreement with Sultan Mehmed I, who proposed a location for the new castle within the lands of the emir of Mentеше, outside Ottoman-controlled territory. Bodrum's construction permitted the order to retain the indulgences granted for the defense of Smyrna, and to sell indulgences for the building of the new castle. The Christian West believed that Bodrum had been captured from the Turks and that it aided Christians escaping the Turks, giving the order ammunition against its critics who wanted it to engage the Turks on the mainland. The Hospitallers, however, considered the castle of Bodrum as part of the fortification system

of Rhodes. The convent in Rhodes appointed the castellan of Bodrum, and the castle received its supplies from Rhodes and from Kos. It became a base for Hospitaller naval raids by 1412, and was one of a string of watch castles by the time of the Ottoman siege of Rhodes in 1480.

Bohemia and Moravia

Bohemia and Moravia were two sparsely populated regions in eastern central Europe, inhabited during the period of the crusades mainly by Czechs, with minorities of Germans and Jews. At the beginning of this period, the two regions were ruled by the Přemyslid dynasty, whose leading representatives held the titles of dukes of Bohemia and margraves of Moravia. They were vassals of the kings or emperors in Germany and paid tribute to them. They retained great influence on ecclesiastical institutions in their countries, especially the bishoprics of Prague (Cz. Praha) in Bohemia and Olomouc in Moravia. This situation allowed Duke Vratislav II of Bohemia (d. 1092) to aspire to a royal crown under imperial suzerainty, and participation in crusades was helpful in the continuing attempts of his successors to achieve the royal title.

Both Bohemia and Moravia had contacts with the East dating from the ninth and tenth centuries, because trade routes from the West passed through the Bohemian capital, Prague, via Kraków to Kiev and the Black Sea. Other routes that followed the Danube through Hungary and crossed the Balkans to Constantinople were frequently used by Western pilgrims and crusaders to Jerusalem. The Jewish community at Prague suffered from riots in 1096, when during the First Crusade (1096–1099) the German leader Volkmar and his

hordes passed through Bohemia on the way from the Rhineland to Hungary.

Participation in the Crusades (Twelfth–Thirteenth Centuries)

From the late eleventh to the early fourteenth centuries, the population of Bohemia and Moravia grew, especially through German immigration. Compared with other parts of Latin Christendom, however, the overall figures remained low, and as a consequence the participation of Bohemians and Moravians in the crusades was insignificant, as far as numbers are concerned. Nevertheless, it is possible to identify individuals from Bohemia and Moravia who went on crusades, and even in some cases to speculate about their motives. After the First Crusade a few pilgrims are known to have left for Jerusalem, such as Count Vznata in 1122 and the two noblemen Hermann and Lutobor in 1124. Sources from Klosterneuburg in Austria mention a crusader with the typical Czech name Ottokar. Pious nobles evidently adopted the habits of their social equals from other Western countries.

The most important pilgrim to Jerusalem was Henry Zdík, bishop of Olomouc (1126–1150), who went there in 1123 and again in 1137. On both journeys he was accompanied by nobles, clerics, and servants, among them a Count Dluhomil (1123) and Silvester, abbot of the monastery of Sázava (1137). Henry's books are known to have included a *Descriptio Terre Sancte* (description of the Holy Land). On his deathbed, the bishop commissioned donations to Jerusalem; Count Groznata, son of Count Hermann, took these gifts to the Latin patriarch of Jerusalem in 1152. Henry not only enhanced his reputation for piety through his travels to Jerusalem, but also established many contacts that were extremely helpful when he tried to reform existing religious houses or found new ones. He established Augustinian canons in his cathedral in Olomouc that obtained a fragment of the True Cross; the cathedral chapter was later reorganized to follow the rule of the Church of the Holy Sepulchre in Jerusalem. Premonstratensian canons were installed at Litomyšl, where the convent was named after the Mount of Olives, and Cistercians came to Strahov in Prague, where the monastery was called Mount Zion.

When Bernard of Clairvaux was planning the preaching for the Second Crusade (1147–1149), Bishop Henry Zdík was the obvious choice to be entrusted with this mission in eastern central Europe. The Second Crusade significantly increased crusade participation from Bohemia and Moravia.

Duke Vladislav II of Bohemia had been used to collaborating with Henry Zdík against other members of the Přemyslid family. Now he was convinced by Henry that crusading could be an effective way to rally support and to establish his primacy. So Vladislav organized a contingent to accompany his overlord King Conrad III of Germany on the crusade. Although Vladislav himself returned from Constantinople via Kiev and Kraków along the ancient trade route, some of his retinue continued with Conrad III through Asia Minor; at the battle of Dorylaion in 1147, Vladislav's marshal Jurik died, and the ducal chancellor Bartholomew was taken prisoner. At Constantinople, Bishop Henry Zdík held talks concerning ecclesiastical differences between Greeks and Latins. Later Pope Eugenius III permitted him and three Moravian princes, cousins of Vladislav, to fight against heathen peoples living on the coasts of the Baltic Sea. Yet neither there nor in the East did these crusading efforts yield immediate advantages for the Přemyslids. In order to gain recognition as king of Bohemia in 1158, Vladislav had to provide troops to Frederick I Barbarossa, the Holy Roman Emperor, for his campaign against Milan. But Vladislav still felt uneasy about his unfulfilled vow to visit Jerusalem and never gave up his plans to go to the Holy Land. When Raymond, the master of the Hospital, heard of this, he presented Vladislav with the keys of the Hospitaller fortress Krak des Chevaliers.

In the 1160s Vladislav's brother Henry was a guest of the Hospitaller master Gilbert of Assailly in the Holy Land, as attested by a charter of Henry's son Henry Břetislav, bishop of Prague (1182–1197). In 1172 Vladislav was forced to abdicate. From this point on, the rival Přemyslids who competed for the throne, as well as the nobility of Bohemia and Moravia, favored prestigious crusading plans and crusader institutions such as the military-religious orders as a means of securing ecclesiastical support. Martin, provost of the cathedral chapter of Prague, became a Hospitaller, served several years in the East, and returned with the title *preceptor Ungarie, Boemie et omnium aliarum terrarum ob oriente et meridie et septentrione adiacentium* (preceptor of Hungary, Bohemia and all adjacent lands to the east, south, and north), having been given the task of organizing support for the kingdom of Jerusalem from eastern central Europe. Martin secured important donations for the Hospitallers from Duke Frederick of Bohemia, the eldest son of the late King Vladislav.

The fall of Jerusalem to Saladin in 1187 sparked a new enthusiasm for crusades to the East that lasted for several

decades. When Emperor Frederick Barbarossa took the cross at Mainz in 1188, Duke Frederick of Bohemia was present, although he did not ultimately accompany his overlord to the East. Duke Frederick's successor, Conrad Otto, similarly did not go in person to the Holy Land, unlike some of his relatives and rivals. Among them was Děpolt II, a nephew of Vladislav II, who died on his return from the Third Crusade (1189–1192) on 9 August 1191, in Italy, where he had joined Emperor Henry VI who was besieging Naples. Henry Břetislav, bishop of Prague and duke of Bohemia, took the cross in 1195, but died at home in 1197. The ruling princes who took crusade vows but did not go, notwithstanding the dangers for their souls, were probably attempting to strengthen their position by exploiting crusade privileges, even though they could not afford to leave Bohemia.

The political situation in Bohemia-Moravia changed in 1197 with the accession of Ottokar I (d. 1230). The new prince profited from internal strife in Germany and was formally recognized as hereditary king of Bohemia by both claimants to the empire, Otto IV and Philip of Swabia, and by Pope Innocent III. His surviving Přemyslid rivals were expelled from the kingdom. Bohemia and Moravia were now united under a strong monarchy, supported by German immigrants, townspeople, and churchmen, while the Czech nobles increasingly concentrated their attention on their own estates. Gradually crusading initiatives lost their importance for the internal affairs of the realm.

During the first half of the thirteenth century, both Bohemia and Moravia continued to contribute men and money for crusades in the East, against the Cathars in southern France, and in the eastern Baltic lands. Bishop Daniel of Prague (1197–1214) collected money for the Holy Land; when he died, Pope Innocent III commissioned an investigation. When Ottokar I's cousin Děpolt III assembled troops for a crusade, the troops attacked a royal castle instead, and in 1217 Pope Honorius III ordered the bishops of Prague and Olomouc and the provost of Regensburg to intervene on behalf of the king against Děpolt III's attack. The monarchy was now clearly too strong to be endangered by magnates under the pretext of a crusade. Yet people from Bohemia and Moravia were still attracted by crusades. In 1250 a *dominus Marcualdus suppanus de Boemia* (Lord Markwald, the judge, from Bohemia) and thirty-six companions were recorded on a ship at Messina bound to join King Louis IX of France in the Holy Land [*Historia diplomatica Friderici II*, ed. Jean-Louis-Alphonse Huillard-Bréholles, 6 vols. (Paris: Plon,

1852–1861), vol. 6, book 2: 784–789]. There were even some inhabitants of Bohemia or Moravia who emigrated to the Holy Land, for example the monk Egidius mentioned by the chronicler Gunther of Pairis.

Ottokar I's grandson Ottokar II (d. 1278) was the last Bohemian ruler to make use of the prestige and enthusiasm that accrued to those who organized crusades. His ultimate aim was probably to secure the German imperial throne. Significantly Ottokar II's crusades were not directed toward the Holy Land but toward Prussia, where the Teutonic Order was carrying out campaigns of Christianization. From the perspective of Bohemia and Moravia, crusades to Prussia had several advantages: the costs of traveling were lower; Bohemian interests in Poland could be pursued; the friendship of the Teutonic Order could be secured. The most obvious advantage, however, was papal support. As early as 1246, Pope Innocent IV sent an envoy to negotiate with Ottokar about a new crusade. After his accession (1253), Ottokar II led crusades to Prussia in 1254–1255 and again in 1267–1268. His first expedition succeeded in conquering the last heathen parts of the Prussian coast, and the newly constructed stronghold of Königsberg (literally, "the king's mountain") was named in his honor. Ottokar's second expedition helped to subdue a rebellion among the heathen Prussians and was intended to stabilize his hegemony throughout central Europe. Ottokar's councillor Bruno, bishop of Olomouc (1245–1281), even vainly hoped that his see would become the archbishopric for Prussia and Livonia.

Religious Orders

One of the main results of the crusading movement in the twelfth and thirteenth centuries was the establishment in Bohemia and Moravia of new religious orders: the Hospitallers, Templars, Teutonic Knights, and Canons of the Holy Sepulchre. Their common purpose was to support and protect pilgrims: they fought for the faith (except for the Canons of the Holy Sepulchre) and cared for the sick (except for the Templars). These orders were given rich houses, important parishes, and large estates in Bohemia and Moravia, whose surpluses they were supposed to transfer to the Holy Land. Usually their early acquisitions were pious donations, either from Přemyslid princes or from nobles such as the Bavor family or the Markvartice. All four orders had houses at Prague, the capital of the realm. Southern Moravia was another important center, because after the Third Crusade, when the routes through Hungary, the

Balkans, and Asia Minor had become too insecure, men and money from all over eastern central Europe were sent to the Holy Land through this region via Vienna and Venice. Later the great military religious orders began to invest surpluses in Bohemia and Moravia themselves. From the mid-thirteenth century, they no longer relied upon donations but bought estates, colonized lands, erected castles, and even founded towns.

The Hospitallers were evidently established in Bohemia as early as 1169. Favored by King Vladislav and his court at Prague, they acquired a site on the western side of the main bridge over the River Vltava just outside the town walls. More than a dozen houses and commanderies throughout the realm followed. In Bohemia these included Kadaň (confiscated by Ottokar II in order to found a town) and the town of Manětín; the castle of Strakonice (acquired before 1243 from the Bavor family); estates at Horažďovice and Pičín; and parish churches, tithes, and in some cases hospitals at Světla (later called Dub), Mladá Boleslav, and Ploskovice, as well as at Zittau and Hirschfelde on the roads to Lusatia (Lausitz) and Glatz (mod. Kłodzko, Poland) on the road to Silesia. In central Moravia, they had hospitals at Staré Brno and later at Kroměříž, estates at Ivanovice (near where the Hospitallers built a castle at Orlovice), Mutěnice (Crux), Příbice, Horní Kounice (the last two places initially as dependencies of Mailberg in Austria), and perhaps also Brtnice. In the north of Moravia they held estates at Hrobníky, from which they moved to the nearby town of Leobschütz (mod. Głubczyce, Poland), and in 1333 Duke Nicholas of Opava gave them a hospital at his capital of Opava (Ger. Troppau).

The main dependency of the Canons of the Holy Sepulchre was the church of St. Peter at the Zderaz in Prague, though they soon acquired other churches and hospitals, especially Nymburk and Trutnov (the latter dependent upon their convent at Neisse in Silesia). Though the other orders did not admit women, at least initially, the Order of the Holy Sepulchre supervised a female convent at Světec.

The Teutonic Knights received their first donations from Vladislav Henry, margrave of Moravia (1198–1203). Their possessions soon outnumbered those of the Hospitallers. Outside Prague, the Teutonic Order held the town of Chomutov, several parish churches in Řepín, Býčkovice, Bílina, Plzeň, Cheb (Ger. Eger, an imperial town pawned to the Bohemian kings), Miletín and Hradec Králové, Drobovice (to which was added a house and a hospital in the town of

Německý Brod), and finally the parish church and a hospital next to the castle and town of Jindřichův Hradec (Ger. Neuhaus). In Moravia several possessions were centered at Hostěradice, Krumlov, and especially the small town of Neusedlitz (Austerlitz, founded by the order). Parish churches at Opava and at Jägerndorf were donated to the Teutonic Order by the Přemyslids. Since Bohemia and especially Moravia were essential for the communication between the Baltic and Mediterranean regions, the Teutonic Order administered its possessions in the two countries through a provincial commander subject directly to the grand master in Prussia.

The Temple, the oldest military religious order, was the last to receive estates in the Czech lands. During the 1230s and later, the Templars obtained houses in Prague itself and in the nearby village of Uhřetěves. In Moravia they were given the castle of Čejkovice and the large estate of Jamolice, where they built the castle of Tempelštejn. Between 1297 and 1308, the Templars colonized newly acquired territories around the River Bečva and near Vsetín on the border with Hungary, where they built the castle of Friendsberg. After the dissolution of the order in 1312, only Čejkovice and Tempelštejn passed on to the Hospitallers, whereas the other possessions were taken over by noble families.

The Later Middle Ages

Crusading in Bohemia and Moravia during the fifteenth century was primarily concerned with religious wars against the Hussites, a reform movement in the Czech lands that was regarded as heretical by the Roman Catholic Church. In the fourteenth century, however, the kings of Bohemia maintained close ties with the Teutonic Order in the Baltic region, mainly because John of Luxembourg, king of Bohemia from 1310, and his son, Emperor Charles IV (d. 1378), periodically allied themselves with the Teutonic grand master against Poland. This policy was designed to further Bohemian expansion into Silesia and Lusatia. This expansion had already begun in the thirteenth century, but under Charles IV it culminated in the incorporation of these countries into the Bohemian realm, while even Brandenburg and its Neumark (new march) came under Luxembourg rule. This explains the participation of Bohemians and Moravians in the *reysen* (seasonal campaigns) against the pagan Lithuanians organized by the Teutonic grand master in Prussia, and joined by nobles from all over Europe. Three times (1328–1329, 1336–1337, and 1344–1345) King John himself

took part, accompanied by Ulrich von Neuhaus, who commemorated the events with paintings in his palace at Jindřichův Hradec. On some occasions crusading schemes were fostered in connection with the eastern Mediterranean region, as, for example, when Charles IV received King Peter I of Cyprus at his court in Prague.

The Luxembourg kings, especially Charles IV, leaned heavily on ecclesiastical support against aristocratic opposition. The Hospitallers and the Teutonic Knights in Bohemia and Moravia had to cope with economic difficulties, royal interventions, and noble jealousy. Conflicts between Luxembourg princes after Charles IV's death increased the power of the Czech nobility and boded ill for both crusades financed by papal indulgences and ecclesiastical property in the realm. The Teutonic Order suffered most. King Wenceslas IV came into conflict with its grand master in 1388–1389 when the order in Prussia refused to buy the Neumark of Brandenburg. Burdened by heavy debts in its commanderies and disaster in Prussia after its defeat at Tannenberg, the Teutonic Order was unable to prevent the king from confiscating its Bohemian and Moravian houses in 1411. Only some parishes of the order survived.

During the wars against the Hussites, the alienation of ecclesiastical property continued. Even Roman Catholic kings wooed the magnates with such donations. The Hospitallers survived in their stronghold of Strakonice. Later in the fifteenth century, the orders returned to Prague, though the Czech nobility did not restore many of their former estates. Frequent crusades against the Hussites made any significant contribution to the wars against the Ottoman Turks impossible. The crusade against the Turks was, however, often used as an argument in various negotiations for peace with the Hussites held by King Sigismund and his heirs, by the Council of Basel, and by Pope Pius II. Pope Paul II was not pleased when King Matthias Corvinus of Hungary used the papal crusade against the heretical Bohemian king George of Poděbrad as a pretext to conquer Moravia, Silesia, and Lusatia instead of fighting the infidel in the Balkans. Of course some Moravians and even Bohemians participated in expeditions such as that directed by John of Capistrano against Belgrade in 1456. But in general the Hussite problem contributed decisively to the demise of crusading in Bohemia and Moravia at the end of the Middle Ages.

Bohemund I of Antioch (d. IIII)

Leader of the Italian Norman contingent in the First Crusade (1096–1099) and subsequently prince of Antioch (1098–1111).

Bohemund was the nickname of Mark, a son of Robert Guiscard, the Norman conqueror of southern Italy, by his marriage to the Norman Alverada. Guiscard repudiated this first marriage in 1058 in order to marry the Lombard princess Sikelgaita, and Bohemund lost his right of inheritance to the duchy of Apulia in favor of the sons she bore him. However, as a young adult Bohemund fought constantly at his father's side, and, specifically, he participated in his father's attacks on the Dalmatian coast of the Byzantine Empire in the 1080s. This was intended to provide him with his own lands, but after Guiscard died in 1085 the Dalmatian conquests were soon lost. Bohemund was left to fight his half-brother and his paternal uncle, the count of Sicily (both called Roger), for a small territorial inheritance in Apulia, including the cities of Taranto and Bari. Unsurprisingly, therefore, it was widely thought even at the time that Bohemund took part in the First Crusade for reasons of territorial ambition.

Bohemund announced his participation in the expedition in dramatic fashion: the anonymous author of the *Gesta Francorum* claims that Bohemund heard about the crusade while besieging Amalfi and was "inspired by the Holy Ghost" to cut up his most valuable cloak into crosses and abandon the siege, along with most of his army, in order to go and join it [*Gesta Francorum*, ed. and trans. Rosalind Hill (London: Nelson, 1962), p. 7]. However, it is highly unlikely that this was Bohemund's first intimation of the expedition, since he and Pope Urban II were well acquainted and this was seven months after the crusade was announced at the Council of Clermont. Most probably, Bohemund was pre-

empting possible opposition to his participation by a show of responding to popular enthusiasm and pressure. Bohemund's contingent, which was not large, crossed the Adriatic Sea in October 1096, ahead of the other major armies, and landed near Dyrrachion (mod. Durrës, Albania), which Bohemund and his father had besieged during the winter of 1081–1082 and which was betrayed into their hands: a lesson that Bohemund was to put to good use at Antioch. The approach of their old antagonist was viewed with great suspicion by the Byzantines: this is reported not only by Anna Komnene, the emperor's daughter, whose account was written in the light of subsequent developments, but also by Latin writers, one of whom reported a secret approach to Godfrey of Bouillon to suggest an attack on Constantinople (mod. İstanbul, Turkey).

Emperor Alexios I Komnenos endeavored to contain the potential threat from Bohemund by extracting an oath from him: according to the *Gesta Francorum*, in return for an oath of loyalty the emperor would give Bohemund lands "beyond Antioch" (p. 12). The exact terms of this oath have been much discussed. Byzantine fears were seen to be justified in the summer of 1098, when Antioch (mod. Antakya, Turkey) was captured by the crusaders after a long siege, and Bohemund kept the city, which was formerly Byzantine and which was immensely important to the empire, strategically, economically, and symbolically. At what point Bohemund decided Antioch was to be his is not established, but his actions in the spring of 1098 suggest that he was actively maneuvering to this end: having identified a traitor within the city, he encouraged first the withdrawal of the Byzantines under their general, Tatikios, and then the desertion of Stephen of Blois, who held some position of overall command within the barons' war council. He extracted a promise from the other leaders that the city should be granted to whichever of them was able to engineer its capture. Thus, when the city was betrayed to the crusaders, Bohemund laid claim to it, and although succeeding months were spent in wrangling over his possession, especially with Raymond of Saint-Gilles, he remained in Antioch when the rest of the leaders marched south to Jerusalem early in 1099. Bohemund did not participate in the siege and capture of Jerusalem, and he did not complete his pilgrimage by visiting the city until Christmas 1099.

There is little evidence for the earliest stages of consolidation of the principality of Antioch by Bohemund. While campaigning in Cilicia in August 1100, he was captured by

Bohemund I of Antioch (d. 1111)

the Dānishmendid emir and held for ransom. His nephew Tancred assumed the regency of Antioch during his absence (1101–1103) but was understandably unwilling to raise the enormous sum demanded to release him. Bohemund, meanwhile, persuaded his captor to refuse an offer by Emperor Alexios to ransom him, which would have ended his ambitions, in favor of a smaller sum and an alliance with the Franks. The sum (100,000 bezants) was raised by King Baldwin I of Jerusalem and Patriarch Bernard of Antioch. Remarkably, Bohemund emerged from captivity to reclaim Antioch intact from Tancred, and with his legendary status enhanced by tales of his wily negotiations with the emir, and his winning ways with the emir's womenfolk. Bohemund and Joscelin I of Edessa profited from the alliance with the Dānishmendid emir to secure Marash (mod. Kahramanmaraş, Turkey) in 1103, while a Byzantine attempt to reclaim Cilician cities was unsuccessful. In the following year, however, Bohemund and Tancred found themselves constantly fighting both Muslims and Byzantines, and in September 1104 Bohemund announced that he would sail for Europe to secure reinforcements. He left Tancred as his regent.

Bohemund headed first for his lands in southern Italy, where he spent some months putting his affairs in order after nine years' absence and recruiting Normans for an expedition. In Rome he persuaded Pope Paschal II that the Byzantines were inimical to the Latin settlements in Outremer, and gained crusading status for a planned attack on the Byzantine Empire. From there he traveled to France, where King Philip I gave him permission to recruit, and to Normandy, where he met King Henry I of England and his sister Adela, widow of Stephen of Blois, at Easter 1106. They brokered a marriage for him with Constance, daughter of Philip of France and divorced countess of Champagne. Although Constance went no further than Italy with Bohemund, the marriage was an impressive mark of favor and a boost to recruitment.

Bohemund returned to Italy late in 1106 and spent much of the following year planning his crusade. He and his army landed on the Dalmatian coast of the Byzantine Empire in October 1107 and marched on Dyrrachion. This time, too, he was unable to take the city by assault, and Emperor Alexios moved swiftly to blockade him by sea. In the spring of 1108 the Byzantine army moved up to encircle the crusaders, and in the summer famine and disease sapped their morale. In September Bohemund was forced to surrender. The

Treaty of Devol, which Anna Komnene reports verbatim, made him the emperor's liege-man (Gr. *to lizion anthropon*) [Anne Comnène, *Alexiade*, ed. Bernard Leib, 3 vols. (Paris: Les Belles Lettres, 1937–1976), 3:127]; he was to govern Antioch under the emperor's suzerainty, while his Cilician conquests were to be forfeited to the emperor. A Greek patriarch was to be restored in Antioch. Finally, Tancred was to be obliged to comply with the treaty. This last requirement ensured that Bohemund was unable to return to Antioch, and instead he retreated to his Italian lands, where he died in 1111, leaving two infant sons by his French wife to inherit his claim to Antioch.

Although Bohemund's career ended ignominiously, he has retained the aura of a legendary hero. Anna Komnene remembered him vividly some forty years after she, as a young woman, had witnessed his humiliation at Devol: his tall stature, his light brown hair, his blue eyes, his charm, and even his laugh. Other writers exaggerated his adventures on campaign and in captivity. He is depicted as a man whose abilities were exceeded only by his ambition.

Bohemund II of Antioch (1108–1130)

Prince of Antioch (1126–1130).

As the son of Prince Bohemund I and Constance of

France, Bohemund was Roger of Salerno's prospective heir when Roger was killed in the battle of the Ager Sanguinis in 1119, but at that time he was only eleven years old and still in France. King Baldwin II of Jerusalem therefore acted as regent during his minority. Bohemund arrived in Antioch (mod. Antakya, Turkey) in the autumn of 1126. He married Baldwin's second daughter, Alice, early in 1127.

Bohemund II's rule started promisingly with the siege and recovery of Kafartab in 1127, but this was followed by a quarrel with Joscelin I, count of Edessa, that developed into war and was only reconciled by the intervention of Baldwin II. Both Bohemund and Joscelin tried to take advantage of Turkish dissension to capture Aleppo, but without success. In 1129, however, Bohemund was part of an alliance (with Baldwin and Joscelin) that captured Banyas. It was also recorded by the Arab chronicler Usāma Ibn Munqidh that Bohemund attacked Shaizar during his brief reign.

While campaigning in Cilicia early in 1130, Bohemund was ambushed by the Dānishmendid Turks, who massacred his whole army and beheaded Bohemund. His death was the cue for renewed aggression from Aleppo under the rising Turkish leader Zangī. Antioch was ill equipped to counter this, since Bohemund had left only a two-year-old daughter, Constance. His widow, Alice, seized power without waiting for her father, King Baldwin, as overlord, to appoint a regent.

Bohemund III of Antioch (d. 1201)

Prince of Antioch (1163–1201), the son of Constance (daughter and heiress of Bohemund II) and her husband, Raymond of Poitiers.

Bohemund III came to the throne of Antioch in 1163, when an aristocratic faction expelled his mother. The principality soon faced an invasion by Nūr al-Dīn in response to an attack on Egypt by King Amalric of Jerusalem. While defending the

town of Harenc (mod. Harim, Syria), Bohemund was captured in August 1164, but he was soon released. He then traveled to Constantinople to seek assistance from Emperor Manuel Komnenos. Bohemund returned with a Greek Orthodox cleric, Athanasios, who was to be installed as patriarch of Antioch, probably as a condition of Manuel paying Bohemund's ransom. An earthquake in 1170 demolished Antioch's cathedral, crushing Athanasios and allowing the return of the Latin patriarch, Aimery of Limoges.

Bohemund's first wife was Orgilosa of Harenc; in 1177 he married a relative of Manuel's named Theodora, but then he put her aside in 1180 to marry his mistress, Sibyl. Patriarch Aimery denounced the marriage as bigamous and again withdrew from the city, while the nobility revolted. Mediation by the Latin patriarch of Jerusalem, Eraclius, lifted Aimery's interdict on the city and established a tenuous peace.

Bohemund maintained a truce with Saladin from 1177 to 1187, but in 1188 Saladin captured Laodikeia (mod. Al-Lādhiqīyah, Syria) and a large part of the principality, although another peace agreement preserved the city of Antioch from attack. Bohemund's interests lay largely in Cilicia and northern Syria, so he participated little in the events of the Third Crusade (1189–1192). A dispute over the stronghold of Baghras (mod. Bağra, Turkey) with Leon II of Cilicia ended in Bohemund's captivity in 1193. Bohemund acknowledged Leon's suzerainty and allowed Armenian soldiers into the citadel of Antioch. The citizenry rioted against this imposition, and after they expelled the garrison, established a commune. The mediation of Henry of Champagne, ruler of Jerusalem, led Bohemund to recognize Baghras as Armenian territory and to marry his heir, Raymond, to Leon's heiress, his niece Alice.

The death of Raymond (1197) left his infant son, Raymond-Rupen, as heir to Antioch. However, in 1198 Bohemund III's second son, Bohemund of Tripoli, expelled his father from the city and was recognized as prince by the commune. Bohemund III regained the city three months later with the help of Leon (king of Cilicia as Leon I from 1198). Despite the papacy's support for Raymond-Rupen, Bohemund of Tripoli again seized Antioch after his father's death (April 1201), sparking a civil war for the next twenty-five years over the succession in Antioch.

Bohemund IV of Antioch-Tripoli (d. 1233)

Count of Tripoli and prince of Antioch (1201–1233), whose claims to Antioch were contested for over twenty years by his nephew, Raymond-Rupen.

The second son of Bohemund III of Antioch, Bohemund IV was installed by his father as count of Tripoli on the death of the childless Count Raymond III, who had originally designated Bohemund IV's older brother, Raymond, as his heir. As Raymond was already foreseen as future ruler of the principality of Antioch, these dispositions sowed the seeds of future conflict over the succession to the principality. Raymond died in 1197, leaving a young son, Raymond-Rupen. On the death of Bohemund III (April 1201), however, Bohemund IV seized the city of Antioch (mod. Antakya, Turkey), dispossessing his young nephew. Bohemund received the support of the commune of Antioch, which disliked Raymond-Rupen's Armenian connections. To gain the support of the commune's largely Greek members, Bohemund in 1206 expelled the Latin patriarch, Peter of Angoulême, and installed a Greek patriarch, Symeon II. A coup mounted by Peter against Bohemund failed in 1207; the patriarch subsequently starved to death in prison. Bohemund accepted a Latin patriarch back into the city the following year.

Raymond-Rupen's principal ally was his great-uncle King Leon I of Cilicia, who captured Antioch and had his great-nephew inaugurated as prince in 1216, forcing Bohemund to retreat to Tripoli. Leon returned the castle of Baghras (mod. Bağra, Turkey) to the Templars, as well as confiscated land to Latin prelates, thus wooing many of the supporters of Bohemund. In 1220, however, Bohemund recaptured the city from his nephew. Raymond-Rupen invaded Cilicia, claiming its throne by right of his mother, Alice, but he was captured and died in prison. The threat from the Saljūqs brought Antioch and the Armenians together, and Bohemund's younger son, Philip, was married to the young queen of Cilicia, Isabella. Despite joining the

Armenian church, Philip remained Latin at heart, and he was deposed and poisoned by the Armenian Het'umid dynasty in 1224.

Bohemund IV was married twice: first to Plaisance of Gibelet, by whom he had four children, and second to Melisende of Cyprus, by whom he had Maria, later claimant to the throne of Jerusalem. Bohemund died in March 1233, reconciled to the Latin Church at his death. He was succeeded in both Antioch and Tripoli by his eldest son, Bohemund V.

Bohemund V of Antioch-Tripoli (d. 1252)

Prince of Antioch and count of Tripoli (1233–1252), having inherited both titles on the death of his father, Bohemund IV.

After a marriage to Alice of Champagne that was soon annulled, Bohemund married Lucienne of Segni, a cousin of Pope Gregory IX. Perhaps learning from his father's experience, Bohemund obtained the privilege that he could not be excommunicated by anyone except the pope. His authority within both of his principalities was curtailed by the commune of Antioch (mod. Antakya, Turkey) as well as by the independence of the military orders, which controlled the port of Tortosa (mod. Tartūs, Syria) and the castles of Baghras (mod. Bağra, Turkey), Margat (mod. Marqab, Syria), Krak des Chevaliers (mod. Qal'at al-Hisn or Hisn al-Akrād, Syria), and Safita.

Like his father and grandfather before him, Bohemund largely stayed out of the struggle in the kingdom of Jerusalem between the Frankish barons and the Staufien regime imposed by Frederick II, Holy Roman Emperor and king of Sicily. Bohemund himself did not join in the battle of La Forbie (1244), in which the Franks of Jerusalem were defeated

by the Ayyūbids of Egypt, but a large number of Antiochene and Tripolitan troops lost their lives. Although the prince generally maintained good relations with his Muslim neighbors, relations with the Armenians had been strained since the death of his brother Philip at the hands of Constantine of Lampron in 1225. Bohemund died in January 1252 and was succeeded by his son Bohemund VI.

Bohemund VI of Antioch-Tripoli (d. 1275)

Prince of Antioch and count of Tripoli (1252–1275).

The son of Bohemund V of Antioch-Tripoli and Lucienne of Segni, Bohemund VI succeeded to both principalities on the death of his father (1252), when, although still a minor, he seized power from his mother with the help of the crusader King Louis IX of France. It was Louis who arranged Bohemund's marriage to Sibyl, daughter of King Het'um I of Cilicia, ending years of hostilities between the two neighboring states. With Het'um, Bohemund allied with the Mongols and received back the port of Laodikeia (mod. Al-Lādhiqiyah, Syria), which had been lost since 1188. However, the Mongols required Bohemund to admit the Greek patriarch Euthymios into the city of Antioch (mod. Antakya, Turkey), earning the prince a papal excommunication.

Following the Mongol defeat by the Mamlūks at 'Ayn Jālūt in September 1260, Bohemund's lands were again threatened. The Mamlūks invaded the county of Tripoli in 1266, capturing Arqah and dividing the county in two. Ten years later, the Mamlūk sultan Baybars I captured Antioch, massacring its inhabitants (1268); although Bohemund survived in Tripoli, most of the principality of Antioch was lost. In 1270 the mighty Hospitaller castle Krak des Chevaliers fell to Baybars, but Bohemund managed to gain a ten-year truce with the sultan. Bohemund VI died in 1275, passing his much-reduced lands to his son Bohemund VII.

Bohemund VII of Antioch-Tripoli (d. 1287)

Prince of Antioch and count of Tripoli (1275–1287).

Bohemund succeeded to his much-reduced domains on the death of his father, Bohemund VI, in 1275 but remained in Cilicia with his mother's relatives until he came of age in 1277. When he returned, Bohemund faced opposition from Guy II Embriaco, lord of Gibelet, and the Templars, which led to civil strife for the next five years. In 1282, Bohemund captured Guy and his two brothers and had them buried in sand up to their necks until they starved.

In 1281 Bohemund abandoned the long-standing alliance with the Mongols, and he signed a truce with the Mamlūks shortly before a Mongol invasion. However, in March 1287 Laodikeia (mod. Al-Lādhiqiyah, Syria), the last portion of the principality of Antioch, fell to the Mamlūk sultan Qalāwūn. Bohemund himself died on 19 October the same year. He was succeeded in the county of Tripoli by his sister Lucia. Two years later Tripoli itself fell and the long line of Norman princes of Syria ended.

Boniface I of Montferrat (d. 1207)

Marquis of Montferrat (1192–1207), titular leader of the Fourth Crusade (1202–1204) and subsequently marquis of Thessalonica (1204–1207).

Boniface VIII (d. 1303)

Born around 1150, the third son of William V “the Old,” marquis of Montferrat, and Judith of Austria, Boniface succeeded to the marquisate of Montferrat in northwestern Italy in 1192 when his elder brother Conrad was assassinated in the Holy Land. In June 1201 the leading barons of the Fourth Crusade, perhaps on the advice of King Philip II of France, offered the leadership of the enterprise to Boniface, who accepted. After visiting the king in Paris and the monks of Cîteaux, he traveled to Hagenau in Alsace, where he spent Christmas with his cousin, Philip of Swabia, king of Germany. There he spoke with young Alexios Angelos, the brother of Philip’s wife, Irene, and son of the deposed Byzantine emperor, Isaac II Angelos. Alexios had just arrived in the West and was seeking an army to help him obtain the throne by overthrowing his uncle, Emperor Alexios III Angelos. The plan was commended by Philip, although, given his own struggle for the German throne, he could offer no material support. Boniface promised to do all that he could to help. He later tried and failed to convince Pope Innocent III to allow the crusade to divert to Constantinople.

The crusade fleet left Venice in early October 1202 without Boniface, who had matters to attend to elsewhere. He also wanted to avoid the conquest of Zara (mod. Zadar, Croatia), which the crusaders had agreed to undertake in return for the suspension of their debt to the Venetians, and did not arrive at Zara until mid-December. A few weeks later, envoys from Philip of Swabia arrived, promising rich rewards for the crusaders if they would help the young Alexios to claim his throne in Constantinople. Boniface naturally supported the plan, as did most of the other barons, conscious of the crusade’s lack of funds. Alexios joined the crusaders on 25 April 1202 and remained under the marquis’s care thereafter. After the crusaders had successfully placed their claimant on the throne of Byzantium as Emperor Alexios IV (July 1203), Boniface became an important member of the imperial court; it was probably at this time that Alexios granted him the island of Crete. Boniface led an expeditionary force with the new emperor to capture Alexios III and extend control over Thrace in autumn 1203, but soon after, the marquis was edged out of court by a growing anti-Latin faction.

Given their experience with the Montferrat clan, the Greek citizens of Constantinople believed that the crusader attack on the city in April 1204 was an attempt to place Boniface on the throne of the Caesars. After the city’s fall, people on the streets would greet Latins with the Greek phrase *Ayos*

vasileas marchio (holy emperor the marquis). Boniface certainly aspired to the position, and he looked the part. He had already occupied the Great Palace of Constantinople and married the widow of Isaac II, Margaret of Hungary. However, the crusaders elected Count Baldwin IX of Flanders instead, and a dispute between the two men soon broke out over possession of the city of Thessalonica, which Boniface insisted should be given to him at once. War was avoided only by the quick work of Doge Enrico Dandolo and Geoffrey of Villehardouin. Boniface took the city and, with the help of his wife and her son, Manuel, extended his holdings throughout Thessaly and into central Greece. From 1205 onward, Boniface, allied with the new emperor, Henry, waged war against the Bulgarian emperor, Kalojan. He was killed on 4 September 1207 in a Bulgarian ambush near Mosynopolis, leaving a young son, Demetrius, as heir to Thessalonica.

Boniface VIII (d. 1303)

Pope (1294–1303). Benedict Caetani was probably born at Anagni around 1235. After legal studies in Bologna (1263–1264), he embarked upon an ecclesiastical career as a papal diplomat in England and France. His mastery of canon law and curial politics helped to secure his advancement to cardinal deacon (1281) and cardinal priest (1291); he was elected pope as Boniface VIII following the abdication of Celestine V.

Boniface’s policy of relentless familial aggrandizement and a rigid insistence upon papal plenitude of power, exemplified by the claims of the bull *Unam Sanctam* (1302), earned him powerful enemies. The chief of these were King Philip IV of France and the Colonna family (whose lands lay in the Papal State), the joint perpetrators of the assault upon him known as the “crime of Anagni,” which led to Boniface’s death (11 October 1303).

Throughout his papacy and posthumously, Boniface was maligned for putting the interests of his kin above those of Christendom and the crusade. The great Italian poet Dante Alighieri reserved a place for him in Hell (*Paradiso* XXX.145–148). Yet Boniface wrote a text of canon law, the *Liber sextus*; was a skillful administrator and a patron of art; and decreed the first Holy Year (jubilee) on 22 February 1300, perhaps the most significant act of his pontificate. The jubilee cannot be divorced from the crusade tradition. Hitherto enjoyed only by crusaders, the plenary indulgence was now granted to jubilee pilgrims to Rome. Crusader Jerusalem was lost; Rome was now unrivaled as Latin Christendom's holy city. Just as the calling of a crusade depended upon papal authority, so, too, with the jubilee; and because the jubilee indulgence was not permitted to compete with crusade indulgences, holy years were limited to one per century.

Boniface launched several crusades that were political in nature: these were fought against the Aragonese regime in Sicily in 1296, 1299, and 1302, and, most famously, against the Colonna cardinals, Giacomo and Pietro. Officially, this last was a legal crusade with full indulgences preached against rebels, heretics, schismatics, and blasphemers of the Roman church. In reality, it was a struggle between the Colonna and the Caetani clans for lordship in the Campagna. Preached throughout Italy, Boniface's crusade against the Colonna resulted in the destruction of their stronghold, Palestrina (1297–1298). Thus the crusades came to Lazio in the vicinity of Rome only a few years after the fall of the city of Acre (mod. 'Akko, Israel) to the Muslims (1291), a fact bitterly noted by Dante (*Inferno*, XXVII.85–89). Boniface's final conflict with Philip IV of France precipitated the papacy's relocation to Avignon (1309–1376).

Boucicaut, Marshal (1366–1421)

Jean II Le Meingre, known as Boucicaut, was marshal of France and a participant in numerous crusade expeditions.

He was the son of Jean I Le Meingre (d. 1368), marshal of France, and Fleurie of Linières.

Jean II was educated at the French court with the young King Charles VI. He became a knight at the battle of West-Rozebeke, which was fought against the Flemings in 1382, and went twice to Prussia to campaign with the Teutonic Order against the pagan Lithuanians in 1384–1385. At the beginning of 1388, he went to the court of Murad I, the Ottoman sultan, offering to fight for him. As the sultan was not undertaking any campaigns, Boucicaut went on to Hungary, Venice, and the Holy Land (1389). He stayed for four months in Cairo to share the imprisonment of Philip of Eu, a cousin of the French king, who had been arrested at Damascus. In 1390 Charles VI forbade him to go with the duke of Bourbon on the Mahdia Crusade, and so Boucicaut made a third journey to Prussia in 1390–1391. On his return, the king appointed him marshal of France.

When Philippe de Mézières founded his Order of the Passion, Boucicaut was one of the first members. In 1395 Charles VI agreed to send an army to assist King Sigismund of Hungary against the Ottoman Turks, which was to include Boucicaut and his own retinue. This venture became known as the Crusade of Nikopolis from the site of its defeat by the Turks on 25 September 1396. Boucicaut was taken prisoner, but was saved from death by Count John of Nevers and was ransomed the following year.

In 1399 Charles VI sent an expeditionary corps headed by Boucicaut to Constantinople, which was under siege by the Turks. The marshal persuaded Emperor Manuel II Palaiologos to go to the West in person to seek military assistance. Manuel undertook a lengthy diplomatic tour of Western Christendom, and finally left Paris in order to return home on 21 November 1402, when he learned of the defeat of Sultan Bayezid I at Ankara by the Mongol ruler of central Asia, Timur Lenk. By this time Boucicaut was serving as governor of Genoa for Charles VI, where he met the emperor again at the beginning of 1403. He accompanied Manuel as far as the Morea (Peloponnese) and then went on to Rhodes. From there he took his fleet to Syria, where he attacked and sacked Botron, Beirut, Sidon, and Laodikeia in Syria. However, while returning to Genoa, he met a Venetian fleet at Modon and was defeated. He drafted a new project for an attack against Alexandria in 1407, but was expelled from Genoa two years later.

Boucicaut fought against the English at the battle of Agincourt in 1415, where he drew up the French battle plan. He

Boudonitza

was taken prisoner, and remained a captive until his death. Boucicaut embodied all the knightly values of his time, but, as a commander and political leader, he failed to understand that these values were outdated, and often showed impetuosity and lack of judgment in his conduct. Boucicaut's career was described in an anonymous French prose work, the *Livre des Fais du bon messire Jehan le Meingre*.

Boudonitza

A castle and associated settlement in central Greece, situated southeast of the pass of Thermopylae and the Boiotian plain. Boudonitza was founded by the Pallavicini family from Parma in the years after 1204 when they were granted a marquisate from Boniface of Montferrat, the ruler of Thessalonica. It guarded both the pass and the Malian Gulf to the north and also protected an important harbor used in the 1330s for the import of corn from Wallachia.

The castle is built on the site of a Byzantine fortress and consists of two circuit walls and a central keep. The town, known as Mendenitsa, grew up around the fortress and was also surrounded by a wall. It provides evidence of the move-

ment of population by Western settlers after 1204. The town was the seat of a Latin bishop, a suffragan of the archbishop of Athens.

The overlordship of the marquisate passed from the rulers of Thessalonica to the princes of Achaia either in the early days of the Frankish conquest or in the 1240s. About that time (possibly in 1248), according to Marino Sanudo Torsello, William II of Achaia sent an army of 11,000 men to relieve Boudonitza from an attack by the Epirote Greeks under Michael II Doukas. The marquis of Boudonitza was numbered among the twelve peers of Achaia, and it was only during the Catalan occupation of Athens that the marquisate was reckoned a dependency of Athens. The marquis survived the battle of Halmyros, and his castle successfully resisted a Catalan attack in 1311. However, it was only by coming to terms with the Catalans that the marquisate survived intact. The Pallavicini family held it until 1335, when the marquisate was ceded to the Venetian family of Zorzi in order to enhance the protection of Venetian Negroponte against the Catalans. The Zorzi were displaced when the town and castle fell to the Turks in 1414.

Brienne Family

A great French aristocratic family that provided rulers for the kingdom of Jerusalem, the Latin Empire of Constantinople, and the duchy of Athens.

The lords of Brienne were vassals of the counts of Champagne, holding lands near Troyes. The family had a long tradition of crusading. Erard I took the cross in 1097. His son Walter II took part in the Second Crusade (1147–1149), as did his son Erard II, who also joined the Third Crusade in

1189 and took part in the siege of Acre. Walter III originally agreed to go on the Fourth Crusade (1202–1204) in the army of the count of Champagne, but he was allowed to substitute service in southern Italy against Markward of Anweiler, a move that enabled him to press the claims of his wife, Elvira, to the county of Lecce and the principality of Taranto. His younger brother John was perhaps the most famous member of the family to involve himself in the crusading movement. He became king of Jerusalem in right of his wife, Maria (1210–1212), and regent of Jerusalem for his daughter Isabella II (1212–1225). Later he served as marshal of the papal armies in Italy opposed to his own son-in-law Frederick II, Holy Roman Emperor, and subsequently he became co-ruler of the Latin Empire of Constantinople (1230–1237) along with Emperor Baldwin II.

John's nephew Walter IV, count of Brienne and Lecce (1205–1250), became count of Jaffa in 1221. Thereafter the family interests became centered in Frankish Greece. Hugh of Brienne (1250–1296) was influential at the Angevin court of Naples. He married first Isabella of La Roche (1277) and subsequently Helena Doukaina, the widow of his former brother-in-law, William of La Roche (1291), and thereby became *bailli* (regent) of the duchy of Athens for his stepson Guy. On the latter's death in 1309, Hugh's own son Walter V of Brienne became duke of Athens (as Walter I). He was killed at the battle of Halmyros against the Catalan Company in 1311 and was thus the last French duke of Athens. His son Walter VI was titular duke of Athens (as Walter II) until his death, fighting against the English as constable of France at Poitiers in 1356. In 1331–1332 he mounted a considerable campaign against the Catalans, but they refused to give battle. The cost effectively ruined the Brienne family. His only child, also called Walter, predeceased him in 1332.

Burchard of Mount Zion

A Dominican friar of German origin and author of a work known as *Descriptio Terrae Sanctae*, based on his travels in the Holy Land.

Crusaders at the gates of Jerusalem, from the thirteenth-century manuscript *Descriptio Terrae Sanctae* (*Of the Holy Land*), by Burchard of Mount Zion. (The Art Archive/Biblioteca Capitolare Padua/Dagli Orti)

No information is available about Burchard's family or life other than what is known from his travelogue. After joining the Dominican Order, he entered its house at Magdeburg in northern Germany. By 1280 he went on pilgrimage to the Holy Land and, while based in Acre (mod. 'Akko, Israel) during the three years of his travels in the East, became connected with the convent of Mount Zion, hence his epithet.

In 1283 Burchard compiled the *Descriptio Terrae Sanctae* on the basis of his travel recollections. It is the first systematic description of Cisjordanian Palestine after the Hebrew work of Ashtori Haparhi (c. 1217), which he did not know. The book includes the results of his own observations on Christian holy sites he had visited, as well as remarks on the topography, the fauna and flora, and the ethnopolitical conditions of the country, with particular emphasis on the city of Jerusalem. He was an excellent observer, critical and empirical by nature; he often challenged statements by previous authors, no matter how authoritative, if their accounts were contradicted by his own observations. For example, during his visit to Mount Gelboe, he experienced a heavy rain, despite King David's curse: "neither let there be rain upon you" (2 Sam. 1:21); accordingly, he challenged the interpretation of the biblical text. Being aware of the historical evolution that had caused the destruction of many ancient Christian sites and monuments, he recommended digging through ruined strata in order to reach the authentic holy places.

Burchard's description of Palestinian society is important eyewitness evidence about ethnic and social conditions in the Holy Land during the last generations of Frankish rule. Among the Christian population, he praised the Armenians for their piety; by contrast, he vehemently criticized the Latins for their immoral and criminal behavior, foreseeing the loss of the Holy Land due to their sins.

Burgundy

Burgundy in the later Middle Ages was a quasi-state that developed under the Valois dukes Philip the Bold (1363–

1404), John the Fearless (1404–1419), Philip the Good (1419–1467), and Charles the Bold (1467–1477). It consisted of diverse possessions in southern and northern territorial blocs, both of which belonged partly to the kingdom of France and partly to the Holy Roman Empire: in the south, the duchy of Burgundy and the originally separate county of Burgundy (also known as Franche-Comté), and in the north the Burgundian Netherlands, comprising Flanders, Artois, Holland, Zeeland, Hainaut, Namur, Brabant, and Luxembourg.

Philip the Bold and John the Fearless (1363–1419)

Duke Philip the Bold (Fr. Philippe le Hardi) came late to the idea of crusade. The chronicler Jean Froissart said of him that he was very imaginative and farsighted in his business; to understand this judgment, one must appreciate that Philip the Bold's involvement in the crusade may have been driven by the desire to control the crusading aspirations of his nephews Charles VI, king of France, and Louis, duke of Orléans. He may also have been motivated by piety, as he wanted to take part personally in an expedition. Signs of his interest in the crusade appear in 1392, when he was fifty. He had two options: to participate in a *reyse* (campaign) of the Teutonic Order against the pagan Lithuanians in 1395 or to answer the calls of King Sigismund of Hungary for assistance against the Turks. When the grand master of the Teutonic Order informed him at the end of 1394 there would be no *reyse* the following year, he turned his interests toward Hungary. The grandiose scheme was to lead a *passagium particulare* (an advance expedition) along with Louis, duke of Orléans, and John of Gaunt, duke of Lancaster; the kings of France and England would then lead a *passagium generale* (general crusade). When the dukes of Lancaster and Orléans withdrew from the project, Philip the Bold named his eldest son, John, count of Nevers (later known as "the Fearless"), to lead the Burgundian forces in the ill-fated Crusade of Nikopolis, which ended in disaster in battle against the Turks in 1396. After securing the release of his son and organizing a triumphal return for him, Philip had no further involvement in crusading; nor did John the Fearless (Fr. Jean sans Peur) when he became duke. The Nikopolis expedition was Philip the Bold's biggest political mistake: it led to the deaths of the constable and the admiral of France, of his two nephews of royal blood from the Bar family, and of the important noblemen Enguerrand of Coucy and William of La Trémoille, as

well as numerous other losses of those who were killed or enslaved.

Philip the Good and Charles the Bold (1419–1477)

Philip the Good (Fr. Philippe le Bon) was born while his father, John of Nevers, was on his way to Hungary. If he had any feelings of vengeance against the Turks, these did not emerge until late in his life. In 1420, following the Treaty of Troyes, King Henry V of England and the duke promised to go on crusade to Jerusalem (which was a renewal of the dream of 1396), and the following year they sent Gilbert de Lannoy to the Levant to report on the possibilities for landing forces to recover the Holy Land. Ten years later, Bertrand de La Broquière completed Lannoy's mission by visiting the Ottoman Empire. However, Philip's ambitions lay in all directions. His crusading policy was part of a more general policy of the defense of the Roman Catholic faith and of the Holy Church, as stated in the statutes of his new order of chivalry, the Golden Fleece. Thus in the 1420s and 1430s, he was involved in diplomatic activities against the Hussites of Bohemia. In 1429, he sent a carrack to Rhodes. In 1437, he dreamed of conquering Greece from the Morea. At an unknown date, he studied how he might conquer Muslim Granada. In 1441 Geoffroy de Thoisy led a small squadron of Portuguese ships built in Flanders and Brabant to bring assistance to the Hospitallers at Rhodes against an expected Mamlūk attack. Following this small expedition, the Burgundians were able to use naval facilities at Nice and Villefranche, and received help from the Genoese. Thoisy returned to Rhodes when the attack actually took place in 1444. The same year, Philip the Good took part in an expedition to assist the Greeks that had been promised by Pope Eugenius IV after the union of Greek and Latin churches at the Council of Florence. He had hired galleys at Venice. The head of the Burgundian corps was Waleran de Wavrin, who was later joined by Geoffroy de Thoisy. In 1445 Thoisy roved through the Black Sea, attacking all sorts of ships, but was eventually taken prisoner, while Wavrin went up the Danube with the Venetians in order to take part in a concerted attack with John Hunyadi, the voivode of Transylvania. However, as it was late in the season, nothing came of this effort, and Wavrin came home. On their homeward journey, the other Burgundian ships carried on privateering as far as Beirut and North Africa in 1446–1447. Meanwhile, Philip the Good had galleys built in Antwerp, still dreaming of recovering the Holy Land.

Everything changed in 1451. Up to that date, Philip's involvement in the crusade was personal. Now, aged fifty-five, at a chapter of the Order of the Golden Fleece, he vowed to go on a crusade, without specifying an objective. He urged his fellow knights to accompany him and decided to hold a great feast to attract the nobility of Burgundy. Philip also sent four embassies to call for other sovereigns to join him in a crusade: to France, to England, to Rome and Naples, and to Germany and Poland. As the Polish chronicler John Długosz put it: "the Burgundian embassy was grandiloquent, vain, destitute of any sense, full only of specious words, but deprived of any courage, and very far from any effect or fulfillment" [Joannes Dlugossius, *Opera omnia*, ed. Aleksander Przędziecki, 15 vols. (Cracoviae: Czas, 1863–1887), 14:98]. These embassies were dispatched without any knowledge of the actual state of affairs in these countries. The feast itself was delayed by an uprising in the town of Ghent, which at least meant that an objective could be defined for the crusade: the recovery of Constantinople (mod. İstanbul, Turkey), which in the meantime had been captured by Mehmed II, the Ottoman sultan, in 1453.

The Feast of the Pheasant took place at Lille on 17 February 1454. It was organized after the model of a chivalric romance, in this case, Jacques de Longuyon's *Voeux du Paon*, a sequel to the *Romance of Alexander*. Philip planned to leave in the spring of 1455, but was unable to come to an agreement with Emperor Frederick III, and so no expedition was arranged. However, the duke sent embassies to successive German diets and a large one to the congress convened at Mantua by Pope Pius II. In 1456, he managed to marry his wife's nephew John of Coimbra to the heiress of the kingdom of Cyprus.

It was only in 1463 that the pope succeeded in setting up a league with Venice and Burgundy. At the beginning of 1464, Philip delayed his departure at the behest of King Louis XI of France and sent in his place his illegitimate son Anthony, the Grand Bastard of Burgundy, whose fleet, which left from Sluis in Flanders, did not proceed beyond Marseilles. The duke never realized his dream of going on crusade, as he became senile, and government passed to his legitimate son Charles the Bold (Fr. Charles le Téméraire) as early as 1465. Several Western powers, notably Venice, Naples, and the papacy, expected the latter to pursue his father's crusading policy against the ever increasing Turkish menace. However, the symbolic capital gained by his father's plans was only ever used by Charles to advance his

political aims in western Europe, even if he did dream of conquering the East like his hero Alexander.

Conclusions

Without doubt, the dukes of Burgundy used the crusade as a means to gain a place among the leading western European powers. This can be seen from the diplomatic activity deployed in connection with Prussia and Hungary by Philip the Bold, or Rome, Naples, Germany, and Hungary by Philip the Good. Without being a kingdom, Burgundy succeeded in being recognized as a major power. Yet the rhetorical discourse concerning the crusade was feeble. Its major exponents were the successive chancellors of the Order of the Golden Fleece, Jean Germain and Guillaume Fillastre. Jean Germain clung to the old theory of the temporal sword (the use of force against the infidels) in contrast to other theorists such as John of Segovia and Nicholas of Cues, who held to the idea of the spiritual sword, that is, mission and conversion. Guillaume Fillastre saw the crusade as a means to gain power in the Burgundian government.

The failure of the Crusade of Nikopolis in 1396 effectively put an end to any future great expedition. In the period 1420 to 1450, grandiose and unrealizable schemes were conceived, yet small operations and expeditions could have made Burgundy a power to be reckoned with in the context of the crusade and the Christian East. From 1451, however, the matter of the crusade became increasingly embroiled in diplomatic schemes and ideas of chivalric romance. Yet even if it was too often turned toward the past, the court of Burgundy was a fount of crusading activity that can be compared among contemporary lay powers only with the Aragonese court of Naples.

Būrī (1085–1132)

Tāj al-Mulūk Būrī was ruler of Damascus (mod. Dimashq, Syria) and southern Syria (1128–1132).

When Būrī succeeded his father ʿUḡhtigin at the age of forty-three, he enjoyed great political and military experience, having acted as deputy to his father and commander of the Damascene army in numerous military campaigns. In 1101 he was sent by his father to relieve the coastal town of Jabala, a dominion of Muslim Tripoli (1101), which was under attack by the Genoese. In 1112 Būrī took over the government of Tyre (mod. Soûr, Lebanon) from the Egyptians, who could not hold it against Baldwin I of Jerusalem. Būrī’s swift actions kept Tyre out of Frankish possession until 1124.

Būrī’s four-year rule was characterized by struggles against the Franks, Zangī of Mosul, and the Ismāʿīlī Assassins. Būrī managed to put down a plot by his vizier, al-Mazdaqanī, who had conspired to hand Damascus to King Baldwin II of Jerusalem with the help of the Assassins (August 1129). Having discovered the conspiracy, Būrī executed his vizier and carried out a great massacre of the Ismāʿīlīs in

Damascus. Their leader fled to Jerusalem and turned the town of Banyas over to Baldwin II. Determined to capture Damascus, Baldwin II invaded Damascene territory with his troops and Western crusaders in November 1129. Būrī’s troops heavily defeated a Frankish division led by William of Bures on 6 December 1129, and the rest of the Christians abandoned the campaign.

The Ismāʿīlīs tried to murder Būrī in May 1131 in revenge for the earlier massacre. For seven months he struggled with a fatal wound, and nominated his eldest son Ismāʿīl as ruler. Būrī died on 6 June 1132, having successfully warded off the first crusader attempt to capture Damascus.

Burzenland

A highland region in southeastern Transylvania, known in Latin sources as Terra Bursa (Ger. Burzenland; Hung. Barcaság). This region (mod. Țara Bîrsei, Romania), enclosed by the river Olt, the Carpathian Mountains, the Székelyföld plain, and the Persány Mountains, was settled by the Teutonic Order in 1211 at the invitation of Andrew II, king of Hungary (1205–1235).

Andrew II, dissatisfied with the defensive activity of Hungary’s Pecheneg population against the raids of the pagan Cumans, entrusted the order with the defense of the mountain passes of this frontier area. The Teutonic Knights, led by a certain Theoderic, promptly occupied the region and by 1222 had erected five castles at strategic points, identified as Kreuzburg (near the Tatar Pass), Marienburg, Feketehalom, Cetatea Neamțului (near present-day Rucăr, Romania), and Höltövény.

On the basis of written sources and archaeological finds, recent scholarship has identified these castles as mixed structures of stone and wood. The region, described in the sources as deserted and uninhabited, was populated by the order with settlers from Germany and other parts of Transylvania. This activity was supported by royal privileges of 1211 and 1212 that exempted the order from royal taxation, the mandatory money-change, and the demand for hospi-

Byzantine Empire

tality of the voivod of Transylvania; the knights were also authorized to elect their own judge and to hold markets. From 1213 they were exempted from tithes and established their own deanery independent from the jurisdiction of the bishop of Transylvania, although the latter privilege was challenged by Bishop Reynald (1222–1240). Andrew II also came into conflict with the order by 1221, but this dispute was temporarily settled, perhaps as a result of the recent success of the order against the Cumans. The king enlarged the size of the original donation of land toward the south and permitted the order to erect castles of stone. However, in 1225 he expelled it from Burzenland for reasons that are still debated. It is known that the knights had infringed royal rights by occupying royal lands and minting their own coins. Moreover, the king's policy was no longer to defeat the Cumans but rather to baptize them, which eventually took place in 1227.

After the expulsion of the order, territorial rights were transferred to the Cistercians by King Béla IV of Hungary (1235–1270), in 1240. Around the end of the reign of King Sigismund (1387–1437), the Teutonic Order unsuccessfully tried to resettle in the region.

Byzantine Empire

The Byzantine Empire, or Byzantium, is the conventional modern name for the medieval Christian Greek-speaking empire that was created after the division of the Roman Empire into western and eastern parts, Byzantium being the eastern part of the empire. Contemporary Byzantines referred to their empire in Greek as *Romaike autokratoria*

(Roman Empire) or *autokratoria ton Romaion* (empire of the Romans), regarding it as the continuation of the ancient Roman Empire; Westerners called it the "Greek Empire" or "Empire of the Greeks." The name Byzantium was only used by the people of the empire to describe the city of Constantinople (mod. İstanbul, Turkey), which was founded in the seventh century B.C. by Byzas, a Greek from Megara; Byzantium never referred to the empire itself. The term *Byzantine* was introduced by Hieronymus Wolf in 1562.

The Byzantine Empire was a multinational empire, composed primarily of Greeks, Armenians, Jews, and Slavs. Initially, the official language of the empire was Latin, but in the seventh century it was replaced by Greek, which was the vernacular used by the various peoples of the empire.

The history of the empire, the longest-lived of Western civilization, spans more than eleven centuries. There is no generally agreed date for the beginning of Byzantine (as opposed to Roman) history. Some modern scholars have suggested that it began in 324, when Emperor Constantine I the Great became *monokrator* (sole ruler) of the Roman Empire, or in 330, when Constantine transferred the capital of the empire from Rome to Constantinople. Others suggest 395, when Emperor Theodosios the Great died and the empire was divided into western and eastern parts. Other suggested dates are the year 284, when Diocleteian became emperor; the year 610, when Heraclius I became emperor; and the year 717, when the Isaurian dynasty ascended the throne of Constantinople. Most scholars agree, however, that the fourth century should be considered as the beginning of Byzantine history. The fall of Constantinople to the Ottoman Turks (1453) can be regarded as its end, in spite of the fact that two Byzantine territories, the despotate of Mistra and the empire of Trebizond, fell to the Turks only in 1460 and 1461 respectively.

At the beginning of its existence, the borders of Byzantium coincided with those of the eastern Roman Empire. In the sixth century, Emperor Justinian I extended its frontiers to the Atlantic, capturing the southern part of Spain as well as northern African lands. In the following centuries the Arabs, Lombards, Slavs, and Normans deprived Byzantium of most of its territories outside the Balkan Peninsula and Asia Minor. In the last centuries of its existence, the empire was confined to the southern Balkans and western Asia Minor. At the beginning of the fourteenth century, it lost Asia Minor to the Turks; in the middle of that century, it had only eastern Macedonia and Thrace under its authority; and at the

The Byzantine Empire at the end of the twelfth century

Byzantine Empire

beginning of the fifteenth century, it was confined to Constantinople, a few islands in the Aegean Sea, and the despotate of Mistra in the Peloponnese.

The Early Byzantine Period (330–717)

The early Byzantine period has also been called proto-Byzantine, referring to the period of Late Antiquity. In this period, the administrative and legal systems of the empire were influenced significantly by those of the Roman Empire in the previous centuries. Until 476, the Byzantine emperor also ruled the western half of the empire, part of which Justinian I managed to recover briefly in the first half of the sixth century. This period is characterized by the transfer of the capital to Constantinople and the toleration of Christianity and subsequent adoption of the Christian faith as the official religion of the empire, by the gradual adoption of the Greek language as the official language of the empire, and by the defeat of invaders who appeared at the borders of the empire.

Constantinople, or New Rome, was located at the crossroads of Europe and Asia, and protected by the sea on three sides, and it controlled the land route that joins Europe and Asia Minor and also the sea route connecting the Black Sea and the Aegean Sea. It was also closer than Rome to the Danube area, which had been invaded by Germanic peoples, and to the eastern borders of the empire, which were under threat from the Persian Empire. It was thus the perfect choice for a capital from a strategic point of view.

Christianity was recognized as a legal religion by Emperor Constantine I in 313 and proclaimed as the official state religion by Emperor Theodosios I in 380. During this period, the first rift between the church of Constantinople and the church of Rome took place, while in six ecumenical synods, all of which took place in the eastern half of the empire and in all of which the Byzantine emperors were involved, the doctrine of the Christian faith was defined, and various heresies (including Arianism and Nestorianism) were proscribed.

When Constantine I transferred the capital of the empire, the new state administration in Constantinople was Latin-speaking. The adoption of Greek as the official language of the state was a slow process. From the fourth century, court judgments could be recorded in Greek; in the fifth century wills written in Greek were considered valid, and in the sixth century a new series of laws, the *Novellae*, were written in Greek; however, it was only in the seventh century that Greek became the sole official language of the state. The church, however, only ever used the Greek language, since the east-

ern part of the empire was Hellenized to a large extent and Greek was the language understood by most of the citizens there. In this period, the empire successfully turned back the waves of Goths, Franks, and Lombards on its northern and western borders, the early Turkish-speaking peoples in the north, and the Persians in the east; however, by 642 the Arabs had succeeded in depriving the empire of all of its provinces in the Near East and Egypt, and in the 670s and 710s they even besieged Constantinople.

The Middle Byzantine Period (717–1204)

During this period, a number of significant ecclesiastical, political, and military events occurred that affected the power and prestige of the empire.

A religious controversy known as iconoclasm (or iconomachy) arose as a result of disputes among the Christians of the empire over the veneration of icons, beginning in 726. By its end in 843, it had devastated the empire financially and cost a number of emperors their thrones because their views on iconoclasm did not coincide with those of the majority of the population at that time. In the ninth century, systematic Byzantine missionary expeditions led to the Christianization of the Slavic peoples and the invention of the Cyrillic alphabet by two missionary brothers, SS. Constantine (Cyril) and Methodios.

On Christmas Day 800 the Frankish king Charlemagne (Charles the Great) was crowned by the pope in Rome as emperor and governor of the Roman Empire. From this time the Byzantine Empire, from being an (ecumenical) “Roman” Empire, became a “Greek” Empire in the political and ecclesiastical perceptions of western Europe.

In the 860s, dogmatic and ritual differences between the church of Constantinople and the church of Rome, together with a clash of personalities of their leaders, led to a rift, which was healed, however, in 886. In 1054, during the reign of Emperor Constantine IX Monomachos, the patriarchate of Michael Keroularios, and the pontificate of Leo IX, the Greek Orthodox and Latin churches separated because of their ecclesiastical and theological differences, which were triggered by the intervention of the pope in bishoprics under the jurisdiction of the patriarch of Constantinople.

In the middle Byzantine era, the empire succeeded in repelling a number of attacks by Arabs and Bulgarians. In 1071, however, it suffered severe territorial losses on two fronts. In eastern Anatolia, Emperor Romanos IV Diogenes suffered a disastrous defeat by the Saljūq Turks at the bat-

tle of Mantzikert, which resulted in the loss of a large part of the Byzantine lands in Asia Minor. In Italy, the Normans seized Bari, the last Byzantine territory on the peninsula. During the reign of the first two emperors of the Komnenoi dynasty, Byzantium managed to recover some of its territorial losses of the previous decades. Emperor Alexios I Komnenos (d. 1118) succeeded in recovering part of Asia Minor with the help of crusaders and defeated his enemies in the Balkans, while his son John II (d. 1143) extended the dominion of the empire in the Balkans at the expense of the Pecheneg and Cuman peoples. These successes were reversed in 1176 when the Byzantines suffered another crushing defeat at the hands of the Turks at Myriokephalon in Asia Minor.

During the rule of the Komnenoi (1081–1185) and the Angeloi (1185–1204) dynasties, the presence of Westerners in the eastern Mediterranean changed the political, military, and financial status quo in the region. The Norman conquerors of southern Italy, with their many attacks against Byzantine lands, posed a serious threat to the empire, and the Italian naval cities, thanks to the commercial privileges they had been granted by the Byzantine emperors, gained control of trade in the eastern Mediterranean and thus reduced Byzantium's financial resources. The first commercial privileges were granted to Venice in 1082 as the direct result of the military pressure Byzantium was under from the Normans. In the treaty of May 1082 between Byzantium and Venice, the latter promised to support the Byzantine Empire against the Normans and in return received, among other privileges, an annual tribute and tax-free trading privileges in the empire. In his struggle against Norman imperialism, Alexios I also approached the Holy Roman (Western) emperor, Henry IV, and Pope Gregory VII, but only Venice supported him militarily against the Normans.

In the 1090s it was the Saljūq Turks who posed the most serious threat to the Byzantine Empire. After the crushing defeat at Mantzikert, the Byzantines were unable to put a halt to Turkish advances, which led to the capture of the town of Nicaea (mod. İznik, Turkey) in 1081, the establishment of the sultanate of Rūm in Bithynia, and the loss of the important city of Antioch on the Orontes (mod. Antakya, Turkey) in Syria in 1085. In March 1095, a Byzantine embassy sent by Alexios I Komnenos to Pope Urban II appealed for military aid in the struggle against the Turks. In November 1095, at the Council of Clermont, Urban appealed for a campaign to liberate Jerusalem from the Muslims, to pass through Asia

Minor. The series of expeditions now known as the First Crusade (1096–1099) was the help that the Byzantines were offered by the West against the Turks.

The first crusaders who reached Constantinople in summer 1096 under the leadership of Peter the Hermit and Walter Sans-Avoir were well received by Emperor Alexios, despite having raided the Byzantine countryside and clashed with Byzantine forces in the central Balkans because of their attacks against locals. They were transferred hastily across the Bosphorus to Asia Minor for fear of further adverse incidents if they stayed in the empire any longer. On 21 October 1096 they were ambushed by the Turks and annihilated.

Between summer 1096 and May 1097, a more disciplined crusader army assembled at Constantinople from different contingents that had traveled by several routes from the West.

The arrival of the crusaders in the Byzantine Empire brought its authorities and the local population face-to-face with unfamiliar and threatening attitudes and practices. Violent clashes between the crusader armies and their Byzantine escorts on their way to Constantinople, raids on its suburbs, foraging in the countryside, looting, the destruction of a small town in Macedonia, and an attack on Constantinople itself on Maundy Thursday 1097 shocked the Byzantines and worried Alexios. Another source of worry was the presence of armed Norman crusaders under Bohemund of Taranto, when only a few years earlier the emperor had appealed to the West for help against Norman attacks. More importantly, since no provision had been made at the launch of the crusade regarding dominion over the lands that the crusaders might liberate from the Muslims, the Byzantines were concerned about the fate of their former territories in the East. For that reason, Alexios demanded from the leaders of the crusade two oaths: the first was a promise to hand over to the Byzantines all the lands they liberated from the Turks that had once belonged to Byzantium; the second was an oath of homage and fealty. In return, the Byzantine emperor gave them a large financial subsidy, but did not promise to take on the leadership of the crusade, something most of its leaders were hoping for. The Byzantines did help the crusaders militarily, however. After transporting them to Asia Minor, they joined them in besieging the capital of the sultanate of Rūm, Nicaea, which in June 1097 surrendered to the Byzantine emperor. Next, the Byzantine army liberated Smyrna, and Alexios himself advanced toward Phrygia while the crusaders advanced east to Syria and Mesopotamia. In June 1098, the city of Antioch was captured, but

Byzantine Empire

was not handed over to the Byzantines as had been agreed, and on 15 July 1099, Jerusalem was liberated.

The newly established Norman principality of Antioch, under Bohemund I (of Taranto), proved to be a constant source of worry to the Byzantines. When they reoccupied Tarsos, Adana, Misis, and Laodikeia in Syria, Bohemund went to Europe to organize a crusade against the Byzantine Empire. In 1107, the army that he assembled in the West landed in Valona and marched on Dyrrachion (Durazzo), where Byzantines and Normans met again outside the walls of the city, twenty-five years after their last encounter there. Bohemund was defeated and in 1108 signed a treaty with Emperor Alexios at Devol, according to which he was to rule over the principality of Antioch as the Byzantine emperor's vassal. However, Bohemund did not dare return to Antioch, and the terms of the treaty were never implemented by Tancred, his regent there.

The disputes between Byzantium and Antioch continued

after the death of Alexios I and Bohemund I. In 1137, Emperor John II Komnenos subjugated Cilicia (Lesser Armenia), which lay between the Byzantine Empire and the principality of Antioch. In August 1137, Antioch surrendered to him after a short siege, and its ruler, Raymond of Poitiers, offered him an oath of vassalage. In 1142, Raymond annulled his agreement with John II and the Byzantine emperor planned an expedition against him, but died unexpectedly in April 1143.

Manuel I Komnenos (d. 1180), John's son and successor, achieved a temporary success against the Frankish states. During his reign, the armies of the Second Crusade (1147–1149) passed through the empire. Once again, there were violent skirmishes between the crusaders and the locals (an attack was proposed against Constantinople by the bishop of Langres's party), but on a lesser scale than those of the First Crusade. Adopting his grandfather's policy toward the crusaders, Manuel transferred them to Asia

Minor as soon as possible, and demanded an oath of homage from their leaders and also a promise that they would hand over to him all the former Byzantine lands that they captured. The first wave of crusaders who were transported to Asia in 1147 consisted of Germans under the leadership of King Conrad III. Manuel had recently become his kinsman, having married Bertha, a relative of the German king. He also had an alliance with Conrad against the Normans of Sicily. In their first encounter with the Turks, the German crusaders were defeated. The second, French, wave of crusaders under King Louis VII joined forces with the surviving Germans and marched through Byzantine lands along the coast, but in January 1148, at Antalya, they suffered severely from Turkish attacks. Short of supplies and with little assistance from the Byzantines, only a small number of exhausted crusaders reached Antioch. On his way back to the West, Conrad III stopped in Constantinople, where he was received warmly and committed himself to an expedition against Roger II, the Norman king of Sicily, who had captured Corfu, Corinth, and Thebes while Byzantium was preoccupied with the crusade in the East. Manuel's achievements with regard to Outremer after the end of the Second Crusade were impressive. In 1158, he marched against the principality of Antioch and Cilicia, which in 1156 had attacked Byzantine Cyprus. Manuel forced the rulers of both states, Prince Reynald of Antioch and Prince T'oros II of Armenia, to pay homage to him. In the same year, King Baldwin III of Jerusalem put himself under the protection of the Byzantine emperor and married one of Manuel's nieces, Theodora. In April 1159, Manuel entered Antioch in triumph, riding a white horse with Reynald walking alongside him, and two years later he sealed the special relationship that he had established with Antioch by his marriage to Princess Maria of Antioch.

The issue of the nationality and confession of the patriarch of Antioch was a source of constant friction between the Latin principality and Byzantium during the Komnenian period: the Greek emperors considered themselves protectors of the Orthodox population of the area, and the Greek Orthodox Church refused to accept the Latinization of the church of Antioch. After the expulsion of the Greek patriarch John of Oxeia from Antioch in 1100, the Byzantines appointed another Greek as (titular) patriarch of Antioch, thus refusing to accept John's Latin successor. In 1136–1137, during the successful Byzantine expedition against Cilicia and Antioch, there seemed to be a real prospect of restoring

the Greek patriarch of Antioch to his throne, but in the end that goal was not realized because of Emperor John II's withdrawal to Europe in order to deal with the Normans of southern Italy. During Manuel I's successful campaign against the principality of Antioch in 1159, the issue of the restoration of the Greek patriarch of Antioch to his throne was not raised, mainly because Manuel did not want to jeopardize the de facto recognition of his overlordship by the rulers of the Latin East by upsetting the religious sentiment of the Latins there. Prince Bohemund III agreed to restore the Greek patriarch in 1165 in return for the money that the Byzantine emperor offered to pay the ransom he owed Nūr al-Dīn for his freedom. In 1170, after an earthquake that killed the Greek patriarch of Antioch, the Latin patriarch was brought back, thus forcing the next two Greek patriarchs to live in exile in Constantinople.

In 1189, the Byzantines were reassured by the Holy Roman Emperor, Frederick I Barbarossa, that the passage of the crusaders of the Third Crusade (1189–1192) through Byzantine lands would be peaceful. The Byzantines in return promised to supply provisions and guides. In the same year, however, the Byzantine emperor Isaac II Angelos renewed the treaty of alliance that his predecessor Andronikos I had signed with Saladin with the purpose of impeding the German crusaders' passage to Jerusalem. The reason Isaac sided with Saladin was the close relationship that Emperor Frederick had established with the Serb, Bulgarian, and Turkish enemies of Byzantium. Frederick responded to the treaty with Saladin, as well as to Isaac's demand that he should hand over to Byzantium half of his future conquests from the Muslims, by capturing the city of Philippopolis, plundering the Byzantine countryside, and starting preparations to march against Constantinople. The threat to the Byzantine capital forced Isaac to sign a treaty with Frederick in 1190, providing for the transfer of the crusaders to Asia Minor and their provisioning. The only event of the Third Crusade that had a lasting impact on Byzantium was the capture of Cyprus by one of the leaders of the crusade, King Richard I of England (1191).

The aim of the Fourth Crusade (1202–1204) was the liberation of the Holy Land from the Ayyūbids by means of an invasion of Egypt, but lack of funds to pay the Venetians the agreed costs of naval transport to the Levant was the main reason for the diversion of the crusade against the town of Zara (mod. Zadar, Croatia), which they captured and plundered. The crusaders were then invited to turn against

Byzantium by an exiled Byzantine prince, the future Alexios IV, to restore his father, Isaac II Angelos, who had been deposed in 1195. Alexios IV Angelos promised the crusaders and the Venetians a large sum of money, committed himself to assist the crusade after his father had been restored to the throne, and promised to work toward the reunification of the Greek Orthodox and Latin churches. A few months later, after Alexios had failed to fulfill his promise to pay the crusaders, they besieged Constantinople, capturing the city in April 1204. For three days the Byzantine capital was ruthlessly sacked.

The diversion of the Fourth Crusade to Constantinople and the atrocities committed by the crusaders and the Venetians after the capture of the Byzantine capital can be fully explained if Byzantine-Latin relations of the recent past are taken into consideration. There is no doubt that the crusaders and the Venetians wanted their debts to be paid by

the Byzantines, but apart from this, a significant role in the events of 1204 was played by the antipathy that had been cultivated for decades in the West against Byzantium because of the lack of commitment of the Byzantine emperors to the aims of the crusaders. Further contributory factors were the schism between the Latin and Greek Orthodox churches, the imperialistic policy of Emperor Manuel I toward the West, the anti-Latin policy of Emperor Andronikos I, and finally long-standing Western ambitions to conquer Constantinople, which had been an aim of the Norman kings of Sicily in the eleventh century, and may well have been considered by Emperor Frederick I Barbarossa and his son Emperor Henry VI in the twelfth century.

The Later Byzantine Period (1204–1453)

This was the period of the decline and collapse of the Byzantine Empire, which, apart from external enemies, now also faced civil wars and rebellions. Around the time of the Latin conquest of Constantinople in 1204, a number of independent Greek states were established in the lands of the former Byzantine Empire, three of which played a dominant role in the political developments in the area in the first decades of the thirteenth century: the empire of Nicaea, the principality of Epiros, and the empire of Trebizond. The empire of Nicaea fought against the other two states in its struggle to be recognized by Greeks as the legitimate successor state of the Byzantine Empire. It achieved this aim in 1230, when the Bulgarian army of Ivan Asen II crushed the Epirote army at the battle of Klokochnitsa. The empire of Trebizond had already been a vassal state to the Saljūq sultanate of Rūm since 1214. The Nicaean army liberated Constantinople from the Latins in 1261, and the Nicaean emperor Michael VIII Palaiologos himself entered the city in triumph in August 1261, thus restoring the Byzantine Empire. However, in the 1270s popular uprisings took place in the empire because the vast majority of Byzantines disagreed with Michael's policy of forcing the Orthodox Church to accept reunification with the Church of Rome on papal terms in return for political benefits for the empire.

Further internal restlessness occurred during the reigns of Michael's successors. Emperor Andronikos II Palaiologos fought for seven years (1321–1328) against his grandson Andronikos III. In the mid-fourteenth century the religious movement known as Hesychasm (quietude) led to an open conflict among members of the church and also between the church and the emperor. A civil war (1341–1347), which ini-

tially did not seem to have social causes but eventually became a violent manifestation of the hostility between the lower classes and the landed aristocracy, was the worst civil conflict, which destroyed almost everything, according to Emperor John VI Kantakouzenos. After the end of the civil war, John VI ruled in the place of the young John V Palaiologos, thus interrupting for seven years the rule of the Palaiologoi dynasty (1347–1354). Finally, when John V was restored to the throne, he had to face the rebellion of his son Andronikos IV and then of his grandson John VII.

In this period, the empire was surrounded only by enemies. The continuing commercial privileges enjoyed by Italian maritime cities (principally Venice and Genoa) posed a threat to the existence of the empire: they enabled those cities to intervene at will in its internal affairs by means of the fleets they had stationed in Byzantine waters. The Angevin dynasty that ruled southern Italy and Sicily was a serious threat to the integrity of the Byzantine Empire throughout the reign of Michael VIII Palaiologos. In order to reduce this danger, Michael submitted the Greek Orthodox Church to the Latin Church, believing that the pope would be willing and able to hold back an Angevin attack against Byzantium. At the same time, the Ottoman Turks were consolidating their position in Asia Minor at the expense of the Saljūqs of Rūm and later of the Byzantines themselves, who, by the beginning of the fourteenth century, had lost most of Bithynia (in northwestern Asia Minor) to them. In the fourteenth century, the Byzantine lands in northern and central Greece were captured by the Serbs, who, under Tsar Stephan Dušan, deprived the Byzantine Empire of almost half of its lands, and by the Catalan Company, which established control over the duchy of Athens and Thebes (1311–1388) after the Byzantine emperor had been unable to pay it for its mercenary services.

In 1354, the Ottomans crossed over to Europe for the first time and captured the Gallipoli peninsula. By the end of the century, a number of Byzantine cities in the Balkans had succumbed, and in 1390 the last Byzantine stronghold in Asia Minor was captured by the Ottoman sultan Bayezid I. A Western-Balkan coalition against the Turks, the so-called Crusade of Nikopolis, ended in disaster in 1396. It was mainly thanks to the defeat of the Turks by the Mongols at the battle of Ankara in 1402 that the Byzantine Empire managed to survive for a further fifty years.

Aid from abroad was desperately needed for the empire, but the means that were employed to achieve this occasion-

ally caused more problems in the empire. Attempts to heal the schism between the Orthodox and Latin churches at the Council of Ferrara-Florence (1438–1439) were followed by internal unrest in the Byzantine Empire, whose population was divided into “unionists” and “anti-unionists.” As at the Second Council of Lyons in 1274, the motivations of the Byzantines in signing the agreement on the reunification of the churches were mainly political, hoping for military aid from the West. Pope Eugenius IV appealed to Western rulers for a crusade against the Turks, and in the summer of 1443, about 25,000 crusaders, Hungarians, Serbs, and Vlachs were assembled. In November 1443 they captured Niš and entered Sofia; in June 1444 King Ladislas of Hungary signed a ten-year truce with the Turkish sultan Murad II, which, however, lasted for only a few months. In November 1444 the Hungarians and the crusaders renewed their military activities and besieged Varna, but were defeated by the Turks there on 10 November. The Crusade of Varna was the last attempt in the Byzantine era for a coordinated Christian offensive against the Turks. When Emperor Constantine XI Palaiologos ascended the throne in 1448, only military help from the West could offer the empire any hope of survival, and to that end, the Byzantine emperor again tried to implement the reunification of the churches agreed to in Ferrara-Florence. The much needed aid from the West did not arrive on time, and Constantinople fell to the Turks on 29 May 1453, followed by the despotate of Mistra in 1460 and the empire of Trebizond in 1461.

C

Caesarea (Maritima)

A coastal city in central Palestine, Caesarea (mod. Har Qesari, Israel) was the seat of a lordship and an archbishopric in the kingdom of Jerusalem.

After the arrival of the Franks in the course of the First Crusade (1096–1099), the Muslim emir of Caesarea obtained tributary status from Godfrey of Bouillon, the ruler of Jerusalem. In May 1101, however, with Genoese naval assistance, Godfrey's brother and successor, King Baldwin I, took the city amid scenes of plunder and carnage. An archbishop was subsequently installed in the cathedral of St. Peter, formerly the great mosque, and a royal garrison was left to defend the town. In the twelfth century the population mostly consisted of Franks, with some Eastern Christians and a small number of Jews and Samaritans. Although the Genoese later claimed to have been granted a third of the city by Baldwin I, there is no evidence to suggest that their claim was ever fully realized.

Between 1105 and 1110, the lordship of Caesarea was granted to Eustace Granarius (Grenier), a knight from the bishopric of Thérouanne. It passed to his son Walter in 1123, but the precise succession to the lordship thereafter is unclear. Its territory extended over the coastal plain from Le Destroit (near 'Atlit) in the north to the borders of the lordship of Arsuf in the south. According to John of Jaffa, the lord owed the king the service of twenty-five knights, and the city and archbishop, fifty sergeants each.

Caesarea fell to Saladin's emirs after the battle of Hattin in mid-July 1187. The Muslims systematically dismantled its towers and walls before it was occupied by King Richard I of England on 31 August 1191. Although it was confirmed

as a Frankish possession in August 1192, Juliana, lady of Caesarea, seems not to have taken up residence there. In December 1217, John of Brienne began refortifying the town with the assistance of Duke Leopold VI of Austria and the Hospitallers, and on 2 February 1218 the patriarch of Jerusalem celebrated Mass in the cathedral. During the winter of 1219–1220, however, Caesarea was attacked by al-Mu'azzam 'Isā, Ayyūbid ruler of Damascus, while its lord, Walter, was absent with the king at Damietta in Egypt. The city's defense had been entrusted to the Genoese, but they abandoned it after four days, leaving al-Mu'azzam to destroy its defenses once more. Refortification was put in hand between May and September 1228 by Duke Henry of Limburg and German crusaders awaiting the arrival of Emperor Frederick II. It was brought to completion by King Louis IX of France between March 1251 and May 1252.

Caesarea's territory was raided in summer 1264 by the Mamlūk sultan Baybars I, who returned in February 1265 to lay siege to the city. When the walls were breached, the defenders retired to the castle on the south harbor mole. For six days Baybars directed the attack from a vantage point on the cathedral roof, and on 5 March the garrison surrendered and was evacuated by sea to Acre. Over the next two weeks, the Mamlūks dismantled the defenses for the last time.

Caesarea has been the subject of archaeological excavations since 1960 and of underwater research since 1980. The Frankish town walls followed the course of the earlier Muslim defenses, enclosing an area some 450 meters (148 ft.) north to south by 240 meters (787 ft.) east to west. This was about 10 hectares, representing less than a twen-

Caesarea (Maritima)

The moat and fortifications of Caesarea in Palestine. (Courtesy Alfred Andrea)

tieth of the area of the Byzantine city. The walls were strengthened by fifteen towers, including gatehouses on the north, east, and south, and were buttressed by a sloping masonry batter (talus) rising from the bottom of the enclosing ditch. A small harbor on the west, enclosed by the castle and an artificial mole, represented merely the inner part of the earlier harbor built by King Herod (22–10 B.C.).

The Latin archbishopric had a single suffragan, the bishop of Sebastea, adjacent to Nablus. The twelfth-century cathedral of Caesarea had three aisles terminating in rounded apses; sometime in the thirteenth century the east end was rebuilt to a slightly different design, probably after destruction in 1191 or 1219–1220. Other churches included the Genoese Church of St. Lawrence, a Chapel of St. Cornelius outside the walls, and houses of the Hospitallers, the Order of St. Lazarus, and the Teutonic Knights. A group of Fāṭimid-period houses, laid out around central courtyards, continued in use after the Frankish conquest, one of them having its

first floor carried over the street on series of arches. Elsewhere there survives the vaulted undercroft of what may be a merchant's house. Pottery found in the excavations includes wares imported from Cyprus, North Africa, Italy, Greece, and Muslim Syria.

Caffaro (1080/1081–1166)

Genoese politician and crusader, and the first layperson to emerge as a historian in the Middle Ages.

Caffaro was the son of Rustico, lord of Caschifellone in Val Pocevera north of Genoa. In 1100–1101 he took part in the first naval expedition organized by the commune of Genoa in support of the crusaders who had reached Syria and Palestine in the course of the First Crusade (1096–1099). He may have gone to Outremer for a second time between 1130 and 1140. After the First Crusade, Caffaro played an important role in the political life of Genoa: from 1122 to 1149 he served frequently as consul; several times he was one of the four elected leaders of the commune; as one of the two *consules de comuni* who were responsible for Genoa's foreign policy, he acted repeatedly as commander of the Genoese war fleet (1125 and 1146–1148), and also as a diplomat.

Caffaro negotiated successfully with Pisa and Pope Calixtus II (1121–1123) to secure Genoa's metropolitan rights over the island of Corsica. He secured improved conditions for Genoese trade from Raymond Berengar III, count of Barcelona (1127 and 1146), and also concluded an alliance with King Alfonso VII of Castile in 1146 that enabled the Genoese fleet to capture the Spanish towns of Almeria and Tortosa in 1147–1148 in the course of the Second Crusade. He conducted negotiations with Frederick I Barbarossa, the Holy Roman Emperor, in 1154 and 1158, which achieved formal confirmation of earlier imperial privileges for Genoa. As admiral, Caffaro defeated the Pisan fleet in 1125. In the western Mediterranean, he commanded a Genoese fleet that attacked the island of Menorca, plundered one of its coastal towns (Port Mahon or Cittadella), and was able to gain control of this island from the Moors in 1146. The Genoese fleet that captured the towns of Almeria and Tortosa on the Iberian mainland from the Saracens was also under his command.

Caffaro wrote three chronicles that differed greatly: the *Annales Ianuenses*, the *De liberatione civitatum Orientis*, and the *Ystoria captionis Almarie et Turtuose*. The *Annales*

Ianuenses (1099–1163) constituted his main historiographical work; despite his partiality toward his native city, it is much more reliable than his lesser works and was continued up to 1294 by various city chroniclers as the official history of the commune of Genoa.

Calatrava, Order of

The oldest military religious order of Hispanic origin.

The order was founded in 1158 in the fortress of Calatrava in what is now the province of Ciudad Real (Spain) by Abbot Raymond and a group of Cistercian monks from the mon-

astery of Fitero in Navarre, who included one Diego Velázquez, a former knight who had been brought up at the Castilian court. According to the chronicler Rodrigo Jiménez de Rada, archbishop of Toledo, Calatrava had been abandoned by the Templars because they considered themselves incapable of defending it against a likely attack from the Almohads. Because of this, the Cistercians of Fitero were able to occupy the fortress after it had been handed over to them by the king of Castile, Sancho III. From this point the monks combined their spiritual vocation with the defense of the enclave, creating a religious militia, or military order, that received the name of the castle. From 1164 the Cistercian general chapter and the papacy both recognized the new institution as part of the Cistercian Order, even though placing the *freires* (knight brethren) and monks in the same category posed problems for a long time.

The *freires* were obliged to obey the Cistercian rule, and the Cistercian chapter regularly visited their central convent. From 1186, it was the abbot of Morimond who visited them, and Calatrava came to be considered as an affiliate of his monastery. The responsibility of this abbot was to lay down norms and disciplinary prescriptions, which all members of the Order of Calatrava were obliged to observe. As part of their religious profession, the members had to take solemn monastic vows of obedience, poverty, and chastity. Most of them were knights with military functions, and only a few were clerics, whose duty was to administer the sacraments to all of the members. After the death of the founder, Raymond of Fitero (c. 1162), the head of the order was termed a *maestre* (grand master), who was always a knight brother. The other members came under his authority, even though the clerics were directly responsible to the prior, or prelate. The prior belonged to the clerical branch of the militia and, being lower in rank than the grand master, was nominated by the abbot of Morimond. The *freires* lived in the central convent at Calatrava, or in other convents of the area; these were known as *prioratos* (priories) and *comendas* (commanderies), and were the territorial divisions into which the estates of the order were divided for administrative purposes. From the first decades of the thirteenth century the order admitted women, who entered as contemplative nuns in the few monasteries belonging to the militia: San Felices de Amaya (Burgos), San Salvador de Pinilla (Guadalajara), and Santa María de Jalimena (Jaén).

The territorial estates of the Order of Calatrava were mainly situated in Castile, particularly in a large part of the

ancient kingdom of Toledo, the so-called Campo de Calatrava, in what is now the province of Ciudad Real. There the order received numerous donations from kings, nobles, and other individuals, and managed to control some of the most important communication routes that linked the center of the Iberian Peninsula with al-Andalus. These routes were flanked by numerous castles that also belonged to the order: Malagón, Benavente, Alarcos, Caracuel, and Piedrabuena, among others. The order also had a considerable presence in the kingdoms of León and Portugal, although from the beginning of the thirteenth century its branches in these kingdoms developed into autonomous orders under the names Alcántara and Avis; in the Cistercian terminology of the time, they were affiliates of Calatrava. In Aragon, the members of the Order of Calatrava established themselves in the strategic fortress of Alcañiz from 1179. They never actually constituted an independent order, but they did establish a major commandery, which was relatively autonomous in relation to the central convent. At the end of the Middle Ages, the estates of the order in Castile alone amounted to approximately 15,000 square kilometers (5,800 sq. mi.), with more than fifty commanderies and almost 100,000 vassals. The wealth accumulated from a patrimony of this size was quite considerable; livestock farming was particularly relevant in the depopulated area between the river Tagus and the Sierra Morena.

