Flanders, he led a French army against Flemish rebels and won a resounding victory at Cassel in August.

Throughout his reign, Philip VI had to maneuver among conflicting political groupings whose ability to cause him trouble was enhanced by the existence of other descendants of St. Louis who might claim the French throne. Philip IV the Fair, Louis X, and Philip V all had grandsons who were disqualified by the decision to exclude princes whose claims were through their mothers. Two of these, Edward III of England and the future Charles II of Navarre (r. 1349–87), presented malcontents with attractive alternatives to whom to give allegiance. To avoid alienating the count of Flanders and duke of Burgundy, Philip had to rule against his friend and cousin Robert of Artois in the disputed succession to Artois, and Robert then gave his allegiance to Edward III. When Philip ruled in favor of his nephew Charles de Blois in the disputed Breton succession (1341), the opposing claimant, Jean de Montfort, also turned to Edward. Many nobles of the north and west felt more closely tied to England than to the Valois, and they disliked Philip's queen, Jeanne of Burgundy. Perhaps because of her influence, Philip tended to distrust this important regional aristocracy and to draw a disproportionately large number of his advisers from regions like Auvergne and Burgundy.

Amid growing discontent in the north and west, Philip's relations with England steadily deteriorated. The two monarchies could not resolve differences over Aquitaine, and Philip supported Scottish opposition to Edward, while the latter built up an anti-Valois coalition in the Low Countries. In 1337, the Hundred Years' War began, with the first years marked by expensive preparations and little military action. Edward then defeated the French fleet at Sluys in 1340 and gained a valuable new fighting front the next year with the disputed succession in Brittany. Always short of money, Philip gave great power to the leaders of the Chambre des Comptes, whose aggressive fiscal measures did not produce the military success needed to offset the antagonism they caused.

In 1345, the military situation began to deteriorate seriously. The English victory at Auberoche that autumn secured important gains in Aquitaine. The next year, Edward III invaded Normandy, threatened Paris, and then crushed Philip's army at Crécy. In 1347, the English in Brittany won a major victory at La Roche-Derrien, while Philip could not save Calais from capitulating to Edward III in August.

At the end of 1347, the Estates General convened in Paris and demanded governmental reforms before endorsing plans for each region to raise large taxes to pay for an effective army. Before this initiative could achieve results, France began to be ravaged by the Black Death, which eventually claimed the lives of Philip's queen and daughter-in-law and left government and society in disarray. The plague also produced a lull in the war, but when he died in August 1350, Philip left behind many problems for his son and successor, John II the Good.

# PHILIP THE BOLD

(1342–1404). The first of the Valois dukes of Burgundy, Philip the Bold was the fourth son of King John II of France and Bonne de Luxembourg. Born at Pontoise on January 17, 1342, he fought beside his father at the age of fourteen and was captured with him at the Battle of Poitiers (1356). After he and the king secured release in 1360, he became, duke of Touraine, but he surrendered this duchy in 1363 when John II made him duke of Burgundy and first peer of France. In May 1364, the new king, Philip's brother Charles V, confirmed these titles.

After complex diplomatic maneuvering, Philip became an international figure with his marriage, in 1369, to Marguerite, daughter of the count of Flanders and heiress to five counties in northern and eastern France. The deaths of her grandmother (1382) and father (1384) brought these lands to her and Philip, but they needed military force to secure the most important of them, Flanders, which had been in rebellion since 1379. Marguerite also had a claim to the duchy of Brabant, and in 1385 she and Philip arranged the marriage of their son and daughter to members of the Wittelsbach family that ruled the counties of Hainaut, Holland, and Zeeland, thereby laying the foundations for a Burgundian state that eventually included most of the Low Countries.

Despite his expanding role in the Netherlands, Philip was above all the most powerful French prince of his generation. At the death of Charles V in 1380, he led a coalition that ousted from the regency his older brother Louis of Anjou, and he dominated the French government for the next eight years. He played an active diplomatic role in the Anglo-French war, the papal Schism, and imperial politics, and he secured the services of the French royal army to crush the Flemish rebels at Roosebeke in 1382 and to intimidate his enemy the duke of Guelders in 1388.