The members of the order participated in all the principal battles during the reconquest of the Iberian Peninsula from the Muslims. They suffered a severe defeat at Alarcos (1195) against the Almohads, which almost caused their disappearance as an institution. However, they contributed decisively to the Christian victory at Las Navas de Tolosa (1212), and formed a substantial part of the Christian army under Ferdinand III of Castile that, between 1230 and 1248, managed to incorporate the whole of northern Andalusia into Castile. They were also active in the major campaigns against the Marinids in the XIV century, in particular at the battle of Salado (1340), and in the conquest of Granada by the "Catholic Monarchs," Ferdinand II of Aragon and Isabella I of Castile, toward the end of the fifteenth century.

Their presence outside the Iberian Peninsula was of minor importance, although we have knowledge of a convent of Calatrava in the 1230s situated in Tymau in Poland, on the left bank of the river Vistula. In any case, the efficiency of the *freires* on the battlefield did not depend as much on their num-

ber (which probably never amounted to more than 300 knights) as on their quality. They were skilled professionals in warfare, and embodied the purest spirit of the crusade; they were also capable of mobilizing numerous laypeople under their banners, who took advantage of the indulgences and spiritual privileges the papacy bestowed on crusaders. Some of these laypeople may even have been affiliated with the order, that is, linked to it by both spiritual and material ties.

Like the rest of the military orders, Calatrava underwent a fairly obvious transformation process. In its first century of existence, it was a militia with clear monastic connections that acted as a faithful collaborator of the Castilian monarchy in its military and colonizing plans. From the middle of the thirteenth century, an irreversible process of secularization began to occur as a consequence of two circumstances: on the one hand, the *freires* became increasingly tied to the noble lineages of the kingdom; on the other, the monarchy demonstrated a greater interest in intervening in the control of the institution. Both these factors contributed to a weakening of the original monastic character of the order and converted it into a mere institution of nobles, identified with the interests of the important aristocratic dynasties and, consequently, not always loyal to the king.

Given these developments, the control of the office of grand master became a matter of constant concern, for different reasons, both to the important noble families and to the monarchy. All this contributed to the outbreak of internal crises, which were especially intense throughout the fifteenth century, as was evident during the periods of office of the grand masters Enrique de Villena, Luis González de Guzmán, and Pedro Girón. These crises, combined with the intervention of the *freires* in civil conflicts, were used to justify the acquisition of the office of grand master by the Crown in 1489. At that time, the militia was showing signs of becoming decidedly secular, as demonstrated by the relaxation of the monastic vows of the *freires*, which was legitimized by the Cistercian general chapter and the papacy. The members of the Order of Calatrava (along with those of the other military orders) were transferred to the responsibility of the Council of Military Orders, a government department integrated into the political structure of the monarchy. Their resources were utilized by the monarchy, and the order finally became an honorific corporation, suppressed by the liberal governments of the nineteenth century. From that time a series of complex vicissitudes permitted the order's intermittent appearance on the social scene; today it

belongs to a restored and honorific Council of Orders presided over by a member of the Spanish royal family.

Caliphate

The institution of leadership of the Muslim *umma* (community).

After the death of the Prophet Muḥammad in 632, the Muslim community found itself faced with a dilemma: the Qur'ān provided no clear indication of who was intended to lead the *umma* after the Prophet, nor in exactly what capacity. Leadership of the community soon passed to individuals who became known as caliphs; the English term derives from Arabic *khalīfa* (successor). The caliphs were initially, de facto, both military commanders (as leaders of raids were in the pre-Islamic era) and religious leaders (in their capacity as successors to the Prophet, although they were not prophets themselves).

By the time of the crusades the relationship between the caliph and the actual mechanisms of rule had become less stringently defined as a result of ninth-century tensions between the caliphs and the religious elite as well as later developments in theories of the caliphate. From the ninth century on, domination of the caliphs by their military subordinates also restricted their power. The situation came to a head in 946, when the caliph al-Mustakfī (944–946) was forced to accept a member of the Shī'ite Būyid family as his deputy, becoming little more than a figurehead for the new ruler of the Muslim world. While the Būyids were displaced by the Sunnī Saljūq Turks in 1055, the caliphs remained for

the most part the religious and the secular leaders of the Muslim world in name only. Nevertheless, during the crusading period some caliphs, most notably al-Muqtafi (1136–1160) and al-Naṣir (1180–1225), managed to resist their theoretical subordinates and assert their own authority.

The first four caliphs were chosen by the general agreement of the umma, but after the death of the fourth caliph, ‘Alī ibn Abī Ṭālib (661), the caliphate passed to the Umayyad family, who instituted a principle of dynastic succession, something that raised some opposition within the umma. By the eighth century, the Umayyads had become embroiled in a number of difficulties and had made several major enemies. Finally, in 750, they were replaced by another prominent Arab family, the ‘Abbāsids. ‘Abbāsid caliphs reigned (though as indicated, few actually ruled) at Baghdad until 1258 and at Cairo from 1262 (under Mamlūk tutelage) until the fall of the Mamlūk sultanate to the Ottomans in 1517.

At times there were rival caliphates, each of them claiming to be the legitimate one. Partisans of the family of ‘Alī had opposed both the Umayyads and the ‘Abbāsids; indeed, in North Africa the Shi‘ite Fātimids founded a caliphate at Kairouan in 909, took Egypt sixty years later, and ruled there until 1171. Rival caliphates also existed in Spain, where the Umayyad emir, ‘Abd al-Rahmān III (d. 961), founded a caliphate that lasted from 928 until 1031, and in North Africa, where the Almohad ‘Abd al-Mu‘min (d. 1163) and his descendants claimed the title until 1269. The title was also claimed by the Ḥafṣids of Tunisia and eastern Algeria (1228–1574) and the Marīnids of Morocco (1196–1464).

Calixtus II (d. 1124)

Pope (1119–1124) who played a significant role in extending the definition of the crusade. Guy (Lat. Guido) of Burgundy, as he was originally known, was probably born around 1060. As one of six sons and five daughters of William II Tête-Hardie, count of Burgundy (d. 1087), Guy belonged to the highest aristocratic circles of the kingdom of France and the Holy Roman Empire.

Like his older brother Hugh, Guy was destined for an ecclesiastical career, while their other three surviving brothers divided the rule over the vast domains of the comital house of Burgundy. Educated at the cathedral school of Besançon, Guy was elected archbishop of Vienne, probably in 1088. The story that he spent fourteen years as a wandering scholar on pilgrimage in the service of St. James of Compostela is an invention of the *Liber Sancti Jacobi* found in the so-called Codex Calixtinus.

As archbishop of Vienne, Guy devoted much of his energy to the territorial expansion of his archdiocese. He was engaged in long-running conflicts with the bishop of Grenoble, one of his suffragans, and with the abbey of Saint-Barnard, and did not allow even papal judgments to stand in his way. This earned him the opposition of Pope Urban II, who decided both disputes against Guy on account of disobedience to earlier commands of the pontiff at the Council of Clermont (1095), which Guy did not attend. Guy himself did not go on crusade, unlike his brothers: two of them died in 1102 after having gone to the East with the Crusade of 1101; the third, Hugh, archbishop of Besançon, died during the sea crossing to the Holy Land in 1101.

Guy was a leading opponent of Urban’s successor, Pope Paschal II, who in 1111 tried to reach an agreement with

Henry V, the Holy Roman Emperor, in the long-running dispute between empire and papacy concerning the investiture of ecclesiastical offices. At the Council of Vienne (1112), Guy threatened Paschal with schism and excommunicated the emperor. When Paschal's successor, Pope Gelasius II, died at Cluny in February 1119, the cardinals present at his death elected Guy as pope. He was crowned at Vienne a week later (9 February 1119) and took the name Calixtus. On his way to Rome, he had already held two synods (Toulouse and Mouzon). The First Lateran Council (1123) could be considered the high point of his pontificate. Despite some opposition, it ratified the Concordat of Worms, establishing a truce between Emperor Henry V and the papacy in the struggle over investiture.

The decrees of the Lateran Council of 1123 built on earlier crusade legislation of Urban II and Paschal II by promising remission of sin to those who set out for Jerusalem and by placing their properties and families under the protection of the Apostolic See. Calixtus's legislation was largely in response to appeals from the Franks of Outremer after the defeat of the army of Antioch by the Turks at the battle of the *Ager Sanguinis* (Field of Blood) in 1119. Approaches to Venice by Calixtus and King Baldwin II of Jerusalem (a distant relative of his) resulted in a naval crusade in 1122–1124, which was led by Doge Domenico Michiel. Although the expedition was also intended to further Venetian commercial interests, it enabled the Franks of Jerusalem to defeat a major Fāṭimid invasion in 1123 and contributed decisively to the capture of the port of Tyre (mod. Soûr, Lebanon) in 1124. In a letter of 1123 to Spanish magnates, Calixtus also equated participation in the *Reconquista* (reconquest of Iberia from the Muslims) with the crusade to the Holy Land. He died on 13 or 14 December 1124 in Rome. His encouragement for the crusade in Spain eventually helped bring about a campaign launched against Granada by King Alfonso I of Aragon in 1125–1126.

Canary Islands

The Canary Islands (Sp. *Islas Canarias*) are a group of islands off the western coast of North Africa, which were the target for expeditions with commercial or crusading character from the late thirteenth century onward, until they were incorporated into the Crown of Castile at the end of the fifteenth century.

In classical times the *Fortunatae Insulae* ("Fortunate Islands"), as they were named, were known to the Romans, albeit imperfectly. Nonetheless, archaeological finds seem to support the idea of some kind of Roman presence and even of Phoenician colonial outposts. These colonies would have established contact with the native population (the Guanches), which must have reached the islands coming from Late Neolithic North Africa around the middle of the first millennium B.C. The Arabs paid little attention to the archipelago, and even some Muslim authors thought that it was uninhabited; only Italian interest in navigation down the western African coast from the late thirteenth century onward brought these islands onto the map of the Mediterranean commerce, particularly for slaves, the sap of the dragon-tree (*Dracaena draco*), and archil (orchil). Around 1336 the Genoese Lancelloto Malocello reached the most eastern island, Lanzarote, to which he gave his own name.

In the second half of the fourteenth century, Catalans and Mallorcans controlled the expeditions to the Canary Islands, which began to have also a missionary character. Italian and Aragonese voyages gave way at the end of that century to Castilian and Portuguese interest in the islands, a shift that showed the increasing political weight of the Atlantic powers. It was a French nobleman from Normandy, Jean de Bethencourt, who in 1402 launched an expedition to conquer an archipelago that was well depicted in contemporary portolan charts. The Age of Rediscovery gave way to the Age of Lordship. The conqueror became a vassal of King Henry III of Castile and obtained a papal indulgence for those participating in the campaign, but soon he lost interest in the three islands he had occupied (Lanzarote, Fuerteventura, and Hierro) and transferred lordship to his nephew Maciot,

who ceded it to the Andalusian count of Niebla in 1418. From that time until the Castilian Crown stepped in (1477), these three islands, plus the right of conquest over the other four (Gran Canaria, Tenerife, La Palma, and Gomera), were in the hands of the Andalusian noble houses of Las Casas and Peraza. In these decades firm control was established only over Gomera.

The rest of the islands were only conquered after Ferdinand II of Aragon and Isabella I of Castile decided in 1477 to take the Canary Islands under their control in the midst of the civil war against Juana la Beltraneja. The end of that war also put an end to Portuguese claims to that Atlantic region. The Treaty of Alcaçovas-Toledo (1479) fixed zones of influence in the Atlantic; the Canary Islands were assigned to Castile, and Madeira and the Azores to Portugal. In 1483 Gran Canaria was finally subdued after strong resistance. The need for safe Atlantic bases for the exploratory voyages of Christopher Columbus quickened the efforts of the Castilian Crown for complete control of the archipelago; in 1492–1493 La Palma was occupied, and in 1494–1496 so was Tenerife.

Caoursin, Guillaume (1430–1501)

Historian of the Order of the Hospital.

Born in Douai in Flanders, Guillaume Caoursin received a doctorate in arts from the University of Paris and was also a professor of law. He became vice-chancellor of the Order of the Hospital on Rhodes (mod. Rodos, Greece), first appearing in the records of the chapter general in 1456, and he served as secretary to the master. Twice he served as the order's ambassador to the papal Curia, once in August 1470, and again in 1485, when he delivered an oration addressed to Pope Innocent VIII that was published as *Ad Innocentium papam VIII oratio* (1485).

Caoursin wrote the official description of the Ottoman siege of Rhodes in 1480, published under the title *Obsidionis Rhodiae urbis descriptio* (1480). His major work was the compilation of the order's rule, entitled *Stabilimenta Rhodiorum militum* (1495). His final published work was an illustrated collection of histories of the order, the *Rhodiorum historia* (1496). Despite his long association with the order, Caoursin never became a member, nor was he a cleric; in 1480 he married a Rhodian.

Captivity

Capture by the enemy was a perennial danger during crusade expeditions as well as during fighting between Latin Christians and their various opponents in Outremer, Greece, Spain, and the Baltic lands, a danger that affected fighters and noncombatants of both sexes and of all social groups. Captivity came to be an important theme of crusading literature, notably in the form of the Old French epic *Les Chétifs*, and it eventually led to the creation of Christian religious institutions established specifically for the liberation of prisoners.

In eleventh- and twelfth-century Western warfare, class consciousness and economic self-interest meant that cap-

tured knights were often spared and ransomed, while captured foot soldiers and noncombatants were frequently massacred. In the Muslim world, captives might be ransomed, exchanged, or enslaved, and large-scale prisoner exchanges had been common between Byzantine and Arab armies. During the First Crusade (1096–1099), however, there seems to have been little expectation that captives would be spared, and execution was the usual fate of those taken in battle by both Christians and Muslims.

In Outremer such attitudes meant that the Franks often carried out large-scale and savage massacres of the inhabitants of captured cities, such as Ma'arrat al-Nu'man (1098), Jerusalem (1099), and Caesarea (1101), while they were reluctant to pay ransoms demanded by the Muslims. From around 1105, however, it became more common for captives on both sides to be spared, especially when they could be used to obtain large ransoms or for prisoner exchanges, although the inability to meet ransom demands, along with the reluctance of Muslims to release key enemies, often meant that prominent Franks spent lengthy periods in captivity. These included the following (with periods of captivity in parentheses): Bohemund I (1100–1103) and Bohemund III of Antioch (1164–1165), Baldwin II of Edessa and Jerusalem (1104–1108, 1123–1124), Joscelin I (1104–1107) and Joscelin II of Edessa (1150–1159), Raymond III of Tripoli (1164–1173), and Reynald of Châtillon (1160/1161–1175, 1187). The intensification of warfare in the time of Saladin led to increasingly harsh treatment of captives, as exemplified by Saladin's execution of Templar and Hospitaller knights after the battle of Hattin (1187) and the massacre of several thousand Muslims ordered by Richard the Lionheart after the surrender of Acre (1191).

For captives on either side, freedom might come about by various means. Escape or rescue was frequently a possibility, and some rescue attempts might involve complex or large-scale efforts, as when Armenians from Edessa infiltrated the Turkish fortress of Khartput disguised as monks and traders to rescue Baldwin II (1123), or when the Franco-Lombard contingent during the Crusade of 1101 turned aside from its march route in a vain attempt to rescue Bohemund I of Antioch in northern Anatolia. Liberation was more commonly secured by ransom or exchange for captives freed by the other side. Even lords might need to sell or mortgage considerable property to raise ransoms, or might demand payments from their vassals, but enslavement was often the fate of those without sufficient resources. Liberation through apostasy, that is conversion to the faith of the

captors, was often offered under duress, as an alternative to death, and such a conversion usually meant that the convert was unable to return to his former home. The Templars and Hospitallers generally refused to ransom any of their knight brethren who were captured, although they were often prepared to put up funds to free laypeople.

The great number of Christian fighters and noncombatants taken prisoner by Saladin at Hattin and afterward brought about a new focus in the West on the plight of captives and the need for their liberation. On the initiative of the papacy, prayers for Christian captives were introduced into the liturgy, while new institutions were founded with the purpose of redeeming captives. Although military orders in both Outremer and Iberia had previously been active in this respect, the work of redemption was given a new basis in 1198 with the foundation of the Trinitarian Order, whose principal objective was the liberation of captives by the provision of ransoms as an act of charity. Although the Trinitarians were active in the Holy Land, it was Spain and the western Mediterranean region that came to be the main sphere of their own and other redemptionist activity, particularly after the foundation of a second dedicated redemptionist order, the Mercedarians (1223), based primarily in Iberia and Languedoc. Redemptionist work extended not only to captives taken in the wars of the *Reconquista*, but also to the many Christians carried off by the corsairs of North Africa. For Muslims too, the liberation of prisoners was regarded as a meritorious act, and wealthy individuals often donated money directly for redemptions or for charitable foundations established for this purpose.

The failure of many crusades after 1187 often resulted in large-scale captures of Christians. Thus Louis IX of France and his men were obliged to surrender to the Egyptians, after being outmaneuvered during their advance on Cairo, and were obliged to pay a colossal ransom (1250); after the disastrous defeat of Nikopolis at the hands of the Turks (1396), the majority of Christian captives were systematically butchered, with some being sold into slavery, and a few nobles spared for heavy ransom. Even a crusader returning home was not immune to capture, as in the case of Richard the Lionheart, seized by Duke Leopold V of Austria on his journey back from the Third Crusade and held for ransom for 100,000 marks by the emperor Henry VI (1192).

Cruelty to captives was a particular feature of the Christian conquest of Prussia and Livonia; it was common for prisoners on both sides to be butchered or burned alive on

Carmelite Order

the field of battle. However, from the later thirteenth century there was a growing tendency to treat captives on this front as an important economic resource, particularly to replenish working populations that had been depleted through continual warfare. Many of the numerous raids by Christians and pagans alike during the later Baltic crusades were mounted with the express purpose of obtaining captives who could be enslaved and set to work in the fields or in the construction of fortifications.

Carmelite Order

The Order of Our Lady of Mount Carmel was a religious order of the Latin Church, founded in the kingdom of Jerusalem.

The order began when Albert of Vercelli, Latin patriarch of Jerusalem (1205–1214), gave a rule for living to a group of hermits living on Mount Carmel in the north of the king-

dom of Jerusalem. Papal confirmations in 1226 and 1229 determined the eremitical character of the order, but from around 1242 onward the hermits began to settle in the West, and in 1247 a modification to the rule enabled a transformation into a mendicant order. Thenceforth the Carmelites exercised a pastoral ministry similar to that of other friars, though Carmelite spirituality retained an emphasis on contemplation. After 1291 the Carmelites' link to crusading was manifested largely in the legendary traditions developed about the order's origins and early history.

Mount Carmel is a mountainous ridge roughly 22 kilometers (13½ mi.) long and 14 kilometers (8½ mi.) broad, rising gradually in parallel to the Mediterranean Sea to a peak of around 550 meters (c. 1804 ft.) overlooking the bay of Acre (mod. 'Akko, Israel). Carmel was venerated by Jews, Christians, and Muslims because of its association with Elijah. Two features attracted especial attention: the cave of Elijah, below the summit of the promontory, and the spring of Elijah, which rises in a *wādī* (watercourse) about 6.5 kilometers (4 mi.) south of the summit. Three Greek Orthodox monasteries are attested from the Byzantine period: St. Margaret, on the summit; St. Elisha, in *wādī* 'Ain as-Siah; and St. John of Tyre, in *wādī* al-'Ain; the hermit Martinian lived on Mount Carmel in the fourth century.

In 1185, John Phokas, a Greek pilgrim, reported the existence of a small community of Calabrian hermits on Mount Carmel, probably in 'Ain as-Siah, since he refers to the hermits inhabiting the ruins of a monastery. After 1187 Carmel's wooded valleys probably attracted Frankish and indigenous hermits fleeing from Galilee, where they had been numerous. It was these hermits who were described in Albert's rule as having been gathered together to live in a regulated community. Nothing is known of the early composition of the order, but the rule, which shares similarities with the Carthusian customary, required the hermits to live in individual cells grouped around an oratory. The rule envisaged a largely lay community, but liturgical offices following the custom of the Holy Sepulchre were specified. A vow of silence was imposed, and the hermits were to own no property. The community was headed by a prior who assigned the hermits to their cells, which they were not to leave without permission.

The earliest witnesses to Carmelite life were pilgrims. Anonymous guides from the 1230s mention the Latin hermits and their church, dedicated to the Blessed Virgin, and remark on the fertility of their site. In 1238, however, the per-

ceived threat of Muslim attack induced some of the hermits to settle in Cyprus, while in 1242 two English crusaders, Richard de Grey and William de Vescy, took hermits from Carmel to found hermitages in England; similarly, King Louis IX of France founded a Carmelite house near Paris in 1258. The Carmelites also founded new houses in Outremer: documentary evidence attests to houses in Acre and Tyre (mod. Soûr, Lebanon), but a fourteenth-century Carmelite list of houses also mentions houses in Tripoli (mod. Trâblous, Lebanon), the Black Mountain near Antioch (mod. Antakya, Turkey), and Jerusalem. A papal bull of 1263 refers to the rebuilding of the church on Mount Carmel.

The Carmelites successfully petitioned Pope Innocent IV to modify their rule in 1247 so as to continue spreading beyond Mount Carmel. In England, forty houses were founded between 1242 and 1320. The progress of the Carmelites was temporarily halted in 1274 when the Second Council of Lyons suspended new recruitment, but in 1286 papal reconfirmation ensured their continued existence. By the end of the thirteenth century, Carmelites had begun to secure advanced degrees in the universities, and Carmelite scholars, notably Guy Terrenus, John Baconthorpe, and Thomas Netter, played an important role in the theology faculties at Paris, Oxford, and Cambridge. Carmelite theology and ecclesiology were characterized by firm support for the papacy, particularly during the debates concerning ecclesiastical poverty in the 1320s, and opposition to Lollardy in England in the later fourteenth century.

Carmelite involvement in crusading and the recovery of the Holy Land was slight after 1291. Although there is evidence for Carmelite crusade preachers in fourteenth-century England, the strongest link between the order and the Holy Land was the Carmelite liturgy, which continued to follow the usage of the Holy Sepulchre. Carmelite pilgrimages to the Holy Land are attested for the fourteenth and fifteenth centuries, but there is little evidence for a tradition of devotion to the holy places to compare with that of the Franciscans, and Carmelites did not found missions to the East before the seventeenth century. An exception to this general rule was Peter Thomas, a Carmelite from Gascony who was intimately involved in the crusade of King Peter I of Cyprus against Alexandria in 1365. As Latin patriarch of Constantinople, he had also overseen the submission to Rome of John V Palaiologos, the Byzantine emperor, in 1357, and as papal legate in the East from 1359 to 1366, he enforced the obedience of the Greek clergy in Cyprus.

The most distinctive feature of Carmelite culture in the late Middle Ages was the development of historical traditions focused on the early history of Mount Carmel. Throughout the thirteenth century, the Carmelites maintained a devotion to the Blessed Virgin, but during the fourteenth century a new strand, the claim to have been founded by Elijah, was woven into the fabric of their traditions. The fullest account of their history, by Philip Ribot (1376/1397), argued that the Carmelites were the first monks, and that their particular brand of mendicancy had been handed down directly from Elijah. The Carmelites' explanations for the transformations from Old Testament prophets to early Christian monks, and from Orthodoxy to Latin Catholicism, though ingenious, did not convince all contemporaries, and the order became involved in the fourteenth century in continued controversy with the Dominicans over their historical claims. An increasing number of historical figures connected with the early church and the crusades were added to the legendary. According to one such tradition, Peter the Hermit was a Carmelite, while in another, the Carmelites saved Acre during the crusade of 1239–1241. The Carmelite legendary, though extravagant, reveals the depth of Western preoccupations with the Eastern origins of monasticism.

Castile and León

In the tenth century, the kingdom of Asturias, which had slowly emerged as the political expression of resistance to the Muslims in northwestern Iberia, became the kingdom of

León after the Christians had occupied the basin of the river Duero. The most eastward expansion along the Duero exposed them to the attacks of the Muslims who had chosen that route for their punitive expeditions into Christian northern territories. That region developed into a strongly fortified frontier march, hence its name Castile (from Sp. *castella*, “castle”). King Sancho III of Navarre controlled the county of Castile after 1029. At his death in 1035, it passed to his second son, Ferdinand (Sp. Fernando), who assumed the title of king. Soon Ferdinand I of Castile acquired León after the Leonese monarch Vermudo III met death fighting the Castilians at the battle of Tamarón (1037). The kingdoms remained united until 1157 (save for a brief spell between 1065 and 1072) and again, permanently, from 1230 onward.

The *Reconquista*: An All-Embracing and Controversial Concept

One of the main peculiarities of Castile-León (as of medieval Iberia in general) in relation to other European kingdoms in the Middle Ages was its uneasy coexistence with the Muslims over eight centuries, a relationship that frequently led to war to defend or occupy lands and to impose the ideological cement of the Christian faith. That long struggle has been conventionally tagged *Reconquista* (reconquest), a label that has also been used to sum up the complex history of the Middle Ages in the Iberian Peninsula; that concept was and still is under debate. Traditional historians thought that the desire to reestablish the territorial and religious unity of the Visigothic kingdom was the leitmotif of medieval kings and counts and of social groups as a whole in Iberia. Modern research has related the north-south Christian expansion to the development of societies in search of new lands and has lowered the status of the embracing term *Reconquista* to the level of an ideological construct. It is true that no continuous process of conquest was possible without inner strength, but it is also true that later the effort was made consistent and historically significant through an image that linked present and future to the Visigothic past.

Originally both elements, the beginnings of unplanned territorial expansion by local groups and its ideological setting, devised by the monarchy as a means of enhancing its power, emerged in the central and western Christian territories of Iberia, that is to say in the kingdom of Asturias, in the second half of the ninth century. A series of chronicles written in the reign of King Alfonso III (866–910) became the official history of the new kingdom and highlighted the

figure of the king by tracing his ancestry back to the time of the Goths. Previously, pockets of resistance against overwhelming Muslim control of the peninsula had probably lacked any conscious ideological understanding of continuity with the Visigothic past. Territories to the north of the Cantabrian Mountains had not been fully controlled before by the Romans or the Visigoths, and so their inhabitants had no deep commitment to the lost kingdom. The skirmish of Covadonga, later considered the mythical starting point of the Reconquista, was probably a small guerrilla incident carried out by a local populace with no wider significance. Gradually the defenders of the Cantabrian Mountains gathered strength and developed a society with enough dynamism to overflow its limits from the middle of the ninth century into the valley of the river Duero, a region that lacked effective Muslim control after the rebellion of the Berbers in the central decades of the previous century.

Territorial expansion and the ideological optimism of court chroniclers who expected the end of the Muslim presence in the peninsula in the near future were checked by the growing pressure of the new caliphate of Córdoba in the tenth century, when the center of gravity of central and western peninsular Christians was transferred to the city of León, a nucleus that was nearer to the Duero axis than the previous, peripheral center of Oviedo. The political crisis in al-Andalus after 1031, which gave way to a split into several Muslim states (the so-called Taifa kingdoms), began to reverse the balance in favor of the Christian kingdoms.

Castilian-Leonese Reconquest and Crusade in the Eleventh and Twelfth Centuries

The growing strength of Castile and León in the mid-eleventh century did not lead to immediate expansion and war but rather to a policy of extorting tribute payments (Sp. *parias*) from the Muslim kingdoms; these payments weakened the Taifa kings just as they helped to consolidate the new Castilian-Leonese monarchy. As frequently happened later, what we might regard as the uncompromising project of reconquest was not the only alternative for monarchs ready to obtain income from the Muslims through peaceful means. A religious war of conquest was not contradictory to other ways of pursuing policies favorable to the nascent monarchies.

A remarkable shift of policies toward the Muslims took place in Castile-León, as well as in other peninsular kingdoms, in the last decades of the eleventh century. Without

The Kingdom of Castile and León and its neighbors in the final stages of the Reconquest

abandoning the system of *parias*, which was complementary to open war, King Alfonso VI of Castile (1065–1109) pressed on militarily and conquered the city of Toledo in 1085. At the same time, the Roman Church was in the process of accepting violence for the Christian faith as a suitable path to salvation. The old tradition of religious war in Iberia began to combine with the Roman ideological preparation for the crusade when a new Muslim power menaced Christian superiority in the peninsula. The conquest of Toledo alarmed other Taifa kings to the point of seeking the aid of the Almoravids of western North Africa. They crossed the Strait of Gibraltar and routed Alfonso VI at Sagrajas (1086). The Castilian king's call for help produced a French expedition, which did not go beyond Tudela in the valley of the river Ebro. After their victory at Sagrajas, the Almoravids aimed at controlling the mosaic of Taifa kingdoms, which came to resent their unifying policy.

The new invaders increasingly became a great menace to Castile-León. The tributary relationship with the Muslims was no longer operative, as the Almoravids refused these practices, and Alfonso VI needed combatants to withstand military pressure. Pope Paschal II was well aware of the danger and insisted on forbidding Castilians and Leonese from travelling to Jerusalem. As Urban II had done previously in relation to Tarragona, Paschal II now equated military service against Iberian Muslims with the crusade to the East, offering similar spiritual rewards. The parallel between Jerusalem and the Iberian Peninsula was fixed in Canon 10 of the First Lateran Council (1123). Archbishop Diego Gelmírez of Santiago expressed it even more clearly at a council in 1125: Spain was the easiest way to reach the Holy Sepulchre. Reconquista and crusade, though always different paths, joined their ways at the turn of the eleventh century and went on doing so in the future, as long as the Castilian-Leonese kings used the crusade as a useful expedient to proceed with their policies of territorial expansion and monarchical reinforcement.

In the late 1140s, while the Second Crusade (1147–1149) was developing, important campaigns against the Muslims took place throughout Iberia. Lisbon fell in 1148 as a result of joint military action by King Afonso I Henriques of Portugal and Anglo-Norman and Flemish crusaders on their way to Outremer. That same year Count Raymond Berengar IV of Barcelona conquered Tortosa at the mouth of the river Ebro with the help of the Genoese. In 1147 King Alfonso VII of Castile-León laid siege to and briefly occupied Almería. At

that time Pope Eugenius III placed campaigns in Spain and against the Wends in central Europe on the same level as actions in the East. A few years later the pope's legate in Castile-León took the initiative of promoting a crusade at the Council of Valladolid (1155). A new wave of uncompromising North African Muslims, the Almohads, had landed in Spain in 1146 and were beginning to impose unity on the scattered Taifa kingdoms. The proposal of Cardinal Hyacinth at Valladolid did not develop into a major campaign, but it was certainly a sign of the fears the Almohads aroused among Christians.

The renewed Muslim strength did not find a unified Christian opposition in central and western Iberia in the second half of the twelfth century. Castile and León, which had remained united since 1072, were split between Alfonso VII's sons on the latter's death in 1157. This division led to opposition and frequent war between the two kingdoms. Portugal, which had broken its dependency on Castile-León earlier on, was ready to foster turbulence. The kings of Castile and León were keener on controlling each other's territorial expansion than on checking the Muslims, whose alliance they sometimes sought, as Alfonso IX of León and Sancho VII of Navarre did in 1196, after Alfonso VIII of Castile had quarrelled bitterly with the Leonese king on account of the victory of the Almohads over the Castilians at Alarcos in the previous year. Pope Celestine III was outraged at the sight of Christian monarchs fighting each other and blamed Alfonso IX, whom he excommunicated. Some historians even think that it was the king of León the pope had in mind when he told the people of southern France that they could perform their crusading duties in Spain.

The Origin of the Castilian-Leonese Military Orders

The increase of the Muslim pressure on Castile and León in the second half of the twelfth century was the main stimulus for the establishment of military orders, which were given the task of defending the frontier. Two of the three new foundations were Cistercian offshoots. In 1147 Alfonso VII had entrusted the defense of the recently conquered position of Kalaat-Rawa (Calatrava), a fortress on the Guadiana River, to the Templars, but they soon abandoned the task. His son Sancho III of Castile offered the fortress in 1158 to Raymond, abbot of the Cistercian monastery of Fitero, who developed a military order within the Cistercian structure that was approved by the pope in 1164, after the monks had abandoned the place some time before and the Cistercian general

chapter had agreed to incorporate the new development into the scheme of the Cistercian Order. The Order of St. Julián of Pereiro, which is documented for the first time in 1176, may have been originally a dependency of the Order of Calatrava in León. The link weakened as time passed, but it was still operative in the fifteenth century. The general chapter of Cîteaux of 1190 associated Pereiro with the Cistercian structure. In 1218 Pereiro received as headquarters the frontier town of Alcántara (in mod. Extremadura, Spain), which gave the order its future name.

The Order of Santiago was born in the southern fringes of the kingdom of León in 1169, though its almost immediate association with the archbishop of Compostela and the protection of St. James broadened its appeal and stamped it with the name of the Apostle. Santiago had no connections with Cîteaux, and its rule, approved by the pope in 1175, had distinctive traits when compared with the codes of other orders. The geographical scope of Santiago was soon extended to Castile, when in 1174 King Alfonso VIII gave the knights Uclés, which became the headquarters of the order in that kingdom. In 1272 the new strategic character of the fight against the Muslims, which highlighted Christian control of the Strait of Gibraltar, favored the foundation of the maritime Order of Santa María de España whose short life came to an end when, already deprived of its naval character, it was incorporated in the Order of Santiago in 1281. All these new institutions, which appeared mainly in the twelfth century, shared basic principles with the prestigious orders of the Temple and of the Hospital of St. John of Jerusalem. Yet the fact that they were confined basically to the territories of Castile and León meant that they had to align themselves with the wishes and policies of the monarchs of those kingdoms, who nonetheless initially left these institutions considerable freedom of action in internal affairs. From the fourteenth century onward, however, the kings controlled masterships, which they conferred on members of the royal family or on loyal nobles. The last step was the direct control of these institutions by the Castilian monarchy achieved by the Catholic Monarchs, Ferdinand and Isabella, at the end of the fifteenth century.

The Great Leap to the South in the Thirteenth Century: The Conquests of Andalusia and Murcia

Warfare between Castilians and the Almohads after the battle of Alarcos (1195) was temporarily halted by a truce, which was prolonged until 1210. The lack of a military target for

Castile in those years left the military orders idle. A project to transfer knights of Calatrava to the Latin kingdom of Jerusalem showed how the fight against Muslims at both ends of the Mediterranean was interchangeable. Alfonso VIII of Castile resumed hostilities in 1210, to the point that the Almohad caliph Muḥammad al-Naṣir crossed the straits in 1211 to face the Castilian aggression. The Muslim campaign in the summer of that year was aimed at striking at a symbolic fortress as a clear sign to the Castilians. Salvatierra, an advanced post conquered by the knights of Calatrava in 1198, was taken by al-Naṣir. Alfonso VIII, alarmed at the turn of events and mindful of his imprudent move at Alarcos, prepared thoroughly for a campaign, which was to take place the following year. His appeal to Pope Innocent III was swiftly answered with a call to a proper crusade preached in France and Provence. Before the assembly date of 20 May 1212, Toledo was already bustling with *ultramontanos* (people from beyond the Pyrenees), who nonetheless left the expedition early after not being allowed any plunder when the fortress of Calatrava la Vieja was taken. A few remained, among them Arnold Amalric, archbishop of Narbonne; when commenting on the resounding victory of Las Navas de Tolosa (16 July 1212), he again established a clear parallel between all crusades: those against southern Saracens (the Almohads), but also those against Eastern schismatics (a reference to the Fourth Crusade) or Western heretics (the Cathars). The campaign of Las Navas de Tolosa had also gathered considerable peninsular contingents. The kings of Aragon and Navarre were present, but not the monarchs of León and Portugal. Alfonso IX of León even attacked Castilian territory, in disregard of all papal warnings.

The victory at Las Navas de Tolosa was less decisive than is often currently thought. A deceptive link can be established between the defeat of al-Naṣir in 1212 and the extraordinary territorial expansion of the 1230s and 1240s in Andalusia. The immediate effects of the battle were not great. The conquests of Úbeda and Baeza were quickly abandoned. Besides, Alfonso VIII's death in 1214 introduced the uncertainties of a minority government in Castile (1214–1217), which was balanced by a similar situation in the Almohad caliphate. A truce was the obvious answer to internal weaknesses on both sides; it was to last for ten years. Apart from the victory of 1212, which like most medieval battles was not conclusive, other key aspects were at the heart of later developments in the central Iberian kingdoms. The Almohad caliphate began to disintegrate soon after al-

Naṣir's death in 1213, leaving the feeble and quarrelling Taifa kingdoms to their own fate.

The final union of Castile and León in the person of Ferdinand III, king of Castile from 1217 and of León from 1230, was also decisive. It was not coincidence that the great expansion into the valley of the Guadalquivir took place after that date. Previously Ferdinand III's father, the quarrelsome Alfonso IX of León, who had been impervious to common crusading efforts before, had used the crusade to extend the frontiers of his kingdom as far as the fortress of Alcántara in 1217 and the cities of Mérida and Badajoz in the spring of 1230. The attitude of the papacy to the Iberian kings' petitions after 1212 showed clearly that Rome, conscious of the impossibility of keeping two theaters of war active, swung its support either to East or West depending on circumstances. Innocent III and later Honorius III regarded matters in Iberia as temporarily settled by the victory of Las Navas de Tolosa and the subsequent truce. They thus favored actions in the East, such as the Fifth Crusade (1217–1221), and were ready to offer only ad hoc spiritual advantages to some campaigns in Iberia, like the one promoted by Rodrigo Jiménez de Rada, archbishop of Toledo. This policy of using scant European fighting manpower in one way or the other through the stimulus of spiritual benefices showed once again that the war against the Muslims had the same status in Iberia and in Outremer.

Rodrigo Jiménez de Rada was responsible for the initial stages of the great Castilian move to the south. In April 1231 he was granted the same privileges as those conferred by the Fourth Lateran Council to those journeying to the East, that is to say indulgence for those participating in the campaign as well as for those financing it. In that year he took Quesada and Cazorla. Nearby Úbeda was conquered in 1233 by Ferdinand III, who was then ready to concentrate on military actions against the Muslims after having asserted his authority over the kingdom of León. A bold and unexpected coup by a small Christian contingent that captured a section of the city of Córdoba at the end of 1235 forced the king of Castile-León to undertake the conquest of that most symbolic city, which took place in June 1236 and was undoubtedly favored by the fierce opposition between the two main rulers of al-Andalus: Ibn Hūd, who controlled Córdoba, among other important centers, and Ibn al-Aḥmar, king of Jaén and future founder of the Naṣrid dynasty in Granada. In September 1236, Pope Gregory IX granted Ferdinand III *post eventum* privileges that ensured financial support by the

church for the campaigns and protected the king from ecclesiastical sanctions. They also extended the same spiritual benefits conferred in 1215 on those voyaging to Outremer to those collaborating personally or economically in the wars against the Muslims in Iberia. Jerusalem was nevertheless the main goal, as shown when Gregory IX tried to enlist the support of the Iberian kings for the crusade that he had proclaimed in 1234, regardless of the fact that Ferdinand III in Castile-León and James I in the Crown of Aragon were dealing with the initial stages of their great campaigns against the Muslims of al-Andalus. In 1244, the final fall of Jerusalem, which had been under precarious Christian control since 1229, increased the psychological pressure to aid the East at the precise moment when Ferdinand III of Castile-León was launching the great campaign to conquer the whole Guadalquivir valley. Conflicting theaters of war led the knights of Santiago to abandon their commitment to assist the Latin emperor of Constantinople, according to a contract signed with the emperor in 1246, in the face of the military requirements of the projected conquest of Seville.

In the 1240s Castilian expansion on the southern and western regions of the Guadalquivir valley and into the kingdom of Murcia in southeastern Iberia reached its climax. In 1244 the Treaty of Almirra drew the final line between Aragonese and Castilian areas of expansion. The border ran from Biar in the inner coastal mountains to Denia on the Mediterranean Sea. James I of Aragon reached both points in 1244 and 1245, thus ending Aragonese territorial expansion in Iberia. The southern parts of Alicante and Murcia were either conquered or submitted to Castilian suzerainty, until the revolt of the Mudéjars in 1264 led to full control of those areas by Castile in 1266. At the same time that Ferdinand III was planning the extension of Castile to the Mediterranean, he began operations against Jaén in the upper Guadalquivir valley; the town surrendered in 1246. At the end of that year, he started the campaign to subdue Seville; by July 1247 the siege by land and sea was completed, and the city, with great defenses but devoid of any effective help from either Tunis or Morocco, had to surrender in November 1248.

Ferdinand III had thus achieved the spectacular acquisition of some 150,000 square kilometers (c. 57,900 sq. mi.) of land, which was also of immense significance because great centers of Muslim power fell into Christian hands. The emirate of Granada was now the only surviving Muslim state. Europeans were well aware of this feat; the English

chronicler Matthew Paris commented that Englishmen regarded Ferdinand III as a true champion of Christendom, who had done more for the church than the pope and all the crusaders. Pope Innocent IV was of course also conscious of Ferdinand III's contribution when he allotted the Castilian-Leonese king the third part of the tithe destined for the upkeep of churches (Sp. *tercias*), thus establishing a decisive precedent in crusade finance.

Castilian Control of the Strait of Gibraltar and the Downfall of the Muslim Kingdom of Granada (Fourteenth and Fifteenth Centuries)

When Alfonso X of Castile-León succeeded his father Ferdinand III in 1252, Muslim territory in Iberia had been drastically reduced to eastern Andalusia (the Naşrid kingdom of Granada) and some districts west of Seville. Alfonso X was planning an intervention in North Africa to check Moroccan help to Granada when a Mudéjar rebellion occurred in 1264, encouraged by the ruler of Granada, who resented the feudal submission of his kingdom to Castile-León. The revolt was suppressed, not without difficulty, in 1265–1266, and the Naşrid king turned to North Africa for help. The usual cycle followed. The Marīnids, one of the new unifying Muslim powers in North Africa, crossed the straits in 1275 and checked the disintegration of the remainder of al-Andalus, although their presence produced mixed feelings at the court of Granada, as the intervention of the Almoravids and Almohads had previously done in the Taifa kingdoms. Control of the northern coast of the straits to prevent easy communication with Africa thereafter became the main military objective of the Castilian-Leonese kings. Tarifa was conquered by Sancho IV in 1292, and Gibraltar fell briefly into Christian hands between 1310 and 1333. The Marīnid effort to reoccupy Tarifa was halted by Alfonso XI at the battle of El Salado (1340). His subsequent siege and capture of Algeciras (1344) was not followed by that of Gibraltar because the king died of plague while conducting the siege of the Rock in 1350.

By the mid-fourteenth century, Castile-León controlled the straits, although internal developments then delayed action against Granada for decades. The Castilian Civil War (1366–1369), which brought the Trastámara dynasty to the throne, focused the policies of the kings on strengthening their own position in the kingdom. Only Ferdinand of Antequera, regent for his nephew John (Sp. Juan) II, and future king of Aragon after the Compromise of Caspe (1412), was

active against the Muslims of Granada. The fifteenth century witnessed a hard war of attrition on the frontier, but no important sustained campaigns, apart from those of the years 1431–1439 and of the early period of Henry IV's reign. Isabella I of Castile and Ferdinand II of Aragon, known as the Catholic Monarchs, finally put an end to the long status quo of forced submission to the Castilians and of intermittent rebellions of the Muslims. From 1482 they led a bitter war that chipped away at Naşrid territory until the city of Granada finally surrendered in November 1491. The outcome of this war was favored by internal dissensions in the royal court in Granada, a situation similar to the struggle among the Taifa kingdoms that had contributed to previous Christian conquests. Like their predecessors, Ferdinand and Isabella also benefited from the spiritual and financial support of the papacy, which was repeatedly given by Sixtus IV and Innocent VIII. Reconquista and crusade went hand in hand to the very end. They were different but converging processes, which had both been controlled by the Castilian-Leonese monarchy from the late eleventh century.

Castles: The Baltic Region

The thirteenth-century conquest of Livonia and Prussia by the Order of the Sword Brethren and its successor, the Teutonic Order, would not have been possible if the numerically weaker knights and crusaders had not enjoyed certain advantages over the heathen peoples. These included several innovations in military techniques, including the erection of permanent fortresses in stone or brick. The manufacture of bricks and mortar was unknown in the eastern Baltic region until then. The heathens defended themselves in fortifications and castles made of wood and surrounded by ditches and ramparts, mostly built on a hill, like Warbola (mod. Varbola, Estonia) and Odenpäh (mod. Otepää, Estonia), or near a lake or a river, like Arrasch (mod. Āraiši, Latvia) and Seeburg (mod. Jūrpils, Latvia), not far from Grobin (mod. Grobiņa, Latvia), formerly a Viking settlement.

These hundreds of wooden castles have not been preserved into the present, but excavations have shown that many of them were of a sophisticated construction, exploiting the advantages of the terrain. Examples include Terweten (mod. Tērvete, Latvia) and Mesoten (mod. Mežotne, Latvia) and Kernavė and Šeimyniškiškėliai in Lithuania, the latter possibly identical with Voruta, the famous castle of King Mindaugas. The first small stone castle in the Baltic region was erected in 1185 in Üxküll (mod. Ikšķile, Latvia) by Meinhard, appointed first bishop of Livonia, who brought stonemasons for that purpose from Gotland. Later many more firm castles were built by the Order of the Sword Brethren, founded in 1202 and incorporated into the Teutonic Order in 1237, as well as by the archbishop, the bishops, chapters, and vassals.

In Prussia the Christian conquest began three decades later than in Livonia. As the Teutonic Knights initiated it by crossing the river Vistula and pressing forward into the Kulmerland in 1231, they made do with fortifications of timber and earth, like their pagan adversaries. After 1250, when these structures were partially built up as permanent defense installations or built anew, they all displayed irregular architectural configurations. Toward the end of the century, however, a fundamental transformation took place in which there arose walled castles made of stone or brick laid out in the form of a square; the first of these was the castle of Brandenburg in Prussia (mod. Ushakovo, Russia). The basic form of these structures most often displayed four wings, consisting of three floors each measuring up to 40–60 meters in length (131–197 ft.) and surrounding an enclosed court-

yard. This was the well-known convent-castle of the Teutonic Order in its classic form, a fine example of which is Rehden (mod. Radzyn, Poland) in the Kulmerland. It was the center of power of the order's commandery (Ger. *Komturei*), since the administrator and commander resided within its walls together with his "convent," which was made up of a body of knight brethren of the order.

Sources of inspiration for this typical form of castle built by the order may not only be found in faraway places but also in Scandinavia and the Baltic region. By the beginning of the thirteenth century the bishops of Livonia and the Order of the Sword Brethren were already building in geometrically ordered, strongly rectangular configurations, as seen at Üxküll and Holme (mod. Salaspils, Latvia), and also at Riga, Segewold (mod. Sigulda, Latvia), and Ascheraden (mod. Aizkraukle, Latvia).

While the Teutonic Order had been subject to foreign influence in Livonia and Prussia during the first decades of the fourteenth century, in the following decades the full formation of the convent castle configuration became a model of high quality and utility through which the order itself influenced Scandinavia and the Baltic regions. During the phase of stagnation in Prussia after the defeat of the order's knights at the battle of Tannenberg (1410), this influential role was taken over by Livonia, where the order's ideas about building were maintained and developed. In the fifteenth century the Livonian branch of the order built structures with large inner courtyards and powerful, round corner towers that followed developments in the art of war, such as mercenary armies and artillery. The only counterpart to this in Prussia was in the castle of Bütow (mod. Bytów, Poland), built between 1393 and 1405. During the period of the Kalmar Union among Denmark, Norway, and Sweden (1397–1521), it was Livonia rather than Prussia that played an influential role in this part of the Baltic region.

The formation of Prussia into a political, administrative, economic, and military center of the Teutonic Order in the thirteenth and fourteenth centuries created especially favorable conditions for the construction of castles there. As the Teutonic Knights advanced down the river Vistula, they first built strongholds at Thorn (mod. Toruń, Poland) and Kulm (mod. Chełmno, Poland), under the protection of which German settlements were soon established. In 1233 the Christian army advanced into the Prussian district of Pomesania and founded Marienwerder (mod. Kwidzyn, Poland). During a campaign in 1237, the castle and town of Elbing (mod.

Castles and other fortified sites in the Baltic Region

The castle of Marienburg (Malbork, Poland), headquarters of the Teutonic Knights in Prussia. (Kevin Burke/Corbis)

Elbląg, Poland) were founded. Thereafter the order was no longer exclusively dependent on the overland route through Poland; Prussia could also be reached by sea from Lübeck. At Balga (mod. Veseloe, Russia) a stronghold was erected on the southern coast of the lagoon known as the Frisches Haff to protect the outlet. It was from such points on these waterways that the Teutonic Knights invaded the interior of Prussia.

The settlement thus extended from west to east following, in a natural manner, the route taken during the occupation of the country. After western Prussia and the coastal district along the Frisches Haff had been pacified, the attack on Sambia (Ger. Samland) could be completed. This attack was prepared for on the Livonian side through the construction of the castle of Memel (mod. Klaipėda, Lithuania), a stronghold at the outlet of the Kurisches Haff into the Baltic Sea (1252). During a famous campaign in 1255, Sambia was occupied and a citadel built on the heights above the river Pregel, receiving the name of Königsberg, literally “the king’s moun-

tain” (mod. Kaliningrad, Russia), in honor of King Ottokar II of Bohemia who led the crusade. Thereafter Königsberg became the most important castle and town in eastern Prussia as the starting point of military expeditions into Lithuania after 1283. Another important eastern castle was that of Ragnit (mod. Neman, Russia). The order always strove to conquer the pagan land of Samogitia, which separated Livonia from Prussia, in order to obtain an overland bridge between the two main territories of the order.

The occupation of Prussia was not always a progressive endeavor, as the Teutonic Knights were sometimes defeated. Especially dangerous were rebellions of the native Prussians in 1243–1249 and 1260–1273, which only certain strongholds of the order were able to resist. By 1283, however, the order had firmly subjugated pagan Prussia.

In 1309 the order acquired by force the town of Danzig (mod. Gdańsk, Poland) and the Christian land of Pomerelia, which were thereafter divided into five large commanderies and one advocacy (Ger. *Vogtei*). In the same year the

grand master moved from Venice, where he had been resident since the fall of Acre (mod. 'Akko, Israel), to the fortress of Marienburg (mod. Malbork, Poland), which had been built around 1275 as a commandery castle. Thereafter Marienburg became the residence and headquarters of the Teutonic Knights. By 1350 a number of important castles had been erected in Pomerelia to protect it against Poland and the dukes of Pomerania, among them Schlochau, Konitz, and Tuchel. Also important were the four dioceses in Prussia. Of these, Warmia (Ger. Ermland) remained outside the possession of the Teutonic Order while the others (Pomesania, Kulm, and Sambia) were incorporated into it. The bishops and chapters, too, built large and significant castles in the style of the convent castles of the order, such as Heilsberg, Braunsberg, and Frauenburg in Warmia.

In Livonia the situation was considerably more complicated: there the Order of the Sword Brethren, and the Teutonic Order following it, not only had to resist the heathens, but also the Danes, the bishop (from 1255 archbishop) of Riga, and the bishops of Dorpat (mod. Tartu, Estonia), Curonia (which was later incorporated), and Ösel-Wiek. Continuous squabbling and conflicts were the result. In addition to the castle at Riga, in 1237 the Teutonic Order took over the castles at Segewold, Wenden (mod. Cēsis, Latvia), Ascheraden, and Fellin (mod. Viljandi, Estonia) as well as some small strongpoints and bases. In 1346 the Teutonic Order bought Estonia from the Danes and thus acquired the important castles of Reval (mod. Tallinn, Estonia), founded by King Valdemar the Great in 1219, Weissenstein (mod. Paide, Latvia), and Narva. Of particular strategic significance were the rivers Düna (Latv. Daugava; Russ. Dvina) and Aa, along which many strongholds were built by the bishop of Riga and the Sword Brethren by the beginning of the thirteenth century. This produced a chain of castles linking Dünamünde (mod. Daugavgrīva, Latvia), Riga, Holme, Üxküll, Lennewarden (mod. Lielvārde, Latvia), Kokenhusen (mod. Koknese, Latvia), and Segewold-Treiden-Wenden (all in mod. Latvia).

In the fourteenth century this Livonian castle network was solidified through the installation of new commanderies of the Teutonic Order. The archbishop, bishops, and cathedral chapters vied with the order, also building strong castles. By the beginning of the fifteenth century there were 266 castles in Prussia and Livonia, including those of bishops, cathedral chapters, and vassals (castles of vassals existing only in Livonia). The Teutonic master of Livonia as well

as the archbishop resided in Riga (the master in Wenden after 1480).

The strongholds were strategically placed in areas of military importance, most often along major river routes and roads that were, for preference, also suited to commerce and communications. Near them settlements arose. The castle could grant or restrict entrance into and passage through an area of land. It could be the starting point or finishing point of the conquest or the center of government of an area of land and its population. It was the place where a permanently armed detachment remained and resided, and also a place of refuge for people and cattle in cases of attack by the enemy. Castles protected the deployment and withdrawal of armies as well as trade and transport. They housed storage magazines for food, weapons, and munitions, and often workshops for the production of arms and armor. In the surrounding areas the important practices of horse breeding as well as cattle breeding and agriculture were conducted. The castle was also important as a center of command and as a meeting point for local military mobilization. For thirteenth- and fourteenth-century crusaders and for mercenaries in the fifteenth and sixteenth centuries, the castles were natural communication zones and meeting places.

During the long-lasting war of the Teutonic Order with the Lithuanians, many wooden fortresses were built and soon also destroyed by both sides in the wilderness along the river Nemunas. They were often constructed within a few weeks in the summer during expeditions into enemy territory. Small "wilderness houses" were also built, from which reconnaissance against Lithuania was conducted. The first Lithuanian stone and/or brick castles, built in the thirteenth and fourteenth centuries, were those of Vilnius (lower castle), Kaunas (old castle), Medininkai and Old Trakai (in mod. Lithuania), and Novogrudok, Kriavo, Lida, and Hrodno Gardinas (in mod. Belarus). In the middle of the fourteenth century the upper castle of Vilnius, the peninsular castle of New Trakai, and the new castle of Kaunas were erected. The famous island castle of Trakai was built a few decades later during the time of Grand Duke Vytautas (finished in 1409).

Another theater of war in the Baltic region was eastern Finland and Karelia, where the Swedes tried to gain control of the important Russian trade. In 1293 the mighty stone castle at Viborg (mod. Vyborg, Russia) was erected as an outpost against Novgorod. Two other early firm castles were at

Åbo (mod. Turku, Finland), founded in 1280, and Tavastehus (mod. Hämeenlinna, Finland). These and other castles along the coasts and in the interior of Finland served both military and administrative purposes, especially to withstand Russian attacks from Novgorod. Although the enemies were believers belonging to the Russian Orthodox Church, the Swedes regarded military expeditions against them as crusades. The Novgorodians, on their part, erected a protecting chain of strongholds against their adversaries, including Korpor'e south of the Gulf of Finland (1297) and the island castle of Orekhovets in the River Neva near Lake Ladoga (1322/1323).

Castles: Greece and Cyprus

For several reasons, crusader-period castles built by Latin settlers in Greece and Cyprus tended to be simpler and to contain fewer defenses than did strongholds in Outremer. Many sites in the mountainous terrain of northern Cyprus and southern Greece could be defended without the kind of complex fortifications built by the Franks along the flat Levantine coastline. Virtually all strategic sites or settlements in Greece and Cyprus were already protected by Byzantine, Roman, or older defenses that did not require major alterations. Furthermore, when Western settlers did carry out improvements, they employed local Greek craftsmen who recycled stone, making it difficult to distinguish between older Byzantine and newer Frankish structures. In areas such as northern Greece, Frankish rule was short-lived, leaving little time or money for major new construction projects. Franks in Greece and Cyprus did not have the same financial resources as the major castle builders in the Holy Land, such as King Louis IX of France or the military orders. Warfare also tended to be simpler. Whereas some thirteenth-century Egyptian armies contained thousands of troops equipped with trebuchets and other siege weapons, late Byzantine armies usually only contained a few hundred men. This also applied to the Frankish states in Greece, where piracy and localized warfare accounted for most of the fighting. The physical isolation of Cyprus meant that it, too, experienced little major warfare, and it was only after 1291,

when the fall of the Holy Land increased the risk of a Mamlūk invasion, that large new fortifications were constructed.

In northern Greece, these factors prevented the Franks from building any major fortifications on virgin sites. Instead they either garrisoned existing strongholds or repaired the ruins of older ones. The chronicler Henry of Valenciennes described how the Latin emperor Henry (d. 1216) rebuilt the ruined Byzantine fortress of Pamphilon to strengthen his grip on Thrace. However, the fact that no archaeological remains have ever been found of this or any other major Frankish building projects reflects the tenuous nature of Latin rule in northern Greece.

In southern and central Greece, the much longer period of Western settlement means that more Frankish fortifications have survived. Karytaina, located in the mountainous interior of the Peloponnese (then the Frankish principality of Achaia), is a typical example. Built on an outcrop 150 meters (492 ft.) high, its north, south, and west sides were so steep that they did not require complete circuit walls. On the gentler eastern slope a single gateway, protected by a barbican, led to an outer bailey, which gave access to the upper fortress. This was divided into two courtyards separated by some kind of square central keep. The presence in the keep of well-dressed classical stones, which were probably fashioned for use in an older structure, suggests that this was a pre-medieval site. However, according to the *Chronicle of Morea*, the key Western source for the period, the castle was effectively rebuilt by Frankish lords of Karytaina in the thirteenth century. Presumably they constructed the bulk of the defenses, which were completed using poor-quality, uncut stones sometimes no more than 90 centimeters (35½ in.) thick.

The use of recycled masonry or poor-quality stones to create successive baileys around a summit occupied by an isolated keep was typical of medieval fortifications in this area. At most such sites, the Franks' reliance on existing fortifications is more obvious than at Karytaina. At Kalamata, situated to the south, the outer circuit walls predate the thirteenth century, because the Franks had to besiege the fortress when they first arrived in 1205. However, the rectangular central keep appears to be a Frankish construction, one of several such structures apparently added by the Franks to larger fortresses or acropolis sites, including Corinth, Athens, Neopatras, and Mistra. Towers of this kind were common in the West and, being easy to construct and defend, were built by settlers throughout the eastern Mediterranean region. However, in Greece the practice of

using recycled or poor-quality stone makes it difficult to date these structures accurately. For example, the medieval tower on the Akropolis in Athens was constructed out of marble slabs from surrounding classical structures. It seems that this tower was built by Western settlers, but it is not clear whether it should be attributed to the thirteenth-century Frankish rulers of Athens, to their fourteenth-century Catalan successors, or to the late fourteenth-century Florentine Acciaiuoli lords of the city. Indeed, perhaps the only datable Frankish castle in Greece was Chlemoutsi (Clermont), built in the northwestern Peloponnese by Prince William I of Achaia around 1223. Its construction is well documented because it was funded with revenues seized from local church lands, a windfall that meant that Chlemoutsi, a hexagonal citadel protected by a large outer bailey, was built to a much higher standard than any other local Frankish stronghold.

Frankish settlers also constructed many towers situated in the countryside rather than within a larger castle or acropolis. The tower of Markopoulo, situated about 20 kilometers (12½ mi.) southeast of Athens, is a well-preserved example. Markopoulo's external measurements are 5.4 by 8.2 meters (17½ by 27 ft.), and it still stands to its crenellated height of 18–20 meters (59–65½ ft.). Internally there are three floors, and although there is a ground-floor entrance, many other such towers only had a door at the first-floor level. Towers like Markopoulo were constructed using the familiar combination of recycled and uncut stones. Few contained features like fireplaces or cisterns, and they were presumably heated using braziers. This has led to the suggestion that such towers were only intended as refuge sites or lookout posts. It has been argued that the numerous towers on the island of Negroponte (Euboea) could all communicate using fire signals, thus forming a Venetian early-warning system against Turks or pirates. However, recent research indicates that few of these towers could communicate in this way and that most were actually fortified farmsteads designed for permanent occupation and lordly display. Their generic appearance and constant use throughout (and beyond) the Middle Ages make it difficult to date the medieval towers of Greece. Those on Negroponte were probably constructed by fourteenth-century Lombard settlers. On Chios the Genoese built more sophisticated round towers into the sixteenth century. Mainland towers like the one at Markopoulo probably date from the thirteenth or fourteenth century.

Most urban fortifications held by the Franks in Greece were Byzantine and incorporated typically Greek features such as decorative brickwork and polygonal towers. Famous examples survive at Constantinople and Thessalonica, but they can also be seen at regional centers such as Spiga, a port in northern Asia Minor held by the Franks between 1204 and 1225. Spiga was protected by a Byzantine rampart flanked by a series of closely set pentagonal towers. Many fortifications of this kind were, again, constructed and repaired using poor-quality masonry, making it impossible to identify any Latin alterations. Instead modern historians must rely on written references to crusader repair work, such as Geoffrey of Villehardouin's statement that in 1206–1207 Boniface of Montferrat, ruler of Thessaly, repaired the Byzantine walls of Serres in northern Greece. It seems that the only urban fortifications that the Franks built from scratch were those of Glarentza, a port in the northwestern Peloponnese established in the thirteenth century because of its convenient sea links with Italy. Glarentza's defenses consisted of a single wall and ditch protecting the headland occupied by the town. The wall was approximately 2 meters (6½ ft.) thick and pierced by at least two gateways, whose design was very simple compared with the complex entrances to Levantine cities such as Acre. This suggests that siege warfare in the Aegean region was often more primitive than in the Holy Land.

The fortifications of Frankish Greece shared many characteristics with those of Cyprus, whose physical isolation and Byzantine legacy meant that few new defenses were constructed there in the thirteenth century. In rugged northern Cyprus, the three Byzantine mountain castles of St. Hilarion (mod. Agios Ilarion), Buffavento (mod. Voufavento), and Kantara resembled strongholds like Karytaina. St. Hilarion was situated on a precipitous outcrop whose only vulnerable side, the southeast, was defended by three successive baileys. These defenses were essentially Byzantine, the most significant Frankish additions being later royal apartments. Outside the mountains, the only other substantial Byzantine stronghold on Cyprus was the citadel guarding the northern port of Kyrenia (mod. Keryneia). This castle consisted of a large, rectangular enclosure situated on a headland overlooking the port. On its landward side it was protected by an additional rampart flanked by typically Byzantine pentagonal salients. It was not substantially altered by the Franks before 1291.

Accounts of the invasion of Cyprus by King Richard I in 1191 in the course of the Third Crusade (1189–1192) suggest

that the only other Byzantine castles on Cyprus were minor citadels at Limassol (mod. Lemesos), Paphos (mod. Pafos), Famagusta (mod. Ammochostos), and Nicosia (mod. Lefkosia). The archaeological evidence, along with an account by the German pilgrim Willbrand of Oldenburg (1212), indicates that during the first thirty years of Frankish rule these strongpoints were replaced by new towers of the type already mentioned in Greece. Their modest scale shows that thirteenth-century Cypriot warfare was limited to piracy, Greek rebellions, and relatively minor internecine conflicts. However, before its destruction in the earthquake of 1222, a larger Frankish castle, consisting of two concentric ramparts defending a square central courtyard, was built on a hilltop overlooking Paphos. The purpose of this stronghold remains unclear, but the fact that it was not reconstructed after 1222 suggests that it was built in connection with the Fifth Crusade (1217–1221), when Cyprus was used by crusaders fighting in Egypt and was targeted by a Muslim naval raid.

After 1291 fears of a Mamlük invasion prompted a much larger building program. Famagusta's isolated tower became one of four corner towers in a new, rectangular citadel, and a rampart was built around the city. Kyrenia's Byzantine ramparts were strengthened with new defenses constructed out of ashlar masonry that was similar to that used in Outremer but far superior to what was normally used in Greece. Other features at Kyrenia, such as the complex new L-shaped gateway along the western front, confirm that this castle was improved against potential Mamlük attacks involving counterweight trebuchets. However, no such attack ever came, and it was not until the Genoese invasion of 1373–1374 that building work increased dramatically. The Genoese managed to capture Famagusta through stealth, and then occupied Nicosia, where King Peter I (1359–1369) had built a new citadel, known as the Margarita Tower, but had not provided adequate urban defenses. After the Genoese withdrawal from Nicosia (1374), Peter II (1369–1382) and his successors completed these defenses and undertook other projects designed to keep the Genoese contained at Famagusta. James I (1398–1432) carried out repairs and alterations at Paphos, Nicosia, and Kantara and constructed the castle of Sigouri, a rectangular enclosure protected by a moat, on the plain opposite Famagusta. This proved a useful base for attacks on Famagusta, which was recaptured by Cypriot forces in 1464.

Many of these Greek and Cypriot fortifications no longer

exist in their thirteenth- and fourteenth-century state because they were altered after the arrival of gunpowder. Some of the alterations were made by the Ottoman Turks, who controlled most of mainland Greece by 1500 and conquered Cyprus in 1571. However, many can be attributed to the Venetians, who held a number of Greek ports and islands after the Fourth Crusade (1202–1204), controlled Cyprus from 1489, and regained the Peloponnese between 1685 and 1715. On Cyprus the Venetians constructed eleven triangular artillery bastions forming a star around Nicosia. Similar bastions were added to Famagusta's defenses, whereas other strongholds, such as Limassol and Kyrenia, had sloping embankments added to them to absorb the impact of cannon balls. Meanwhile, the mountain castles of St. Hilarion, Buffavento, and Kantara were demolished to prevent potential Ottoman invaders from using them. In Greece a similar process took place at sites like Modon and Coron, two heavily fortified ports in the southern Peloponnese. These sites were held by the Venetians from 1209 until 1500 and from 1685 until 1715. They had been fortified in some way since classical times, but their medieval defenses have mostly disappeared under much later earthworks and artillery emplacements.

Castles: Iberia

Castle building in Iberia left a lasting impression upon the landscape, language, settlement patterns, and laws of the

peninsula, which is one of the most heavily castellated parts of western Europe. Estimates of numbers of Iberian castles, walled cities, and fortified places vary between 2,000 and 10,000, depending upon how each structure is defined. The numerous fortifications result from the ongoing warfare between Christians and Muslims during the reconquest of the Iberian Peninsula (711–1492) and the fourteenth- and fifteenth-century civil wars among Christians. Decades of warfare along static military frontiers from the Roman period until the late Middle Ages necessitated frequent refortification of strategic sites. Castles in Spain often consist of layers of construction; Visigothic fortifications incorporated Roman foundations, which subsequent builders enhanced and augmented. Towns and cities followed the same process, repairing Roman walls or building new ones as the situation required.

The Muslim invasion of 711 introduced the Eastern style of military architecture into the peninsula. From the eighth century to the middle of the twelfth century, the Muslims built fortifications called *alcazabas*, designed to hold garrisons or to protect the rural population. The builders adapted the shape of the enceinte to the terrain, locating small gates near the corners. The walls were constructed from *tapia* (a mixture of cement and pebbles or stones), which was poured into forms where it hardened. This method of construction determined the rectangular shape of the towers. The crenellations had pointed merlons (the structures separating the embrasures, or openings, atop a parapet). Lesser buildings within the enceinte housed workshops, barracks, and kitchens. Rural castles had a central redoubt (Arab. *salūqiya*, Romance *celoquia*), which was the residence of the castellan (Arab. *qā'id*, Romance *alcaid*). The walled-in space was called the *baqqar* or *albacar*. The villages dependent on the castle were the *qurā* (Arabic) or the *alquería* (Romance). From the middle of the twelfth century until the fall of Seville in 1248, there was general adoption of *tapia* work, towers with large salients, and octagonal and dodecagonal plans. The stone-built *alcazar* (a fortified palace) developed in the thirteenth and fourteenth centuries from the *alcazaba*. The word *alcazar* entered the Spanish language to mean an urban fortification. *Torres albarranas* were massive keeps located outside the enceinte and connected by a walkway. From 1248 until the conquest of Granada in 1492, the complex construction of the Alhambra, with its large towers, became the prototype of Iberian Muslim castles.

The Alcazar in Segovia (Corel)

Christian castles of the ninth and tenth centuries (Lat. *castrum* and *castellum*, pl. *castris* and *castelli*) probably were surrounded by wooden palisades. The *torre del homenaje* (main tower) dominated tenth-century Christian castles: it was built within the enceinte, and Christians added *torres del homenaje* to captured Muslim *alcabazas*. Building materials consisted of brick and stone rubble, and the layout was adapted to the topography of the ground. Stone-built castles with walls and keep appeared by the eleventh century, and wealthy lords walled entire towns as well. Twelfth-century castles bore similarities to French styles. By the late thirteenth to the end of the fourteenth century, the military orders built castles with extended walls to protect important centers. *Castillos roqueros* were smaller, irregularly planned castles constructed on high and inaccessible locations and

making use of natural features. By the fourteenth and fifteenth centuries, Christians built symmetrically planned stone castles on the plains that had round towers at the corners and a square or rectangular *torre del homenaje*. In contrast to other parts of Europe, Iberian castle builders did not develop fortified gates and gatehouses.

Nobles, high-ranking churchmen, and townspeople also built and maintained fortifications during the period of the reconquest. In the twelfth century, Castilian kings granted frontier castles to noble tenants. These castles remained military structures in the service of the Crown and did not become hereditary fiefs. Churchmen, in their capacity as temporal lords, also built and maintained castles. The military orders dominated castle construction from the late twelfth until the fourteenth century, particularly along the frontier. Ecclesiastical buildings also functioned as fortified places; the cathedral located within the walled city of Ávila resembles a castle. Other churches employed a very solid interpretation of the Romanesque style, and either augmented the town walls or served as a place of refuge for a rural population. Monasteries were encircled with walls, and some, such as Poblet, were fortified. The towns and cities levied tolls to maintain their walls, gates, and watchtowers, although they also received royal subsidies in times of great danger.

Though most Iberian castles were built as military installations, residential castles began to evolve in the thirteenth century. Lords wealthy from the reconquest renovated older castles, well away from the frontier, according to French style. Urban castles also became residences. The fortified nobiliary residences were put to military use during civil wars in the fourteenth and fifteenth centuries, but many were demolished during the reigns of Ferdinand II of Aragon and Isabella I of Castile. By the fifteenth and sixteenth centuries, the rulers of Spain began construction of castle-palaces, similar in scope, if not in style, to the Alhambra.

The placement of Iberian castles in the landscape reflected both settlement patterns and military frontiers. The Christians built systems of castles around strategic cities as a defensive shield: examples are the lines of castles built along the Tordera River to defend Barcelona from the north, and the castles along the Tagus River, which shielded Toledo from the south. In this system, part of the barrier might fall, but the main city remained secure. Watchtowers built on high ground to observe enemy movement and

isolated tower houses formed part of the system of defense. Muslim castles, like Christian ones, functioned as part of a system for collecting peasant taxes and maintaining organized systems of land ownership. Archaeological excavations have established the castle and the village as the basic unit of rural settlement (Arab. *ḥiṣn/qirya*). The size of the castle was determined by the number of the population who took refuge in it, rather than by the strategic importance of the area, as in Christian fortifications.

In addition to the archaeological remains, a substantial number of legal and notarial documents record the transfer, sale, and acquisition of castles. Christian settlement charters bestowed castles with their dependent villages (Rom. *alqueria*) on noble tenants. Castles feature in royal dowries and peace treaties. Laws regarding royal castles, their maintenance, provisioning, defense, and transfer form a significant part of codes such as the *Usatges of Barcelona*, *Partida II* of the *Siete Partidas* of Alfonso X of Castile, and the *Costum d'Espanya*. Finally, most of the major Christian chronicles, such as the *Chronica Adefonsi Imperatoris* and the *Vita* of James I of Aragon, detail sieges and raids of castles.

Castles: Outremer

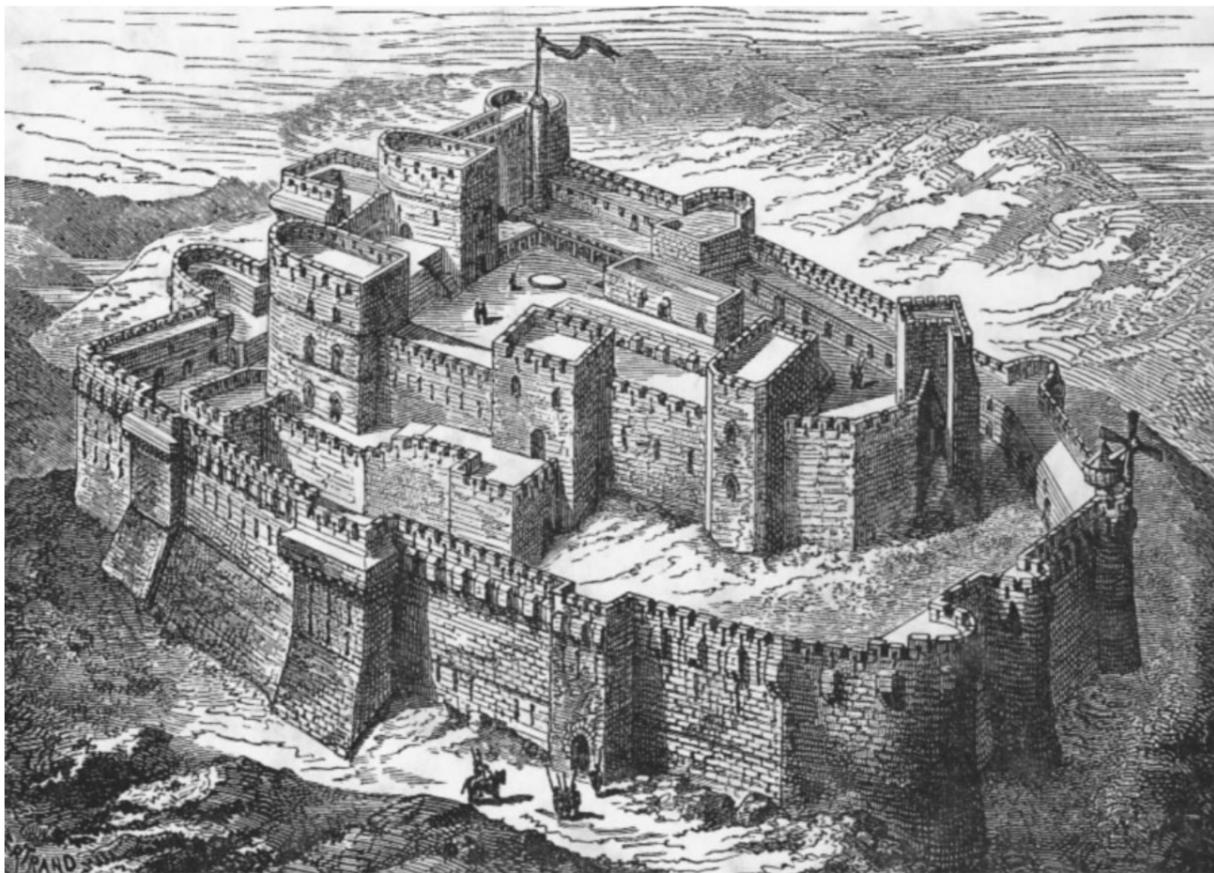

The Franks started building castles soon after their arrival in Outremer. In the aftermath of the First Crusade (1096–1099), those knights who elected to remain in the East probably began to build castles almost immediately. It is difficult to date these structures precisely, and the first written evidence about many of them dates from the time when they passed into the hands of the military orders or other ecclesiastical bodies. These early castles were mostly small hall keeps on two floors, like Tour Rouge (the Red Tower) in the Plain of Sharon, or taller thinner towers, like Tukhla in the county of Tripoli. They were stone-vaulted with narrow slit windows and straight stone staircases. Sometimes, as at Chastel Rouge (mod. Qal'at Yahmur, Lebanon) in the county of Tripoli, there were outer walls enclosing a narrow courtyard with domestic offices. Seventy-five towers have been located in the kingdom of Jerusalem alone, and many more must have existed at one time. They were probably erected in the first half century of the Frankish occupation by knights who intended to settle in the rural landscape as they had done at home in the West. Insecurity and the expense of defending even these small structures meant that they almost all passed into the hands of institutions like the Templars and Hospitallers before the end of the twelfth century.

The higher nobility of Outremer tended to live in the coastal cities, where they certainly built castles. The best surviving example is at Gibelet (mod. Jubail, Lebanon) in the south of the county of Tripoli. Here the Embriaco lords of the city built a simple massive keep at the landward corner of the city walls and surrounded it with a roughly square enclosure wall defended by square towers at the corners. Nineteenth-century illustrations show very similar castles in Beirut and Tyre (mod. Soûr, Lebanon). In Jerusalem the royal castle was attached to the massive Roman tower known as the Tower of David.

In more remote areas, enclosure castles were built to shelter the entire Frankish population of the district. The earliest datable example may be fragments of the hilltop castle at Montréal (mod. ash-Shaubak, Jordan), east of the Dead Sea in the lordship of Transjordan. It was erected by King Baldwin I of Jerusalem in 1115 and enclosed by later Mamlūk fortifications. In 1142 Pagan the Butler began the construction of a huge ridgetop castle to defend the town of Kerak (mod. Karak, Jordan), which replaced Montréal as the capital of Transjordan. The masonry is chunky and lacking in elegance, but the rugged strength that enabled it to defy

Major castles and other fortified sites in Outremer

Krak des Chevaliers, Syria. (Pixel That)

Saladin's army in 1184 is still apparent. Outposts were also maintained further south, including an amazing crag-top fortification in the heart of the ancient city of Petra. All these fell to the Muslims in the aftermath of the battle of Hattin in 1187, and both Kerak and Montréal were rebuilt and used by the Mamlüks.

In the principality of Antioch, the lords of Saône (mod. Qal'at Şalāḥ al-Dīn, Syria) built another ridgetop castle, cut off from the neighboring hill by a vast rock-cut ditch. The site had been fortified by the Byzantines during the tenth century, but the crusader occupants built much stronger and more massive walls and towers. Saône is really a series of large tower houses connected by a curtain wall. There are no communal buildings, apart from a vaulted shelter, which may have been a stable, and a large vaulted cistern. The fabric at Saône is of a very high standard with beautifully cut ashlar.

The military orders began to erect castles soon after their formation. Their castles were often rectangular enclosure castles rather than isolated towers or ridge fortresses. Each was in effect a fortified cloister with communal buildings, refectory, dormitory, and chapel. The rectangular or oblong enclosure with vaulted halls running along the inside of the curtain walls was the most common plan. The Templars tended to build along main routes to protect pilgrims, and few of their twelfth-century structures have survived. However, from 1168 the Hospitallers began work on a site they called Belvoir (mod. Kokhav ha-Yarden, Israel), an isolated summit commanding superb views over the Jordan Valley. The castle was destroyed by Saladin's army in 1188, so the ruins can be fairly closely dated. It consisted of two rectangular enclosures, one inside the other, surrounded by a deep ditch cut in the rocky summit. There were large square towers at each corner of each enclosure. The upper stories

Glacis and cistern, Krak des Chevaliers. (Courtesy Graham Loud)

have disappeared, but there must have been halls around the insides of both enclosures.

The defeat of the Frankish armies at Hattin in 1187 and Saladin's campaigns of conquest that followed showed how inadequate the castles of the twelfth century were when confronted with an enemy who could deploy siege engines efficiently. A few castles on isolated outcrops, such as Margat (mod. Marqab, Syria) and Krak des Chevaliers (mod. Ḥisn al-Akrād or Qal'at al-Ḥisn, Syria), were able to hold out, but most others, denuded of men and with no real hope of relief, surrendered in the end.

In the thirteenth century, the Franks rebuilt and strengthened a comparatively small number of castles, which include examples of some of the most elaborate and impressive surviving military architecture of the Middle Ages. The great thirteenth-century castles were all built by the military

orders. Neither the lay aristocracy nor the monarchy, engulfed by succession disputes, had the resources needed to build credible fortifications. The builders concentrated on sites on hilltops or that had access to the sea. The castles had multiple lines of fortification, boldly projecting towers, and shooting galleries in the thickness of the walls. In many cases, they also boasted stone machicolations. Inside there were vast storerooms, halls, and places where the garrison could shelter from incoming missiles. The towers were roofed, as usual in Outremer, by stone vaults, strong enough for the mounting of trebuchets, which were often used in defense. As a general rule, the Templars used rectangular towers while the Hospitallers used round ones, although there were exceptions like the Templar castle at Baghras (mod. Bagras Kalesi, Turkey) outside Antioch. There seems to be no logical explanation for these preferences, and it may simply have been house style.

The Templars constructed a number of major monuments. In the kingdom of Jerusalem, Château Pèlerin (mod. 'Atlit, Israel) was constructed in 1218. As its name ("Pilgrims' Castle") implies, much of the labor was contributed by pilgrim volunteers. The castle stood on a promontory in the sea, and the defense was concentrated on the land side where there were two lines of wall, the inner one defended by two massive oblong towers. In the interior there were the halls typical of the work of military orders and an elegant chapel. The castle, defended by 4,000 men, survived a Muslim siege in 1220 and remained in Templar hands until it was abandoned after the fall of Acre in 1291.

Around 1240 the Templars began to build the castle at Saphet (mod. Zefat, Israel) in Upper Galilee. Virtually nothing has survived of the structure, but we have a unique account of the architecture and purpose of the castle in a treatise apparently written as a fund-raising pamphlet at the behest of the bishop of Marseilles who visited the site while on pilgrimage. Despite these efforts, the castle fell to Sultan Baybars I in 1266.

In the northern states of Outremer, or what was left of them, the Templars also embarked on major building projects. In their base in the coastal town of Tortosa (mod. Tartūs, Syria), they strengthened the twelfth-century fortress by constructing a curtain wall with massive oblong towers and improving the defenses of the square keep by the addition of shooting galleries. In the court there were an elegant chapel, halls, and a chapter house, now incorporated in the fabric of the houses of the town. The most complete surviv-

Inner and outer walls, Krak des Chevaliers. (Courtesy Graham Loud)

ing example of Templar work from this period is the tower and chapel at Chastel Blanc (mod. Safita, Lebanon). The centerpiece of the castles is a vast rectangular tower with a large simple church on the ground floor and a chamber above. This was surrounded by a curtain wall that enclosed spacious halls, but all of these are now very ruinous.

The most important surviving Hospitaller castles are to be found in the principality of Antioch and the county of Tripoli. Margat had been founded by the Mazoir family but was sold by them to the Hospitallers in 1186. Situated on an isolated plateau overlooking the coast road, the fortifications consisted of a castle town, now overgrown and ruined, and a huge citadel. Built in a rugged and unforgiving black basalt, the citadel is defended by the precipitous slopes of the hill and two lines of walls defended by round towers. At the south end where the castle site is most vulnerable, there is a massive round tower some 24 meters (78½ ft.) in

height. As usual, the court is filled with storerooms, kitchens, halls, and a large chapel. A visitor in 1212 said that the castle contained provisions for five years. Margat also contained the archives of the Hospitallers, and it was there that they retreated after the fall of Krak des Chevaliers in 1271. It was not until May 1285, just six years before the fall of Acre, that the castle was taken by the army of Sultan Qalūwūn and the surviving members of the garrison were allowed to retreat to Tripoli.

Krak des Chevaliers is the most famous of all the castles of Outremer. The castle is situated on the eastern frontiers of the county of Tripoli, overlooking the plains around Homs. It passed into Hospitaller hands in the 1140s. The surviving structures seem to belong to two distinct phases. In the twelfth century an enclosure castle was built on the spur of the hill with square mural towers and halls and a chapel surrounding an open courtyard. Saladin decided it was too

Wall and towers, Saône. (Courtesy Graham Loud)

strong to attack, but even so, in the early thirteenth century the Hospitallers thought it necessary to transform the defenses. An outer wall was built, and the inner enceinte encased by a massive new wall and glacis. Both inner and outer walls were now defended by round mural towers and box machicolations at the wall-head. A new and very elegant gothic hall was built for the knights and large, airy rooms were created in the towers.

We are told that Saphet, which was probably typical of the great castles of the military orders, had a garrison of 1,700 men in peacetime and 2,200 in war. Of these only 50 were Templar knight brethren. There were 30 sergeants, who were probably also Franks, and 50 locally engaged Turcopoles. The remainder consisted of 300 crossbowmen, workers and servants, and 400 slaves. Castles like Krak des Chevaliers and Margat had an important offensive role. Raiding parties from the castles could set out and extort tribute from the surrounding Muslim areas. They also

attracted visiting pilgrims, who would be asked to make a donation. In this way, these vast fortifications may even have paid for themselves and become moneymaking operations.

This position changed with the coming of the Mamlûks under Sultan Baybars I (1260–1277). Baybars was a master of the use of trebuchets, dismantling them and moving them from one siege to another as required. Even the strongest defenses, like the south walls at Krak des Chevaliers, could not withstand these for long. Miners also contributed to the fall of castles like Margat. Two crucial facts, that there was no prospect of a relieving army and that the Mamlûks offered safe conduct to those who surrendered, contributed to the fall of the castle. No castle in Outremer held out for more than six weeks after the Mamlûks had begun a serious siege. The castles of the Frankish East represent some of the most developed and sophisticated military architecture of medieval Christendom, but in the

Ditch and pillar supporting the bridge, Saône. (Courtesy Graham Loud)

absence of reinforcements and the absence of hope, they could not ensure the survival of Outremer.

Catalan Company

A company of professional soldiers that established an autonomous state in central Greece after overthrowing the duke of Athens in 1311.

The so-called Catalan Company was founded in Sicily in 1302 by Roger de Flor, a renegade Templar, corsair, and warlord who had fought in the service of Frederick II, the Aragonese king of Sicily (1296–1357). Its members were recruited in Sicily from among the participants in the war against the kingdom of Naples. It was hired in 1303 by Emperor Andronikos II Palaiologos of Byzantium to fight against the Turks in Asia Minor. The assassination of its chief in April 1305 pitched the company against the Byzantine Empire. It seized the town of Gallipoli (mod. Gelibolu, Turkey) in Thrace, and in the following six years it moved westward in stages through Byzantine territory. Although the company displayed an allegiance toward the kings of Aragon or Sicily, it maintained its stand as an independent and sovereign body. In the spring of 1311, it vanquished Walter I of Brienne, the Frankish duke of Athens, at the battle of Halmyros in Thessaly and took over his territory. The state founded by the Catalan Company maintained its existence for some seventy years.

Several of the company's features during its six-year-long odyssey had a decisive impact upon the shaping of the Catalan state in the duchy of Athens. Soon after the conquest the company established municipal institutions based on the customs of Barcelona and Catalonia and a central council composed of the representatives of the communes, which dealt with important matters of policy and enacted laws. It used the Catalan language in its documents. All of this constituted a definite break with the political regime that had existed prior to 1311, when cities were governed by the duke's officials.

External pressure compelled the company to submit to the Aragonese king Frederick II of Sicily in 1312. It nevertheless maintained its existence as an autonomous corporation under ducal sovereignty throughout the existence of the Catalan state. Effective royal rule began in 1317 with the arrival of the king's son Alfonso Fadrique, the first duke appointed by the kings of Sicily. His successors were all members of the Aragonese dynasty of Sicily until King Peter

IV of Aragon gained the ducal throne between 1377 and 1379. In 1318 or 1319 Alfonso Fadrique conquered and annexed the southern part of the Byzantine state of Thessaly, known thereafter as the duchy of Neopatras. In this territory he exercised direct rule on behalf of his father, without any participation of the company. Its regime thus differed markedly from that of the duchy of Athens, although communes were also established in some of its cities. However, Alfonso Fadrique, who allied himself with the Turks of Asia Minor, failed to conquer the island of Negroponte (Euboea). Venice put an end to Catalan expansion in 1331.

The settlement of noblemen from Catalonia, Aragon, and Sicily from 1317 resulted in the introduction of feudal structures in the Catalan duchies. The challenge of the noblemen to the authority of the ducal governors and the rivalry among themselves created a state of almost permanent crisis from the 1350s, which led to an armed struggle in the 1360s. Ducal power was seriously restricted in the years 1373–1378 by a new conflict between factions of noblemen and prelates, supported by the communes; the duchies were disintegrating. In 1379 the municipal councils jointly appealed to King Peter IV of Aragon to rule over the duchies, but Thebes was occupied by the Navarrese Companies in that year, and other cities shortly afterward.

Soon after conquering the duchy of Athens in 1311, the company devised a series of legal measures in order to maintain its own political ascendancy and enforce social and legal segregation between Latins and the local Greeks of the Orthodox faith. Religious affiliation became a criterion of basic social status and a convenient means of social identification, whether individual or collective. The company established legal barriers that prevented the upward social mobility of the Greeks, and this restrictive legislation was extended to the duchy of Neopatras after its conquest in 1318 or 1319. Greeks were barred from marrying Latin women and acquiring various types of real estate, unless they obtained official authorization. Between 1362 and 1380, the dukes granted wide privileges ensuring full social integration among the Franks to a small number of high-ranking Greeks.

Cathars

The name given to a group of radical Christian heretics who first appeared in the Byzantine Empire and later spread to western Europe, where they became a target of crusading in the course of the Albigensian Crusade (1209–1229).

The Cathars derived from the sect of the Bogomils, which seems to have originated in the tenth century in what is now Bulgaria. Their doctrines were founded upon the heresy of the Paulicians and the Massalians from Asia Minor, both of whom espoused dualist views about God and the nature of the world. Their ideas became widespread in the Byzantine Empire in the eleventh and twelfth centuries, despite persecution by the imperial authorities.

The spread of the heresy to western Europe was inevitable, given the growing movement between East and West of both trade and pilgrims. It is likely that the ideas spread into western Europe along the Rhine valley and thence to northern Gaul. Thence the ideas traveled south into Italy, where they became widespread in the cities of the north, and into Languedoc, where they began to make real headway in the later twelfth century. By 1165, when a debate was staged at Lombers near Albi, Cathar ideas were well established. Between 1174 and 1177 the heretics held a council at Saint-Felix-de-Caraman near Toulouse, which concerned both doctrine and organization. In 1177 Count Raymond V of Toulouse, writing to the chapter general of the Cistercians, described the doctrine of "the Two Principles" as spreading like a plague.

Contemporary commentators noted that the heresy was common among the nobility of the Languedoc, and this undoubtedly helped its spread. Peter of Les Vaux-de-Cernay, the northern eyewitness chronicler of the Albigensian Crusade, wrote that "the lords of the Languedoc almost all protected and harboured the heretics, showing them excessive love and defending them against God and the church" [*His-*

toire Albigeoise de Pierre des Vaux-de-Cernay, ed. Pascal Guébin and Henri Maisonneuve (Paris: Vrin, 1951), p. 5]. Some of their protectors, such as the count of Foix, were ruling princes, and there were many noblewomen among their adherents. This was a new development, since until this time in western Europe the church could rely upon rulers to support it against heretics, who were normally clerics, townsmen, or peasants. Support among the nobility helped Catharism to spread in the countryside. By the beginning of the Albigensian Crusade in 1209, the heresy was widespread across Languedoc and was strong in the burgeoning towns, many of which had their own governments and relied upon trade and the manufacture of cloth for their wealth. Here the independent and cosmopolitan nature of town life, combined with a relatively weak church presence, provided the conditions for heresy to grow. In Italy, at a period when the towns of the north were beyond papal control and also effectively outside the control of the Holy Roman Emperor, their growing independence similarly provided a benign climate for the spread of Catharism.

As a set of beliefs Catharism was far from monolithic. At a time when the church in western Europe was defining its doctrines more closely than ever before, the beliefs of the Cathars were more and more obviously heterodox, but were not uniform, simply because the leaders of the sect were quite unequipped to enforce discipline across a wide area. At the heart of Catharism was the belief in the dual nature of the ruling forces of the universe. On the one side was the God of goodness and light, on the other Satan, the god of darkness and evil: these two forces contended eternally. For some Cathars the good God was the supreme being, whose work had been subverted by Satan, but for most the physical world was something created by the evil god. It was therefore Hell, and as such a caricature of the perfect world of the spirit. For the Cathars, the separation between the world of the spirit and the physical world was absolute. It was not merely tainted by the sin of Adam, but irremediably corrupt because of its origin. This applied to everything within it, including people, whose bodies as part of the world had been created by Satan. Since Satan could not make dead things live it was clear that the souls of men, which gave their flesh life, were angels who had been seduced to rebel against God and had fallen from Heaven. Consequently the Old Testament, with its description of the Creation, was the history of the Devil's work, and the Law of Moses was also his doing. The True God revealed himself in the New Testament, and

the Gospel of St. John, with its emphasis on the importance of the Word, was particularly important to the Cathars.

This view of the world was a strategy for accommodating the gap between the individual's experience of suffering and the explanation for that experience offered by conventional religious thought. The question inevitably raised was how a good God could allow the obvious suffering within the world to continue. The answer must be that he had no control over it. For the Cathars the physical world as a changeable, alien, and wicked place was ultimately of no consequence. Its structures were not ordained by God. Society was ultimately of no value. The Cathars, who saw themselves as saved by being outside orthodox society, were naturally nonconformists and understood persecution as a sign of their righteousness and salvation.

The belief that the world is something to be rejected in favor of the heavenly world (Lat. *contemptus mundi*) was a strain of thought common in orthodox Christianity, especially among the more ascetic monastics. Here, however, it signaled a desire to break with a society that was irredeemable and was to be regarded as a battleground upon which the good God fought for the souls he had lost. Since that world was Hell, it was also natural to believe that when a person died he might return to Heaven, the place to which he belonged, or return once more to the world. The Cathars therefore believed in reincarnation.

Since they saw the world as outside God's creation, it followed that the Gospel was Good News brought from outside. Christ was not a real man, since that would imply that God had cooperated with Satan in Christ's coming. Instead he was an angel or the Son of God, but not his equal. Above all, he was not really of flesh and blood, and hence his death was not a sacrifice as understood in Catholic theology. Men were to be saved but by following the news that he brought, which told them of their origin and how to find salvation. Catharism was therefore a religion of *gnosis* (knowledge or deeper wisdom) that rejected the corporeality of Catholicism; salvation meant the release of the soul from the world by becoming perfect.

The core of Catharism consisted of a group of men and women known in Latin sources as the *perfecti* ("perfect ones," masc. sing. *perfectus*, fem. sing. *perfecta*), that is, those who had determined to attain salvation (the name "Cathar" comes from the Greek *katharos*, "perfect"). They practiced an austere way of life, often fasting and refusing to eat meat, and regarded animals as endowed with spirits. These animal

Catherine Cornaro (d. 1510)

spirits, they believed, might be transferred in another life to human bodies, and so killing them would be a form of murder. The perfecti were celibate, since procreation was considered as cooperation with Satan in the continuation of the world. They took no oaths, since oaths were based upon the belief that God intervenes in the world. They lived as itinerant preachers, engaged in prayer and care of the believers. They were not priests, since they did not believe in Christ's sacrifice, but they acted as pastors for their followers. They believed that strict adherence to their practices would maintain the perfection that was necessary for salvation and that had been granted to them when they received the *consolamentum* (laying on of hands by those who were already perfect), which transmitted the Holy Spirit. Failure to lead a spotless life would mean a fall from grace and loss of salvation, a situation that could only be remedied by reconso-lation after a long period of abstinence and prayer. They offered those who could not attain perfection in their lives immediately the chance to be consoled on their deathbed. Such believers listened to the sermons of the perfecti, accepted bread from them at meals, received their blessing, and received penance from them for their sins.

By the beginning of the thirteenth century, the Cathars of Languedoc had a counterchurch, with bishops who controlled dioceses and deacons who were perfecti and behaved much like parish priests. Many female *perfectae* lived in groups in convents, but those men who had no fixed responsibilities traveled incessantly, preaching where they could. They were supported and sheltered by their sympathizers, but many also had trades, especially where they were settled in communities. It was this organization that made the Cathars such a formidable opposition to the church and enabled them to survive for so long in the face of persecution. It was only after the Albigensian Crusade that the General Inquisition was organized, and it took the rest of the thirteenth century to destroy the movement.

Catherine Cornaro (d. 1510)

Queen of Cyprus (1474–1489) under a Venetian protectorate of the island.

Catherine Cornaro (also Corner, Correr) belonged to an old, established Venetian family that possessed large estates at Kolossi on Cyprus from the mid-fourteenth century onward. Following the treaty of 1469 that effectively placed Cyprus under Venetian protection, she married King James II in 1471. Their son, King James III, born a few weeks after the death of James II, died in August 1474, thereby bringing to a close the Lusignan dynasty of Cyprus. From this time Catherine reigned alone until 1489. The Catalan and Neapolitan officials whom her late husband had favored plotted unsuccessfully on several occasions to overthrow her, with the support of the exiled Queen Charlotte, Archbishop Louis of Nicosia, and the royal house of Naples. These plots were put down with the help of the Venetian fleet and garrisons established on Cyprus after the death of King James.

Catherine was queen in name only, for in reality the administration of the island was carried out by officials appointed from Venice, who gave Catherine occasion to complain of their parsimony and disregard toward her. In 1476 the Mamlūk sultan, who was the formal suzerain of Cyprus, recognized her as queen, and she was popular among the Cypriots, especially those of Nicosia, who gave her a rapturous reception when she moved there from Famagusta in 1475. However, attempts to repopulate Cyprus by attracting settlers from Venice, Albania, and the Peloponnese (1478–1486) were unsuccessful, and in 1489 Venice, wishing to strengthen the republic's presence on Cyprus through complete annexation, induced her to abdicate. She spent her remaining years at Asolo in Italy, dying in 1510.

Cave de Suète

Cave de Suète (Arab. Habis Jaldak, in mod. Jordan) was a cave fortress established by one of the lords of Tiberias sometime before 1109 in a former Byzantine laura cut into a cliff face on the south side of the gorge of the river Yarmuk to the east of the Jordan.

Approached by a narrow path, the castle comprised three levels of chambers accessed by external timber stairs and internal passages. Its purpose was to watch over the territory known as the Terre de Suète, which in 1109 was divided between the kingdom of Jerusalem and Muslim Damascus. In 1113, Ṭughtigin, *atabeg* of Damascus, took the castle and killed its garrison, but it reverted to Frankish control two years later. Taken again by the Muslims in 1118, it was recaptured later that year by Baldwin II of Jerusalem, who then advanced to Dara, bringing the whole Yarmuk Valley under Frankish control.

Nūr al-Dīn besieged the castle in July 1158 but raised the siege on the approach of Baldwin III, who then defeated him at Puthaha, south of Lake Tiberias. Restored and regarrisoned, the castle remained in Frankish hands until July 1182, when Farrūkh Shāh, Saladin's nephew, took it after five days by mining up through the soft rock from the lower level. In October 1182, however, the Muslim garrison of around seventy men surrendered when the Franks blockaded the castle and dug them out from the cliff-top. Thereafter, Cave de Suète remained in Frankish possession until the large-scale conquests of Saladin in 1187.

Caxton, William (d. 1491)

The first English printer and publisher; translator of *Godfrey of Boloyne*, an account of the First Crusade (1096–1099).

Caxton was born in Kent around 1422 and apprenticed to

a silk mercer in London in 1438. From 1441 he lived in Bruges, and around 1470 won the patronage of Margaret of York, the daughter of King Edward IV of England and wife of Duke Charles the Bold of Burgundy. He presented to Margaret his first translated work: *The Recuyell of the Historyes of Troye*. Caxton learned printing while in Cologne in 1471–1472 and on his return to Bruges set up a press, from which the *Recuyell* was the first printed book (1474 or 1475). He transferred his enterprise to Westminster in England in 1476, and until his death he occupied himself with translating, writing, and printing. In all he published at least 18,000 pages under eighty different titles. Most of these works were chivalric or religious in nature, such as Thomas Malory's *Morte Darthur*, and he translated twenty-two of them himself: twenty-one from French and one from Dutch.

Godfrey of Boloyne or The Siege and Conqueste of Jherusalem (1481) is a translation into Middle English of the Old French *Estoire de Eracles empereur et la conqueste de la terre d'Outremer*, itself a translation of William of Tyre's Latin chronicle. The version used by Caxton was probably a codex known to have belonged to Louis of Bruges. Its hero was Godfrey of Bouillon, the first Christian ruler of Jerusalem after the crusader conquest of 1099, whom Caxton placed in the "thyrde stalle of the moost worthy of Cristen men" [*Godffroy of Boloyne*, ed. Colvin, p. 3]: that is, he was seen as the world's greatest hero since Arthur and Charlemagne. This comment occurs at the beginning of the work, which ends with Godfrey's death. In a colophon Caxton gave his purpose: "to thende that every cristen man may be the better encoraged tenterprise warre for the defense of Cristendom" [*Godffroy of Boloyne*, p. 311], reflecting the enthusiasm for crusading in England at the time. The work survives in thirteen copies and one set of fragments.

Ceuta

A well-situated, strategic port town on the north Moroccan coast (Arab. Sabta), just 16 kilometers (10 mi.) south of Gibraltar.

Ceuta was the home of the Byzantine governor “Count Julian,” who legendarily dispatched Muslim forces under Ṭāriq ibn Ziyād to Iberia in 711/714 in revenge for King

Roderic’s mistreatment of his daughter, resulting in the fall of the Visigothic kingdom and the Muslim conquest of Iberia. In the Umayyad period Ceuta was an important entrepôt and a nexus for trade between Iberia and Africa. After 1010 Ceuta became a Taifa kingdom. It fell to the Almoravids in 1083 and subsequently passed under the control of the Almohads and the Ḥafṣids, before the local ‘Azafids took control. Conquered by Granada in 1306, in 1387 it fell to the Marinids and went into a decline. The Portuguese conquered it in a crusade in 1415, establishing an episcopal see in 1421. Under the control of Spain since 1580, Ceuta, along with Melilla, remains a Spanish enclave in Moroccan territory to this day.

Chaka (d. 1105/1106)

Chaka (from Turk. *çaka[n]*, "axe"), known as Tzachas in Greek sources, was the Turkish emir of Smyrna (mod. İzmir, Turkey) and its surrounding area at the time of the First Crusade (1096–1099). His maritime principality came to include most of the Ionian littoral and several eastern Aegean islands, and his aspirations included the Byzantine throne itself.

While a hostage in the court of the Byzantine emperor Nikephoros III Botaneiates, Chaka received the high title of *protonovelissimos* and possibly baptism, although later in his career he definitely reverted to Islam. Around 1081, having obtained prominence in Byzantium and organized a fleet, he gained control of Smyrna and the surrounding areas of Klazomenai and Phokaia, and razed Adramyttion to the ground. For almost a quarter of a century he posed a serious threat to Emperor Alexios I Komnenos. With the help of a Christian Smyrniote, he created a powerful fleet and a piratical army of 8,000 troops, with which he raided (and in some cases, took control of) several Aegean islands in 1088/1089 and 1092/1093; his combined attack with the Pechenegs against Constantinople (1090–1091) was the only case during the Saljūq period when the Turks laid siege to the Byzantine capital.

Even after being driven out of Smyrna by the Byzantines (1096–1098/1099), Chaka was far from being neutralized. Alexios I eventually succeeded in convincing Chaka's son-in-law Qilij Arslān I, sultan of Rūm, that his domains were Chaka's real target, which caused the sultan to lure the emir to a banquet in Abydos, where the sultan himself stabbed Chaka to death.

Chanson d'Antioche

An Old French epic poem dealing with the First Crusade (1096–1099), and incorporating apparently authentic historical material.

The version of the poem that survives is believed to have been written in the last quarter of the twelfth century and is usually attributed to one Graindor of Douai, who took three chansons de geste (epic songs) that were circulating in oral form and reworked them to form what is known as the "first crusade cycle." He claimed to have had the *Chanson d'Antioche* from an eyewitness, named "Richard the Pilgrim" (line 9014). It differs markedly from the two other chansons in the cycle, *Les Chétifs* and the *Chanson* (or *Conquête*) *de Jérusalem*, which are works of fantasy, complete with monsters and villains, heroes and beautiful maidens. This disparity is persuasive evidence that the reworker of the chansons used already existing content in all three cases. However, attempts by its modern editor, Suzanne Duparc-Quioc, to establish the original version of the *Chanson d'Antioche* using comparison with other narratives of the First Crusade are not conclusive and have been challenged, notably by Robert F. Cook.

The poem comprises nearly 10,000 lines. It identifies Peter the Hermit as the instigator of the crusade, then traces

the recruitment of crusaders in response to the pope's appeal and their journeys via Constantinople into Asia Minor. The capture of Nicaea and the acquisition of Edessa are described before the crusaders arrive at Antioch. Events there are at the heart of the poem, which ends with the Christian victory in the battle of Antioch (1098). There are some unexpected heroes, including the Tafurs, a fierce and quasi-autonomous gang of ruffians who accompanied the Christians under the leadership of their own "king." Unfortunately none of the poem's content can be used as evidence for the First Crusade, because of Graindor's reworkings and because the earliest extant manuscript (MS Paris, Bibliothèque Nationale de France, fr.12558) dates from the mid-thirteenth century. However, the *Chanson d'Antioche* was probably used as part of the recruitment drive for the Third Crusade, around 1190, and holds considerable interest in this light. It has linguistic features from Picardy and would have been recited to audiences drawn from the knights and nobility of north-eastern France, whose ancestors' deeds it celebrates.

Chanson de Jérusalem

An Old French crusade epic, also known as *La Conquête de Jérusalem*, originally composed around 1135.

The poem survives in eleven manuscripts (in three only fragmentarily), most importantly MSS Paris, Bibliothèque Nationale de France, fr.12558 and fr.12569, both dating from around 1275. Almost 10,000 lines in length, the poem has as its central theme the siege and conquest of Jerusalem (15 July 1099) by the First Crusade, covering the period from the arrival of the crusaders at the walls of Jerusalem (early June 1099) up to the defeat of a Saracen army shortly after the capture of the city, which may be a reminiscence of the

historical battle of Ascalon (12 August 1099). The text's historicity is clearly recognizable, but less reliable than in the older *Chanson d'Antioche*. The *Chanson de Jérusalem* was composed by an anonymous author and does not survive in its original form. The oldest extant version was made between 1180 and 1190 by the otherwise unknown Graindor de Douai, adapting the story in order to compose a trilogy along with the *Chanson d'Antioche* and *Les Chétifs*, which became the core of the later Crusade Cycle.

Chanson de la Croisade albigeoise

A *chanson de geste* (epic poem), in Occitan mixed with French forms, dealing with the Albigensian Crusade (1209–1229).

The first part of the poem was composed by Guilhem (William) de Tudela between 1210 and 1213. From Tudela in Spanish Navarre, Guilhem was a member of the Occitan clergy. He explicitly imitated the form and music of the *Canso d'Antiocha*, capitalizing on its prestige and clothing the invasion of Occitania with the legitimacy of the First Crusade (1096–1099). Not an active participant in events, he cites eyewitnesses, indicates the limits of his knowledge, and is factually reliable, apart from a few mistakes. He supports the persecution of heretics but is disturbed by what he sees as indiscriminate acts of repression and confiscation of lands. His measured style reflects a considered effort at objectivity.

The anonymous continuator of the poem, probably a lay cleric from Toulouse, is poetically much more exciting, while also being well informed about participants and events. Eschewing objectivity, virtually obliterating the issue of heresy, and condemning the French invasion as unjustified and treacherous, he sounds a passionate rallying cry to collective Occitan resistance under the banner of *paratge*, that is, a blend of values such as youth, generosity, and courtliness, with the right to one's inherited patrimony. He probably wrote between July 1218 and June 1219 (mention of Guy de Montfort's death in 1228 is probably an interpolation), breaking off at the moment when defenders on the walls of Toulouse await the arrival of the army of King Louis

VII of France. While showing the pope in a sympathetic light, and the clergy at the Lateran Council divided on the issue of the rights of Simon of Montfort (leader of the crusade) and the young Count Raymond VII of Toulouse, he excoriates the duplicitous harshness of antagonistic clergy at Toulouse and delights in Simon's death at the hands of a woman working a siege machine.

Chanson de Roland

The *Chanson de Roland* (Song of Roland) is the oldest known chanson de geste (Old French epic poem). The earliest surviving version dates from around 1100: the sole manuscript is from the second half of the twelfth century (MS Oxford, Bodleian Library, Digby 23). The poem is written in assonanced *laissez* (strophes of unequal length). A later twelfth-century reworking into rhyme, known as the *Rhymed Roland*, knew greater success in the Middle Ages, but the Oxford text is more studied today.

The *Chanson de Roland* transforms the historical event of a Gascon attack on the rearguard of the army of the emperor Charlemagne as it crossed the Pyrenees in 778, turning it into a heroic defeat by a Saracen army that outnumbers the rearguard by five to one. The original skirmish between two "Christian" groups becomes a piece of crusading propaganda opposing Christians and Saracens, who are portrayed as worshippers of the heathen gods Muḥammad, Apollo, and Tervagant.

The poem begins with the Saracens plotting to deceive Charlemagne into giving up his war in Spain by feigning a desire to make peace and convert to Christianity. The Christians are persuaded to accept these terms by Ganelon, Roland's stepfather, supported by Naimon, Charlemagne's wisest counselor. Ganelon and Roland, Charlemagne's nephew, quarrel over the nomination of Ganelon as ambassador to the Saracens. This leads to a betrayal by Ganelon, intended to be against Roland but involving the whole Christian army. Ganelon plots with the pagan king Marsile to ensure that Roland will lead the rearguard, telling Marsile that Roland can be defeated if he attacks the rearguard in two waves.

All goes according to plan: Roland, his companion Oliver, and the rearguard die at the battle of Roncevaux, near a pass across the Pyrenees. Before engaging in battle, Oliver advises Roland to summon Charlemagne by sounding his horn (the Olifant). Roland refuses. However, before his death he decides that, having given his all, he should now inform Charlemagne of the fate of the rearguard; this time it is Oliver who disagrees, but Roland goes ahead and blows his horn. The two quarrels over the blowing of the horn have been central to scholars' interpretations of Roland's character. Hearing the horn, Charlemagne returns to find the slaughtered rearguard. He pursues Marsile to avenge their deaths. The pagans are defeated, Marsile fleeing to Saragossa. What follows, the arrival on the scene of Baligant, overlord to Marsile, is considered by most scholars to be an interpolation, though it is integral to the text as we now have it. The clash between the armies of Baligant and Charlemagne, culminating in a single combat between the two leaders, is presented in ideological terms, a battle between Christian and non-Christian, good and evil. God, inevitably, is on Charlemagne's side, and with his encouragement Charlemagne and Christianity triumph. The narrative concludes with justice being done; following a judicial combat between the champions of Ganelon and Charlemagne, Ganelon is found guilty and condemned to death with his followers.

There is no doubt in the poem that the role of a vassal is to serve both God and king. Archbishop Turpin tells the men in the rearguard before the battle that if they confess their sins they will die as martyrs. The action takes place in northern Spain rather than the Holy Land, and the links with the *Reconquista* are clear, but the ideology is that of the First Crusade (1096–1099).

Charles I of Anjou (1226–1285)

Count of Provence (1246–1285), king of Sicily (1266–1285), and claimant to various Frankish principalities in Outremer and Greece.

Charles I of Anjou was born in March 1226 as the youngest child of King Louis VIII of France and Blanche of Castile. Through marriage to Beatrice, daughter of Count Raymond Berengar IV, he became count of Provence in 1246. In the same year he was invested with the appanages of Anjou and Maine by his brother King Louis IX of France.

Pope Clement IV invests Charles I of Anjou as king of Sicily, late thirteenth-century fresco. (Archivo Iconografico, S.A./Corbis)

As a result of extensive negotiations with Popes Urban IV and Clement IV, Charles was invested on 28 June 1265 with the kingdom of Sicily, with the goal of overthrowing the reigning king, Manfred of Staufen. Charles was crowned on 6 January 1266, and fought a successful campaign, which culminated in the defeat and death of Manfred at the battle of Benevento on 26 February 1266. Charles was then forced to defend his newly acquired kingdom against Manfred's nephew, Conradin, but succeeded in defeating the young Staufen claimant in the battle of Tagliacozzo on 23 August 1268 and had him executed on 29 October of that year. Charles was now ruler of the island of Sicily as well as of the southern Italian mainland. In order to stabilize his rule, the king exiled all of the pro-Staufen partisans and nominated only Frenchmen for higher positions in the military and civil administrations; the financial administration of the kingdom was mainly in the hand of Italians from the cities of Amalfi and Ravello.

Soon after the conquest of the kingdom of Sicily, Charles became involved in affairs on the eastern coast of the Ionian Sea, because he had inherited rule over territories acquired as the dowry of Manfred's Greek wife. These consisted of the island of Corfu (mod. Kerkira, Greece) and the strip of the Albanian coast from Durazzo (mod. Durrës, Albania) in the north to Butrint in the south. Charles was even acclaimed as king of Albania in 1272, but his real power there remained more or less limited to the maritime cities of Durazzo, Vlorë, Sopot, and Butrint. On 24 May 1267 the prince of Achaia, William II of Villehardouin, threatened by the Byzantine advance in the Peloponnese after 1261, ceded to Charles direct rule over the principality of Achaia after his death. Three days later Baldwin II, the dethroned Latin emperor of Constantinople, also recognized his sovereignty over the principality and over Manfred's Epirotic dowry, in exchange for the promise of military help in the reconquest of Constantinople.

In 1270 Charles was obliged to take part in the crusade of his brother Louis IX against Tunis, although at the time he was already planning an expedition against Byzantium. After the death of the French king during the crusade, Charles succeeded nevertheless in concluding a very advantageous treaty with Abū 'Abd Allāh Muḥammad al-Mustanşir, emir of Tunis (November 1270). This agreement guaranteed him the payment of a lump sum of 70,000 ounces of gold and an annual tribute of 2,777 ounces of gold.

In the following years Charles continued with his plans for

the reconquest of Constantinople and continuously sent troops and foodstuffs to Greece and Albania, hoping to realize his dream of an Angevin hegemony over the Mediterranean. An important step in this direction was the acquisition of the rights to the kingdom of Jerusalem from Mary of Antioch on 15 January 1277 in return for a down payment of 1,000 gold pieces and an annual rent of 4,000 *livres tournois* (pounds of the standard of Tours). Although the king nominated Roger of Sanseverino and Odo Poilechien as his *baillis* (regents), his rule in Palestine was never fully recognized, and his representatives were unable to stop the advance of the Mamlūks under Sultan Qalāwūn.

In the long term, Charles's involvement in the affairs of Outremer only harmed his attempts to establish an Angevin hegemony in the Mediterranean. He wasted his efforts on diverse fronts instead of concentrating his forces on the defense of his Greek possessions and the reconquest of Constantinople. After the death of Prince William II (1 May 1278), the principality of Achaia did in fact fall under direct Angevin rule and was subsequently governed by regents. However, an attempt by one of the king's captains in Albania (Hugh of Sully) to advance against Constantinople by land in 1279 failed completely. As a consequence of this disaster, Charles concluded an alliance for a combined attack by sea and by land against the Byzantine Empire with Venice and the titular Latin emperor, Philip of Courtenay, on 3 July 1281 at Orvieto.

Charles's wider Mediterranean ambitions forced him to place an increasingly heavy burden on his subjects in the kingdom of Sicily. This, together with his restriction of the powers of the nobility and the actions of pro-Staufen expatriates, led to the uprising known as the Sicilian Vespers on 30 or 31 March 1282. This was followed by the secession of the island of Sicily from Angevin rule and the intervention of Peter III of Aragon, who was recognized by the Sicilians as their new king. Left in possession of the southern mainland of Italy, Charles tried in vain during the last years of his life to reconquer Sicily, his dreams of subjecting the Byzantine Empire already shattered. He died on 7 January 1285, in Foggia, and was succeeded in the kingdom of Naples by his son Charles II.

Charles I of Spain

See Charles V of Germany

Charles II of Anjou (1253–1309)

King of Sicily (Naples) and count of Provence (1285–1309). Charles II of Anjou was born on 18 November 1253, the eldest son of Charles I of Anjou and Beatrice of Provence.

After the rebellion of the Sicilian Vespers (1282), through which the island of Sicily broke away from his father's rule, Charles held the office of lieutenant of the kingdom of Naples for his father and tried to regain the confidence of his subjects with reforms. These resulted in the *Capitula* of San Martino (30 March 1283), which granted important privileges to the nobility, the clergy, and the citizens of the kingdom.

Captured in the naval battle of Naples on 5 June 1284 by the Aragonese admiral Roger Lauria, Charles was not released until November 1288 after long negotiations, by which time his father had died (1285). During Charles's captivity, Angevin rule in the kingdom of Jerusalem collapsed, and his *bailli* (regent) in Acre, Odo Poilechien, was forced to surrender the citadel of the city to Charles's rival Henry II, king of Cyprus, in the last days of June 1286. The Angevin possessions in Albania were lost at the same time.

After his coronation as king on 29 May 1289, Charles attempted in vain to resolve the Sicilian question by diplomacy or military means and was finally forced in 1302 to

ratify the Treaty of Caltabellotta, which guaranteed the independence of the island of Sicily under a collateral line of the Aragonese royal family. According to his plan for a decentralization of the Angevin possessions in the Mediterranean, Charles bestowed sovereignty over the principality of Achaia, as well as direct rule over Corfu and the defunct kingdom of Albania, on his fourth son, Philip I, prince of Taranto (1294). He then granted Philip direct possession of Achaia after the deposition of Isabella of Villehardouin and her husband Philip of Savoy as rulers in 1304–1307.

The climax of Charles's foreign policy, however, was the general acknowledgement of his grandson Charles Robert as king of Hungary in 1308, which guaranteed the crown of St. Stephen for the Angevin dynasty. During his reign, Charles II attempted to continue with the reform of the kingdom of Naples, although with largely negative results, because the power of the nobility had been strengthened. His administrative reforms in the county of Provence, by contrast, were much more successful. The War of the Sicilian Vespers proved disastrous for the finances of the kingdom of Naples and prevented the rise of trade and industry, but Charles succeeded at least in securing the continuation of Angevin rule in the mainland part of the former kingdom of Sicily. He died on 5 May 1309 in Naples, and was succeeded by his son Robert.

Charles V of Germany (I of Spain) (1500–1558)

King of Spain (1516–1556) and Holy Roman Emperor (1520–1556), and initiator of three major campaigns that could be considered crusades: in central Europe in 1532, against Tunis in 1535, and against Algiers in 1541.

Charles was the son of Philip the Fair (d. 1506), ruler of the Habsburg Netherlands, and of Joanna, infanta of Spain, who was the daughter of the two "Catholic Monarchs," Ferdinand II of Aragon and Isabella I of Castile. By the time he was crowned Holy Roman Emperor at the age of nineteen, Charles had succeeded to Spain and the Habsburg lands in Austria and the Netherlands.

Charles had vowed to maintain peace with Christians and warfare against Muslims, but political realities prevented him from fulfilling his vow. His reign was marked by the Protestant Reformation, conflict with France, and rivalry with the Ottoman sultan, Süleyman the Magnificent, in central Europe and the western Mediterranean. Charles committed imperial resources against the Ottomans in central Europe to protect the interests of his younger brother (later emperor), Ferdinand (d. 1564). Ferdinand claimed the throne of Hungary after the death of King Louis II at the battle of Mohács in 1526, but Süleyman recognized a rival candidate, John Szapolyai. The Turks unsuccessfully besieged Vienna in 1529; in 1532 Ferdinand relieved the Turkish siege of Köszeg (Güns), and in 1533 Süleyman agreed to a division of Hungary between Ferdinand and Szapolyai.

The Ottoman conquest of Egypt in 1517 shifted the balance of power in the Mediterranean. The Turks established Algiers and Tripoli as outposts, threatening Spain's interests in the western Mediterranean. Charles expanded his naval forces, acquiring a major Mediterranean fleet when the Genoese admiral, Andrea Doria, defected to him from Francis I of France in 1528. After Süleyman expelled the Hospitallers from Rhodes in 1522, Charles offered them the island of Malta, with additional responsibility for Tripoli. The order accepted Charles's offer in 1530. These precautions sheltered the stretch of sea near Naples and Sicily and shielded Spain from Ottoman expansion. For his part, Süleyman acquired the services of the ruler of Algiers, Khayr al-Din Pasha (known in the West as Barbarossa), who seized the island fortress of Peñón of Algiers from Spain in 1529.

Charles organized an expedition against Barbarossa in Tunis in 1535 to remove Süleyman's fleet and secure the western Mediterranean. Under the command of Charles

and Doria, the expedition captured the fortress of La Goleta and the city of Tunis. Barbarossa escaped to Istanbul, where he took command of the sultan's navy in the eastern Mediterranean. Charles's other rival, Francis I of France, made an alliance with Süleyman against Charles in 1536. In response, in 1538 Charles formed the Holy League with Venice and the papacy to fight Barbarossa off the coast of Greece. He began planning a Mediterranean crusade against Algiers in 1541, but the Christians abandoned it when their fleet was wrecked in a storm.

Although Barbarossa died in 1546, Ottoman expansion in North Africa remained a threat to the Habsburg interests in Spain. Charles's obligations in northern Europe prevented him from giving his full attention to the Mediterranean, and his plans to lead an armada against Istanbul were interrupted by other wars in Europe. In 1555–1556 he abdicated from rule in all his dominions and retired to a Spanish monastery.

Charles the Good (d. 1127)

Pilgrim to the Holy Land, count of Flanders (1119–1127), and potential claimant to the throne of Jerusalem.

Charles was born in Denmark, the son of Knud the Holy, king of Denmark (1080–1086), and Adela, daughter of Robert I, count of Flanders. When Knud was murdered by political opponents in Denmark (1086), Adela fled with Charles to the court of her brother Robert II of Flanders (1087–1111), and Charles grew up there. Around 1107 he made a pilgrimage to the Holy Land and fought alongside the army of Baldwin I of Jerusalem. In 1119 he succeeded his cousin Baldwin VII as count of Flanders. In 1123, while King

Baldwin II of Jerusalem was a prisoner of the Turks, Charles was offered the throne of Jerusalem by a faction of the kingdom's ruling classes that was opposed to Baldwin's policies and favoritism, but he declined to pursue the opportunity. He was murdered on 2 March 1127 in the Church of St. Donatian in Bruges as a result of a conspiracy centered on the Erembalds, a powerful Flemish family whose influence he was attempting to curtail.

Chastellet, Le

See Jacob's Ford

Chastel Neuf

A castle, also known as Castellum Novum or Qal'at Hunin (mod. Horvat Mezudat Hunin, Israel), sited on the Tyre–Damascus road in northern Galilee, overlooking Banyas and the upper Jordan Valley.

Perhaps established by Hugh of Fauquembergues, lord of Tiberias, Chastel Neuf would have formed part of the lordship of Toron (Tibnin) established soon after his death (1106). In 1157, Humphrey II, lord of Toron, granted one-half of Chastel Neuf and Banyas to the Hospitallers to defend, but the order almost immediately withdrew from the agreement. The castle was taken and demolished by Nūr al-Dīn in July and August 1167. It was under reconstruction when Humphrey II died there in April 1179. In 1180, it passed to King Baldwin IV when his sister Isabella was betrothed to Humphrey IV of Toron. The Arab writer Ibn Jubayr describes the system for joint Muslim-Frankish exploitation of the villages between Hunin and Banyas when he passed through the plain in September 1184. In 1186 the king granted Hunin to Joscelin III of Courtenay, but in December 1187 the castle fell to Saladin. Although nominally returned to Humphrey IV when Isabella divorced him in 1190, it remained in Muslim hands and was destroyed by al-Mu'azzam 'Īsā, ruler of Damascus, in 1222. It finally returned to Frankish control in 1241, but was taken by the Mamlūk sultan Baybars I in 1266 and subsequently refortified.

Château Pèlerin

The castle was rectangular, extending some 85 meters (279 ft.) east to west and 65 meters (213 ft.) north to south and enclosed by a rock-cut ditch on the north, west, and south and by the edge of the plateau on the west. Apart from one projecting rectangular turret on the east, little Frankish masonry survives. Excavation around the Ottoman-period gatehouse in 1994, however, revealed the foundations of two Frankish towers, 13 (40 ft.) meters square with walls 3 meters (9.8 ft.) thick, spaced 20 meters (65.5 ft.) apart and set 5 meters (16.4 ft.) back from the southern wall.

Château Pèlerin

Château (Chastel) Pèlerin was a Templar castle, whose name means "Pilgrims' Castle," also known as *Castrum Filii Dei* or 'Athlith (mod. 'Atlit, Israel), occupying a rocky seagirt promontory 20 kilometers (12½ mi.) south of Haifa.

The castle replaced an earlier tower built by King Baldwin I of Jerusalem for the protection of travellers at *Districtum* (Le Destroit), where the coastal road passes through a rock cutting. Construction was begun during the winter of 1217–1218 by Walter of Avesnes, together with pilgrims who had come to the Holy Land in the course of the Fifth Crusade (1217–1221), Teutonic Knights, and Templars. Excavations in 1930–1935 fully confirmed the contemporary description given by the chronicler Oliver of Paderborn. The principal defenses consisted of two massive walls preceded by a ditch and counterscarp wall, cutting off the promontory. The inner wall, 12 meters (39 ft.) thick and over 30 meters (98 ft.) high, was strengthened by two projecting rectangular towers, each 21 by 27 meters (69 by 88½ ft.). The outer wall was only 6.5 meters (21 ft.) thick and 16 meters (52½ ft.) high and had three towers so placed that the defenders of the inner wall could fire between them. The gates were set in the sides of the towers, and the access to them was so contrived

as to expose anyone approaching them to the defenders. Within the castle was a central courtyard, surrounded by two concentric ranges of vaulted buildings, the outer built almost to the water's edge. They would have included the refectory, dormitory, and chapter house, besides a twelve-sided chapel. Before its abandonment in 1291, the castle successfully withstood Muslim attacks in 1220 and 1265, though the latter, led by Sultan Baybars, succeeded in sacking the walled faubourg (suburb) that had developed east and south of it. Archaeological investigations show this to have been enclosed by a wall 645 meters (2,116 ft.) long on the east and 230 meters (755 ft.) on the south, with a rock-cut ditch, three gate towers, and a postern. It enclosed a defensive tower, stables, a bathhouse, and an unfinished church. To the north-east of it lies a cemetery containing some 1,700 tombs, many marked by stone slabs bearing carved crosses and symbols of the dead person's profession.

Children's Crusade (1212)

The Children's Crusade of 1212 (Lat. *Peregrinatio puerorum*) was an unofficial crusade enthusiasm that arose in France, Germany, and the Low Countries. It was perhaps the first truly popular crusade, because its leaders were neither knights, clerics, nor hermits.

To medieval chroniclers the Children's Crusade was a foolish venture that sadly, but appropriately, ended in catastrophe. The fact that in modern popular culture the Children's Crusade has become one of the most memorable episodes in

the history of the crusading movement would have astounded them. For the chroniclers, the *pueri* (boys, children, youngsters) who were its most conspicuous and leading element were deluded. They had defied parents and scorned the advice of clergy by running off on a "crusade" that no pope had authorized. The clerical chroniclers referred to it as a crusade (Lat. *peregrinatio, iter, cruce-signatio*, etc.), perhaps because that is what ordinary lay folk called it, or perhaps they meant it mockingly. Certainly, those who joined it thought of themselves as pilgrims and crusaders; they carried the identifying emblems (staves, wallets, crosses), though they bore no arms. Among their monastic chroniclers were talented writers like Matthew Paris, Vincent of Beauvais, and Alberic of Trois-Fontaines, all writing about forty years afterward; their imaginative stories have influenced scholars and the general public down through the centuries. Thus they variously claimed that the *pueri* had been led astray by Satan and a personage known as the Master of Hungary, later to become leader of the First Shepherds' Crusade (1251); or lured away by the Old Man of the Mountain; or duped and betrayed by evil merchants who promised them sea passage to the Holy Land, then sold them to slavers; or tricked by secret agents of the Muslims.

The story of the crusade became a cautionary tale, a preacher's *exemplum* (moral anecdote), and its lamentable outcome was emphasized. Northern chroniclers pointed out that few of these "crusaders" returned to their homelands (which is true); others, they wrote, died of hunger or thirst along the way, suffered shipwreck, rotted away in Muslim prisons, or were exploited, particularly the young women among them. The *pueri*, of course, did encounter hardship and sometimes death. Yet the altogether grim picture painted by the chroniclers was colored by their belief that God did not will the crusade to take place. In fact, those who ran off on the Children's Crusade were shepherds and peasants, often youthful, but not always; artisans and laborers recruited in the French and German towns along their route; servants and poor folk; men, women, and babes-in-arms; old people as well as youths. They were excited by crusading dreams, no doubt, but also fleeing poverty and hopelessness, the unhappy results of rural overpopulation. When the remnants of the Children's Crusade ultimately arrived in Mediterranean Europe, they entered booming urban economies. The cheap labor they could supply would be put to good use. What began as a popular crusade, indeed the most famous of all popular crusades, ended as a peasant

migration. For those who never returned, opportunity, not death, may have been the reason.

Historians have uncritically taken the exaggerated accounts of the clerical chroniclers at face value. Similarly, the traditional views of the origins, itinerary, and nature of this extraordinary movement need to be reassessed. Lack of evidence poses a problem. Despite fifty-four references to the Children's Crusade in Latin prose narratives composed before 1301, the chroniclers rarely provide more than a few lines of fragmentary and elusive material. There exists no reliable, step-by-step narrative of the enthusiasm from its inception in northern Europe to its finale in the Mediterranean south. At best we have occasional snapshots. What is clear, however, is that the genesis of the *Peregrinatio puerorum* occurred in the midst of crusading activities that excited popular enthusiasm. Eight years earlier, the Fourth Crusade (1202–1204) had culminated in the conquest of Christian Constantinople (mod. İstanbul, Turkey), and crusading continued in the West. During the winter of 1211–1212 recruitment for the ongoing Albigensian Crusade (1209–1229) against the Cathars of Languedoc was stimulated by preaching in the same territories that would later yield recruits for the Children's Crusade: Ile-de-France, Flanders, and possibly the Rhineland, preparing the ground for what was to come. Meanwhile, another crusade was mounted to save Christendom's western flank from the Almohads of Berber North Africa who had invaded Spain. A decisive battle was expected around Pentecost (13 May), and Pope Innocent III responded to the pleas of King Alfonso VIII of Castile by ordering liturgical processions in Rome and elsewhere on behalf of the Spanish church.

Such processions are likely to have taken place at Chartres around 20 May. Following the evidence of a late though reliable source, Jean le Long or Jean d'Ypres (d. 1383), author of the *Chronica monasterii sancti Bertini*, Gary Dickson has argued that these church-organized processions soon threw off ecclesiastical control, becoming popular events in which the *pueri* now assumed a dominant role [Dickson, *Religious Enthusiasm*, V:88–90]. Their outcries and acclamations ("Lord God, exalt Christendom!"; "Lord God, return to us the True Cross!") demonstrate that the *pueri* retained the crusading fervor originally kindled by the church [Dickson, *Religious Enthusiasm*, IV:36]. Yet their desire for the True Cross (the relic lost at the battle of Hattin in 1187) implies that the focus of their enthusiasm had shifted away from Spain and toward the Holy Land.

Perhaps at this stage Stephen of Cloyes emerged as the charismatic leader of the French pueri. According to the anonymous chronicler of Laon, he was a young shepherd who claimed that Jesus, disguised as a poor pilgrim, had given him a letter intended for King Philip II of France. He and his followers then went to Saint-Denis to deliver the letter to the king, who, advised by the masters of the University of Paris, ordered the pueri to return to their homes. The Laon chronicler noted that Stephen's pilgrimage took place in June.

This sequence of events is disputed by Norman P. Zacour and Peter Raedts, who locate the origins of the Children's Crusade in the Rhineland with Nicholas of Cologne, his followers, and his charismatic symbol, the Tau cross. The movement would thus have spread from Germany to north-central France. Several arguments can be adduced against this view. The first is chronological. Stephen's movement (in June) would have directly followed the processions (in late May), whereas the best estimate historians have for the departure of Nicholas and his troop of pueri from Cologne is mid-July. Second, the Rhenish Children's Crusade lacks an initial cause of collective enthusiasm like the processions. Third, the Rhenish pueri spoke of reaching the Holy Land by crossing the sea dry-shod. Nothing of the kind was mentioned by the French pueri. Ideas like this develop over time. Fourth, contemporary German chronicles know about the French movement, while the reverse is not true. Finally, why would the Rhenish pueri, looking toward the east and heading down the Rhine and over the Alps to Italy and perhaps southern France to get there, direct any of their energies toward the west? An earlier historian of the pueri, D. C. Munro, insisted that there were two movements, one in France and one in Germany, and no evidence indicates that they ever came in contact with each other. However that may be, for two popular crusading movements with a similar social composition to have begun around the same time without one group having influenced the other is implausible. A route map suggests the line of march that a troop of French pueri may have taken toward the Rhineland.

Raedts has provided not only an invaluable study of the chroniclers but also an intriguing global interpretation of the Children's Crusade: it was a movement of the poor. For Raedts, the medieval pueri were a social group, not an ambiguously defined age group. The term, he holds, refers to landless peasants who were too poor to marry. In peasant society, marriage brought social adulthood. As social

underlings and rural laborers, they were and would always remain "boys." This seems like a neat solution, and some of the chroniclers appear to bear him out. In reality, however, the pueri were often young people of both sexes who were poor and propertyless. So the two senses of the word are far from being mutually exclusive, and no student of the texts would affirm that the pueri were all youngsters, let alone children. Moreover, the nametag pueri stood for the whole movement, allowing the chroniclers to differentiate it from that of the *pastores* (shepherds), who came later (1251) but belonged to the same largely agrarian underclass. The pueri, some would say, believed they were chosen by God because, unlike the knights, they were both poor and pure. This must remain conjecture. Conversely, there is now a general consensus that Pope Innocent III learned from the Children's Crusade that popular enthusiasm for crusading was far from dead.

Chivalry

The term *chivalry* covers a variety of ideas and values connected with knights, who played a central role in the crusade movement. Originally, the Latin word *militia* referred to an army as a whole, and *milites* to all of its members, cavalry and foot soldiers alike. The ideas of chivalry and nobility remained distinct throughout the Middle Ages, even if the military and social prestige of knighthood, supported by its depictions in literature, tended to emphasize its aristocratic aspects and its increasing exclusion of non-aristocrats.

Origins of Knighthood

In the eleventh and twelfth centuries, various texts imply the existence of a class of knights whose social background was

close to that of the peasantry. They were distinguished solely by their profession of arms. If they were unable to exercise this profession, whether through age, sickness, or loss of their equipment, they ceased to be *militēs* and reverted to the status of peasants. In Germany, there existed a type of unfree ministerial knights (Lat. *ministeriales*), who were nevertheless close to the aristocracy in their functions. In France during the twelfth century, there is evidence of a few serfs who became knights. The exercise of arms made them free, but their free status was entirely conditional on their profession and did not extend to their heirs.

Up to the thirteenth century, then, knighthood was not generally associated with nobility, freedom, the exercise of a public office, or wealth. Knights did not constitute a social class and had no legal status; being a knight was not a particular state or order. Rather, they were a body of elite warriors who formed the main instruments of princes in warfare.

It was originally possible for almost any man to become a knight, through the ritual known as dubbing (Fr. *adoubement*). However, knighthood came to be increasingly closed to those of nonnoble origin through ever more precise juridical limitations. By the mid-thirteenth century it was no longer possible to become a knight unless one was born to it or was made so by royal decree. In contrast to the previous age, knights now became an elite body of *noble* warriors. After 1300 this tendency gathered momentum. Knighthood became an honor, which not all nobles might attain. The word *knight* in its various forms (Fr. *chevalier*, MHG *ritter*, MDu *ridder*, etc.) designated a grade of the nobility, without losing its existing range of meanings relating to its military functions: its cultural and ideological aspects became superimposed on its functional significance. This development was reinforced by the foundation of new secular orders of chivalry, which encouraged the perception that previous forms of knighthood were in decline and had been superseded.

Knighthly Combat and Equipment

Knighthood during the time of the crusades did have social, ethical, and cultural dimensions, but these had not yet obscured its primary function: that of elite cavalry. Its development was closely connected with a society that was founded upon the possession of castles; the *militēs*, who defended castles, became knights as a result of the adoption of a new form of combat that involved the use of the “couched” lance and came to characterize knighthood.

The Duke of Anhalt in a tournament, from the Codex Manesse, fourteenth century. (Archivo Iconografico, S.A./Corbis)

Invented around the year 1060 and employed by the first crusaders, it became widespread by the beginning of the twelfth century and was soon universal throughout the West. It differed radically from older methods based on forms of combat used by foot soldiers where the lance was used in the manner of a javelin (i.e., for throwing) or a spear (for stabbing). In the new form of combat, which was ideally suited for short cavalry charges, the knight’s arm was used only to position the lance in the direction of the enemy. The shaft of the lance was now couched, that is, wedged under the knight’s armpit and held in a fixed horizontal position. The efficacy of this fighting technique derived from the impact of the blow and thus depended ultimately on the speed of the horseman, who was positioned more securely on his horse through the use of a much deeper form of saddle than before. The birth of chivalry was greatly assisted by this new technique, and from this time, knighthood began to develop its own code of ethics and ideology.

In order to meet the new penetrative force of the couched lance, the defensive armor used by knights had to undergo development. Up to the mid-eleventh century, the coat of mail, made of interlinked iron rings, protected the warrior down to mid-thigh. From about 1060 to 1150 the hauberk came into general use: also made of mail, it was longer than the coat of mail and was split at the sides to make mounting the horse easier, while the two overhanging "tails" protected the thighs; it was supple and relatively light, generally of the order of 12–15 kilograms (c. 26½–33 lbs.). It was completed by the addition of mail chausses, sleeves, and gauntlets. A mail coif or hood, worn under the helmet, protected the head and neck. Around 1150, knights began to wear a surcoat over the hauberk; this item of clothing usually displayed the knight's heraldic bearings, thus assisting recognition in battle and reinforcing the superiority complex of the knights by distinguishing them from other soldiers. During the thirteenth century, the hauberk was reinforced by rigid plate armor in those places where the knight was most exposed (chest, arms, back); this was plate armor, a step toward the use of the suit of armor. The fifteenth century saw the development of the complete suit of armor made of rigid but articulated components, which offered maximum protection at the cost of considerably increased weight.

The role of knights in medieval warfare is in need of re-evaluation. Medieval chroniclers frequently originated from knightly families and, like the writers of romances, wanted to please their aristocratic patrons. Thus they tended to emphasize the role of cavalry charges, which were decisive in battles. Yet battles were a relatively rare occurrence. Military operations usually consisted of raids or sieges of fortresses, in which knights played only a minimal role. However, the absence of knights could mean the immediate defeat of the other troops, because the knights' armaments gave them both military superiority and prestige.

The actual number of knights involved in warfare, generally overestimated by medieval chroniclers, has been much debated by historians. During the eleventh and twelfth centuries, there was a probable ratio of one knight to every seven to twelve foot soldiers. Knights, therefore, made up a very small elite in medieval armies, but this in no way lessened their status. The class of soldiers known as sergeants, and more rarely the squires, also fought on horseback. The rest of the Western armies was made up of infantry. The hierarchy was reflected in pay: around 1200, a mounted sergeant

was paid twice as much as a foot soldier, and a knight received four times as much.

Chivalric Ideology

Knights were professional warriors, most of whom depended for their livelihood on the use of arms. This profession required physical and moral strength, discipline and cohesion, and also sufficient leisure time to permit training in combat and horsemanship. All this reinforced solidarity among knights, but it also gave rise to a sporting aspect to knightly combat: the knight did not so much seek to kill his adversary as to defeat him in order to win weapons, armor, horses, or ransom money. This type of combat differed noticeably from nonknightly forms of warfare, such as those waged by Christian foot soldiers, Celts, heathens, or Muslims in Iberia and the East. The knightly moral code was born of economic necessity and gradually incorporated moral, social, and religious dimensions. Thus specific methods of combat, a new concept of war, and a certain ideology served to set knights clearly apart from all other fighters. The size of the ransom, which became prevalent in the twelfth century, was usually in proportion to the status of the captive, rising to considerable sums for personages of high rank: 150,000 silver marks for Richard the Lionheart, captured during his journey back from the Holy Land; 200,000 livres for King Louis IX of France, taken by the Muslims of Egypt. Ransoms for less important knights rarely amounted to more than a few livres; sometimes their captors were content to take their equipment, as they knew that loss of this in itself could ruin a knight. Foot soldiers, who had no market value, were excluded for a long time from these unwritten agreements and could be killed without shame. The custom of ransom thus contributed to the ethical precept that the life of a defeated knight should be spared.

The moral code of chivalry also developed as a result of tournaments, which were popular from the twelfth century onward. Tournaments had four main characteristics: (1) they were utilitarian, in that they helped knights train for combat; (2) they had a ludic aspect, in that they were a game, but also a sport, for professionals who hoped to win wealth and glory in them; (3) they had a socioeconomic dimension, in that poorer knights might hope to gain the patronage of a prince or the favor of a rich heiress; and (4) they also had a festive character, making them a hugely popular public spectacle. These four elements glorified and defined the val-

ues of chivalry, helped by the literature of courtly love and Arthurian romances.

Vernacular literature, which praised the idea of adventure and the virtues of valor, largesse, and courtesy, contributed to the development of the ideal of the “perfect knight,” who was better than a cleric: a cultural model to be imitated. This ideal was not supplanted until some centuries later by that of the “gentleman.” We see here the power of the chivalric ideal forged in the twelfth century. Chivalry became a way of life, a moral code, a social and moral model, and soon, a myth.

The church could not remain indifferent to such a powerful social phenomenon. In fact, a number of chivalric ideals—both cultural and military—conflicted with the ideals of the church. Chivalry idealized splendor, glory, and carnal love (even adulterous love), which were all glamorized by romances. The church feared knights, but needed them to defend it from warriors in the service of feudal lords who coveted the church’s wealth. It excommunicated such warriors, but praised those who fought on the side of the church, such as advocates of monasteries or defenders or soldiers of the church. In the eleventh century the church invented liturgical blessings that sanctified the investiture of such persons. These were used subsequently in rituals for the dubbing of “ordinary” knights (late twelfth to thirteenth centuries), as the church attempted to infuse chivalry with its own values. It went about this by means of liturgy (such as the rites used to create knights) and literature, including the Christianization of existing literary themes, such as the legend of the Grail, and the creation of didactic writings such as treatises on chivalry.

Chivalry and the Crusades

Crusading and chivalry were profoundly linked: the crusade was, in effect, both a pilgrimage and a holy war. The latter idea gained a wider currency in the West during the eleventh century. This sanctification of war, which regarded some knights as better than others, was demonstrated in battles fought on behalf of the pope in Italy. It was also apparent in diverse military operations carried out in the western Mediterranean region, either at the instigation of the pope or with his blessing, such as the Norman conquest of Sicily, the *Reconquista* (reconquest) of Iberia from the Muslims, and the Mahdia campaign of 1087 mounted by Pisans and Genoese against the Zīrid emirate in North Africa.

The crusades were in this tradition, but also developed

certain characteristics that tended toward a kind of assimilation or reclamation of chivalry by the church: (1) The element of pilgrimage, which was either absent or unimportant during former “chivalric” operations, was of primary importance in Pope Urban II’s call to crusade, which stressed the importance of the deliverance of the Holy Sepulchre, turning the expedition into a pilgrimage with all the implications of spiritual privilege that this entailed. (2) Such an armed pilgrimage was prescribed for knights (and for them alone, according to Urban II’s original concept) for the remission of sins. In this way, an armed expedition with the express intention of killing its adversaries, and which even at the beginning of the century would have required its members to do penance, instead became a means of penance itself. (3) Muslims were seen as pagans; this made it easier to regard warriors who died at their hands as martyrs, identifying them with the earliest Christian victims of pagan persecution. (4) The idea of reconquering the country of Christ, despoiled by Muslims, was substituted for the idea of Christian reconquest “for St. Peter,” which had previously formed part of the concept of holy war. The pope decided, over the heads of kings and princes, to assemble his own army of Western knights in order to reestablish the patrimony of Christ. This call to feudal and chivalric values indicates clearly that the knights of the crusade no longer served temporal princes, but the supreme sovereign. (5) The crusaders (Lat. *crucesignati*) were therefore *milites Christi*: Christ’s vassals, his knights, his soldiers. The semantic development of this expression is enlightening: in the earliest centuries of the church it was simply a term for Christians, but from the fifth century on, it designated clergy and monks fighting evil through prayer. From 1075, it was used for warriors fighting for St. Peter. After 1095, it nearly always meant a crusader.

Thus the concept of a new military force was born: this was a force not in the service of the world (Lat. *militia mundi*) but in the service of Christ (Lat. *militia Christi*). This “new chivalry,” with different ideals, was opposed to “ordinary chivalry.” This contrast was underlined by the chronicler Guibert of Nogent: God was now offering knights a fitting means of salvation that did not require them to abandon their way of life or to don the monk’s habit: the holy war. According to the chronicler Fulcher of Chartres, Urban II emphasized the irreducible opposition of these two forms of service by exhorting the warriors to “change chivalry.” [Fulcher of Chartres, “Historia

Hierosolymitana,” in *Recueil des Historiens des Croisades: Historiens occidentaux* (Paris: Académie des Inscriptions et Belles-Lettres, 1844–1895), 3:324]. The traditional chivalric code did not lead to the crusades; rather, the crusader was enjoined to break with chivalry, its customs, and its material and worldly aspirations, putting himself in God’s service in the “new chivalry” of Christ. Urban II clearly denounced war among Christians as a sinful activity endangering the soul, but in compensation he praised the fight for the liberation of Jerusalem, led by this new knight-hood of crusaders, as being meritorious and holy. This amounted to an ideological support of knightly crusaders, but in no way of chivalry as a whole, the customs of which were, indeed, condemned by Urban II, as they were to be by Bernard of Clairvaux.

The First Crusade (1096–1099) was, at least initially, a military success. However, it also marked a relative failure of the papacy. The pope did appear as the initiator of a Christian movement against the infidels, but in the eyes of knights, the crusade remained purely a pious and deserving action, not a moral necessity inherent to their function. Participation in a crusade, like a pilgrimage, did not become a duty or a moral obligation of chivalry in the same way that pilgrimage to Mecca, and even *jihād* (holy war), were integral to Islam. Chivalry retained its lay dimension, its ideals, and its values, which were certainly influenced by the church but were sometimes very far from the virtues that it propounded. The creation of military religious orders is an indication of this relative failure; from now on, the *milites Christi* were the Templars. It also marked the beginning of a veritable doctrinal revolution within the church with regard to war. The existence of an order of monks called to take up the sword and to shed blood was by its very nature a true doctrinal monstrosity. Its acceptance at the Council of Troyes (1129) marks therefore the definitive integration of the idea of the holy war in the doctrine of the Latin Church. It also illustrates the failure of the church to assemble under its banner a knighthood from among the laity. Despite the influence of the church, the chivalric ideal remained essentially secular and tended to become increasingly worldly and even profane, an indication of the ideological split between crusades and chivalry.

Choniates, Niketas (d. c. 1217)

Byzantine statesman, court orator, and historian of the Komnenos and Angelos dynasties as well as of the first years of the Empire of Nicaea. His historiographical work is one of the most important Greek sources for the Second (1147–1149), Third (1189–1192), and Fourth (1202–1204) Crusades.

Born in Chonai (mod. Honaz, Turkey) in Phrygia between 1155 and 1160, Choniates studied theology, law, and history in Constantinople (mod. İstanbul, Turkey), where he was promoted to high posts in the Byzantine administration by the Angeloi. In 1189, while governor of Philippopolis (mod. Plovdiv, Bulgaria), he encountered the leader of the German contingent of the Third Crusade (1189–1192), Frederick I Barbarossa, and personally clashed with Emperor Isaac II Angelos over the latter’s resistance to the crusade and his alliance with Saladin. Choniates eventually attained the important administrative post of grand logothete, which he held from 1191/1192 to early 1204, when he was forced to emigrate with his family to Nicaea (mod. İznik, Turkey) following the second crusader capture of the capital (12–13 April 1204).

At Nicaea Choniates became a fervent supporter of the emperor Theodore I Laskaris, and it was there that he

began the compilation of his main work, the *Chronike Diegesis*. In twenty-one books it describes the period from the death of Alexios I Komnenos to the fourth year of the Empire of Nicaea (1118–1207); the narrative ends abruptly with the siege of Adrianople by the Bulgarian tsar Kalojan in the autumn of 1207, probably on account of the author's death (after spring 1217). To a considerable extent an eye-witness account, with trustworthy information but also clear traces of its author's strong personal feelings and assessments, the work provides invaluable information on Byzantium's relations with the Balkan peoples, Hungarians, Turks, and crusaders and other Westerners, particularly concerning the crusader conquest of 1204. Together with the account of John Kinnamos, that of Choniates continues the narrative of Anna Komnene's *Alexiad*; both works were themselves continued (for the post-1204 period) by Akropolites. Also of historical interest are several of Choniates's orations and speeches, as well as his theological works, containing refutations of heresies up to his own time.

Chrétien de Troyes

One of the greatest vernacular writers of the Middle Ages, Chrétien is the first known author of an Arthurian romance (initially, a narrative poem written in octosyllabic couplets), active between 1165 and 1190. He wrote five such romances (*Erec et Enide*, *Cligès*, *Le Chevalier de la charrette*, *Le Chevalier au lion*, and *Le Conte du graal*), two surviving lyric poems, a series of adaptations from Ovid, and a lost poem about King Mark and Iseult, all of them in Old French. He may also have been the author of a non-Arthurian romance, *Guillaume d'Angleterre*.

Chrétien wrote *Le Chevalier de la charrette* (also known as *Lancelot*) for Marie of Champagne (d. 1198), daughter of King Louis VII of France and Eleanor of Aquitaine, and wife of Henry I (the Liberal), count of Champagne (d. 1181). He wrote *Le Conte du graal* (*Perceval*) for Philip of Alsace, count of Flanders (d. 1191). Given that he wrote for the courts of Flanders and Champagne, both of which had strong crusading traditions, Chrétien's work is astonishingly free of references to the crusade movement. It does contain a handful of allusions to the Near East (Arabia, Babylon, Beirut, Constantinople, Greece, India, Persia, Saracens, and Turks), but these occur almost invariably in stock expressions or as the sources of exotic stuffs and objects. He never mentions Jerusalem, and the only reference to Saracens in the entire oeuvre occurs in the *Chevalier de la charrette*, where the people of the fictitious land of Gorre are said to be "worse than Saracens" [Chrétien de Troyes, *The Complete Romances*, p. 196]. The only direct references to the crusade movement occur in the *Chevalier au lion* (*Yvain*), where the character Kay the Seneschal notes that "after dinner, without budging, everyone goes to slay Noradin," that is, Nūr al-Dīn, the Muslim ruler of Syria (d. 1174) [Chrétien de Troyes, *The Complete Romances*, p. 264], and in the *Chevalier de la charrette*, where the narrator states that certain knights refrained from participating in a tournament because they had taken the cross to go on crusade.

These references show that Chrétien was aware of the crusade movement. His description of the order of chivalry as “the highest honor God had created and ordained,” in the *Conte du graal* [Chrétien de Troyes, *The Complete Romances*, p. 360], perhaps also owes something to Bernard of Clairvaux’s ideas about the new chivalry. It has also recently been argued that his portrayal of the ailing Fisher King in *Conte du graal* may have been influenced by the historical figure of the Leper King, Baldwin IV of Jerusalem (d. 1185). However, the crusade movement never figures directly in any of Chrétien’s works. This may have been because the Arthurian world he describes supposedly dated to the sixth century, or because it was a resolutely fictional world whose literary strength lay precisely in its detachment from the everyday world of its audiences; but it is a remarkable and curious absence.

Christ, Knights of

See Dobrin, Order of

Christ, Order of

A Portuguese military religious order, established by the bull *Ad ea ex quibus* (14 March 1319) of Pope John XXII after long negotiations concerning the assets of the Order of the Temple in Portugal after its dissolution.

King Dinis of Portugal (1279–1325) initially opposed the arrest of the Templars and the confiscation of their patrimony, and after the dissolution of the order, he prevented the annexation of its properties in Portugal by the Hospitallers. Probably influenced by the solution achieved in

Aragon through the creation of the Order of Montesa, Dinis petitioned the papacy for the foundation of a new Portuguese order (1318), to be based at Castro Marim in the southernmost part of the country, with the aim of protecting the kingdom and fighting the enemies of the Christian faith. Once the papal letter of foundation was made public (April 1319) and translated into Portuguese by a royal decree (May 1319), the establishment of the Order of Christ was celebrated in November 1319. As the new order adopted the rule of the Castilian Order of Calatrava, its first master was chosen from the Portuguese Order of Avis.

The new order took over the Temple’s assets in the kingdom of Portugal and also received many of its former brethren into its ranks. It adopted the Templar cross (with minor modifications) as its insignia and ensured the conservation of the archives of the Templars in Portugal. The new brethren of Christ even reoccupied the former Templar headquarters in Tomar, having abandoned Castro Marim by the middle of the fourteenth century.

The main novelty of the new military order lay in the loss of international ties and also in its strict subordination to the interests and service of the king, who was responsible for the systematic organization of its resources and of personnel, which were approved by royal statutes of 1321. According to the papal bull of 1319, the master was obliged to pay personal homage to the monarch before taking possession of the assets of the order. The master and commanders had the duty of giving aid and counsel to the monarch and had to attend parliaments. The Crown’s competences were further extended by statutes of 1326, which also diminished the autonomy of the master, since the mandates of the commanders were made for life.

The approval of the Crown became crucial in much of the daily business of the order, such as the alienation and transfer of its assets, the regulation of the behavior of the brethren, the modification of their numbers, and even the dismissal of the commanders. Such control over the order’s internal affairs, which was without evident parallel in the other military orders, cemented the destiny of the Order of Christ to that of the Crown, which selected the masters from men it regarded as trustworthy, and called upon them to participate in its military campaigns and to fulfill obligations at the royal court. On occasions when the masters lost the political support of the king, they were forced to renounce their office, as happened in the cases of Joao Lourenço (1326) and Rodrigo Anes (1357). Around 1372, the result of this close

relationship with the Crown was the election of a master who was a mere twelve years old, but was closely related to the queen. This same relationship undoubtedly helped to turn the order into a more aristocratic institution. This tendency can be observed toward the end of the fourteenth century in the noble surnames of some knights (Avelar, Botelho, Ferreira, Rebelo, Vale, Vilela), while surnames that indicate a more modest ancestry, such as Bezero (Calf), Campos (Fields), Leite (Milk), and Vinho (Wine), became less common. This process paved the way for the introduction of the main noble families (Azevedo, Castro, Coutinho, Cunha, Sousa, Vasconcelos) into the membership of the order, although this matter is far from being clarified, as little research has been undertaken on it.

The same period saw a weakening of the religious character of the institution. Besides frequent infringements of the vow of chastity in the fourteenth century, a progressive reduction of the vow of poverty can also be observed. The brethren were allowed to dispose of one-third of the movable assets in their custody at the time of their death (1372). This quota was later increased to one-half in 1426, when they were allowed to bequeath two-thirds of any real estate acquired through inheritance or purchase. These arrangements were completed by the statutes of 1449, which normalized the personal wealth of the knights and brought their religious obligations closer to those of the laity. By the middle of the fifteenth century, very few would recognize the former monk-knights from the days of the reconquest of the land from the Muslims beneath the rich vestments and golden ornaments now used by the brethren of Christ.

The plans of the Portuguese Crown to take the holy war to Africa, which started with the conquest of Ceuta (1415), helped to combine service of the king with the war against the infidels, thus promoting a renewal of the original purposes of the order. Among the reasons invoked for handing over the order's administration to Prince Henry the Navigator (1420) were the previous misuse of its resources and the need to rechannel them to fight the Moors and spread the Christian faith. Henry soon identified himself with those designs and came to plan several attacks against Granada and Morocco, always justifying them as being in the service of God, the king, and the kingdom. At the same time, he expressed the wish to profess in the Order of Christ, but never did, although he had petitioned for an exemption from the vow of poverty (1443), which would allow him to keep and eventually bequeath his patrimony.

In spite of these expectations, the brethren only became more involved in overseas projects at the end of the fifteenth century, when the governor of the order was made king of Portugal and was able to use its men and resources for the Crown's policies. The papacy soon recognized the king's control over the order (1551), thus combining the profession of the brethren with royal service, a situation that lasted until the order was finally extinguished in the first half of the nineteenth century.

Christburg, Treaty of (1249)

The peace treaty that ended the first great insurrection of the native Prussians against the rule of the Teutonic Order.

After the defeat of the order's Livonian branch by Prince Alexander Nevskii (Yaroslavich) of Novgorod on the ice of Lake Peipus, the newly converted Prussians apostatized in 1242 and allied with Duke Swantopelk II of Pomerelia, an enemy of the order. However, with the support of crusaders from Germany the order largely prevailed. At the end of 1247,

Christian, Bishop of Prussia (d. 1244)

Pope Innocent IV dispatched his legate Jacques Pantaléon, archdeacon of Liège (later pope as Urban IV), to Prussia. Jacques first mediated a peace between Swantopelk and the order and subsequently the Treaty of Christburg (mod. Dzierzgoń, Poland) was concluded on 7 February 1249.

The treaty identified the severe lordship of the order as the reason for the insurrection. As a result, personal liberty was granted to the Prussians, comprising rights of property, inheritance (including inheritance rights for women), trade, marriage, and legal representation. Prussians could become clerics, enter religious orders, and receive the belt of knighthood if they were of noble birth. This liberty was to be forfeited if the Prussians apostatized or rebelled against the order, their overlord. The Prussians were also given the right to their own civil law and chose that of the neighboring Poles. They were obliged, however, to abandon all pagan customs and ceremonies, including polygamy, the purchase of wives, the making of idols, and heathen burial rites. Christian duties such as fasts, infant baptism, and annual confession and communion had to be observed. Twenty-two churches were to be built and maintained in places named in the treaty, with priests to be provided by the order. Finally, the Prussians had to participate in the military campaigns of the order. The treaty was rendered invalid when a second insurrection broke out in 1260.

Christian, Bishop of Prussia (d. 1244)

Bishop of Prussia (1215–1244) and one of the early leaders of the mission to the pagan Prussians.

Born into the Pomeranian nobility, Christian became a Cistercian monk at the monasteries of Kolbacz and Oliva. In 1215, with the support of Pope Innocent III and Valdemar II, king of Denmark, Christian was elected as missionary bishop of Prussia. In 1217 he received from the papacy the right to recruit crusaders for the Prussian mission, and after visiting

Rome in 1218 he obtained further privileges that freed his bishopric from the authority of the archbishop of Gniezno.

Christian's missionary work included ransoming Christian prisoners and Prussian girls as well as erecting schools for native boys. In 1222 Bishop Christian received lands in the area of Kulm (mod. Chełmno, Poland) from Duke Conrad of Mazovia, and in 1228 he founded a military order known as the *Milites Christi de Prussia* (Knights of Christ in Prussia), or Knights of Dobrin, which was intended to provide his bishopric with a military force. However, Christian's mission suffered a major setback when he was taken captive by the pagan Prussians in 1233; on his release (1238), he tried unsuccessfully to regain his bishopric, which was eventually dissolved in 1243 as a result of a new organization of the Prussian church. In the meantime, the Knights of Dobrin were absorbed into the Teutonic Order.

Chronica Polonorum

See Wincenty Kadłubek

Chronicle of the Morea

A chronicle that is the most important single source for the political history of the Frankish lordships in Greece in the thirteenth and fourteenth centuries. It exists in French, Greek, Aragonese, and Italian versions, in a total of eight manuscripts, of which five are of the Greek text. The Greek version is in popular verse, whereas the other three are in prose.

The French version survives in a single manuscript (MS Bruxelles, Bibliothèque Royale Albert Ier, 15702). It covers events from 1095 to 1303 but has a brief chronological table

appended that brings events down to 1333, incidentally recording that Catherine of Valois-Courtenay (d. 1346) was still alive. The scribe specifically stated that the French version was an abridgment of an original text that formerly belonged to Bartolomeo Ghisi and was found in his castle of Thebes in Greece, where he had been the castellan from 1327 to 1331. The text appears to have been written between 1333 and 1346 and to have relied upon a French prototype.

The Aragonese version, also known as *Libro de los Fechos et conquistas del Principado de la Mores*, was commissioned by Juan Fernández de Heredia, grand master of the Order of the Hospital (1377–1396). His scribe, Bernard of Jaca, completed the work of copying on Thursday, 24 October 1393, presumably in Avignon, where Heredia was then resident. The Aragonese text builds upon the French version and incorporates new material for the years 1305–1377. The Italian version belongs to the sixteenth century and is an abridgment and translation of the Greek version.

Of the five manuscripts of the Greek chronicle, the two fullest are MSS København, Kongelige Bibliotek, 57 (=H) and Paris, Bibliothèque Nationale de France, gr.2898 (=P). From internal evidence it appears that P is slightly later in composition than H. They both cover the years 1095 to 1292. Later material has been added that refers to the Catalan slighting of the castle of Thebes in 1332. Manuscript H refers to Erard III le Maure, lord of Arkadia (d. 1388), as still being alive, whereas P suggests that he was dead. The anonymous author was well informed on matters of chivalry and was intensely pro-Frankish.

The issue of the language in which the prototype of this chronicle was written has been a matter of great debate and is still an open question.

Cilicia

A territory in southeastern Anatolia (mod. Turkey), which in the eleventh century was disputed among Armenians, Byzantines, and Franks, and later came to constitute an Armenian kingdom (also known as Lesser Armenia) under the Rupenid (1198–1226) and Het'umid (1226–1373) dynasties.

Geography

Cilicia is roughly divisible into two parts: the wide coastal plain to the east, and the Taurus Mountains (mod. Toros Dağları) to the north and west. The plain held the principal cities, such as Adana, Anazarba, Ayas (mod. Yumurtalık), Mamistra (mod. Misis), and Tarsos (mod. Tarsus), while the rivers Saros (mod. Seyhan) and Pyramus (mod. Ceyhan) provided irrigation and maritime access. It is difficult to assess the size of the cities; Ayas was certainly a large and thriving port in the thirteenth century, but other cities may have held relatively small populations. The bulk of the population was rural and lived in the mountain valleys. The most important route between Cilicia and Anatolia and between the Middle East and Asia Minor was through the pass known as the Cilician Gates, north of Tarsos. To the southeast Cilicia is separated from Syria by the Amanus

(mod. Nur Dağları), a lower and less rugged range. The coastal plain was agriculturally productive, cotton being a particularly important export, whereas the mountain ranges provided timber for much of the eastern Mediterranean, particularly Egypt.

Cilicia among Byzantines, Armenians, and Franks (1071–1198)

Incorporated into the Roman Empire in the first century B.C., Cilicia fell to Muslim armies in 646 and was considered part of the Syrian frontier with Byzantium. The revival of Byzantine military power in the ninth and tenth centuries led to the region's reincorporation into the empire by Nikephoros II Phokas in 965. Muslim inhabitants were driven out, and Christian Armenian troops and immigrants were encouraged to settle. Further Armenian settlement followed Byzantine annexation of the Armenian kingdoms around Lake Van in eastern Anatolia. Following the defeat of the imperial army by Turkish Saljūq forces at Mantzikert in 1071, Cilicia became part of the short-lived principality of Philaretos, an Armenian warlord who had served in the Byzantine army.

With the coming of the First Crusade (1096–1099), the crusaders Baldwin of Boulogne (brother of Godfrey of Bouillon) and Tancred (nephew of Bohemund of Taranto) both sought to establish principalities in the area in 1097, but their conquests did not endure once they left the region. Between 1097 and 1132, the Cilician plain passed from Byzantine to Frankish control and back again several times. The Byzantines, however, retained control of the western part of Cilicia, notably Seleucia (mod. Silifke) and Korykos (mod. Korykos), while the Taurus Mountains were largely under the control of Armenian lords, notably Oshin (ancestor of the Het'umid dynasty) and Constantine (ancestor of the Rupenid dynasty).

By the 1130s, the Rupenids had gained control of the eastern highland valleys of the Taurus Mountains and sought to dominate the plains. Prince T'oros I's conquest of Anazarba by 1111 gave the Rupenids a stronghold on the plain as well as greater prestige among Armenians. In 1132, his brother Prince Leon I (d. 1137) conquered Tarsos, Mamistra, and Adana, but this expansion of Rupenid power did not last. Byzantine ambitions to regain the area gained release in the spring of 1137. Emperor John Komnenos quickly seized the three towns before moving on to Antioch. Leon and his family escaped capture, retreating into the Taurus Mountains. Having received homage from Raymond of Antioch, John

returned to Cilicia in the fall and captured the remaining Armenian strongholds. Leon and two of his sons, T'oros II and Rupen, were captured and taken back to Constantinople. Several years later T'oros escaped, and while Byzantine forces were distracted fighting the Turkish leader Nūr al-Dīn in northern Syria in 1152, T'oros and his supporters recaptured most of eastern Cilicia, including Tarsos, Adana, and Mamistra. T'oros also attacked Byzantine Cyprus with the new prince of Antioch, Reynald of Châtillon. In response, Emperor Manuel Komnenos, son of John, invaded Cilicia in 1158, and once again T'oros and his closest supporters fled to the mountains.

T'oros II died in 1168 and his young son and successor, Rupen II, was soon killed by his uncle Mleh, long exiled by his brother. With the support of Nūr al-Dīn, Mleh attacked the Byzantine-held cities of the coast as well as castles under the control of other Armenian leaders, but following Nūr al-Dīn's death in May 1174, Mleh was killed by disgruntled Armenian nobles, and his position taken by his nephew Rupen III. The defeat of the Byzantine army at Myriokephalon in 1176 by the Saljūq sultanate of Rūm meant that the Armenians no longer needed to fear a Byzantine reconquest of Cilicia. But Bohemund III of Antioch worried that the Armenians, unchecked by the Byzantines, would overpower Antioch, and apprehended Rupen after inviting him to a banquet. Bohemund's subsequent invasion of Cilicia was fought off by Rupen's brother Leon (d. 1219), and Rupen was released in return for Mamistra, Adana, and two strategically placed castles. Rupen, however, soon reconquered what he had lost.

Rupen retired to a monastery in 1187 and handed power over to Prince Leon, who expanded Armenian power to its greatest extent. He captured the western city of Seleucia from the Saljūqs of Rūm and raided as far as Caesarea in Cappadocia (mod. Kayseri). Unlike their Frankish allies to the south, the Armenians of Cilicia were little threatened by Saladin and were thus one of the strongest Christian forces in the Near East. Armenian forces joined with those of the Third Crusade (1189–1192) in besieging Acre, but Leon's seizure of the ruined castle of Baghras (mod. Bagras Kalesi) became a source of tension between the Armenians and the Franks. The castle protected the Syrian Gates, the easiest passage over the Amanus Mountains, and whoever controlled it effectively dominated Antioch and eastern Cilicia. It had been held by the Templars before Saladin seized it, and the military order demanded it back. This quarrel fed into

political struggles between Cilicia and Antioch. Leon attempted to seize the city of Antioch (mod. Antakya) itself, having captured Bohemund III by a ruse, but the citizens declared a commune and swore allegiance to Bohemund's eldest son, Raymond. The hostilities were temporarily resolved by the marriage of Leon's niece and heir, Alice, to Raymond, a move that caused boundless problems later.

The Kingdom of Cilicia (1198–1375)

Prince Leon II negotiated with Pope Celestine III and the Holy Roman Emperor, Henry VI, to receive recognition as king from the Western powers. After he agreed to the nominal union of the Armenian Orthodox Church with the Latin Church, he was crowned king as Leon I in Tarsos (6 January 1198) in a ceremony presided over by Gregory VI, the Armenian patriarch of Cilicia, and witnessed by Latin, Greek, and Syrian Orthodox archbishops.

The death of Raymond of Antioch in 1197 involved Leon I in a lengthy war of succession. Leon supported the claims of Raymond's son, his own great-nephew Raymond-Rupen. The commune of Antioch and the Templars, still seeking the return of Baghras, supported the claims of Raymond's brother Bohemund (IV) of Tripoli. For a time Raymond-Rupen ruled the principality, but in 1220 he and his mother, Alice, were forced to flee to Cilicia. To counter the animosity of the Templars and to gain Latin support, Leon granted castles to the Hospitallers (notably Seleucia on the western borders) and the Teutonic Order (which received the castle of Amoudain).

The death of Leon II/I in 1219 also led to a contested succession. He had disinherited his great-nephew Raymond-Rupen in favor of his daughter Isabel (Arm. Zabel), who was then married to Philip of Antioch, son of Bohemund of Tripoli. The Armenian nobility, however, disliked Philip's Frankish ways, and he was imprisoned and poisoned. Isabel, grieving for her husband and unwilling to remarry, sought the protection of the Hospitallers. The order, rather than hand her over to the regent Constantine of Lampron, simply sold him the fortress of Seleucia along with the queen. Isabel was then forcibly married to Constantine's own son Het'um I (d. 1269). This marriage united the two leading Armenian dynasties of Cilicia.

In the thirteenth century Cilicia faced the threat of conquest by the Saljūqs of Rūm. A Saljūq invasion in 1233 forced Het'um I to pay tribute, but another invasion in 1245 proved far less a threat. The Armenians found a new ally in the Mon-

Dedicatory page from a thirteenth-century Armenian Gospel book, illuminated in Sis, capital of Cilicia. (The Pierpont Morgan Library/Art Resource)

gols, who invaded the Middle East and the Caucasus in 1239. Het'um I sent his brother Smpad the Constable as an ambassador to the Mongol capital, Qaraqorum, and he returned with an alliance that protected the kingdom against Saljūq attacks. The kingdom became a tributary to the Mongols, and at times Mongol garrisons were stationed in Cilicia. Under Mongol protection, the Armenians were able to conquer several northern Syrian towns from the Ayyūbids, such as Behesni (mod. Besni) and Marash (mod. Kahramanmaraş), which once had belonged to the county of Edessa.

The defeat of the Mongols by the Mamlūks of Egypt in 1260 at 'Ayn Jālūt heralded the decline of Armenian power. When the Mamlūks invaded Cilicia in 1266, Het'um's sons were killed or captured, and the cities plundered. Devastated by this blow, the king retired to a monastery in 1269 after redeeming his son Leon II (d. 1289) from captivity. King Leon II was forced to cede the castles in the Amanus Moun-

tains, leaving the cities of the Cilician plain open to Mamlūk raids. At this time the Mamlūks had little intention of conquering Cilicia. They sought to punish the Armenians for their alliance with the Mongols, and perhaps to gain a convenient base to conquer the sultanate of Rūm. Leon II still hoped that a Mongol alliance would save his kingdom; Antioch had already fallen to the Mamlūks, and there was little hope of help from Byzantium or Western kingdoms.

The Armenians participated in a Mongol invasion of Syria in 1280–1281, sacking Aleppo, but no permanent conquests were made, and the Mamlūks responded with an attack that looted Cilician cities. Leon II sent an embassy to Egypt to negotiate a peace agreement, which was signed on 6 June 1285, obliging him to pay 500,000 dirhams in tribute yearly to the Mamlūks. In 1292 the Mamlūk sultan, Khalīl, sacked the Armenian patriarchal residence at Hromgla and imprisoned the patriarch, Stephen IV. This was followed in 1293 by a threatened invasion of Cilicia, and Het‘um II was forced to cede Marash, Behesni, and other eastern cities as well as to double the annual tribute. Het‘um finally relinquished power to his nephew Leon III, probably in 1306, after previous abdications in favor of his brother T‘oros. The Mongol emir Bilarghu, however, executed both kings, along with about forty Armenian nobles, on his own initiative in 1307. The Mongol khan had Bilarghu executed for his temerity and accepted Het‘um’s brother Oshin as king. Oshin’s reign was relatively peaceful (aside from rumors that he was poisoned); he was succeeded in 1320 by his young son Leon IV.

Renewed Mamlūk pressure exacerbated tensions within the kingdom. Leon IV sought aid from the West and feared subversion by his relatives, many of whom he had executed. He was assassinated in 1342, and the crown was offered to Guy of Lusignan, son of Oshin’s sister Isabel by her marriage to Aimery of Cyprus. Guy (renamed Constantine II) was killed in 1344, perhaps because of his pro-Latin policies, and the throne was seized by Constantine III, whose shaky claim to the throne was through his wife, Maria, sister-in-law of Leon IV and daughter by a second marriage of Queen Joanna, widow of King Oshin. Constantine III was the last Armenian king to attempt to fight rather than accept Mamlūk domination. He allied himself with Peter I of Cyprus, hoping to ensure Peter’s commitment to defending Cilicia by ceding Korykos to him. For a brief time, it seemed he might succeed. In alliance with the Hospitallers of Rhodes, Peter and Constantine III captured Attaleia (mod. Antalya) in August 1360.

This, however, was the last gasp of a leadership pressed to the edge. When Constantine III died in 1363, indecision and wariness among the Armenian nobility left the throne unoccupied for two years, until his cousin Constantine IV married his widow and claimed the throne. Following the death of Peter of Cyprus in 1369, Constantine IV sought rapprochement with Egypt, ceding Tarsos and Adana, but he, in turn, was assassinated, perhaps as a result of his new policy of appeasement (1373). Leon V of Lusignan, illegitimate nephew of Guy-Constantine II, was offered the throne in 1374. The Mamlūks overran the last Armenian stronghold of Sis (mod. Kozan) in 1375, and Leon V was taken captive. In 1402, Cilicia fell to the Mongols, and was later incorporated into the Ottoman Empire.

Religion and Society

Armenians, the dominant group in Cilicia, had grown powerful only in the period of Byzantine reconquest in the tenth and eleventh centuries. Armenian communities were ruled not by the traditional dynasties of historical Armenia but by new military elites. Armenian society thus developed new social hierarchies and structures, drawn in part from neighboring Byzantine, Frankish, and Islamic communities. Particularly influential was Frankish aristocratic culture, centered on military prowess, a hierarchy of knighthood, and chivalric ideals. Armenians also adopted from the Franks of Antioch their law code, as well as matters of dress and conduct.

Cilicia contained a number of different religious communities. It is possible that some Muslim communities survived under Armenian rule. Certainly in the thirteenth century, Mongol garrisons introduced Muslims into Cilicia; one Mongol emir sought to build a mosque for his troops. The Frankish and Byzantine occupations brought in Greek Orthodox and Latin hierarchies, which survived under Armenian rule. The dominant hierarchy and religious community was that of the Armenian Orthodox Church, which held an anomalous position. In 1151 Patriarch Gregory III transferred the seat of the Cilician patriarchate to Hromgla (mod. Rumkale). The territory around the castle soon fell to the Turkish emir Nūr al-Dīn, yet the patriarchate continued to exercise authority over Armenian churches throughout the Levant. It was only in 1292 that the Mamlūks sacked Hromgla and forced the patriarchate to move. Thus, while the patriarchs dominated Cilicia ecclesiastically, they remained in residence in Muslim-ruled Syria.

The church also had to deal with political and religious pressures to Latinize. The establishment of Cilicia as an Armenian kingdom recognized by Western monarchs was dependent on the nominal union of the Armenian and Latin churches. Some influential Armenian clerics were enthusiastic for the union, such as Nerses of Lampron. The many intermarriages between the Armenian and Frankish aristocracies fostered familiarity with Latin customs but also provoked fears that Armenian identity would be lost within the Latin Church. Frankish influence could also be seen in Armenian art, where Western images, such as the depiction of Jesus as the Lamb of God, appeared in Gospel manuscripts.

Cistercian Order

A monastic order, also known as the Order of Cîteaux, founded in 1098 under the leadership of Robert of Molesme.

The new monastery at Cîteaux in Burgundy, from which the order's name was derived, exemplified residence in the wilderness, where monks vowed to conduct a simple life in poverty, rededicating themselves to a strict interpretation of the Rule of St. Benedict of Nursia. The order's foundation coincided with the capture of Jerusalem by the First Crusade (1096–1099), and under the leadership of Bernard, abbot of Clairvaux (d. 1153), the Cistercians began to engage in a far-reaching reform movement that included the crusade. The order expanded rapidly and widely, founding houses from northern England to Scandinavia, from Spain to Greece and Outremer. By the end of the order's first fifty years, the

number of Cistercian abbeys had grown to about 350, and by 1200 it had increased to more than 500. Foundations extended to areas of key importance to the crusades: the abbey of Belmont, established near Tripoli in 1157, founded a daughter house, St. John in the Woods, at 'Ain Karim in 1169. Near Jerusalem, Salvation monastery was established in 1161. Twelve houses were acquired in the Latin empire of Constantinople and Frankish Greece between 1204 and 1276, nine of which were lost. In southern France, twenty-four monasteries were founded between 1135 and 1160.

Bernard of Clairvaux

The order's collaboration with the papacy intensified during the time of Abbot Bernard of Clairvaux. He championed the election of Pope Innocent II against his rival Anacletus in the 1130s. By 1145, Eugenius III, originally a monk from Clairvaux, occupied the Holy See and was collaborating with Bernard to engineer a program of ecclesiastical and social reform. Bernard set the course for Cistercian involvement with crusading in four principal endeavors: (1) the order's vast expansion into frontier regions; (2) support of military religious orders, notably the Templars; (3) preaching against heresy in southern France; and (4) preaching the Second Crusade (1146).

Bernard laid the theological groundwork for crusading and the military orders in the tract *De laude novae militiae*, written in the late 1120s. Bernard supported the Templars, whom he described as soldiers of Christ (Lat. *milites Christi*). As monks who took the traditional monastic vows, the white-robed Templars wielded both the secular and the ecclesiastical swords represented in Luke 22:38. They were to undertake the crusade as a penitential pilgrimage, an opportunity for personal reform that could mean achieving salvation through martyrdom. Bernard confessed that he did not know "if it would be more appropriate to refer to them as monks or soldiers, unless perhaps it would be better to recognize them as being both" [*In Praise of the New Knighthood*, p. 140]. Like the Cistercians, the Templars lived a communal life and relied on sergeants, much like the Cistercian lay brothers (Lat. *conversi*) who were not full members of the order but helped with various aspects of daily life and benefited from protection and the promises of spiritual rewards.

The Cistercians were instrumental in founding another military order: the Order of Calatrava. Raymond, Cistercian abbot of Fitero in Navarre, assembled monks and lay broth-

ers, including former knights, to take arms and defend the castle of Calatrava. King Alfonso VII of Castile had been struggling to hold out against the Almohads; the Templars requested release from the responsibility of the castle's defense, and Alfonso's son Sancho III granted it to Abbot Raymond in 1158. The Cistercian general chapter established a formal bond with Calatrava six years later, which was approved by Pope Alexander III in September 1164. The 1187 general chapter agreed to incorporate Calatrava fully into the Cistercian Order and affiliated it with the abbey of Morimond.

With the encyclical *Quantum praedecessores* (1145), Eugenius III launched the Second Crusade (1147–1149), which Bernard of Clairvaux preached at Vézelay the following year. In the intervening months, Bernard undertook a preaching mission to southern France, led by the legate Alberic of Ostia and accompanied by Bishop Geoffrey of Chartres, who had joined Bernard at the Council of Pisa in 1135, where the heresiarch Henry of Lausanne (also known as Henry the Monk) had been condemned. Reports of Henry's reappearance in southern France and an alarming letter about heretics in the Rhineland from the Premonstratensian prior, Evervin of Steinfeld, prompted Bernard to action against the "little foxes" ravaging the Lord's vineyard (Song of Songs 2:15). Bernard's reply to Evervin in Sermons 65 and 66 on this verse (1143/1144) advocates catching the foxes (the heretics) with arguments and not arms, asserting that faith is to be persuaded and not forced. Nonetheless, Bernard's Letter 241, written before departure for southern France, vehemently denounces Henry as Satan's ally and a threat to Christian society. In pursuit of Henry, Bernard journeyed from Poitiers to Bordeaux to Cahors, Périgueux, and Toulouse. Cistercian sources (the life of Bernard by Geoffrey of Auxerre and the *Exordium magnum*, an account of the order's early years, probably by Conrad of Eberbach) recount Bernard's preaching at Sarlat, Verfeil, and Albi. Although the abbot abandoned Verfeil in frustration at the noisy crowd that refused to allow him to be heard, the accounts generally depict conversions and rousing sermons that expounded and denounced heretical beliefs. The mission marked an advance in centralizing responsibility and securing outside intervention for quelling heresy, and it established a precedent for depriving heretics and their supporters of legal rights. Hence it proved instrumental in the expansion of the crusade ideology to campaigns against heresy, and it provided a model for later Cistercian abbots

who exercised much less restraint than Bernard. Furthermore, Bernard's Sermon 66 leaves the door to violence ajar when he both denounces mob violence against heretics and applauds the mob's zeal, alluding to Romans 13:4.

Following the expedition to southern France during the summer of 1145, Bernard preached the Second Crusade at Vézelay in March 1146. The papal encyclical *Quantum praedecessores* (December 1145) had espoused Bernard's theology of sacrificial service by appealing to an ideal of charity as the grounds for knights' engagement to free the Holy Land of infidels. Taking the cross, along with contrition and confession of sins, would achieve indulgence and eternal salvation for those who completed the journey or met martyrdom on the way. The encyclical was reissued in March 1146 to support Bernard's preaching at Vézelay, where he reportedly tore up his own robes in order to provide sufficient cloth for the enthusiastic crowd to put on crosses. Little evidence remains for what Bernard actually said at Vézelay, but his Letter 247, addressed to Eugenius III, reported successes as he continued preaching across France and into Flanders. By Christmas 1146 he had reached the court of King Conrad III of Germany at Speyer, where he persuaded him and other princes to take the cross. Another goal of Bernard's journey to Germany was the disciplining of the Cistercian monk Ralph, who had been preaching the crusade without authorization and arousing enmity and violence against Jews. Bernard's pursuit of Ralph by letters, then summons and the order to return to his monastery, illustrates the boundaries the abbot set on clerical participation in crusading activities. Preaching the cross required authorization. Moreover, monks who embarked on crusade were rebuked sharply and threatened with excommunication.

Other Cistercians had joined Bernard in preaching the Second Crusade, and chroniclers indicate that Bernard and the Cistercian Order suffered criticism for their involvement. Some historians assert that this led to a decline in donations to the order and to curtailment of its expansion. Cistercian apologists for Bernard, such as Otto of Freising, Geoffrey of Auxerre, and John of Casa Maria, argued that the crusaders' defeat was punishment for their sins but that the many who died were delivered from sinning further. Although, after the failure of the Second Crusade, Bernard advocated the call for another crusade and advised Eugenius III to back it, he strongly rejected a nomination to lead the expedition himself.

Crusade and Expansion after Bernard of Clairvaux

Later Cistercians followed Bernard's example of preaching and intervention in crusading campaigns directed at domestic enemies and to the Holy Land. Some seized on the ambiguities in his thought and disregarded the boundaries he set against monks' leading armies. Where Bernard had shown hesitancy, Henry of Clairvaux showed little. Abbot of Clairvaux (1176–1178) and an influential figure at the Third Lateran Council (1179), where he was named cardinal bishop of Albano, Henry participated in a preaching mission to southern France in 1178 and interrogated Waldes of Lyons, initiator of the Waldensian movement, in 1180. In 1181 Henry became the first papal legate to himself raise an army and lead an expedition into a Christian land, when he took the castle of Lavaur, northeast of Toulouse, by force. The unfortunate precedent he set helped to lay the basis for the future Albigensian Crusade called by Pope Innocent III. Yves Congar observed that under Henry's leadership the crusade had been transformed into a holy war against heretics [Congar, "Henri de Marcy, abbé de Clairvaux," p. 18]. A candidate for the papal elections of 1187, Henry withdrew and offered his services to preach the crusade to the East. He travelled across northern France to Germany, where at Mainz he preached the crusade in March 1188 and exhorted German knights to take the cross and make satisfaction for their sins. After the fall of Jerusalem (2 October 1187), Henry completed *De peregrinante civitate Dei*, a manifesto of crusade ideology. He criticized Christians who were not sufficiently concerned with the plight of the Holy Land. They should feel a sense of personal loss and view the desecration of holy sites as a second Crucifixion and Saladin as a manifestation of the devil. The crusade was a necessary step in the fight against evil. Henry died on 1 January 1189 without ever journeying to the Holy Land.

In England, the Third Crusade (1189–1192) was preached by Baldwin, archbishop of Canterbury and former Cistercian abbot of Ford. Between 1188 and 1190, Baldwin preached the cross for King Henry II. He led a reportedly successful preaching campaign into Wales, which was described by the contemporary chronicler Gerald of Wales (Giraldus Cambrensis), who accompanied him there. Baldwin himself took the cross and died at Acre in 1190.

In contrast, some criticism of the crusade movement came from English Cistercian circles around this time. Toward the end of the twelfth century, Ralph Niger, who was certainly a cleric and possibly a Cistercian, questioned

the legitimacy of a crusade to the Holy Land in his work *De re militari et triplici via peregrinationis Ierosolimitane*. Ralph argued against the use of violence to propagate the faith and asserted that Christians ought to stay at home and fight heresy rather than interfere in other regions. What good would it do, he asked, to free Palestine when the faith at home was being trampled? The departure of leaders to the East allowed heresy to proceed unchecked in the West. In Ralph's view, the sins of Christians in Palestine had brought about its loss. He even questioned whether God wanted the Muslims' rule to end there. John, abbot of Ford, perhaps voiced his own criticism of the crusade through the words of the hermit Wulfric of Haselbury, whose life he wrote around 1185. According to Wulfric, God judged the enterprise harshly, "abandoned the false pilgrims, shaved the heads of the proud, and shamed the great men of the world because they sought not the Lord in truth but polluted the way of pilgrimage in idols" [*Wulfric of Haselbury by John, Abbot of Ford*, ed. Maurice Bell (n.p.: Somerset Record Society, 1933), p. 112].

When Innocent III became pope in 1198, his efforts at broad reform, including crusades ranging in their goals from Iberia to Livonia and the Holy Land, led him to seek the intellectual, pastoral, and financial aid of the Cistercians. In 1198 the pope proclaimed the Fourth Crusade (1202–1204) and ordered Luke, abbot of Sambucina in Calabria, to preach the cross in Sicily. Innocent III appealed to the Cistercian general chapter in Cîteaux for prayers; his legate, Fulk of Neuilly, appeared there to recruit Cistercians to preach the crusade to the Holy Land. In November of the same year, Fulk was authorized to recruit monks and canons for preaching, and he secured the assistance of Garnier of Rochefort, bishop of Langres and former abbot of Clairvaux. In 1200 Innocent III instructed several abbots to collect offerings from their dioceses, and he repeatedly negotiated with the Cistercians over contributions to the crusade. In 1201 he ordered Cistercian abbots to insist that lay brothers who had taken the cross should maintain their pledges. By 1201 Fulk had received papal permission to name the Abbots of Perseigne, Cercanceaux, and Vaux-de-Cernay as his assistants. Guy of Vaux-de-Cernay, a friend of the crusader Simon of Montfort, accompanied the armies, as did abbots Simon of Loos and Peter of Locedio. The chronicler Geoffrey of Villehardouin records Abbot Guy's opposition to the crusaders' attack on Zara (1202) and the deviation of the expedition to Constantinople (1204).

Martin, abbot of Pairis in Alsace, also preached the Fourth Crusade. A valuable report on Abbot Martin's sermon at Basel was preserved in the *Historia Constantinopolitana* by his chronicler Gunther. Martin strove to recruit soldiers for the necessity of Christ (Lat. *necessitas Christi*), evoking not only spiritual rewards but material benefits awaiting them in a rich and fertile land. Martin himself reportedly returned home in 1205 from the sack of Constantinople with relics from the Church of the Pantokrator.

After the establishment of the Latin Empire of Constantinople, donations were made to the order there, and its monks also took possession of Greek monasteries. Important donations included Chortaiton, near Thessalonica; St. Archangelus on Negroponte (Euboea); Daphni, between Athens and Eleusis; and Gergeri and St. Mary Varangorum on Crete. Established near Constantinople were the abbeys of St. Stephen and St. Angelus in Pera, and the monastery of nuns at St. Mary of Percheio. The ruins of two monasteries, which were probably Cistercian, remain on the Peloponnese: Zaraka and Our Lady of Isova. From these widespread houses, Cistercians served as papal agents in the East, assisting in the problematic relationships between the Latin patriarchs of Constantinople and the papacy and acting as administrators and overseers to the point of twice (1224 and 1236) collecting taxes that the pope had imposed for defending the Latin Empire. After 1240, the Cistercian role in the East diminished, and the friars took the forefront in dealing with the Latin empire. Contact between Cistercians in the West and those in Greece and the Latin Empire continued until 1276, when the only Cistercian foundation remaining on the mainland of Greece was Daphni.

The Albigensian Crusade (1209–1229)

Even though Innocent III emphasized the importance of the crusade to the East over the domestic crusade, the Albigensian Crusade against heresy in southern France at times achieved the status of the crusades to the Holy Land: plenary indulgences were awarded; crusaders were promised protections; and extensive measures were undertaken to recruit and finance the operations. The Cistercian legates Peter of Castelnau (d. 1208) and Ralph of Fontfroide were appointed for southern France in 1203. They were joined in 1204 by Arnold Amalric (d. 1225), former abbot of Grandselve (1198–1200), elected abbot of Cîteaux in 1200 and archbishop of Narbonne in 1212. Innocent III sent repeated letters urging the frustrated legates to keep to their

task, and in 1206 the pope's letter and Arnold Amalric's personal appeal to the general chapter prompted the sending of a delegation of twelve abbots and numerous monks to the region. Among them was Guy of Vaux-de-Cernay, uncle of the chronicler Peter of Vaux-de-Cernay and preacher of the Fourth Crusade. Dominic Guzman, founder of the Dominican Order, also joined the preachers in the summer of 1206, but their efforts met with failure. The assassination of Peter of Castelnau in 1208 led the enraged pope to call for armed intervention; a letter called on Philip II Augustus, king of France, to join the material and spiritual swords (Luke 22:38) to destroy heresy and force repentance from Raymond VI, count of Toulouse, whom Innocent III presumed to be responsible for the murder of Peter of Castelnau.

Battles eclipsed sermons during the Albigensian Crusade, but Cistercians still engaged in preaching, whether to exhort troops, recruit new forces, or attempt to convert heretics. Arnold Amalric headed the crusade army at the infamous sack of Béziers (1209) and diverted troops to Las Navas de Tolosa in Iberia, where his intervention aided the Christian army's victory over the Almohads (1212). Fulk, bishop of Toulouse (d. 1235) and former abbot of Le Thoronet, spent fifteen of his years as bishop in exile. He preached recruitment sermons in the north, where on his second trip (1213), he met James of Vitry and influenced his engagement in preaching the Albigensian Crusade. Fulk established a corps of diocesan preachers in Toulouse, including Dominic Guzman and his companions, and attended the Fourth Lateran Council (1215). A close ally of Simon of Montfort, he accompanied the crusading armies and led troops himself to intervene at the siege of Lavaur (1211). In the late years of the crusade, Conrad of Urach, abbot of Cîteaux, and Nicolas of Claromonte were appointed legates in 1220 and 1223. Hélié Garin, abbot of Grandselve, played a role in negotiating the 1229 treaty, and with Hélinand, monk of Froidmont (d. 1237), he helped to establish the university of Toulouse. The monasteries of Grandselve, Belleperche, and Candeil received reparations from the treaty, an indication of the damages inflicted on monasteries that probably served as bases for crusaders.

The Baltic Region

At the time of the Second Crusade, Bernard of Clairvaux became involved in the affairs of the Baltic region. King Conrad III and other German princes had been reluctant to

depart on crusade and place their armies and lands at risk of attack from the Wends, marauding tribes who had launched numerous raids on Denmark and Germany. Bernard called for a crusade against the Wends in 1147, ordering that no truce should be made with them “until such a time as, by God’s help, they shall be either converted or wiped out” [*Letters*, p. 467]. Moreover, Bernard had pressed for the Cistercians to expand into the northern lands of Scandinavia.

Cistercians performed key roles in the Christianization of the Baltic lands and in the complex interplay among missions, defense, and expansion in Denmark, Poland, and Prussia. The Danish conquest of pagan lands allowed the founding of Cistercian monasteries at Dargun (1171–1172) and Kolbaz (1174). In Poland, Oliwa was founded near Danzig (1186), and Christian of Oliwa headed missions to Prussia. Innocent III called upon the Cistercians in 1212 to support the missionary activity in Prussia. Christian, named bishop of Prussia in 1225–1216, established the Order of the Knights of Christ (Knights of Dobrin) and organized armed expeditions in the Prussian campaign.

The chronicler Henry of Livonia records the arrival of German missionaries and the events surrounding the conversion of Livonia in the 1180s. Dietrich, a Cistercian missionary who arrived with Meinhard, first bishop of Livonia (1186), founded the Order of the Sword Brethren in 1202 and was consecrated bishop of Estonia in 1211. Berthold, Cistercian abbot of Loccum, served as the second bishop of Livonia at Üxküll (mod. Ikšķile, Latvia). Albert of Buxhöden, consecrated bishop of Livonia in 1199, established Riga as the bishop’s residence and obtained from Innocent III in 1215 the right to preach a perpetual crusade. In Livonia Cistercian monasteries were founded in Dünamunde (mod. Daugavgrīva, Latvia) in 1205–1206 and near the episcopal city of Dorpat (mod. Tartu, Estonia) in the mid-1220s, while a house for nuns was established in Reval (mod. Tallinn, Estonia) in the late 1240s.

The Cistercians in the Later Middle Ages

Although the responsibility for preaching the cross had passed primarily to the friars by the 1220s, Honorius III recruited the Cistercian abbots of Aquebelle and Lützel among others in 1224–1225 to preach the Crusade of Frederick II. Cistercians continued to play some part in the campaign against heresy. The inquisitor Jacques Fournier had been a monk at Boulbonne and abbot of Fontfroide, a

monastery that achieved prominence during the Albigensian Crusade. Two Cistercians at Oxford, Henry Crump and William Rymington, opposed John Wyclif’s teachings, and some Cistercians were expelled from the University of Prague when the Hussites took control. The extent to which these Cistercians continued the crusading rhetoric of their predecessors has not been examined.

Clement IV (d. 1268)

Pope (1265–1268). Clement IV was born at the end of the twelfth century in Saint-Gilles-du-Gard (Languedoc) as Guy Foucois (Gui Foulques).

After the study of law in Paris, he became a legal counselor to Count Alphonse of Poitiers and King Louis IX of France. He was repeatedly entrusted with *enquêtes* (judicial inquiries) and thus came into contact with the Inquisition in the Languedoc. As a result he wrote (around 1260) a manual for inquisitors, the *Questiones quindecim ad Inquistores*. After the death of his wife, he began an ecclesiastical career, becoming bishop of Le Puy (1257), archbishop of Narbonne (1259), and cardinal bishop of Sabina (1261). Although a legation to England failed in 1264, he was elected pope on 5 February 1265 and crowned ten days later.

Clement’s pontificate stood under the shadow of having to resolve the question of the succession to the kingdom of Sicily, left open after the death of his predecessor Urban IV. Clement succeeded in imposing stricter feudal obligations on Charles I of Anjou, and, although his policies were crowned with success by the investment of Charles with the kingdom of Sicily on 28 June 1265, he was faced with several setbacks because the king often failed to meet his obligations. Different projects for a crusade were never realized during his pontificate, but Clement succeeded in strengthening papal control of the church by reserving all vacant prebends to the pope (in the constitution *Licet ecclesiarum* of 1265). He died

on 29 November 1268 in Viterbo, where he had continued building the famous papal palace.

Clement V (d. 1314)

Pope (1305–1314). Bernard of Got was born around 1255 as the son of an influential family of Gascony; he became pope under the name Clement V after an eleven-month interregnum following the death of Benedict XI.

As a former archbishop of Bordeaux, Clement had been a major ecclesiastical vassal of the kings of England, whose political interests he advanced. His close relations with Edward I and Edward II of England reflect a main goal of his pontificate; namely, papal cooperation with the leading monarchs of Christendom as a prerequisite for the launching of a new crusade.

Often blamed for having surrendered the papal Curia to the control of Philip IV of France, especially during the scandalous trials of Boniface VIII and the Templars, Clement actually succeeded in rescuing the papacy from the political impasse fostered by his predecessor while creating a propitious basis for the participation of France in the crusade. Still, collaboration with the Christian princes had its cost, and the disgraceful trial and subsequent suppression of the Order of the Temple may be regarded as a price that the pope had to pay. Reluctant to corroborate the charge of heresy following the arrest of the Templars in France, Clement gradually surrendered and collaborated with the policy of Philip the Fair. Thus, it was the pope who brought about the arrest of the Templars throughout Christendom, and it was he who eventually forced the prelates of the church to support the abolition of the order by apostolic mandate at the Council of Vienne (1312).

Elected to the papacy fourteen years after the fall of Acre (mod. ‘Akko, Israel) to the Mamlūks, Clement devoted his curial policy and resources to the implementation of a new crusade. The pope’s original scheme was based on a double

alliance with the kings of France and Naples. The poor motivation of the Christian princes at the beginning of his pontificate, however, eventually encouraged Clement to appeal to the military orders as the traditional allies of the papacy in Outremer. After the dissolution of the Order of the Temple, the papal designs were essentially directed to the Order of the Hospital of St. John.

On 11 August 1308, Clement proclaimed a Hospitaller *passagium particulare* (that is, a limited crusade), the aim of which was to strengthen the defenses of Cyprus and Cilicia (Lesser Armenia) and to obstruct illegal Christian trade with the Muslims in the Mediterranean. Early in 1310, a fleet of twenty-six galleys departed eastward under the leadership of Fulk of Villaret, the master of the Hospital, and with the participation of the papal legate, Peter of Pleine Chassagne. This first Christian expedition to Outremer since 1291 contributed a suitable basis for launching future crusades while consolidating the order's dominion in Rhodes, the conquest of which had begun in 1306. The Hospitaller crusade further facilitated the transfer of the order's headquarters to the island, where it remained until 1522.

Itinerant during the first years of his pontificate, Clement never went to Rome, because of his precarious health and his desire to oversee the peace negotiations between France and England. Although he fixed his residence in Avignon only in 1309, and resided there for just 160 days, Clement V is considered as the promoter of the protracted stay of the papacy in Avignon, which lasted up to 1378. Of a pleasant character, he did not stand up to the demands of his relatives and friends, thus coloring his nominations with a nepotistic character. In the longer term, this policy fostered the Gallianization of the Roman Curia.

Clement V died on 20 April 1314 before being able to crystallize plans for a general crusade, for which he had enlisted Christian princes and the church's resources at the Council of Vienne.

Clermont, Council of (1095)

A church council held at Clermont (mod. Clermont-Ferrand, France) in the Auvergne (18–28 November 1095), at which Pope Urban II called on nobles and knights to liberate the Christians of the East from the Turks. This expedition, which has since come to be known as the First Crusade (1096–1099), can be regarded as inaugurating the crusade movement.

Urban II was able to return to Rome in 1093 after his imperialist rival, Clement III (Guibert of Ravenna), withdrew from the city. Two years later the pope left Rome on an extended journey to France, planned at least since 1091 as part of a wider plan of calming the unsettled state of affairs in the church in the aftermath of the death of Pope Gregory VII (1085). The Council of Clermont had originally been planned for Vézelay, then for Le Puy, but by the summer of 1095 Urban had summoned the bishops of France and some of the surrounding areas to meet at Clermont. All of the sessions except the final one took place either in the cathedral of Clermont or in the suburban church of Notre-Dame-du-Port. Among the ecclesiastical participants, of whom either 182 or 184 are known by name, were many representatives from French sees, but the Italian delegation (which included the papal entourage) and the Spanish delegation were also very numerous.

Urban II was focused on the reform of the French church, as revealed by the legislation of the council; also of prime importance was the settlement of the marital problems of King Philip I of France. The assembly decided at least 61 decrees or canons, including the renewal of Urban's legislation from his earlier synods, and concluded several lawsuits, as was usual at councils of this period.

The crusade to the East was not proclaimed until the speech with which Urban concluded the council (27 November 1095). It was made outdoors in order to accommodate the great throngs of clergy and laity and men and women of all ages and classes who had come to hear the pope. No official record of the papal address has been preserved.

Clermont, Council of (1095)

Urban II preaching the First Crusade at the Council of Clermont. In contrast to the portrayal in this fourteenth-century miniature painting, the sermon took place outdoors. (Archivo Iconografico, S.A./Corbis)

Accounts of it were given in chronicles later written by Robert of Rheims, Baldric of Dol, Fulcher of Chartres, and Guibert of Nogent, but it is uncertain which one of these reflects most accurately what Urban actually said.

Nevertheless, it is clear that Urban called on the Christians of the West to come to the aid of fellow Christians in the East who were victims of the invading Saljūq Turks and whose churches had been destroyed. Like his immediate predecessors, Urban had long been interested in the relationship between the Greek and the Latin churches, a problem that was urgent as far as southern Italy and Sicily were concerned, but the idea of military assistance for the Byzantines

probably had not arisen before an embassy from the Byzantine emperor Alexios I Komnenos approached the pope at the Council of Piacenza in March 1095. There can be no doubt, though, of the overwhelming and unexpected success of Urban's call. A huge number of those present came forward to ask permission to go to the East: they included Adhemar, bishop of Le Puy, and representatives of Raymond IV of Saint-Gilles, count of Toulouse.

The canons of the council would have been recited in one of the closing sessions. It is unknown whether participants received copies of the decisions or took notes during the lengthy reading; in any event, some participants did copy

what was of interest to them and brought these texts back home, omitting the rest of the legislation. Some of this material was then included in the canonical collections or in chronicle narratives and has thus survived in different forms; additional stipulations may well have been lost, and the number sixty-one arrived at by Robert Somerville should be considered a minimum. No single official record is still extant, although Somerville, who edited the texts from several different manuscript families, could show that ten of its decrees appear to have been preserved in an official style, thus indicating official records of the Roman Curia as the most likely original source. But the official canons of Clermont probably never circulated as a group. Bishop Lambert of Arras and his entourage returned from the council with extensive, varied materials, some of which have been preserved in a document named after Lambert, the *Liber Lamberti*. It opens with a canon promulgating a Peace and Truce regulation for monks, clerics, women, and those who accompanied them. The second item is the famous decree granting a penitential indulgence as reward for having undertaken the journey to Jerusalem to those who “purely on the grounds of faith, not for the sake of glory or money, set out for Jerusalem in order to free the church of God” [Somerville, *Councils of Urban II*, p. 74]. One other decree transmitted elsewhere placed the goods of crusaders under the protection of the Peace of God.

The majority of the canons, however, confronted issues that were relevant in the context of the eleventh-century church reform, such as the prohibition of liege homage by bishops or priests to the king or any layman, of investiture with ecclesiastical honors by kings or laymen, and of the possession of altars by laymen, as well as the prohibition of simony (the payment of money for spiritual gifts) and of clerical marriage or concubinage; the sons of such unions were not to be promoted to ecclesiastical offices unless they became monks. To the faithful in general the eating of meat during Lent was prohibited; traditional rights of asylum were upheld; marriages were prohibited within seven degrees of consanguinity. It is obvious that Urban set out to reform the moral as well as the institutional life of Christianity in general; the call for the armed pilgrimage to Jerusalem formed only part of his program, yet it had the widest echo.

Communications

The ability to communicate on the highest level is a basic manifestation of the social nature of humankind and, as such, differentiates humans from animals. Being an interpersonal process, communication requires a shared code of symbols and some standardized usage; words are convenient codes by which people share meaning. Communication may therefore be defined as a symbolic behavior that occurs between two or more participating individuals. It is a transactional process, affective, and purposive, and it implies goal-directed behavior, which may have instrumental or consummatory ends.

Accepted values are shaped and distributed in every society according to communication's distinctive institutional patterns. Though traditional societies did use and develop communication, they did not require a skilled, professional network of the kind they develop nowadays; nor was communication essential to the economy or the production process. Communication in traditional societies (in contrast to the anonymity of the audience inherent in electronic mass media) was in most cases characterized by immediate contact between communicator and audience.

Conceptualization of Communication in Medieval Society

In medieval society, communication was further conditioned by the isolation of one group from another within the hierarchy of the feudal system. The feudal pyramid provided, in this regard, a communication pattern in which the amount of information assimilated by different social strata was determined by their socioeconomic status and the political functions they fulfilled. Whereas peasants or craftsmen contented themselves with scanty information, the sociopolitical elite—both lay and ecclesiastical—dealt with a considerable range of reports. Many of its members were well aware of the fact that the faster information was received, the more accurately it could be translated into political practice. Accordingly, they tried and to a certain degree succeeded in developing communication channels of limited scope. The prevailing political and socioeconomic conditions thus justify a different conceptualization of communications in medieval society when everyday practices assumed the significance of communication channels. The use of the term *media* with regard to the Middle Ages thus refers to the different means of communication elaborated at the time, without the socioeconomic implications they acquire in modern society. The essential liaison among the different media further means that they cannot be categorized according to institutional patterns alone.

The Contribution of the Crusades to the Communication Network

Alongside other factors, the crusades may also be regarded as an outcome of communication, their success conditioned on the convincing transmission of ideological tenets and, in parallel, the supply of viable solutions to changing needs. In this regard, the success of the First Crusade (1096–1099) remains *sui generis* because of the extensive and immediate positive response it received prior to the date set by Pope Urban II to depart overseas at the Council of Clermont in 1095. Some contemporary chroniclers approached the wide diffusion of the papal call within a very short period of time in terms of divine intervention. Urban II himself hinted at more conventional means of transmission, such as preaching and correspondence. The propaganda success of the First Crusade thus does not indicate the relative proficiency of communication channels at the time but, first and foremost, the appeal of Christian values and images to the average eleventh-century believer, such as those of holy war and the Holy Sepulchre, endlessly repeated for generations.

From its very beginnings, preaching was the main channel utilized to propagate the crusade. Whether in the framework of great assemblies or small meetings, inside palaces and strongholds, churches and cathedrals, or in the open air, the aim of crusade propaganda was to bring about an immediate response while inducing the faithful to take up the cross. Urban II himself preached at Clermont, Angers, Tours, and Limoges as well as other locations. Peter the Hermit concentrated his efforts in small towns and villages in northern France and the Rhineland, thus turning the urban population into the main target for recruitment. On the eve of the Second Crusade (1147–1149), Bernard of Clairvaux, too, preached the crusade in the urban centers of France, Lotharingia, Flanders, and Germany. Contemporary sources emphasized the fact that Bernard was able to preach in French and Latin, but his listeners in the empire, who were ignorant of these languages, were captivated by the saint's words as though they were spoken in German. While preaching the Third Crusade (1189–1192), Gerard of Wales admitted that he spoke in Latin and French to Welsh people, whose knowledge of these languages was almost nil. Perhaps because of this fact, he further claimed that the main importance of a crusade sermon did not lie in its content but in the way it was delivered and the emotions it raised. Universal weeping and, as much as possible, miracles were considered fundamental to the success of crusade preaching.

But miracles were not always at the disposal of Christian preachers, who had to cope with the heterogeneous character of their audiences. Many listeners did not understand Latin, and the itinerant character of preachers did not make communication with local audiences any easier. The experiences of Bernard of Clairvaux and Gerard of Wales make it clear that besides linguistic knowledge, body language and mass suggestion played crucial roles. The need to develop suitable substitutes further fostered the use of audiovisual channels of communication, such as loud voices, songs (mostly in the vernacular), bells, processions, public prayers, ornaments, and gestures, all of them devoted to enhancing the crusade.

Beyond the pan-European level, the crusades confronted Christendom with the challenge of developing efficient channels of communication with those who departed overseas, a rather difficult goal in itself because of the heterogeneous character of the crusader armies. The chronicler Fulcher of Chartres, writing of the First Crusade, emphasized the mixture of languages in one army. Linguistic barriers also drove

a wedge among those who restored Lisbon to Christian rule during the Second Crusade (1147). Obviously, the encounter with Eastern Christians and Muslims did not make communication any easier, given both the lack of bilingual skills and the almost complete ignorance of the average westerner about the Eastern populations and their culture or faith.

The existence of a common Christian faith did not bridge the sociocultural gap between crusaders and the Byzantines, nor did it make communication with the Byzantine emperor and his delegates any easier. By the tenth century, Byzantium had reached an advanced stage in the transmission of information. Its naval power gave the empire a valuable means of rapid communication, enabling it to organize its diplomacy over a wide area and to exploit more readily opportune developments in districts near the sea. In contrast to the communication developments in the Eastern empire, Western Christendom was at a more archaic stage. By the late eleventh century, European society had yet to develop communication channels beyond elementary contacts in the framework of feudal bonds or intermittent commercial links. The church, with the papacy at its head, was at the forefront of communication techniques, whether in the framework of the diocesan system or in the wider context of such movements as the Peace of God, the Truce of God, and the Gregorian Reform. Although the papacy contributed the legatine system (with legates actively participating in the crusades) and turned church councils into the main arena for crusade planning and propaganda, these two means could hardly cover the various and changing needs that affected both shores of the Mediterranean.

Alongside the many challenges facing communication between Western Christendom and those who departed to the East, on the one hand, and among the crusaders, Muslims, and Byzantines, on the other, the colonial character of the Frankish states in Outremer made it imperative to find the most efficient channels with western Europe, which throughout the crusader period remained the major supplier of manpower and logistical assistance. An analysis of the Second Crusade, however, indicates that Western society still had not solved communication difficulties, especially in the field of message transmission, an unfortunate state of affairs that left its mark on the path of future developments. Thus, news of the fall of Edessa (mod. Şanlıurfa, Turkey) in December 1144 was delivered to the Curia by messengers from Antioch (mod. Antakya, Turkey) a little less than one year later. The arrival of this delegation prompted Pope

Eugenius III to react immediately, and the first bulls calling for a new crusade were dated 1 December 1145. The Christian armies, however, left Europe only in April 1147, almost eighteen months after the papal call, and almost two and a half years after the fall of Edessa.

The considerable delay in the departure of the crusader armies appears to be the rule from the second half of the twelfth century onward, when the urgent needs of the Frankish states in Outremer encountered a slow response, if any, among the Western leaders. Besides the slowness in the transmission of vital information, the dependence on feudal routines (which were per se slow and complex) made it difficult, if not impossible, to offer an immediate response to the calls for help from the Levant.

Being the main “consumers” of communication practices, crusade leaders tried and to some degree also succeeded in circulating up-to-date reports of their situation, notwithstanding the archaic communication channels at their disposal. They failed, however, to resolve the long delays in transmission, so that the considerable gap between actual developments and their reception in the West neutralized even more the fragile cohesion between the two shores of the Mediterranean. Some examples may clarify the slowness of transmission that was the rule even when very important considerations were at stake: The disastrous defeats of the Second Crusade, conveyed orally or through letters carried by deserters and released prisoners, became known in Europe toward the end of 1147. In turn, the news of Emperor Henry V’s death in Germany (23 May 1125) and his succession by Lothar III of Supplingenburg was delivered to Jerusalem by pilgrims almost one year later on Easter Day (11 April 1126). Emperor Frederick I Barbarossa dispatched a letter to Outremer detailing Saladin’s policy only in July 1187; its contents, however, were publicized in Germany eight months earlier (23 November 1186).

Limitations of Medieval Communication

The delays in information transmission, which were often but not only caused by technical factors such as the limitations of navigation, brought about the indiscriminate reception of information both in Europe and Outremer, with complete disregard for its reliability. The lack of trustworthy information sources further favored the spread of rumors, an integral component in traditional societies and a most important channel of information or, rather, misinformation transmission. The “news” about the Mongol

conquest of the Holy Land in 1300, for instance, reached Europe a few months after the supposed event, accompanied by additional rumors of the Mongols' readiness to entrust the land into Christian hands following their expected conversion.

Though the lack of reliable information appears to have been most crucial in regard to current events, it also affected geographical knowledge about the Holy Land and neighboring areas, which remained rather poor. Still, the pursuit of information about the places where Christ lived and was crucified caused contemporary chroniclers to offer some data about the soil, the fauna, and the flora of Outremer, gradually weakening its former mystical essence. This tendency matured in the second half of the twelfth century with the diffusion of *Itineraria*, that is, reports written by pilgrims for the sake of those who wanted to follow the footsteps of Jesus and the apostles in the Holy Land. The itineraries provide a good example of the transitional stage of communication in the crusader period: there was a new awareness of the need for information, though it did not bring about significant improvement in either communication channels or the accuracy of the messages transmitted.

If the average twelfth-century person could cope with the relative stagnation of information, the situation was quite different for the political elite, both lay and ecclesiastical, because of the complex links between the two shores of the Mediterranean. Princes, the masters of the military orders, and prelates appear to have been the most important communication consumers, their actions and interests spreading beyond the near neighborhood. They played a leading role in the development of a communication network while fostering what might tentatively be categorized as a "communication-oriented society."

Communication Channels

Letters (very often in the framework of diplomatic missions) also served as a main communication channel. Bernard of Clairvaux complemented his preaching of the Second Crusade with dozens of letters, through which he tried to extend his influence throughout Christendom, especially among the nobility. Correspondence became common practice among the Franks in their dealings with the West and with the Muslim and Byzantine political elites as well. Although available information does not offer satisfactory data about the time of reception, this interchange indicates an average of about four to six months for the exchange of letters between Byzan-

tium and Antioch, Jerusalem, or Acre (mod. 'Akko, Israel). Although letter-exchange was efficient, relatively speaking, across short distances within the Levant, it encountered many difficulties when attempted between western Europe and the Latin East. The maritime journey was relatively short, lasting from fifteen to twenty-five days, with favorable winds, and only during specific seasons. Still, the length of time required for the transmission of information remained a critical problem throughout the whole period of the crusades. With the absence of more suitable alternatives, letters served as the main channel of transmission to report on the critical situation in Outremer and the means urgently needed to ensure the survival of the Frankish strongholds there. During Saladin's advance (1177–1187), for instance, there was a continuous interchange of letters with the political elite of the West, whose assistance was desperately required. Again, the main communicators were the masters of the military orders and the prelates and princes of Outremer.

Alongside written correspondence, messengers and pilgrims were associated with oral delivery, with messages very often transmitted aloud, whether in public or in private. Messengers actually played a role in communication besides their original duty as couriers in that they transmitted all or a great part of their information orally. This state of affairs demanded their selection from among a very narrow group of close advisers and high officers. Still, the many dangers in the Mediterranean and Baltic areas, whether emanating from man or from nature, turned the mission of personal messengers into a very difficult task. This justified the parallel use of both oral and written messages, a widespread practice throughout the Middle Ages. Saladin himself wrote to Emperor Frederick Barbarossa and to Pope Lucius III and mentioned the exchange of personal messengers between them. The parallel use of several messengers also became common practice, with several copies of the same letter sent to the same destination to ensure reception. The dependence of the Latin strongholds on the continuous, substantial assistance of Western Christendom made this practice indispensable. Contemporary records report quite regularly the mission of delegations to Europe with almost identical aims. Though the size of these delegations changed from time to time, they seem as a rule to have been rather considerable.

The most developed stage in the transmission of information in the crusader period is manifested in the establishment of permanent embassies, which ensured the continuous transmission of reliable information within an

acceptable period of time. This development came very slowly in Europe, probably because the lack of a clear distinction among diplomatic relations, information exchange, and simple espionage instilled a suspicious approach toward the representatives of foreign powers. The crusade movement and the expansion of trade in the Mediterranean brought about crucial changes in this regard. By the twelfth century, there was a Pisan ambassador in Bougie (mod. Bejaïa, Algeria), an exclusively Muslim city. Most Italian communes established permanent representations in Outremer, mainly located in Acre and Tyre (mod. Soûr, Lebanon). The Teutonic Order also often had a permanent or semipermanent representation at the papal Curia.

Conclusions

Analysis of communication developments during the period of the crusades leads to the conclusion that no new channels were elaborated to ensure a more efficient transmission of information. The colonial character of Frankish society fostered the adoption of the archaic channels of communication that existed in Europe. Moreover, the normative character of medieval society blocked the adoption of more advanced communication channels of the kind that were practiced at the time in both Muslim and Byzantine societies. Regular mail services, like those operating in the neighboring Muslim states and Byzantium, remained completely extrinsic to the crusaders' world. Still, as time went by the Teutonic Order, for instance, developed an advanced postal system in the Baltic area. One of the few examples of Muslim influence was the use of carrier pigeons, a practice unknown in eleventh-century Europe but regularly used in the Frankish states in Outremer during the thirteenth century.

From a communication perspective, the continuation of practices suitable to feudal society—in the face of new needs created by the states of Outremer and, no less important, of the more advanced communication standards of Muslim and Byzantine societies—turned the crusades into a paradox. Still, when examined in the framework of political, security, demographical, and economic factors, the communication contribution of the crusades can hardly be neglected. Against the localism that was inherent in feudal practice, a growing number of Europeans moved between Europe and the Levant during the twelfth and thirteenth centuries, their occupations requiring a constant exchange

of information. The crusades further appear as an important catalyst for communication developments, not only between the two shores of the Mediterranean but, first and foremost, within Europe itself: the very crystallization of a crusade depended on close coordination and information exchange between the pope and the secular leaders of Christendom and, in turn, between the latter and their vassals-in-chief. Though the technical level of transmission remained archaic, imperative needs brought about the upgrading and more intensive use of communication channels. Moreover, the significant growth in letter-exchange, the acceleration in information transmission, and perhaps above all the new awareness of the crucial importance of delivering reliable information in the shortest period of time combine to make the crusades an important stage in the emergence of a more communication-oriented society in the late Middle Ages.

Cono of Montaigu (d. 1106)

A participant in the First Crusade (1096–1099). The eldest son of Gozelo, count of Behogne (d. 1064), and Ermentrude of Harzé, Cono was more usually known as count of Montaigu (in mod. Belgium), after the castle on the river Ourthe in the northern Ardennes where most of his possessions lay. His family had long been prominent vassals of the ecclesiastical principality of Liège. Some of the older literature mistakenly claims that Cono was a brother-in-law of Godfrey of Bouillon, ruler of Jerusalem. There is no reliable evidence to support this claim, although it is likely that they were more distantly related.

In 1096 Cono sold property to the abbey of Saint-Hubert in the Ardennes to raise funds for the crusade, in which he and his sons Gozelo and Lambert took part as members of Godfrey's contingent. Gozelo died of disease at Artah. After fighting at the battle of Ascalon (12 August 1099), Cono and Lambert returned home, reaching Liège by 10 March 1100. Cono died on 30 April 1106, and was succeeded by Lambert as count of Montaigu.

Conrad II of Jerusalem

See Conrad IV of Germany

Conrad III of Germany (1093–1152)

King of Germany (1138–1152) and one of the leaders of the Second Crusade (1147–1149).

Conrad was the son of Duke Frederick I of Swabia (d. 1105) and of Agnes, daughter of Henry IV, Holy Roman Emperor. It is probable that he made a pilgrimage to the Holy Land before the Second Crusade, in 1124/1125; certainly he is known to have made a vow to go to Jerusalem,

and he was not present at the election of a new German king in 1125, when his elder brother Duke Frederick II of Swabia (d. 1147) was one of the candidates. Conrad himself made a bid for the crown from December 1127 onward: probably this was shortly after his return from the East. He was eventually elected king in March 1138 after the death of Emperor Lothar III.

Conrad took the cross at Speyer at Christmas 1146. His initial reluctance was overcome by the persuasion of Abbot Bernard of Clairvaux, who had come to the Rhineland to put a stop to the anti-Jewish agitation stirred up by a Cistercian monk, Rudolf. Bernard's biographer claimed that the abbot gave the king a banner to carry on the expedition. The preparations were made very speedily. A diet of the imperial princes was held at Frankfurt am Main in March 1147, from which Conrad wrote to Pope Eugenius III, apologizing for taking the cross without notifying him, and the German crusade set out from Regensburg in May 1147. Despite some mishaps on the way, including the flooding of the army's camp shortly after it had entered Byzantine territory, Conrad arrived at Constantinople (mod. İstanbul, Turkey) early in September. He already enjoyed close diplomatic relations with the Byzantine emperor, Manuel I Komnenos, not least through their common hostility to King Roger I of Sicily, and in 1145 Manuel had married Conrad's sister-in-law, Bertha of Sulzbach.

The German army crossed the Bosphorus and set out from Nicaea (mod. İznik, Turkey) into Turkish-held territory on 15 October 1147. By now Conrad had split his forces, sending most of the poorer pilgrims and noncombatants along the coast of Asia Minor under the command of his half-brother Otto, bishop of Freising. The main army soon ran short of food, and it suffered severely from Turkish attacks, eventually linking up with the French army under King Louis VII at the beginning of November. However, on arrival at Ephesos Conrad was forced to halt by illness, and he subsequently returned with most of his surviving forces to Constantinople. Many of the German troops then returned home. Conrad himself was nursed back to health by Manuel Komnenos, and he expressed his gratitude for this treatment in a letter to his chief minister in Germany, Abbot Guibald of Stavelot. He eventually sailed directly to the Holy Land on Byzantine ships, accompanied by a number of his princes, and landed at Acre (mod. 'Akko, Israel) in April 1148. He had been well supplied with money by Manuel, and he used these funds to recruit pilgrims to augment the forces that remained to him.

The French army, which had succeeded in crossing Asia Minor, marched south from Antioch (mod. Antakya, Turkey), and the reunited crusade, along with the forces of the kingdom of Jerusalem, attacked Damascus at the end of July 1148. The decision to pursue this attack, often criticized, had been settled in a conference among the three kings (Conrad, Louis VII, and Baldwin III of Jerusalem) near Acre a month earlier, although the account by Otto of Freising suggests that Conrad and Baldwin had already decided on this aim before Louis's arrival. However, after five days of heavy fighting, and with Muslim reinforcements approaching, the siege was abandoned. A subsequent proposal to attack Ascalon (mod. Tel Ashqelon, Israel) came to nothing, with Conrad blaming the men of Jerusalem for their failure to turn up. He left Acre by sea on 8 September 1148 and returned to Germany via Thessalonica and Constantinople, where his friendly relations with Byzantium were strengthened by the marriage of his other half-brother, Henry Jasomirgott, duke of Bavaria, to Manuel's niece, Theodora.

Conrad's health had been undermined by his experiences on the crusade, and he subsequently died on 15 February 1152. His eldest son had predeceased him, and he was succeeded as king of Germany by his nephew Frederick I Barbarossa, the son of Frederick II of Swabia. Conrad's reign in Germany was seen, even at the time, as a failure. He never secured his imperial coronation at Rome, and his crusade was a major setback. Certainly he must bear some responsibility for the indiscipline that hampered his army, and the attempt to follow the route of the First Crusade (1096–1099) across Anatolia in mid-winter and not to wait for the French was misguided. Yet he preserved good relations with Byzantium, which the French did not, and the attack on Damascus was by no means as ill-conceived as some modern historians have claimed.

Conrad III of Jerusalem

See Conradin

Conrad IV of Germany (1228–1254)

King of Jerusalem (1228–1254), Germany (1237–1254), and Sicily (1251–1254).

The last ruling German monarch of the Staufen dynasty, Conrad was born on 25 April 1228, the son of Frederick II, Holy Roman Emperor and king of Sicily, and Isabella II, queen of Jerusalem, whom Frederick had married before undertaking his crusade to the Holy Land (1227–1229).

The death of his mother in childbirth meant that Conrad, as her heir, was recognized from infancy as king of Jerusalem by the magnates of the kingdom. Although Frederick II had worn a crown in the city of Jerusalem on 18 March 1229, his claims were not recognized by the majority of the magnates, who would only accept that Frederick was the legal regent until Conrad attained his majority. After Frederick departed from Outremer (1229), he sent a lieutenant, the Sicilian nobleman Richard Filangieri, to govern the kingdom (1231). The Staufen regime was opposed by a significant section of the baronage and church, and the kingdom descended into civil war. After some ten years in office, Filangieri was replaced by another lieutenant, Count Thomas of Acerra.

Conrad came of age in 1243, but the High Court of Jerusalem refused to recognize his authority unless he came to the kingdom in person. This Conrad was hardly able to do: by this time he had been given a central place in his father's political plans for Germany and Sicily, as a result of the rebellion of his elder half-brother Henry (VII), king of Germany and Frederick's intended successor in the empire. In 1235 Frederick deposed and imprisoned Henry and at Vienna in

Conrad of Krosigk (d. 1225)

1237 had Conrad elected king in his place. With Frederick largely absent in Italy and Sicily during the following years, Conrad and his supporters came to be increasingly occupied in trying to maintain imperial authority in Germany against the anti-Staufen princes and clerics, who elected a rival king in the person of Henry Raspe, landgrave of Thuringia (1246), and after his death, William II, count of Holland (1247).

With the death of Emperor Frederick (February 1250), the German pro-Staufen coalition began to disintegrate. Conrad decided to abandon the increasingly unequal struggle in Germany and stake his remaining resources on an attempt to claim his father's kingdom of Sicily. With a mercenary army financed by the sale of imperial and Staufen family property and rights, he sailed to Apulia in the winter of 1251, and took over the government from his illegitimate half brother, Manfred, who had effectively ruled the country since Frederick's death. Although Conrad was able to establish control over the kingdom of Sicily, he was unable to make peace with Pope Innocent IV, who excommunicated him in April 1254. Conrad died only a few weeks later on 25 May 1254 at Lavello in Apulia, aged only 26.

Conrad never visited Outremer. In his absence the High Court of Jerusalem bestowed the government of the kingdom on regents: Queen Alice of Cyprus, daughter of Henry of Champagne and Isabella I of Jerusalem, and after her death (1246) her son Henry I of Cyprus. Conrad's rights in the kingdoms of Jerusalem and Sicily passed to his infant son Conrad (Conradin), duke of Swabia (b. 1252), his only child by his wife Elisabeth (d. 1273), daughter of Duke Otto II of Bavaria.

Conrad of Hildesheim

See Conrad of Querfurt

Conrad of Krosigk (d. 1225)

Bishop of Halberstadt (1201–1208), participant in the Fourth Crusade (1202–1204), and subsequently preacher of two other crusades.

Scion of the powerful Krosigk family of Saxony, Conrad took the cross in April 1202 to escape the consequences of his recent excommunication for not supporting Pope Innocent III's imperial policies. Although disturbed by the Venetian plan to capture the Christian city of Zara (mod. Zadar, Croatia), Conrad participated in the expedition, and the following year (1203), he supported the diversion to Constantinople (mod. İstanbul, Turkey), to the point of conspiring with other crusade leaders to keep the army ignorant of the pope's prohibition of this adventure. When relations with the citizens of Constantinople degenerated into open hostilities, Conrad assured the crusaders that their war against the Greeks was righteous. Following the capture of Constantinople, Conrad sailed to Acre (mod. 'Akko, Israel), where he convinced the two papal crusade legates to lift his sentence of excommunication. His pilgrimage completed, Conrad traveled to Rome and made peace with the pope. He reached Halberstadt on 16 August 1205, accompanied by a large number of relics from Constantinople.

In 1208 Conrad became a Cistercian monk. In 1213 and 1216, he received papal commissions to preach and organize efforts for the Fifth Crusade in the provinces of Magdeburg and Bremen, and in 1224 he was commissioned to recruit participants for Emperor Frederick II's proposed crusade. He died on 21 June 1225.

Conrad of Mainz (d. 1200)

Archbishop of Mainz (1161–1165 and 1183–1200), archbishop of Salzburg (1177–1183), and papal legate on the Crusade of Emperor Henry VI (1197–1198).

Conrad was born around the year 1130, the son of Otto V, count of Wittelsbach. He was educated in the cathedral school of Salzburg and then either at Paris or Bologna. In 1161 he was elected archbishop of Mainz with the support of Frederick I Barbarossa, Holy Roman Emperor, but was deposed after he decided to support Pope Alexander III rather than the rival imperialist candidate. After spending the intervening years in Alexander's service with the rank of cardinal priest (1165) and cardinal bishop (1166), he was made archbishop of Salzburg after peace was concluded between pope and emperor in the Treaty of Venice (1177). He was restored to the see of Mainz after the death of the archbishop who had replaced him there, Christian of Buch; he was also named as papal legate for Germany.

Conrad took the cross in 1195 and was enthusiastic in recruiting for the forthcoming crusade of Frederick I's son, Emperor Henry VI. He was particularly keen that the crusade should leave at Christmas 1196, the departure date fixed at the diet of Gelnhausen after an initial postponement from Christmas 1195. To this end he was instrumental in persuading the German princes to elect the emperor's son Frederick (II) as king of Germany, so that the succession would be secured before the departure of the crusade.

Conrad left Germany in January 1197 and reached Rome by the end of the month. There he held discussions with Pope Celestine III, and was probably named as legate to the crusade on this occasion. After a meeting with Emperor Henry VI, he set sail (probably from Bari or Brindisi) in April; however, as the majority of the crusaders had still not arrived at the southern Italian ports, those who accompanied Conrad comprised only an advance contingent. This force, carried on some thirty vessels, arrived in Palestine in May.

After the arrival of the main army under Conrad of Querfurt, bishop of Hildesheim, Conrad of Mainz sailed with the fleet via Tyre (mod. Soûr, Lebanon) as far as Beirut. While the rest of the crusade forces marched inland to besiege the castle of Toron, Conrad left the army to travel to the court of Leon II, prince of Cilicia, on whom he was to bestow a royal crown in recognition of Leon's acceptance of imperial overlordship. This mission had originally been meant to be carried out by Conrad of Querfurt, whose authority as imperial chancellor, however, ceased on the death of Henry VI (28 September 1197). As the pope had already given Conrad of Mainz the task of concluding negotiations regarding the union of the Latin and Armenian churches,

it seems that in the confused situation following the emperor's death, the leaders of the crusade decided that it would be best for the papal legate to carry out both missions. On 6 January 1198 Conrad crowned Leon as king of Cilicia (numbered as Leon I) in a magnificent ceremony at Tarsos (mod. Tarsus, Turkey), acting as representative of both pope and emperor.

Conrad was back in Palestine by March, when he was present at the foundation of the Teutonic Order in Acre (mod. 'Akko, Israel). He remained in the Holy Land longer than most of the other participants of the crusade of 1197–1198, not returning to the West until the summer of 1199. After the proclamation of another crusade by the new pope, Innocent III, Conrad again took the cross, with the evident intention of taking part in what became the Fourth Crusade (1202–1204). He died on 25 October 1200 while preparations for the expedition were still in progress.

Conrad of Montferrat (d. 1192)

Ruler of the kingdom of Jerusalem (1192) as consort to Queen Isabella I. Conrad was born around 1146, the son of William V the Old, marquis of Montferrat. He was a cousin of Emperor Frederick I Barbarossa and King Louis VII of France.

Conrad's eldest brother, William Longsword, and their father were involved in the affairs of Outremer during the reign of King Baldwin IV of Jerusalem (1174–1185). Conrad spent some time in Byzantine service, but after the Frankish defeat at Hattin on 4 July 1187 he went to Tyre (mod. Soûr, Lebanon), the last stronghold of the kingdom of Jerusalem. In the absence of King Guy, who was a captive of Saladin, and Queen Sibyl, who was still in Jerusalem, Conrad successfully organized the defense of Tyre, which later became the springboard for the reconquest of Acre (mod. 'Akko, Israel) during the Third Crusade (1189–

Conrad of Querfurt (d. 1202)

1192). The fierce power struggle between Conrad and King Guy, released by Saladin in the summer of 1188, was stimulated by the deep cleavage within the higher nobility and exacerbated by the rivalry between Genoa and Pisa. The unexpected death of Queen Sibyl and her two small daughters in the autumn of 1190 deprived Guy of his legitimate standing as king of Jerusalem. Shortly afterward Conrad married Isabella (I), Sibyl's younger sister and heiress to the throne, and thus became titular king. After the reconquest of Acre, a gathering of barons and knights convened at Ascalon by King Richard I of England recognized Conrad as king early in April 1192, yet later that month he was stabbed in Tyre by an Ismā'īlī Assassin and died before being crowned.

Conrad was praised by contemporaries for his defense of Tyre and was depicted by some troubadours as the embodiment of true knightly values. A shrewd and determined statesman, he issued generous charters of privilege to the major maritime powers of the West, by which he obtained their military assistance and political support. He apparently did not intend to honor all his promises, yet his legal and fiscal concessions created some weighty precedents, with which his successors had to cope.

Conrad of Querfurt (d. 1202)

Bishop of Hildesheim (1195–1199) and Würzburg (1198–1202) and executive leader of the Crusade of Emperor Henry VI (1197–1198).

Conrad was a son of Burchard II, burgrave of Magdeburg. He became a canon of the cathedral chapter of Hildesheim in 1182 and studied in Paris before being appointed to various ecclesiastical offices in Germany: royal chaplain (1188), provost of Goslar (1188) and Aachen (1194), and bishop of Hildesheim (1194). At some point after this, he was made

chancellor to Emperor Henry VI, since he is named as occupying this office when he witnessed the taking of the cross by Henry at Bari on Good Friday (30 March) 1195.

Conrad took the cross himself at Gelnhausen on 28 October 1195, and subsequently traveled south of the Alps, having been named as imperial legate for Italy and the kingdom of Sicily. Much of his time in Sicily and Apulia was spent in making preparations for the emperor's planned crusade to the Holy Land, even after his legatine powers lapsed with the arrival of Henry VI in his southern kingdom in summer 1196. The following year the emperor appointed Conrad as leader of the crusade, with responsibility for the overall direction of the expedition and the keeping of its treasury, although military command was given to the imperial marshal Henry of Kalden. By 22 June 1197 Conrad was at Bari, where he performed the dedication of the Church of St. Nicholas in the company of numerous crusaders.

Conrad, accompanied by his brothers Gerhard and Gebhard, set sail with the main crusade fleet from Messina on 1 September 1197. While most of the fleet sailed directly to Acre (mod. 'Akko, Israel), Conrad made a detour to Cyprus, where he carried out a royal coronation for the ruler of the island, Aimery of Lusignan; Henry VI had previously agreed to bestow a crown on Aimery in return for the new king's acknowledgement of imperial overlordship. After his arrival in Palestine, Conrad was one of those who successfully brought about the election of Aimery as king of Jerusalem in succession to Henry of Champagne, who had died as the result of an accident.

In the course of campaigning whose main aim was to secure the coast of Palestine for the Christians, Conrad sailed with the fleet via Tyre (mod. Soûr, Lebanon) to the ports of Sidon (mod. Saïda, Lebanon) and Beirut, which were abandoned by the Ayyūbids without fighting (October–November). During the siege of the inland castle of Toron, however, Conrad left the army for Tyre on 2 February 1198 after having heard news of the death of Henry VI, with the intention of taking ship for Germany. Conrad's decision to retire may have been correct, in the sense that the emperor's death meant that he no longer had the authority to lead the crusade as imperial chancellor; he may have been motivated by concerns about the succession in Germany; it is also possible that he had heard of his own election as bishop by the cathedral chapter of Würzburg, a richer and more important diocese than Hildesheim. Nev-

ertheless, it is clear that the departure of its executive leader and his entourage effectively brought the crusade to an end, as other magnates followed Conrad's example and deserted the siege of Toron, which was finally abandoned on 24 February 1198.

Conrad was present at the gathering in March that decided on the conversion of the small German hospitaller confraternity in Acre into a new military religious order, the Teutonic Knights. However, he was one of the first of the crusaders to leave Palestine, and was back in the bishopric of Hildesheim by 21 May 1198. In the struggle for the German throne that had broken out on the death of Henry VI, Conrad initially supported the late emperor's brother, Philip of Swabia, who confirmed him in the office of chancellor; as a result he was excommunicated by Pope Innocent III, who supported the rival German king, Otto IV. In 1201 Innocent lifted the sentence of excommunication and confirmed Conrad as bishop of Würzburg; shortly afterward he abandoned Philip and changed to the side of Otto. On 3 December 1202, Conrad was murdered by Bodo and Henry of Ravensburg, leaders of a faction among the knights of Würzburg, which was opposed to the new bishop's policies.

Conrad of Urach (d. 1227)

Cistercian monk, crusade preacher, and legate.

A member of the south German Zähringen dynasty, Conrad joined the Cistercian Order in 1199. He rose to become abbot (in turn) of the monasteries of Villers (1208/1209–1214), Clairvaux (1214–1217), and Cîteaux (1217–1219). In 1213 Conrad was appointed to preach the Fifth Crusade (1217–1221) with the abbot of Rommersdorf in the province of Trier. In 1214 he worked with Arnold Amalric, abbot of Cîteaux, to resolve disputes within the

Cistercian Order and reform it in preparation for the Fourth Lateran Council (1215). He also cooperated with other notables to persuade Philip II Augustus, king of France, to end the invasion of England mounted by Philip's son Louis (later Louis VIII), which threatened the peace essential for the Fifth Crusade.

Made cardinal of Porto and St. Rufina by Pope Honorius III in 1219, Conrad served as legate for the Albigensian Crusade from 1220 to 1223. While attempting to rally support for Amalric of Montfort and to draw Philip Augustus and Louis into the crusade, Conrad worked with local prelates to reform the church in France and won papal approval for a new antihetical military order. After Philip Augustus's death in 1223, Conrad was sent to Germany to hasten the preparation of Emperor Frederick II's delayed crusade to the Holy Land. His acquaintances among reformers and prelates in France and Germany and within the Cistercian Order provided invaluable assistance, as Conrad sought to balance several crusade projects during both legations. From 1224 to 1226, he collaborated closely with Conrad of Hildesheim and the papal preachers appointed in Germany to organize Frederick II's crusade; extirpate heresy; forge peace between the kings of England, France, and Germany and warring noblemen; and reform secular and regular churches according to the Fourth Lateran's mandates through disciplinary actions and local synods. From 1226 until his death in September 1227, he participated in several crusade-planning councils in Italy and helped to broker a peace agreement between Frederick II and the Lombard League, enabling the emperor's departure on crusade.

Conradin (1252–1268)

Duke of Swabia and titular king of Jerusalem (1254–1268), actually named Conrad, although the diminutive form Conradin (from It. *Corradino*) has become commonplace in modern scholarship.

The last legitimate male member of the imperial Staufeu dynasty, Conradin was born on 25 March 1252, the only son of Conrad IV, king of Germany, Sicily, and Jerusalem, and Elisabeth, daughter of Otto II, duke of Bavaria. Invested with the by then largely meaningless dignity of duke of Swabia, Conradin grew up at the court of his uncle Ludwig II of Bavaria, where he had been sent for safety after his father left Germany in order to claim his ancestral kingdom of Sicily. On Conrad IV's death (1254), Conradin should have by rights succeeded in turn to Sicily, but the throne was seized by his uncle Manfred, an illegitimate son of Emperor Frederick II and the de facto ruler of the kingdom. Attempts to have Conradin elected as king of Germany in 1262 and 1266 failed when his candidature was prohibited by the papacy, long opposed to the political ambitions of the Staufeu dynasty.

Only in the kingdom of Jerusalem, the inheritance of his grandmother Isabella of Brienne, was Conradin's authority recognized, at least formally; actual government was vested in regents belonging to the Lusignan ruling family of Cyprus (Henry I and then Hugh II), who exercised their rule in Palestine through appointed lieutenants. It is conceivable that Conradin would have been recognized as the ruling king of Jerusalem by the High Court if he had come to the kingdom in person; this was the same condition that had been laid down in his father's case. However, by the time he had attained his majority, his ambitions were set on the recovery of his Sicilian inheritance.

In 1266 Manfred's rule in Sicily had been overthrown by Charles I of Anjou at the battle of Benevento (26 February). The following year Conradin travelled across the Alps with a small force and was welcomed throughout Italy by members of the traditionally pro-Staufeu Ghibelline party and other opponents of the Angevins. He and his supporters mounted an invasion of the kingdom of Sicily, but were decisively defeated by Charles of Anjou at the battle of Tagliacozzo on 23 August 1268. Conradin was apprehended in

Rome and handed over to Charles, who had him executed at Naples on 29 October. As Conradin had no heirs, the kingdom of Jerusalem passed to Hugh III, king of Cyprus.

Constantine XI Palaiologos (1405–1453)

The last Byzantine emperor (1448–1453), who died childless while defending the city of Constantinople (mod. İstanbul, Turkey) against the Ottoman Turks.

Constantine was born on 8 February 1405, the son of Emperor Manuel II Palaiologos. He became emperor in 1448 when his brother John VIII died without an heir. At the time of his accession to the throne, only Constantinople and the Peloponnese remained under Byzantine control. In 1428, he married Maddalena Tocco, niece of the Italian ruler of Epiros and Cephalonia. After her death, he married Caterina Catiluisio, daughter of the Genoese lord of the island of Lesbos.

Although he faced problems in making the union of the Greek Orthodox and Latin churches acceptable in the Byzantine Empire, Constantine remained an advocate of the agreement that Emperor John VIII had concluded with the Roman church at Florence in 1439, since he believed that if union were brought about, the West would send the military aid the Byzantines desperately needed in their fight against the Turks. In 1452, he asked for military reinforcements from Venice and various other Italian towns, King Alfonso V of Aragon (I of Naples), the Genoese rulers of Chios, and the pope, but to no avail. The pope demanded from the Byzantines union with the Church of Rome before he would dispatch military aid to them. In October 1452, four hundred archers arrived in Constantinople, together with the papal legate Cardinal Isidore, who came to celebrate the union of the churches in a ceremony in the Church of Hagia Sophia on 12 December of the same year. In January 1453, the Genoese Giovanni Longo arrived in Constantinople with 700 troops. That aid, however, was too little and arrived too late to save Constantinople, which fell to

the Turks at dawn on Tuesday, 29 May 1453. Constantine died in the fighting the same day.

Constantinople, City of

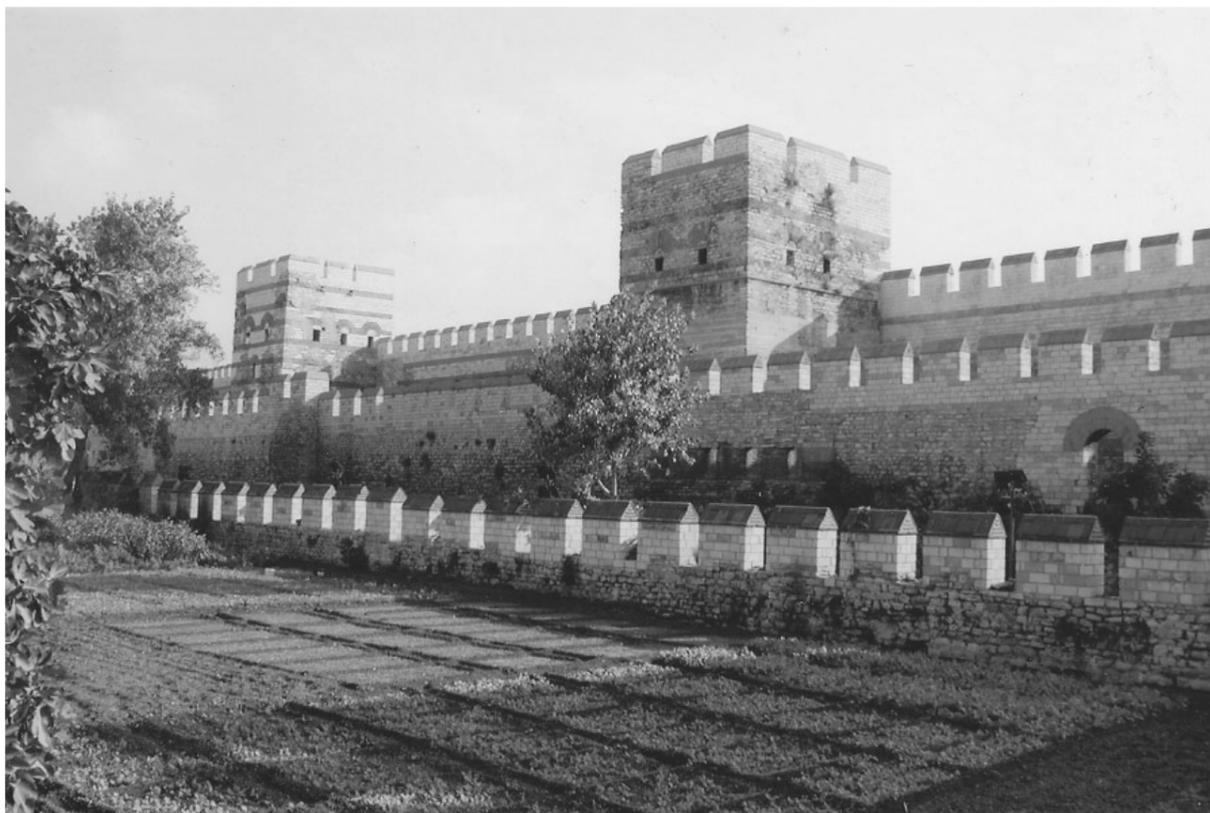

The city of Constantinople (mod. İstanbul, Turkey) was the capital of the Byzantine Empire until it was captured in 1204 by the army of the Fourth Crusade (1202–1204). Shortly afterward it was divided into two sections. The new Latin emperor, Baldwin I (IX of Flanders), obtained five-eighths of the city, including the imperial palaces of the Blachernae in the north and of Boukoleon in the southeast, while Venice obtained the remainder. Constantinople then functioned as the capital of the Latin Empire of Constantinople and as the center of Venetian government in the empire until 1261, when it was retaken by the Greeks of the empire of Nicaea who made it the capital of the restored Byzantine Empire. The city fell to the Ottoman Turks in 1453.

Three fires in 1203 and 1204 and the crusader assault on Constantinople on 12 April 1204 inflicted destruction upon large sections of the city, crippled its economic infrastructure, and caused heavy loss of life. The crusader conquest was followed by the massive looting of relics and precious artifacts and their transfer to the West. These events led to an exodus of Greek population, including the imperial household, members of the lay elite, merchants, and silk manufacturers. The seizure of ecclesiastical property, the establishment of a Latin patriarch, and the pressure to acknowledge papal supremacy also induced many Greek priests and monks to leave the city. Smaller-scale emigration continued throughout the period of Latin rule. The Greeks nevertheless remained the largest group within the city's population. High-ranking Greek officials in the service of the Latin emperors account for the Byzantine imprint upon the coronation ceremonial, the Latin imperial administration, the use of Byzantine titles, and the formulae of imperial doc-

uments. Former Byzantine officials at lower ranks and interpreters enabled the use of Byzantine cadasters and other documents found at Constantinople, upon which the partition of the city and the empire was based. They also ensured the large-scale continuity of the Byzantine fiscal system, both in the imperial and Venetian sections of Constantinople and elsewhere in the Latin Empire.

The urban economy was reactivated shortly after the Latin conquest, yet it underwent important changes. It substantially contracted in the absence of massive local consumption and investment in high-grade manufacture. In addition, its operation was increasingly dependent upon the transit and transshipment of goods in the framework of medium- and long-distance trade. This function was ensured by the continuity of Constantinople's pivotal role in commercial-exchanges between the Mediterranean and the Black Sea, and the city's multiple commercial connections with ports in both these regions. Economic growth was furthered by treaties between Venice and the powers holding the coastline of Asia Minor, namely the Greek empire of Nicaea and the Saljūq sultanate of Rūm, as well as with the kingdom of Cilicia (Lesser Armenia) and Egypt. This process accelerated in the last two decades of Latin rule. The consolidation of Mongol rule along the northern Black Sea coast and over its vast hinterland (achieved by 1240) generated a growing involvement of Latin merchants and carriers based in Constantinople in the Black Sea trade. They established direct links between that region and the Mediterranean, which led to the full integration of their respective trading networks in the early Palaiologan period. This integration lasted until the fall of Constantinople to the Ottomans in 1453. The Latin period thus made a decisive contribution to the long-term development of Constantinople's economy.

The political and territorial partition of Constantinople between the Latin emperor and Venice, implemented shortly after the conquest, lasted until the end of the Latin Empire in 1261. It created different political, economic, and social conditions in each of the two sections and a disparity between their respective evolutions. Venice was the only Italian maritime power to benefit from the conquest. Its quarter, spared from destruction by fire, was substantially enlarged as a result of the city's partition and became the center of an administration exercising full sovereignty over the Venetian portion of the Latin Empire. This quarter was the focus of commercial activity in the city. Its prosperity and state investments contributed to the maintenance of private,

Modern reconstruction of Constantinople's land walls. (Courtesy Alfred Andrea)

public, and ecclesiastical structures, while the imperial section of the city suffered from neglect.

The crusader conquest and subsequent economic growth furthered ongoing Western immigration and settlement during the Latin period. Especially Venetians were attracted by the privileged status they enjoyed in their national quarter. While they constituted the driving force in Constantinople's economy during the Latin period, the share of Pisan, Genoese, Florentine, and other Italian settlers should not be overlooked. These resided in the imperial section of the city, which also accommodated the imperial court, the feudal nobility, and non-Venetian commoners. The loss of Greek population was not offset by Latin immigration. Some 3,000 Latins, mostly Venetians, fled when Nicaean forces reconquered Constantinople in 1261.

By the end of 1204 many churches had been abandoned by the Greek Orthodox clergy, as reported in a letter of Pope Innocent III. The churches and monasteries remaining in the

hands of the Greek clergy suffered from the loss of their sources of revenue. The number of these institutions seized by the Latin clergy is unknown. The Church of Hagia Sophia was taken over by the Latin patriarch of Constantinople. In its own section of the city, Venice granted several Greek monasteries to Venetian religious institutions. One of them, the Pantokrator, became Venice's center of government and administration in Constantinople, and its monks were replaced by Latin clerics. The substantial increase in the Latin ecclesiastical presence in the city did not outlast the Latin period.

Constantinople, Latin Empire of

An empire under Latin (Frankish) domination, established in April 1204 after the overthrow of the Byzantine Empire by the Fourth Crusade (1202–1204). The territory of the Latin Empire was much smaller than that of Byzantium: at its greatest extent it comprised the city of Constantinople (mod. İstanbul, Turkey), Thrace, eastern Macedonia, and north-west Asia Minor, although the Latin emperor was often, at least in theory, recognized as the suzerain of the other Frankish states in Greece.

The empire had been effectively reduced to Constantinople and its environs when on 25 July 1261 the city was recaptured by the Byzantine troops of the Nicaean emperor Michael VIII Palaiologos. Emperor Baldwin II fled to the West and the empire came to an end, although various titular emperors continued to maintain claims until 1382.

Establishment and Early History (1204–1216)

The Latin Empire of Constantinople was the direct result of the deviation of the Fourth Crusade. While encamped before the walls of Constantinople in March 1204, the Frankish crusaders and the Venetians agreed between themselves to replace the Byzantine emperor with a Latin one, and after the

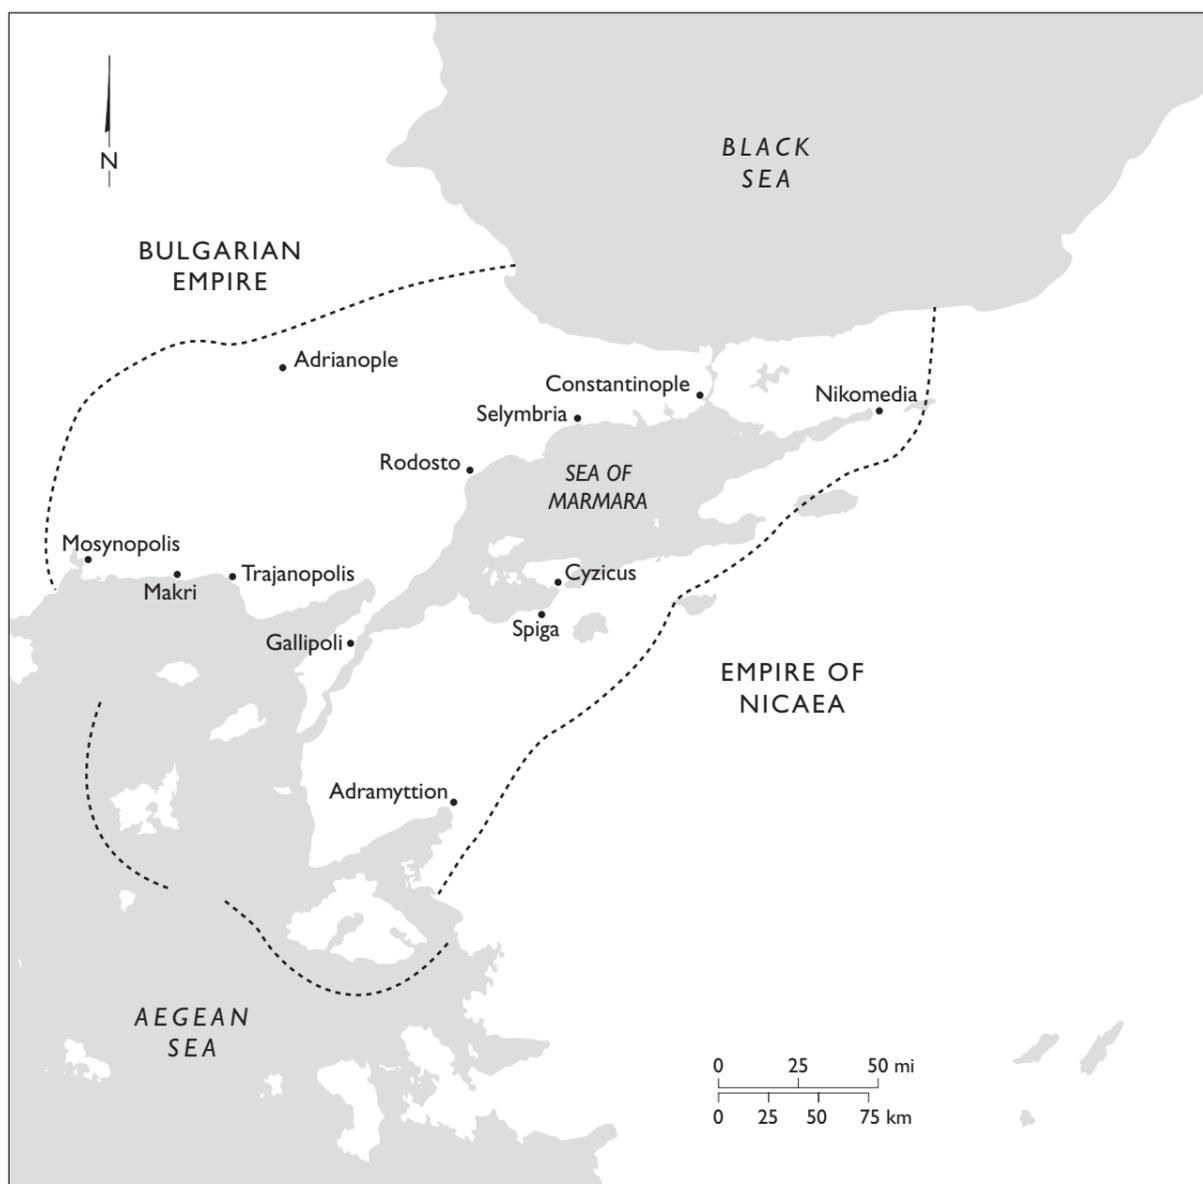

capture of the city, Count Baldwin IX of Flanders (VI of Hainaut) was crowned emperor (as Baldwin I) in the Church of Hagia Sophia on 16 May 1204. Baldwin I's first task was to safeguard the empire against the Greek and Vlach-Bulgarian alliance in Thrace. On 14 April 1205, a battle took place near Adrianople (mod. Edirne, Turkey), where Tsar Kaloyan (Johannitsa), who had received the pope's blessing for his Vlach-Bulgarian Empire, defeated Baldwin's army, which retreated toward Constantinople. Baldwin was taken prisoner and died in captivity. Later, in 1225, a “false Baldwin” turned up in Flanders, but was recognized as a minstrel called Bertrand de Rais and executed on orders of Johanna of Constantinople, Baldwin's daughter.

Baldwin's brother Henry of Flanders became regent of the empire and was crowned emperor on 20 August 1206. He was the only “great” emperor of Latin Constantinople. On the military front, he broke the Greco-Bulgarian alliance by ceding, by the end of 1205, Apros to the Greek Theodoros Branas, who also received Adrianople from the Venetians. After Kaloyan's death (1207), his empire disintegrated. His young nephew, John Asen, fled to Russia, and three princes claimed the succession: Slav (Esclav), a member of the royal family (in the Rhodope Mountains); Strez, another relative (in the Vardar Valley); and Boril, a son of Kaloyan's sister (in Turnovo). Using diplomacy as well as military means, Henry met the internal and external dangers of his empire. In February 1207 he married Agnes, daughter of Boniface of Montferrat, king of Thessalonica. Around September 1208, he gave his natural daughter in marriage to the Bulgarian prince Slav, and his brother, Eustace of Flanders, took as wife a daughter of Michael of Epiros in June/July 1209.

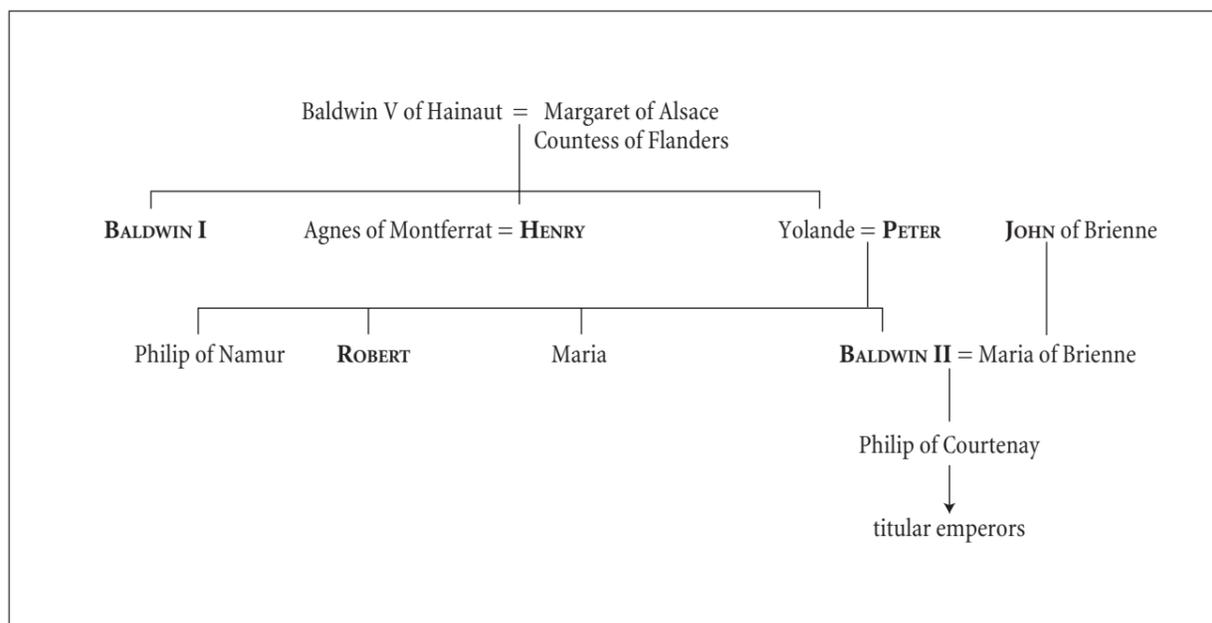

Henry supported David Komnenos, the co-emperor of Trebizond, against Theodore I Laskaris, emperor of Nicaea, and four Latin military expeditions (1206–1207) strengthened the Latin position in the eastern part of the empire. By 1211 Boril and Theodore Laskaris once again were able to attack the Latin Empire. Boril first retreated deep into Bulgaria and was then defeated by Eustace and Slav. Strez was also defeated by Eustace, and on 15 October 1211, Henry won a victory over Theodore Laskaris. After the early death of his wife Agnes, Henry himself married the daughter of the new Bulgarian tsar, Boril (c. 1212).

Emperor Henry also normalized relations with the principality of Achaia in June 1209, thus putting an end to the confusion of suzerainty over the Frankish Morea. Geoffrey I of Villehardouin, prince of Achaia, became the vassal of

Constantinople, Latin Empire of

The Latin Empire of Constantinople, c. 1215

Succession to the Latin Empire of Constantinople, 1204–1261

Henry, but Venetian rights were preserved. Understanding that the empire could neither prosper nor even function without the support of the Greek population, Henry tried to accommodate Greek aspirations, especially religious ones, by instigating dialogue between the Latin and Greek Orthodox churches. Although these negotiations proved unsuccessful, Henry gained the respect of his Greek subjects. His biggest challenge, however, came from the Lombards of the kingdom of Thessalonica. After Boniface's death (in 1207), the Lombard regent of the kingdom, Count Oberto of Biantate, was unwilling to recognize the suzerainty of the emperor and planned to unite Thessalonica with the Italian territory of William of Montferrat, Boniface's brother, thereby hoping that William would supplant Henry as emperor. Henry, however, supported by Maria (Margaret) of Hungary, widow of Boniface, crowned her son Demetrios as king of Thessalonica on 6 January 1209, and subdued the Lombards. To keep enough manpower in the country, he wisely restored the rebellious Lombards to their fiefs, generally winning their loyalty. During the last years of Henry's reign (1214–1216), the political landscape again altered: Michael of Epiros was murdered and succeeded by his brother Theodore (1214–1230), who was an ally of Theodore

Laskaris and gave his niece in marriage to Slav (whose wife, Henry's daughter, had died). When Henry suddenly died on 11 June 1216 in Thessalonica, he left a relatively well-organized empire.

Decline and End, 1216–1261

The sudden and unforeseen death of Emperor Henry was the catalyst for a series of catastrophes for the Latin Empire. While the Fleming Conon of Béthune proved to be an able regent, the same cannot be said about Henry's successors. Emperor Peter of Courtenay, husband of Yolande of Flanders (Henry's sister), unwisely decided to travel from the West to Durazzo (mod. Durrës, Albania) and go from there to Constantinople by land. He was ambushed by Michael of Epiros in 1217 and died in captivity. Yolande died in Constantinople in October 1219 and was succeeded by her second son, Robert of Courtenay (1221–1228), who was crowned emperor in Constantinople on 25 March 1221. He left the city after an unfortunate love affair and secret marriage with a French lady and died in the Morea in 1228.

The empire was by now in full crisis. In 1224, the Nicaean emperor John III Vatatzes had heavily defeated the Latins at Poimaninon and imposed humiliating conditions

on the Latin Empire. In the west, Theodore, despot of Epiros, had extended his power, and in 1222 Thessalonica fell to the Epirote, who had himself crowned emperor. After Robert's death, the Frankish barons of Constantinople offered the throne to John of Brienne (former king of Jerusalem), whose daughter was to marry the future Baldwin II, Robert's young brother. John's election had alienated the Bulgarian tsar, Ivan Asen II, who had hoped that the crown would be offered to him. John of Brienne arrived in Constantinople during the summer of 1231, but waited until 1233 before attacking John Vatatzes. Once again, the political landscape had altered: in 1230, Theodore of Epiros-Thessalonica had broken his alliance with Asen and invaded Bulgaria, but was defeated and captured. His brother Manuel, who was Asen's son-in-law, now ruled over Thessalonica (1230–1236). Between 1232 and 1235, Asen tried to build up a coalition of Orthodox nations to recover Constantinople, and in 1235 his daughter was engaged to the future Theodore II Laskaris. But Asen's policy was unstable, and he again allied himself with the Franks, only to change camps once more after the sudden death of his wife. After his death (in 1241), Bulgaria suffered from internal weakness.

After the death of John of Brienne (1237), Baldwin II returned in July 1239 from the Low Countries with a small army to Constantinople, made an alliance with the Cumans, and was crowned emperor in 1240. He spent several years in the West trying to find financial and military support for his impoverished and collapsing empire. He signed a truce with John Vatatzes (June 1241) for a period of two years, which was renewed for another year in 1244.

The military situation of the empire became untenable after the deaths of John Vatatzes of Nicaea (1254) and his successor Theodore II Laskaris (1258). The usurper Michael VIII Palaiologos became emperor of Nicaea, and his troops heavily defeated the Franks of the principality of Achaia at the battle of Pelagonia (1259). In July 1261 Michael Palaiologos agreed to a truce, but on 25 July, his general Alexios Strategopoulos took Constantinople by surprise, thus putting a de facto end to the existence of the Latin Empire. Emperor Baldwin II fled to Italy. By the Treaties of Viterbo (24 and 27 May 1267), he ceded the suzerainty of the Frankish Peloponnese and other Latin regions to Charles I of Anjou, king of Naples. Baldwin died in Sicily in October 1273. His reign in Constantinople had been marked by poverty: he was even obliged to mortgage his own son,

Philip, to Venetian merchants in 1258. In exile Baldwin II and Philip of Courtenay maintained their claims as titular emperors, which passed to the dynasties of Valois and Taranto. They were extinguished with the death of Philip's great-great-grandson James of Baux (1285).

Constitution of the Empire

The Pact of March 1204 between the Venetian republic and the crusader leaders Boniface of Montferrat, Baldwin IX of Flanders, Louis of Blois, and Hugh of Saint-Pol formed the basis on which the empire's institutions were built. It foresaw the partition of the Byzantine Empire, regulated the election of a Latin emperor, legalized feudalism as the empire's institutional form, and also defined and described the powers, duties, and rights of the emperor, the Venetians, and the crusaders who would settle in the empire, as well as the relationship between them. It also defined the status of the church, mandating the election of a Latin patriarch of Constantinople and the partition of ecclesiastical property. Evidently this agreement, signed before the capture of Constantinople in March 1204, created a number of problems. Its details therefore needed to be revised or completed with a series of other agreements, which together can be considered as the "constitutional charters" of the empire. These other documents are the *Partitio Romaniae* and the Convention of October 1205.

The *Partitio Romaniae*, a document resulting from the work of a committee of *partitores* (officials charged with the partition of the Byzantine Empire) who finalized their work around September 1204, divided the empire into sections assigned variously to the emperor, the other crusaders, and the Venetians, leaving some parts around Thessalonica open, most probably for Boniface, marquis of Montferrat. The latter had been the unsuccessful contender for the throne, and after some strife between the marquis and Baldwin I, it was agreed that the marquis would become ruler of Thessalonica. The *Partitio's* divisions, however, were often more of theoretical than of practical value. Many of the defined and subdivided lands were in Greek hands and would never be occupied by the Latins after 1204. Moreover, the Venetians were only interested in ports or places that were of interest for their trade empire. Therefore, Venice had no problem in granting Adrianople to Theodore Branas, and was pleased with the suzerainty arrangement regarding the Peloponnese, agreed to in June 1209 by Prince Geoffrey I of Villehardouin and the Venetian envoy Raphael Geno

through the mediation of Henry's ambassadors, Conon of Béthune and Guy of Henruel.

In many cases the barons would have to conquer their fiefs themselves. Thus, Louis of Blois became duke of Nicaea (mod. İznik, Turkey), Henry of Flanders received Adramytion (mod. Edremit, Turkey) in Asia Minor, and Peter of Braecieux was given a "kingdom" elsewhere in Asia Minor; all of these lands were still in Greek hands when they were assigned. Probably, the *Partitio* also resulted in the creation of a register of fiefs, much the same as that which existed in the principality of Achaia. Fiefs were distributed to the barons in accordance with the number of their troops and their wealth (which could of course produce troops). In their work the *partitores* made use of Byzantine documents related to tax and properties.

The third "constitutional charter" was the Convention of October 1205 between Henry of Flanders and Marino Zeno, representative of the republic of Venice. It refined the clauses of the Pact of March 1204, mainly with regard to the service that was due from the empire's barons and knights to the emperor, and to relations between Venetians and Franks within the empire. Moreover, a pact known as the *Forma Iustitiae* was signed in March 1207 that regulated judicial relations between Venetians and Franks. The ecclesiastical regulations of the Pact of March 1204 were not entirely welcomed by Pope Innocent III, who had grudgingly agreed to the election of a Venetian, Thomas Morosini, as Latin patriarch, but who also insisted on a new deal regarding church property. This question was settled by a series of agreements: the convention of Patriarch Thomas Morosini and the papal legate, Benedict of St. Suzanne, with Henry of Flanders (17 March 1206), another settlement accepted at the parliament of Ravennika (2 May 1210) regarding the church in Thessalonica and Greece south of this kingdom, and finally a settlement reached in December 1219, during the regency of Conon of Béthune. These agreements restored—at least partly—the property of the church, defined its status, and regulated problematic issues, such as tithes and the *acrostichon* (Byzantine property tax).

Government and Institutions

As a result of the "constitutional" conventions, the Latin emperor was forced into a condominium with the Venetians. This political reality was illustrated by the titles taken by Venetian representatives: Doge Dandolo was *Imperii quartae partis et dimidie dominator* (ruler of a quarter and a half of

the empire) and later each Venetian *podestà* (plenipotentiary representative of the doge in Constantinople) was *vicedominator* (vice-ruler) in similar fashion. The political history reflects the complications of this Frankish-Venetian condominium and the tensions between the different ethnic and political groups within the ranks of the Franks. The resulting tensions inevitably contributed to the decline of the empire, especially when, after the deaths of Baldwin I and Henry, weak emperors occupied the throne. Each emperor was obliged to swear on oath that he would respect the fundamental charters and the rights and privileges of the Venetians. Venetian policy did not necessarily coincide with the empire's interests, and each *podestà* was inclined to follow his own line, and (independently of the emperors) often contracted his own trade and political agreements with other states, for example, with the empire of Nicaea and the Saljuq sultanate of Rûm. It was thus clear that from the foundation of the empire, there was a *de facto* division of interests between Venice and the Frankish rulers of Constantinople. The Venetians regarded their "quarter and a half" of the empire as part of the Venetian Empire, where trade and commerce were first priorities. This meant that trade and commerce were mainly in Venetian hands, as was sea transport, although Italians of non-Venetian origin were active in the islands and, as was the case with the Lombards, in the kingdom of Thessalonica.

Impasses or interregnums after the death of each emperor gave rise to the appointment of regents. Only Henry of Flanders had the title of *moderator Imperii* (regent of the empire) until he was crowned emperor. The other regents were known as *bajuli* (baillis): Conon of Béthune was appointed after the deaths of Henry (1216) and Yolande (1219); after Robert of Courtenay died in 1228, his sister Marie of Courtenay was in charge; and after John of Brienne's death (1237), the regency was exercised by Anselm of Cayeux and then Narjot of Toucy. When he traveled, Baldwin II left the regency to Philip of Toucy. The regents, whether known as *bajulus* or *moderator*, signed pacts, agreements, and truces with the same authority as the emperors. Surviving documents attest that Conon of Béthune had (like the emperors) to give an oath to the Venetians, guaranteeing their privileges. Perhaps the other regents had to do the same. The case of John of Brienne deserves special mention: the agreements of Perugia in March/April 1231 gave him full rights as emperor, but recognized the dynastic rights of Baldwin II, who had married his daughter and was to be his successor. In fact, the "con-

stitutional laws” had not stipulated any dynastic rights of the imperial family, but the divisions of the *Partitio Romaniae*, together with the hereditary rights that were provided in these charters, made it quite impossible to disregard the imperial dynasty, thus limiting the choice of the barons at every succession to the members of the Courtenay family.

The Convention of March 1204 and the other “constitutional charters,” as well as imperial documents and correspondence, give us insight into the institutions of the new empire. A number of councils and committees were created, some ephemeral, others more permanent. To the first category belong the electors of the new emperor, the *partitores* who were responsible for the division of the empire and distribution of fiefs, honors, and titles, and the mixed committees that arranged the partition of church property. The second category consisted of the council of the empire, which was sometimes only indicated by the collective expression “the barons (of the empire)” and the private ad hoc councils of each individual emperor. The existence of a chancery with its chancellor and staff is known from the very beginning of the empire and grew out of Baldwin I’s own Flemish secretaries who accompanied him on the crusade.

Judicial institutions were based on the Western, mainly French, feudal system, and there was little noticeable legal development in the empire. The well-known *Assizes of Romania* did not result from legal practice in the empire, but took shape in the principality of Achaia, where written legal documents since the beginning of the thirteenth century had

gradually developed into a law code (probably at the beginning of the fourteenth century).

The military organization of the empire was left to the emperor, whose successes or failures in war were highly dependent on his own personality and abilities: while Henry could impose his will on many unruly vassals, his successors were unable to do so. The army of the empire consisted of the Frankish and Venetian vassals, whose service duties were limited by the “constitutional charters” as well as by the fact that the barons were almost continuously besieged by Greek insurgents, so that a general mobilization was not a practical possibility. Only Henry of Flanders seems to have made use of Greek troops (as did the princes of Achaia). Consequently, the use of diplomatic weapons such as dynastic and political marriages had to play an important role in the defense of the empire. This system, which Henry used to the benefit of the empire, was continued after his death, but not with the same insight and success. Empress Yolanda married her daughter Marie of Courtenay to Theodore I Laskaris of Nicaea and another daughter, Agnes, to Geoffrey II, prince of Achaia. The planned marriage between Robert of Courtenay and Theodore Laskaris’s daughter Eudokia was not realized. More fatal was the marriage of Baldwin II to Marie of Brienne, because of the election of John of Brienne. Ivan Asen II of Bulgaria, a rival candidate for the throne, had other plans for the young Baldwin and was willing to offer him the hand of his daughter Helena, who, finally, was betrothed to the young Theodore (II) Laskaris of Nicaea.

As the Latin Empire was not only a new creation, but also the continuation of the Byzantine Empire, one might expect some Byzantine influence on its court institutions and customs, and this was the case to a limited extent. Thus, next to the Western feudal titles and dignities of seneschal, constable, marshal, and butler, some Byzantine titles occur: Conon of Béthune received the titles of *protovestiaros* and *sebastokrator*, Doge Dandolo became despot of Romania, and the title of Caesar was given to Theodore Branas and later to Narjot of Toucy (1228) and most probably to his son, Philip of Toucy. Emperor Henry made Navigaioso Philocalo *meas doux* (great duke) in 1206 or 1207. Emperor Baldwin II, born in Constantinople, became *porphyrogenetos* (literally “born in the purple,” i.e., the son of a ruling emperor).

hand, and Greeks, Bulgarians, and Vlachs, on the other hand, was the key to peace and prosperity in the Latin territories of the empire. Only Emperor Henry seems to have fully recognized the necessity of such a symbiosis and to have conscientiously aimed at creating it. This is illustrated by his insistence on ecclesiastical dialogue, his firm but subtle policy toward the Lombards of Thessalonica, his diplomatic marriage arrangements, and the employment of Greek and other “native” troops and of Greek functionaries in his administration. Moreover, the Greeks seem to have enjoyed the application of their own laws and administrative system, not only in Thessalonica (as attested by a lawsuit in 1213), but almost certainly everywhere in the empire. Henry’s death did not immediately entail a change of policy. Indeed the ecclesiastical agreement of 1219 shows some understanding for the Greek Orthodox subjects regarding tithes and the *acrostichon*. Even Emperor Baldwin II seems to have been aware of the necessity of employing Greeks, since he was castigated by Blanche of Castile for employing Greek advisers. But rulers like Baldwin II were far too weak to impose their own policies.

The decline of the empire’s military power and administration after Henry’s death inevitably led to financial penury and impoverishment, not only of the rural population, but also of the capital itself, where Baldwin II was obliged to sell the lead of the roofs in order to finance his bills. This poverty contrasted sharply with the welfare of the Venetian traders. Such a climate was not conducive to any promotion of arts in the empire.

Conclusions

The manpower of the Latin Empire was extremely limited by the fact that the Frankish states in Outremer had the same needs. Therefore, the creation and existence of the Latin Empire weakened the Frankish presence and manpower in the East. It also awakened Greek nationalism, especially since the rulers of the Byzantine successor states after 1204 were national Greek princes, ruling an indigenous, homogeneous Greek population. The empire’s existence did not help the Christian cause versus the progress of Islam either: its existence caused the total breakdown of the traditional Byzantine political structures, as well as of commerce and agriculture, and left Constantinople and many other cities in ruins. It not only was unable to replace the Byzantine civilization as a Christian bulwark, but actually destroyed that bulwark. It thus contributed to the weakening of the Chris-

tian cause in Palestine and Syria and finally paved the way for the eventual disappearance of the Byzantine Empire.

Constantinople, Latin Patriarchate of

The Latin Patriarchate of Constantinople represented the church organization and hierarchy of the Latin Empire of Constantinople (1204–1261). As such, it was a direct result of the deviation of the Fourth Crusade (1202–1204). The Convention of March 1204 agreed to by the crusader leaders and the Venetians before the capture of Constantinople (mod. İstanbul, Turkey) mandated that the patriarch should be elected from whichever of the two parties did not provide the new emperor. The election of Count Baldwin IX of Flanders as emperor therefore meant that the patriarch would be a Venetian. The patriarchate ended de facto with the recapture of Constantinople by the Byzantines of the empire of Nicaea in 1261.

The Patriarchs, 1204–1261

The Venetian committee appointed to elect the patriarch chose Thomas Morosini (1204–1211), then only a subdean. He arrived in Constantinople in midsummer 1205 and, according to what was expected from him, tried to keep the church firmly under Venetian control, thereby coming into direct conflict with Pope Innocent III, Emperor Henry (Baldwin’s brother and successor), and the French clergy of Constantinople. Morosini’s problems were mostly related to the stipulations of the Convention of March 1204, which were unacceptable to the pope, as well as to the question of church property and related financial matters, and the appointment of the clergy. Dialogues with the Greek Orthodox Church were not successful, and Morosini’s difficult personality did not help a harmonious development of the patriarchate. He died in Thessalonica in June or July 1211.

After a vacancy in 1211–1215, Gervase, archbishop of Herakleia, was invested by Innocent III as the second patriarch (1215–1219); his period of office was dominated by the problem of church property. He was succeeded by Matthew, bishop of Jesolo (Equilio), a Venetian, who was appointed by the pope in January 1221. The papal legate John Colonna

took charge during the vacancy (9 November 1219–January 1221). Matthew, like Morosini and Gervase, behaved like a power-hungry despot, without much concern for his subordinates, the empire, or the papacy. He was mainly interested in (mis)using church funds and extracting as much money as possible from his flock. Like his predecessors, he supported Venetian interests and discriminated against the French clergy. Pope Honorius III (1216–1227) balanced the power struggle first by strengthening the position of his legate, and then by supporting the patriarch. Matthew died at the end of 1226.

Simon, archbishop of Tyre (probably not a Venetian citizen), was appointed patriarch to succeed Matthew, perhaps by Honorius III (who died on 18 March 1227) or more probably in 1229 by Pope Gregory IX. The new patriarch’s reign was marked by a rather harmonious relationship with Pope Gregory IX, who appointed Simon as his legate. Simon died in early 1233. More than one year later, the pope appointed Nicholas of Santo Arquato, bishop of Spoleto, a noble from Piacenza, to the patriarchal see (1234), and some time later (on 12 August 1234), Nicholas also became legate. As was the case with Simon, relations between pope and patriarch remained good. Relatively little is known of Nicholas’s activity except that he was often away from the capital. Pope Gregory IX tried to secure financial support for the patriarch from the Morea and the islands, as the patriarchate had by now become as poor as the empire itself. Gregory’s successor, Innocent IV, reconfirmed Nicholas as papal legate on 10 July 1243 and again on 28 May 1249. Nicholas was present at the First Council of Lyons (1245), supporting the pope in his condemnation of Frederick II, the Holy Roman Emperor. Nicholas died in Milan between July and September 1251.

After a vacancy of more than one year, the pope appointed the Venetian Pantaleone Giustiniani in February 1253. The pope’s choice reflected his belief that only Venice would be able to save the Latin Empire. Giustiniani was also appointed legate, and the next pope, Alexander IV, confirmed this appointment. The pope’s most important problem now regarding the patriarchate was how to alleviate its misery and penury. In July 1261, when the Greeks recaptured Constantinople, the last Latin patriarch fled to the West, where he died in 1286.

Relations with Papacy and Latin Empire

The Convention of March 1204 had stipulated that “Frankish” (i.e., non-Venetian) clergy were to be appointed in the

churches that would be assigned by the *Partitio Romaniae* to the Franks, and Venetians in the churches assigned to Venice. The clergy were to receive from the treasures of these churches enough to have a respectable life, and the churches themselves were to have enough for their maintenance. The rest of the ecclesiastical treasures were to be divided among the emperor, the crusaders, and the Venetians. The pope rejected these terms. A further problem was created by the Convention's provision that the patriarchate was to belong to the group from which the emperor was not elected (i.e., the Venetians), and that the Venetian chapter of St. Sophia would thus elect the patriarch. Pope Innocent III had accepted Morosini's election as a *fait accompli*, but successive popes did not accept the uncanonical arrangements of the Convention. Yet Innocent III and his successors had to balance the idea of a strong Latin patriarchate in Constantinople with the desire for subjugation of, or at least reconciliation with, the Greek Orthodox Church.

The question of church property was steadily resolved by a series of agreements with the Latin emperors. On 17 March 1206, a convention between Benedict of St. Suzanne (the papal legate) and Thomas Morosini on the one hand, and Emperor Henry and the barons on the other hand, assigned one-fifteenth of all property outside Constantinople (with some exemptions) to the church along with one-fifteenth of tolls and custom duties. Moreover, all monasteries were to be free and not subjected to lay hands. The same agreement also regulated the payment of tithes to the church, while the clergy and the church properties were not to be subjected to lay jurisdiction. However, the Venetians were not part of the deal, and Morosini obstructed the application of the pact, whose regulations were not fully applied until 1210.

Another settlement was reached regarding church property and the status of the clergy in the kingdom of Thessalonica and the other Frankish states in Greece. This settlement was formally accepted at a council at Ravennika on 2 May 1210, and a pact was signed between the patriarch and clergy on the one hand, and the barons (with Emperor Henry's approval) on the other hand. This pact also contained the introduction of the payment of the *acrostichon* (Byzantine property tax) not only by the Greek, but also by the Latin, clergy. The agreement was confirmed in January 1219 by Pope Honorius III.

In the Latin Empire itself, however, practically all church property was still in lay hands around 1218, and further negotiations took place at a meeting in Rodosto among Patriarch

Gervase, the papal legate John Colonna, the Venetian *podestà* (plenipotentiary representative of the Doge) in Constantinople, and the regent, Conon of Béthune, and his barons. A final settlement was reached on 15 December 1219 and confirmed in June 1221 by Emperor Robert and in March 1222 by Honorius III. It was also accepted by the barons of the kingdom of Thessalonica. This agreement finally regulated the questions of property, asylum, lay and ecclesiastical jurisdiction, and the *acrostichon*. Church property was restored in a realistic way, in order not to ruin the empire and its knights. The Venetians, who were not part of the pact, were finally obliged to adhere to the agreement in 1223.

Successive popes also tackled the problem of Venetian domination of the patriarchate, created by the Pact of March 1204. They mainly used their legates, especially Peter Capuano, Benedict of St. Suzanne, and John Colonna, to counter the power of the patriarch, until finally, under Patriarch Simon, the Venetian grip on the patriarchate was broken, and as a symbol of the new relationship, Patriarchs Simon and Nicholas were elevated to the position of papal legate. The pro-Venetian policy of the first patriarchs had also entailed discrimination against the French clergy. This was countered by the papacy through its legates and the right of the popes to appoint themselves canons and *praepositi* (provosts) in Constantinople. In one instance the right of appointing *praepositi* was even given to Emperor Robert by Honorius III, but later was taken away by Gregory IX. The popes succeeded in breaking the Venetian monopoly on the church, but later realizing that only Venice was able to sustain the empire, they reversed this policy during the last period of the empire's existence.

The story of how the patriarchs were elected illustrates this struggle. Thomas Morosini was directly elected by the Venetians and had sworn to serve Venetian interests, but Innocent III obliged him to retract his oath on 15 December 1208. After Morosini's death in 1211, the Venetian chapter of St. Sophia was determined to elect a Venetian. The chapter's election of its dean, Philip, was declared illegal by Innocent III. A formal election by the chapter *and* the (French) *praepositi* took place on 24 December 1211. The result was a deadlock: the French elected Gervase, who was nevertheless a Venetian citizen, while the Venetians chose Ludovico, *plebanus* (canon in charge of the parish ministry in a cathedral church) of the church of St. Paul in Venice. The pope unsuccessfully tried to solve the issue through his representative, Maximus, and his legate, Pelagius of Albano. The mat-

ter was only settled in 1215 when Gervase was directly appointed by Innocent III himself. After Gervase's death (8 November 1219), the patriarchal election by the chapter and *praepositi* produced a new stalemate, and the pope himself appointed Matthew of Jesolo. From then on, papal appointment became the norm.

Several Greek *notitiae* (episcopal lists) and papal correspondence have allowed modern scholars (especially Robert L. Wolff) to reconstruct the list of archbishoprics and bishoprics of the Latin Empire. The system in the Latin Church was quite different from the previous Byzantine system, mainly as to the number and status of suffragan bishoprics as well as of archbishoprics. According to the 1228 edition of the so-called *Provinciale Romanum*, a catalogue of archbishoprics subject to Rome, the following Latin archbishoprics existed in Romania (as the Latin Empire and other Frankish states were referred to in the West): Constantinople (with six suffragan bishoprics), Herakleia (with seven suffragan bishoprics), Parium or Parion (with three suffragan bishoprics), Kyzikos (with eight suffragan bishoprics), Vrysis (with three suffragan bishoprics), Madytos, Adrianople, Trajanopolis (with one suffragan bishopric), Makrê (with one suffragan bishopric), Mosynopolis (with one suffragan bishopric), Philippoi (with three suffragan bishoprics), Serres, Thessalonica (with two suffragan bishoprics), Larissa (with six suffragan bishoprics), Neopatras (with one suffragan bishopric), Thebes (with two suffragan bishoprics), Athens (with eight suffragan bishoprics), Corinth (with one suffragan bishopric), Patras (with seven suffragan bishoprics), Corfu, Durazzo, Crete (with five suffragan bishoprics), and Rhodes.

Relations with the Greek Orthodox Church

The creation of a Latin Empire and patriarchate presented Pope Innocent III with the opportunity of reuniting the Greek "schismatics" with the Latin Church. He therefore

Latin Patriarchs of Constantinople

Thomas Morosini	1204–1211
Gervase of Herakleia	1215–1219
Matthew of Jesolo	1221–1226

Nicholas of Santo Arquato	1234–1251
Pantaleone Giustiniani	1253–1261

ordered that Greek bishops were to retain their sees, but give obedience to the Latin patriarch and acknowledge papal supremacy. The pope instructed Morosini to this effect and laid down these conditions for the retention of Greek bishops. Ecclesiastical dialogues between the Latin and Greek churches, sponsored by Emperor Henry, took place in August–October 1206 but did not bring results. The Greek clergy was not keen to cooperate with the Latin conquerors, especially after the election of a Greek patriarch, Michael Autoreianos, in Nicaea in 1208. Even those bishops who at first had given allegiance to Morosini refused to be anointed or to anoint according to the Latin rite. Consequently, the pope took a harder line and eventually decided to organize the church according to new, "Latin" lines. This led to tensions with Emperor Henry and Queen Maria of Thessalonica, who continued a policy of reconciliation. Thus in 1214, when the arrogant papal legate Pelagius had closed the Greek churches of Constantinople, Henry received a Greek delegation and reopened them.

Similar problems were experienced with the Greek monasteries, while Latin orders, including military orders such as the Templars, were introduced in Romania. It seems safe to say, however, that the lower levels of the clergy largely remained Greek. Tensions between the two clergies and hardships imposed on Greek clergymen and Greek monasteries by lay barons and knights were common, and are well documented in the surviving documents. The Latin patriarchate thus contributed little to peace and integration within the empire; indeed, it provoked more tensions and stiffened the resistance of the indigenous population.

Constantinople, Siege of (1204)

Siege of the Byzantine capital (mod. İstanbul, Turkey) by the army and fleet of the Fourth Crusade (1202–1204), culminating in the capture of the city on 13 April 1204.

The crusaders' initial assault on the city in July 1203 resulted in the flight of the Byzantine emperor Alexios III Angelos and the crowning of the crusader-backed claimant to the throne, Alexios IV Angelos. Over the following months, however, relations between the Byzantine court and the crusaders were strained by Alexios IV's inability to fulfill the obligations he had undertaken in return for the crusaders' support. On 19 August, the day after a Greek riot against Latin residents within Constantinople, a band of crusaders attacked a mosque near the city's harbor and started a devastating fire. By December the situation escalated into open conflict, as the Latins plundered the suburbs and the Greeks twice attempted to burn the crusader fleet.

Taking advantage of growing anti-Latin sentiment, in late January the Byzantine nobleman Alexios Doukas Mourtzouphlos deposed Alexios IV, formally assuming the throne (as Alexios V) on 5 February 1204 and killing Alexios IV a few days later. Less ambiguous in his attitude toward the crusaders, over the following months Mourtzouphlos engaged the Latins in a number of skirmishes. This turn of events led the crusader fleet to attack the city walls along the Golden Horn (mod. Haliç) on 8 April 1204. The initial assault floundered, and the Latins retreated. Exhorted by the army's clerics, who declared the assault a holy war against the murderous Alexios V and the schismatic Greeks, the attackers resumed their assault on 12 April. Two ships, the *Paradise* and the *Pilgrim*, succeeded in securing a tower on the harbor walls; Latin penetration into the city's northern corner followed. That night, apparently in an attempt to defend their tenuous position, the crusaders in the city started

Taking of Constantinople. (Pixel That)

another fire, which quickly raged out of control. His support wavering, Mourtzouphlos fled before dawn, leaving Constantinople open to the Latin army, which proceeded to sack the city on 13 April.

Constantinople, Siege of (1453)

An Ottoman military operation lasting fifty-four days (5/7 April to 29 May 1453), which culminated in the conquest of the Byzantine imperial capital (mod. İstanbul, Turkey) by Sultan Mehmet II Fatih. For almost two months the 7,000 Greek defenders, assisted by about 3,000 Western merce-

naries (mostly Genoese under Giovanni Longo Giustiniani), held out against an enemy whose numbers were nearly ten times greater, as well as a devastating artillery pounding that destroyed a significant section of the city's western walls.

This was the third Ottoman siege of Constantinople following earlier abortive attempts by Sultans Bayezid I in 1394–1399 and Murad II in 1422. The inevitable fate of the city had already been heralded following the Turkish defeat of the Varna Crusade of 1444.

Preparations for the impending siege became apparent with the construction by the Turks from March to August 1453 of the massive castle of Rumeli Hisar ("Castle of Europe"), known also as Boghaz Kesen ("Throat Cutter"), on the western shores of the narrowest part of the Bosphorus, facing the older Anadolu Hisar ("Castle of Anatolia"), built in 1395/1396 by Bayezid I. Mehmet proceeded to isolate the city from possible help by sending his general Turakhan Begh to invade the Morea and by having Karadja Begh dismantle Byzantine fortifications in the Sea of Marmara and

on the Black Sea coastline (autumn 1452). A belated and minimal Western force consisting of Venetians and Genoese, who had the support of Pope Nicholas V, arrived in Constantinople in late 1452 or early 1453, just before the huge Ottoman forces assembled before its western walls (March and early April). The siege commenced on 5/7 April. Despite a temporary respite in the blockade brought about by the Genoese Francesco Lecanella (called "Flantanelas" in Byzantine sources), who succeeded in entering the Golden Horn (mod. Haliç) with one Byzantine and three Genoese ships (20 April), it became even tighter when the Turks managed to haul seventy-two vessels on oiled wooden planks overland behind the suburb of Galata from the Bosphorus into the Golden Horn (22 April). This move thus neutralized the protective Byzantine chain that had sealed the Golden Horn since 2 April, and allowed the besiegers to build a floating bridge across the inlet, consequently forcing the besieged to divide their attention. Even then the stout defense of the city made Mehmet oscillate

between the advice of his generals Zaghanos Pasha and Shihabeddin to proceed tenaciously and the counsel of his grand vizier Khalil Pasha Djandarli to lift the siege (25 May). The latter was suspected of consulting with the besieged (he was later executed), and so Mehmet carried on with the operations.

The end was precipitated following the breaching of a large section of the ramparts and the controversial opening of a small secret underground gate on the northern section of the walls called Kerkoporta (probably because of careless defending on the part of some Byzantines), through which the Ottomans, who also breached the Charisios Gate further to the north, entered the city. Giustiniani received a serious wound and was forced to leave his post, while Emperor Constantine Palaiologos (who had flatly refused to capitulate on Mehmet's terms on 21 May) was killed along with a handful of defenders near the Gate of Romanos, at about the center of the western walls, on the early afternoon of Tuesday, 29 May. Some of the defenders succeeded in fleeing in Venetian and Genoese ships.

The fall of Constantinople caused consternation in western Europe. The victorious sultan entered the city, which was to become his empire's new European capital in succession to Adrianople (mod. Edirne, Turkey). Following a period of looting lasting three days, during which Mehmet gave strict orders against the destruction of monuments, he began to colonize his new capital with Muslim populations from his eastern provinces as well as Christians from the recently conquered Greek and Balkan territories. Finally, in 1454 the conqueror granted important privileges to the Greek Orthodox patriarch Gennadios II, who was thus recognized as the *ethnarch* (head of the community) of the Orthodox peoples within the Ottoman Empire.

The capture of Constantinople is generally considered to mark the final fall of the Byzantine Empire, although some outposts of medieval Hellenism actually outlived Constantinople by several years: the despotate of Morea until 1460/1461, the empire of Trebizond until 1461, the semiautonomous state of Thessaly until 1454/1470, and the autonomous state of Epiros until 1449/1479.

Conversion: The Baltic Lands

The conversion of the peoples living on the eastern shores of the Baltic Sea was a major component of the crusades to these regions, which took place from the end of the twelfth century to the end of the fourteenth. The actual acceptance of Christianity, however, was a long process extending into the early modern period.

The attempt to integrate the territories of present-day Estonia and Latvia into the system of bishoprics of the Roman Church was first undertaken by Eskil, archbishop of Lund, who appointed a monk named Fulco as bishop of Estonia in the 1170s, although there is no evidence that he ever visited the country. The ambitions of the bishopric of

Hamburg-Bremen meant that Danish and German parties became rivals in the Christianization of the Baltic lands.

In the mid-1180s a canon of the cathedral of Bremen called Meinhard (d. 1196) arrived with German merchants at the mouth of the Dūna River, and the first systematic attempts at conversion began, initially among the Livs and Lettgallians. The achievements of Meinhard, appointed bishop of Üxküll (mod. Ikšķile, Latvia) in 1186, and his successor, Berthold of Loccum, remained modest. Large-scale Christianization began only with the military campaigns organized at the beginning of the thirteenth century by Albert of Buxhövdn, bishop of Riga, in the Livic, Lettgallian, and south Estonian territories and King Valdemar II of Denmark in the northern and western Estonian territories. The Livs were baptized by 1206, and from 1208 onward systematic military campaigns were launched against the Estonians by the crusaders based in Riga and the Order of the Sword Brethren (founded in 1202). In 1211 a Cistercian monk called Dietrich, a companion of the late bishop Meinard, was appointed bishop of Estonia, and after the defeat of the Estonians in 1219 by Valdemar II, Vescelin was appointed Danish bishop of Reval (mod. Tallinn, Estonia). The Estonians were formally baptized in 1215–1227. In 1220 Bishop Albert appointed his brother Hermann as bishop of Dorpat (mod. Tartu, Estonia). The first bishop of Ösel-Wiek, Gottfried, is mentioned in 1228, and the bishopric of Curonia in northern Latvia was established at the end of the 1230s.

The first attempts to convert Prussia were not successful. Long before the period of the crusades, the missionaries Adalbert of Prague (d. 997) and Bruno of Magdeburg (d. 1009) had been killed by Prussian and Lithuanian tribes. The conquest of Prussia was initiated by Conrad, duke of Mazovia, with the help of the Teutonic Order. In 1243, four bishoprics (for Pomesania, Warmia, Sambia, and Kulm) were created to replace the single bishopric of Prussia. The largely forceful Christianization of Prussia was characterized by serious setbacks and heathen revolts and was not accomplished until 1283. In 1245 Albert Suerbeer was consecrated as the first archbishop of Prussia, Livonia, and Estonia, and in 1253 he made Riga his seat. The bishop of Tallinn remained a suffragan of the archbishop of Lund up to the Reformation.

Lithuania retained paganism until the end of the fourteenth century. In the mid-thirteenth century Grand Duke Mindaugas made an attempt to accept Christianity, largely for political reasons, but lost the support of his heathen subjects, apostatized, and was murdered in 1263. Lithuania was

officially converted in 1386 when Grand Duke Jogaila accepted baptism in order to become king of Poland. Samogitia was conquered by the Teutonic Order in 1405 and accepted Christianity by 1414.

There are very few sources representing the inner religious attitudes of the population during the process of conversion. At first, Christianization was hampered by the small numbers of missionaries, by their inadequate knowledge of local languages, and not least by the resistance of the native peoples. The launching of crusades to Livonia and Prussia increased the rate of conversion, but it is evident that baptism was often imposed by force or by the threat of violence, and it is difficult to establish how far the converts actually accepted Christian beliefs. Certainly revolts of the Prussians and Estonians against their new rulers were often accompanied by apostasy and reversion to pagan religious practices. In 1199 Pope Innocent III described the local peoples as venerating forces of nature and impure ghosts, and similar remarks occur in synodal statutes from Riga (1428, 1437) and Ösel-Wiek (1505, 1517). Innocent ordered clerics to be moderate in imposing penance on the newly converted, and during the following centuries similar admonitions stressed the importance of teaching the native inhabitants the basic catechetical texts in their own languages and forcing them to give up pagan habits such as using their old burial places, saying auguries, and venerating heathen gods.

The process of conversion in the countryside of Livonia and Prussia seems to have been relatively slow and for a long period burdened with pagan or half-pagan habits. In Livonia so-called non-German chancels existed at least from the fifteenth century in many urban churches, monasteries, and friaries and were able to minister to the native population living in the towns.

The first written texts in local languages (the *Pater Noster*, the *Ave Maria*, and the creed) date from the first part of the sixteenth century. The existence of earlier texts of this kind is probable but cannot be proved because of the poor survival of any medieval religious texts in this region, whether Latin or vernacular.

Conversion: Iberia

The Iberian Peninsula experienced two significant conversion movements in the Middle Ages: from Christianity to Islam after the Muslim conquest in the eighth century, and from Islam and Judaism to Christianity in the course of the long reconquest of the eleventh to fifteenth centuries. Neither Muslim conquest nor Christian reconquest had as an object the conversion or expulsion of infidels; rather, they aimed at the displacement of the vanquished ruling classes and the redirection of tax revenues to the conquerors' fisc. That said, the success of the victors' societies provoked conquered peoples to adopt the cultural and religious practices of the new regimes to the measure that these were seen to fill needs that their own cultures could not provide. Under Christian rule, official coercion, popular violence, and missionizing all failed ultimately to convert or integrate Jews and Muslims.

Scholarly opinion varies regarding the rate of conversion of Christians to Islam under Muslim rule, but the broad consensus is that the overwhelming bulk of the native population had converted by the late ninth century. Christians who adopted the cultural and linguistic manifestations of Islam but who retained their faith (known as Mozarabs) remained a significant minority into the twelfth century despite emigration to Christian lands. The descendants of converts (Arab. *muwallads*) often adopted the genealogy of Islamic patrons and were thus profoundly integrated into Andalusi

society, although rebellions in the ninth century demonstrated that they maintained a distinct identity until that time. Jewish conversion to Islam was limited, but cultural assimilation was dramatic.

Under Christian rule, native Jews and Muslims (*Mudéjars*) tended to be implicated in royal, ecclesiastical, and local economies (the former as financiers, the latter as producers and laborers) to such a degree that it was rarely in the interests of clerical or secular institutions to actively promote conversion. Nevertheless, the missionary ideal was publicly promoted, although subtle legal obstacles were often presented to would-be converts, who for their part found that adopting the Christian religion was no guarantee of social acceptance. In the thirteenth century, missionary work was undertaken by the Dominicans and Franciscans (including the lay brother Ramon Llull), who obliged non-Christians to attend sermons, studied the Hebrew and Arabic scriptures, lobbied against Muslim and Jewish participation in Christian society, wrote polemics, and engaged in public debates (Lat. *disputationes*). None of these techniques yielded much success, except among the Muslim slave population, who saw conversion as a step toward manumission.

In the fourteenth century religious and social boundaries became more rigid as increasingly elaborate codes of dress and conduct were prescribed for minority members. Pressure on Jews increased with Christian competition in the economic spheres that they had previously dominated as clerics, frustrated by their failure to rationally convert Jews, characterized them as obstinate, and as the population at large came to perceive marginal groups (including lepers and Muslims) as responsible for its misfortunes. Occasional outbreaks of violence, particularly during Eastertime, culminated in widespread pogroms in 1391. In the aftermath of these events many Jews converted out of either fear or opportunism, some secretly maintaining their beliefs as crypto-Jews (Sp. *Marranos*). Converts, however, remained marginalized by a society that distinguished between "old" and "new" Christians. In 1492, the Spanish kingdoms adopted policies that called for conversion or execution (with the option of exile in Castilian and Aragonese lands). Many Jews fled abroad, particularly to Muslim lands and the Netherlands; those who remained became a favorite target of the Inquisition.

Officially marginalized, Muslims occasionally rose in local revolts, which were sometimes responded to with mass deportations. Perceived as less of a threat, *Mudéjars*' resis-

Conversion: Outremer

tance to conversion did not tend to elicit the violent reaction that the Jewish presence did until the late fifteenth century. Following the fall of Granada in 1492, pressure increased, thanks in part to the machinations of Archbishop Cisneros of Toledo and the military threat posed by the Turks. The sixteenth century was characterized by persecution, expulsion, and forced conversion in Portugal (1497), Castile (1502), Navarre (1515), and Aragon and Valencia (1526). Later in the century, Inquisition and the prohibition of traditional culture prompted further revolts among the converts (Moriscos), while increasing reactionism in Spanish church and society led to the promulgation of decrees of expulsion from 1609. Over the following decade the Moriscos were exiled and sought refuge in North Africa and Ottoman territories.

Conversion: Outremer

Conversions from Islam to Christianity occurred quite often in the Frankish states of Outremer. Some Muslims converted and entered the service of Frankish rulers, such as Godfrey of Bouillon and King Baldwin I of Jerusalem; Muslim converts are also mentioned as serving in Frankish armies at various times. The conversion of a Muslim peasant is referred to in a Muslim treatise, *Karāmāt Mashā'ikh al-Arḍ al-Muqaddasa* (*The Cited Tales of the Wondrous Doings of the Shaykhs of the Holy Land*), by Ḍiyā' al-Dīn al-Maqrīṣī. A papal letter of 1264 deals with poor Muslims (and Jews) who come to Acre (mod. 'Akko, Israel) to be converted and

enjoins the Latin patriarch to provide for their sustenance during the days on which they are to receive instruction. Some Franks married baptized Muslim women: a decretal of Pope Celestine III sent in 1193 to the bishop of Acre deals with Muslim converts wishing to marry Frankish women. A decretal of Pope Innocent III, sent in 1201 to the titular bishop of Tiberias (mod. Teverya, Israel), deals with recently baptized Muslims who, before conversion, married spouses related to them in degrees prohibited by canon law, and lays down that such marriages are valid. The ruling was reiterated in 1274. A Muslim convert called *Mestre Jaques Sarasin le ypoticaires, nouveau crestien* (Master James the apothecary, a new Christian) collaborated toward the end of the thirteenth century in the writing of an Arabic-French glossary.

Evidence for the conversion of Muslim slaves is more abundant. Frankish custom granted freedom to a converted slave, and so Frankish lords reacted by preventing the conversion of their slaves so as to avoid the obligation to manumit them; in 1237–1238 Pope Gregory IX promulgated a compromise ruling that allowed slaves to accept baptism but abolished the custom that gave them freedom. As the lords' resistance continued, the papal legate Odo of Châteauroux threatened them in 1253 with excommunication. Yet some baptized slaves did gain freedom. Thus, the will of a burgess drawn up in Acre in 1264 reveals that he owned two baptized slaves, at least one of whom he had manumitted, and that he ordered the baptism and manumission of two others. Treaties between the Mamlūks and Frankish rulers in the years 1267–1283 deal with fugitive slaves from the sultanate who converted to Christianity upon their arrival in Frankish territory: two treaties allow the fugitives to stay put, the third stipulates the return even of those who sought sanctuary in a church. The Muslim chroniclers Ibn al-Furāt and al-Maqrīṣī relate that in 1268–1269 four *mamlūks* (slave soldiers) of Sultan Baybars I fled to Acre and converted there. Al-Maqrīṣī mentions the abduction and forcible baptism of a Muslim girl and adds that the Franks frequently coerced Muslims to become Christian.

As for Christian attempts at missionizing, a Frankish hermit tried in the 1120s to preach Christianity to a Muslim ruler; in 1217 James of Vitry, bishop of Acre, preached in the Christian-Muslim borderland, sent letters in Arabic to Muslims outside Frankish territory, and baptized a number of Muslims. In later years Franciscans and Dominicans systematically endeavored to bring about Muslim conversion, and Pope Gregory IX proclaimed their efforts as commendable as

crusading. When a Dominican friar boasted in 1273 that he had baptized more than a thousand Saracens, his contention must not have been utterly divorced from reality.

There were also many instances of Franks converting to Islam. Both Latin and Arabic chroniclers relate repeatedly that Christian warriors who could not endure the hardships of battle crossed the lines and became Muslims. Such cases took place during the Second Crusade (1147–1149), in the times of Saladin, and during the Fifth Crusade (1217–1221). Also, many Franks who fell into Muslim captivity chose to embrace Islam and regain freedom. Conversions unrelated to warfare also took place. A law attributed to King Baldwin II of Jerusalem deals with a *home lige* (liege man) who abandons his fief, denies Christianity, and becomes a Saracen; another law lays down that children may disown parents who go to the land of the Saracens and become Jews or Saracens. A decretal of Pope Alexander III reveals that an archbishop of Tyre (mod. Soûr, Lebanon) wrote to him that, in his province, it frequently happened that a Christian went over to Saracen territory and renounced his faith. Pope Celestine III, in a letter of 1193 to the bishop of Acre, mentions a Christian who left his faith and wife and according to gentile rites married a pagan (that is, Muslim) woman who bore him several sons; after the death of the Christian wife, he decided to revert to Christianity and marry the pagan one, who had converted in the meantime together with her children. This case is paralleled by the story given by the Arab writer Usâma ibn Munqidh about a Frank who fell into Muslim captivity, became a devout Muslim, married the daughter of a pious family, but later fled to Frankish territory and reverted to Christianity together with his sons. A still more dramatic case of Frankish conversion to Islam appears in *A Thousand and One Nights*: a Muslim merchant who comes to Acre and lusts for the beautiful wife of a Frankish knight finds her after the battle of Hattin in a crowd of Frankish prisoners; she converts to Islam of her own will, and the two are married by the *qâdî* (judge) of Saladin's army [*The Book of the Thousand Nights and a Night*, trans. Richard F. Burton, 12 vols. (London: H. S. Nichols, 1897), 7:99–104].

There is also some evidence of Jews converting to Christianity and Christians converting to Judaism in the kingdom of Jerusalem.

Copts

Copts are Christian descendants of the ancient Egyptians. The term "Coptic" is used to refer to race, religion, and language. As far as religion is concerned, the Copts are, like the members of the Syrian Orthodox Church (Jacobites), non-Chalcedonian—that is, they are monophysites who deny the doctrine of Christ's two natures.

The religious differences between the Coptic population of Egypt and their Byzantine rulers, who supported the diophysite doctrine of the Greek Orthodox Church, are part of the background to the Muslim conquest of Egypt in the seventh century, when many Copts actually welcomed their new masters. The Coptic patriarch of Alexandria was the leader of the community and acted as its representative to the Muslim authorities. Throughout the period of the crusades, the largest concentrations of Copts were found in Upper Egypt. There were also Coptic communities in Ethiopia and Nubia as well as in the delta region of Lower Egypt. As late as the twelfth century, Coptic Christians may have outnumbered Muslims in Egypt. Fustat was overwhelmingly a Coptic city, whereas the newer Fāṭimid foundation of Cairo was predominantly Muslim.

Copts were especially powerful in the administrations of the successive Egyptian regimes, and many Copts served the Fāṭimids, Ayyūbids, and Mamlūks as viziers, although the heyday of the Copts was during the Fāṭimid period. The Copts' prominent role as financial advisers and tax gatherers, as well as the sultans' tendency to use them as cat's paws for unpopular measures, contributed to their unpopularity with the Muslim community. Muslim hostility to the Copts flared up from time to time, and it increased during the crusade period, when many Muslims believed that the Copts were operating as a kind of fifth column for the Franks, sup-

Coron

plying their coreligionaries with intelligence and committing acts of sabotage. The burning of Fustat by Shāwar to prevent King Amalric of Jerusalem from occupying it in 1168 was a disaster for the Copts.

In the course of the thirteenth century, Copts came under increasing pressure to convert to Islam, but even then some of those who had converted were still suspected of being crypto-Christian spies and were persecuted still further. In fact there is little evidence of any Coptic enthusiasm for the crusading cause, and those crusade theorists in the West who thought that the Copts might provide any effective assistance to a crusader invasion of Egypt were deluding themselves. In 1237 negotiations began for a union of the Coptic Church with the Latin Church, although nothing came of this.

All the evidence suggests that the Coptic community suffered a catastrophic decline in numbers in the course of the fourteenth century as its members came under increasing pressure to convert. The Arabic chronicles of the period are peppered with accounts of anti-Christian riots, the destruction of churches, and senior Coptic officials being forced to renounce their faith. Some of the Arabic chronicles of the period were actually written by Copts, most notably by al-Makīn ibn al-ʿAmīd (1205–1274) and al-Mufaḍḍal ibn Abī Faḍīl (fl. c. 1350). These historians not only made use of Muslim chronicles but also tended to reproduce a Muslim perspective on events.

Coron

Coron (mod. Koroni, Greece) was a port and bishopric on the southeastern tip of the Messenian Peninsula in the Peloponnese, overlooking the Gulf of Messenia.

Coron was originally the site of ancient Asine, which was reoccupied in the seventh century by the inhabitants of classical Korone (mod. Petalidhi), hence the Greek version of its name. The town came under Frankish and subsequently Venetian rule in the aftermath of the Fourth Crusade (1202–1204). It was attacked and besieged by William of Champlitte in 1205 immediately after his occupation of Modon on the other side of the peninsula. Coron surrendered after a short siege and was granted by Champlitte to Geoffrey of Villehardouin, who subsequently became prince of Achaia as Geoffrey I. However, according to the partition treaty agreed upon by the leaders of the crusade in March 1204, Modon and Coron had been assigned to the Venetians. In 1206 they asserted their claim by force, and in the Treaty of Sapienza (1209) Geoffrey ceded both ports to the Venetians in return for their recognition and support in the Morea.

Like Modon, Coron became an important port of call for ships taking pilgrims to the Holy Land. It was first attacked by the Turks in 1421 and was surrendered to them in 1500 after their capture of Modon. The port was occupied once again by the Franks in 1532–1533, when it became the advance base of a Spanish expedition led by Andrea Doria, who attacked Kalamata and Mistra before his expulsion by the Turks. Coron was again occupied by Venetian forces from 1685 to 1715. The castle and cathedral stand immediately west of the present town and contain Byzantine, Frankish, and Turkish features.

Courtenay, Family

A French family, branches of which ruled the county of Edessa (1118–1146) and the Latin Empire of Constantinople (1221–1228 and 1237–1261). According to its own tradition, the family descended from one Atto, who built the castle of Courtenay (dép. Loiret) in central France at the beginning of the eleventh century.

One of Atto's grandsons, the formidable Joscelin I (d. 1131), went to Outremer around 1101 and became lord of Turbessel in the county of Edessa, then ruled by his cousin, Baldwin II (of Bourcq). Although Baldwin deprived him of this lordship in 1113, Joscelin went to the kingdom of Jerusalem and was made lord of Tiberias. When Baldwin II himself became king of Jerusalem, he appointed Joscelin as his successor in Edessa. Joscelin's family, by means of conquest and skillful family politics, particularly through close relations and intermarriage with the Latin and Armenian nobility, acquired a powerful position. Even though the county of Edessa was overrun by the Muslims during the reign of Joscelin II (d. 1159), his children became key figures in the kingdom of Jerusalem: Agnes (d. after 1186) married Amalric, count of Jaffa, and her brother Joscelin III (d. 1200) became seneschal of the kingdom. Although Agnes was divorced when Amalric became king (1163), both she and Joscelin acquired great influence during the reign of her son Baldwin IV (1174–1185). They were also instrumental in appointing Eraclius as Latin patriarch of Jerusalem (1180) and securing the crown for Agnes's daughter Sybil (1186). Their actions have largely been seen in a negative light by historians, partly due to the historiography of William of Tyre, whom they opposed. Joscelin

III's daughters married husbands from the West and sold part of his estates to the Teutonic Order.

The family of Joscelin I's elder brother Milo (d. 1127) improved its position in France and became related to the Capetians through a marriage between Milo's granddaughter Elisabeth and Peter, a younger son of King Louis VI. Peter II (d. 1217/1219), count of Nevers and Auxerre, was crowned as the third Latin emperor of Constantinople after his marriage to Yolanda of Hainaut (d. 1219), a sister of the first two emperors, but died in captivity. Later their second son Robert became emperor (1221–1228), and when he withdrew from Constantinople after a dispute with his barons, his sister Mary ruled as regent. After the intervening reign of John of Brienne (1229–1237), their younger brother Baldwin II (1237–1261) ruled as the last Latin emperor. His reign was overshadowed by severe lack of power and money: he even mortgaged his son Philip (d. 1285) to Venetian creditors. In 1261 Constantinople was captured by the Greeks of Nicaea, and Baldwin died in exile in 1273. The claim to the Latin Empire and the Courtenay estates passed to the descendants of Philip's daughter Catherine and her husband Charles of Valois, a brother of King Philip IV of France.

Crac des Chevaliers

See Krak des Chevaliers

Cresson, Battle of (1187)

A battle fought at the spring of the Cresson, a site near the town of Nazareth (mod. Nazerat, Israel), on 1 May 1187. In the fighting 140 Christian knights of the kingdom of Jerusalem, including Templars and Hospitallers, were defeated by 7,000 Muslims under Saladin's emir Muẓaffar al-Dīn Kukburī.

In April 1187, Saladin's son al-Afḍal obtained permission from the lord of Tiberias, Raymond III of Tripoli, to pass through the lordship in order to raid the royal domain around Acre. The Muslims were to withdraw the same day and do the lordship no harm. Entering the lordship on 1 May north of Lake Tiberias, Kukburī followed the shore south to Tiberias (mod. Teverya, Israel) itself before turning west. A Latin account, the *Libellus de expugnatione Terrae Sanctae per Saladinum expeditione*, indicates, however, that other Muslim groups had already crossed the Jordan the night before and were thus able to reach as far west as Shafa 'Amr, before returning through the Wadi Saffuriya and Battauf Valley respectively. Gerard of Ridefort, master of the Temple, and Roger of Les Moulins, master of the Hospital, were on their way north to mediate between Raymond and King Guy, and received warning of the raid from Raymond on 30 April while they were at the Templar castle of La Fève (al-Fula) in the Jezreel Valley. Disregarding Raymond's instructions not to interfere with the Muslims, they decided to attack them. Reinforced by Templars from Caco, their force of 80–90 Templars and 10 Hospitallers moved north to Nazareth where they were joined by 40 knights of the king. They then proceeded northeast toward Tiberias and came upon the main Muslim force returning toward the Jordan at the spring of the Cresson. In the battle, the master of the Hospital and all the knights of the military order were killed, apart from Gerard of Ridefort and two other Templars; the secular knights were taken prisoner.

Although the spring of the Cresson has been identified variously as 'Ayn al-Jauza and 'Ayn Kasyun, later chronicle references suggest that the spring and the brook issuing from it were the Kishon (Cison), whose east-flowing branch was identified in the twelfth and thirteenth centuries with the valley (Wadi Kasta, Wadi al-Madi) that runs south on the east side of Mount Tabor and thence to the Jordan Valley. The battle therefore seems likely to have taken place where the upper reaches of this valley were crossed by the Saffuriya to Tiberias road, near the village of al-Shajara (Seiera, Sysara).

Crete

The largest of the Aegean islands, known in Italian and Latin as Candia (mod. Kriti, Greece), Crete came under Western domination as a result of the Fourth Crusade (1202–1204). Up to that time it formed part of the Byzantine Empire, except for a period from around 824, when it became the seat of a thriving Muslim emirate, reverting to Byzantine authority following its reconquest in 961. After the fall of Constantinople to the Fourth Crusade, the island's fate was initially connected with the crusader Boniface of Montferrat, although it is difficult to verify either a concession of it to him by Emperor Alexios IV Angelos in 1203 (shortly before the crusade reached the Byzantine capital) or its grant as a dowry to Boniface on account of his purported marriage to a Byzantine princess. It is clear, however, that in exchange for Thessalonica, Boniface was quick to sell Crete to Venice, which succeeded in gaining control over the island after a lengthy struggle with the Genoese pirate Enrico Pescatore (1206–1210/1211). Thereafter Crete was administered by a Venetian *duca* (duke) who was not a subject of the Latin emperor of Constantinople, but enjoyed sovereign authority, being answerable only to the ruler of Venice, the doge.

From the beginning of their long rule in Crete, the Venetians faced a stern resistance on the part of local archontic (magnate) families, culminating in a series of revolts from the early thirteenth century onward. These revolts were often checked only after prolonged fighting, and in many cases were followed by concessions by Venice to the insurgents. By the fourteenth century, the political and social climate was ripe for a combined rebellion of the Cretans and the disaffected indigenous Venetians of the island, who felt exploited by the Venetian Republic. Venice's oppression of both Greeks and Cretan Venetians had become burdensome by the 1350s, while the stifling of the Orthodox clergy, rigorously limited in number and placed under the jurisdiction of a Latin archbishopric, added to Greek discontent. A con-

sequence was a massive uprising known as the Revolt of St. Titus (1363–1366), which Venice eventually succeeded in suppressing; a parallel uprising of the Kallergai family in 1364–1367 was equally unsuccessful. In 1453–1454, following the final fall of Constantinople to the Ottomans, a Greek from Rethymnon, Siffios Vlastos, attempted to topple the Venetian government, but his plans were betrayed to the authorities, and his enterprise failed, as did a renewed attempt a few years later. Venetian rule in Crete survived for over two more centuries, until the Ottoman annexation of the island between 1645 and 1669, in the course of the fifth Venetian-Ottoman war.

Of cardinal importance throughout the Venetian period was the island's enormous and lucrative productivity in foodstuffs, wine, and other commodities, as well as its extensive trade with the Levant, particularly with the Mamlūk territories of Egypt and Syria and the Turcoman emirates of Menteshē and Aydin on the western Anatolian coast.

Criticism of Crusading

From the beginning of the crusading movement, it is possible to identify and trace strands of criticism of aspects of the crusades themselves and of the behavior of crusaders, with suggestions for improvements that would ensure the success of future expeditions.

In the twelfth and thirteenth centuries there seem to have been few who fundamentally challenged the concept of crusading itself. Some of the critics of the use of the crusade against heretics and Christian lay powers were vociferous and even vitriolic in their language, but it is important to analyze the geographical or political context in which the critic was writing and, for example, his broader attitude to the papacy before reaching any judgment about whether the criticism represented wider public opinion. The vitality of the crusading movement into the thirteenth and fourteenth centuries is evidenced by the regular expeditions to the East and a range of crusades undertaken in Europe.

One of the standard criticisms of crusaders was that their behavior was inconsistent with that expected of soldiers fighting a holy war. Both chroniclers and crusade preachers complained about sexual promiscuity, avarice, and overconfidence during crusades. Human sinfulness (Lat. *peccatis exigentibus hominum*) was regularly cited by chroniclers as the explanation for setbacks during the First Crusade (1096–1099); for Muslim victories, such as the battle of Hattin (1187); and for the failure of later crusade expeditions. In consequence, major engagements were often preceded by penitential marches and injunctions to reform, including the prohibition of gambling and displays of luxury. Efforts were made to remove temptation by limiting the number of woman accompanying the Christian armies—for example, the Councils of Le Mans and Geddington in 1188 forbade any women except laundresses of a certain age to go on the Third Crusade. In practice, however, such injunctions had a limited effect, and chroniclers regularly bemoaned the moral conduct of crusade armies.

Another theme of criticism was the delay in fulfilling crusade vows, particularly by kings, princes, and nobles, who thereby postponed the departure of the main army. At the time of the Third Crusade (1189–1192), there was criticism from crusade apologists, troubadours, and minnesingers that Richard I of England, Philip II Augustus of France, and Emperor Frederick I Barbarossa of Germany were too preoccupied with secular matters, to the detriment of the Holy Land, and in fact the pressure of public opinion does seem

to have hastened their ultimate departure. There was similar criticism of Emperor Frederick II in the run-up to the Fifth Crusade (1217–1221) and again in the 1220s, prompting his excommunication by the pope. Conversely, there were those who urged monks and priests to remain in the West and seek their spiritual rewards by performing their ecclesiastical duties at home. Indeed, in his treatise *De re militari* (1187–1188), the English scholar Ralph Niger underlined the importance of excluding noncombatants of all varieties in order to ensure an effective fighting force.

The high cost of provisioning and transporting an army to the East meant that papal and royal taxation became essential to the maintenance of the crusading movement and regular occurrences. Not surprisingly, this attracted criticism from chroniclers and recipients of these demands, who were concerned about the establishment of new precedents; from opponents of the papacy, such as the chroniclers of the abbey of St. Albans, Roger Wendover and Matthew Paris; and from some vernacular poets, such as Walther von der Vogelweide. The same writers expressed concern about what they perceived as abuse by crusade preachers, in particular the Franciscan and Dominican friars, of the system of vow redemption for financial advantage.

The first real indication of fundamental criticism of the crusading movement itself came after the Second Crusade (1147–1149). In his apocalyptic treatise *De investigatione Antichristi*, Gerhoh, provost of Reichersberg, a prolific writer and reformer and initially an advocate of the expedition, drew a connection between the failure of the crusade and the coming of the Antichrist. The anonymous compiler of the Würzburg Annals not only criticized the behavior of the crusaders but went on to suggest that the devil himself had inspired the crusade as a revolt against God's righteous punishment of the world. In England, Ralph Niger also questioned whether God wished the faithful to end the Muslim domination of the holy places, but at the same time his treatise was full of advice about the forthcoming expedition. Military setbacks in the thirteenth century, such as the defeat of the crusade army of Louis IX of France at Mansurah, prompted further doubts, and there are occasional references to those who challenged the idea of the crusades in crusade sermons and treatises, such as *De praedicatione crucis* by the Dominican Humbert of Romans. There were also others, such as the followers of the Calabrian abbot Joachim of Fiore and the Franciscan Roger Bacon, who saw the way forward in peaceful conversion of the Muslims.

There is, however, no evidence that such pacifist sentiments were widely held and represented public opinion. Indeed, the continued popularity of the crusades leads to the opposite conclusion.

In the thirteenth century there was some criticism of the diversion of the Fourth Crusade to Constantinople (1202–1204) and the perceived diversion of crusade resources against enemies of the church in Europe, in particular the crusade against the Albigensian heretics in southern France and the anti-Staufen crusades against Emperor Frederick II and his sons, Conrad IV and Manfred. Troubadours especially were forthright in their views, denouncing the expeditions in southern France as false preaching and lamenting the neglect of the Holy Land. They were echoed by Roger of Wendover, who wrote of a *bellum injustum* (unjust war). Although this must have reflected some degree of public opinion, the vernacular poets at least were not entirely objective commentators. Moreover, the armies engaged in such crusades were drawn from throughout Europe, including crusaders who had already fought or would subsequently go to fight in the East. The same applies to criticism of the crusades against the Staufen dynasty. One of the loudest critics was the poet Walther von der Vogelweide, who was probably active at the court of Emperor Frederick II or of one of his supporters. By contrast, the northern French poet Rutebeuf composed two songs exhorting the faithful to take the cross against the Staufen.

It has been argued that by the mid-thirteenth century the crusade attracted little support. Evidence cited includes the treatises commissioned by Pope Gregory X and submitted to the Second Council of Lyons in 1274 by Bishop Bruno of Olomouc, Humbert of Romans, and the Franciscans Gilbert of Tournai and William of Tripoli. By their very nature, the treatises set out what needed to change in order to mount successful expeditions to the East, but they were written against a background of continued interest in and support for the crusading movement. Humbert of Romans also produced a manual on how best to preach the crusade and respond to possible questions from the audience. The practicalities of European politics and other domestic preoccupations meant that kings found it difficult to be absent for the length of time necessary to mount a major crusade, but in fact a range of large- and small-scale expeditions to the East were planned and launched, if not always successfully completed, in the later Middle Ages.

Crusading also continued and indeed flourished in other

theaters, such as Spain and the Baltic region. Although there were major setbacks and defeats, such as the fall of Acre (mod. 'Akko, Israel) to the Mamlūks in 1291 and the disastrous crusade of Nikopolis against the Ottoman Turks in 1396, this did not prevent plans for further expeditions being mooted. Moreover, the crusades seem to have retained a popular appeal, with individuals continuing to take the cross and participants in expeditions being drawn from a wide geographical area.

Cross, Symbol

The sign of Christ's crucifixion and resurrection and principal symbol of the Christian faith was associated with the crusade movement from its very inception. At the Council of Clermont (1095), which set in motion the First Crusade (1096–1099), Pope Urban II decreed that all those going to fight on behalf of their fellow Christians in the East should wear the sign of the cross. The use of the cross as the special sign of the crusader was immediately taken up with great enthusiasm as Urban's appeal found adherents all over the West.

The attachment of a cross to clothing or armor came to be the most visible and popular outward expression of the intention to go on crusade, so much so that "to take the cross" effectively meant the same as to take a crusade vow. The cross

was normally made of cloth and sewn onto the prospective crusader's outer garments, in preference on the right shoulder or between the shoulders. Cloth crosses were usually prepared beforehand but might be improvised from any suitable material as circumstances demanded. After the Norman Bohemund of Taranto announced his intention to join the First Crusade on hearing Urban II's appeal while at the siege of Amalfi, he tore up his own red cloak to make crosses for those of his followers who wished to join him. When the charismatic Cistercian abbot Bernard of Clairvaux preached the Second Crusade (1147–1149) at Vézelay in France in March 1146, it produced such an overwhelming response that he was obliged to hand over his own outer clothing to meet the immediate huge demand for crosses.

The cross of cloth seems to have been most frequently made of red material at first, but other colors were used, sometimes for purposes of differentiation. During the organization for the Third Crusade (1189–1192), it was decided to reserve colors to specific contingents of crusaders: red for the French, white for the English, and green for the Flemings. Crosses of cloth were not the only means of identification used by the crusaders, however: some simply painted the sign of the cross on their breasts or foreheads. Others, particularly in the atmosphere of fervent piety that characterized many popular crusades, had it branded on their shoulders or foreheads. It was this practice that probably gave rise to reports that the corpses of some dead crusaders found in 1097 had been marked with crosses by some miraculous agency.

The act of taking the cross remained largely informal during the twelfth century and to some extent in the thirteenth. Many crusaders seem to have "crossed themselves": although the frequency of terminology relating to "self-crossing" expressed the volitional and determinant role of the individual, it also reflected the prevalence of that practice. When the cross was indeed received by would-be crusaders, they usually preferred to accept it from ecclesiastics and in ecclesiastical venues, but it was also given by secular persons and in nonecclesiastical contexts. The cross given on such occasions was usually the insignia subsequently sewn on the crusader's clothes, but in some cases a cross was handed over momentarily as a foretoken of that insignia, as in the case (in some accounts) of the taking of the cross by Louis IX, king of France. No regular formal ceremony of "taking" or "giving" the cross is documented prior to the late twelfth century, and the public venues described were usually characterized by disorderly ecstasy and inspired improvisation.

A more specialized use of the cross occurred in the insignia of the military religious orders, founded to provide permanent fighting forces to protect pilgrims and to defend Christian territories in Outremer, Iberia, and the Baltic region. Almost all of the orders used the sign of the cross on their surcoats and banners, with variations in form and colors. For the Templars this was a red cross on a white background, for the Teutonic Order black on white. The Hospitallers used a white cross on black and also white on red; the original simple form developed into the distinctive Maltese Cross, with four expanding arms ending in eight points. Crosses also figured in the insignia of the military orders of the Iberian Peninsula.

The most tangible use of the cross as a symbol of crusading occurred in the context of the veneration of relics associated with the crucifixion of Christ. One particle of the True Cross was discovered after the capture of Jerusalem by the First Crusade in 1099. Set within a larger metal cross, this fragment was regularly venerated and displayed in liturgical ceremonies in Jerusalem up to the time of its loss at the battle of Hattin, but it was also carried into battle with the armies of the kingdom of Jerusalem, thereby combining the functions of battle standard and talismanic relic.

The cross as crusader's symbol was charged with various meanings. It was perceived (often simultaneously) as an imitation of the cross carried by Christ, a sign and memorial of the Passion, a mark of the true discipleship of Christ, a pilgrimage badge, a mark of inclusion in an order or a privileged status similar to the emblem of knighthood, a guarantee of defense and protection, a military sign and a sign of military victory identical to the Triumphant Cross shown in a vision to Emperor Constantine the Great, and, finally, as an example and means of influencing the pusillanimous. The primacy of pilgrimage in this complex is best illustrated by the prevalent contemporary opinion that a crusader's vow was deemed to be fulfilled only after he had visited the holy places or died as a martyr on the way.

Crucesignatus

The Latin word *crucesignatus* (pl. *crucesignati*) was one of the contemporary medieval terms used to refer to a crusader, along with *pilgrim* (Lat. *peregrinus*) and other formulations. Its literal meaning, "a person signed with the cross," derives from the cross that a crusader usually wore on his clothing as a visible sign of his vow to go on crusade. This practice was so common that the expression "to take the cross" (Lat. *crucem accipere*, *crucem assumere*, and the like) came to be effectively synonymous with "to make a crusade vow." Although crusaders are known to have fixed or sewn crosses on their clothing as early as the Council of Clermont (1095), evidently with the encouragement of Pope Urban II, the use of the term *crucesignatus* does not seem to have become widespread until the time of the Third Crusade (1189–1192). This chronology suggests that the widespread use of the term was connected with the development of a formal ritual for bestowing and receiving the cross, for which there is evidence from the late twelfth century.

Crusade Cycle

A modern term (Fr. *Cycle de la Croisade*) referring to a coherent cycle of largely anonymous Old French crusade epics, originating in the early twelfth century and reaching its most extended form in the second half of the thirteenth century.

The cycle survives in twenty-four manuscripts and fragments, notably MSS Paris, Bibliothèque Nationale de France,

fr.12558 (the oldest known version, from around 1275) and the roughly contemporaneous fr.12569 (the most complete version). Four other manuscripts are known but have not survived. Depending on the manuscripts in which it appears, the cycle amounts to some 30,000–50,000 lines. Its core is a trilogy (the *cycle rudimentaire*) consisting of the *Chanson d'Antioche* (from around 1100, and attributed to a poet called Richard le Pèlerin), the *Chanson* (or *Conquête*) *de Jérusalem* (c. 1135), and *Les Chétifs* (c. 1149). These texts were adapted and brought together between 1180 and 1190 by the otherwise unknown Graindor de Douai. His role is as yet unclear: he may have been a poet, or simply a patron.

This core cycle relates the central episodes of the First Crusade (1096–1099), but in an uneven manner: the *Chanson d'Antioche* follows fairly closely the historical siege and conquest of Antioch in 1097–1098; the ties with history are loosened in the *Chanson de Jérusalem*, in which the siege, conquest, and defense of Jerusalem in 1099 are interspersed with fictitious elements. *Les Chétifs*, the middle part of the trilogy, is a highly fictional story about three crusaders captured at the battle of Civetot, who gain their freedom by heroic feats in the service of their Muslim captor. The role of Godfrey of Bouillon, who gained prominence only after the conquest of Jerusalem (15 July 1099), is of minor importance in the *Chanson d'Antioche*, but greatly enhanced in the *Chanson de Jérusalem*, a tendency that continues in the further development of the cycle.

Between 1180 and 1220 the cycle rudimentaire was expanded with five epics that narrate events before the time of the First Crusade: *La Naissance (Les Enfances) du Chevalier au Cygne* (in two versions: *Elioxe* from 1190/1200, and *Beatrix* from 1190/1220); *Le Chevalier au Cygne* (1170/1188); *La Fin d'Elias* (1188/1218); *Les Enfances Godefroi*, possibly by an otherwise unknown poet called Renaud (1191/1220); and *Le Retour de Cornumarant* (c. 1292). These branches offer a highly fictitious and legendary ancestral history of Godfrey of Bouillon, who is presented as the grandson of the legendary Swan Knight. These so-called *épopées intermédiaires* (intermediary epics) originated in the French-speaking parts of the Holy Roman Empire, and were probably added to the core cycle at the request of Duke Henry I of Brabant (d. 1235). In this expanded form the cycle could function as propaganda for his crusading initiatives, while also strengthening his claim on the Lotharingian ducal title by subtly incorporating Godfrey of Bouillon into his own family tree. These five epics offer little on the historical crusades.

The third developmental stage of the cycle shows a return to crusade history. In the second half of the thirteenth century four continuations were added to the *Chanson de Jérusalem*: *La Chrétienté Corbaran*, *La Prise d'Acre*, *La Mort de Godefroi*, and *La Chanson des Rois Baudouin*. These continuations present a version of the history of Outremer from the battle of Ascalon (1099) up to the eve of the battle of Hattin (1187). The backbone of the story is formed by the reigns of the rulers of the Latin kingdom: Godfrey of Bouillon, Baldwin I, Baldwin II (called *Baudouin de Sebourc*), Amalric, and Baldwin IV; it concludes with the ascent of Saladin. There are important connections with history, which are flawed by many anachronisms and incorrect mixing of events and characters. The abrupt ending before the battle of Hattin and the total neglect of the unsuccessful Second Crusade (1147–1149) make it highly plausible that the cycle in this form was meant to raise enthusiasm for a new crusade by extolling the glorious days of the Latin kingdom at a time when its very survival was threatened.

Although the cycle is evidently related to the tradition of the Old French chansons de geste, parts of it can be considered as vernacular historiography rather than pure literary fiction. The importance of the cycle for contemporary ideas about the crusade is demonstrated by the number of manuscripts, and also by the fact that it was evidently translated into Middle Dutch. In the early fourteenth century the cycle (as presented in MS Paris, Bibliothèque Nationale de France,

The Old French Crusade Cycle

Title	Date	Length (lines)
<i>Naissance du Chevalier au Cygne</i>	1190/1220	3200–3500
<i>Chevalier au Cygne</i>	1170/1188	4500

<i>Chanson des Rois Baudouin</i>	1250/1300	3300

fr.12569) formed the basis of an adaptation known as the *Chevalier au cygne et Godefroid de Bouillon*. Together with *Baudouin de Sebourc*, the *Bâtard de Bouillon*, and the lost poem known as *Saladin*, it has sometimes been viewed incorrectly as a second crusade cycle; yet, although some historical figures and events are faintly recognizable, it is evident that this loosely connected group of texts should be considered as a collection of romances (Fr. *romans d'aventures*) in which crusade history forms the backdrop: as such it is an important witness to the later evolution of the public perception of crusade history.

Crusade of 1101

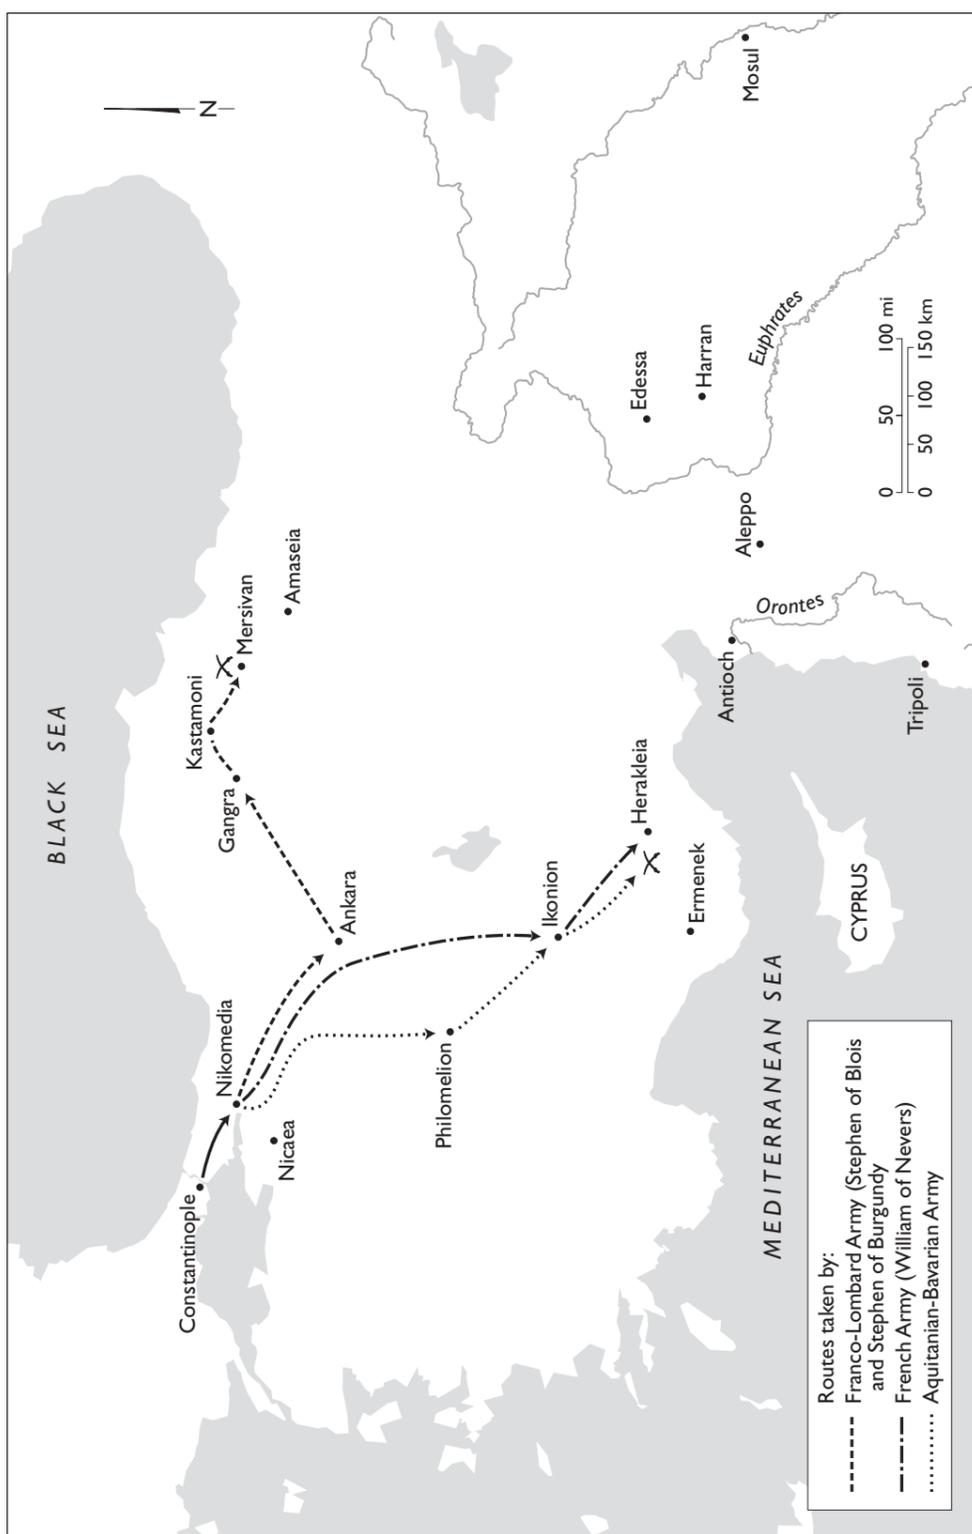

The Crusade of 1101 consisted of four separate expeditions to the Holy Land launched in 1101 in response to Pope Urban II's call to arms at the Council of Clermont (1095); it may be regarded as a second wave of armies following the First Crusade (1096–1099) rather than as a separate crusade.

The capture of Jerusalem in July 1099 combined with efforts by Pope Paschal II to encourage further calls to crusade at the synod of Anse in December 1099 and the Council of Poitiers in November 1100; these efforts, together with a vigorous letter-writing campaign, led to a number of new armies departing for Jerusalem in 1101. The motives of the crusaders varied considerably. Some, like Albert, count of Biandrate, desired to emulate the success of the First Crusade, while others such as Welf IV, duke of Bavaria, evidently felt a need to go on pilgrimage after a long and eventful life. Stephen, count of Blois, had been one of the leaders of the First Crusade, but had not fulfilled his vows, having

deserted at Antioch; he was pressured into travelling back to Jerusalem by Adela, his wife. William IX, duke of Aquitaine, seems to have gone on crusade for the adventure. The crusading armies were powerful but uncoordinated military enterprises, and included a large number of pilgrims and other noncombatants. Hugh, archbishop of Die, had been appointed as papal legate, but seems to have traveled independently to Jerusalem and took little part in the enterprise. This lack of coordination had important consequences, as a small but mobile Turkish army was able to defeat each crusading army in turn as it attempted to travel across Asia Minor.

The first army to depart for the East left Milan on 13 September 1100. It was composed primarily of northern Italians from Lombardy and was led by Anselm, archbishop of Milan; Albert of Biandrate with his brother Guy and nephew Otto Altaspata; William, bishop of Parma; Guy, bishop of Tortona; Albert, count of Parma; and Albert, bishop of Piacenza. Anselm of Milan had been pressured into taking the cross by Urban II and Paschal II, both of whom had written many letters to him. He had then enthusiastically preached the cross in 1100, leading to the formation of the Lombard army. It comprised 8,000 soldiers (including many pilgrims), most of whom appear to have been interested in emulating the success of the First Crusade. The Lombard army marched swiftly through Hungary, passing the Bulgarian border at Semlin. The Byzantine emperor Alexios I Komnenos made market privileges available to the crusaders at various towns between the Bulgarian frontier and Thrace, but when the crusaders wintered outside Adrianople (mod. Edirne, Turkey), they began to commit numerous atrocities, pillaging, raping, and desecrating Greek shrines. Alexios ordered them to proceed directly to Constantinople (mod. Istanbul, Turkey), which they reached between 15 and 20 March 1101. At the Byzantine capital the Lombard army was joined by a compact force of 2,000 soldiers led by Conrad, constable to the German emperor, Henry IV, which arrived in the second half of April.

A second crusader army of around 3,000 people, commanded by William II, count of Nevers, left for the East at the beginning of February 1101. It went south through Italy to Brindisi, sailed to Avlona (mod. Vlorë, Albania), and then traveled across Macedonia via Thessalonica (mod. Thessaloniki, Greece) to Constantinople, where it arrived around 14 June. Like the other armies, this contingent also contained a large number of noncombatants, including women.

Crusade of 1101

The third group of crusaders to leave was a large combined army from northern France, Flanders, and Burgundy, which departed for Constantinople at the beginning of March 1101. Its leaders were Stephen of Blois; Stephen, count of Burgundy, with his brothers Reginald and Hugh; the archbishop of Besançon; Miles, viscount of Troyes; Guy, count of Rochefort; Baldwin of Grandpré; and Ingilrand, bishop of Laon. They travelled south through Italy and across the Adriatic, arriving in Constantinople at the beginning of May 1101. At the start of the crusade this army was composed of approximately 8,000 soldiers.

The fourth and final army to depart was made up of two originally separate contingents. One was led by William IX of Aquitaine, and included Geoffrey of Vendôme; Herbert, viscount of Thouars; and Hugh of Lusignan. This Aquitanian expedition departed around 20 March 1101 and joined up with a large army of German crusaders in southern Bavaria that was commanded by Welf IV of Bavaria and included Thiemo, archbishop of Salzburg; Ulrich, bishop of Passau; and many of the anti-imperial Bavarian nobility. Welf's decision to journey to the East was a personal one based on the need to expiate his sins. It was far more in the nature of a pilgrimage than a conscious desire to embark on a crusading venture. The joint Aquitanian-Bavarian army passed through Hungary and after much fighting with Byzantine forces, including a pitched battle outside Adrianople, eventually arrived in Constantinople at the beginning of June 1101. The joint army equalled about 16,000 people.

The crusaders' opponents in Asia Minor consisted of a compact but powerful Muslim alliance. Their principal enemy was Qilij Arslān I, Saljūq sultan of Rūm. Although he had lost his capital of Nicaea (mod. İzmit, Turkey) to the army of the First Crusade in 1097, his largely nomadic Turks were still a formidable force. He had already proven a dangerous enemy to the crusading movement through his destruction of the People's Crusade in 1097 and his bitter clashes with the army of the First Crusade at Nicaea and Dorylaion. Having learned to avoid the crusader army in open battle and not to rely solely upon his own resources, Qilij Arslān now gathered a number of allies. The main one was Malik-Ghāzī, the Dānishmendid emir of Sebastea, who governed northeast Asia Minor from the cities of Sebastea (mod. Sivas, Turkey), Amaseia (mod. Amasya, Turkey), and Ankara, and since he was holding captive Bohemund I, prince of Antioch, he had as much incentive to defeat this fresh expedition as did Qilij Arslān.

The two other allies were Riḍwān of Aleppo and Karaja of Harran, both of whom had fought against the crusader army outside Antioch in 1098. The Muslim armies consisted of approximately 4,000–6,000 cavalymen.

Following a disturbance in Constantinople, the Lombard army moved to Nikomedia (mod. İzmit, Turkey), where it was joined by Conrad and his German force and the larger northern French army of Stephen of Blois and Stephen of Burgundy. The Franco-Lombard army was also joined at Nikomedia by Raymond of Saint-Gilles, acting on the orders of Emperor Alexios I Komnenos. About this time a dispute broke out over the direction of the army across Asia Minor. Alexios advised following the route of the First Crusade, but news had broken of the capture of Bohemund, one of the heroes of that expedition, and the leaders of the Franco-Lombard army instead determined to rescue him from captivity in Paphlagonia. They left Nikomedia around 9 June 1101, traveling along the Pilgrim's Road, and on 24 June reached Ankara, then held by forces of Qilij Arslān I. The Turkish garrison fled during the night, and the town was handed back to Alexios. From Ankara the crusaders struck northward, arriving at Gangra (mod. Çankırı, Turkey) around 2 July, which they attacked but were unable to capture. The Franco-Lombard army was then forced northward by Saljūq forces, arriving at Kastamoni on 30 July, where a foraging expedition suffered a particularly heavy defeat. Despite intense enemy pressure, the crusaders pushed eastward, hoping to reach Amaseia. However, they were intercepted by the main Turkish army and at Mersivan on 16 August were forced into a protracted engagement lasting over five days.

On the first day the Turkish army attacked the crusader encampment but was driven off with heavy losses. On the second day the Turks successfully ambushed a crusader foraging expedition, capturing all their plunder. The main battle occurred on the fourth day. The crusader army attacked the Turks in five separate divisions, but each was defeated in turn and the crusader encampment besieged. During the night the crusader army fled toward Bafra on the Black Sea coast, but the Turks were able to overtake and massacre the infantry and enslave large numbers of women. Stephen of Blois and Stephen of Burgundy traveled overland back to Constantinople with as many survivors as they could find. Raymond of Saint-Gilles travelled back to Constantinople by ship. Anselm of Milan died at Constantinople on 30 September 1101.

The army of William of Nevers left Constantinople on 1 July 1101 and arrived at Ankara on 25 July, hoping to catch

up with the Franco-Lombard army. Failing to find it, the crusaders travelled south to Ikonion (mod. Konya, Turkey), which they found heavily defended by Saljūq troops and were unable to capture. On leaving Ankara the crusaders were constantly harassed by local Turkish forces until the main Saljūq army was able to catch up with them at Herakleia (mod. Eregli, Turkey) around 25–26 August. By this stage the crusader army was suffering terribly, having been unable to find water for three days. Abandoning their usual hit-and-run tactics, the Turks engaged in close combat, and after a fierce engagement the crusader cavalry was forced to flee, leaving the infantry to be massacred. About 1,000 women were taken prisoner. William of Nevers escaped by fleeing to Antioch via Ermanek.

The last army to leave Constantinople was the Aquitanian-Bavarian expedition, but before its departure rumors had begun to spread that Alexios was in league with the Turks. Fearing treachery, many German crusaders, including the chronicler Ekkehard of Aura, sailed directly from Constantinople in July 1101, reaching the port of Jaffa (mod. Tel Aviv-Yafo, Israel) in late August. After fulfilling their vows, many departed for home, Ekkehard leaving Palestine in September 1101. The rest of the crusaders travelled to Nikomedia and from there to Philomelion, which they destroyed, before arriving at Ikonion around 20 August. After leaving Ikonion, the crusader army suffered greatly from Turkish attacks and lack of provisions and water, and after leaving Herakleia was attacked by the main Muslim army commanded by Qilij Arslān. Following a long and bitter contest the crusader army fled; William IX of Aquitaine and Welf IV of Bavaria escaped, but Thiemo of Salzburg was captured and executed. All of the crusading armies had been defeated piecemeal by a mobile and powerful Muslim alliance, whose forces had all fought against the army of the First Crusade and were well versed in crusader military tactics. Later crusader allegations of Greek treachery and collusion with the Turks are unfounded.

After the heavy defeats suffered by all the crusader armies in Asia Minor, the survivors regrouped, using Antioch as a base. The crusading leaders still commanded a powerful army. Raymond of Saint-Gilles had been arrested by Tancred, regent of Antioch, but was allowed to rejoin the army at the request of the crusader leaders. The crusaders left Antioch in mid-February 1102 and besieged Tortosa (mod. Tartūs, Syria). However, Welf IV of Bavaria and Reginald of Burgundy continued on to Jerusalem. Reginald

died en route, but Welf fulfilled his vows, only to die in Cyprus on his way home. The main crusader army stormed Tortosa with the help of a Genoese fleet and then massacred the population. Raymond of Saint-Gilles remained in command of Tortosa, taking no further part in the crusade. The crusaders then travelled south, meeting King Baldwin I of Jerusalem at Beirut around 8 March. They arrived in Jaffa on 23 March 1102, and finally fulfilled their vows in Jerusalem in time for Easter.

William of Aquitaine was able to leave by ship, arriving back in Poitiers by 29 October 1102, but all the other crusader leaders were delayed at Jaffa by contrary winds and so were caught up in an Egyptian invasion of the kingdom of Jerusalem. The leaders and their knights fought in the disastrous second battle of Ramla on 17 May 1102, where they formed the majority of Baldwin's army. Stephen of Blois, Stephen of Burgundy, and Hugh of Lusignan were killed in the fighting. The constable Conrad was captured and held prisoner for three years. Albert of Biandrate survived and was still with Baldwin in 1103. William of Nevers also survived and later refused to join the Second Crusade. Although the crusader knights' contribution to the defense of Jerusalem had ended in failure, the crusader infantry formed the bulk of Baldwin's army that decisively defeated the Egyptian army at the battle of Jaffa on 4 July 1110, and thus helped save the kingdom from collapse.

Crusade of 1122–1124

A major Venetian naval crusade that succeeded in crippling the Fāṭimid navy in 1123 and capturing the city of Tyre (mod. Soûr, Lebanon) in Palestine in 1124.

After the disastrous defeat of the Franks of Outremer at the battle known as the *Ager Sanguinis* (the Field of Blood) in 1119, King Baldwin II of Jerusalem sent an urgent appeal for assistance to Pope Calixtus II and Doge Domenico Michiel of Venice. A group of papal ambassadors took a letter from the pope to the Venetians, asking them to have mercy on the Christians of the East by coming quickly to their aid. Having called an assembly of all citizens at San Marco, Michiel gave a stirring speech in support of the crusade. The response was tremendous: with shouts of assent, the doge himself took the cross, followed by his people. All Venetians engaged in overseas commerce were ordered to return to Venice in preparation for the crusade.

After assembling or building a fleet of approximately 120 major vessels, the Venetian crusaders, numbering some 15,000, departed from the Venetian lagoon in August 1122.

Doge Domenico Michiel orders that the ships' sails and rudders be brought ashore to assure the Franks that the Venetians will not leave the Holy Land without conquering Tyre (1123), by Antonio Vassilacchi Aliense (1556–1629). (Cameraphoto/Art Resource)

They wintered on Corfu (mod. Kerkira, Greece), where they besieged the Byzantine stronghold in retaliation for Emperor John II Komnenos's refusal to honor Venetian commercial privileges. Early in spring 1123, the Venetians learned of Baldwin II's capture by the Turks, abandoned the siege, and sailed immediately for Outremer. At Cyprus, they heard that a powerful Egyptian fleet was threatening Jaffa (mod. Tel Aviv-Yafo, Israel), and Michiel ordered his ships to intercept it. Off the coast near Ascalon (mod. Tel Ashqelon, Israel), Michiel cleverly hid his war galleys behind the large transport vessels, deceiving the Fāṭimids into believing that the Venetian fleet was an unarmed pilgrimage convoy. When the Egyptian vessels approached, they were surrounded and captured or destroyed. It was a tremendous victory, effectively handing control of the sea to the Christians.

The Venetians proceeded to Acre (mod. 'Akko, Israel), where they agreed to help the Franks capture the important coastal city of Tyre. An agreement was drawn up (the *Pactum Warmundi*) that promised the Venetians one-third of Tyre, a quarter in every city in the kingdom, and various privileges in return for their assistance. The siege was predominantly a Venetian enterprise, since they far outnumbered their Frankish allies. After failing to breach the sea walls, the Venetians beached their vessels and continued the siege by land. Tyre finally surrendered in early summer 1124. On their journey home the Venetians again harassed Byzantine territories in an unsuccessful attempt to compel the emperor to honor their privileges. They returned to Venice and a hero's welcome in summer 1125.

Crusade of 1129

A campaign in which an army of crusaders from western Europe joined troops from all four of the Frankish states in Outremer to assault the key Muslim city of Damascus. It was the result of a carefully calculated strategy by King Baldwin II of Jerusalem and was closely connected with his efforts to

settle the succession to his kingdom and to encourage the growth of the Order of the Temple.

When Baldwin II was released from Turkish captivity in August 1124, he embarked upon a period of vigorous military endeavor in order to reestablish his own authority and to capitalize on the recent capture of Tyre (mod. Soûr, Lebanon) in July 1124. In 1125 and early 1126, Baldwin mounted campaigns against Damascus, but following the second of these engagements he realized that he would require outside assistance to capture the city. He combined the aim of launching an attack on Damascus with, first, the mission of Hugh of Payns to secure papal endorsement and wider support for the nascent Order of the Temple, and, second, Baldwin's own embassy, led by William of Bures, lord of Tiberias, which sought to persuade Count Fulk V of Anjou to marry Melisende, Baldwin's eldest daughter and the heiress to the throne of Jerusalem. If Fulk accepted the offer, then he would be the obvious figurehead for crusaders to gather around.

Baldwin's ambitious agenda shows his confidence in expanding the frontiers of Outremer. The Damascus campaign of 1129 was an early example of a crusade that was wholly aggressive in its purpose: the justification of defending holy places only applied in the sense that it removed a theoretical threat to Jerusalem. No papal bull endorsing the expedition survives, but there is unambiguous contemporary charter evidence of people taking the cross for the remission of their sins and in order to fight the Muslims. Furthermore, the papal legate to France was present at Le Mans in May 1128 when Fulk himself was signed with the cross, which suggests some form of papal endorsement. Hugh of Payns also visited England and Scotland, and the *Anglo-Saxon Chronicle* recorded that "he summoned people out to Jerusalem, and there went with him and after him so large a number of people as never had done since the first expedition in the days of Pope Urban" [*Anglo-Saxon Chronicle*, ed. D. Whitelock (London: Eyre and Spottiswoode, 1961), pp. 194–195]. The fact that the chronicler saw Hugh's efforts in the same vein as the First Crusade (1096–1099) is also indicative that contemporaries saw this as a formal crusading expedition and not as a large armed pilgrimage that lacked the offer of full spiritual rewards.

The exact numbers recruited by Hugh are unknown, although both Christian and Muslim writers suggested that a significant force of men accompanied the future king of Jerusalem to the East. Fulk reached the Holy Land in late

May, although it was not until the early winter that the crusaders and the armies of Antioch, Edessa, Tripoli, and Jerusalem assembled to begin the attack. The Franks advanced to within six miles of Damascus and set up camp. William of Bures led a large party of knights on a foraging expedition, but this group broke up into smaller bands and began to roam recklessly across a wide area. Būrī, the ruler of Damascus, learned of this breakdown of discipline and, leading out his finest warriors, fell upon the unsuspecting Christians. The Muslims routed their enemy, killing many knights and lesser men. Infuriated by this defeat, the Franks prepared to counter, but an enormous thunderstorm and dense fog prevented them from acting. The chronicler William of Tyre claimed that the Christians realized this natural phenomenon was a punishment for their sins and that they should retreat.

The crusader army returned home and broke up, a cause of great relief to the Damascenes; as the local chronicler Ibn al-Qalānīsī commented, "So the hearts of the Muslims were relieved from terror, and restored to security after fear" [Ibn al-Qalanisi, *The Damascus Chronicles of the Crusades*, trans. Hamilton A. R. Gibb (London: Luzac, 1932), p. 200]. Baldwin's bold plan had failed, although, as the campaign of the Second Crusade in July 1148 demonstrated, the Franks persisted in their attempts to take Damascus.

Crusade of 1239–1241

A crusade (sometimes known as the Barons' Crusade) consisting of successive expeditions led by Thibaud IV, count of Champagne, and Richard, earl of Cornwall, that regained considerable Frankish territory in the Holy Land by way of diplomacy.

In 1229 Emperor Frederick II and the Ayyūbid sultan of Egypt, al-Kāmil, had agreed to a ten-year truce for the

Pope Gregory IX. (Library of Congress)

kingdom of Jerusalem. On 4 September 1234, Pope Gregory IX, who had condemned this agreement, wrote to the English and encouraged them to be ready to launch a crusade once the truce expired. A number of English and French nobles took the cross, but the crusade's departure was delayed because Frederick, whose lands the crusaders had planned to cross, opposed any crusading activity before the expiration of his truce with al-Kāmil. Frederick's excommunication (20 March 1239), prompted by differences between him and the pope regarding their Italian spheres of influence, caused most crusaders to avoid his territories on their way to Outremer.

The crusaders of the French expedition assembled in Lyons in August 1239. Their leaders were Thibaud IV of Champagne (who since 1234 had also been king of Navarre) and Hugh IV, duke of Burgundy, joined by two officials of the French royal court, namely, the constable Amalric of Montfort and the butler Robert of Courtenay, and by Peter

of Dreux, the former count of Brittany. Most of them sailed from Marseilles. On 1 September 1239, Thibaud arrived in Acre (mod. 'Akko, Israel), where the crusaders set up camp. They were soon drawn into the Ayyūbid wars of succession, which had been raging since the death of al-Kāmil (1238). At the end of September, al-Kāmil's brother al-Şāliḥ Ismā'īl seized Damascus from his nephew, al-Şāliḥ Ayyūb, and recognized Ayyūb's brother al-'Ādil II as sultan of Egypt. On 21 October, Ayyūb was captured and imprisoned by his cousin al-Nāşir Dāwūd of Kerak. Realizing that a Damascus with close ties to Egypt would place Frankish Outremer in a dangerous embrace, the crusaders decided to fortify the city of Ascalon (mod. Tel Ashqelon, Israel) to protect the southern border of the kingdom and to move against Damascus later. While the crusaders were marching from Acre to Jaffa (2–12 November), Egyptian troops moved up to Gaza to secure the border. Contrary to Thibaud's instructions and the advice of the military orders, a group of 400–600 knights, led by Henry of Bar, Amalric of Montfort, Hugh of Burgundy, and Walter of Jaffa, decided to move against the enemy without further delay, but they were surprised by the Muslims and forced into combat. Hugh and Walter escaped to Ascalon, Amalric and many others were captured, and Henry was killed (13 November 1239). Following this defeat, the military orders convinced Thibaud to retreat to Acre rather than pursue the Egyptians and their Frankish prisoners.

In the spring of 1240, al-Nāşir released Ayyūb and helped him to seize control of Egypt. Realizing that Ayyūb's new position of power could become dangerous for Damascus, Ismā'īl approached the crusaders, with whom he had been in negotiations for some time. He promised to restore Galilee, Jerusalem, Bethlehem, and considerable coastal areas to the Franks in exchange for their support against Egypt. Much of the territory Ismā'īl was offering in fact belonged to al-Nāşir. Naturally, the truce was opposed by those hoping to obtain the freedom of the Frankish prisoners held in Egypt. Al-Nāşir's hopes that his support for Ayyūb would earn him assistance to win Damascus were disappointed once Ayyūb was firmly installed in Egypt, and so both al-Nāşir and al-Manşūr Ibrāhīm, ruler of Homs, joined the Frankish-Damascene alliance (summer 1240). In mid-September 1240, after a visit to Jerusalem, Thibaud departed for Europe, while Hugh of Burgundy remained to help fortify Ascalon.

On 8 October 1240, the crusaders of the English expedition arrived, led by Richard, earl of Cornwall, who had left

England on 10 June, traveled through France, and then sailed from Marseilles to Acre. The crusaders marched to Jaffa, where an Egyptian envoy suggested that Ayyūb would honor Ismāʿīl's territorial promises (even though Ayyūb himself controlled none of those territories), with the exception of the strategically important cities of Gaza, Hebron, and Nablus, which Ayyūb reserved for himself, and that he would release the Frankish prisoners if the crusaders would abandon their alliance with Damascus for a position of "benevolent neutrality" [Jackson, "The Crusades of 1239–41," p. 48]. Richard consented, the new agreement was ratified by Ayyūb by 8 February 1241, and the prisoners were released on 13 April. Meanwhile, Richard's forces helped to work on Ascalon's fortifications, which were completed by mid-March 1241. Since he was Emperor Frederick II's brother-in-law, he entrusted the new fortress to Walter Pennepié, an imperial representative, and departed for the West on 3 May. Throughout their crusade, Thibaud and Richard had to contend with opposing factions of local barons as well as disunity among the military orders. The main sources for this crusade are the Old French continuations of William of Tyre (*Estoire d'Eracles* and *Rothelin*), the *Gestes des Chiprois*, the *Chronica maiora* of Matthew Paris, and the works of Ibn Wāsil, Ibn Shaddād, and al-Maqrīzī.

Crusade of 1267

An expedition from the Upper Rhine region to the Holy Land in response to appeals by Pope Clement IV to aid the king-

dom of Jerusalem against the threat from the Mamlūks under Sultan Baybars I.

In January 1266, Clement commenced a campaign for a new crusade in Germany, ordering the German bishops, Dominicans, and Franciscans to preach the cross, but the response was poor except in those regions bordering France. In the Upper Rhine region, the crusade was preached with considerable success by Achilles, former prior of the Basel Dominicans, with the result that several hundred individuals from Alsace, the Sundgau, and Basel had taken the cross by early 1267. The crusaders departed from Basel during Lent (2 March–10 April) 1267, under the leadership of two ministerial knights of the bishop of Basel, Sigfrid Mönch and Hemman (Johannes) Schaler, and traveled by sea from Genoa to Acre (mod. 'Akko, Israel).

Several of the crusaders were able to visit the Church of the Holy Sepulchre in Jerusalem, but little else is known of their activity in the Holy Land; it is probable that the Germans held off from any significant military activity in expectation of the arrival of the expeditions of Louis IX of France and Prince Edward of England. The majority appear to have returned to Germany in the course of 1269–1270. The main source for the history of the expedition is the *Baßler Chronick* of Christian Wurstisen (Basel, 1580).

Crusade of 1309

The Crusade of 1309 was the first popular crusading movement after the fall of the city of Acre (mod. 'Akko, Israel) to the Mamlūks in 1291. Particularly in the Low Countries and northern France and Germany, popular enthusiasm was kindled by the prospect of a new crusade and the desire to participate in it. Clearly, this demonstrates that more than a decade after the loss of the Holy Land, crusading fervor among the Latin Christian populace was far from extinguished.

Also known as the "Crusade of the Poor," it began as a direct popular response to official crusade preaching. Pope Clement V intended to promote a first-stage, limited cru-

sade to the East (Lat. *passagium particulare*), which was to be restricted to the Order of the Hospital. Bulls were issued in August 1308 for a crusade that was originally intended to depart in the spring of 1309, but which was then deferred until the autumn of that year. In June and July, Clement urged the friars responsible for preaching the crusade north of the Alps to excite the faithful to contribute funds and offer up prayers for the success of the forthcoming expedition. Generous indulgences were promised for those contributing cash or legacies to the new venture. Because this was not meant to be an all-inclusive, full-scale crusade (Lat. *passagium generale*), the laity were not supposed to take the cross, let alone participate overseas in actual combat. Their role in the crusade was to provide funds, prayerful support—and nothing more.

Not for the first time, the church succeeded brilliantly in whipping up overwhelming popular enthusiasm for a crusade, only to fail to channel that enthusiasm, once aroused, in the desired direction. Consequently, from the spring of 1309, hordes of people (tens of thousands of them in some perhaps inflated estimates) headed for the papal court at Avignon, presumably hoping to combine their forces with the army of Hospitallers. A minority sought ships to take them down the Danube. According to the well-placed annalist of Ghent, “countless common people” (Lat. *innumerabiles vulgares*) “from England, Picardy, Flanders, Brabant, and Germany, taking the cross without consulting the bishops, set off to conquer the Holy Land” [translation adapted from *Annales Gandenses*, ed. and trans. Hilda Johnstone (Oxford: Clarendon, 1985), p. 97]. The largest contingent was most probably the Germans. Several chroniclers affirm that these unwelcome recruits had taken the cross. This is significant, for it indicates that they perceived themselves as authentic crusaders. The chroniclers further report that they referred to themselves as “Brothers of the Cross,” which seems to imply that they felt they belonged to some kind of self-proclaimed military order like the Hospitallers.

Women as well as men joined the troops of enthusiasts, whose declared aim was to cross the sea and regain the Holy Land. The chroniclers agree that nearly all these “Brothers of the Cross” came from the lower ranks of society. The great majority of them, so the chroniclers say, were destitute, landless peasants, rural laborers, and impoverished urban artisans such as tailors and furriers. Still, among them there were also well-to-do burghesses from northwestern German towns. Moreover, it is possible that a scat-

tering of knights was tempted to enter the ranks of these impecunious crusaders. Yet, if this was the case, they provided no leaders, for several chroniclers stress that this vast throng of popular crusaders was headless (Lat. *sine capite*), that is, leaderless.

Unable to provide for themselves en route, the *pauperes* (poor men) of 1309 were forced to beg for Christian charity. At times, charity was freely given; at other times, it was extorted, or simply seized. Outbreaks of violence thus occurred along their line of march. Predictably, the Jews became a special target for the rapacious crusaders. At the castle of Born, north of Maastricht, they attacked and reportedly killed as many as 110 Jews from the surrounding region who had taken refuge there. Similar threats and raids against the Jews of Leuven and Tienen terrified the Jews of Brabant. Their protector, Duke John II of Brabant, who had an economic interest in their well-being, allowed them to take shelter in his castle of Genappe. Audaciously, the crusaders besieged it, but a ducal army came to the rescue, and the assailants fled with heavy losses.

Although some of these paupers may have reached Marseilles, the climax of the Crusade of 1309 occurred in July, when a great multitude of unsummoned, and thus illicit, crusaders arrived at the papal residence in Avignon. It is said that they asked the pontiff to declare a full-scale crusade, which would have had the effect of legitimizing them. Estimates of their numbers range from 30,000 to 40,000. It is noteworthy that the outright hostility of the clerical chroniclers does not seem to have been shared by the pope. Indeed, Clement V never condemned the movement. Instead, on 25 July, he granted an indulgence of 100 years to all the German faithful who had assumed the cross, together with those who sponsored them, and who vowed to assist the Holy Land but were unable to carry out their pilgrimage due to their lack of ships. The Hospitallers certainly must have rejected their advances and refused to transport them. So, comments the annalist of Ghent, “they returned in confusion to their own homes” [*Annales Gandenses*, p. 97]. This seems to have been the universal verdict of the chroniclers, who pronounced the movement vain and empty, and from which few returned.

In early 1310 the Hospitaller fleet sailed out of Brindisi in southeastern Italy. Their crusade achieved very little, aside from enabling the Hospitallers to consolidate their power in Rhodes (mod. Rodos, Greece). Aided by the Genoese, the Hospitallers had begun the conquest of the island in 1306, and by 1311 their hold was secure. Rhodes

was admirably positioned as a platform for further crusading activities in the eastern Mediterranean, and the Hospitallers retained it until 1523.

Altogether, the Crusade of the Hospitallers and the popular Crusade of 1309, two diverse ventures originating from the same papal summons, exhibit a striking parallelism, almost as if they were mirror images of one another. A papal crusade purpose-built for specially selected, professional warrior-monks had been preached to the laity, who then responded, not with handsome donations, but with their own unauthorized crusade of self-selected, nonmilitary people, both male and female. No unified *passagium generale* resulted, but calls for a crusade continued to have unanticipated echoes.

Crusade of 1330

See Douglas, James

Crusade of Emperor Frederick II (1227–1229)

A crusade to the Holy Land organized by Frederick II, Holy Roman Emperor and king of Sicily, that achieved the restoration of the city of Jerusalem and other territory to the kingdom of Jerusalem and also secured a ten-year truce with the kingdom's Muslim enemies.

Frederick II had taken the cross on the occasion of his coronation as king of Germany at Aachen on 15 July 1215. It was not until 1218 that Pope Honorius III issued an urgent appeal to Frederick to fulfill his crusading obligations by leading an expedition to the Holy Land, where Jerusalem had been under the control of the Muslim Ayyūbids since 1187. Frederick prepared for a campaign, planning to set sail in

1220. However, his departure came to be entwined with his demands for himself to be crowned emperor and for his eldest son, Henry (VII), to be crowned king of Germany, all of which Frederick wanted to be accomplished before leaving. Hampered by the initial lukewarm reception to the call for crusade among the German nobility, Frederick asked that his departure be postponed until 1221; he then proceeded to have Henry elected king by a diet of German princes at Frankfurt am Main in April 1220. Negotiations about his coronation as emperor, increasingly recognized as a prerequisite for his departure by Pope Honorius III, began in August 1220, with Frederick finally receiving the imperial crown at Rome on 22 November. Honorius also accepted the delay of the emperor's departure, but threatened him with excommunication should he not depart the following year.

In April 1221, the emperor dispatched a first contingent of troops, led by Ludwig I, duke of Bavaria, to be followed by another fleet of forty ships in June, under the command of Walter of Paleara, chancellor of Sicily; Henry of Malta, admiral of the Sicilian fleet; and Anselm of Justingen, Frederick's imperial marshal. Faced with political difficulties in Sicily, Frederick II himself did not leave for the Holy Land. Frederick and Honorius held further meetings in November 1222 at Verona, and in March 1223 at Ferentino, where they were joined by the patriarch of Jerusalem and John of Brienne, the king of Jerusalem. These meetings resulted in an agreement that Frederick would set sail by 24 June 1225; it was also arranged that he would marry John's daughter Isabella II, the heiress of the kingdom of Jerusalem. Preparations for the campaign were, however, fraught with difficulties. Although transport for nearly 12,000 armed men had been procured by spring 1224, few were willing to join this expedition. Furthermore, Frederick's actions in Sicily engendered resistance among the north Italian communes, which re-formed the Lombard League and engaged the emperor in a series of armed skirmishes, while a conflict over Poitou between Henry III of England and Louis VIII of France reduced the number of likely crusaders from outside Sicily and the empire. Hermann von Salza, the master of the Teutonic Order, was sent to meet Honorius III, and on 25 July 1225, at San Germano, the result of their negotiations was made public. Frederick promised to depart by 15 August 1227, and to provide 1,000 knights for two years at his expense; he was also to hand over 100,000 ounces of gold to John of Brienne, Hermann von Salza, and Patriarch Ralph of Jerusalem, which was only to be returned to him once he

actually arrived in the Holy Land. Finally, the emperor accepted that, if, for whatever reason, he failed to set sail for the Holy Land, he was to be excommunicated.

To underline his commitment, Frederick II sent for Isabella in August 1225. Their marriage was celebrated at Brindisi on 9 November 1225. By mid-1227 the emperor had assembled a force of over 1,000 knights at Brindisi, with the main crusading army dispatched by mid-August 1227. Frederick II and Ludwig IV, landgrave of Thuringia, followed on 8 September. However, both emperor and landgrave soon fell ill, and Frederick was forced to return to Otranto. An embassy led by Hermann von Salza and Patriarch Gerold of Jerusalem was sent to the new pope, Gregory IX, to explain the delay, while in the meantime Duke Henry of Limburg was appointed as leader of the crusading army. The pope was, however, unwilling to accept Frederick's reasoning, and on 29 September pronounced a sentence of excommunication against him.

The fleets dispatched by Frederick probably arrived in Palestine by October 1227. Their activities were limited to strengthening fortifications at Sidon (mod. Saïda, Lebanon), Caesarea (mod. Har Qesari, Israel), and Jaffa (mod. Tel Aviv-yafo, Israel), and contributing to the building of Montfort castle near Acre (mod. 'Akko, Israel). A reliable estimate puts the number of knights assembled at about 800 at most. These imperial contingents were joined by a group of English crusaders under the leadership of Walter Brewer, bishop of Exeter, and Peter des Roches, bishop of Winchester. The crusaders lacked overall leadership and suffered from low morale. Frederick's arrival was, therefore, essential. The main part of the imperial crusading army, about 500 knights under the leadership of Richard Filangieri, was dispatched in April 1228, with the emperor himself, accompanied by another 200 knights and an estimated 3,000 foot soldiers, following on 28 June 1228. He arrived in Cyprus on 21 July, and reached Acre on 7 September 1228.

While in Cyprus, Frederick sought to establish imperial overlordship over the island, in recognition of the homage done to the emissaries of his father, Henry VI. This soon brought him into conflict with John of Ibelin, the lord of Beirut and regent of Cyprus. A faction hostile to John had called upon Frederick to intervene, and the emperor, having taken offense at John's delay in presenting the infant king of Cyprus to him, began a formal investigation into John's administration. This led to John's flight, and the imperial army, supported by a contingent of troops from

the Frankish states of the mainland, laid siege to one of John's Cypriot strongholds. In the end, a prolonged military confrontation was avoided, but Frederick had engendered the hostility of one of the most important baronial families in the kingdom of Jerusalem. His handling of the situation caused apprehension among the other barons in the Holy Land and laid the foundation for his and his officials' difficulties in administering the emperor's Palestinian domains.

In the meantime, Gregory IX had commanded the military orders and the clergy of the Holy Land not to cooperate with the excommunicated emperor. This command caused divisions among the crusading army, which were circumvented by nominal command being handed over to Hermann von Salza, Richard Filangieri, and Odo of Montbéliard. In the meantime, changing political fortunes in the Muslim East held out the prospect that a military confrontation might be avoided. In 1226 envoys from al-Kāmil, sultan of Egypt, had gone to Sicily to suggest that as many towns in Palestine could be restored to Christian control as Frederick wished, if he aided al-Kāmil in his campaign against the governor of Damascus, al-Mu'azzam. Archbishop Berard of Palermo contacted the ruler of Damascus in October 1227 and remained in touch with al-Kāmil until just before the arrival of Frederick in Acre. The death of al-Mu'azzam in November 1227 strengthened al-Kāmil's position and added urgency to the negotiations. Frederick's army, heavily depleted by sickness and desertions, and beset by disputes as to the legitimacy of the emperor's position, could not contemplate mounting a serious military challenge. Furthermore, Frederick's father-in-law, John of Brienne, was now in command of a papal army that was attacking the kingdom of Sicily.

The emperor could thus not afford to remain in the East for long, and so took up negotiations with al-Kāmil. These did not progress well, and at one point Frederick even considered military action and (in late 1228) encamped his army near Jaffa. Nonetheless, in January or February 1229 a ten-year truce was agreed on. Jerusalem was returned to Christian control, with the exception of the Temple Mount containing the al-Aqṣā mosque and the Dome of the Rock. Bethlehem, Nazareth, and Toron, with a strip of territory as far as the coast, were also returned to the kingdom of Jerusalem. However, no military help was to be given to the Christian states of Tripoli and Antioch, and support for a series of Templar and Hospitaller castles was to be curtailed.

The emperor even undertook to aid al-Kāmil for the duration of this truce against all his enemies, including Christians. The treaty aroused heavy opposition from the patriarch of Jerusalem and the military orders. This opposition did not derive from the fact that the return of Jerusalem had been accomplished by negotiation rather than combat, but rather was directed against specific clauses of the agreement between Frederick and al-Kāmil: the emperor's promise to aid the sultan even against Christians, the continuing presence of Muslim soldiers in parts of Jerusalem, the promise that the city's fortifications would be destroyed, and the concession that the truce would not extend to all the strongholds of the military orders or to all of Outremer.

Patriarch Gerold undertook concerted efforts to prevent the emperor from entering Jerusalem by placing the city under interdict and threatening excommunication to anyone following Frederick there. On Saturday, 17 March 1229, Frederick entered Jerusalem with his German and Italian troops and some of the barons of the kingdom. Of the military orders only the Teutonic Knights were present. Finding no priests at the Church of the Holy Sepulchre the next day, Frederick had a crown laid on the altar and placed it on his own head. Queen Isabella had died in 1227, and technically Frederick was only regent for their infant son Conrad. Nevertheless, he continued to claim the title of king of Jerusalem and appointed his own officials to govern the kingdom, although he was faced with growing opposition from the Ibelins and their supporters. Yet the worsening situation in Sicily forced the emperor's departure for Acre, where he narrowly avoided an armed skirmish with troops raised by Gerold and the Templars. On 1 May 1229 Frederick left Acre, and he arrived back in Sicily on 10 June. The emperor's return resulted in a quick reversal of recent papal advances, and by early 1230 negotiations began to revoke his excommunication, resulting in the Treaty of San Germano on 28 August 1230.

Crusade of Emperor Henry VI (1197–1198)

The Crusade to the Holy Land organized by Henry VI, Holy Roman Emperor and king of Sicily (d. 1197), is sometimes known as the German Crusade of 1197–1198 because it consisted almost exclusively of contingents from Germany.

Although Henry VI appears to have taken the cross, it was clear by the early autumn of 1196 that he was not going to lead the crusade personally. Instead he appointed the imperial chancellor Conrad of Querfurt, bishop of Hildesheim, and the imperial marshal Henry of Kalden as leaders of the expedition. Archbishop Conrad of Mainz led the first contingents to the Holy Land at Christmas 1196, with the main army and a contingent from northern Germany and Brabant following during 1197, perhaps numbering as many as 16,000 men and more than 240 ships. Although Henry VI succumbed to illness in Sicily during the summer of 1197, the crusade continued and managed to secure the coast of Palestine for the kingdom of Jerusalem before concluding a truce with the Ayyūbid rulers of Egypt and returning to the West in 1198.

Origins and Organization

In November 1194 Henry VI conquered the kingdom of Sicily, which he had claimed by right of his wife, Constance, daughter of King Roger II of Sicily. With his possession of Sicily further secured by the birth of an heir, Frederick (II) in December 1194, the emperor's aims turned to a wider horizon. In March 1193 he received the cross from Bishop Radulf of Sutri in private at Bari. He promised to send 1,500 knights and a similar number of ministerials (serf-knights) to the Holy Land but not to lead them personally. Although the truce in the Holy Land concluded in 1191 between Richard the Lionheart, king of England, and Saladin came to an end in 1195/1196, it does not appear that the situation in Syria or Palestine had any influence upon the planning of the crusade or that the rulers of Outremer had asked for assistance. Henry sent an embassy to Byzantium to ask for sup-

port, but there is no indication that he schemed to redirect the crusade against Byzantium, as is often suggested.

It is probably futile to attempt to disentangle political from religious motives behind Henry's decision to take the cross. The primary objective of the crusade was to bolster the kingdom of Jerusalem, which had been greatly reduced by the conquests of Saladin in the years 1187–1191, yet the enterprise should also be seen in connection with Henry's ambitions to win over Pope Celestine III for his plans for hereditary succession of the Staufen dynasty in the Holy Roman Empire and the kingdom of Sicily. A new crusade also gave Henry the opportunity to assert imperial authority in the East, and to this end he started negotiations with the rulers of Cilicia and Cyprus, by which he would confer the royal dignity upon them in return for their acknowledgement of imperial overlordship.

The crusade was proclaimed at diets held in Gelnhausen and Worms in the autumn of 1195, at which numerous prominent bishops and princes took the cross. The original departure date had been fixed for Christmas 1195, but at Gelnhausen it was postponed to Christmas 1196. However, only a fraction of those who had taken the cross departed on this date with Conrad, archbishop of Mainz, who had been named as papal legate to the crusade. It is unclear how large this part of the army was, but several other princes joined it on its march across the Alps and through Italy toward the southern Italian ports of Bari and Brindisi, where the emperor had made preparations for transport; they included Walram, son of Duke Henry III of Limburg, and Abbot Mangold of Kremsmünster. Conrad's fleet left Apulia in April, and two ships were lost in spring storms during the journey. Upon arriving in Palestine (probably in May 1197), the fleet returned to carry the main army from Italy.

To transport the army by ship was a natural decision, in view of Henry's possession of the ports of Apulia and Sicily. But not all of the crusaders sailed from southern Italy. A fleet consisting of 44 ships (probably cogs) set sail from the ports of northern Germany and Brabant. The crusaders carried on it appear to have been relatively independent from imperial command, perhaps because most of them were supporters of the Welfs, the main opponents of the Staufen dynasty in Germany; the most prominent of them were Henry I, count palatine of the Rhine; Hartwig II, archbishop of Bremen; Henry II, count of Oldenburg; and Henry I, duke of Brabant. The transport of the main army would, however, have been problematic had it not been for these extra ships. The fleet

reached Messina on 3 August 1197, after having briefly assisted the Christians on the Iberian Peninsula against the Muslims.

The main army left Germany on 1 May 1197, and the first groups reached Messina in July. They thus arrived too late to take part in the suppression of the Sicilian uprising against Henry that broke out in April. The leader was to be Conrad of Querfurt, bishop of Hildesheim, while the military command was given to the imperial marshal Henry of Kalden. The crusaders included a large number of lay and ecclesiastical princes from all over Germany: Wolfger of Erla, bishop of Passau; Frederick I, duke of Austria; Conrad, bishop of Regensburg; Ludwig I, duke of Bavaria; Hermann I, landgrave of Thuringia; Adolf III, count of Holstein; Dietrich, count of Weißenfels; Gardulf, bishop of Halberstadt; Berthold II, bishop of Naumburg-Zeitz; and Rudolf, bishop of Verden. Henry of Kalden had been sent to Byzantium to demand financial and logistical assistance in the winter of 1196–1197, and he returned to Sicily in May 1197 to join the fleet, which set sail on 1 September. A part of the fleet sailed directly for Acre (mod. 'Akko, Israel), but the imperial chancellor Conrad of Querfurt first sailed to Cyprus to crown the island's ruler, Aimery of Lusignan, as king.

The Crusade in the Holy Land

The advance contingent under the leadership of Archbishop Conrad of Mainz made camp on the beach outside Acre. Walram of Limburg could not wait for the arrival of the main army to see some action and raided in the vicinity. This was a breach of the existing truce, which caused the Ayyūbid rulers in Egypt to put an army in the field. Acre was saved by swift action by Hugh of Tiberias, who summoned assistance from Henry of Champagne, the ruler of the kingdom of Jerusalem. The Ayyūbid army then turned on Jaffa (mod. Tel Aviv-Yafo, Israel), which it captured. The problems of the Christians increased with the accidental death of Henry of Champagne on 10 September 1197. His successor, Aimery of Lusignan, was not crowned until late 1197 or early 1198.

The military goal of the crusade was to secure the coast of Palestine. To march against the city of Jerusalem had been made virtually impossible by the loss of Jaffa and the presence of the strong Ayyūbid army. When the main army arrived, therefore, it headed north toward Beirut. It marched along the coast accompanied by the fleet to Tyre (mod. Sôur, Lebanon), where the men-at-arms embarked on the ships, while the knights continued by land. The crusaders were able

to occupy Sidon (mod. Saïda, Lebanon), which had been abandoned by the Muslims.

In the meantime the Ayyūbid army under the leadership of al-ʿĀdil had guessed that the goal of the crusade army was Beirut and marched inland toward the city, where he had its walls torn down before the crusaders could arrive. Al-ʿĀdil then turned south, meeting the crusade army in pitched battle in October near Sidon, where his troops were routed. The crusaders made camp at Nahr Damur, and Beirut surrendered to them. It was then decided to lay siege to the castle of Toron, which was invested in November. The successful undermining of the castle produced an offer by the garrison to surrender it in return for free passage, but the crusaders were divided as to whether to accept these terms or to take the castle by storm. The decision was overtaken by events. By the beginning of February the crusaders heard of the arrival of new Ayyūbid forces. In the meantime news of the death of Emperor Henry VI had also arrived, and Conrad of Querfurt and other leaders left the army to return to Tyre. Some of the German crusaders remained in position at Toron, but finally abandoned the siege on 24 February after the arrival of an Ayyūbid army under al-ʿAziz, nephew of al-ʿĀdil.

By March most of the army was on its way home. On 21 June 1198 a truce was concluded with the Ayyūbids for five years and eight months. The crusade had achieved some modest successes, notably the recapture of Sidon and Beirut. Several prominent crusaders are known to have died during the expedition, including Duke Frederick of Austria, Count Otto III of Ortenburg, and Bishop Odo of Toul. At least one of the German nobles remained in Palestine: Otto, count of Henneberg-Botenlauben, married Beatrix, the daughter and heiress of Joscelin III of Courtenay, seneschal of the kingdom of Jerusalem.

There were two other significant developments during the crusade that were significant for the development of the crusading movement and relationships between West and East. As the main contingent marched toward Toron, Conrad of Mainz travelled to Tarsos (mod. Tarsus, Turkey) to attend the coronation of Leon I, king of Cilician Armenia, taking with him a crown bestowed on the new king by Henry VI (6 January 1198). Conrad, acting as representative of both emperor and pope, crowned Leon in a ceremony that marked a new rapprochement between Armenia and the Western powers, as well as a union of the Armenian and Roman churches.

Later in the year, as the German crusaders assembled in the coastal cities for their voyage home, many of their leaders met at Acre on 5 March 1198 with representatives of the kingdom of Jerusalem. There they made the decision to establish a new military religious order on the basis of the small fraternity that had originally been founded to run the German hospital in Acre during the Third Crusade (1189–1192). This act marked the establishment of the Teutonic Order, the third great international military order after the Hospitallers and Templars.

Crusade of the Lord Edward (1270–1272)

A crusade commanded by the “Lord Edward” (the future King Edward I), eldest son and heir of Henry III of England. Of negligible importance for the survival of the precarious kingdom of Jerusalem, this expedition to Acre (mod. ʿAkko, Israel) simultaneously revealed the continued enthusiasm for the holy war in the East and the difficulty in translating that enthusiasm into tangible results.

Crusade of Louis IX of France to Tunis (1270)

The loss of the town of Saphet (mod. Zefat, Israel) in 1266 to the Mamlūk sultan of Egypt, Baybars I, following that of Caesarea and Arsuf the year before, prompted a revival of the crusade recruitment begun by Pope Urban IV in 1263. In the aftermath of the civil war of 1263–1267, the English initially responded with indifference. However, by early 1268, encouraged by the example of King Louis IX of France, who took the cross in March 1267, Edward determined to join the expedition, taking the cross at Northampton on 24 June 1268. Falling in with King Louis's plans, in August 1269, Edward agreed to serve under him in return for a loan of 70,000 *livres tournois* (pounds of the standard of Tours).

With preparations moving slowly, Edward embarked only on 24 August 1270, reaching the Mediterranean a month later, bound for Tunis in North Africa, where he was supposed to rendezvous with the French army. However, by the time that Edward arrived in November, Louis IX was dead and a treaty with the Muslim emir arranged. Wintering in Sicily, alone of the leaders of what was in essence Louis IX's family crusade, Edward proceeded to the Holy Land, reinforced by a few French lords. He reached Acre via Cyprus on 9 May 1271. Joined by his brother Edmund in September 1271, Edward remained in the Holy Land for a year. He attempted to coordinate action with the Mongol Il-Khan of Persia against the Mamlūks and to resolve internal tensions within Outremer, particularly those between Hugh III, king of Cyprus and Jerusalem, and his barons concerning their obligation to serve on the mainland. Edward resisted an attack on Acre by Baybars in December 1271 and also organized two abortive raids into the surrounding countryside. He lacked sufficient manpower to achieve anything, a result of his quixotic insistence on pursuing his crusade to Acre unsupported by other Western leaders.

A truce agreed to by King Hugh with Baybars (May 1272) failed to persuade Edward of the futility of his stay, his opposition to the truce possibly provoking Baybars or his lieutenant the emir of Ramla to order Edward's assassination in June. Edward survived (whether or not because his wife Eleanor of Castile sucked poison from his wound) but the incident exposed his false position: he was vulnerable and impotent in the East, while his absence risked his inheritance in the West. Probably comprising fewer than 1,000 men, including some 200–250 knights, Edward's force was tightly centralized around his own and his brother's affinities, its leaders bound to Edward by written contracts and pay. With the bulk of the cost of more than £100,000 falling on

Edward, who received assistance from both church and state, including (in 1269–1270) the first lay subsidy since 1237, neither he nor his followers profited materially from the enterprise, financial disincentive matching political disadvantage. Baronial conflicts persisting, the absence of both of the aged king's sons on such a dangerous adventure gambled with the stability of England. Yet Edward consistently dismissed obstacles and prudence. Pressed early in 1271 to return to England, where his father had been gravely ill, he swore he would go to Acre, if necessary, with only his groom Fowin for company. Edward's commitment was pious, brave, popular, rash, futile, and misconceived, his feeble contingent a passing irritant to the rampant Baybars; his heroics satisfied his own self-image and ambition more than the needs of Outremer or Christendom.

Crusade of Louis IX of France to Tunis (1270)

The second crusade led by Louis IX, king of France. It culminated in an attack on the Muslim city of Tunis in North Africa, but failed to achieve anything of note. The 1260s saw an escalation of the military threat posed to Outremer by the Mamlūk sultan of Egypt, Baybars I, who had captured a number of Frankish towns and fortifications and subjected

Route of the French Fleet in the Crusade of 1270

Crusade of Louis IX of France to Tunis (1270)

Acre (mod. 'Akko, Israel) to frequent attack. In 1266 this news caused Pope Clement IV to proclaim a new expedition to the Holy Land, and toward the end of that year King Louis IX of France secretly informed the pope of his decision to undertake a new crusade to the East.

The king took the cross on 25 March 1267 at a ceremony to celebrate the feast of the Annunciation. Three of his sons, including his heir, Philip, also vowed to go on crusade, together with various barons. Many more took the cross when Prince Philip was knighted on 5 June 1267. Recent scholars have discounted the suggestion by the contemporary French chronicler John of Joinville that the crusade lacked support; agreements drawn up for the supply of shipping, and contracts made between the king and those lords who had committed themselves to the crusade, indicate that a figure of 10,000 participants is plausible.

The crusade was preached throughout France, first by Simon of Brie, the cardinal-bishop of St. Cecilia, and from 1268 by Ralph of Grosparmi, the cardinal-bishop of Albano, who was to accompany the crusade as papal legate. The king reduced his own household expenses to raise money for the expedition, but the biggest source of funds was the church. The pope granted Louis a tenth of the revenues from the church in France and a twentieth of the revenues from those dioceses that bordered the realm, for a period of three years. He was also awarded the income from the redemption of crusade vows and other ecclesiastical profits, and the pope actively encouraged private donations by awarding an indulgence to anyone who gave a quarter of their annual income to the crusade. Louis also secured money from the French towns by extending aid for the knighting of his son to cover the crusade as well. Louis contracted knights to serve with him for a year in the East; agreements specified the number of men and horses they were to bring and detailed the payment they would receive in return. Ships were commissioned and others chartered from the maritime cities of Marseilles and Genoa, which were to be ready to sail from the French port of Aigues-Mortes in May 1270. Finally, an admiral was named, Florence of Varennes, the first Frenchman to command a fleet.

In March 1270 Louis IX entrusted the government of France to the abbot of Saint-Denis and the lord of Nesle. On 14 March he received the pilgrim's staff and the Oriflamme standard from the altar at Saint-Denis and on the following day left Paris. He arrived at Aigues-Mortes in May, but the ships were delayed and the fleet did not depart until the beginning of July 1270.

Much scholarly discussion has taken place over the intended destination of the crusade. It seems likely that the king had been persuaded of the possibility that the Hafsid sultan of Tunis, al-Mustanşir, would convert to Christianity if an army were present to protect him from Muslim discontent. Louis evidently also hoped to undertake an offensive against Baybars in conjunction with Abagha, the Mongol Il-Khanid ruler. In 1270, Abagha faced a pressing military threat from a new quarter and postponed his planned campaign against the Egyptians. Motivated by piety, Louis used this unexpected delay to try to secure the conversion of al-Mustanşir, while keeping his army together and possibly winning additional riches that could be used in the recovery of the Holy Land. This explanation accounts for the action in Tunis by establishing that it was not the final goal of the crusade but merely a staging post before the proposed campaign in Outremer.

The choice of Cagliari in Sardinia as the initial rendezvous point for the crusaders supports the thesis that Tunis was Louis's intended goal for the first phase of the expedition. On 12 or 13 July the new plan was announced at a council meeting held there. It surprised most, but there was no significant opposition, and the fleet sailed for the North African coast. On 18 July 1270 the crusaders landed unopposed opposite Tunis. A lack of water forced them to move, and on 24 July they seized the town of Carthage and encamped outside it. The sultan made no move to convert, and Louis decided to await the arrival of his brother Charles I of Anjou, king of Sicily, before he attacked Tunis. While they waited, the Muslims harried the camp and disease broke out within the army. Many died, including John, one of Louis's sons, and Ralph of Grosparmi, the papal legate. Louis himself fell ill, and on 25 August 1270, the very day that Charles of Anjou arrived, he died.

Charles took control of the crusade and succeeded in repulsing the Muslims, but the army had been so weakened by attack and disease that he decided to negotiate a withdrawal. On 30 October 1270, an agreement was reached. Charles was unable to secure freedom of worship for Christians in Tunisia, but the sultan conceded that they could preach and pray in their own churches. An indemnity of 210,000 ounces of gold was granted to the crusaders, and the sultan agreed to restore payment of the tribute owed to the kings of Sicily, but at double the previous amount, and to expel pro-Staufen refugees who had opposed Charles in Sicily. These latter concessions benefited Charles exclusively

and helped to create the myth that he had influenced the direction of the crusade.

On 10 November 1270, Lord Edward of England, King Henry III's heir, who had taken the cross in 1268 and in 1269 had arranged to join Louis IX's expedition, finally arrived in Tunis. He had missed the opportunity to play a part in the expedition and was too late to have any influence on or to benefit from the agreement Charles had reached with the sultan.

The crusaders left Africa on 11 November 1270 and reached Sicily three days later. The original plan was apparently for Alphonse of Poitiers, another of the king's brothers, to lead the remainder of the army to Syria in the following spring, while Philip, now king of France, returned to Paris. However, on the night of 15 November a storm destroyed the fleet, with the loss of 40 ships and at least 1,000 men, and it was decided that the crusade would be postponed. Only Lord Edward of England continued to Outremer.

Crusade of Louis IX to the East (1248–1254)

The first crusade led by King Louis IX of France, which aimed to relieve the Holy Land by attacking Egypt, the main seat of Ayyūbid power in the Near East; it initially met with success but ended in defeat, with most of the army, including the king, captured by the Muslims.

In December 1244 Louis IX was motivated by a number

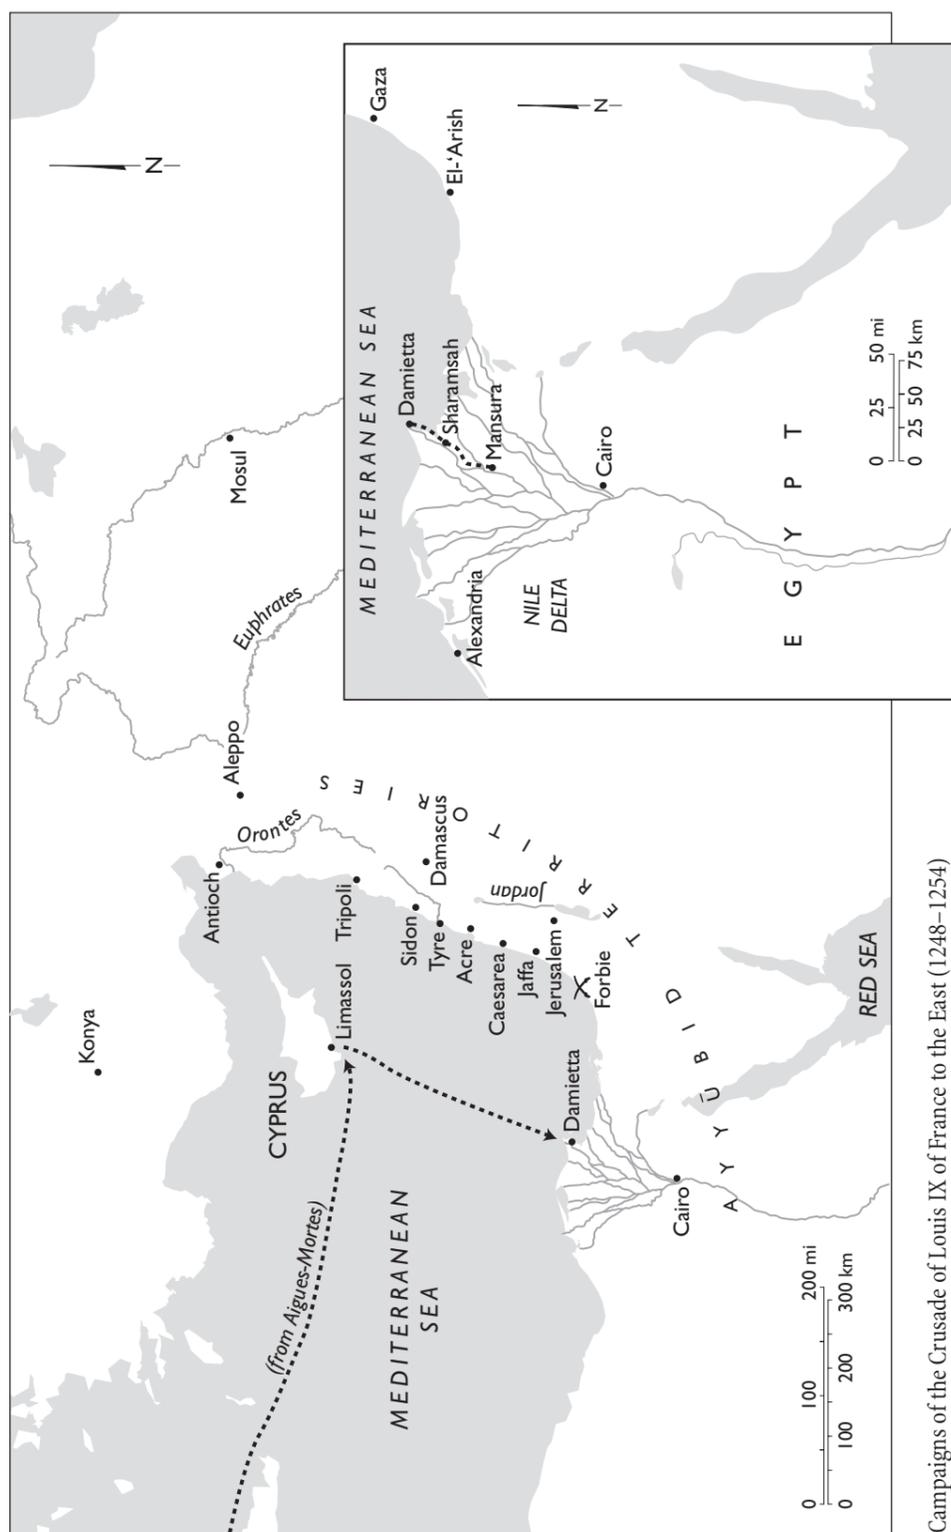

of personal, religious, and political factors to take the cross. Most chroniclers record that the king was seriously ill and vowed to go on crusade in response to a vision when close to death. It is probable, however, that his vow was not made simply to obtain a cure, but was motivated by a number of other concerns. The political situation in Outremer was ripe for a new crusade. In August 1244 the city of Jerusalem, which had been restored to the Christians, was sacked by the Khwārazmians, a Muslim people from central Asia that had been driven westward by the advancing Mongols and formed an alliance with al-Ṣaliḥ Ayyūb, sultan of Egypt. On 17 October 1244 the army of the kingdom of Jerusalem was annihilated by a combined Egyptian-Khwārazmian army at La Forbie near Gaza.

Although news of the defeat did not reach Europe before the end of January 1245, it is possible that rumors about the fall of Jerusalem influenced Louis's decision. The king was a pious man, and the crusade provided an opportunity for the secular classes to achieve a spiritual reward; he came from a family that had a dynastic tradition of crusading, which he must have wanted to maintain; his personal prestige and political reputation would be enhanced by participation in the crusade, which was regarded as an imperative for Christian princes, and Louis was undoubtedly moved by the plight of the holy places and the Christians in the East.

Pope Innocent IV also recognized the need for a new crusade to relieve Outremer and issued the crusade encyclical *Afflicti corde* at the Council of Lyons in July 1245. Together with the appointment of a number of crusade preachers led by Odo of Châteauroux, this papal recognition of Louis's expedition boosted recruitment in France. Yet elsewhere enthusiasm was muted. Germany and Italy were preoccupied with the conflict between Emperor Frederick II and the pope, eastern Europe was recovering from the Mongol invasion of 1241, England was dominated by internal conflict, and a new crusade was being launched in Spain against the Muslims of the Iberian Peninsula.

Louis IX attempted to reconcile the emperor and the pope in the interests of the crusade, but without success, and tried in vain to secure peace with Henry III of England to ensure that France would not be attacked in his absence. He initiated an inquiry into injustices perpetrated throughout France in the name of the Crown and ensured that the kingdom's administration was in good order during his absence. He raised money for the expedition by a wide range of means: he reduced his own expenditure, increased the level

of fines imposed by courts, confiscated the property of Jews, placed impositions on the towns, and persuaded the French clergy to contribute a tenth of their ecclesiastical revenues for three years, rather than the twentieth specified by the pope in *Afflicti corde*. The annual royal revenues have been estimated at 250,000 livres, most of which was needed for the Crown's normal expenditure, but Louis spent at least 1.5 million livres during the crusade, of which some 950,000 livres were contributed by the church and 274,000 livres by the towns. In 1246 Louis contracted for a fleet of thirty-six ships from Genoa and Marseilles to transport the crusaders and began stockpiling food and wine on Cyprus; meanwhile, development of the port of Aigues-Mortes on the Mediterranean coast of France was speeded up to provide a departure point for the crusaders.

Louis's commitment to the expedition and the failure of any other rulers to join it made him its undisputed secular leader. In 1248 Odo of Châteauroux was appointed legate to accompany the crusade. On 25 August Louis sailed from Aigues-Mortes with an army that probably numbered around 2,500–2,800 knights, 5,000 squires and sergeants, over 10,000 foot soldiers, and almost 5,000 crossbowmen. The assembly point for the crusade was Cyprus. The island's abundant resources enabled it to support the crusade army during the winter, and its position allowed an attack to be launched toward either Egypt or Palestine. In May 1249 the fleet set sail, and on 4 June it reached the Egyptian coast off Damietta (mod. Dumâyât). The army landed almost unopposed, and the Ayyūbid forces abandoned Damietta to the Christians.

In November the army began to march up the Nile toward Cairo, the Ayyūbid capital, having rejected the alternative proposal to attack the port of Alexandria. Adverse weather conditions impeded the army's progress, and it took a month to reach the bank of a Nile tributary opposite the town of Mansurah (mod. El-Mansūra). The crusaders were unable to cross, and it was only in February 1250 that a local inhabitant informed them of the existence of a ford. Louis ordered the army to cross and regroup on the far bank before any further advance was made.

On 24 November the Ayyūbid sultan had died, but his death had been concealed while his son, Turān-Shāh, traveled from Iraq. The Ayyūbid army was held together by the sultan's widow, Shajar-al-Durr, and Fakhr-al-Dīn, a senior Egyptian emir who had previously negotiated with Frederick II on the sultan's behalf, but if it was defeated the road to Cairo would be clear. The Christian vanguard, which

Conquest of Damietta by Louis IX of France, from the *Speculum Majus*, fifteenth century. (Archivo Iconografico, S.A./Corbis)

included the king's brother, Count Robert of Artois, ignored Louis's directive to wait for the rest of the army and attacked the Ayyūbid camp. The Muslims were caught unawares, and many were massacred. Robert and the vanguard then attacked Mansurah, but the Ayyūbid forces regrouped between the town and the river and cut them off from the main army. The crusaders became dispersed in the streets of the town and were attacked from the rooftops. Unable to escape and without hope of rescue, they were slaughtered.

The rest of the crusader army crossed the Nile and after a daylong battle scored an important victory, but its offensive capabilities were seriously affected by the loss of the vanguard, which had included the army's elite knights and the experienced Templars. The Ayyūbids recovered their position and subjected the crusaders to constant attack. The two sides entered into negotiations, which involved the exchange of Damietta for Jerusalem; however, the possibility of an agreement evaporated when the Ayyūbids demanded that Louis surrender himself as surety for the deliverance of Damietta. The Ayyūbids tipped the balance in their favor when they transported galleys overland and launched them on the Nile between the Christian army and Damietta to intercept supplies being carried upriver from the coast.

Crusade of Louis IX to the East (1248–1254)

Without fresh provisions and ravaged by disease, Louis's weakened army was obliged to retreat. On 5 April 1250 it began its march, but its progress was slowed by the great number of sick and wounded, who now included the king. Continually attacked by the Ayyūbid army, the rearguard halted at Sharamsah while the majority of the army reached Fariskur, a day's march from Damietta. Philip of Montfort tried to negotiate a new truce, but his efforts were frustrated when a French sergeant called on the crusaders to surrender, pretending to repeat an order from the king. As a result, the crusaders laid down their arms, and the Ayyūbids refused any further discussion of terms. A massacre ensued and the defeat was complete. The king and most of his nobles were imprisoned and many of the soldiers killed. Only a small number, which included the legate, reached Damietta.

Louis negotiated the release of the army in return for the surrender of Damietta and a payment of 400,000 livres. A ten-year truce was agreed on. The treaty, originally concluded with Turān-Shāh, was confirmed by the Mamlūk emirs who had assassinated the new sultan on 2 May, overthrowing the Ayyūbid regime. Louis was released on 6 May. Damietta was handed over, and the king was rigorous in his efforts to ensure that the ransom was paid in full. The new Mamlūk government, however, broke its promises, slaughtering the Christians who remained in Damietta and burning the crusaders' provisions and war machines.

Louis sailed to Outremer with the remnants of his army, intending to refit the fleet and await the arrival of the rest of the prisoners and equipment before returning to France. The failure of the truce, however, prompted Louis to remain in the East. In a letter to his subjects, he explained that he needed to stay in order to secure the release of the captives and to ensure that Outremer was not lost to Christendom, and he asked for warriors to join him and for money to be sent.

Many of the French barons now returned to France, but Louis turned his attention to refortifying the towns and castles in the kingdom of Jerusalem. While still in Acre (mod. 'Akko, Israel) Louis began to build a defensive wall around the suburb of Montmusart. In March 1251 he moved to Caesarea (mod. Har Qesari, Israel), where he spent over a year reinforcing the town. In May 1252 he moved to Jaffa (mod. Tel Aviv-Yafo, Israel), which he refortified, and in 1253 he rebuilt Sidon (mod. Saīda, Lebanon). Louis also reconciled Prince Bohemund VI of Antioch with his mother, the regent, and established peace between Antioch and Cilicia. In 1252

he concluded a peace with Egypt; its terms included the return of almost all the Christian captives and the waiver of the remaining 200,000 livres of the ransom. Little else of lasting value was gained from this truce, however, because it was superseded by a subsequent treaty between the Mamlūks and the Ayyūbids of Damascus and Aleppo that was directed against the Christians. In 1254 Louis concluded a truce with the Ayyūbid prince al-Nasīr, to last for two years, six months, and forty days. This provided a sufficient safeguard for Louis to embark for France (24 April), where his mother, the regent, had died.

During his stay in the East, Louis had failed to recapture Jerusalem or score a military success, but he had refortified Outremer, secured peace among the Christians, and obtained a truce with the Muslims. He also left an important legacy in the form of a force of French knights, crossbowmen, and sergeants who contributed to the defense of the kingdom until the fall of Acre in 1291.

Deriving its legitimacy from Roman theories of public war, the examples of Scripture, and the identification of the Christian Church with secular powers, Christian holy war boasted an ancient pedigree. Long familiar with wars against external infidels attracting spiritual privileges, in the eleventh century the Western church extended the images and rituals of holy war to conflicts within Christendom as the church strove to define its legal, liturgical, and theological codes, as well as its relationship with the secular world. Impetus came from the radicals of the papal reform movement, who increasingly equated the universal church with the see of Rome. Ecclesiastical support for military activity centered on the protection and defense of the church, its clergy, and its property, exemplified by the Peace and Truce of God initiatives. Reforming popes, such as Leo IX in his attack on the Normans in southern Italy (1053), encouraged their troops to believe they were engaged in a holy pursuit, gaining remission of the penalties of sin. Pope Gregory VII (1073–1085), with his *militia Sancti Petri* (knighthood of St. Peter), insisted that fighting for the papacy was a penitential act, those killed being promised salvation. Such ideas owed less to Augustinian theories of just war than to the experience of militant Christianity and wars to defend the church since the eighth century. Both Anselm of Lucca's *Collectio Canonum* (c. 1085), which included Augustinian just war texts but received little attention, and the description of the Christian warrior in *De vita christiana* (c. 1090–1095) by the extreme Gregorian Bonizo of Sutri focused on internal threats to the church by heretics and schismatics rather than wars against infidels.

Origins

By the time Pope Urban II preached the First Crusade in 1095–1096, holy wars against errant Christians, both in practice and in theory, occupied a familiar place in the arsenal of the papacy and its adherents, as, more widely, did the idea of divinely sanctioned violence in the culture of Western arms bearers. There is some modern debate as to whether these developments represented a clerical Christianizing of secular violence or, alternatively, a militarization of church teaching. Either way, by 1095 there existed a living tradition of Christian war against fellow Christians, a theory and practice familiar to veterans of the Investiture Wars who answered Urban's call to the East.

The Jerusalem expedition of 1096–1099 was novel in its explicit association of pilgrimage and arms, its plenary indulgence, and its objective, but not in its penitential, or redemptive, dimension. Its features proved readily transferable to all theaters of Christian conflict, although its institutions only reached full coherence under Pope Innocent III (1198–1216). The legacy of the First Crusade encouraged overt demonstrations of holy war, as in peacekeeping in northern France or in papal opposition to the Norman kings of Sicily, while holy war against errant Christians received greater clarification in the great codification of canon law, the *Decretum*, attributed to the canonist Gratian of Bologna (c. 1140), where *Causa 23* analyzed justified warfare within Christendom (although not war against pagans). When the thirteenth-century canonist Henry of Segusio (Hostiensis) insisted that the crusade within Christendom (Lat. *crux cis-marina*) possessed greater urgency and justice than the overseas crusade (Lat. *crux transmarina*), he was not only condoning contemporary papal policy but also reflecting traditional attitudes.

Such transference of language, images, and institutions had been a fitful process: even by the fourteenth century not all wars fought against Christians on behalf of church or pope attracted the trappings of crusading: plenary remission of sins for combatants, even survivors, based on those granted to Jerusalem crusaders; the taking of vows and the receiving of the cross; the authorization of specific preaching; the offer of ecclesiastical protection and other temporal privileges; and, from around 1200, access to reserved clerical taxation, vow redemptions, donations, and legacies.

Indulgences were offered to those fighting for the pope against King Roger II of Sicily in the 1120s and 1130s (including a grant by the Council of Pisa in 1135 of the same

remission as decreed at the Council of Clermont) and also against assorted heretics, together with their protectors and mercenary bands (Fr. *routiers*), in the 1130s and 1170s, but vows and the ceremony of taking the cross were absent. It has been argued that Pope Innocent III, fearful of losing control of Sicily, launched the first “political” crusade (a misnomer: like all wars, every crusade was, per se, political) in November 1199, against the freebooting adventurer Markward of Anweiler, by offering the same indulgences as those given for campaigns in Outremer. Yet no evidence survives of preaching, giving of the cross, or other privileges in this context. Only with the promulgation of a crusade against the Cathar heretics of southern France and their Christian protectors in 1208 was the full apparatus of a war of the cross directed against Christians, in the Albigensian Crusade (1209–1229), its equality with the Eastern enterprises reinforced by the Fourth Lateran Council (1215).

Development

Four long-term trends assisted this use of the crusade: (1) the desire to make the uniquely powerful crusade indulgence more widely available to the laity; (2) the configuring of the *societas Christiana* (Christian society) into a church militant, beset by evil, sin, and temporal enemies; (3) the inception of ecclesiastical taxation (in 1199) as the church became more fully incorporated into papal universalism; and (4) the acquisition, defense, and retention of a temporal Papal State in central Italy.

However, crusades against Christians fed off habitual responses to paid fighting and popular indulgences, and, unlike war with the infidel, allegiances were mutable. Given the papacy’s drive for exclusive uniformity of doctrine, dogma, and observance, charges of heresy and schism could readily be applied to any group that incurred official disapproval, especially those beyond the authority of the Inquisition: the Drenther peasants of the Netherlands (1228–1232), Bosnians opposed to Hungarian aggrandizement from 1227, and the Stedinger peasants of the Lower Weser (1232–1234), as well as the protectors of the Cathars during the Albigensian Crusade (1209–1229) or English rebels in 1216–1217 and 1265. As the tide turned against the Latins in their post-1204 conquests in Greece, crusades were announced against Greek Orthodox Byzantines in 1231 and 1239, repeated into the fourteenth century, until the Ottoman threat imposed uneasy rapprochement.

Crusading lent physical force to excommunication as a

political weapon. The main crusades against Christians centered on the independent temporal position of the papacy in Italy, the defense of the Papal States, and fears of territorial encirclement. Insecurity contradicted papal claims to temporal as well as spiritual plenitude of power. Only by maintaining their own secular state, free from invasion or rebellion, could popes feel safe in Rome. Crusades became major devices in several papally inspired campaigns: the struggle with the Staufers of Germany and Sicily (1239–1269), the Wars of the Sicilian Vespers to restore Angevin control over the island of Sicily (1282–1302), the campaigns to secure papal interests in central and northern Italy during the evacuation of the Curia to Avignon (1309–1377), and attempts to resolve the Great Schism (1378–1417) by force.

Wars against the Staufer and Ghibellines

The wars against the Staufers (Hohenstaufen) dynasty were designed to prevent territorial encirclement by Emperor Frederick II (1197–1250), ruler of Germany and, nominally, northern Italy, as well as the kingdom of Sicily, and his heirs; to assert control over Sicily, a papal fief; and to protect the Papal States, especially the March of Ancona and the duchy of Spoleto. A fundamental lack of trust in what Pope Urban IV called a “viper race” fueled the tenacity with which the Staufers were pursued by Popes Gregory IX (1227–1241), Innocent IV (1243–1254), Alexander IV (1254–1261), Urban IV (1261–1264), and Clement IV (1265–1268).

Although earlier campaigns, such as that led by John of Brienne in 1228–1230, had been funded by church taxation, and Frederick II had finally been excommunicated in March 1239, only in the winter of 1239–1240 did Gregory IX call for a formal crusade against the emperor. The anti-imperial Lombard League had been heavily defeated in 1237; Frederick’s forces were threatening Rome, where support for the pope remained fickle. By raising the stakes, Gregory could hope to stiffen local support but also mobilize a larger coalition in northern Italy and Germany. The apparatus of crusading emphasized a shared identity across political, social, and geographic frontiers; added powerful spiritual inducements to recruitment; and, crucially, permitted any anti-imperialist coalition to be funded by church taxation. The crusade, renewed in 1240 and 1243, was preached chiefly in northern Italy and Germany, where papal anti-kings were established, first Henry Raspe of Thuringia, then William of Holland. Although hard to quantify, the political effect of these crusades, supported by the ringing endorsement of the

First Council of Lyons (1245), lent a measure of cohesion and additional finance to the struggle against Frederick II.

On the emperor's death, crusades were renewed against his son and successor King Conrad IV (1250–1254) in Germany and Frederick's illegitimate son, Manfred (d. 1266), regent of Sicily. From the mid-1250s, the focus fell on southern Italy and Sicily. In 1255, Alexander IV persuaded King Henry III of England to accept the crown of Sicily on behalf of his second son, Edmund, hoping to add the resources of a secular kingdom to those of the church. Although English involvement proved abortive, Alexander's idea of hiring a secular prince to attack Manfred (king of Sicily since 1258) was revived by Urban IV and Clement IV, who secured the services of Charles I of Anjou (d. 1285), a younger brother of King Louis IX of France. In a lightning campaign in the winter of 1265–1266, Charles of Anjou defeated and killed Manfred at the battle of Benevento in February 1266. Two years later, Charles consolidated his position by his victory at Tagliacozzo (August 1268) over Conradin, Conrad IV's son, whom he subsequently executed in Naples (October), the last male member of the Staufan dynasty.

In the wake of the anti-Staufen wars, crusading became habitual. Crusades were launched in 1255 against Ezzelino and Alberic of Romano, in 1263 against Sardinia, and in 1263 and 1265 against English rebels. Italy still provided the most active arena. Following the Sicilian rising against Charles I of Anjou in 1282 (the so-called Sicilian Vespers) and the annexation of the island by King Peter III of Aragon, husband of Emperor Frederick II's daughter Constance, a new crusade was promulgated in January 1283, culminating in the invasion of Aragon in 1285 by Philip III of France, which ended in retreat and complete failure. When Frederick II of Sicily (1296–1337), a younger son of Peter III, defied his elder brother James II of Aragon (1291–1327) by retaining control of Sicily despite a papal-Aragonese agreement in 1295 to surrender the island to the Angevins, another round of crusading ensued. This round ended only with the treaty of Caltabellota in 1302 between Frederick and the new papal claimant to the island, Charles of Valois, younger brother of Philip IV of France (1285–1314), which left Sicily in Aragonese hands. There were no more crusades against Sicily.

In the fourteenth century, Italian battle lines became fragmented. Twice attempts were made to reassert imperial claims in the peninsula by the German monarchs Henry VII (1310–1313) and Ludwig IV (1328–1330), the latter pro-

voking a crusade against him for his pains. In general popes applied crusades to more local enemies, as with Boniface VIII (1294–1303) dealing with his rivals the Colonna family in 1297–1298, the suppression of the populist heretical movement of Fra Dolcino in Piedmont (1306–1307), or preventing Venetian control of Ferrara (1309–1310). The *signori* (military lords of cities) of Lombardy, Tuscany, and central Italy tended to be antipapal Ghibellines, prominently the Visconti of Milan; Florence and Naples tended toward the Guelph (i.e., pro-papal) side. Self-interest, not principle or faith, determined action: in 1334 Guelph Florence combined with its rival Milan to thwart papal plans to create a new Lombard puppet state.

Major campaigns over the Papal States were organized by cardinal-legates, notably Bertrand du Poujet after 1319 and Gil Albornoz after 1353, with crusades instigated in 1321 against Milan and Ferrara; in 1324 against Milan, Mantua, and rebels in Ancona; in 1354 against Cesena and Faenza; and against Milan once more in 1360, 1363, and 1368. In 1357, a new element was introduced by the crusade directed at the mercenary company of Conrad of Landau, other such companies (Fr. *routiers*) being targeted in 1361 and 1369/1370. Local and regional in objective, preaching, recruitment, and effect, these crusades allowed popes to spend huge sums on their Italian ambitions, while elsewhere they were reluctant to convert secular conflicts into holy wars, as in the case of French designs on Flanders or of the Hundred Years' War (1337–1453).

The Later Middle Ages

During the Great Schism (1378–1417), crusades were launched by the Roman pope Urban VI against his rival at Avignon, Clement VII (1378); both sides lent crusade status to continuing succession wars in Naples: in 1382 by Clement VII, and in 1411 and 1414 by John XXIII. In 1383, a campaign against Flanders launched by Henry Despenser, bishop of Norwich, gained funds and popular support by being granted the status of crusade by Urban VI. For the English government, this was a cheap, if in the event dimly unsuccessful, way of pursuing the war against the French. John of Gaunt's attempt to install himself as king of Castile in 1386 also attracted crusade bulls.

Increasingly, however, the military solution to the Great Schism lost appeal, not least because neither side had access to adequate church funds to sponsor large armies. The experience of the Italian wars of the fourteenth century combined

with that of the Great Schism to dissuade popes after 1417 from using the crusade to defend the Papal States, perhaps a retrospective recognition of futility and the damage they caused to the standing of both papacy and crusade. Only the bellicose Julius II (1503–1513) revived the tradition of crusading in Italy, as well as granting crusading status to the French war of Henry VIII of England in 1512.

By contrast, where Wars of the Cross did appear more appropriate, there existed no hesitation. Thus there were several crusades fought against the Hussites of Bohemia (1420, 1421, 1422, 1427, 1431, 1465–1471), and another planned (1428–1429). The Reformation led to a brief, fleeting revival of crusade schemes against Roman Catholic enemies of the papacy, as well as the new schismatics and heretics, such as Henry VIII of England in the 1530s and Elizabeth I in the last years of the sixteenth century, when Spain's attack and the Roman Catholic opposition in Ireland both became associated with crusading.

Legitimate or Perverted Crusades?

That crusading should become involved in wars against Christians was inevitable, given the pre-1095 history of holy wars within Christendom. That such an application only became habitual in the thirteenth century reflected the greater coherence of crusade institutions after the end of the twelfth century, as well as the enhanced bureaucratic and financial efficiency of the system of ecclesiastical taxation upon which such enterprises depended for their operation and appeal to military commanders. The simultaneous consolidation of the theology of indulgences aided recruitment to a cause that offered the greatest remission of sins possible, even though idealism alone cannot explain how armies were raised for these (or for any other) crusades. Holy war against Christians suited prevalent cultural attitudes that demanded formal religious sanction to secular behavior, hence the eccentric phenomenon of crusades against crusaders: in 1240, the imperialist dean of Passau in Bavaria publicly preached the cross against the papal legate; in 1263–1265, Simon of Montfort explicitly associated his rebellion against King Henry III of England with a crusade; even in 1215 such a conflict occurred, when Robert FitzWalter, a leader of the opposition to King John, who had just taken the cross, called himself Marshal of the Army of God.

From the thirteenth century onward, papal wars against Christians attracted controversy. Victims and enemies naturally complained. Crusades against Christians could seem

tawdry rackets, distracting from the higher call of the Holy Land. In the thirteenth century, many otherwise sympathetic to crusading opposed papal wars in Italy: clergy resentful at taxation, English and French nobles reluctant to commute their vows in the 1230s and 1240s, citizens of Lille in 1284, and Florentines who refused to allow their crusade legacies to be diverted. The papalist Hostiensis noted that popular opinion in Germany preferred the crusade to the Holy Land. Those eager to see crusading as a means of moral and religious regeneration tended to look to wars against heretics and infidels, not fellow Christians, which, in the fourteenth century, attracted limited international approval.

While popes such as Innocent IV, Clement IV, Boniface VIII, and John XXIII promoted wars against Christians, others, such as Gregory X (1271–1276) and Nicholas IV (1288–1291), pursued peace to achieve a new Eastern expedition. The Curia could recognize the potential unpopularity of crusades against Christians: in 1246 Innocent IV insisted that his order to his legate to stop preaching the Holy Land crusade in order to facilitate the promotion of the crusade against the Staufens should be kept secret. The concurrence of numerous crusade appeals with different objectives caused a degree of confusion, duplication, and contradiction of effort.

While popes and their apologists insisted that the anti-Staufen and Italian crusades were necessary prerequisites for any successful campaign in the East, others, such as the Venetian crusade propagandist Marino Sanudo (d. 1343), argued instead that they constituted major impediments to the recovery of the Holy Land. The gradual loss of Outremer coinciding with the intensification of crusading in Italy struck some as reprehensible. However, successive popes managed to find enthusiasts for their campaigns, eager to pursue secular warfare with spiritual benefits and church funding. It is hard to blame the crusades against Christians as single-handedly undermining support for the concept of Wars of the Cross or for papal authority in the West; John Wyclif's famous attack on Despenser's Crusade in 1383 formed part of a much wider critique of a church palpably in crisis over the Great Schism. Criticism of papal bureaucracy, corruption, and bellicosity embraced the Italian crusades but was hardly defined by it. There is no such thing as neutral public opinion, but it is hard to detect either majority condemnation or majority approval. Papal crusades against Christians, while producing major successes, such as Charles of Anjou's victory, failed to secure papal territory. By

the early fifteenth century, with papal temporal plenitude of power compromised by the growing assertion of national ecclesiastical autonomy, crusades against Christians, appearing at worst objects of derision and at best irrelevant beyond the regional conflicts to which they were still applied, were abandoned, rather as poor business than as ideologically corrupt.

Curonia

Curonia (mod. Kurzeme, Latvia; Ger. Kurland) was a province of medieval Livonia covering roughly the peninsula between the Baltic Sea and Gulf of Riga. It was inhabited at the inception of the Baltic Crusades by the Baltic tribe of the Curonians (Kurs) and the Finno-Ugrian Livs.

According to the chronicler Henry of Livonia, the Curonians made peace with the emerging bishopric of Riga in 1201. In 1210 they besieged Riga, but there are indications that peace was restored and that it was even possible to use the land route to Prussia via Curonia. The Christianization

of Curonia was first pursued seriously during the activity of the papal representative Baldwin of Aulne, who in 1230–1231 agreed with the Curonians on the acceptance of Christianity and subjected the land directly to himself and the pope. Yet it was impossible for Baldwin to enforce this settlement because it ignored the ambitions of other parties among the Germans in Livonia. Following attempts to establish a bishopric and division of the land with the Order of the Sword Brethren, a new settlement took shape in 1245, when the papal legate William of Modena granted two-thirds of the land to the Teutonic Order, and the remaining third to the bishop of Curonia, after the model of a similar settlement in Prussia. However, the province remained in a turbulent situation, experiencing a major Curonian uprising in 1260 after the Teutonic Order was defeated at the battle of Durben. A final peace agreement was reached only in 1267. Some chieftains of the Curonians were able to keep their position as fief-holders of the order.

The most important stronghold of the Teutonic Order in Curonia was Goldingen (mod. Kuldīga, Latvia). Another important castle was Memel (Klaipėda, Lithuania), founded jointly by the Livonian branch of the order and the bishop of Curonia in 1252 as the seat of the bishopric, which, however, was moved later to Pilten (mod. Piltene, Latvia). From 1326 the castle of Memel and its commandery belonged to the Prussian branch of the Teutonic Order. In 1263 a priest of the order, Emund von Werd, was elected as bishop of Curonia. During his episcopate, it was ordained that the members of the cathedral chapter should be elected from the Teutonic Order, which effectively placed the bishopric under the order's control.

In 1561 Curonia was converted into a hereditary duchy by the last master of the Teutonic Order in Livonia, Gotthard Kettler. Although he had aimed to become ruler of all of Livonia by the secularization of all the order's lands and an oath of allegiance to Poland, he was left only with the districts south of the river Dūna.

Cyprus

A Byzantine possession until 1184, the island of Cyprus was under the independent rule of the Greek usurper Isaac Komnenos when it was conquered in 1191 by Richard I (the Lionheart), king of England, who had come to the East in the course of the Third Crusade (1189–1192). After being held for a short time by the Order of the Temple, Cyprus was granted to Guy of Lusignan, the dispossessed king of Jerusalem. Latin (Frankish) rule over the island lasted from 1192 until 1489, by which time it had effectively become a Venetian protectorate. Cyprus was then a colony of Venice until its conquest by the Ottoman Turks in 1571.

Crusader Conquest and Latin Settlement

Cyprus had been detached from the Byzantine Empire in 1184 when Isaac Komnenos, a member of the imperial dynasty of the Komnenoi, seized power and had himself proclaimed emperor of the island. Although the pretext for King Richard's conquest was Isaac's ill treatment of his sister Berengaria when her ship arrived on Cyprus, the king realized the value of the island in supplying men, money, and provisions to the Frankish states of Outremer, which had been greatly reduced following the conquests of Saladin in 1187. Pope Innocent III likewise appreciated the island's value in this regard, urging the military orders of the Temple and the Hospital to assist in the defense of Cyprus against a possible Byzantine invasion and rejecting the arguments of the Byzantine emperor Alexios III Angelos for the restoration of the island to Byzantine rule.

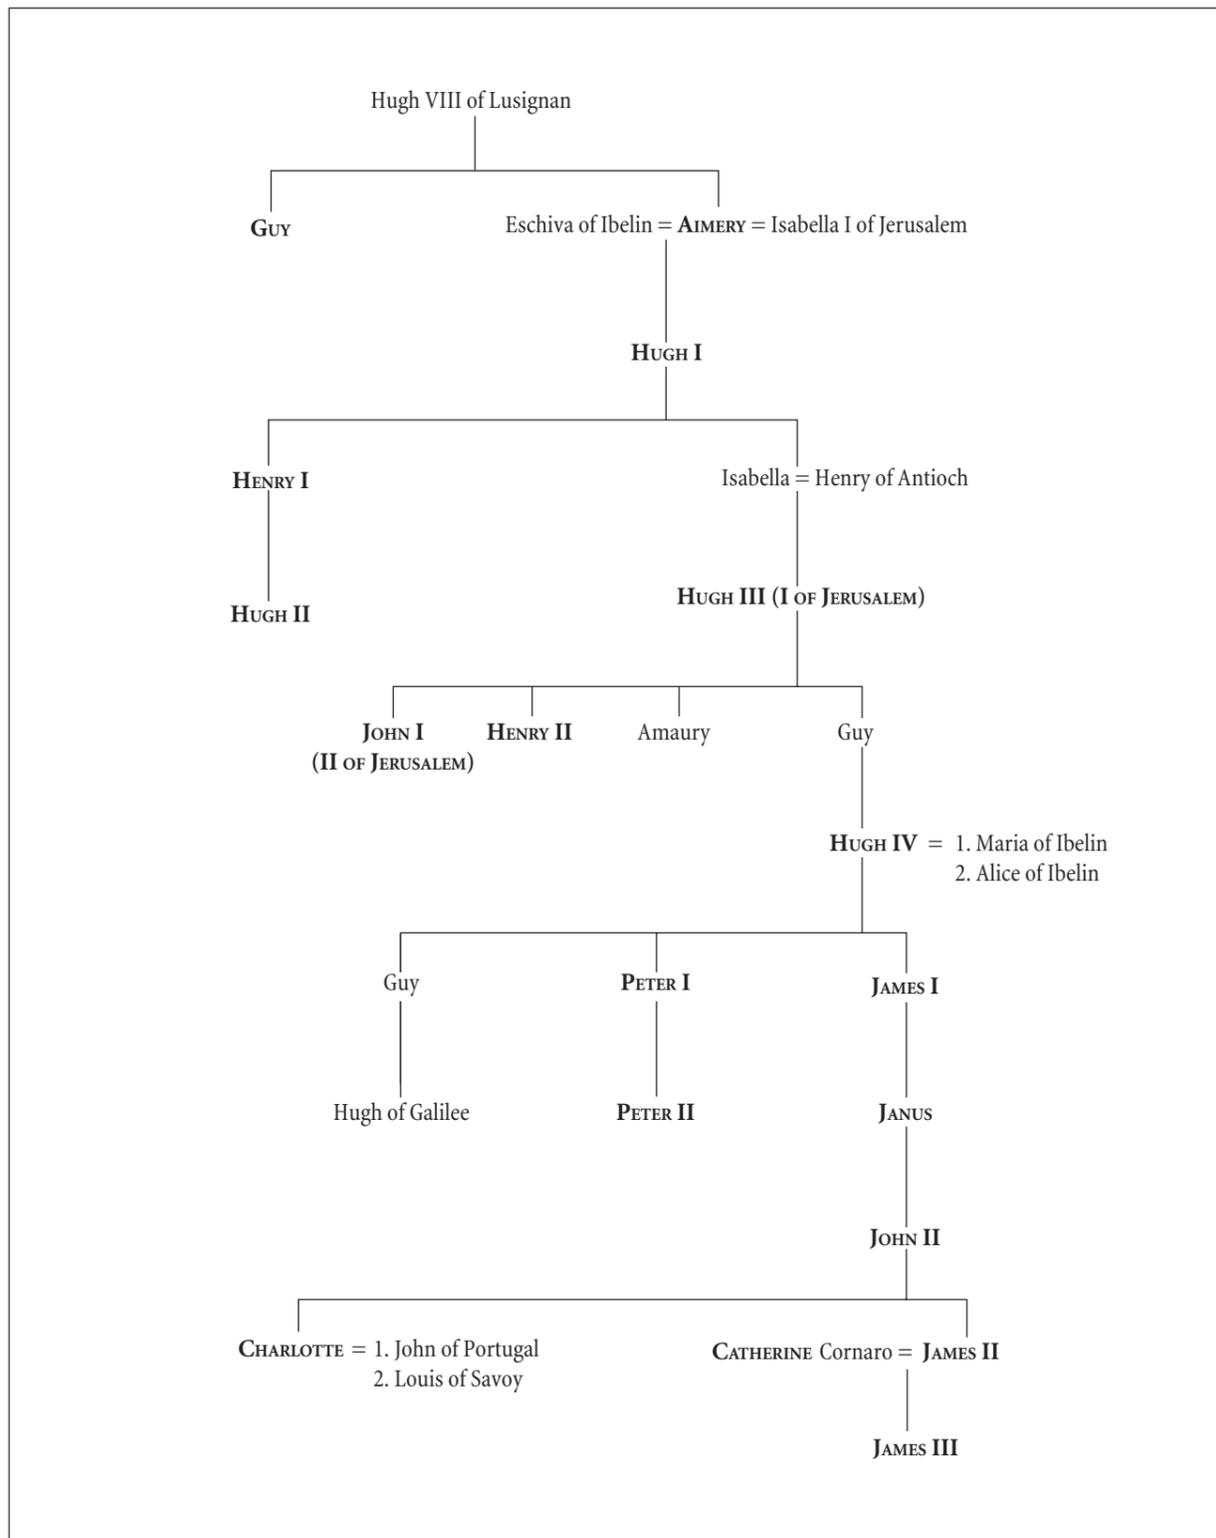

Richard initially sold the island to the Templars, but their attempt to impose new taxes on the Greeks led to a rebellion in Nicosia (mod. Lefkosia), which they suppressed bloodily. Unsure of their position, they returned the island to him, and he sold it to Guy of Lusignan as part

of a general settlement between rival claimants to the throne of Jerusalem. In 1197 Guy's brother and successor, Aimery, who had succeeded him in 1194, was formally crowned king of Cyprus by Bishop Conrad of Hildesheim, who was a representative of the pope and also the chancellor of the Holy Roman Emperor Henry VI, to whom King Aimery owed fealty.

Prior to the Latin conquest Cyprus's population had been mainly Greek. It also included Syrian Melkites, who shared the Greeks' confessional allegiance to the Orthodox Church, as well as Maronites, Armenians, Jews, and some Latins. The Latins were mostly Italians: Venetians had settled on the island following the grant of commercial privileges to Venice on Crete and Cyprus by the Byzantine emperor John Komnenos in 1126, and Latin merchants resident in Limassol (mod. Lemesos) provided King Richard with intelligence concerning Isaac Komnenos after Richard landed there and captured the city.

Following the conquest and the establishment of the Lusignan dynasty, Pisan and Genoese merchants settled on Cyprus along with the Venetians, and they settled in all the main towns of the island, where they established communities headed by consuls or *baillis* (governors) and centered on *loggias* (lodgings for merchants), where disputes of a commercial nature were settled by the officers of their communes, although the Crown retained a monopoly on criminal justice.

Guy of Lusignan was well aware of the Greeks' hostility to the Latins, and so he encouraged Latin nobles, knights, and burgesses, chiefly from Outremer, to settle on the island, granting them lands, property, and even dowries in accordance with their social station. This Latin or Frankish element was reinforced throughout the thirteenth century and especially between 1263 and 1291: with the conquest of the Frankish territories and cities on the mainland of Palestine and Syria by the Mamlūk sultans Baybars I and Qalāwūn, numerous Latin (as well as Syrian Christian) refugees came to settle on Cyprus. In military terms the Latin presence was strengthened by the Templars, the Hospitallers, and the Teutonic Knights, who acquired estates on the island. Probably in response to injunctions of Pope Innocent III to strengthen the island's defenses, castles were constructed by the Templars at Gastria near Famagusta (mod. Ammochostos) and by the Hospitallers at Saranda Kolones behind the harbor of Paphos (mod. Pafos).

Succession to the Kingdom of Cypress, 1192–1498

The Latin Kingdom under the Lusignan Dynasty (1192–1489)

The continuing arrival of Latin settlers in the early thirteenth century led to tensions among the Frankish nobles culminating in civil war in 1228–1232, when supporters of the powerful Ibelin family, who were relative newcomers to Cyprus, clashed with older established families under the leadership of Aimery Barlais. Barlais enjoyed the support of the Holy Roman Emperor, Frederick II, the formal suzerain of Cyprus. The death of King Hugh I (1218) and the minority of his son and successor, Henry I, meant that royal authority was effectively absent, and although the pro-Ibelin nobles who controlled the young king eventually won the war with Genoese help, the commercial concessions granted to Genoa subsequently led to tension between them and the crown. The king, heavily in debt as a result of payments for troops, was forced to sell or lease properties to the Latin Church in return for cash. It was during the reign of Henry I that Venetian properties on Cyprus were sequestered for some unknown reason, although the Venetians and the Genoese continued to be the chief commercial powers throughout the period of Lusignan rule.

Cyprus was of considerable strategic value to the crusading movement as a place of assembly for crusading campaigns and as a source of men and supplies to the beleaguered Franks of Outremer. The Latin nobles of Cyprus and their forces took part in two major crusades: the Fifth Crusade (1217–1221) and the first crusade of King Louis IX of France (1248–1254). Together with the Franks of Outremer they also took part in various other military campaigns against the Muslims throughout the thirteenth century, fighting at the battle of La Forbie (1244), in which the Christian forces were badly defeated by the Muslims; defending Ascalon (mod. Tel Ashqelon, Israel) with a fleet in 1247; and sending forces to assist in the defense of Acre (mod. 'Akko, Israel) and other places in 1265, 1266, and 1271.

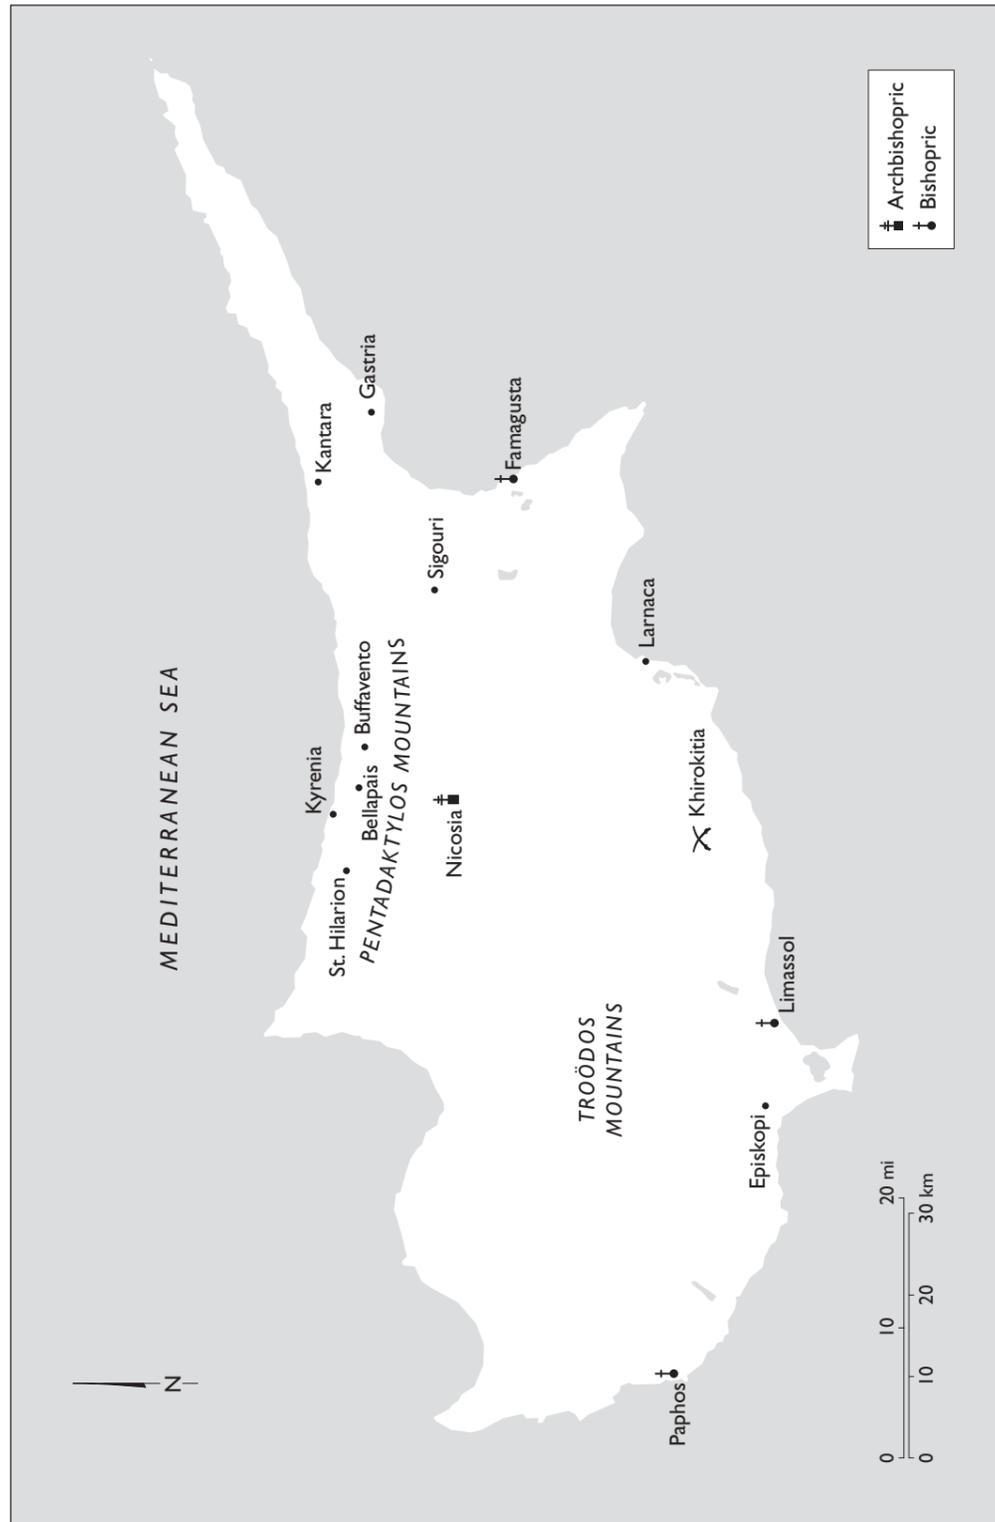

From 1268 to 1291 three kings of Cyprus were also kings of Jerusalem. The senior branch of the royal house of Jerusalem became extinct on the execution of Conradin of Staufen at the hands of Charles I of Anjou (1268), whereupon Hugh III of Cyprus became king of Jerusalem. Hugh's rights to both Cyprus and Jerusalem were contested by rival claimants, Count Hugh of Brienne and Maria of Antioch, who arguably had a stronger legal title but who lacked Hugh's capacity to deploy the military resources of Cyprus in the defense of Outremer. This he did to the best of his abil-

ity, although he was hampered by the opposition of the Cypriot nobles to military service on the mainland and by the intervention there of Charles of Anjou after Maria of Antioch had sold her claim to him in 1277. Hugh III was succeeded in both kingdoms by his sons John I and Henry II.

The Muslims' realization of Cyprus's usefulness in assisting the Franks of Outremer impelled them to organize two naval raids against Limassol: the first (1220–1221) caused the Latins great loss of life; in the second (1270) the Muslim fleet was wrecked on the shoals off Limassol and the survivors captured. Such assistance, however, did not stop the Mamlūk conquest of Frankish Palestine and Syria. In 1291 Acre was captured after a long siege despite the assistance provided by King Henry II, who went there in person with a large force of Cypriot knights and foot soldiers. The later Lusignan kings continued to use the title of kings of Jerusalem after the loss of Acre.

The refugees from Latin Syria who flooded into Cyprus after the fall of Acre, Tyre (mod. Soûr, Lebanon), and the remaining coastal towns, such as Tortosa (mod. Tartûs, Syria), suffered great hardship, and provision for them placed a considerable burden on the Crown, which imposed the *testagium* (head tax) to raise funds. The Latin Church of Cyprus had to cater to numerous refugee clerics, such as the patriarch of Jerusalem, the bishops of Beirut and Laodikeia, as well as monks and cathedral clergy from the places lost to the Muslims. Limassol now became the headquarters of the Orders of the Temple and the Hospital, which both developed fleets with which to conduct raids against Muslim Syria and Palestine. From 1299 to 1301 the two orders and the Cypriot Crown tried to coordinate military campaigns against the Mamlūks with the Mongols of Persia, but without success, and a Templar expedition to the island of Ruad (mod. Arwād, Syria) was a resounding failure, ending in 1302 with the death or capture of over 500 Templars when a powerful Muslim fleet besieged and retook the island. These failures were a contributory factor in the ultimately unsuccessful conspiracy organized in 1306 by Amaury, brother of King Henry II. Amaury had Templar and Genoese support, but although he managed to have himself made regent and exile the king to Cilician Armenia, he was murdered in 1310 and the king was restored with Hospitaller assistance.

It was around this time that the involvement of the military orders in Cypriot affairs was greatly reduced. The Order of the Temple was dissolved in 1312 after being subjected to

Cyprus under the Lusignan Dynasty

trials at the instigation of the French monarchy in 1310–1311. Almost contemporaneously, the Hospitallers moved their headquarters to Rhodes (mod. Rodos, Greece) after their conquest of that island from the Byzantines in 1307–1308, while the Teutonic Order redeployed to the Baltic region after 1309. Thereafter the Hospitallers and the Teutonic Knights simply maintained estates on the island, although those of the Hospitallers, greatly augmented after they were given the confiscated Templar properties, were of considerable economic importance as a source of income and agricultural produce right up to 1570.

From 1344 to 1426 a series of events took place that permanently weakened the Lusignan royal house and the Latin nobility and also damaged the flourishing economy of Cyprus. In 1344 the papal embargo on direct trade with the Muslims was lifted, and Cyprus was increasingly bypassed by merchants in favor of other destinations such as Alexandria, Beirut, and Rhodes. The Black Death, which swept across Europe and the Mediterranean in 1348, carried off one-third of the population. The wars begun by King Peter I from 1359 onward against the Turks of Anatolia and the Mamlūks of Egypt and Syria, while resulting in notable successes, such as the sack of Alexandria in the crusade of 1365, were ruinously expensive and involved the increasing use of foreign mercenaries. This caused resentment and fear on the part of the Latin nobles, a party of whom murdered the king in 1369. His son Peter II was a minor when he came to the throne, and Genoa, angered in part by the sack of Alexandria, which had damaged its trade, invaded Cyprus in 1373. The ensuing war was ruinous for the kingdom, resulting in the destruction of a large section of the noble class, the loss of Famagusta to the Genoese (who kept the city until 1464), and the payment of a heavy annual war indemnity to Genoa.

To finance the indemnity from their now shrunken revenues, the kings of Cyprus encouraged raids against the Mamlūk-ruled mainland by Catalan, Rhodian, and Cypriot pirates. These eventually provoked a Mamlūk invasion of Cyprus in 1426, resulting in the defeat and capture of King Janus at the battle of Khirokitia. He was only freed following the payment of a huge ransom (paid in part by the Hospitallers) and the imposition of Mamlūk suzerainty on Cyprus together with an annual tribute, which now had to be financed alongside the annual indemnity paid to Genoa. The monarchs of Cyprus were no longer able to maintain an effective royal fleet, and in the mid-fifteenth century the kingdom was also subject to raids by Turkish pirates oper-

ating from the emirate of Karaman opposite the northern coast of Cyprus. Royal estates were mortgaged to an increasing extent to the Venetians and Hospitallers to raise cash to pay the Mamlūk tribute and the Genoese indemnity. King John II's inability to pay his debts led to tensions with both Venice, which in 1452 ordered its subjects to leave the island, and Genoa, which occupied the coastal town of Limassol in the same year.

With the death of King John II in 1458, civil war broke out. On one side were the supporters of his daughter Queen Charlotte, the legitimate heir to the throne, who had married Duke Louis of Savoy and enjoyed the support of the papacy and the Hospitallers; they were opposed by James (II), John's illegitimate son by his Greek mistress, Maria of Patras. James made his way to Egypt, where he acknowledged Mamlūk suzerainty, and in late 1460 he invaded Cyprus with a Mamlūk force to augment his supporters, who included Catalans and Neapolitans. By 1464 James II had succeeded in making himself master of the island, capturing Famagusta from the Genoese and Kyrenia (mod. Keryneia) from the supporters of Queen Charlotte, who with Hospitaller help had held it under siege for four years.

Sometime after 1461, Genoa had lost control of Limassol. By the late fifteenth century the republic had declined as a maritime power, with a contracting share of international trade. In 1458 Genoa was annexed by France, and in 1463, after a brief spell of independence, it became part of the duchy of Milan. Venice was now the strongest Christian maritime power in the Mediterranean, and fear of Ottoman expansion impelled it to come to an understanding with James, who was firmly established on the throne by 1464. In 1468 James II married Catherine Cornaro (Corner), the daughter of a noble Venetian family with large estates in Episkopi near Limassol, but his death in 1473, followed by that of their son James III (1474), effectively opened the way for the imposition of what was in effect a Venetian protectorate. Catherine remained queen until 1489, when she abdicated under Venetian pressure, but although her rule was nominal it was remembered with affection by the people of Cyprus and especially those of Nicosia, who wept at her departure.

The Latin and Greek Churches

In 1196 a Latin Church hierarchy was established on the island in accordance with a bull of Pope Celestine III. It was headed by an archbishop at Nicosia, with three suffragan

Venetian walls in the old town of Famagusta, northeastern Cyprus. (James Davis; Eye Ubiquitous/Corbis)

bishops at Limassol, Paphos, and Famagusta. The Greek Orthodox Church of Cyprus had been weakened by the flight of most of the Greek nobles (who were mainly of Constantinopolitan origin) to Byzantium immediately after the Latin conquest, which deprived it of a fundamental source of patronage. The Latin Church, by contrast, was augmented by the arrival of Latin monastic and mendicant orders. The Benedictines, Praemonstratensians, Cistercians, and later the Carmelites took over monasteries from the Greeks or established new ones. The Franciscan and Dominican mendicants obtained houses in the towns, notably in Nicosia, the capital, and Famagusta, which became the chief commercial port of the island.

During the reign of Henry I, religious strife arose between

the Latin and Greek churches as a result of the agreements of 1220 and 1223 concluded between representatives of the Latin nobles and the Latin secular church. These concerned the payment of tithes to the Latin Church by the nobles but also reduced the number of Greek bishoprics from fourteen to four, limited the number of Greeks able to become priests or monks, and subordinated the Greek Church to the Latin one. Some Greek clerics cooperated with the Latins, but others resisted, encouraged by the patriarch of Constantinople, himself in exile at Nicaea as a result of the Latin conquest of Constantinople in 1204. This resistance came to a head in 1231 with the martyrdom of thirteen Greek monks who were burnt at the stake in Nicosia for refusing to accept the validity of the Latin doctrine of unleavened bread.

The Greek clergy continued to resist subordination to the papacy and the Latin Church until 1260, when Archbishop Germanos and his remaining Greek suffragan bishops accepted the terms of the *Bulla Cypria* of Pope Alexander IV, which made them jurisdictionally subordinate to the pope and the Latin archbishop and bishops of Cyprus. Their acceptance provoked unrest in Nicosia in 1261, and disaffection continued into the fourteenth century. In 1312 and again in 1360 the Greeks of Nicosia and their bishops rioted against the policies of visiting papal legates. Yet apart from these incidents, the Greeks accepted (albeit with some resentment) the new arrangements, which remained in place until the Turkish conquest of 1570.

Economy and Society

The economic and social structure of Cyprus under Frankish rule shows a marked continuity with the Byzantine period, especially in the countryside. The estates of the Byzantine emperor, the former Greek *archontes* (magnates), and the Greek Orthodox Church were taken over by the Lusignan Crown, the Latin nobles, and the Latin Church, who employed officials (Fr. *baillis*, Lat. *appaltores*), who were often of Greek or Syrian origin, to administer these estates and ensure that the peasants discharged their feudal obligations. These included various labor services, such as working two days a week on the domains of their lords, and the

payment of fief rents to the Latin land-owners, usually in kind and amounting to one-third of their annual produce. Unlike their counterparts in Frankish Greece, the Greek peasants did not pay tithes directly to the Latin Church, for the lords themselves paid these, as was the custom in the kingdom of Jerusalem. Besides the serfs, there was also a class of free peasants who had no labor obligations, were free to leave their lands, and paid their lords one-fourth to one-third of their annual income.

The loss of Outremer to the Mamlūks in 1291 impelled the popes to declare an embargo on direct trade (especially in strategic materials such as weapons, iron, and timber) between Western merchants and Muslim lands, and Cyprus benefited greatly from this. Western merchants came to Cyprus to sell textiles and other goods; there they bought silks, spices, and other luxury articles; Cypriot traders disregarded the embargo and brought such goods from Mamlūk territories to Cyprus to resell them at considerable profit to the merchants from the West. The Venetians and Genoese continued to be the most powerful of the trading nations frequenting Cyprus, but Catalans, Provençals, Anconitans, Pisans, Florentines, and Ragusans also traded with the island from the late thirteenth century onward. Besides luxury articles originating from the East, they purchased Cypriot agricultural products such as wheat, pulses, carobs, cotton, wine, and sugar as well as salt from the two salt lakes of Larnaca (mod. Larnaka) and Limassol, which was a royal monopoly.

Cyprus also became a destination for short-distance trade with the Venetian possessions of Crete and Negroponte, Hospitaller Rhodes, and the Genoese colonies of Chios and Pera. The Crown benefited greatly from such trade by way of increased revenues and customs dues, as did nobles and peasants through the demand for and sale of agricultural produce. By the early fourteenth century Famagusta, whose development had been fueled by the influx of refugees from Outremer, had become the chief port of the kingdom and a major emporium of the eastern Mediterranean along with Alexandria and Ayas (Lajazzo).

The prosperity of Cyprus at this time also enabled the kingdom to send assistance to the embattled kingdom of Cilicia, which was threatened by the Saljūqs of Rūm, the Mongols, and the Mamlūks, and to take part in the naval leagues organized from 1333 onward to combat Turkish piracy in the Aegean. Together with Venice, the papacy, and the Hospitallers of Rhodes, Cyprus contributed ships for this

purpose, and following the capture of Smyrna (mod. İzmir, Turkey) from the Turks in 1342, Cyprus provided ships and funds for the garrison at Smyrna, which the Christians managed to hold until 1402.

The Black Death of 1348, the wars of King Peter I against the Turks and Mamlūks, and the Genoese invasion of 1373 all weakened the Crown and nobles economically but brought some benefit to the non-Latin population. Many serfs were able to purchase the status of free peasants, and in the Venetian period (1473–1570) the latter greatly outnumbered the former. The administration of justice also exhibits continuity with the Byzantine period in that under the Lusignans it remained a Crown monopoly, for unlike their counterparts in Latin Greece, the Cypriot nobles did not have the right to administer high justice. The High Court of the nobles and the Court of Burgesses were modeled on those of the kingdom of Jerusalem, and from the 1230s onward the *Assizes of Jerusalem* were also applied in Cyprus. In addition, the Syrians had their own courts in Nicosia and Famagusta, while the Greeks retained their own ecclesiastical courts, from which it was possible, however, to lodge appeals to the Latin ecclesiastical courts and the papal Curia. Under the Venetians, the High Court was abolished and its functions taken over by magistrates dispatched from Venice, but the other courts continued to operate. The assizes of the Court of Burgesses are known in Greek versions from 1469 and 1512 and were also translated into Italian in 1531 (published in 1535).

By the fifteenth century Greeks and Syrians were entering the royal administration to an increasing extent. By this time all the officials at the royal *secrète* (the office responsible for tax collection) other than the bailli were Syrians or Greeks, and from the mid-fifteenth century onward this office, too, was held exclusively by Greeks or Syrians. In 1455 the nobleman James of Fleury complained, “The government of this kingdom has fallen entirely into the hands of Greeks and people of no consequence” [Raffaële di Tucci, “Il matrimonio fra Ludovico di Savoia e Carlotta di Cipro,” *Bollettino storico-bibliografico subalpino* 37 (1935), 87]. This opinion was shared by Pope Pius II, and Greeks purchased many of the fiefs sold by the Crown for cash after the war of 1373 with Genoa. Leontios Makhairas, a Greek whose family had close connections with the royal court, wrote the first chronicle of Cypriot history in popular (that is, demotic) Greek in the mid-fifteenth century. This work was continued by another chronicler, George Boustronios, in the early six-

teenth century. These two chronicles, together with the two Greek versions of the assizes of the Court of Burgesses, represent a tradition of prose writing in popular Greek found in no other part of the Greek world at this time.

It is no accident that many of the Latin churches and abbeys still standing, such as the cathedrals of St. Sophia in Nicosia and St. Nicholas in Famagusta and the Praemonstratensian abbey of Belapais near Kyrenia, not to mention the numerous Latin churches in Nicosia and Famagusta, were constructed or embellished in the first half of the thirteenth century, showing influences from the Gothic architecture of northern France, Italy, and elsewhere. Greek iconography, at times commissioned by Latin patrons, was itself influenced by the art of Outremer and subsequently by that of the Italian Renaissance, as well as by that of Byzantine Constantinople, while the fourteenth-century church of St. George of the Greeks in Famagusta was constructed in the Gothic style.

The court of King Hugh IV of Cyprus was open to Greek and Arab scholars as well as Latins; the Greek George Laphites, for example, was described as a theologian fluent in both Classical Greek and Latin. Moreover, musical motets performed at the court of King Janus in the early fifteenth century included themes taken from Greek hagiography. A lively tradition of manuscript copying and illumination developed on Cyprus, continuing to the Venetian period, and under Venetian rule Cypriots of Latin, Greek, and Syrian origin went to study at the University of Padua, which was a Venetian possession. Some of them attained doctorates in law, medicine, and theology.

Cyprus as a Venetian Colony (1489–1571)

Following the enforced abdication of Queen Catherine in 1489, Cyprus became a Venetian colony. Venice was in a position to make use of over two centuries of experience gained in governing Greek lands, such as Crete, Euboea, the Ionian Islands, and the Cyclades. In keeping with its policies elsewhere, Venice sought to gain the allegiance and the cooperation of the local elites, and so from 1521 onward the urban assemblies formerly summoned at irregular intervals in Nicosia and Famagusta became regular town councils. Although they submitted demands to the Venetian Senate, these were not invariably satisfied. The Cypriot nobles cooperated with Venice, however, and among them were several Greek families, including the Podocataro, the Contostephano, the Sozomeno, and the Synclitico families.

Around 1535 Zegno Synclitico was probably the wealthiest individual in Cyprus. Mindful of the depopulation Cyprus had suffered on account of war and emigration, the Venetians encouraged settlement from Syria, the Peloponnese, Crete, and even Venice itself, so that by 1541 there was little land left for settlement. Bread riots in Nicosia marked the final decade of Venetian rule; the population, which may have risen from around 110,000 in 1490 to just under 200,000 by 1570, had grown faster than grain production. Measures were taken to combat a plague of locusts, although poverty continued to exist in both the towns and the countryside. The towns other than Nicosia and Famagusta were largely neglected, and the inhabitants of Limassol and later of Kyrenia lost their civic status as a result.

By 1522 the Ottomans had conquered Mamlūk Syria, Palestine, and Egypt as well as Hospitaller Rhodes, thereby virtually surrounding Cyprus, and the need to construct new fortifications capable of withstanding artillery bombardment became ever more pressing. Famagusta had acquired a new circuit of walls by 1544, and the castle at Kyrenia seems to have been refortified by this time. Other forts, such as those at Limassol, Paphos, and those along the northern coast, were not strengthened owing to lack of manpower, and only in 1567 did work begin on providing new walls for Nicosia. These were still unfinished when the Ottomans invaded Cyprus in July 1570, and the capital fell in September after a siege of five weeks. Kyrenia surrendered a few days later without resistance, but in Famagusta, Venetian and Cypriot forces under the command of Marcantonio Bragadino resisted the Turks heroically for nearly a year. They surrendered only in August 1571 on account of the lack of victuals and gunpowder. Mustafa Pasha, the commander of the Turkish forces, admitted that he had lost 80,000 men in the course of this hard-fought siege, and he had the unfortunate Bragadino flayed alive following the Venetian surrender. With the fall of Famagusta, Latin dominion over Cyprus ended, and the island became an Ottoman province.

Plans of Castles in Frankish Greece and Cyprus

(drawn by Mike Fyles)

The plans shown below illustrate the layout of four castles in southern Greece and the kingdom of Cyprus in the period of the crusades. The castle of Karytaina (Diagram 1) in the interior of the Peloponnese peninsula was constructed by the Frankish lords of Karytaina in the thirteenth century on a pre-medieval site. By contrast, the castle at Glarentza (Diagram 2) was a new construction intended to protect this port in the north-western Pelop-

onnese. St Hilarion (Diagram 3) in the mountains of northern Cyprus was a Byzantine fortification that was taken over and added to by the Franks. The citadel of Kyrenia (Diagram 4) was another Byzantine fortification constructed to protect this port on the northern coast of the island. For more detailed commentary, see the entry “Castles: Greece and Cyprus” in this volume.

D

Daibert of Pisa (d. 1105)

Bishop (1088–1092) and archbishop of Pisa (1092–1105), leader of the first Pisan crusader fleet, and subsequently Latin patriarch of Jerusalem (1099–1102/1105).

Daibert's origins are unknown, but he was probably of northern Italian descent. He was ordained as a deacon by the excommunicate pro-imperial Archbishop Wezilo of Mainz (1085/1087), for which he later received much criticism from fundamentalist church reformers. Yet soon after his ordination Daibert himself became a reform cleric in the entourage of Countess Matilda of Canossa, who supported his election as bishop of Pisa (1088). During his episcopate, Daibert promoted peace within Pisa and encouraged its leading classes to support the interests and projects of the Reform Papacy, such as campaigns against Muslim Valencia and Tortosa (1092). In April 1092 Pope Urban II made Pisa into an archbishopric with metropolitan rights over the island of Corsica. As one of the closest associates of the pope, Daibert was often in Rome, and in 1095–1096 he accompanied Urban on the journey through France during which the concept of the crusade was developed.

In 1099 Daibert traveled to the East with a large crusader fleet under Pisan command to provide support for the army of the First Crusade, which was thought to have stalled at Antioch (mod. Antakya, Turkey). Daibert himself had been named legate to replace the deceased Adhemar of Le Puy. However, when the fleet arrived in Syria in late September 1099, the crusade had already captured Jerusalem. The completion of the crusade and news of the death of the pope meant that Daibert lost his powers as legate. In late 1099 he went with Bohemund I of Antioch and Baldwin I of Edessa

to complete their pilgrimage to Jerusalem. There Daibert presided over a council that deposed the elected Latin patriarch of Jerusalem, Arnulf of Chocques, and was himself elected in his place (Christmas 1099).

Daibert immediately consecrated four Latin bishops in the patriarchate of Antioch. He also invested Godfrey of Bouillon as ruler of Jerusalem and Bohemund as prince of Antioch. In return, Godfrey ceded to Daibert all the possessions formerly owned by the deceased Greek patriarch. The princes clearly sought legitimacy for their new principalities in Outremer, but Daibert's motivation has been a matter of debate, particularly in the case of the former Byzantine city of Antioch, which the eastern emperor clearly expected to be restored to him under the terms of his agreements with the leaders of the crusade. It seems likely that in the absence of instructions from Rome, Daibert was trying to imitate Urban II's model for the relationship between the Reform Papacy and those princes who supported it, such as the Normans of Sicily and Matilda of Canossa. This entailed a formal sovereignty of the papacy in Rome, along with the princes' obligation to give help and military protection. Daibert's actions probably derived more from his zeal for reform principles than from any personal ambition to become a theocratic ruler in the Holy Land, as has often been wrongly presumed.

Daibert exploited the presence of the Pisan fleet as well as the support of the Normans in Antioch to pursue his ideals. He secured from Godfrey a quarter of the town of Jaffa (mod. Tel Aviv-Yafo, Israel) in February 1100, and at Easter he seems to have obtained a promise of the entire city of Jerusalem once Godfrey conquered two further

cities. It is likely that, in his governance of the church, Daibert tried to impose the communal life on the clerics of the Holy Sepulchre, meeting with heavy resistance, and that he reorganized the Hospital of St. John. Daibert's fortunes turned with the fleet's departure (spring 1100) and the capture of his ally and vassal Bohemund I by the Dānishmenids. When Godfrey died in July 1100, his successor, Baldwin I of Edessa, refused to recognize any dependency from Daibert, which resulted in a worsening in their relations. A new papal legate, Maurice of Porto, mediated a compromise that led to the coronation of Baldwin as king of Jerusalem by Daibert in Bethlehem on Christmas Day 1100.

Conflict soon arose about the use of alms and donations to the Holy Sepulchre. Baldwin's desire to use this money for the payment of soldiers to defend the Holy Land clashed with Daibert's reform principles concerning the freedom of the church and the inalienability of its property. With the help of Arnulf of Chocques, now archdeacon of Jerusalem, Baldwin succeeded in securing a proportion of the alms and then expelled Daibert from Jerusalem. Daibert fled to Antioch but was restored in Jerusalem in October 1102, thanks to the support of the Normans. However, his enemies managed to have him deposed at a synod presided over by another papal legate, Robert of St. Eusebio. The grounds for his removal from office were evidently ill founded, and in the winter of 1104–1105 Daibert sailed to Italy with Bohemund of Antioch to appeal against his removal from office. Pope Paschal II canceled the deposition, but Daibert died at Messina on 15 June 1105 while returning to the Holy Land.

As a close collaborator of Pope Urban II, Daibert was deeply involved in the preparation and realization of the First Crusade. He can therefore be considered a key figure for the understanding of Urban's idea of crusading. Daibert's loyalty to the principles of reform underlay his successes in Pisa as well as his uneven conflict with Baldwin I of Jerusalem and his ultimate failure in the hostile environment of the Holy Land.

Damascus

Damascus (mod. Dimashq, Syria) was the major city of Muslim Syria in the period of the crusades.

The fall of the Umayyad caliphs in 750 left their imperial capital of Damascus as a capital of Greater Syria, a heterogeneous land divided east-west between the desert, the mountains, and the coast, as well as north-south between Egypt and Iraq. Under the Egyptian dynasty of the ʿUṭūnids (869–905), Damascus was briefly the capital of the whole; but under their successors, the Ikhshīdids and the Fāṭimids (935–1070), it was the capital only of the center and the south. In 1078 it became the seat of Tutush I, the Saljūq conqueror of Syria, but on his departure in 1093, the long-standing importance of Aleppo was reaffirmed with the division of his appanage between his two sons, Duqāq at Damascus and Riḍwān at Aleppo. In the period of the crusades, the separate identity of the coast was still more strikingly demonstrated when it fell to the Franks of Outremer, together with the greater part of the mountains. Damascus in the center and Aleppo in the north were then left as the principal cities in Muslim hands.

Damascus is an oasis city, its famous *ghūṭa* (garden) formed by the delta of the Barada River, flowing southeastward into the desert from the mountains of the range called the Anti-Lebanon. Its foundation dates from remote antiquity, its site being good for cultivation and trade across the desert to the northeast, and across the mountains to Beirut and Galilee in the west and south. These factors made Damascus the capital of the Aramaeans in the second millennium B.C., but never thereafter an imperial city like Petra and

still more Palmyra. Nevertheless they created a major city, patronized by its various foreign rulers. Roman rule from Antioch countenanced an extensive, and monumental, reconstruction involving a castle in the northwest corner, city walls, an aqueduct, streets, baths, a theater, a marketplace, and above all a vast new temple, which later became the cathedral of St. John. This patronage was continued by the Umayyads, who converted the cathedral into their great mosque at the beginning of the eighth century.

Otherwise there is little trace of the Umayyad city, either as the capital of the Arab Empire or that of a *jund* (military district). The caliph and his Arab armies were largely resident outside, and it is likely that there was no great change either in the population, its religion, or its language until the subsequent 'Abbāsid period. Damascus was then neglected along with the rest of Syria by the caliphate at Baghdad. When this dark age came to an end in the tenth century, a substantial Muslim population had established itself in the western half of the city, around the mosque and the citadel, with Christians in the northeast and Jews in the southeast. The Muslims had lost any connection with the army and become citizens. As citizens of Damascus, they have played a major role in the modern argument over the nature of the city in Islam: whether it has been simply a place to live in accordance with the prescriptions of the Islamic law or whether it can be said to have had a corporate existence comparable to the cities of antiquity and of medieval Europe. The argument for a place to live has been architectural: the deformation of the grid pattern of antiquity with the encroachment of shops onto the main thoroughfares and private housing onto the back streets, to create quarters in which the population was segregated rather than integrated into a citizen body. The argument for the existence of such a body is derived from the written sources from the tenth century onward. The possibility that some element of the Roman city had survived the Byzantines and the Arabs has been discounted in favor of a renaissance comparable to that of contemporary Italy, beginning in the tenth century with the revival of Mediterranean trade between western Europe and the Islamic east. Certainly the century witnessed the return of Syria to prosperity and saw the appearance of a vigorous city life at Damascus.

The vigor of Damascus was apparent at the time of the Fāṭimid conquest in the 970s, when the Ikhshīdīd regime crumbled, and Damascus was left to face the incomers. Between 971 and 983, first under its *shaykhs* (religious lead-

ers) and then under Qassām, the *ra'īs* (head of the city) and chief of the *aḥdāth* (city militia), it held out with the assistance of its Bedouin allies and refugee Turkish warriors from Iraq. The resistance highlights another aspect of the controversy, as to whether the government of the city was in the hands of its upper classes or in those of lower-class bosses and their gangs. Both were represented here; Qassām was an immigrant villager who had carried sand on his donkey. But it is clear that Damascus was in effect self-governing, even if it required a military champion such as the Turk Aftakīn to defend its independence. Two revolts against the Fāṭimids in 997 and 1021 continued the tradition of popular opposition to imperial rule, and they foreshadowed the final eviction of the Fāṭimids between 1071 and 1075, with the assistance of the Turcoman Atsiz. Self-government was only briefly suppressed by the Saljūq conquest in 1078; it reappeared after the departure of the conqueror Tutush in 1093, leaving his elder son Duqāq in the care of the *atabeg* Ṭuḡhtikīn. After the death of Duqāq in 1105, Ṭuḡhtikīn became the first of the Būrid dynasty, which ruled at Damascus down to its fall to Nūr al-Dīn in 1154. But from 1095 to 1154, the *riyāsa* (office of *ra'īs*) was held by the Banū'l-Ṣūfī, from whose point of view the Turkish princes were protectors rather than rulers of Damascus.

From the Būrid point of view, the Banū'l-Ṣūfī were indispensable. They were notables belonging to the upper classes, but, backed by the *aḥdāth*, they had the support of the populace, the force to impose their authority, and the revenues to maintain it. Fluctuations in their fortunes in conflict with the dynasty were temporary, and ended in their favor. Al-Mufarrij (d. 1136), briefly, and al-Musayyab (exiled 1153) both acted as viziers, the first having been instrumental in the massacre and expulsion of the Ismā'īlī Assassins after the death of Ṭuḡhtikīn in 1128. Only at the end did they quarrel among themselves, lose the support of the people, and fall together with the Būrids before the advance of Nūr al-Dīn. Their successors were the family of the chronicler of Damascus, Ibn al-Qalānisī, whose work is its own testimony to civic consciousness, and whose brother, as the new *ra'īs*, admitted Nūr al-Dīn into the city on behalf of the populace in 1154.

Under the Būrids, the territory dominated by Damascus stretched some 200 kilometers (130 mi.) from Bosra (mod. Busra, Syria) and the Ḥawrān in the south toward Homs (mod. Ḥimṣ, Syria) in the north; to the northeast it reached toward Palmyra. To the west the Golan (Jawlān) Heights and

the Bekaa (Biqā') Valley formed a buffer zone with the kingdom of Jerusalem, as did the hills and plains of northern Transjordan (Jabal 'Ajlūn and the Sawād) to the south; treaties to share the revenues of these territories were concluded in 1108 and 1110. But Jerusalem aspired to control of the Ḥawrān itself, which was held only with difficulty against Frankish invasions conjoined with rebellions by governors at Bosra. To the north, the fall of the city to Nūr al-Dīn was the climax of fifty years of conflict with the rival city of Aleppo, which was centered upon the fluctuating control of Homs and Hama (mod. Ḥamāh, Syria). This conflict was overridden between 1110 and 1115 by common opposition to Mosul, whose atabegs threatened to restore the rule of the Great Saljūqs to Syria. But it became acute after 1128, the year of Ṭughtikīn's death, when the atabeg of Mosul, Zangī, took possession of Aleppo, and attempted to take over Damascus. Threatened by his ambition and that of Jerusalem, the latter marked by the invasions of King Baldwin II in 1126 and 1129, King Fulk in 1134, and the Second Crusade in 1147, the Būrīds were finally forced to call upon Nūr al-Dīn, Zangī's son and successor at Aleppo, for aid. Seven years later Nūr al-Dīn occupied Damascus without difficulty, and the city became his capital, stamped with his monuments: a hospital, a *ḥammām* (bathhouse), and a *madrasa* (religious college) known as the Nūriyya, to house his mausoleum at his death in 1174, with inscriptions to proclaim his virtues as a champion of Islam. After the centuries since the building of the Umayyad Mosque, these were the first new civic buildings to affirm the power and authority of the ruler since the days of the caliphs. The practice was continued by Nūr al-Dīn's successors, and marked the beginning of a new phase in the social, political, and architectural history of the city.

The new regime was made permanent by the still greater imperialism of Saladin, who usurped the empire of Nūr al-Dīn at his death. Although Egypt was Saladin's principal possession, Damascus was central to his operations against the Zangids in Aleppo and Mosul, and against the Franks. By the time of his death and burial at Damascus in 1193, it was in the hands of his son 'Alī as part of the Ayyūbid family empire. In 1196, however, the city passed to Saladin's brother al-'Ādil who left his own son in charge when he took over Egypt in 1200. After the reconstruction of the walls by Nūr al-Dīn, father and son rebuilt the citadel, enlarging it to include a palace as a center of government; the son, 'Īsā, went on to build the 'Ādiliyya *madrasa* to house the tomb

of his father. Fortification continued, notably around 1240, but the defenses were never tested; the last Ayyūbid, al-Nāṣir, abandoned the city to the Mongols in 1260. With the defeat of the Mongols at 'Ayn Jālūt later in the year, Damascus fell into the hands of the Mamlūk sultans of Egypt. Beginning with Sultan Baybars I (1260–1277), these rulers made Damascus the Syrian capital of a very different kind of empire, one centralized on Cairo rather than divided among the princes of a ruling house. The kind of regime installed under Nūr al-Dīn and the Ayyūbids was nevertheless maintained.

The previous dichotomy between the city and the dynasty came to an end as the patronage of the Zangid and Ayyūbid court reached down into society. The office of *ra'īs* dwindled away as the likes of the Banū'l-Qalānīsī were absorbed into the entourage of the prince. Still more important was the attraction of the court for immigrants into the ranks of the army, the secretariat, and the '*ulamā'*' (scholars of the law). It was these more than the princes who were responsible for the pious foundations that became such a feature of the city. Immigration of all kinds was a sign of the prosperity associated with the establishment of the court, and evidenced by the growth of three suburbs beyond the walls. The suburb to the west developed under the patronage of Nūr al-Dīn to cater for the pilgrimage to Mecca. Meanwhile in 1159 he founded the new town of al-Ṣaliḥiyya on the slopes of Mount Kassiun 2 kilometers (1¼ mi.) to the north, as a settlement for refugees from Palestine. Further immigration took place in the second half of the thirteenth century, so that in the mid-fourteenth century the total population was perhaps of the order of sixty to seventy thousand. By then Damascus was ruled by Mamlūk governors appointed from Cairo, who replaced the Ayyūbids as its patrons. In the absence of a sovereign, the Mamlūk aristocracy kept its hold on the city by alliance with the various classes and divisions of the population, rich and poor. Damascus thus continued to form a political entity that maintained its civic pride. Ibn 'Asākir (d. 1176) produced a monumental biographical dictionary of the city, while from the time of Sibṭ Ibn al-Jawzī in the early thirteenth century down to the fifteenth century, a school of history flourished.

Alliances with the Mamlūks, however, could turn to faction-fighting, as in the warfare over the Mamlūk succession between 1382 and 1422. In other ways, the interests of the city did not necessarily coincide with those of its rulers. Without a *ra'īs*, or any force of their own, the notables

enjoyed the peace and prosperity that the Mamlūk Empire promoted, especially in the first half of the fourteenth century. But faced by Mongol invasion in 1299–1300, and again by the conqueror Tīmūr (Tamerlane) in 1400–1401, they preferred to surrender rather than resist, leaving the Mamlūks in the citadel to take the brunt of Tīmūr’s assault. They failed on both occasions, since the city was twice plundered, and the artisans of Damascus deported by Tīmūr to Samarkand in central Asia. The decline in the prosperity of the city from the middle of the fourteenth century, lasting down to the Ottoman conquest in 1517, can only have been accelerated.

Damietta

A port (mod. Dumyât, Egypt) on the eastern portion of the Nile Delta, boasting triple walls and a tower that controlled access to the upper Nile by means of a chain stretched across the river to the city walls.

In 1169 Damietta was besieged by King Amalric of Jerusalem and the Byzantine emperor Manuel I Komnenos during their attempt to seize control of the Fāṭimid realm. Regarded as the “key to all Egypt,” Damietta became the initial target of the Fifth Crusade (1217–1221), although the crusaders’ intentions toward the city appear to have evolved during the course of their campaign. Some seem to have considered it and other potential acquisitions in Egypt as pawns to be traded for territory lost in the kingdom of

Entry of the Crusaders into Damietta, 1249. Illustration from *Le Miroir Historial (The Mirror of History)*, by Vincent de Beauvais (1190–1264). (Archivo Iconografico, S.A./Corbis)

Dandolo, Enrico (d. 1205)

Jerusalem, while others viewed Damietta as a beachhead for the permanent conquest and colonization of Egypt.

After a siege of fifteen months, the crusaders captured the city in November 1219, a plague having ravaged its inhabitants. The port and its spoils, including the towers guarding its walls, were partitioned among the regional groups present in the army, although not without serious dispute. The overlordship of the city sparked a struggle between the papal legate Pelagius, who wanted to reserve it for the titular, albeit absent head of the crusade, Emperor Frederick II, and John of Brienne, who claimed it for the kingdom of Jerusalem. After John was granted temporary custodianship, the city's mosques were converted into churches, including a cathedral for a newly created archbishopric.

The crusaders repeatedly rejected truces proposed by the sultan of Egypt, al-Kāmil, offering the return of Jerusalem and major fortresses west of the Jordan in return for the Christian army's withdrawal, partly due to his exclusion of the castles of Kerak and Montréal, considered essential to hold Jerusalem. However, after the crusader army advanced toward Cairo, it suffered devastating losses and was forced to surrender Damietta to al-Kāmil in 1221.

Perhaps influenced by the advice of John of Brienne, King Louis IX of France also made Damietta the initial goal of his crusade against Egypt (1248–1254), taking it in 1249. After Louis and his army were captured by the Egyptians in the spring of 1250, however, the city was returned to Muslim hands as part of the staggering ransom demanded for their release. It was razed shortly thereafter to prevent the vulnerable port from being used as a foothold for future crusader offensives.

Dandolo, Enrico (d. 1205)

Doge of Venice (1192–1205) and leader of the Venetians during the Fourth Crusade (1202–1204).

Doge of Venice preaching the crusade. (Pixel That)

Enrico was born around 1107, the son of Vitale Dandolo, one of the architects of Venetian political reform, and, like him, frequently served as an ambassador. Enrico was ambassador to Byzantium (1172, 1184), Sicily (1174), Egypt (1175), and Ferrara (1191). He was a judge in the ducal court until 1178, when cortical blindness disqualified him from further service. Despite his loss of sight, he was elected doge in 1192 while in his eighties. During his reign, he enacted sweeping reforms in Venice's legal code and coinage.

Responding to a papal request, in 1198 Dandolo agreed to assist with a new crusade. In 1201 he entered into the Treaty of Venice, promising to lease vessels to the Frankish army and join the crusade with an armada of war galleys. When the Franks were unable to keep their part of the bargain, it was Dandolo who crafted the compromise in which the crusade captured the city of Zara (mod. Zadar, Croatia) on the Dalmatian coast. Later, when the Frankish leaders informed Dandolo that they had previously agreed to travel to Constantinople to support Alexios Angelos, a contender for the Byzantine throne, Dandolo agreed to assist them.

During an attack on the city walls on 17 July 1203, he turned the tide of battle, ordering his own galley to row forward unprotected and plant the standard of St. Mark onshore. After the second conquest of Constantinople, he mediated disputes between the barons in an attempt to forge a stable Latin government. In August 1204 Dandolo purchased the island of Crete, which would remain a Venetian possession for centuries. The next year he personally led a relief force that rescued a Frankish force defeated by the Bulgarian leader, Kalojan (Ioannitsa).

Shortly after returning to Constantinople, Dandolo died of an inguinal hernia, the result of days of rigorous horseback travel (May 1205). He was about ninety-eight years old. His tomb was placed in the gallery of the Church of Hagia Sophia, where it remained until the Ottoman conquest.

Daniel Romanovich (1201–1264)

Prince of Galicia-Volynia from 1205, a key figure in Pope Innocent IV's attempts to bring Russian princes into the crusading movement against the Mongols.

A western Russian principality bordering on Hungary and Poland, Galicia-Volynia was overwhelmed by the Mongols in 1240 along with the rest of Russia, but after their withdrawal in 1242, Daniel was able to attain a semi-independent position. In 1245 Innocent's envoy John of Plano Carpini visited Daniel, proposing that he should enter into union with the Roman church. After Daniel's acceptance, Innocent in 1248 circulated letters to Daniel, his brother, and the Russian prince Alexander Yaroslavich (Nevskii), urging them to explore whether the Mongols were planning attacks on Christianity and to join together against them. In the following years Daniel tried to widen this transconfessional alliance by marrying his daughter to Alexander Nevskii's brother, Grand Prince Andrei.

When Andrei rebelled against the Mongols a year later and was defeated, the alliance began to dissolve. Yet while Alexander Nevskii was forced to accept Mongol rule, Daniel stuck to the alliance, which Innocent IV tried to reinforce in 1253 by offering royal crowns to Daniel and the Lithuanian grand duke, Mindaugas, who at the same time concluded a

marital alliance. When Daniel turned against the Mongols in 1256, however, he received no help, and he was forced to accept Mongol supremacy in 1260.

Dānishmendids

A Turkish dynasty (Turk. Danişmendliler) ruled an emirate in central and northeastern Anatolia in the period from 1071/1085 to 1177/1178. Several among its rulers were involved in conflicts with Byzantines, crusaders, and Franks, as well as the rival dynasty of the Saljūqs of Rūm, who eventually annexed the Dānishmendid territories shortly before the mid-twelfth century.

The Dānishmendids were the first pre-Ottoman Turks to employ on their coinage (with Greek and Arabic inscriptions) the terms *Romania* and *Rūm*—shortly before the Saljūqs of Rūm, with whom they struggled for domination over Anatolia in the twelfth century. Their first two leaders, Malik Dānishmend Ghāzī (c. 1071/1085–1104/1106) and Amīr Ghāzī Gümüştegin (1104/1106–1134), distinguished themselves in protracted wars against Byzantium, the Franks, and the Rupenids of Cilician Armenia, as well as interfering successfully in Saljūq internal affairs.

Cappadocia and north-central Anatolia as far west as Ankara constituted the initial Dānishmendid center of power. Their first emir, Malik Dānishmend Ghāzī (from Persian *danishmand*, "wise, learned man," "scholar"), prevailed in central Anatolia in the period of confusion that followed the death of the founder of the Saljūq sultanate of Rūm, Sulaymān I ibn Quṭlumush (1085/1086). In 1097–1105, Malik Ghāzī formed an alliance of necessity with Qilij Arslān I of Rūm against the various crusading armies that were arriving from the West, and the two allies defeated the crusaders in 1101 at Mersivan and Herakleia (mod. Ereğli). Malik Ghāzī had previously captured Bohemund I, prince of Antioch, imprisoning him at Neocaesarea until he was ran-

Danzig

somed, following negotiations with King Baldwin I of Jerusalem in 1103. In that year Malik Ghāzī took Melitene (mod. Malatya) from its Armenian ruler, Gabriel, although it was captured by Qilij Arslān I following Malik Ghāzī's demise (c. 1106).

A period of further conquests ensued under Amīr Ghāzī Gümüşhtegin (1104/1106–1134). Intervening in the Saljūq struggle for succession, he helped Mas'ūd I seize power in Ikonion (1116); he defeated and held for ransom the Byzantine duke of Pontic Chaldia, Constantine Gabras (c. 1120), and captured Melitene from Mas'ūd's rivals (1124–1125). The conquest of Caesarea in Cappadocia (mod. Kayseri), Ankara, and Kastamoni (mod. Kastamonu) in the Pontos (1126–1127) alarmed the Byzantine emperor, John II Komnenos, who prepared for war. In 1129/1130, Amīr Ghāzī invaded Cilician Armenia, taking several strongholds and defeating Bohemund II of Antioch, who had come to assist the Rupenid prince Leon I. John II Komnenos conducted repeated campaigns against the Dānishmendids in 1130–1135. The Greeks seized Kastamoni (1131–1132), which, however, was lost again in 1133. Amīr Ghāzī was honored by the 'Abbāsīd caliph al-Mustarshid and the Great Saljūq sultan, Sanjar, with the title of *malik* (prince) for his struggles against the infidels, although his premature death bestowed that title on his successor, emir Muḥammad (1134–1142). Muḥammad refortified Caesarea and continued the war against Byzantium, raiding Cilicia and the Sangarios River regions as far as Neocaesarea (mod. Niksar, Turkey) in 1138/1139. John II eventually managed to repel the Dānishmendids from eastern Bithynia and Paphlagonia in 1139–1140, although a section of his army was defeated by Muḥammad's forces in 1141.

Upon Muḥammad's death (1142), the dynasty split into two branches descending from his brothers: one under Yaghibasan at Sebasteia (mod. Sivas) and another under Ayn al-Dawla at Melitene and Elbistan; the latter's son Dhu'l-Nun established himself at Caesarea. Yaghibasan (1142–1164) became an ally of the Byzantine emperor Manuel I Komnenos against the Saljūqs of Rūm, and even issued seals with Greek inscriptions designating him as the latter's servant (Gr. *doulos*). Following Yaghibasan's death and the ensuing decline of his emirate, Qilij Arslān II of Rūm invaded Dānishmendid territory, but he was temporarily halted by the fact that Dhu'l-Nun, ruling at Caesarea, was son-in-law of the powerful Nūr al-Dīn of Damascus, who

threatened to attack the Rūm sultanate. It was only after Nūr al-Dīn's death (1174) that Qilij Arslān II had a free hand to launch his decisive attack on the Dānishmendids, annexing the territories of both branches of the dynasty: first that of Sebasteia in 1174, and then that of Melitene and Elbistan in 1177/1178.

A thirteenth-century Persian chronicler at the court of Ikonion (mod. Konya, Turkey), Ibn al-Bibī, recorded that the surviving Dānishmendids entered Saljūq service.

Danzig

Danzig (mod. Gdańsk, Poland) was a town in Pomerelia on the coast of the Baltic Sea that was under the lordship of the Teutonic Order from 1308 to 1454.

Danzig was already a notable trading center in the tenth century and received town rights in the thirteenth. Its castle was the residence of the dukes of Pomerelia, who encouraged an influx of German merchants. When the ducal dynasty died out in 1294, disputes over the suzerainty of Pomerelia arose among Brandenburg, Bohemia, and Władisław Lokietek, duke of Great Poland and Cuiavia (later king of Poland), in which the latter sought assistance from the Teutonic Order. In 1308 the order relieved Danzig from a siege by Brandenburg forces and took over the cas-

tle and town. By September 1309 the Teutonic Knights had driven the Brandenburg troops from Pomerelia, but refused to hand over the land to Władysław. The conflict with Poland that arose from this conquest was settled only in 1343 by the Peace of Kalisz. A convent was installed in Danzig castle, and the devastated town was rebuilt. Dietrich von Altenburg, grand master of the Teutonic Order, initiated the building of a new castle in 1340.

As the greatest trading port under the order's dominion, Danzig developed into a leading member of the Hanseatic League. Many participants of the order's campaigns landed, lodged, and made financial transactions here. As its economy grew, the citizens demanded greater liberty, and relations between the town and the order worsened. After the battle of Tannenberg, in which the order's forces were decisively defeated by a Polish-Lithuanian alliance (1410), Danzig immediately swore allegiance to Poland, but the town was forced back under the lordship of the Teutonic Order by Grand Master Heinrich von Plauen. Danzig joined the league of the Prussian estates (Ger. *Preußischer Bund*) and finally threw off the order's rule in 1454 during the so-called Thirteen Years' War between the league and the order. The burgesses destroyed the order's castle and allied with the Polish king, whose overlordship allowed them greater independence.

David IV of Georgia (1073–1125)

David IV Aghmashenebeli was king of Georgia (1089–1125), often considered the greatest of Georgian kings.

The son of King Giorgi II, David was raised during one of the darkest chapters of Georgian history. From around 1080, Georgia faced a massive immigration of nomadic Turcoman tribes, which began to settle in the southern Caucasus. Unable to cope with the problem, Giorgi II resigned his throne to his son in 1089. Over the next eleven years, King

David gradually cleared his countryside of enemy elements and began resettlement of devastated regions and revival of cities. Encouraged by the beginning of the crusades to the Holy Land (1096–1099), he ceased payment of the annual tribute to the Great Saljūqs and secured his control over most of eastern Georgia by 1105. He reformed the Georgian Orthodox Church in 1103 and established a new court system (Georg. *saajo kari*) and police apparatus (Georg. *mstovrebi*) that strengthened his royal authority.

Between 1105 and 1120, King David enjoyed a series of brilliant victories as he continued his expansion throughout southern Transcaucasia, capturing the key fortresses of Samshvilde, Dzerna, Rustavi, Kaladzori, Lore, Aragani, and others. In 1118–1120, he launched a major military reform and resettled some 40,000 Qipchaq families from the northern Caucasus steppes to central and eastern Georgia. In turn, the Qipchaqs provided one soldier per family, allowing King David to establish a 40,000-man-strong standing army in addition to his royal troops. This new army was immediately put to use, as the Georgians began to raid Shirwan and Armenia in 1120.

Although information on the relations between King David and the Franks of Outremer is scarce, chronicles do contain some details. *Kartlis Tskhovreba* mentions the visits of envoys of King Baldwin II of Jerusalem to the Georgian court, which indicates a certain degree of cooperation between the two states. Certainly King Baldwin, hard-pressed by the Muslims in Syria and Palestine, sought allies, and the military support of Christian Georgia would have been desirable for him. Georgian success in northeastern Asia Minor also diverted substantial Muslim forces from the hotly contested Holy Land. The presence of several hundred Franks in the Georgian army in 1121 further attests to close links between these Christian states.

The Muslim powers became increasingly concerned about the rapid rise of the Georgian state. In 1121, the Great Saljūq sultan Mahmūd (1118–1131) declared a holy war on Georgia and rallied a large coalition of Muslim powers, led by the Artūqid Najm al-Dīn Īlghazī. The massive Muslim army advanced toward the Georgian borders but, on 12 August 1121, King David, with a considerably smaller force, routed the enemy on the fields of Didgori, achieving what is often considered the greatest military success in Georgian history. This victory signaled the emergence of Georgia as a great military power and shifted the balance in favor of Georgian cultural and political supremacy in northeastern Asia

De expugnatione Lyxbonensi

Minor and Transcaucasia. In 1123–1124, King David's armies expanded the Georgian sphere of influence to the neighboring territories of Armenia, Shirwan, and the northern Caucasus.

A well-educated man, King David traveled with an extensive library that he constantly perused. He preached tolerance and acceptance of other religions. During David's reign, the country enjoyed a revival in agriculture and industry and flourishing of cities. For his contributions, the grateful nation hailed King David as *aghmashenebeli* (reviver, rebuilders) and canonized him as a saint. He was buried in the gates of the Gelati monastery, where his tomb is still revered. King David also earned fame as the writer of *Galobani sinanulisani*, a powerful work of emotional free-verse psalms, which reveal the king's humility and faith. He was succeeded by his son Demetre.

De expugnatione Lyxbonensi

A Latin source for the Second Crusade (1147–1149) written by an eyewitness to the capture of Lisbon in October 1147. Its author has been identified as Raol, an Anglo-Norman priest who wrote about the campaign to a fellow cleric, Osbert of Bawdsey (from Suffolk, England).

Lisbon was captured from the Muslims by King Afonso I Henriques of Portugal, with the assistance of a combined fleet of crusaders drawn from England, Flanders, and the Rhineland, in the course of a campaign conceived as an integral part of the Second Crusade; in the event, the capture of Lisbon was the crusade's only unequivocal success. There is much of interest in Raol's descriptions of the voyage and the siege, including details of siege warfare and diplomacy. Raol later added passages of sophisticated theological commen-

tary, perhaps to explain why the Iberian expedition succeeded while the enterprise in the East failed.

De expugnatione Terrae Sanctae per Saladinum expeditione

See *Libellus de expugnatione Terrae Sanctae per Saladinum expeditione*

Demetrius of Thessalonica (1206–1230)

Ruler of Thessalonica (1207–1224), the only member of a Frankish ruling dynasty in Greece to be named after a Greek saint. Demetrius was the son of Boniface of Montferrat and Maria (Margaret) of Hungary. He succeeded his father as lord of Thessalonica (mod. Thessaloniki, Greece) in September 1207; his mother acted as regent together with Oberto of Biandrate (1207–1211) and Berthold of Katzenelnbogen (after 1211).

Oberto, along with many important Lombard lords, the Templars, and the Venetian interests in the area, sought to replace Demetrius with his half-brother William VI of Montferrat, who, as an adult and a warrior, had the qualities necessary to defend the area from Greek attacks from Epiros. Demetrius and his mother were backed by the Latin emperor, Henry, who marched to Thessalonica in December 1208. On 6 January 1209, Henry crowned Demetrius the first king of Thessalonica, an action that was endorsed by Pope Innocent III in March 1209 when he took the infant under papal protection.

Whatever this action did to remove any threat to the Latin Empire from the house of Montferrat, it did little to save the kingdom of Thessalonica from Greek attack. By 1222 the city was under threat from Theodore Doukas of Epiros. Demetrius went to Italy to seek military support from Pope

Honorius II and William VI of Montferrat, leaving Guy Pallavicini of Boudonitza in charge of the defense of the city. During Demetrius's absence, the situation in Thessalonica became hopeless; his mother returned to Hungary in 1223, and in December 1224 the city surrendered to the Epirotes. The following year, Demetrius and his half-brother mounted a campaign through Thessaly to recapture the city, but the army broke up following the death of William VI, and Demetrius retired to Pavia.

In 1228 Demetrius is recorded in the entourage of Emperor Frederick II at the "Feast of Kings" at Nicosia in Cyprus. He died in 1230, having bequeathed his titular kingship to Frederick II.

Denmark

Medieval Denmark was situated *in ultimis finibus terre* (at the ultimate end of the world), as narratives and papal letters stated repeatedly. Yet Danes had strong ideological and political reasons for participating in the early crusades to Jerusalem, which the Christian West regarded as the center of the world.

Denmark was converted to Christianity in the eleventh century. The founder of the ruling royal family, Harald Bluetooth, had been converted around 965, and he established his rule through Christian missionary wars. King Sven Estridsen (1047–1074/1076) was closely connected to the ecclesiastical reform movement in Cluny and was also a papal vassal; he carried on wars against the heathen Wends along the Baltic shores, having been promised the status of a martyr by the archbishop of Hamburg-Bremen around 1055 if he fell. One of Sven's many sons married into the family of the count of Flanders, another into the ducal family of Burgundy, and close links were established to almost all prominent military leaders of the First Crusade (1096—

1099). Beyond the royal family, there was a strong feeling of the importance of Jerusalem because of the great number of Scandinavians who followed military careers in the Byzantine army and became accustomed to fighting Muslims and making pilgrimages to Jerusalem.

Crusades to the Holy Land (1097–1307)

According to the chronicler Albert of Aachen, King Sven's son Sven led a substantial Danish contingent to Jerusalem in 1097. According to the well-informed Ekkehard of Aura, Sven's expedition was the fulfillment of a plan that had been negotiated by Godfrey of Bouillon with the Danes and the Normans of Sicily. Sven's army was delayed and could not travel with the main armies of the First Crusade (1096–1099). It decided to cross Anatolia on its own, but it was ambushed by the Turks and wiped out to the last man before reaching the Holy Land. The Danish king Erik I Ejegod was probably the first European king to go on a crusade, but he died on Cyprus in 1103 before completing his pilgrimage. Shortly afterward Charles, who was the son of Erik's brother, King Knud the Holy (d. 1086), fought as a crusader alongside the army of Baldwin I of Jerusalem. After Charles succeeded to the county of Flanders (1119), he was even offered the throne of Jerusalem during the captivity of Baldwin II, but declined (1123).

Throughout the twelfth century, Danish nobles and ecclesiastics participated in crusades to the Holy Land, but it is extremely difficult to know how many. After the fall of Jerusalem to Saladin in 1187, a general crusade was preached in Denmark. A company of nobles set out with their following toward Palestine, but arrived to find that an armistice had been negotiated between Richard the Lionheart and Saladin, and they returned to Denmark without having fought. The spiritual importance of their expedition was defended in a short treatise known as *Historia de profectioe Danorum in Hierosolymam*, which shows the importance of crusading ideas in Denmark and which is also the only source for the papal bull *Quum divina* of Pope Gregory VIII. Other narratives relate that other Danish fleets made substantial contributions during the siege of Acre (mod. 'Akko, Israel) in 1188. Participation in crusades to the East continued throughout the following century, and most of the (admittedly few) testaments from nobles had large donations intended to support others on crusade to the Holy Land. The last known will of this kind was made by a noblewoman named Cecilia in 1307.

Denmark

Areas of Danish crusading activity in the Baltic Region

Crusades in the Baltic Region (1108–1346)

The kings of Denmark soon adapted crusading ideas to areas closer to their homeland. The first proof of such an extension of the crusading idea is from no later than 1108: this was the famous Magdeburg charter, in which King Niels (1103–1134) promised to contribute substantially to the wars against the pagan Slavs, because he had been promised the same indulgence as those who went to Jerusalem. From this date, wars against Slavic Wends, Prussians, Finns, and Estonians were conducted as proper crusades under papal authorization that promised indulgences for the participants. If participants fell during such wars, their souls would be in heaven before their blood turned cold on earth, as the two rival Danish kings, Sven III Grathe and Knud V claimed, when they were both fighting the Wends in the city of Dobin in 1147. This “Wendish” crusade was initiated by the cardinal Hubald, who visited Denmark in 1146, and formed part of the several coordinated expeditions that made up the Second Crusade of 1147–1149.

A heavy militarization of Denmark took place during the twelfth century, both as part of a general European development and because of a civil war in 1146–1157, but also to organize society for religious wars. Towns were fortified and town militias established, for example in the frontier city of Schleswig, from which Duke Knud Lavard (d. 1131) raided the Slavic lands of Schleswig and Holstein and in 1127 was installed as king over the Abodrites by Count Lothar of Supplingenburg, the later Holy Roman Emperor. These raids aimed at expanding Christianity and developed into more permanent wars, involving settlement, colonization, and the establishment of ecclesiastical structures. The burgesses of the town of Roskilde formed a military confraternity under the leadership of one Wetheman around 1150, which manned ships and raided among infidels in the Baltic region. Its prime concern was to liberate Christian prisoners and transport them back home.

An important military instrument for the crusades in the Baltic region was the so-called *leding*, the name given in the Scandinavian languages to the general naval conscription organized by the royal government. The whole country was divided into units that each had to provide a ship; each ship unit was subdivided into forty-two further units that were each to provide a warrior to man the ship. There has been much discussion among Danish historians as to whether the *leding* was a very old or a twelfth-century institution, and whether it was solely for coastal defense or also for aggres-

sive warfare. The contemporary Latin translation of the vernacular *leding* was *expeditio*, one of the most common designations for crusade, and the great *Gesta Danorum* by the chronicler Saxo Grammaticus (c. 1200) reserves the Latin term almost solely for twelfth-century warfare, both aggressive and defensive; if the *leding* was not a new institution, it was almost certainly reorganized and redirected toward crusading. A great number of castles were also built during the twelfth and thirteenth centuries. Many were placed on the southern shores of present-day Denmark, from where they could be used as starting points for aggressive expeditions across the sea. Some were built in the newly conquered areas; old Slavic fortifications were either demolished or taken over by the crusaders and refortified.

In 1223 King Valdemar II Sejr (1202–1241) was captured and held prisoner for two years by his enemy, Count Henry of Schwerin, which thus curtailed the expansion in the eastern Baltic region that Valdemar had begun immediately after his coronation. Up to that time, Danish crusade expeditions probably crossed the Baltic Sea almost every year, initially to the southern shore, and later to Livonia, Estonia, and Finland. In 1213 the *Annales Waldemariani* noted the remarkable event that “this year there was no crusade in Denmark” (*expeditio in Dacia quieuit*) [Ellen Jørgensen, ed., *Annales Danici Medii Aevi* (Copenhagen: G.E.C. Gad, 1920), p. 98]. A decisive victory in these continuous crusades was won when King Valdemar I the Great (1157–1182) conquered the great pagan fortress and temple of Arkona on the island of Rügen in 1168. The pagan idol of Svantevit was cut down and burned; churches were built and monasteries established, and the crusades then continued further eastward. From at least 1206, Danish crusades led by the king or by his nephew Count Albert of Orlamünde were directed toward Estonia. In 1219 this led to the decisive conquest of Reval, whose Estonian name, Tallinn, means “the city of the Danes.” Estonia was Christianized, and it was ruled by Denmark until it was sold to the Teutonic Order in 1346.

Danish contacts with the Teutonic Order became closer during this period, especially after the order’s headquarters were moved to Marienburg (mod. Malbork, Poland) in Prussia in 1309. As early as 1241, Danish vassals from Estonia fought alongside the order’s forces in the famous Battle on the Ice at Lake Peipus in 1241 against the prince of Novgorod, Alexander Nevskii. A peace treaty in 1314 between King Erik VI Menved (1286–1319) and the order lasted for nine years only, but in 1327 and again in 1338, the Danish

Inscription on the funeral plaque of Valdemar the Great (d. 1182). (Courtesy Kurt Villads Jensen)

vassals and bishop in Estonia supported the order against accusations of heresy and prevention of the infidels' conversion by its brutality. After the sale of Estonia by Denmark to the Teutonic Order in 1346, the changing power balance among Denmark, the order, Sweden, and Poland led to a number of shifting alliances over the following two centuries, until the order was secularized under the Lutheran Reformation and the last grand master converted and married a Danish princess.

Ideology, Finance, and Military Orders

A crusade ideology was developed in Denmark during the twelfth century. Some churches were built as copies of the Church of the Holy Sepulchre in Jerusalem; wall paintings in churches showed the conquest of Jerusalem by the First Crusade and scenes from later Danish crusades in the Baltic; in hagiography and iconography, St. Knud Lavard was presented as a crusader. Above all, the only substantial historical narrative of the period, Saxo's *Gesta Danorum*, was composed as a vivid description of Danish crusades against the pagan Wends, who were depicted as inherently unjust, almost inhuman, and always aggressive, so that the wars against them might be regarded as just defense.

Participation in crusades was financed by the collection

of money during crusade sermons, by mortgages of land, by loans (often from the Cistercian Order), and from royal and ecclesiastical taxation. From the early thirteenth century, almost regular taxation of church income was imposed by papal decree and continued until the Lutheran Reformation. The income from this tax was received by papal collectors, who were often emissaries from the papal Curia, but from the fourteenth century more usually local ecclesiastics. Often the tax was shared with the king, who received (typically) half of the revenue for his crusades in the Baltic region, while the other half was transferred to the papacy at Rome or Avignon. Normally, the system worked well. In 1351, King Valdemar IV (1340–1375) even proposed a new papal crusading tax on the churches in his realm. In 1455, King Christian I (1448–1481) simply confiscated the money collected to support a crusade to liberate Cyprus, but he claimed that it was necessary for his own crusades and that he would repay it all later. Whether he actually did so has not been recorded.

From the 1160s at the latest, convents of the Order of the Hospital of St. John were founded in Denmark, and King Valdemar I donated to the order a general tax of one penny from every household in Denmark, which is probably the earliest known example of general taxation in favor of a mil-

itary order. This great privilege was reissued by later kings at least ten times until 1527. The order became well established with more houses and was favored by the nobility throughout the Middle Ages. At the time of the Reformation in 1536, their chief priory of Antvorskov was the second largest religious house in Denmark. The extent of the Hospitallers' actual participation in the Danish crusades is difficult to establish because of the paucity of sources, but it was probably substantial. The Danish national flag is a white cross on red and according to a late tradition, it fell down from heaven during a battle at Fellin in Estonia in 1208 (not at Reval in 1219, as has commonly been believed since 1600). It is tempting to see a connection between this flag and the emblem of the Hospitallers.

There is no good evidence that any other of the international orders established themselves in Denmark, except perhaps that during the dissolution of the Order of the Temple in the early fourteenth century the pope also admonished the Danish king to confiscate Templar lands. But we do not have any other indications of Templar possessions in Denmark. It is probable, however, that a local crusading order was established under the patronage of St. Knud Lavard, possibly around 1170 when he was canonized. This order developed into a religious and mercantile confraternity during the thirteenth century.

Crusading in the Later Middle Ages

Danish crusaders took part in the late medieval attempts to reconquer the Holy Land after the loss of Acre to the Muslims in 1291. In 1363–1364 Valdemar IV traveled around in Europe to seek political support for his wars within Denmark, and as a means toward gaining support he both visited the Holy Sepulchre in Jerusalem and, while at Avignon, took the cross and promised to help King Peter I of Cyprus to recover Jerusalem. He never did so, but crusading and crusading vows were obviously an important part of Danish kings' European policy. In 1457, four years after the loss of Constantinople to the Ottoman Turks, Christian I promised to contribute to a common European crusade with 200,000 Danish crusaders if he could first make peace with Sweden and the Teutonic Order. It never happened, but many hundreds of individual Danish crusaders joined subsequent crusading initiatives in 1464 and went through Hungary to Venice and Ancona, but had to return when the planned crusade was abandoned because of the death of Pope Pius II. In 1471, the imperial German diet in Regensburg decided to fol-

low a new, grand crusading plan proposed by Christian I consisting of three coordinated armies: one led by Christian in person with crusaders from Scandinavia, Scotland, and England through Russia; another overland led by the emperor; and a third led by the pope, sailing from the Italian city-states. The unwillingness of the German princes and the death of the pope prevented the fulfillment of this plan. Later Danish kings were assigned an important role in common European crusading plans until the early sixteenth century, for example in 1512, when Emperor Maximilian suggested that King Hans of Denmark (1481–1513) should negotiate a peace between the pope and the king of Aragon as preparation for a new crusade.

The crusade also became an important element in Danish internal policy, in both practice and theory. In 1259 King Christopher I (1252–1259) had imprisoned the archbishop of Lund, and the only bishop who supported his metropolitan, Peder of Roskilde, fled to the most remote part of his diocese, the island of Rügen. From here he led an army together with Prince Jarimar of Rügen via Bornholm to Copenhagen, which was taken in the early summer, and then on to the small town of Næstved, where a royal army was totally defeated in June. The royal soldiers were buried in pits like dogs (this mass grave was excavated in the 1990s), an indication that they were regarded as heretics and that Bishop Peder considered his war a just crusade against a heretic king. In 1294, King Erik VI Menved also imprisoned his archbishop, and Pope Boniface VIII had to threaten the king with a crusade against Denmark before the archbishop was released and a formal legal process begun at the papal court in Rome. Around 1400, Margaret I (d. 1412), queen of the newly founded Kalmar Union, comprising Denmark, Norway, and Sweden, complained to Pope Boniface IX that her realm was being attacked by enemies from all directions and was difficult to defend because of the long coastline. The reply came promptly. In 1401 the pope commissioned the three Nordic archbishops to preach the crusade in Scandinavia and the Baltic region in support of Queen Margaret. All participants were promised the same indulgence as those who went to Jerusalem if they fought or supported fighting against the enemies of the queen, whether heathens or Christians. This bull is a unique example of a pope speaking unreservedly about crusading against Christians.

After the Lutheran Reformation in 1536, the papal indulgence disappeared, but ideas of gaining spiritual rewards by fighting against the Turks or other infidels and the idea of

war as a penitential act persisted unchanged, at least until the late seventeenth century it seems, though this has not been researched at all until very recently. Treatment of the Nordic crusades disappeared from Danish history writing after the middle of the nineteenth century. The last substantial contribution to the topic was Paul Riant in 1865, but his book has been totally ignored by Danish historians. Since the loss of Denmark's German-speaking provinces of Schleswig-Holstein (1864), historians have concentrated almost exclusively on the internal history of present-day Denmark. A strong tradition of social and economic history has meant that scholars have researched the nobility as land-owners, but never as warriors, and any mention of crusading in Danish medieval sources was normally dismissed as a pretext for political aggression and economic exploitation. During the 1990s, a new and strong interest in crusades, military history, and history of mentalities has created new research milieus and led to a number of recent

publications on Denmark and the crusades in both Danish and English.

Despenser's Crusade (1383)

One of the more controversial manifestations of the crusading movement, the crusade of Henry Despenser, bishop of Norwich, was an English military expedition to Flanders in 1383 that was actually part of the Hundred Years' War between England and France. The expedition was dignified as a crusade by the Roman pope, Urban VI, as it was directed against the schismatic French, who recognized the rival Avignonese papacy of Clement VII.

A member of a powerful aristocratic family of the Marches and South Wales, Henry Despenser was consecrated bishop of Norwich in 1369. He first showed martial abilities in the Peasants' Revolt of 1381, when he was responsible for suppressing the rising in East Anglia. Despenser's crusade was a response to a revolt of the citizens of Ghent (mod. Gent, Belgium) in the county of Flanders against their pro-French count, Louis of Male, and their overlord, King Charles VI of France. Money-raising measures attached to this "crusade," notably the sale of indulgences that went with it, attracted critical comment from contemporaries, especially the reformer John Wyclif, but were in all probability no more outrageous than those that accompanied any crusade. This critical reaction was due rather to the prevailing anticlerical atmosphere of the time, and the fact that the expedition proved to be a failure. The campaign arguably made good strategic and economic sense, as it would have reopened England's wool trade with Flanders, as well as exposing France to attack from the north. Despenser's intervention became more urgent when a French army defeated the rebel Flemish townsmen and killed their leader, Philip van Artevelde, at Roosebeke in November 1382. This army was led by Philip, duke of Burgundy, who was married to the count of Flanders's daughter and stood to inherit the county. The French occupied Ypres (mod. Ieper, Belgium) and Bruges (mod. Brugge, Belgium), cutting off the valuable English wool trade from the Flemish cloth-producing towns.

The crusade enjoyed early success; landing at Calais in

May 1383, Despenser captured Dunkirk (mod. Dunkerque, France) and the Flemish coast, and joined forces with the Ghent rebels in early June. They persuaded the bishop to march on Ypres, although his army was ill-equipped to besiege a major town. The siege was abandoned in August, when news arrived that Philip of Burgundy's army was approaching. At this point the men of Ghent abandoned Despenser in disgust. The English had no choice but to retreat to the coast, sacking the port of Gravelines as they did so. Despenser returned from this ignominious failure to face impeachment and the confiscation of his temporalities for two years. He was never as significant a political figure after this event, although he defended King Richard II at the time of Henry IV's usurpation, a stance that earned him two spells of imprisonment under the new regime.

Devastatio Constantinopolitana

A Latin eyewitness account of the Fourth Crusade (1202–1204), spanning the period from the preaching of the cross in France in 1198 to the division of spoils from the conquest of Constantinople (mod. İstanbul, Turkey) in April 1204.

The anonymous author of the *Devastatio Constantinopolitana* was probably a German cleric from the Rhineland; he developed the theme that the crusade was a series of broken contracts, in which the rich and mighty violated their vows, sold out the crusade, and betrayed the crusade rank and file. The work is rich in dates, names, numbers, and similar factual data, which are generally reliable but not invariably so. Its extraordinary perspective and wealth of detail make the *Devastatio* an important source of the second rank.

La Devise des Chemins de Babiloine

La Devise des Chemins de Babiloine was a document put together on the directions of the grand master of the Hospitallers, Fulk of Villaret, most probably in 1306 or 1307. Its compilers surveyed the numbers and effectiveness of the fighting forces available to the Mamlūk sultan in Egypt and Syria and also gave a detailed breakdown of mileages between places throughout the sultanate. It should be considered as a companion document to a Hospitaller memorandum devoted to the advantages and disadvantages of a crusade in the near future. Although the Hospitallers did not actually favor an imminent invasion of either Egypt or Syria, they thoroughly researched the possibility of mounting one.

Devol, Treaty of (1108)

The treaty imposed on Bohemund I, prince of Antioch, after his invasion of Byzantine territory from southern Italy had been defeated by Alexios I Komnenos, the Byzantine emperor. The treaty was concluded at the unidentified site of Devol (Gr. *Deabolis*) in western Macedonia. The fullest account of its terms is given by the chronicler Anna Komnene, Alexios’s daughter.

According to the treaty, Bohemund became the liegeman (Gr. *lizion anthropon*) of the emperor and his son John and promised to provide them with military support when requested. If he should rebel, the treaty stated, Bohemund’s own vassals would be obliged to either stop him or fight against him. He was allowed to retain the principality of Antioch during his lifetime and was granted the county of

Edessa. Both he and his nephew, Tancred, were to give up all other previously Byzantine territory, particularly Cilicia and Laodikeia in Syria. The Greek patriarchate in Antioch was to be restored. In return, Bohemund was granted as yet unconquered lands in Berroia (Aleppo), Cappadocia, and Mesopotamia and an annual payment of 200 pounds of gold, payable in the sound gold coinage of Michael VII (1071–1078).

Tancred, however, who was in effective control of Antioch in Bohemund’s absence, refused to accept the treaty, and its terms were not known in detail in the West. The historian Orderic Vitalis maintained that Bohemund had merely sworn peace and fidelity to Alexios. The treaty was never enforced, though it remained the basis for Byzantine negotiations with the princes of Antioch in the twelfth century.

Dhimma

The Arabic term *ahl al-Dhimma* refers to the “People of the Pact” in the Muslim lands, after an edict allegedly made by the Caliph ‘Umar (634–644). It applied to Christians, Jews, Samaritans, and, rather grudgingly, Sabaeans, or star worshippers, and guaranteed tolerance of their faiths under certain conditions.

In theory, death or enslavement were the only alternatives available to conquered peoples who were neither Muslims nor members of one of the *dhimmi* communities. Dhimmis were granted freedom of worship and were allowed to work and own property. However, there was discrimination in the form of a dress code. Christians, for example, were supposed to wear a blue belt, and so Eastern Christians are sometimes referred to in older literature as “Christians of the Girdle.” Jews and Christians were also banned from carrying weapons or riding horses. Their testimony in a court of law did not have the same weight as that of a Muslim.

Dhimmis might maintain and repair existing churches or synagogues, but they were debarred (in theory at least) from building new ones. The ringing of church bells was banned. Dhimmis had to pay a special poll tax (Arab. *jizya*). However, as non-Muslims they were not subject to the *zakāt*

(charitable levy) and were exempt from the duty of *jihād* (holy war).

Didgori, Battle of (1121)

A conflict between the kingdom of Georgia and a Muslim coalition at Didgori near Tbilisi in August 1121.

The settlement of large numbers of nomadic Turcomans in Transcaucasia in the late eleventh century turned the occupied territory into pastures, undermining local agriculture and economy. In 1089, a bloodless coup d'état forced King Giorgi II of Georgia to abdicate in favor of his sixteen-year-old son David IV. In 1099, taking advantage of the arrival of the First Crusade in Syria and Palestine (1096–1099), David ceased paying annual tribute to the Great Saljūqs and stopped their seasonal migrations into Georgia. He then continued his expansion throughout southern Transcaucasia and Armenia in 1105–1120. In 1118, he also reorganized the Georgian army, resettling some 40,000 families of Qipchaqs from the northern Caucasus, who provided him with a steady supply of manpower.

Concerned about the rapid rise of this Christian state, in 1121 the Great saljūq sultan Maḥmūd formed a coalition of Muslim states and declared a holy war on Georgia. The coalition included the Artūqid ruler Najm al-Dīn Ḫāzān, Toghrul ibn Muḥammad, the Saljūq ruler of Arran (in modern Azerbaijan) and Nakhichevan, Dubays ibn Ṣadaqa from Hilla on the west coast of the Persian Gulf, and Tughān-Arslān, lord of Arzin, Bidlis, and Dvin. Ḫāzān had just celebrated his great victory over the Franks of Antioch at the battle known as the *Ager Sanguinis* (1119) and enjoyed a reputation as an experienced commander. The size of the Muslim army is still a matter of debate, with numbers ranging from a fantastic 600,000 men (as given by Walter the Chancellor and Matthew of Edessa) to 400,000 (Smpadt Sparapet's Chronicle), while estimates of Georgian historians vary between 100,000 and 250,000 men. Although all of these numbers seem to be exaggerated, all sources indicate that Muslims made massive preparations and vastly outnumbered the

Georgians. In midsummer 1121, the Muslim troops advanced along various routes to Georgia and bivouacked on a plain near Didgori, about a day's march from Tbilisi, in early August. The Georgians mustered some 56,000 men, including 500 Alans and 200 Franks from the Holy Land. On 11 August 1121, King David split them into two divisions with a larger force under his personal command and a smaller detachment under his son Demetre hidden in reserve behind the nearby heights with orders to strike the enemy flank at a given signal.

According to David's battle plan, on the morning of 12 August some 200 cavalymen left the Georgian camp and rode over to the enemy side, indicating that they wanted to defect. The Muslim commanders not only allowed them into the camp but also gathered to meet them. At a signal, Georgians attacked them, killing and wounding most of the Muslim leadership. Observing confusion in the enemy camp, King David ordered a general attack on the enemy positions while Prince Demetre charged the enemy flank. With their leadership in disarray, the Muslims in the front line failed to offer any resistance, while those at the rear soon became so disorganized that the entire army eventually fled in disorder. The Georgian troops pursued them for three days, putting many of them to the sword. Following their triumph, Georgian armies were victorious in the neighboring territories of Armenia, Shirwan, and the northern Caucasus, greatly expanding Georgia's sphere of influence. The battle of Didgori entered Georgian national consciousness as "the miraculous victory" (*Georg. dzlevai sakvirveli*) and is one of the apogees of Georgian history.

Dietrich von Altenburg (d. 1341)

Grand master of the Teutonic Order (1335–1341), who organized important crusading campaigns against the Lithuanians.

Dinis of Portugal (1261–1325)

Dietrich was a son of Dietrich II, burgrave of Altenburg in Thuringia. The year of his birth is unknown, although some late sources of debatable value give 1255. Dietrich probably entered the Teutonic Order between 1301 and 1307. He spent his entire career in Prussia, where he acted as commander of different castles before being made marshal in 1331. On 3 May 1335, Dietrich was elected grand master. His time in office witnessed repeated efforts to settle the conflict with Poland that had arisen after the order's conquest of Pomerelia in 1308–1309, but no peace treaty could be concluded during Dietrich's mastership.

Like his predecessors, Dietrich promoted literary activities within the order. He also had numerous castles reinforced. New castles were erected, especially along the Lithuanian border. Under his leadership many noble guests joined the campaigns against the Lithuanians. Dietrich had been in charge of organizing these crusading campaigns since becoming marshal. Now his expansive (although unrealized) designs on Lithuania were reflected by a grant of the Holy Roman Emperor Ludwig IV, who enfeoffed the order with the whole of Lithuania in 1337. Dietrich died on 6 October 1341. He was the first grand master to be buried in the chapel of St. Anne at Marienburg (mod. Malbork, Poland).

Dinis of Portugal (1261–1325)

King of Portugal (1279–1325).

The son of Afonso III of Portugal, Dinis was also grandson of Alfonso X of Castile, son-in-law of Peter III of Aragon, and father-in-law of Ferdinand IV of Castile. His political activity in the wider context of the Iberian Peninsula was to a large extent determined by these family ties, as became evident, for example, when he collaborated with his son-in-law in the war against Granada, and when he was called upon to settle a dispute between the kings of Castile and Aragon in 1304.

As the reconquest of Portugal from the Muslims was over by the reign of Dinis, he worked to secure the defense of his kingdom and to stabilize its borders with the kingdoms of León and Castile. At the same time, he followed a policy of

affirming the Crown's authority by asserting its control over the lay and ecclesiastical powers within the kingdom, in particular by weakening the international links of the military orders in order to create the conditions by which they might be subordinated to the interests of the monarchy. He insisted on the national character of the orders in Portugal, choosing his own trusted followers to lead them and integrating them in the defense of the kingdom. Dinis succeeded in establishing an autonomous branch of the Order of Santiago in Portugal (1290–1297) and also tried to incorporate the estates of the Order of the Temple into the Crown's possessions (1310). In 1319 his ideas received a sympathetic reception from Pope John XXII, who accepted both the establishment of a provincial mastership for the Order of Santiago and the use of the Temple's assets for the creation of a new Portuguese military order. This was the Order of Christ, which was given headquarters in the extreme south of the kingdom. The following year, Dinis received one-tenth of ecclesiastical incomes over a period of three years, to be used for the construction of a fleet to fight the Muslims and defend the Portuguese coast. Dinis was succeeded by his son Afonso IV.

Disease

Participation on a crusade to the eastern Mediterranean or the Baltic region would have exposed individuals from Europe to a range of diseases at a time when the stress of such an expedition should have weakened their resistance.

By comparing mortality in clergy and knights, study of the Fifth Crusade (1217–1221) has suggested that about 19 percent of the wealthier participants died from malnutrition and infectious disease [James M. Powell, *Anatomy of a Crusade, 1213–1221* (Philadelphia: University of Pennsylvania Press, 1986), pp. 169–171]. We might expect the poor to have even higher mortality, since they had little money to pay for med-

Roundworm eggs on the head of a pin. (Clouds Hill Imaging Ltd./Corbis)

ical care when sick or food at times of shortage. There are many examples in the chronicles when large numbers died from starvation, and specific nutritional deficiency syndromes, such as scurvy (vitamin C deficiency) and night blindness (vitamin A deficiency), also occurred. The concentration of large numbers of people in land armies and ships should have encouraged the transmission of infectious diseases. Epidemics frequently took their toll on armies, but often insufficient details of the symptoms were recorded in the chronicles for a modern identification of the cause to be made. Those army camps close to marshes would have been susceptible to mosquito-borne diseases such as malaria, while poor sanitary arrangements would have led to water-borne infections such as dysentery.

In more stable times, the Frankish settlers of Outremer experienced those infectious diseases endemic to the region. Leprosy was one of the most feared diseases in the medieval period. It may cause skin ulceration, blindness, destruction

of the nose, and deformities of the hands and feet. However, the fear was due not only to the physical disfigurement it can cause, but also to the moral and social implications of diagnosis. Many in Europe believed the disease was a punishment for sin, and the sick were often obliged to live separately, typically in foundations known as *leprosaria*. The military Order of St. Lazarus was formed to accommodate soldiers with the disease in the Frankish kingdoms. The best-known Frank with leprosy was Baldwin IV, king of Jerusalem (1174–1185). Parasitic intestinal worms were common in the medieval world, and the Frankish states were no exception. Excavation of the latrines of the Hospital of St. John in Acre (mod. 'Akko, Israel) has shown that members of the order were infested with roundworm, whipworm, and the fish tapeworm. Dental disease was a further condition widespread in the Frankish population. Excavated human remains frequently demonstrate both dental caries and heavy tooth wear. Often these problems were so

St. Benedict healing a leper, Rome, eleventh century.
(Scala/Art Resource)

severe that many of the teeth were lost before death. It is possible that dietary influences were responsible, and the consumption of sweet, sticky foods such as sugarcane, figs, and dates cultivated in the Levant would be expected to encourage dental caries.

It is also important to understand contrasts in health at a population level. The excavated remains of children who died at the crusader-period farming village of Parvum Gerinum (mod. Jezreel, Israel) and the Frankish castle of Vallis Moysis (mod. al Wu'ayra, Jordan) suggest that health in the children was much better in the village than at the castle. Children at the castle were dying very young, and some even suffered from scurvy. Relying on stored foods rather than fresh produce was a major cause of the poor health there, but the crowded conditions and limited sanitation facilities in castles may have contributed to the problem.

The crusades are often blamed for spreading disease in the medieval period. However, most of the diseases described here were already endemic in Europe and the Near and Middle East by that time, and so the disease epidemiology of the region is unlikely to have been significantly affected. It is quite possible, however, that particular epidemics could have been transported by those traveling between Europe and Outremer.

Ḍiyā' al-Dīn al-Maqdisī (1173–1245)

Ḍiyā' al-Dīn Abū 'Abd Allāh Muḥammad ibn 'Abd al-Wāḥid al-Maqdisī was a Muslim historian and religious scholar from a prominent Ḥanbalī family of Damascus. He is often quoted in Arabic sources as an authority on twelfth- and thirteenth-century Palestine and Damascus.

Ḍiyā' al-Dīn's life was typical of men from his milieu. As a youth he studied in his hometown, then traveled to other centers of Islamic learning. Upon returning to Damascus, he established a college for the study of *ḥadīth* (Prophetic tradition) and settled down to teach and compose works on *ḥadīth*, law, and local history. Of special interest are his vivid portrayals of Muslim life under Frankish rule, particularly in the region of Nablus, which were included in his hagiographical dictionary of Palestinian shaykhs, *Karāmāt Mashā'ikh al-Arḍ al-Muqaddasa* (*The Cited Tales of the Wondrous Doings of the Shaykhs of the Holy Land*). Ḍiyā' al-Dīn propagated resistance and *jihād* (holy war) against the Franks in his writings and accompanied military campaigns

of Saladin along with other men of religion who attended to the spiritual needs of the army.

Dobrin, Order of

The Order (or Knights) of Dobrin is the conventional name given in modern scholarship to a small military order established in northeastern Poland with the objective of carrying on the missionary crusade against the heathen Prussians.

The order's relatively short existence means that its history can only be reconstructed in fragmentary fashion from a small number of sources, principally contemporary documents, the chronicle of the abbey of Oliwa, and the later *Chronicon Terre Prussiae* of the early fourteenth-century priest of the Teutonic Order Peter von Dusburg.

Although some scholars date its origins to as early as 1216–1217, most believe that the order was founded in 1228 or shortly before, on the initiative of Christian, bishop of Prussia. It was intended to provide the bishop with an armed force that would support his mission to convert the Prussians. The order is referred to in the Latin sources as *Milites Christi de Prussia* (Knights of Christ in Prussia), *Milites Christi fratres de Dobrin* (Knight Brethren of Christ of Dobrin), or variations of these names.

The first definite information on the new order dates from 4 July 1228, when it received donations from Conrad, duke of Mazovia, and Günther, bishop of Płock. These consisted of lands and rights within a narrow strip of territory in the north of the Polish duchy of Mazovia, stretching from the right bank of the river Vistula as far as the Prussian frontier, and centered on the castle of Dobrin (mod. Dobrzyń, Poland), with some smaller possessions on the left bank of the Vistula. These donations, which were confirmed by Pope Gregory IX on 28 October 1228, formed the order's principal landed pos-

sessions, although it did come to acquire smaller properties outside its theater of war, notably in Pomerania.

The order followed the Templar rule, and its insignia was a red sword and star on a white surcoat. Its initial strength was 15 knight brethren and an unspecified number of soldiers, servants, and other personnel, which may have been as high as 150. It is unlikely that the order ever exceeded this strength. Only a handful of the knight brethren are known by name: they include Bruno, the first master. The majority were Germans by origin, from Pomerania, Mecklenburg, and the region of the Lower Elbe in northwestern Saxony.

For most of its short existence, the order seems to have been occupied in defending Christian Mazovia from the heathen Prussians, rather than being able to take the offensive against them. The decisive downturn in its fortunes occurred in 1233, when Bishop Christian was captured by the Prussians. The Knights of Dobrin were now deprived of their principal protector, and both the papacy and the new bishop of Płock, Peter, favored the bigger and more powerful Teutonic Order as the main military force to carry on the crusade against the Prussians. The Knights of Dobrin were incorporated into the Teutonic Order in 1235. Duke Conrad contested the Teutonic Order's possession of the lands he had originally granted and repossessed the territory of Dobrin after arbitration by the papal legate, William of Modena.

Meanwhile Master Bruno and some dissident knight brethren had refused to accept the incorporation into the Teutonic Order, and had moved some 240 kilometers (150 mi.) further east, settling at the castle of Drohiczyn on the river Bug, which they had been granted, with its surrounding territory, by Duke Conrad (1237). Their new task was to defend this part of Mazovia against the Prussian Iatving tribe and the Orthodox Russians. However, this small force disintegrated in the face of Russian attacks in 1238, in the course of which Bruno was captured. The surviving members returned to their home countries, and the order's few remaining possessions were sold off.

Dominican Order

The beginnings of the Dominican Order (more formally known as the Order of Friars Preachers) belong in the context of the papacy's campaigns against the Albigensian heretics in southwestern France. The founder of the order, Dominic Guzman (canonized in 1234), was a member of one of the papal legations commissioned to preach against Catharism in Languedoc. During this time he gathered a group of preachers around him that formed the basis for the foundation of the Dominican Order in 1217. When the crusade against the Albigensians was put into motion after 1209, Dominic came into close contact with the crusaders and their leaders, who supported his community of friars financially. Although Dominic and his followers did not become crusaders, they were, as part of the papal faction in Languedoc, pursuing the same aim as the crusaders, the eradication of heresy, albeit with different means.

Not long after the formal establishment of the Dominican Order, the friars became involved in the business of the cross and, alongside their Franciscan counterparts, went on to become arguably the most important group of crusade propagandists of the later Middle Ages. As early as the 1220s, the papacy commissioned individual friars to preach the cross, such as, for example, John of Wildeshausen, who later became the fourth master-general of the order, and the canon lawyer Raymond of Penyaforte, who preached the crusade to Mallorca in the late 1220s. From the 1230s onward, Dominican friars were called upon by the papacy to preach in support of most crusades throughout the later Middle Ages. As with the Franciscans, the Europe-wide presence of the order, combined with a strict internal hierarchy, made the Dominicans an ideal agent for spreading and at the same time controlling crusade propaganda. In the

thirteenth century the Dominicans were given special responsibility for recruiting and organizing the crusading support for the Teutonic Order in the Baltic region, an area that they had already singled out for their missionary activities.

Alongside their preaching activities, Dominican friars also collected taxes, vow redemptions, and money donated in support of the crusades. The Dominican Order was evidently seen by the papacy as particularly reliable in matters of crusade propaganda. In contrast to the Franciscan Order, it was not hampered by internal strife (at least not to the same extent), and its leaders took an active personal interest in the crusades. Besides those already mentioned, important members of the order such as Humbert of Romans, Peter the Martyr, Albert the Great, and John of Capistrano all preached the crusade; Catherine of Siena, a Dominican tertiary, was also one of the most fervent promoters of the crusade in the fourteenth century. Of these, Humbert of Romans was probably the most influential crusade propagandist, not only compiling model sermons for the use of other crusade preachers but also writing a popular crusade-preaching handbook, *De predicatione crucis*, which was read throughout the later Middle Ages and was among the earliest books to be published in print in the fifteenth century.

The Dominican Order thus played a vital role in sustaining the crusade movement. The Dominicans' support of the crusades was linked to their status as an exempt order of the church, subject only to the papacy, and corresponded well to their active support of papal government and policy. As theologians, canon lawyers, inquisitors, crusade preachers, and pastoral reformers Dominican friars were closely involved in the implementation of the papacy's strategies of church reform. The Dominican Order actively supported the papacy's crusade policy because that policy was used as an instrument to enforce orthodoxy and strengthen the doctrinal, political, and institutional authority of the church. But like the Franciscans, the Dominicans also embraced the pastoral dimension of crusading, its appeal to Christocentric spirituality, and its strong penitential thrust. The Dominicans also combined their support of the crusades with their interest in missionizing non-Christian peoples and non-Catholic Christians, which is borne out by the early foundation of Dominican priories in the countries along the Baltic coast, in the Balkans, and in Greece, Cyprus, and Palestine in the wake of the crusades.

Domus Godefridi

A Latin term applied by chroniclers to the household of Godfrey of Bouillon during his reign as ruler of Jerusalem (1099–1100) after the First Crusade.

The household comprised officials (knights and clerics) who exercised important administrative, logistic, and military functions in Godfrey's contingent on crusade, and it formed the basis of Godfrey's machinery of government after his election as ruler of Jerusalem in July 1099. It consisted of a core of Lotharingians who had accompanied Godfrey from the West, augmented by Frenchmen, Normans, Germans, and others who had joined him in the course of the crusade. The household played a decisive role in the development of the kingdom of Jerusalem on the death of Godfrey (18 July 1100), when, under the leadership of the Lotharingian nobleman Warner of Grez, its members seized the citadel of Jerusalem and summoned Godfrey's younger brother Baldwin I from Edessa to take up Godfrey's inheritance, in defiance of the claims of the patriarch of Jerusalem, Daibert of Pisa.

Dorpat

Dorpat (mod. Tartu, Estonia) was the third largest town of Livonia and a bishopric in the Middle Ages. After the final capture of the Estonian hill fort there in 1224 by the crusaders, Dorpat developed into an important center, becoming the seat of a bishopric covering all of southern Estonia. Its western half was subject to the secular rule of the Order of the Sword Brethren, and later of the Teutonic Order. The ambitions of the latter were consistently opposed by the bishops.

The town beside the castle is first mentioned in connection with an attack by the Russians of Novgorod in 1262. Soon after that, the settlement received its first stone fortifications. Because of its location on the waterway to Pskov, Dorpat developed into a large commercial center and joined the Hanseatic League. At the beginning of the fifteenth century, Dorpat, together with Riga and Reval (mod. Tallinn, Estonia), gained control over the eastern trade, and Dorpat contained a Russian quarter with its own Russian settlement and church.

At the beginning of the Livonian War, in 1558, the town surrendered to Muscovite forces. The effects of warfare depleted the wealth of the town, which could not be restored during the following centuries of Polish and Swedish overlordship.

Dorylaion, Battle of (1097)

A battle fought between the armies of the First Crusade (1096–1099) and the forces of Qilij Arslān I (1092–1107), Saljūq sultan of Rūm, and his allies on the edge of the Anatolian plateau near the city of Dorylaion (mod. Eskişehir, Turkey).

Qilij Arslān had been absent from his capital of Nicaea (mod. İzmit, Turkey) when the crusader siege began on 14 May 1097, and his attempt to relieve it failed on 16 May. On 19 June Nicaea surrendered, and on 26 June the crusaders began their march across Anatolia.

Neither the reasons for their choice of direction nor the

Battle of Dorylaion. (Pixel That)

precise nature of their route are known. The sources make clear that, as a result of divided command, their army divided into a vanguard, led by Bohemund of Taranto, and a larger main force, with substantial elements straggling between the two. This gave Qilij Arslān the opportunity to destroy the vanguard, which was outnumbered by his army of around 6,000, and thus to defeat the whole crusade in detail. On 1 July the Turks ambushed the vanguard; Bohemund rallied the troops and sent for help, but the cavalry were driven back on their camp in a confused mass of tents, horses, and people. The Turks were drawn into a close-quarter fight lasting from early morning till noon, when the main crusader force routed them. The sources are vague on the precise location but speak of a battle near Dorylaion. The crusaders could hardly have reached that city in the time available, but the encounter was certainly where two valleys meet, and the most likely place is north of modern Bozüyük.

Douglas, James (d. 1330)

A Scottish knight, also known as “the Black Douglas” and “Good Sir James”; leader of the only expedition against the Muslims to have originated in the kingdom of Scotland (1330).

James’s father, Sir William le Hardi, lord of Douglas in Clydesdale, died a prisoner in the Tower of London in 1299; his estates had been confiscated after the English occupation of Scotland by King Edward I in 1296. In 1306 the landless James joined the Scottish resistance under King Robert Bruce, and in the course of the next two decades rose to become one of his leading supporters, with a reputation as a daring and imaginative military leader. Robert knighted James on the eve of the battle of Bannockburn (1314) and bestowed on him extensive lands in southern Scotland, which formed the basis of the future greatness of his descendants.

When King Robert died without having fulfilled his wish of undertaking a crusade against the Muslims (7 June 1329), Douglas was chosen to lead a kind of crusade by proxy, in which he was to carry the king’s embalmed heart in a silver casket around his neck, even though the actual removal of the heart meant that Douglas incurred an automatic excommunication, as such interference with corpses had been condemned by the pope in the bull *Detestandae feritatis abusum* (1299).

The intended goal of Douglas’s expedition is open to dispute: a safe-conduct from King Edward III of England mentions travel to the Holy Land, but Douglas also secured letters of recommendation to King Alfonso XI of Castile. As the last Christian foothold in Outremer had been lost in 1303, any armed invasion of the Holy Land with the forces available to Douglas would have faced insurmountable difficulties. However, it is possible that a campaign against Muslim Granada was envisaged as the military component of the expedition, with the additional aim of a peaceful pilgrimage carrying Bruce’s heart to Jerusalem. Douglas sailed to Flanders in the spring of 1330 with a substantial number of Scottish knights and soldiers, and then on to Seville in Spain. There the Scots joined Alfonso XI in a campaign against the town of Teba, held by Muḥammad IV of Granada. During fighting at the river Guadalteba in August 1330, the Scots initially routed the Moors opposing them, but were then separated from the rest of the Christian army. Although Teba surrendered soon after, the Scottish crusade had suffered heavy losses, including Douglas himself and the knights William Sinclair and Robert and Walter Logan.

The “bludy hert” of Robert Bruce in the coat of arms of the Douglas family. Nineteenth-century sculpture from Newmains Farm, Douglas, Scotland. (Courtesy John Gavin, Douglas Valley Rural Authority Partnership)

The survivors of the expedition brought back the casket containing Robert Bruce’s heart for burial at Melrose Abbey, and Sir James’s bones for burial at Douglas Kirk; the sentence of excommunication was lifted by Pope John XXII in 1331. The symbol of Bruce’s *bludy hert* (bloody heart) was incorporated into the Douglas family coat of arms in memory of James’s deeds.

Drenthe Crusade (1228–1232)

A crusade that formed part of the conflict over episcopal prerogatives and doctrinal observance between the bishopric of Utrecht and the inhabitants of the Drenthe region in the northeastern Netherlands.

After the murder of Bishop Otto II of Utrecht by the Drenthers in 1227, his successor Willibrand of Oldenburg turned the conflict into a crusade for the defense of episcopal rights and authority in Drenthe. Even though no papal bull has survived, the *Gesta episcoporum Traiectensium* clearly states that Willibrand was acting with papal authority; he may have obtained the relevant powers directly from Pope Gregory IX. The justification of the crusade was presumably that the Drenthers had defied their bishop’s authority, which technically made them heretics. Willibrand was reported to have preached the cross in Frisia several times between the late summer of 1228 and winter of 1230–1231. After a number of encounters between the bishop’s forces and the Drenthers, the crusade came to an end in September 1232.

Druzes

Adherents of an offshoot of Ismā‘īlī Shī‘ism originating in Egypt toward the end of the reign of the Fāṭimid Caliph al-Ḥākīm (996–1021), who later found refuge in Syria, particularly in the mountains of Lebanon. The Druzes were erroneously considered by early modern travelers to the Levant to be descendants of the Franks; more specifically, of a French crusader called Comte de Dreux, who is said to have remained in the East. In fact, the Druzes (Arab. *Durūz* or *Drūz*) are so designated after one of their earliest missionar-

ies, Nashtakīn al-Darazī (d. 1019). They themselves prefer to be called *al-Muwahhidūn* or *Ahl al-Tawhīd* (“Unitarians”).

The Druze religion originated with the propagation of ideas concerning the special standing of al-Ḥākīm as *mahdī* (a redeemer of Prophetic descent), or even divinity, whose advent ends the era of the religious law. Al-Ḥākīm’s mysterious disappearance in 1021 was interpreted as a voluntary temporary occultation. Despite fierce opposition from the Fāṭimid religious establishment, the new cult spread in Egyptian and some other Ismāʿīlī communities. Persecution under al-Ḥākīm’s successor, al-Zāhir, led surviving adherents to settle in Syria, mainly in southern Lebanon, where the movement acquired its greatest success and developed its special body of doctrine and sacred scriptures. It was propagated for some twenty years and then became the religion of a closed and highly secretive autonomous community, permitting neither conversion nor apostasy. The Druze religion received its final formulation in the second half of the fifteenth century. Due to its esoteric character, to the hostility of Muslim authors, and perhaps also to its doctrine of *taqiyya* (permission to conceal religious identity in case of danger), it was often misunderstood and misrepresented.

Druze cosmogony, the theory of creation through emanation and a cyclical view of history, derives from Ismāʿīlī Neoplatonism. The Druze scriptures, the *Rasāʾil al-Ḥikma* (*Epistle of Wisdom*), comprise 111 epistles attributed to al-Ḥākīm and a few of his contemporary companions and missionaries. The Qurʾān and Muslim religious law receive allegoric interpretation. The Druzes emphasize God’s unity while claiming that for the benefit of mankind he periodically manifests himself in human form. They regard al-Ḥākīm as having been the locus of the final human incarnation of God and expect him to return and establish the rule of justice and true faith. They believe in predestination and in the transmigration of souls. While the common believers (Arab. *Juḥhāl*, “ignorants”) are committed to a code of ethical-religious principles, only the *ʿuqqāl* (“sages”), who are initiated into the true faith after lengthy preparation, are allowed access to all the religious literature, but they are obliged to live strict religious lives.

According to the Jewish traveler Benjamin of Tudela (c. 1170) and later Druze chroniclers, the Druze Tanūkh clan (of southern Arab descent) defended the Gharb area southeast of Sidon (mod. Saīda, Lebanon) against the Franks. Later sources claim that the other leading Druze family of Mount Lebanon, the Maʿnis, established itself in the Shūf Mountains

around 1120, for the same purpose. Druze leaders were rewarded by the Būrid *atabeg* of Damascus with official recognition of their rule in the region. Having assisted in warding off the Frankish assault on Damascus in 1148, they received grants of land revenue (Arab. *iqṭāʿ*) from Nūr al-Dīn, reconfirmed later by Saladin. But in the thirteenth century the relations between the leading families of the Gharb and Shūf and the Frankish lords of Sidon seem to have been warmer than their relations with the Muslim Ayyūbids and Mamlūks.

Dubois, Pierre (d. after 1321)

A crusade writer and theorist. Pierre Dubois was probably born between 1250 and 1260. He served as a royal official in Normandy under King Philip IV of France (d. 1314) and in Artois at the end of his life. Pierre had no influence on politics, but wrote in a private capacity about war, lawsuits, tournaments, the relations of the king of France with the church, and the crusade, mostly in a utopian vein.

His treatise concerning the recovery of the Holy Land, *De recuperatione Terre Sancte* (c. 1306), was dedicated to King Edward I of England (whom he also served for a time). In it he argued that the first condition for a successful crusade was a reform of the church, stripping it of its temporal powers, and the establishment of peace within Christendom by means of a kind of international court. The crusade was to be financed from the wealth of the Templars and Hospitallers. Pierre also advocated the teaching of Eastern languages, intermarriage with the Saracens, and the creation of schools for girls and women. The Latin Empire of Constantinople was to be reestablished for Charles of Valois, brother of the king of France and titular emperor. Pierre presented a new edition of this treatise to Philip the Fair in 1308. In the same year he wrote a memorandum in which he urged the king of France to found a kingdom in the East (Jerusalem, Cyprus, Egypt) for his son Philip. Pierre probably died after 1321.

Duluk

Duluk (mod. Dülük, Turkey) was a small town in northern Syria, the seat of a Latin archbishopric during the existence of the county of Edessa.

Dolichè or Tulupe, as it was known in ancient times, had once been of regional importance but had been superseded by Aintab (mod. Gaziantep, Turkey) and, during the Frankish period, by Turbessel (mod. Tellbaşar Kalesi, Turkey), which were more accessible and better-watered sites. At the foot of the mountains, near the route north to Marash (mod. Kahramanmaraş, Turkey), Duluk was in the territory controlled by the Armenian lord Kogh Vasil at the time of the First Crusade (1096–1099). It was in Frankish hands after 1116, although possibly earlier; Count Baldwin II of Edessa was briefly besieged there by Tancred in 1108. One Mahuis, count of Duluk, was at the battle of Azaz (1125); a Latin archbishop, Franco, is attested in 1134 and 1141 but was resident at Turbessel.

After the capture of Count Joscelin II of Edessa (1150), Duluk was sold by his wife, Beatrix, to the Byzantine emperor. However, it was seized in the summer of 1151 by Mas‘ūd I, Saljūq sultan of Rūm, and in 1155 by Nūr al-Dīn.

Duqāq (d. 1104)

King (Arab. *malik*) of Damascus (mod. Dimashq, Syria) and southern Syria (1095–1104), with the title Shams al-Mulūk (Sun of the Kings).

Duqāq was born around 1083, one of five sons of Tutush I ibn Alp Arslān, the Saljūq ruler of Syria. During Tutush’s attempt to gain the Saljūq sultanate, he appointed Ṭughtakin in 1093 as *atabeg* for Duqāq and married him to Duqāq’s mother, Şafwat. When Tutush was killed in battle in Persia in 1095, a struggle for power over Syria broke out between Duqāq in Damascus and his elder brother Riḍwān in Aleppo, aided by their respective *atabegs*. This civil war was still going on when the armies of the First Crusade (1096–1099) arrived in the Levant.

At this time Duqāq’s realm was a large one, extending from the Jaulan (Golan) in the south to the city of Homs in the north. As well as his capital of Damascus, Duqāq ruled the towns of Jaffa (mod. Tel Aviv-Yafo, Israel) and Haifa (mod. Hefa, Israel) on the Mediterranean coast, which he had inherited from his father. When the crusaders started to besiege Antioch on the Orontes (mod. Antakya, Turkey) in October 1097, Yāghisiyān, who governed the city for Duqāq’s brother Riḍwān, sent to Damascus for help. Duqāq and his *atabeg* did not respond at once, but joined the army being assembled by Karbughā, lord of Mosul. The joint Muslim army arrived at Antioch on 5 June 1098, two days after the city’s capture by the crusaders, and was eventually defeated in battle outside the walls on 28 June 1098.

After the fall of Jerusalem to the crusaders (15 July 1099), the inhabitants of Damascus sent an embassy to Baghdad urging the Great Saljūq sultan and the ‘Abbāsīd caliph to send help. By contrast, Duqāq did not share the concerns of his subjects, and in 1100 he took his army to secure his dominions in Mesopotamia from the Franks of Edessa, who threatened the strategic route to Iraq, Persia, and central Asia, where Turcomans were recruited for the Saljūq armies. One of Duqāq’s few contributions to the struggle against the Franks took place near Beirut in 1100, when he attempted

Durben, Battle of (1260)

to intercept a limited force led by Count Baldwin I of Edessa, who was coming south to take up the throne of Jerusalem. However, Baldwin was warned of the attack by the Arab ruler of Tripoli (mod. Trâblous, Lebanon) and managed to reach Jerusalem with minor casualties.

In 1101 Baldwin I seized the coastal town of Haifa from Duqâq's control. Duqâq, however, refrained from serious hostilities and turned down an Egyptian offer for an alliance against the Franks of Jerusalem. In the same year Duqâq and his atabeg responded to a plea from Tripoli to save the port of Jabala from the Franks and managed to take it over, aiming to guard the Damascene commerce that passed through Tripolitan territory.

In June 1104 Duqâq died suddenly while still in his early twenties. According to Ibn 'Asâkir (d. 1176), he was poisoned by his mother, in conspiracy with the ambitious ʿUḡhtigin, who became regent for Duqâq's infant son Tutush II.

Durazzo

See Dyrrachion

Durben, Battle of (1260)

A defeat of the army of the Teutonic Order by pagan Samogitians near Durben (mod. Durbe, Latvia) on 13 July 1260. It triggered revolts among peoples conquered by the Teutonic Order and weakened the crusades in the Baltic area.

At this time the Teutonic Order had conquered Curonia and was expanding into Samogitia. In 1260 Samogitians besieged the fort of Georgenburg (mod. Jurbarkas, Lithuania), newly built by the Livonian and Prussian branches of the Teutonic Order in the area by the Nemunas River called Karšuva (Karsowe). To lift the siege, Teutonic Knights from both branches led out an army of Prussians, Estonians, Curonians, Danes from Reval (mod. Tallinn, Estonia), and thirty knight brethren from Germany. As they marched toward Georgenburg, news came that the Samogitians were

devastating Curonia. The order's army hurried there and met the pagans by the Durben River, near Lake Durben.

According to the chronicle of Peter von Dusburg, the Curonians in the order's host had asked if their wives and children who had been seized by the Samogitians would be restored in case of victory. Others in the host objected, wanting these captives as war booty. During the battle, the angry Curonians defected, attacking the order's troops from the rear. Surrounded, the Christians panicked and were slaughtered. Casualties included Burkhard von Hornhausen, Livonian master of the order, as well as 150 Teutonic Knights and large numbers of allied troops.

As a result, the Teutonic Order withdrew from the forts of Durben and Georgenburg, was obliged to fight revolts by the Curonians and the Prussians (1260–1274), and lost King Mindaugas of Lithuania as an ally.

Dutch Literature

The corpus of Middle Dutch literature contains many texts related to the history of the crusades. The precise relationship takes diverse forms, ranging from the use of crusade motifs in stories otherwise unconnected with the crusades to those texts (on which this survey concentrates) in which the crusades form the central theme. Works of the latter type can in most cases be connected with crusade historiography in Latin or with the corpus of Old French crusade epics and romances. The texts offer a variety of perspectives on the historical crusades, but they are always revealing in terms of the contemporary public perception of crusading.

Die scone historie hertoghe Godevaerts van Boloen is a late fifteenth-century prose text connected with Latin crusade historiography. It survives only in printed form (Gouda, c. 1486), as an exquisite folio incunabulum of 100 leaves with 22 different woodcuts. Its immediate source is a Latin printed text, the *Historia de itineris contra Turcos* (Cologne, c. 1472), which derives primarily from the histories of the First Crusade by Robert of Rheims and Fulcher of Chartres.

The parts taken from Robert's *Historia Hierosolymitana* are to a large extent identical with his text as known from the manuscripts, but that taken from Fulcher's chronicle deviates from the known tradition. In the Cologne printed version, a letter from the Byzantine emperor Alexios I to Robert II of Flanders was added to the chronicle materials; in the Middle Dutch *Scone historie* this letter was omitted, while the prologue and other preliminary material known from the manuscript tradition and the Cologne print were replaced by an original prologue in Middle Dutch, based on that in the *De coniuratione Catilinae* by the Roman historian Sallust. This substitution clearly reveals the historiographical intentions of the anonymous Dutch adaptor, who shows himself to be a very accurate translator (although he changed the book's structure with respect to books and chapters). Two copies of the *Scone historie* are known: Utrecht, Universiteitsbibliotheek, Thomaasse, rariora kast I, 31–2, and Leiden, Universiteitsbibliotheek, Thyss.1993). The text seems to mark the beginning of "scholarly" crusade historiography in the Dutch-language area.

Godevaerts kintshede and the *Roman van Antiochië* are Middle Dutch adaptations in rhymed couplets of the Old French *Enfances Godefroi* and *Chanson d'Antioche*, made by an anonymous Flemish poet; his patron probably belonged to the circle of one of the dukes of Brabant, either John II (d. 1312) or John III (d. 1355), whose ancestor Henry I (d. 1235) was involved as a patron in the production of the Old French Crusade Cycle. Fragments of a single manuscript survive in the form of eight strips of parchment, preserved in four libraries (MSS Wien, Österreichische Nationalbibliothek, 15393; Gent, Universiteitsbibliotheek, 1647; Brussel, Koninklijke Bibliotheek, IV 209,10; and Leuven, Private Collection of J. Deschamps). This manuscript stems from the first half of the fourteenth century; the translation is probably from the same period. The surviving parts of *Godevaerts kintshede* (60, partially damaged lines) belong to the episode in which Godfrey of Bouillon organizes a show of arms to deceive the Muslim king Cornumarant, who has travelled incognito to the West to gauge the strength of the Christians (*Enfances Godefroi*, lines 1585–2088). Of the *Roman van Antiochië*, 175 (partially damaged) lines survive, revealing similarities with and deviations from the *Chanson d'Antioche*. Clearly recognizable is the episode in which the Saracen defenders of Antioch make a sortie from the Iron Gate, as well as a passus from the episode known as the "Embassy of Sansadoine" (*Chanson d'Antioche*, lines 3127–3316 and 4454–4513). The

Middle Dutch text also preserves two battle scenes, with a certain "Reymbaut" and Bohemund I and Tancred of Antioch as protagonists. These two scenes indicate either that the Old French source was adapted or that an idiosyncratic version of the source was translated. The fact that the fragments of both branches belong to the same manuscript is a strong indication that the complete Old French Crusade Cycle was translated into Middle Dutch.

Boudewijn van Seborch is a translation of the Old French crusade romance *Baudouin de Sebourc*, of which 430 (partially damaged) lines survive on four strips of parchment, belonging to two different manuscripts (MS München, Universitätsbibliothek, 2° Cod. 756, and Amsterdam, Universiteitsbibliotheek, E q 73a). The rather free translation was made by an anonymous Fleming in the second half of the fourteenth century, perhaps commissioned by someone belonging to the courtly circles of Hainaut-Holland (the Old French source also has a Hainaut background). The surviving lines tell of the departure of Arnoud, king of Nijmegen, on a rescue mission to Outremer (*Baudouin de Sebourc*, lines 112–259) and of the siege by his son Esmereit of the city of Nijmegen, previously captured by the traitor Gaufrout (*Baudouin de Sebourc*, lines 3447–3560). The story is loosely connected with the history of the crusades: this text—as well as the three next described—belongs to the complex sometimes known as the "Second Crusade Cycle."

The *Roman van Saladin* is a translation of the lost Old French verse romance known as the proto-*Saladin*. Only 160 (partially damaged) lines survive on two strips belonging to the same parchment bifolium (MS Praha, Univerzita Karlová, no shelfmark). The translation, by an anonymous West Flemish poet, dates from the second half of the fourteenth century. The remnants tell of combat scenes in which Gheeraert, son of Hughe van Tabarien, fights the Saracen Solimant, and Gheeraert and his brother Seghin fight the Saracen King Clariant. The importance of the fragments is in their age: they constitute the oldest remnants of the Western tradition of Saladin romances, which include two Old French prose versions of the Saladin and the Middle Dutch *Dystorie van Saladine*, all from the fifteenth century. *Dystorie van Saladine* is a verse adaptation of the *Roman van Saladin*, in 211 eight-line stanzas and one stanza of four lines (1,692 lines). The text is only known in printed form (Oude-naarde, c. 1480–1483, printer Arend de Keyser), of which two copies are extant (Washington, Library of Congress, Inc.1483 H 5 and Haarlem, City Library, 56 D 15). The

rhetorician Andries vander Meulen (from Oudenaarde) is sometimes held to be the author, but there is no conclusive evidence for this attribution. Comparison of the printed text with the fragments of the *Roman van Saladin* reveals the correspondences, but shows also that the stanzaic, crossed rhyme form of *Dystorie* undoubtedly caused an abridgement and deviations in content (lines 1273–1304 correspond to the surviving 160 lines of the *Roman van Saladin*). Further comparison with the two extant fifteenth-century Old French prose versions strengthens the hypothesis that the Middle Dutch printed version retained most of the plot of the lost Old French proto-*Saladin* intact. The story tells of Saladin's conquest of Jerusalem, in which he captures Hughe van Tabarien. Hughe is forced to reveal the secrets and values of Christian chivalry to Saladin. Together with Hughe and Jan van Ponthieu (who appears to be a relative), Saladin travels incognito to Europe, to gauge the strength of the Christians. In Outremer the Christians manage to defeat Saladin, who baptizes himself shortly before his death. A continuation of the *Roman van Saladin* is given in the *Roman van Cassant*, which survives as 65 (partly damaged) lines on one strip of parchment (MS Gent, Universiteitsbibliotheek, 1732). The story, which has Cassant, son of Andries Chavengy, and Herminette van Ermenyen (Armenia) as protagonists, is announced at the end of the Old French *Bâtard de Bouillon*, and it is likely that the Middle Dutch text was a translation of a lost Old French source.

The *Ridder metter Swane* is a Middle Dutch version of the well-known Swan Knight legend. This prose text (with rhymed monologues and dialogues) survives only in printed form. The oldest known print version stems from the early sixteenth century, but it was reprinted into the twentieth century (more than twenty-five editions are known). This version is remotely connected with that part of the Crusade Cycle that tells of the legendary ancestry of Godfrey of Bouillon. The printing history indicates that only the more fantastic parts of the story succeeded in retaining the attention of the literary audience.

Shortly before 1299 the Brabant poet Hein van Aken completed an adaptation of the Old French *Ordène de Chévalerie*, entitled *Vanden coninc Saladijn ende van Hughen van Tabaryen* (35 eight-line stanzas in crossed rhyme). Not a crusade romance in the strict sense, it uses an episode from crusade history as a backdrop for a “narrative treatise” on the values and rituals pertaining to Christian chivalry. Saladin has captured Hughe van Tabaryen and presses to be ini-

tiated in Christian chivalry. At first Hughe refuses because Saladin is not a Christian, but then agrees to guide Saladin through the whole ceremony, explaining its symbolic details, although he does refuse to dub Saladin a knight.

In contrast to the works described so far, *Seghelijn van Jherusalem* is an original Middle Dutch chivalric romance (Flanders, c. 1350), in which borrowings from a great number of hagiographies and romances are discernible. This work gives the pseudobiography of Seghelijn, son of the Muslim king Prides of Jerusalem and his crypto-Christian wife Braffeleur. Seghelijn's vicissitudes are connected to the story of St. Helena, mother of the fourth-century emperor Constantine, who was believed to have discovered the relic of the True Cross. The romance is highly fictional (Seghelijn becomes emperor of Rome and ends up as Pope Benedict I) and does not focus on the historical crusades. It is nevertheless important because it debates prominent elements of medieval crusade ideology and criticism in a narrative form. The poet argues that forced conversion is acceptable and uses the sins of the Christians as an explanation for their defeats at the hands of the Muslims (as is often done in Latin crusade chronicles). The character of Seghelijn is portrayed as a crusader par excellence, a *miles Christi* (“knight of Christ”), clad in the armor of a Templar, born with a cross between his shoulders and on his chest. The romance clearly refers to contemporary justifications of the crusades: the motifs of *haereditas Christi* (Jerusalem as the inheritance of Christ) and of the *auctoritas principis* (justification by the highest authority, the pope as vicar of God) appear, both used in the Latin tradition to define a crusade as a just war. As a narrative “treatise” on crusade theory, the romance was probably intended to propagate new crusade initiatives in a period when the Frankish states in Outremer were lost, and Islam was threatening Europe.

References to the crusades can also be found in many Middle Dutch historiographical texts, such as the *Spiegel historial* (1283–1288), a world chronicle by the Flemish poet Jacob van Maerlant (c. 1230–c. 1290), who, following his source (the *Speculum historiale* of Vincent de Beauvais, with additions from Albert von Aachen's *Historia Hierosolymitana expeditionis*), offers an elaborated overview of the First Crusade. Shorter references are found in *Alexanders geesten* (c. 1260), an adaptation of Gautier de Chatillon's *Alexandris*, also by Jacob van Maerlant, which makes reference, inter alia, to the siege of Antioch in 1097–1098 and the defense of Tyre by Conrad of Montferrat in 1187. Assuming

that such information belongs to the common knowledge of his audience, Maerlant uses the references as geographical markers in a story set in the times of Alexander the Great.

Dyrrachion

Dyrrachion (mod. Durrës, Albania), also known as Dyr-rachium (Lat.) or Durazzo (It.), was a fortified city and Byzantine naval base on the eastern coast of the Adriatic Sea, which featured frequently as both a transit point and a target for crusaders from the West.

Dyrrachion was the center of an administrative district from the ninth century and the seat of a metropolitan of the Orthodox Church. One of the two western termini of the road known as the Via Egnatia, Dyrrachion maintained Byzantine power in the southern Balkans, especially over Diokleia (Montenegro), and provided communications with Byzantine possessions and forces in southern Italy.

The city was frequently fought over; it changed hands thirty-two times in the period 992–1392. It was attacked by Normans under the command of Robert Guiscard and Bohemund of Taranto in 1081. Although their naval force was defeated by the Venetians (then on friendly terms with Byzantium), they held the city until 1085. In 1185, it was again subject to Norman attack. After the Fourth Crusade (1202–1204), Dyrrachion was granted to Venice (1205), but it was recaptured by Greek forces under the despot of Epiros, Michael Angelos, around 1213.

Its history in the mid-thirteenth century is confused; the surrounding region was ruled for a time by the Bulgar tsar, John Asen II (1218–1241). In 1272, the king of Naples, Charles I of Anjou, claiming his rights over the Latin Empire of Constantinople, captured Dyrrachion, whose walls had been gravely damaged by a serious earthquake in 1267. The city had had a thriving mercantile life, exporting salt, wood, and timber and supporting a cosmopolitan population, before the earthquake. The earthquake caused the city, and the coastal plain on which it stood, to become a malarial swamp, rendering them uninhabitable. Nevertheless, the city passed back and forth between Angevins, Byzantines, and Serbs until it was taken around 1376 by Louis of Evreux with the aid of Navarrese mercenaries. In 1392, George Thopia, a local Albanian ruler who had gained control, surrendered it to the Venetians, who held it until its fall to the Ottomans in 1501.

E

Eastern Churches

In the context of the crusades, the term *Eastern* (or *Oriental*) churches refers to those Christian communities that were separate from both the Latin (Roman Catholic) Church of the West and the Greek Orthodox Church of the Byzantine Empire. They can be understood as belonging historically to three groups or families.

The Church of the East has been known at various stages in its history as the Nestorian, Chaldaean, or Assyrian Church. Its adherents were found principally in Mesopotamia, Iraq, and Persia, although the church undertook missions as far as Central Asia and China. It had relatively few communities in the Frankish states of Outremer. The Church of the East today is not in full communion with any other church.

The largest group of Eastern churches are often referred to collectively as monophysite churches, from the Greek words for "one nature," or as non-Chalcedonian churches. They recognized the three church councils of Nicaea, Constantinople, and Ephesus, but rejected the christological definition of the Council of Chalcedon (451), which asserted two natures, divine and human, in Christ. These churches are now in full communion with each other, though they have very different traditions and rites. The Coptic Orthodox Church was mainly confined to Egypt, where it had a substantial number of adherents under Fāṭimid, Ayyūbid and Mamlūk rule. Its patriarch resided at Alexandria and later in Cairo. In the medieval period, the churches of Ethiopia and Nubia were also under the authority of the Coptic patriarchate of Alexandria. The Syrian Orthodox Church was represented in Syria, Upper Mesopotamia,

and eastern Anatolia, with smaller communities elsewhere; under Frankish rule in the Levant, its adherents were found especially in the county of Edessa, but also in the principality of Antioch and the kingdom of Jerusalem. The church was mainly organized by Jacob Baradai in the sixth century, and thus has also been known as the Jacobite Church; its preferred modern designation is the Syriac Orthodox Church. Its patriarch, originally based at Antioch, has changed his place of residence several times, and is now resident in Damascus. The Armenian Orthodox (or Apostolic) Church is the national church of the Armenians, who were the first people to adopt Christianity as a state religion. In the Middle Ages it was organized under four main centres: the catholicosate of Echmiadzin in Greater Armenia (302), the patriarchate of Jerusalem (1311), the catholicosate of Cilicia (1441), and the patriarchate of Constantinople (1461).

The third family of churches comprises those that recognize the Council of Chalcedon. In the period of the crusades, these were principally the Maronite Church, which originated in the struggle concerning the monothelite doctrine, and the Georgian Orthodox Church, which around 600 separated from the Armenian church and accepted the Council of Chalcedon.

From the time of the Frankish conquest of Outremer, the Latin Church made efforts to achieve union with the Eastern churches, although the only successful union in the medieval period was with the Maronite Church. Unions with other Eastern churches occurred much later (between the seventeenth and nineteenth centuries). In all these cases only parts of the respective church entered into union

with Rome, resulting in schisms, so that today there are various Eastern Rite Catholic churches in existence alongside the Eastern churches. Since the nineteenth century, Protestant branches of some of the Eastern Orthodox churches have come into existence as a result of missionary activity, but their numbers are very small.

Economy of the Levant

Research on the economy of the Frankish Levant from 1100 to 1291 is still largely dominated by a Eurocentric approach. This approach is rooted in and has been enhanced by the biased nature of the available documentation, which overwhelmingly illustrates Western commercial expansion, east-west long-distance exchanges across the Mediterranean, and the activity of Western merchants and carriers. Certainly these subjects are of great importance. Yet a more balanced perspective requires due attention to the agrarian and industrial sectors in the economy of the Frankish Levant, local and regional trade, and the economic function of Frankish settlers, all of which are often underrated or largely overlooked. The same holds true of the interaction between the Frankish states and the economies of other regions of the eastern Mediterranean and those of the Near and Middle East.

The establishment of the Frankish states created new geopolitical conditions, which were of paramount importance for the economic evolution of the Levant in the twelfth and thirteenth centuries. Frankish rule had an impact on all sectors of that economy, whether direct or indirect, or short or long term. It ensured Latin Christians more stable and secure conditions in the region than in the precrusading era, and it prompted a fairly large number of them to settle in the Frankish states, whether for a number of years or permanently. Except for Jerusalem before 1187, the largest concentrations of Latin settlers occurred along the Levantine seaboard in Antioch (mod. Antakya, Turkey), Tripoli (mod. Trâblous, Lebanon), Tyre (mod. Soûr, Lebanon), and Acre (mod. 'Akko, Israel), the major cities and markets of the Frankish Levant. Frankish rule also ensured safe maritime

havens, relay stations, and logistical support for Latins engaging in trade and transportation. It stimulated thereby the activity of merchants and carriers, both settlers and those based in Western cities. The citizens and subjects of Genoa, Venice, Pisa, and, to a lesser degree, Marseilles and other Provençal cities enjoyed particularly favorable conditions in that respect. The extensive privileges obtained by their respective governments in various Levantine ports enabled the creation of “national” quarters, which in some cases became virtual free-trade outposts and political enclaves.

The function of the Latin settlers, who are clearly underrepresented in the extant documentation, was crucial for the operation of the economy of the Frankish Levant. They had direct and permanent access to rural producers and to manufacturing workshops in the region and could monitor the movement of commodities, means of transportation, monies, and people all the year through. On their own or in conjunction with indigenous or traveling merchants and carriers, they engaged in short-haul and medium-range trade and transportation along the Levantine seaboard, between the cities under Frankish rule and, especially in the thirteenth century, between these cities and neighboring Muslim territories. Their function as middlemen, agents, money-changers, and carriers was indispensable for traveling merchants and transporters arriving with the seasonal maritime convoys from the West or with caravans from the large inland centers of Aleppo and Damascus.

The Evolution of the Local Economy

The establishment of Frankish rule and the changes in the lordship and tenure of land that followed did not alter the basic structure and operation of the rural economy of the Frankish Levant, which displayed a high degree of continuity. To a large extent the well-developed agrarian sector enabled self-supply in foodstuffs until the Frankish defeat at the battle of Hattin in 1187. In the following period, the territories under Frankish rule were largely reduced to the coastal fringe. As a result their provisioning with foodstuffs, especially in grain, depended heavily on imports from neighboring Muslim territories and especially from countries overseas. The reliance on Western imports further increased in the last three decades of Frankish rule, when the Mamlūk rulers of Egypt inflicted heavy damage upon the Frankish countryside. The Frankish Levant also produced industrial crops. Sugarcane was cultivated in large areas extending from Antioch in the north to Caesarea (mod. Har Qesari,

Israel) in the south, as well as inland along the shores of Lake Tiberias (Sea of Galilee) and in the Jordan Valley. Cotton cultivation and the production of raw silk were practiced in extensive areas of the Frankish states. Some dyestuffs utilized in the textile industries were indigenous. Indigo was cultivated in the Jordan Valley, yet was presumably also imported from Iraq and Egypt. Woad was grown in the area of Damascus and the Orontes Valley and also grew wild in the kingdom of Jerusalem.

The rural sector provided the bulk of revenues of the military orders and of the Frankish lords and enabled the latter to sustain their lifestyle. Not surprisingly, therefore, landlords sought ways to increase their income. In the thirteenth century, the growing Western demand for sugar and textile fibers stimulated investments of money and labor in the expansion of sugarcane and cotton cultivation, as well as in sericulture. Written and archaeological evidence points to the maintenance, repair, and building of water reservoirs and distribution channels for irrigation and for the operation of presses and sugar mills. Indigenous artisans continued to ensure the activity of high-quality manufacture in the Frankish period. Tripoli and Antioch were famous for their luxury silks. Wool was used for the production of textiles, and mixed with camel hair to produce camlets, for which Tripoli was renowned. Syrian weavers in Tyre produced excellent cotton fabrics. High-grade soda ashes obtained from plants growing in coastal or arid areas, fine-grained sand with a high silica content, and recycled broken glass provided the basic ingredients for glassmaking. Antioch, Beirut, Tyre, and Acre (the latter two enjoying abundant raw materials in their vicinity) produced high-grade glassware. Soda ashes were also utilized in the manufacturing of soap, attested in Acre in the thirteenth century.

Both written sources and archaeological finds reveal that the Latins resident in the Levant were receptive to various material aspects of the Eastern lifestyle, such as ceramics, glassware, textiles, carpets, and other artefacts produced by local artisans or imported from Muslim countries situated further east. Large numbers of Western pilgrims, crusaders, warriors, merchants, and sailors visiting the Frankish Levant became acquainted with these artifacts and promoted their diffusion upon their return to the West. In turn, that diffusion enhanced further demand and stimulated production in the Frankish Levant. The same holds true of icons and other devotional objects, which both settlers and especially visitors to the Holy Land were eager to acquire.

Interaction with the Mediterranean and Asia

The creation of the Frankish states along the seaboard of the Levant generated an important evolution in the commercial function of that region. By the second decade of the twelfth century, Acre had definitively replaced Tyre as the major port and market of the Frankish Levant, largely thanks to the fact that it was the main destination of Western crusaders, supplies, pilgrims, and merchants, and had better access to Damascus, the major city of the Syrian interior. As a result it assumed a major role in the Levantine economy of the twelfth and thirteenth centuries. Changes of a more general nature affected the entire Levantine seaboard. In the pre-crusading era, its ports fulfilled a rather modest function as markets and transit stations in maritime and land trade, largely within a regional framework. After the First Crusade (1096–1099), the growing activity of Italian merchants and carriers, mainly those operating from their respective home cities, firmly integrated the Frankish Levant within two large, closely interlocked, and partly overlapping inter-regional systems of trade and transportation. One of these systems linked the West, Byzantium, and Egypt within a triangular Mediterranean network, while the other extended from the West to the Levant and further east into inner Asia. The simultaneous insertion of the major Frankish ports within the Levantine, Mediterranean, and continental Asian networks, together with their position at the crossroads of the latter, generated a substantial increase in the volume of their commercial and maritime operations and of the services they offered to passing merchants, visitors, caravans, and ships.

The expansion of the service sector in the economy of the Frankish Levant was particularly pronounced in Acre, the only port benefiting from the large, continuous, and lucrative pilgrim and crusader traffic. There was a continuous interaction between the economies of the Frankish Levant, Byzantium, and Egypt. The major Italian maritime powers, Venice, Pisa, and Genoa, gradually consolidated their position and expanded their commercial activity in these three regions in the twelfth century, despite short interruptions due to adverse political circumstances. Significantly, some of their citizens and subjects did not restrict their activity to one region and combined visits to two or more of the major emporia of the eastern Mediterranean, such as Constantinople, Acre, and Alexandria. They took advantage of their privileged status, especially in the Frankish states, to acquire a dominant role along the waterway linking Con-

stantinople to Alexandria, at the expense of Byzantine and Muslim traders and carriers, who became increasingly dependent upon Italian middlemen and transporters. Timber for naval construction and silk textiles were the main commodities exported from Byzantium to Egypt, while spices originating in the region bordering the Indian Ocean and in the Arabian Peninsula followed the reverse route along the Levantine coast as far as Constantinople. The Frankish Levant became part of the trade network linking the West to inner Asia.

After the Frankish conquest, both traveling and settled Latin merchants largely replaced the local merchants active along the Levantine coast in the precrusading period. However, until the Third Crusade (1189–1192), only few of them operated between the Frankish ports and the major inland cities under Muslim rule. This traffic was almost entirely handled by merchants based in these cities. After 1192, however, Latins in larger numbers extended the range of their activity to the Muslim hinterland, mainly to Damascus and Aleppo. They sold woolens as well as saffron, the only precious spice and colorant produced in the West. They bought mainly cotton, silk, luxury textiles, and high-quality artifacts produced in Muslim industrial centers, for which there was a large demand both in the Frankish Levant and in the West. In addition, they acquired pearls as well as precious and semiprecious stones. In the late thirteenth century, Venetian merchants also bought cotton directly from growers in the region extending from Acre to Tiberias, which was partly under Muslim rule.

The Mongol expansion over Asia, which reached its peak around 1250, generated a northward shift of the overland trade route linking the Mediterranean to inner Asia. Baghdad was sacked by the Mongols, and the large commercial centers of inner Syria, Aleppo, and Damascus were severely affected by destruction and the warfare between Mongols and Mamlūks from around 1260. As a result, in the following decades they lost their function as main suppliers of oriental commodities to the Frankish ports located along the Levantine coast. Ayas (mod. Yumurtalık, Turkey), called Lajazzo by the Latins, the major port of the Christian kingdom of Cilician Armenia, became the main Mediterranean outlet for goods arriving via Tabriz in Persia, from a region extending as far as China. The establishment of Mongol rule over large parts of Asia also allowed the penetration of Western merchants deep into the continent, again via Ayas. The link of this trade route with the Frankish seaboard is

well illustrated. Significantly, when the father and uncle of the famous Marco Polo returned in 1269 from their first overland Asian voyage, they traveled via Tabriz to Ayas and proceeded from there via Acre to Venice. In 1271, this time together with Marco, they sailed from Venice via Acre to Ayas, from where they began their second overland Asian journey.

Despite the opening of the alternative Asian route of supply, Alexandria remained one of the main emporia of the Mediterranean, as well as its major spice market. An unpublished trade manual compiled in Acre about 1270 and another composed in Pisa in 1278, as well as notarial charters, illustrate exchanges between Alexandria and Acre in a broad range of commodities and demonstrate the continuing dependence of the entire Levantine seaboard upon the Egyptian port with respect to spices. In turn Acre served as a major distribution center for these commodities, supplying them to ports along the Levantine seaboard as far as Cilician Armenia, to its own Muslim hinterland, and particularly to the West.

The focus of research on long-distance navigation in the crusader period has deflected attention from cabotage and tramping along the Levantine coast, that is, short-distance coastal navigation from port to port to load and unload goods. These types of activity, which ensured the exchange, concentration, and distribution of goods within the framework of the regional economy of the Frankish Levant, were closely linked to the larger trans-Mediterranean networks. In the thirteenth century, the shipping of ever larger quantities of bulky goods to Italy, such as cotton (grown in several areas of the Levant), soda ashes, and broken glass, prompted a rationalization of transport services and a lowering of freight rates. Both these goals were achieved by the concentration of goods carried by small and medium-sized Levantine crafts in the major ports, where they were reloaded on larger ships sailing across the Mediterranean.

The connection between Levantine and other regional systems is also reflected by the handling of some specific commodities. Time and again popes, princes, and city governments prohibited the shipping of war materials to Egypt, namely, arms and iron used in arms manufacturing, as well as timber and pitch for naval construction. The large-scale trade in these materials, which originated both in the West and in the eastern Mediterranean region, was often conducted through the Levantine ports with the help of local intermediaries and carriers. A similar pattern was followed

by the slave trade, which expanded substantially after the consolidation of Mongol rule north of the Black Sea around 1240. Slaves from that region and the Balkans were shipped to the Frankish Levant by Genoese, Venetian, and Pisan merchants, yet their final destination was Egypt, in constant need of male slaves for the military contingents of the Mamlūk sultanate. However, in the last decades of the thirteenth century Genoese and Egyptian traders took over the direct transportation of slaves from the Black Sea to Egypt and bypassed Frankish middlemen and carriers.

Compared with the precrusading era, the economy of the Frankish Levant experienced a substantial growth, especially in the thirteenth century. A constant increase in local and Western demand for indigenous raw materials, as well as semifinished and finished products (especially textiles), provided a powerful stimulus to investments in the expansion of agriculture and manufacture. The economy of the Frankish Levant was boosted by its insertion within inter-regional networks of trade and transportation, its function as intermediary in their midst, and growing exports to the West. Revenues generated by the large service sector were partly reinvested in the Levantine economy, largely to the benefit of Frankish settlers. These ensured Western traders a sizable local clientele for foodstuffs, arms, and especially Western woollens, which constituted the main commodity financing Western commercial exchanges with the Frankish Levant and its Muslim hinterland. However, Western imports of bullion and coins suggest that the West faced a negative balance of trade in its commercial exchanges with these regions. Especially from the 1240s onward, the growing demand for resources to finance military operations and the defense of the Latin territories was met by noncommercial imports of foodstuffs and arms, in addition to transfers of capital, the latter handled mainly by Italian trade and banking companies.

Developments after 1291

The fall of the Frankish states of the Levant in 1291 brought to an abrupt end the particularly favorable conditions which for two centuries had enabled the growth of the regional economy and the major functions of the Frankish Levant in trade and shipping. Acre in particular never recovered from the blow it suffered. The altered geopolitical balance in the eastern Mediterranean required a restructuring of both regional and long-distance trade and navigation. Ayas and Cyprus became to some extent sub-

stitutes for the privileged positions along the Levantine coast of which the Latins had been deprived. The events of 1291 thus signaled the beginning of a new era in Mediterranean exchanges and shipping. Despite its close political links with the kingdom of Jerusalem, the kingdom of Cyprus under the Lusignan dynasty fulfilled only a marginal role in Mediterranean trade and shipping from 1192 until 1291. The island, and the port of Famagusta (mod. Ammochostos, Cyprus) in particular, then became a major entrepôt and transit station for Western commercial exchanges with Egypt and Syria, which continued despite the papal embargo on trade with the Mamlūk territories decreed in 1291.

Many goods exchanged between the West and Ayas also passed through Famagusta. The cultivation of sugarcane and cotton on the island was continuously expanded from the thirteenth century onward, and they became major export items, in addition to salt, camlets, and gold threads used in the weaving of gold brocade and embroidery. The fall of Ayas to the Mamlūks in 1337 enhanced Famagusta's function as transit and transshipment station. This function, however, was affected by the resumption of direct Western trade with the Mamlūk territories in 1345, as a result of which many Western traders and ships bypassed Cyprus. The island nevertheless reached the peak of its prosperity before 1374. Political developments, especially Genoese rule over Famagusta, which lasted from that year until 1464, accelerated the economic decline of that city and of Cyprus in general. The Venetians secured a major share in the production of sugar in the territories remaining under Lusignan rule and dominated the export of that commodity, as well as that of cotton and salt. The establishment of direct Venetian rule over Cyprus in 1489 turned the island into the main entrepôt of Venice's trading system in the eastern Mediterranean and brought some improvement in the condition of its economy.

Edessa, City of

Edessa (mod. Şanlıurfa, Turkey) was the principal city of the Frankish county of Edessa from 1098 until its capture by the Muslims in 1144. In the medieval period it was also variously known as Ourha (Armenian), al-Ruha' (Arabic), Orhay (Syriac), and Rohas (Latin).

Edessa was founded by the Seleucid dynasty of Syria in the third century B.C. and had a significant Christian population by the early third century A.D. For Christians of the late antique and medieval periods, the city was inseparably linked to the apocryphal letters exchanged between Jesus and King Abgar V. Edessa became part of the Roman Empire in the mid-third century and soon became the intellectual capital of Syriac Christianity as well as an economic center for northern Syria. Conquered by the Persians in 602, the city returned briefly to Byzantine hands before being captured by the Arabs in 639. In 944 the city of Edessa was recaptured by the resurgent Byzantine Empire, but it changed hands frequently in the late eleventh century.

By the time of the First Crusade (1096–1099), Edessa's population consisted predominantly of Armenians of the non-Chalcedonian Armenian Orthodox Church. There were also Melkite Armenians, that is, members of the Greek Orthodox Church, and Jacobites of the Syrian Orthodox Church. Its ruler, T'oros, professed loyalty to the distant Byzantine Empire. Edessa came under Frankish rule in March 1098, when the citizens overthrew and executed T'oros and proclaimed Baldwin (I) of Boulogne, a brother of Godfrey of Bouillon, as the new duke or count of the city. Despite having few troops, Baldwin was able to maintain his authority through shrewd manipulation of civic factions. The city now became the capital of the county of Edessa, the first Frankish state to be founded in Outremer, and the seat of an archbishopric of the Latin church.

The Armenian chronicle of Matthew of Edessa recorded tensions and hostilities between the Armenian community and the Frankish counts, most prominently Baldwin II of Bourcq (1100–1118), successor to Baldwin I, but many of his accusations are not supported by other sources. The city came under attack several times, most notably by the Turkish leaders Jekermish of Mosul in 1105 and Mawdūd of Mosul in 1110. Joscelin I (1119–1131), cousin and successor of Baldwin II, was admired by local Christian communities for his liberality toward them as well as for his military prowess. An Armenian inscription on the walls of Edessa, dated 1122, testified to the prominent role of Armenians in the administra-

tion of the city. Joscelin II spent most of his time at Turbessel (mod. Tellbaşar Kalesi, Turkey), but this did not diminish Edessa's political, religious, or economic importance.

The city fell to Zangī, atabeg of Mosul, in December 1144, while Joscelin II was away aiding his Saljūq enemies. Zangī spared the local population but massacred the Franks and converted their churches into mosques. Joscelin II recaptured the city in October 1146 following Zangī's death, but he failed to seize the citadel. A month later Zangī's son Nūr al-Dīn stormed the city and massacred a large portion of the Christian population, whom he suspected of collaborating with Joscelin. Edessa's fall shocked the Christian world: it led to the summoning of the Second Crusade (1147–1149), which, however, did nothing to aid the city. Edessa fell into decline, worsened by the Mongol conquest of 1391.

Edessa had a solid urban fabric to which the Franks added. The Byzantine emperor Justinian fortified the city in the sixth century, a work continued by subsequent rulers. The citadel was built on a ridge at the southern end of the city and was surrounded by a rock-cut ditch, allowing it to be held independently of the city. Several churches appear in twelfth-century sources. The church of St. John the Baptist, with an adjoining monastery, probably served as the Latin cathedral, and held the relics of Abgar and Addai. The Franks also controlled the churches of St. Stephen and Thomas the Apostle. Elsewhere in the city was the Syrian Orthodox Church of St. Theodore as well as the monastery of Abgar (or St. Abraham). The Armenians held their cathedral Church of St. Ephraim, outside the city, and the Church of the Holy Apostles, which probably contained the important relic of the Holy Cross of Varag. It is possible that the small Melkite population still worshipped in the Church of Hagia Sophia, the ancient cathedral church of the city.

Edessa, County of

A Frankish state in northern Syria and Upper Mesopotamia (1097–1150). The first of the principalities established in Outremer in the course of the First Crusade (1096–1099), the county of Edessa was also the first to be conquered by

Edessa, County of

Succession to the County of Edessa, 1100–1150

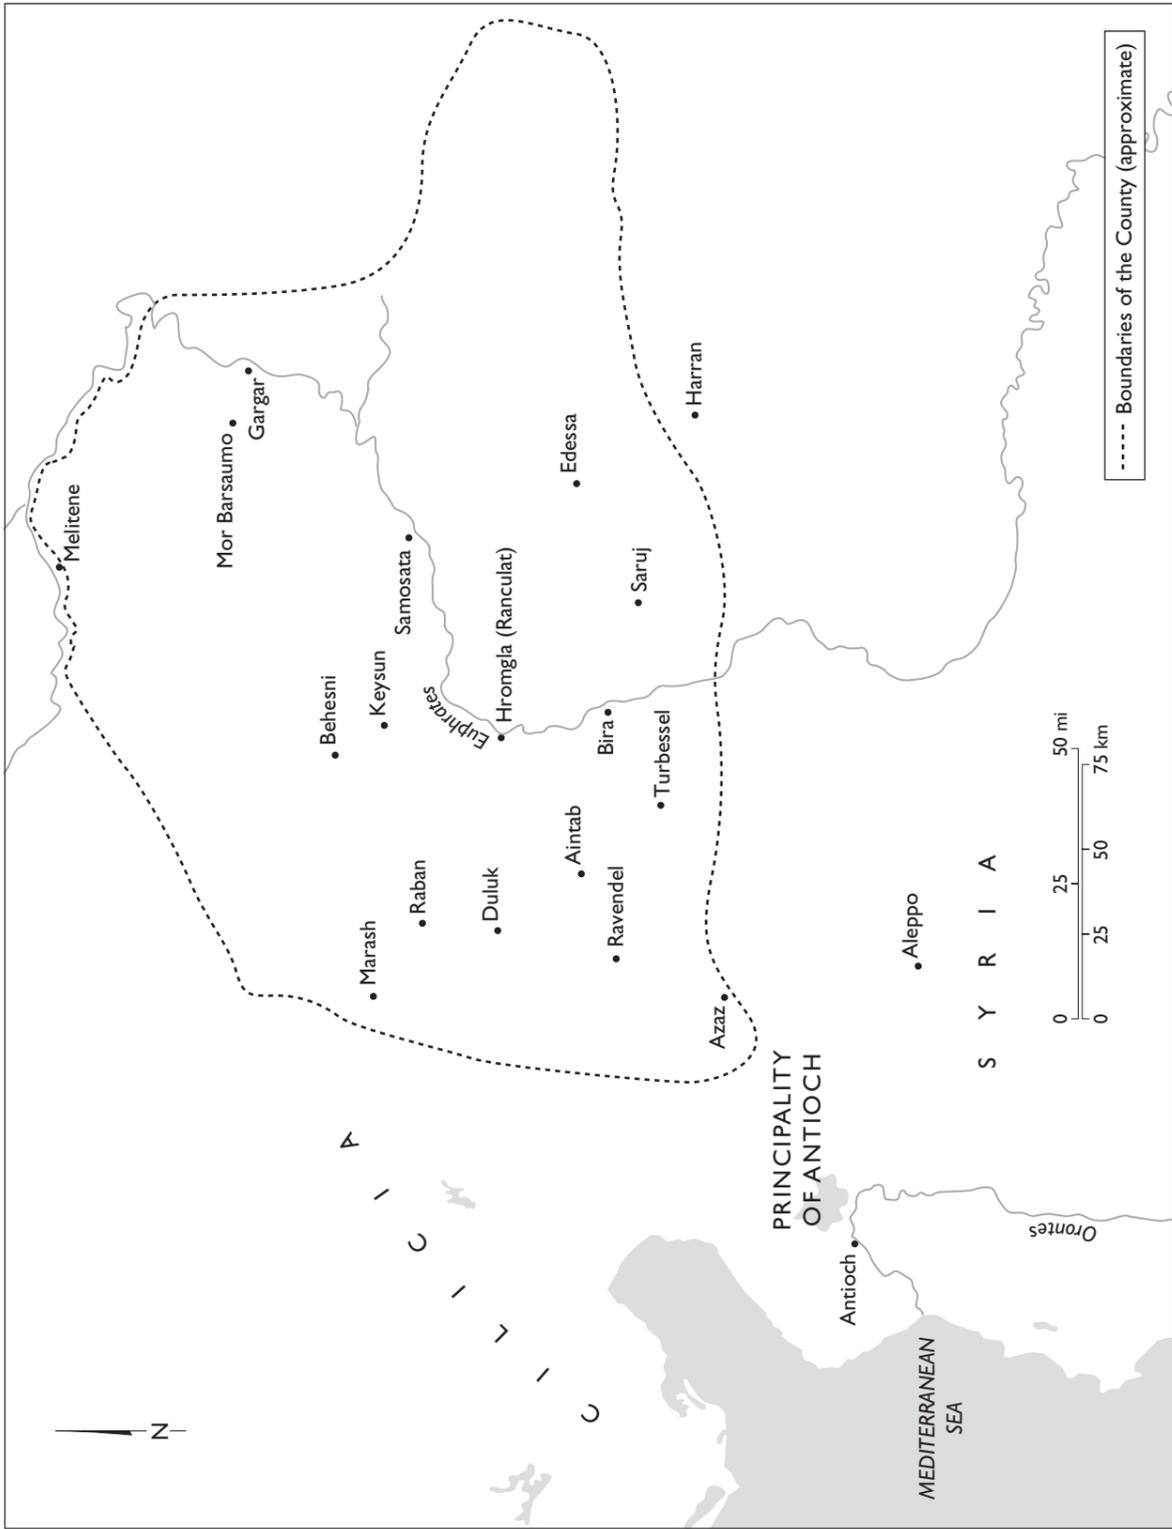

the Turks. The brevity of Edessa's history has left it the least studied of all the principalities of Outremer, but its many distinctive qualities make it more important than the duration of Frankish political authority might suggest. Edessa was the training ground for many leaders of Outremer, including two kings of Jerusalem (Baldwin I and Baldwin II). Unlike other parts of Outremer, Edessa has a history that is traceable not only through Latin sources but also through a number of indigenous Armenian and Syriac chronicles. Another distinctive feature of Edessa was that the county was entirely landlocked, unlike the principalities of Antioch, Tripoli, and Jerusalem, which depended on their seaports for survival.

Geography and Economy

At its greatest extent, the county of Edessa covered a large portion of what is now southeastern Turkey as well as parts of modern Syria. It stretched from Marash (mod. Kahramanmaraş, Turkey) in the west to Tell-Mawzan (mod. Viranşehir, Turkey) in the east and from Gargar (mod. Gerger, Turkey) in the north to 'Azaz in the south. The river

Euphrates cut through the center of the county, providing both a line of communication and a line of defense. The town of Bira (mod. Birecik, Turkey) commanded the crossing of the Euphrates between the city of Edessa (mod. Şanlıurfa, Turkey) and Antioch on the Orontes (mod. Antakya, Turkey) and was the furthest point north that river traffic from the Persian Gulf could travel.

Most of the land within the county was dry high plateau, suitable for raising horses, cattle, and sheep. The fertile areas around the Euphrates and other rivers, such as the Khabur, the Sadjur, and the Balikh, allowed the cultivation of wheat and other grain crops. On hillsides, produce such as olives, walnuts, and almonds were grown, whereas oak forests provided grazing grounds for pig herds. Sheep, goats, and cattle were also raised. The wealth of the county was based largely on its agricultural products; its advantageous position for controlling trade routes across northern Syria may also have provided revenue, although few sources shed light on how profitable this may have been. Unlike the Holy Land, Edessa had only minimal pilgrim traffic, and it never attracted dependencies of Italian merchant republics.

The County of Edessa, 1097-1144

History

Frankish domination was established in the course of the First Crusade. The first important conquest was Turbessel (mod. Tellbaşar Kalesi, Turkey), an important fortress and later residence of the counts, captured in the fall of 1097 by Baldwin of Boulogne, a younger brother of Godfrey of Bouillon. The city of Edessa, however, did not come under Baldwin's authority until March 1098. Baldwin established the county through a strange combination of conquest and political subterfuge. After having shown himself to be an effective fighter against the Turks by capturing Turbessel and other fortresses, Baldwin came to Edessa to help protect the city from Turkish attacks, invited by either the city's T'oros, a Melkite Armenian, or by the citizens. T'oros adopted the crusader, but within fifteen days of Baldwin's arrival, a mob had killed T'oros and proclaimed Baldwin the new leader of the city. Baldwin I soon added Saruj (mod. Suruç, Turkey) and Samosata (mod. Samsat, Turkey) to his domains and married the daughter of an Armenian lord. In October 1100, Baldwin left Edessa to claim the throne of Jerusalem, which had been left vacant by the death of his brother Godfrey. The county he left behind was a patchwork of castles, cities, and rural areas, some directly under Frankish authority, but most under local Armenian leaders. Some were allied with Baldwin, but others were opposed to the new Frankish influence. Baldwin directly ruled a core of territory on the western bank of the Euphrates River, but in the eastern area, his authority only extended to Edessa, Saruj, and Samosata.

Baldwin I's successor was Baldwin II of Bourcq, a distant cousin, who eventually established comital authority on a more formal basis. Soon after becoming count, he installed his cousin Joscelin I of Courtenay as lord of Turbessel, which effectively gave authority over the western half of the county to Joscelin, leaving Baldwin free to concentrate on establishing Frankish authority over the eastern portion. But more importantly, Baldwin had an ally on whom he could rely. Baldwin's marriage to Morphia, the daughter of Gabriel of Melitene, temporarily brought that city under his influence sometime between 1100 and 1104, but it was conquered soon after by the emir of Sivas.

When Baldwin and Joscelin fell captive to different Turkish emirs at the battle of Harran in 1104, Tancred of Antioch and Richard of the Principate, Normans from Antioch, assumed authority over the county, which they were loathe to relinquish when Baldwin and Joscelin were eventually released in 1108. Armenian and Syriac chroniclers denounce

Richard as a vile usurper who exploited the county for financial gain and did nothing to protect Baldwin's interests. The intervention of Baldwin I of Jerusalem was necessary to force Tancred and Richard to return the county to Baldwin II.

Baldwin II had scarcely reestablished his authority when the county fell under attack by Mawdūd, the *atabeg* of Mosul. Mawdūd was the first to employ the ideology of *jihād* (holy war) to rally Muslims against the Frankish settlers. While failing to conquer any significant portion of Frankish territory, Mawdūd did establish a model of Islamic leadership that would later prove very effective against the Franks in the time of Zangī and Nūr al-Dīn. It was perhaps these attacks that spurred Baldwin to establish his authority over all the Christian areas of northern Syria, seeking to replace local Armenian leaders with Franks loyal to him. Taking advantage of the death of Kogh Vasil in 1113, Baldwin seized his territory, capturing the important towns of Kesoun (mod. Keysun, Turkey), Raban, and Behesni (mod. Besni, Turkey). The important crossing point of Bira on the Euphrates came into Frankish hands in 1117, when Baldwin's cousin Waleran of Le Puiset married the daughter of its lord, the Armenian Ablgharib, thereby resolving the siege under which the Franks had placed the fortress. By 1118, many of the more independent-minded Armenian leaders had either died or been forced out by the Franks, though some still held important fortresses within the county, such as Vasil in Gargar and Michael in Duluk.

In 1118, Baldwin II succeeded Baldwin I as king of Jerusalem. He subsequently established Joscelin as count of Edessa. Joscelin I proved to be a vigorous leader and was particularly admired for his military prowess and his close relations with local Christian communities. He first married a daughter of the Armenian lord Rupen, who was the mother of his only son, Joscelin II; he later married Maria, the sister of Roger of Antioch. Joscelin and Baldwin II, acting as regent of Antioch, gained a significant victory over Īlghāzī, Artuqid ruler of Mardin and Aleppo, but their triumph was short-lived. Soon after Īlghāzī's death (1122), his nephew Balak captured Joscelin and Waleran of Bira. Baldwin II was also captured not long after that, leaving northern Syria leaderless. A resourceful band of Armenians infiltrated the fortress where Joscelin and Baldwin II were imprisoned, allowing Joscelin to escape. Once free, he sought to force Balak to free Baldwin by continuously attacking his former captor's territories. Balak's death in May 1124 led to Baldwin II's release, but Joscelin continued his attacks on Aleppo,

now ruled by Aq Sunqūr al-Bursuqī. The chronicles documenting these sieges and battles created a picture of plundering and devastation that may be exaggerated. Most of the conflict consisted of raids along Edessa's border with Aleppo that probably did not affect the remainder of the county.

Joscelin died in 1131 and was succeeded by his son, Joscelin II. Edessa was relatively untroubled during the first few years of his reign, since Zangī, son of Aq Sunqūr, was concentrating on subduing his Turkish opponents. Joscelin resided chiefly in Turbessel, perhaps because of its proximity to Antioch. By 1135, however, Zangī had united much of Muslim Syria and Mesopotamia behind him, and he began to focus his considerable military resources on the Franks, first attacking Antioch. Little effort was made to defend the principality, however, as a result of political conflict within Antioch.

Within two years, the threat posed by Zangī was recognized throughout Outremer. A combined Frankish army was assembled under the leadership of Fulk, king of Jerusalem, which temporarily halted Zangī's attacks, but Edessa and Antioch could not always rely on the military aid of Jerusalem. Joscelin and Raymond of Antioch turned to the Byzantine emperor, John II Komnenos, and both leaders swore an oath of fealty to him in return for protection. The price of Byzantine military support came largely at the expense of Antioch, but Joscelin feared that John's ambitions extended to Edessa as well. In the spring of 1138, the emperor led a Frankish-Byzantine army to Syria, capturing Kafartab and Atharib from Zangī with Frankish help. The siege of the independent Arab city of Shaizar, however, failed because of Joscelin's and Raymond's unwillingness to cooperate with the Byzantines, as well as because of the approach of Zangī's army.

While John Komnenos was alive, his army deterred Zangī's attacks. In 1143 he again returned with his army to Syria and demanded hostages to ensure Joscelin's cooperation. Following John's death later that year, however, the Byzantine army withdrew, leaving Zangī unopposed. While Joscelin II was aiding a Saljūq enemy of Zangī in late 1144, Zangī attacked and captured the city of Edessa. The loss of the city was a blow to the economy and prestige of the county, but more importantly, it signaled to locals and foreigners alike that the Frankish presence in the Levant was by no means permanent. Joscelin, however, still controlled important towns and castles on the western side of the Euphrates that together formed a viable principality. His

attempt to recapture Edessa in 1146 was briefly successful, but within a month the Frankish and Armenian forces were again expelled and the city's Christian population massacred.

Although it was launched as a response to the fall of Edessa, the Second Crusade (1147–1149) did little to aid Joscelin or the much diminished county. Instead of attacking Nūr al-Dīn, Zangī's son and successor in Aleppo, the crusaders attacked the independent Muslim state of Damascus, which had the paradoxical effect of pushing it into Nūr al-Dīn's growing empire. Joscelin obtained a truce from Nūr al-Dīn to protect the remnants of his county and thus did not aid Raymond of Antioch when the latter attacked him in 1148 and 1149. Following the death in battle of Reynald, lord of Marash, Reynald's lands fell to Mas'ūd, the sultan of Rūm, despite Joscelin's attempts to defend it. Gargar similarly fell to Joscelin's erstwhile ally, Kara Arslān, and in 1150 Joscelin himself was captured on his way to Antioch. He was blinded, imprisoned in Aleppo, and died in 1159. His wife, Beatrix, defended Turbessel against Nūr al-Dīn's attacks, but on the advice of Baldwin III of Jerusalem, she sold the remaining portion of the county to the Byzantine emperor, Manuel I Komnenos. The strongholds there fell to the Turks by the end of 1151.

Religious Communities

The county of Edessa had a diverse religious population of Armenian Orthodox, Melkites, Syrian Orthodox (Jacobites), and Muslims as well as a small population of Latins. The city of Edessa was home to a Latin archbishop and Armenian Orthodox and Syrian Orthodox bishops. The Armenian Orthodox and Syrian Orthodox patriarchs (whose nominal see was at Antioch) frequently resided within the county. The Franks had perhaps the most frequent religious interactions with the Armenians. Baldwin II encouraged one of the Armenian patriarchs, Barsegh I, to settle in Edessa in 1103/1104, with gifts of land and wealth. Although Barsegh eventually settled in Kesoun under the protection of the Armenian prince Kogh Vasil, Baldwin's endeavors show the importance the Franks put on close relations with local religious leaders. When Countess Beatrix sold the remnants of the county to Manuel Komnenos, she gave to the Armenian patriarchate the castle of Hromgla (mod. Rumkale, Turkey), which became the seat of the patriarch for the rest of the century.

The counts of Edessa also enjoyed a measure of influence over the Syrian Orthodox Church. Baldwin II had supported

Basil Bar-Shabouni, bishop of Edessa, in his quarrel with his patriarch, Athanasius VII. Following Athanasius's death in 1129, Joscelin I had the patriarchal election take place under his supervision in the Latin church of Turbessel, ensuring that the next patriarch was more favorably inclined toward Edessa. Comital influence also ensured that the candidate favored by Joscelin II was elected as bishop of Edessa in 1135. Frankish relations with other religious communities are harder to uncover. A small community of Melkites lived in Edessa, and perhaps in other cities as well, but little information survives as to their relationship with the Franks. It is certain, however, that the Muslim population, particularly in Saruj, was treated harshly, often due to resistance to the Franks. The county also held Jewish communities about which we know little, and a small group of Armenian Zoroastrians (known in Armenian as *Arewordik*) continued to flourish in Samosata.

Political Institutions

Although few sources survive concerning the institutional history of the county, references in charters and chronicles suggest that the county had a similar structure to that of the kingdom of Jerusalem, many of whose founding crusaders also came from northern France. The counts of Edessa operated a mint that produced a series of copper coins, beginning soon after the establishment of the county and continuing through to its demise. The coins drew on a range of imagery, including crosses, busts of Christ and St. Thomas, images of Frankish soldiers, and inscriptions in Latin, Greek, Armenian, and Syriac. The quality and diversity of the coinage seems to have declined after 1110. Serving under the count were several officers: the chancellor, who was often also the chaplain, and was concerned with civil affairs; the constable, who had military functions; and the marshal, also a military commander. Evidence also survives of castellans who defended fortresses that remained under comital authority. Early twelfth-century texts suggest

that city councils, largely composed of indigenous Christians, also continued to play an influential role in ruling urban communities. Vasil, an Armenian who placed an inscription on Edessa's city wall in 1122, may well have been a leading member of such a council.

The county contained several lordships: Saruj, Bira, Duluk, Gargar, Kuris, Ravendel, and (up to 1113) Turbessel. The rest of the land remained in the hands of the count. Not all of the lordships were Frankish: Gargar continued to be ruled by an Armenian lord, albeit under Frankish sovereignty, and the same may be true of Duluk. However, it is not clear that these lordships all existed contemporaneously. We have no evidence for a Frankish lord in Saruj after 1113, and no evidence for one in Ravendel before 1134. Marash has often been listed among the county's lordships, but it may have been a part of the principality of Antioch or accorded a semi-independent status. Marash was actually entitled a county, thus giving it, at least semantically, the same status as Edessa. A further sign of Marash's independence is the evidence that the counts of Marash minted coins, a regalian right not exercised by lesser lordships in twelfth-century Outremer.

Relatively little archaeological excavation has been carried out within the borders of the county of Edessa, but the few excavations along the Euphrates River (particularly at Gritille, Turkey) suggest that on a material level, the Frankish presence in northern Syria and Mesopotamia had little impact on daily life. Both archaeological and literary sources suggest that cities and local rural centers were fortified, often extensively. In many towns, buildings continued to be built in the mudbrick style indigenous to the region, and intensive agriculture, including irrigation, was not disturbed. Perhaps the greatest impact came from the intensive fortifications that the Franks built around cities and rural centers.

The history of the county of Edessa has often been portrayed as a struggle of an embattled island of Christianity striving to maintain itself in a surrounding sea of Islam. Yet the conflicts cannot be so neatly separated into Christian against Muslim. The counts of Edessa relied on Muslim allies to maintain their position; Joscelin II was aiding a Muslim emir when Zangī captured Edessa. Similarly, Franks turned to Muslims for support, as both Baldwin II and Tancred did during their feud over control of Edessa. The victories of Zangī and Nūr al-Dīn were opposed not only by the Franks, but also by Turkish and Arab rulers who sought to maintain their independence. Frankish authority over Edessa thus fit

Counts of Edessa

Baldwin I (of Boulogne)	1097–1100
Baldwin II (of Bourcq)	1100–1118
Joscelin I of Courtenay	1119–1131
Joscelin II of Courtenay	1131–1150

into a Levantine world of fragmented local authority, whether Christian or Muslim, which could not survive in the united world of Nūr al-Dīn and Saladin.

Edirne

See Adrianople, Battle of

Edward I of England (1239–1307)

King of England (1272–1307), son of King Henry III and Eleanor of Provence; the second and last English king to participate in a crusade to the East.

Henry III had repeatedly stated his intention to go on

Statue of Edward I, king of England (1272–1307). (Library of Congress)

crusade, but it was his son (then known as "the Lord Edward") who finally took the cross in 1268, the crusade being closely linked to the political settlement following the defeat of Simon of Montfort, earl of Leicester, and his partisans in 1265. The papal legate Ottobuono promoted the crusade as part of the peace process, although in fact Edward was to be accompanied largely by his own allies from the civil war period.

The expedition was intended to join the second crusade of Louis IX of France, whom Edward seems to have admired personally: the English were to join Louis at the port of Aigues Mortes in southern France for the departure of the main expedition. In the event, however, Edward's fleet sailed after that of Louis. He arrived in Tunis in north Africa in the

Egypt

autumn of 1270, only to find that Louis had died and that his brother, Charles I of Anjou, had declared the crusade at an end. Edward wintered in Charles's kingdom of Sicily, before sailing to Acre (mod. 'Akko, Israel). Arriving in May 1271, he found the Christians of Outremer in a perilous position following Mamlūk successes in the north. Edward lacked a sizeable army to stem the tide of Mamlūk pressure, and agreed to an eleven-year truce with Sultan Baybars I on the advice of the local barons. He also built a tower at Acre and arranged for a garrison to defend it. Having survived an assassination attempt while in the East, Edward sailed for home in September 1272. He returned as king, his father having died in his absence.

Edward was never to go on crusade again, despite protestations otherwise. He angered the pope by appropriating a crusade tax in 1283 to pay for his war in Wales. He took the cross for a second time in 1287 and engaged in diplomacy to bring peace between Aragon and the Capetians to clear the way for a crusade. The planned expedition never took place. Edward gave little more than moral support to Otho of Grandson's crusade of 1290, and subsequently his wars with Scotland and France diverted his attention from the East. Edward always maintained that his crusading intentions were sincere, but that his prior duty to God was the defense of his own kingdom, using crusade taxation to fund his wars. He reaffirmed his crusade vow in 1306, and made arrangements in his will for the maintenance of a force of crusading knights and for his heart to be buried in the Holy Land.

Egypt

At the time of the inception of the crusades, Egypt, under the Fāṭimid dynasty, was one of the wealthiest and most pow-

erful countries in the Muslim world. The arrival of the First Crusade (1096–1099) and establishment of the kingdom of Jerusalem made the Fāṭimid possessions in Palestine, and eventually Egypt itself, targets for Frankish expansion, until the Fāṭimid regime was overthrown by Saladin, who united Egypt with his territories in Muslim Syria. After Saladin's conquest of Jerusalem and most of Palestine in 1187, Egypt came to figure as the main goal of new crusades from the West, which aimed to secure the liberation of the Holy Land by striking at the center of Muslim power. It was during the final great crusade against Egypt (1248–1254) that Saladin's Ayyūbid successors were overthrown by a caste of Turkish slave soldiers, the Mamlūks, who established a powerful sultanate that ultimately extinguished Frankish rule in Outremer in 1291.

Economy, Population, and Society

Medieval Egypt was a unique country that generally enjoyed a great annual agricultural surplus, and served, at least from the late tenth century, as a land bridge for trade between the Mediterranean Sea and the Indian Ocean. The river Nile, along whose banks arable land was concentrated, began its annual rise toward the end of June or the beginning of July, rising moderately each day at irregular rates until the beginning of August; when the rise accelerated until it reached plenitude, approximately 8.32 meters, slightly after 15 August [William Pooper, *The Cairo Nilometer* (Berkeley: California University Press, 1951)]. The rise of the Nile is recorded in Arabic sources in terms of cubits subdivided into fingers. A level of 16 cubits was regarded as plenitude, signifying a good agricultural year with a plentiful harvest and high tax incomes for the state. A level of 14 cubits was regarded as a disastrous year with high prices, shortages, and starvation. Levels below 14 cubits meant drought, severe starvation accompanied by the outbreak of disease, and high mortality rates. Life and death in medieval Egypt depended on a difference of a meter or two in the annual rise of the life-giving river.

Although demographic assessments are riddled with difficulties, the population of Egypt is generally estimated at 2.6 million for the beginning of the seventh century [Josiah C. Russell, "The Population of Medieval Egypt," *Journal of the American Research Center in Egypt* 5 (1966), 69–82]. The Muslim conquest in 641 made little impact on the indigenous Coptic population, and the Coptic Church retained its power and grip over the rural population. The emergence of

a Muslim society in Egypt and the crystallization of Egypt's Islamic identity were slow and protracted processes. Initially, the Arab population was small and concentrated mainly in Alexandria and in Fustat, the town established by the Arabs adjacent to the Byzantine fortified town of Babylon at the apex of the Nile delta. Fustat developed significantly in terms of population, economic activity, and cultural life during the first 300 years of its existence, serving as the administrative and political center of the country. The first significant Islamization of the rural population took place in the ninth century, following a suppression of rural tax rebellions and a change in Muslim policy toward the Coptic Church. However, Arabization and Islamization were not parallel processes: Arabization advanced faster than Islamization. Copts adhered to their religion but adopted the Arabic language, and, although the same was true of the much smaller Jewish communities, the Jews continued to use Hebrew, giving rise to the Judaeo-Arabic language, Arabic written in Hebrew letters.

The Fāṭimid Period

Until the emergence of the quasi-independent Tūlūnid dynasty (868–905), Egypt was ruled as province directly from Damascus and later from Baghdad. The restoration of 'Abbāsīd direct rule in Egypt (905–935) was followed by the rise of another semi-independent local dynasty, the Ikhshīdids (935–968). The Tūlūnid and Ikhshīdid rulers had much in common. They were Sunnī Muslims who strove to carve out for themselves a patrimony in Egypt. They recognized 'Abbāsīd sovereignty and made every effort to obtain 'Abbāsīd legitimization for their rule. However, the political disintegration of the Ikhshīdid regime and the inability of the 'Abbāsīds to intervene militarily in Egypt facilitated the conquest of the country in 969 by the Fāṭimids, a dynasty based in Tunisia. The Fāṭimids were Ismā'īlī Muslims, a Shī'ite splinter group whose religious and political ambition was the overthrow of the rival Sunni caliphate of the 'Abbāsīds at Baghdad. They were able to conquer Palestine and Damascus, but their drive toward Baghdad stopped at Damascus. For Egypt, Fāṭimid rule brought many changes. The city of Cairo was established as the seat of a dynasty that was to rule over much of the eastern Mediterranean until the late twelfth century, and the presence of the Fāṭimid regime there stimulated demand for luxury goods, products, and services. Commercial relations with the town of Amalfi (dating back to Fāṭimid rule in Tunisia), as well as a Fāṭimid

presence in Yemen, were instrumental in the growth of the numbers of Italian and Byzantine merchants in Alexandria and Cairo, setting a pattern for trade between the Mediterranean and the Indian Ocean that lasted up to the sixteenth century. Generally tolerant and liberal, Fāṭimid policies were conducive to this trade, in which members of the ruling family and upper classes took an active part. The demand created by the regime for textiles, including costly luxury fabrics, gave rise to a textile industry in many parts of the country, including the *ṭirāz* (government workshops). Flax, the cultivation of which was introduced by the Tūlūnids, became one of the main exports.

Many of the economic and urban achievements of the Fāṭimid period were diminished during the civil war that ravaged the country in 1062–1073, causing much damage to the capital, disrupting agricultural output, and reducing the population (possibly to under 2 million). In 1073, Badr al-Jamalī, a Muslim Armenian who was governor of Acre (mod. 'Akko, Israel) in Palestine, restored order in Egypt, establishing a hereditary military dictatorship of a series of viziers under the nominal rule of the Fāṭimid caliphs. However, Fāṭimid rule in Palestine and Syria collapsed in the course of the Saljūq invasion of this region. Nonetheless, Badr repelled the invasion of Egypt by the Saljūq chieftain Atsiz ibn Uwaq (1077) and inaugurated a campaign aiming at the reconquest of Palestine from the Saljūqs, which was continued by his son al-Afḍal (vizier 1094–1121). At the time of the First Crusade (1096–1099), southern and central Palestine, including Jerusalem, was held by the Fāṭimids. However, largely because of internal problems, the Fāṭimid response to the First Crusade by al-Afḍal was hesitant. Fāṭimid forces were unable to hold Jerusalem, and major invasions of Palestine launched by al-Afḍal were defeated by the Franks in 1099, 1101, 1102, and 1105. By 1125 the coast of Palestine had been lost, with only the port of Ascalon (mod. Tel Ashqelon, Israel) remaining as an Egyptian enclave until its capture by the Franks in 1153.

During the rule of Badr al-Jamalī and al-Afḍal, the immigration of Christian Armenians into Egypt was encouraged, and they were integrated into the large multi-ethnic Fāṭimid army. Their presence in Egypt (which included the short rule of the Armenian general Bahrām as vizier in the mid-1130s) continued until the rise to power of Saladin in 1169.

In 1107 al-Afḍal tried to reform the *iqṭā'* system (fiscal rights given to emirs over rural areas in exchange of military service). By the twelfth century, regiments of the Fāṭimid

Crusaders disembark from their ships in Egypt. (Bettmann/Corbis)

army were paid in cash by the treasury, but the *iqṭāʿ* system also spread as a means for paying the army. Emirs who were recipients of *iqṭāʿ* tended to be present in areas assigned to them at harvest time in order to secure their fiscal rights, and they also tended to develop local power bases. The rule of Badr al-Jamālī and al-Afḍal saw a relatively speedy economic and urban restoration of Fustat and Cairo, but the political heritage of Badr al-Jamālī's military rule cast its shadow over the Fāṭimid polity, bringing the country into the dubious position of the "sick man on the Nile": economically rich, but politically and militarily weak, and coveted by its more powerful neighbors. Thus, in 1164–1169 the forces of Nūr al-Dīn of Damascus and King Amalric of Jerusalem fought each other on Egyptian soil. The invading Franks were well informed about the agricultural potential of Egypt, having a

list of Egyptian villages and the incomes derived from them. However, Nūr al-Dīn's forces emerged victorious, and Saladin became Fāṭimid vizier. In the course of these events, large sections of Fustat were burned down, and Saladin's assault against the Fāṭimid army in Cairo brought destruction to parts of the town. From 1169 to 1171 Saladin undermined and finally toppled the Fāṭimid regime, deposing the caliph, al-ʿĀḍid. He ruled the country in the name of Nūr al-Dīn, but on Nūr al-Dīn's death (1174) Saladin embarked on a war for control of his possessions.

The Ayyūbid Period

In 1176, Saladin began to build a citadel on high ground overlooking Cairo, probably as a response to the Frankish invasion and siege of 1169. He also intended to surround

Minarets and domes of the Sultan Hasan and al-Rifa'i mosques, Cairo, Egypt. (Jose Fuste Raga/Corbis)

Cairo and Fustat with a wall; the encirclement of the capital was left unfinished, but the construction of the citadel was accomplished by his successor Sultan al-Kāmil, who moved the court there in 1208. Further expansion of the citadel took place in the second half of the thirteenth century under the Mamlūk sultans. Under Saladin the involvement of Egypt in the wars against the Franks intensified greatly, beginning with his disastrous failure at the battle of Montgisard (November 1177) and continuing until his death in 1193. A further problem which first emerged during Saladin's rule was the defense of the Egyptian coastal towns. Damietta (mod. Dumyât) was attacked by Byzantium and the Franks of Jerusalem in 1169, and Alexandria was attacked by the

Normans of Sicily in 1174. The armies of the Fifth Crusade (1217–1221) conquered Damietta in November 1219, but evacuated Egypt in August 1221. Damietta was captured again in June 1249 by the forces of Louis IX of France, but his crusade ended with the defeat of his army and his own captivity at the battle of Mansurah (February 1250). The greatest impact of the crusades on Egypt was the decline of its Mediterranean coast (with the exception of Alexandria). Economically this was a very important region; the towns of Farama (ancient Pelusium), Tinnis (on Lake Manzala), and Damietta, as well as some villages in the region, were prosperous centers of a textile industry, and the towns also played a role in Mediterranean trade. Tinnis was aban-

Mamlūk minarets tower above the Fāṭimid courtyard at the Al-Azhar Mosque in Cairo, founded in 972. (Angelo Hornak/Corbis)

done in 1190 and destroyed in 1227 on the orders of Sultan al-Kāmil, but Egypt's Mediterranean and Indian trade were not affected by such developments, and Italian and Byzantine traders continued to frequent Alexandria as they had done in the eleventh and twelfth centuries.

In contrast to Saladin's achievements in the holy war against the Franks, his Ayyūbid successors adopted an attitude of *realpolitik* toward them. Their policy of appeasement was a result of military weakness and internal struggles among the members of the Ayyūbid dynasty. The Ayyūbid armies mustered from Egypt were small, in the range of 8,000–12,000 troops (all cavalry forces), and the *iqṭā'* became almost the sole means of paying the army. A shortage of gold was a further problem, and consequently the

weight of Ayyūbid dinars fell below the standard, while the silver content of dirhams varied considerably. To what extent the famine of 1200–1202 had any long-term demographic and agricultural consequences is difficult to assess. It was probably as severe as that of 1024–1025, but such events usually had only short-term effects.

The Mamlūk Period

The collapse of Ayyūbid rule in Egypt was one of the outcomes of the first Crusade of King Louis IX of France (1248–1254). The sultan al-Ṣāliḥ Najm al-Dīn died during the fighting, and his son, Tūrān Shāh, failed to win the confidence of the *mamlūks* (slave soldiers) of the Bahriyya corps. This led to their assassination of Tūrān Shāh in 1250, after which Shajar al-Durr, the widow of al-Ṣāliḥ Najm al-Dīn, ruled for several months in her own name, with the title "Queen of the Muslims." The political involvement of women behind the scenes was common and widespread, but the public exercise of political power by a woman was a rare occurrence in medieval Islam. In light of the circumstances in which she gained power and the continuing struggle against the crusade of Louis IX, her independent rule had little chance of success. The tumultuous decade of 1250–1260 saw the defeat of Louis IX (1250), the assassination of Shajar al-Durr in 1257, the escape of most of the Bahriyya corps to Ayyūbid Damascus, and the rise of the *mamlūk* Qūṭuz to the sultanate (1259). After the fall of Baghdad to the Mongols in 1258, however, the Mongol threat cast its shadow over Mamlūk politics. In March 1260 the Mongols seized Damascus, facilitating a reconciliation between Qūṭuz and the Bahriyya, led by Baybars. The execution of Mongol emissaries to Cairo put the two powers on a collision course. Qūṭuz and Baybars led the Mamlūk army into Palestine to face the Mongols, thus creating a dilemma for the Franks as to what policy they should adopt; eventually they declared neutrality, allowing free movement to the Mamlūk force that, on 3 September 1260, engaged the Mongols at 'Ayn Jālūt in the Jezreel Valley, where they achieved a decisive victory. The reconciliation of Qūṭuz and Baybars did not last long; on 24 October Qūṭuz was killed in a plot led by Baybars, who then claimed the throne.

The reign of Baybars I (1260–1277) saw the consolidation of Mamlūk power in Egypt and Syria and vigorous campaigns against Mongols and Franks. In the 1265 campaign, the Palestinian coastal towns of Arsuf, Caesarea, and Haifa were captured and razed, and it became policy to destroy the

coastal towns in order to prevent any future crusade from obtaining a fortified foothold on the coast. Jaffa (mod. Tel Aviv-Yafo, Israel), taken in 1268, was also demolished, but the inland towns and fortresses of Palestine were rebuilt and populated: these included the town of Saphet (mod. Zefat, Israel), captured in 1266, and the castle of Beaufort, captured in 1268. In Syria Baybars's greatest achievement was the conquest of Antioch (mod. Antakya, Turkey) in 1268 and several fortresses (1271), including Krak des Chevaliers and Hisn 'Akkar. The Frankish states posed no direct threat to Egypt, but Baybars's motives were more complex and wide-ranging. The continued presence of the Franks in the coastal towns offered potential bases for new crusades, and Baybars feared cooperation between the Franks and the Mongols. Finally, territorial gains were important, as they enlarged the power base of the sultan, increasing his ability to reward his confidants and cement new internal political alliances by bestowing land as *iqṭā'* and freeholdings.

Pressure against the Franks was maintained by the sultans of the Qalāwūnid family. The founder of the dynasty, Maṣṣūr Qalāwūn (1279–1290), conquered Tripoli (mod. Trāblous, Lebanon) in 1289, and his son Ashraf Khalīl captured Acre in 1291. Both towns were razed, but Tripoli was rebuilt inland some distance from the sea. The fall of Acre sealed the fate of the other coastal towns of Lebanon—Tyre, Sidon, Beirut, and the fortress of Athlith—bringing the era of Frankish rule to an end. Contrary to what might have been expected, the war waged by the Mamlūk sultans on the Franks had no direct consequences for the Copts in Egypt, and the decisive period in the Islamization of Egypt occurred between 1293 and 1354. The Mamlūk regime eventually yielded to persistent pressure from the Muslim masses (especially in Cairo) and the clerics, who produced a substantial body of anti-Christian writings. The Mamlūk rulers forced conversion on the Copts employed in the administration and allowed the destruction of churches and monasteries. This period saw the reduction of the Copts to a small minority in Egypt.

One of the most crucial events of the Mamlūk period was the Black Death of 1347–1348. Its consequences were compounded by the recurrence of plagues, including the fatal pneumonic form, during the fourteenth and fifteenth centuries. Demographic recovery was seriously hindered, and the country remained underpopulated. Demographic decline had long-term consequences on rural output, as well as demand and production in the towns, while mortality

among the Mamlūk soldiers led to the expensive need to replenish their ranks. Shrinking state revenues caused the Mamlūks to adopt harmful economic policies, involving overtaxation and the imposition of trade monopolies. These led to considerable damage to local merchants, including those involved in the Indian trade, and also caused discontent among the Mamlūks' European trading partners. In 1517, the Ottomans conquered an impoverished country that had been badly governed for a long period.

Ehrentisch

The *Ehrentisch* (Table of Honor) was a ceremonial institution developed by the Teutonic Order in Prussia as a means of honoring selected Western knights who participated in its campaigns against the pagan Lithuanians. It was probably established around 1350, possibly during the grand mastership of Winrich von Kniprode (1352–1382).

The *Ehrentisch* was hosted by the grand master, and

Ekkehard of Aura

organized by the order's marshal, who sometimes also deputized for the grand master. Usually the ceremony was held in Königsberg (mod. Kaliningrad, Russia) before a campaign started, but in exceptional cases it might also be held in other places during or after campaigns. The last known *Ehrentisch* took place in 1400; it cannot be verified whether a few later announcements actually led to events.

Only knights who had come to Prussia to fight against the Lithuanians at their own expense were eligible to sit at the *Ehrentisch*. A small number of them, usually ten to fourteen, were chosen by heralds who had seen them at venues of chivalric warfare, important tournaments, or famous destinations of pilgrimage (especially the Holy Land, Spain, or Rome). These distinguished knights were placed at a special table and ranked according to their chivalric achievements (in contrast to the Arthurian Round Table). They were specially served during the meal and received shoulder badges on which the motto "Honor conquers all" was written in golden letters.

The few participants known by name mostly came from the lesser nobility. The other "guests" of the order who had come at their own expense attended the meal at ordinary tables; those who served for payment were excluded from the event. The Prussian *Ehrentisch* added luster to the order's campaigns and increased the fame of the participants. It was well known throughout Europe: when the English poet Geoffrey Chaucer listed the exploits of his exemplary warrior in the Prologue to the *Canterbury Tales*, he included the fact that the knight had often begun the "board" (i.e., sat in the seat of honor) in Prussia.

Ekkehard of Aura

Benedictine monk; author of a chronicle that describes the First Crusade (1096–1099) and the Crusade of 1101, as well as other contemporary events.

Born around 1050, Ekkehard became a monk at the monastery of St. Michael in Bamberg. He participated in the

Crusade of 1101, probably returning to Rome by April 1102, and subsequently became abbot of the monastery of Aura (Bavaria). Ekkehard's *Chronicon Universale* was written between 1103 and 1125 in three stages. The earliest version (1103–1106) was based upon the universal chronicle of Frutolf, a priest of St. Michael at Bamberg. Ekkehard subsequently revised Frutolf's chronicle and then made two substantial additions, the first being a continuation for the years 1106–1116 and the second taking the chronicle up to the death of Emperor Henry V in 1125. Ekkehard died sometime after 1125.

Eleanor of Aquitaine (c. 1122–1204)

Duchess of Aquitaine (1137–1204) and participant in the Second Crusade (1147–1149).

The heiress to the vast lands of William X, duke of Aquitaine, Eleanor married Louis VII of France a few days before his accession. She accompanied the king on the ill-fated crusade but sided with her uncle Raymond of Poitiers, prince of Antioch, in a dispute over campaign strategy in Outremer. Disillusioned with marriage to the austere Louis and a willing pawn in her uncle's intrigues, she had to be forced to accompany the king to Tripoli, to the lasting damage of her reputation.

The birth of a second daughter (rather than the hoped-for male heir) in 1149 or 1150 ensured that the by now acrimonious marriage ended in annulment in 1152. She swiftly married Henry Plantagenet, count of Anjou (the future Henry II of England), by whom she had five sons and three daughters. Her support of her sons' revolt in 1173 led to many years' imprisonment. She played an important political role during the reigns of her favorite son, the crusader Richard the Lionheart, and his brother John. She was buried at the abbey of Fontevraud.

Elisabeth of Thuringia (1207–1231)

The second patron saint of the Teutonic Order (after the Virgin Mary).

Elisabeth was the daughter of Andrew II, king of Hungary, and Gertrude of Andechs-Meran. In 1211 she was sent to Thuringia as the fiancée of Ludwig, son of Landgrave Hermann I of Thuringia, and was married to him in 1221. Ludwig joined the crusade of Emperor Frederick II, but fell ill and died in Otranto (1227). After his death, Elisabeth settled in Marburg, where she founded a hospital, dedicated to St. Francis, caring for the poor and the needy. She intensified her charitable activity under the influence of her confessor, Konrad von Marburg (c. 1180–1233). Soon after her premature death (1231), on the initiative of Konrad and her own brother-in-law, Count Konrad (d. 1240), a member of the Teutonic Order, she was canonized (1235). Due to the close ties between the ruling dynasty of Thuringia and the Teutonic Order, Elisabeth's cult, rooted in the veneration of her shrine in Marburg, became important in the order's life and liturgy. Many conventual churches and hospitals were dedicated to her, and her feast day (19 November) and translation were celebrated, the latter exclusively by the order.

Embriaci Family

The Embriaci (Embriachi) were a Genoese noble family that probably around 1125 moved to Syria, entered the ranks of the Frankish nobility of Outremer, and established at Gibelet (mod. Jubail, Lebanon) one of the most powerful lordships in the county of Tripoli.

It is unlikely that William Embriacus (also known as William Caputmallei), who commanded the large fleet sent by the commune of Genoa to the East in the summer of 1100, was a member of this family; he thus cannot be considered as the ancestor of the later lords of Gibelet. The material basis for the later position of the Embriaci among the aristocracy of Outremer was established by William I Embriaco and his brother Nicholas, who around 1125 leased the entire property of the commune of Genoa within the principality of Antioch and the county of Tripoli.

Since neither William I nor his nephew Oberto had direct heirs, the entire inheritance passed to Nicolas's son Hugo I and his descendants: William II, Hugo II, and Nicholas II. William II succeeded his father around 1135, and in addition to the Genoese quarter of Laodikeia in Syria, he controlled the entire town of Gibelet, which had belonged to Genoa since 1109. By 1142 at the latest, William II became a vassal of the count of Tripoli, but continued to fulfill his obligations as lessor to Genoa.

William II and his brothers were able to avoid relinquishing their holdings on the expiry of the contract of lease (1145). A few years later (1154), in exchange for a large advance payment, the three brothers William II, Hugo II, and Nicholas II secured for themselves for twenty-nine years the use of all Genoa's possessions and rights in Outremer, that is to say, in Antioch (mod. Antakya, Turkey), Laodikeia in Syria (mod. Al-Lathqiyah, Syria), Gibelet, and now, additionally, in Acre (mod. 'Akko, Israel). They refused to consent to Genoa's attempts to abrogate this lease

Emicho of Flonheim

(1155), and when it expired in 1183, Genoa was no longer able to reassert its rights.

In contrast to his brothers, William II not only became a member of the Frankish nobility, but the ancestor of several lines of the Embriaco family. His son and successor Hugo II (1162/1163–1179) unilaterally brought about a complete separation from Genoa by terminating the lease payments, and he restricted his connections with the republic to concessions for Genoese trade in the district of Gibelet. The Embriaci concluded marriage alliances with many leading families in the Latin East, not least with the princely dynasty of Antioch. Their advocacy of the rights of the Staufen family, namely the claims to the throne of Jerusalem by Emperor Frederick II and his grandson Conradin, set them at odds with the anti-Staufen party among the magnates, including their own lords, the counts of Tripoli. The Embriaci intervention on the side of Genoa during the War of St. Sabas intensified the tension between them and the counts of Tripoli, which climaxed in an unsuccessful rebellion by the last lord of Gibelet against Count Bohemund VII, and the death of the rebels.

The memory of the Genoese roots of the Embriaci was still significant in 1289 when a member of the family acted as spokesman of the newly established commune of Tripoli, asking Genoa for help against the heiress of Tripoli and her regent, and also playing a decisive role in concluding a treaty with the Genoese admiral Benedetto Zaccaria. The Embriaci survived the capture of Gibelet by the Mamlūks (1289); they emigrated to Cyprus, where a branch of the family had settled shortly after the Third Crusade (1189–1192), and to which one of the murderers of King Peter I of Cyprus (1369) belonged.

Emicho of Flonheim

The leader of one of the People's Crusades of 1096. Emicho was long identified in scholarship as one of the counts of Leiningen, but was in fact count of Flonheim on the middle Rhine.

In spring 1096, Emicho emerged as leader of crusaders from this region and led them to the city of Mainz with the aim of attacking its Jewish population. After his force was joined by newly arrived crusaders from France, the townspeople opened the gates, and the crusaders slaughtered almost all the Jews of the city, who had taken refuge with the archbishop, Ruthard II (27 May 1096). Emicho's army then marched to Hungary, but was refused passage by King Coloman and proceeded to besiege the frontier town of Wieselburg (June 1096). After a six-week siege the crusaders were repulsed and routed by the Hungarians. Emicho made his way back to Germany, while some survivors from his army joined other crusading expeditions.

England

The kingdom of England did not show the same level of commitment to the crusading cause as France, but it was nevertheless a major contributor to the crusading movement. One

reigning and one future king went on crusade to the Holy Land, several others took the cross, and there was some English participation in almost every significant crusading expedition from 1096 to 1291, as well as considerable English interest in the later crusading movement. England was affected by the crusades in many of the same ways as the continental lands, such as in the development of crusade taxation and the foundation of houses of the military orders.

English Involvement in Crusade Expeditions

Some Anglo-Norman nobles participated in the First Crusade (1096–1099) together with Robert Curthose, duke of Normandy, the brother of King William I. These lords may not have been English as such, but they included men with strong landed connections with England. However, the main areas of recruitment for the crusade were France, the Low Countries, and Norman Italy. Englishmen were recorded among the nationalities involved in the army of Peter the Hermit, but there is no independent evidence to support this.

Recruitment for the Second Crusade (1147–1149) was concentrated in France and Germany. However, there was significant English participation in the expedition to Lisbon in 1147. Crusaders from the port towns of southern and eastern England joined their counterparts from Flanders and Germany in a seaborne expedition, and all of them were persuaded by Afonso I Henriques, the king of Portugal, to join in his siege of Lisbon en route to the Mediterranean. One of these Englishmen wrote an account of the siege, known as the *De Expugnatione Lyxbonensi*. The subsequent capture of the city was to prove the most significant achievement of the whole crusade. At a more exalted level of the social spectrum, a number of English lords joined the main expedition to the Holy Land, notably Waleran of Meulan, earl of Worcester, and Roger Clinton, bishop of Chester.

A number of Anglo-Norman lords took part in the crusade of Philip, count of Flanders, in 1177. Their participation in this and other expeditions led by foreign rulers is an indication of the close ties that existed between the English nobility and that of the continent, as well as of the international nature of crusading. The presence of Englishmen on this expedition was also a result of King Henry II's suspicions of Count Philip's motives. Fearing that Philip might attempt to claim the throne of Jerusalem, which Henry possibly hoped to gain for himself, the English king sent William of Mandeville to keep an eye on him. Henry II himself never went on crusade, despite repeatedly promising to do so, but

he did provide funds for the defense of the Holy Land, and initiated the first taxes for that purpose.

Most later crusades to the Holy Land involved significant English participation, even though the commitment shown by English kings was inconsistent. The most celebrated English crusader was Richard I the Lionheart, who led a contingent on the Third Crusade (1189–1192), in the course of which he distinguished himself by his abilities as a commander, though less so as a diplomat. The crusade was a collaborative venture with Frederick I, Holy Roman Emperor, and Philip II Augustus, king of France. However, Richard emerged as the effective leader of the whole expedition, as Frederick drowned in 1190 en route to the Holy Land, leading to most of the German army returning home, while Philip proved himself to be an unenthusiastic crusader, returning to France early in the course of the expedition. Although Richard's contingent included many Anglo-Norman lords, it also drew heavily on the Angevin lands in France, especially Richard's county of Poitou. Richard's contribution to the crusade was important in reestablishing a viable crusader presence in Outremer for a further century, but in England itself, which he visited rarely, his significance was that he gave his kingdom its great crusader hero, against whom his successors would have to measure themselves.

The rather chaotic Fifth Crusade (1217–1221) included a significant English element, led by Ranulf, earl of Chester, whose presence at Damietta was recorded alongside that of other English lords. Many English crusaders were reported in the Holy Land during the crusade of 1227, including two English bishops, Peter des Roches, bishop of Salisbury (who was actually a Poitevin) and William Brewer, bishop of Exeter. The later thirteenth century saw considerable interest in the crusades from the Plantagenet rulers of England. King Henry III vowed to go on crusade on three separate occasions, but was either unwilling or unable to redeem his vow. His brother Richard of Cornwall and Simon of Montfort, earl of Leicester, led crusading parties in 1240. William Longsword, earl of Salisbury, led an English contingent of 200 knights on the crusade of Louis IX of France to Egypt (1248–1254), where he was killed at the battle of Mansurah (mod. El-Mansûra) in 1250. Henry III's eldest son, the Lord Edward (the future King Edward I), led an important English contingent on the crusade of 1270–1274, thereby renewing the crusading tradition of his great-uncle Richard I. Having intended to join forces with Louis IX, the English

crusaders proceeded to Acre after the death of the French king in Tunis. Otho of Grandison, a Gascon associate of Edward I, led an English contingent to the East in the last months of the Frankish presence in the Holy Land (1290–1291).

When it came to crusading overseas, however, the English of the High Middle Ages showed little interest in crusading outside the traditional theater of the Levant. There was no English involvement in the Albigensian Crusade (1209–1229) and little interest in crusading in the Baltic region or Greece. In 1239, Richard of Cornwall and his fellow English crusaders vowed not to be diverted from the aim of going to the Holy Land in order to shed Christian blood in Greece or Italy, a reference to the papacy's desire to recruit men to defend the Frankish states in Greece or to wage war against Emperor Frederick II. The fear that the crusade against the Muslims was being diverted by papal political ambitions in the Mediterranean was also an important element of the baronial criticism of Henry III's "Sicilian Business," a papal plan to oust the Staufeu dynasty from Italy in 1258.

In the later Middle Ages, crusading activity continued to be a feature of English life, despite the loss of the last Christian lands in the Holy Land. The fall of Acre (mod. 'Akko, Israel) to the Mamlūks in 1291 did not represent the end of crusading activity in the minds of contemporaries. The crusade was preached, and crusading taxes were raised, both in the immediate aftermath of the loss of Acre, and into the first two decades of the fourteenth century. As king, Edward I repeatedly promised to go on crusade, but was diverted by more pressing issues closer to home. The French writer Pierre Dubois dedicated his *De Recuperatione Terre Sancte* (one of a number of treatises of the period that presented schemes for the reconquest of the Holy Land) to Edward in 1306.

Crusades against the Baltic pagans became increasingly popular among knights and noblemen in the fourteenth century, notably Henry Bolingbroke (the future King Henry IV). Englishmen were also involved in crusading activities against Muslim powers in the Mediterranean, such as the sack of Alexandria in 1365. The poet Geoffrey Chaucer, in the *Canterbury Tales*, described a knight who had fought in the Baltic and the Mediterranean, and paid tribute to King Peter I of Cyprus ("worthy Petro, kyng of Cypre": *Monk's Tale*, line 3188), who visited the English court attempting to recruit soldiers for his crusading expeditions. King Richard II

(1377–1399) was an enthusiast for an Anglo-French crusade against the Ottoman Turks, although in the event there was little English participation in the disastrous French-led crusade to Nikopolis in Bulgaria in 1396. The French crusader Philippe de Mézières was influential at Richard's court, and he established the knightly Order of the Passion, dedicated to the recovery of the Holy Land. Fourteenth-century writers also remembered past crusading heroes, whom they celebrated in vernacular poems and songs, such as *Richard Coeur de Lion* and *Guillaume Longespee*.

The Hundred Years' War against France, and associated conflicts, gave rise to some political crusades in Richard's reign, as the schism between the popes at Rome (backed by England) and Avignon (backed by France) allowed a crusading veneer to be applied to these struggles. Henry Despenser, bishop of Norwich, led an unsuccessful "crusade" to Flanders in 1383, and John of Gaunt's expedition to Portugal and Castile in 1386–1387 was also dignified with crusade status. In addition, the war against France as a whole had something of a crusading aura about it, with the English church organizing prayers for the king's success in battle, and French resistance in 1429 crystallizing around the religious figure of Joan of Arc.

Crusading and Domestic Politics

In general, the pilgrimage element of crusading gave way in later years to the broader concept of a war fought under papal auspices against those deemed to be enemies of the church. In this form, the crusade had some bearing on domestic politics in England in the thirteenth century. In the civil wars of the thirteenth century, the combatants frequently sought to portray themselves as crusaders. After King John turned England into a fief of the papacy in 1213, he was able to invoke papal aid against rebels, for example, by having Magna Carta declared void. His son Henry III was taken under papal protection, and took a crusade vow at the beginning of his reign, so the war of his supporters against baronial rebels and their French allies was declared a crusade. Henry's troops were dubbed a *militia Christi* (knight-hood of Christ) and took the cross before the battle of Lincoln in 1217. Despite this, however, many of these warriors chose to go to Egypt as part of the Fifth Crusade, suggesting that, despite having legally fought a crusade in England, they still felt the desire to take part in an expedition to the East.

The civil war of 1264–1265 between Henry III and the reformers led by Simon of Montfort saw crusade imagery

and propaganda used by both sides. The baronial opposition of 1258 included among their grievances the complaint that Henry's involvement in the "Sicilian Business" was impeding crusade plans. Both sides claimed to be waging a crusade, with Montfortian forces wearing crosses at the battle of Lewes in 1264, and royalist forces wearing them at the decisive battle of Evesham the following year. Montfort was revered by his supporters as a martyr after his death at Evesham, a view of him that was boosted by his record as a crusader and his role in his partisans' eyes as a *miles Christi* (knight of Christ) in the civil war. Both these periods of civil war were followed by recruitment to the crusade, although with rather different results. Whereas the papal legate Guala used recruitment to the Fifth Crusade as a means of uniting the rival factions, the Crusade of the Lord Edward (1270–1272) drew its personnel largely from former royalists who had formed links with Edward in the course of the struggle against Montfort.

There were often crusading overtones to wars between England and her neighbors; Henry II's overlordship of Ireland in the twelfth century was sanctioned by a papal bull, and the Scots' resistance to Edward I was bolstered by the backing of the Scottish clergy. Crusading rhetoric was used on both sides of the struggle between England and Scotland. Edward I's forces invaded Scotland in 1300 under a banner of the Holy Cross, and the English later claimed that the "rebellion" of Robert Bruce was hampering preparations for a crusade. In the Declaration of Arbroath addressed to Pope John XXII in 1320, the Scots asserted that their cause was a holy one, and that the delay in crusade proceedings was the fault of the English for making war on their neighbors.

The crusades had a disastrous impact on the Jews of England, as was also the case on the continent. The preaching of the crusade in 1189–1190 was accompanied by a series of violent attacks on the Jews in the eastern half of the country, notably in York, Stamford, and Lincoln. At a more general level, the crusading movement, creating as it did a violent Christian self-identity, contributed to a hardening of attitudes against the Jews, culminating in their expulsion from England in 1290.

Military Orders

The establishment of military orders for the defense of the Holy Land led to the establishment of houses of the orders of the Hospital and Temple. Individual houses were often founded or endowed by crusaders, such as Roger de Mow-

bray, founder of the Templar preceptory of Balsall. Templar activity in England can be dated to the very beginnings of the order, when Hugh of Payns, the Templars' founder, visited England in 1128, and the Temple of London was founded shortly thereafter. The English Templars were organized into the Province of England, with its headquarters at the London Temple, the oldest and greatest of the Templar houses in England. The Hospitallers for their part came under the Priory of England, with its headquarters at Clerkenwell. Each order was governed by a master at provincial or priory level, while at a local level, each house was headed by a commander (Lat. *preceptor*). Many Englishmen joined the military orders, or helped them by providing them with money and land. While their houses in the Holy Land played a military role, those in Europe were responsible for the recruitment and supply of knights. Donations of land or money to the military orders were a way for noncrusaders to contribute directly or indirectly to the defence of Outremer. The London Temple played an important role as the place for collection and safekeeping of funds intended for the crusade. The lesser military Order of St. Lazarus, established to give succor to leprous knights, was also present in England, with its chief house at Burton Lazars in Leicestershire. The Order of St. Thomas of Acre, founded during the Third Crusade, was the one distinctively English contribution to the military orders. Named in honor of St. Thomas Becket, archbishop of Canterbury, some sources attribute its foundation to King Richard I. It was dissolved by Henry VIII in 1538. In addition, the nonmilitary Order of Canons of the Holy Sepulchre was another reminder in England of the existence of the Holy Places. The Templars were suppressed in England, as elsewhere, on trumped-up charges of heresy in 1312, after which their English possessions passed to the Hospitallers. King Edward II at first resisted the order's suppression, expressing disbelief at the charges leveled against them, before acquiescing after the order had been dissolved by papal bull.

Participation and Finance

Englishmen were kept informed of events in Outremer by the presence of houses of the military orders, by regular newsletters (usually appealing for support) that arrived from Outremer, by visits to the kingdom of representatives of Outremer such as that of Eraclius, patriarch of Jerusalem, in 1185, as well as by direct preaching of the crusade. Appeals to aid the Christians of Outremer were often made on feast days associated with the Holy Cross, as was the case with the

coordinated preaching campaign launched by Archbishop Romeyn of York throughout his archdiocese on 14 September (the Feast of the Holy Cross) 1291. Preaching could serve wider purposes; the famous preaching campaign of Archbishop Baldwin of Canterbury through Wales in 1188, which was recorded by the chronicler Gerald of Wales (*Giraldus Cambrensis*), was in some ways a political mission to emphasize the authority of the see of Canterbury over Wales.

Recruitment tended to follow lines of noble patronage and association, such as tenure, vassalage, kinship, or geographical proximity. The English contingent on the Fifth Crusade, for example, was grouped in part around Ranulf, earl of Chester, and his followers. Participants in the Lord Edward's crusade were drawn almost exclusively from his own supporters in the Montfortian civil war, while the presence of a large contingent of "Northern" crusaders demonstrates the importance of local loyalties and ties in determining crusade participation. Such links might also be supplemented (or where absent, replaced) by oaths of sworn association or written contracts. The Lord Edward's Crusade of 1270–1272 was organized by binding contracts, both between Edward and Louis IX of France, and between Edward and his barons.

Participation in the crusades was unsurprisingly concentrated among the military landowning classes, but not exclusively so. The Lisbon crusaders of 1147 were drawn from the townspeople of the ports of southern and eastern England. Records of inquiries into the fulfillment of vows in Cornwall and Lincolnshire in the 1190s show evidence for the involvement of the lower classes in crusading (although it is true that these records by their nature tend to reveal high levels of nonfulfillment of the crusading vow). Even the lowliest were involved in the crusading movement, with evidence of serfs taking the cross in order to gain manumission or as proxies for their lords.

Women, too, were engaged in the crusading movement. At the highest level in society, Eleanor of Castile, wife of the Lord Edward and future queen of England, accompanied her husband on crusade in 1272–1274. But many other women were involved in the crusade as well, a reminder that the institution had its origins in pilgrimage, an activity in which all classes and both sexes participated. Some women became involved in crusades involuntarily, as in the case of Margaret of Beverley, who found herself caught up in Saladin's invasion of 1187 and the defense of Jerusalem against his army.

The development of fund-raising methods reflected the

general evolution of the crusade as an institution, with the emphasis of preaching shifting in the course of the thirteenth century from recruitment to fund-raising through the commutation of vows in return for monetary payment. For example, the success of preaching in the archdiocese of York in 1275 was measured in a list of those who had taken and then redeemed vows, and the sums of money they had paid to do so. In addition to vow redemptions, money was raised through the collection of alms, or through money bequeathed in wills. Kings (such as Henry II) and noblemen who had been unable in life to go on crusade frequently supported the cause after death in this manner.

The most significant form of fund-raising, both in terms of the sums raised and the long-term impact, was taxation. The relatively centralized nature of the Anglo-Norman state meant that taxation was more extensive and systematic than in other polities. The first crusade tax was levied in 1166, but the Saladin Tithe of 1188 was a more significant landmark, with sophisticated arrangements for its promulgation and collection. The crusade tax became a feature of the English fiscal landscape into the fourteenth century, and was an important stage in the evolution of royal taxation and a state bureaucracy. Changes in fund-raising reflected changes in the financing of the crusade. By the thirteenth century, the crusade was very much centrally financed, with crusade funds allocated not to individual crusaders, but to the crusade leader (usually a royal figure), who subsequently drew up contracts with his followers, who were paid out of the central funds. This model was followed on the crusade of the Lord Edward, who contracted eighteen barons to supply 225 knights.

The need for crusaders to raise money by mortgaging land helped the development of a land-market and money economy, while the levying of taxes to finance crusade expeditions helped the development of government infrastructure. Harder to quantify is the impact the crusades had in broadening the horizons of those who took part, opening their consciousness to the existence of a wider world, and encouraging an awareness in the minds of Western Christians of their being part of a wider Christian community, and of the physical existence of the Holy Places. The impact of these developments long outlasted the crusade movement itself.

English and Scots Literature

Literature with crusading themes in Middle English and Middle Scots consists of more than fifty texts dating from approximately 1225 to 1500. They were meant to be performed to an audience rather than read, serving to entertain their courtly patrons but also functioning as a means of

propagating a political and religious identity, delineating the differences between the Christian "us" and the non-Christian "other." The corpus, comprising romances, a travelogue (*Mandeville's Travels*), poems (e.g., William Langland's *Piers Plowman* and Gower's *Confessio Amantis*), the *Hereford Map*, and texts by Geoffrey Chaucer, gives insight into how literature functioned as both reflection and stimulus of the views held by medieval courtly society. The texts, many of which were written after crusading fervor had already diminished, highlight the ongoing interest in the topic. They depict a victorious chivalric Christendom, superior on the grounds of belief, projecting a European/Christian image and identity on the medieval world stage and, though with some exceptions, in general promoting the concept that the spiritual and moral high ground is held by crusading Christian armies.

The texts are mainly of French origin, being either translated from or based on popular French originals and then adapted by individual authors to highlight certain areas of interest for author and audience. Thus some romances not only describe Saracens and crusading, but use the opportunity to criticize the domestic and foreign political situation (*Guy of Warwick*) through the portrayal of Saracen leaders. One of the characteristics common to these works, which clearly emphasizes the entertainment factor, is the use of popular motifs: chivalrous Christian knights seeking adventure and fighting awesome Saracen giants and ogres or romances like the Scots *Taill of Rauf Coilyear*, which uses the popular motif of a king (Charlemagne) traveling around in disguise.

The dates of composition are all later than the events they describe. Thus *Richard Coer de Lion*, dated to soon after 1300, was composed over 100 years after the Third Crusade (1189–1192). Similarly, the texts in the Charlemagne cycle all date from after 1300 (e.g., *Otuel*, *Roland and Vernagu* from around 1330, and, the last, *Charles the Grete*, as late as 1485), yet they all focus on the figure of Charlemagne, who died in 814, some 650 years earlier. Medieval literature relied heavily on the concept of authority. Thus in crusading literature legendary figures are endowed with military and moral authority. Charlemagne is portrayed as a role model for crusaders. In his time he was famed for his victories over the pagan Saxons and Vikings, and his religious fervor was marked by the forced conversions he had carried out, characteristics also found in crusading literature. Charles's argument of a just war against the unbelievers was revived in romance texts.

Definitions

In the early twelfth century, the chronicler William of Malmesbury defined the world as consisting of European Christendom and the non-believing Saracen world in the east; this division was later expressed by Geoffrey Chaucer in the terms *cristendom* and *hethenesse* [Chaucer, *General Prologue*, line 49]. In crusading literature the term *Saracen* is applied generically to all non-Christians, whether the texts refer to non-Christian Vikings (*King Horn*, *The Man of Law's Tale*, *Havelok the Dane*, or *Blaunchardyn and Eglantine*) or Arabs (*Richard Coer de Lion*, *Charles the Grete*). These heathens threaten Christians both physically, in the military sense, and spiritually, through possible forced conversion and religious intolerance. Saracens make up at least two-thirds of the known world: "Affryke and Assye," as opposed to "only" Europe (*Kyng Alisaunder*, line 43). Africa and Asia are seen as being vast, stretching from the borders of Europe to the "werldes ende" (*Kyng Alisaunder*, line 1912). Charlemagne complains that he cannot conquer countries in the East because they are so "large and wyde" (*The Sege of Melayne*, line 144). India, wealthy and rich in spices, is home to 9,000 different peoples (*Kyng Alisaunder*, lines 4832–4838) who all speak the same language (*Richard Coer de Lion*, line 6023). In *Sir Ferumbras* the armies of Balan and Bruyllant, 300,000 men, speak four different languages, "Persian, Torkeys, and Arrabyns & Affrycans al-so" (*Sir Ferumbras*, line 5433), while in Babel and Babylon they speak "Two and sixty diuers language" (*Kyng Alisaunder*, line 7791). Saracen armies reflect the huge populations of these countries, as the Saracen armies are described as being as thick as grass on the ground and Saracen reinforcements on the battlefield are unlimited. That the Christians are vastly outnumbered makes the inevitable Christian victories described in the texts all the more heroic. But as *Richard Coer de Lion* asserts, one Christian is worth fifteen Saracens.

The authors show both knowledge and ignorance concerning Saracen countries. Thus in *Kyng Alisaunder* eastern countries are dark and dragon-ridden, whereas they are correctly described in *Mandeville's Travels* as having dry deserts. In *Richard Coer de Lion* conditions in the desert include rain and hail and snow that create five-foot snowdrifts, all accompanied by thunder and lightning. In *Blaunchardyn and Eglantine* Prussia, a Saracen country, it is so hot that Blaunchardyn, a white, Christian knight, turns black. In general the description of the blackness of the Saracens is not seen as attributable to climate, but as the outward sign of evil

within: the Saracens have the color of the devil and come from "helle" (*Guy of Warwick*, book 2, 95:11). Descriptions of white Saracens in the texts mean that these have been earmarked by the author for later conversion to Christianity and are predestined to become members of the Christian courtly circle. *Kyng Alisaunder* describes exotic peoples according to the medieval *Physiologus*: for example, the Houndynges are like men from the chest down, but above the chest are like dogs; they bark like dogs, have shoulders like fish, and have claws like dogs. These descriptions and those of ugly Saracen giants can be traced to descriptions in classical sources, so that in the *Hereford Map* (c. 1300) it is possible to trace the monstrous peoples described to Ctesias of Cnidas, (fifth century B.C.) through the works of Solinus, *Collectanea rerum memorabilium* (third century B.C.).

Vikings who raided the coasts of the British Isles during the precrusade period are called Saracens in the texts. In *King Horn*, King Murry of the north of England finds "shipes fyftene, / of sarzynes kene" (*King Horn*, line 41) on his shores. After a battle with these Saracen Vikings, Murry and his two companions are killed, and the Saracens lay waste the land and forbid the Christian faith, so that Queen Gothild is forced to continue practicing her faith in secret, a fate similar to that suffered by Lady Hermengild in Northumberland in Chaucer's *Man of Law's Tale*, indicating the belief that Saracens were intolerant of the Christian faith. Historically the Vikings pursued a flourishing trade with the Arabs in the Mediterranean via the Baltic, Russian rivers and lakes, and the Black Sea, where they had direct connections to the ports of the Silk and Spice Roads. Many Vikings came to settle in these regions and thus also came to be called Saracens.