Philip supported his projects with vast sums drawn from the receipts of the French crown, as did his brother, John, duke of Berry. In the fall of 1388, Charles VI dismissed his uncles from the royal council at the urging of a reforming coalition of royal officials and military commanders, known as the Marmousets. Four years later, Charles VI's first attack of mental illness enabled the duke of Burgundy to regain his dominant position, which he held for another decade before gradually losing power at court to his nephew Louis of Orléans. He died near Brussels on April 27, 1404.

Besides establishing Burgundian power in the Netherlands, Philip the Bold began the tradition of lavish support for the arts by the Burgundian dukes. He also was the primary organizer of the abortive crusade of 1396 led by his eldest son, John, count of Nevers. His great achievements were to a large degree accomplished at the expense of the French taxpayers, but he gave his native land nearly twenty years of statesmanlike, if sometimes self-serving, leadership.

# PHILIP THE CHANCELLOR

(ca. 1160/85–ca. 1236). An influential theologian, a preacher of considerable stature, and an accomplished poet, Philip was born into ecclesiastical circles: he was the illegitimate son of Archdeacon Philip of Paris and was related through his father to Bishop Étienne of Noyon (d. 1211) and Bishop Pierre of Paris (d. 1218), both of whom favored Philip's career. After studying theology and law, he appears in the historical record no later than 1211 as archdeacon of Noyon.

As chancellor of the University of Paris, a position that he held from 1217, Philip had authority over the fledgling university. Philip's chancellorship came in an era of discontent and controversy, and in a combative move early in his tenure (1219) he excommunicated the masters and students—a move that Pope Honorius III ordered him to reverse. During the strike initiated in 1229, Philip sided with the pope and the university against William of Auvergne, bishop of Paris, and Blanche of Castile, regent during Louis IX's minority. The papal bull *Parens scientiarum* of Gregory IX ended the university strike in 1231. Not long after Philip's death, Henri d'Andeli wrote a *Dit du chancelier Philippe,* in which he is associated with jongleurs, chansons, and vielle playing.

As a master of theology, Philip composed a treatise on moral theology, the *Summa de bono,* that had considerable influence on the earliest generation of Franciscan masters. It was organized into two main parts, *De bono naturae* and *De bono gratiae,* with the latter subdivided into three: *gratia gratum faciens, gratia gratis data, gratia virtutum* (both theological and cardinal). Philip is also credited with 723 sermons, which reveal a preacher vigorously calling both the clergy and the laity to a just and holy way of life.

Of the fifty-eight monophonic conductus attributed to Philip, at least twenty-one texts are confirmed as his. *Angelus ad virginem* was made famous by Chaucer: in *The Miller's Tale,* the scholarly but impoverished cleric Nicholas sings it. Medieval sources ascribe nine polyphonic conductus to Philip, and among four possible textings of conductus caudae at least *Bulla fulminante* (and its contrafact *Veste nuptiali*) and *Minor natu filiu* definitely can be counted as his; *Anima lugi lacrima* and *Crucifigat omnes* (which has two contrafacts: *Mundum renovavit* and *Curritur ad vocem*) are suspected of also being his. He penned the four known tropes to Pérotin's two great organa quadrupla: *Vide*

*prophecie, Homo cum mandato dato, De Stephani roseo sanguine,* and *Adesse festina.* Philip and Pérotin appear to have known one another and may have collaborated. Since so many of Philip's texts were tropes or contrafacts for music that already had been composed, it would seem that he was not a composer himself. Although his defense of accumulating benefices earned him the displeasure of the Dominicans, he remained a friend of the Franciscans throughout his life and was buried in their church.

# PHILIP THE GOOD

(1396–1467). Duke of Burgundy, 1419–67. The son and successor of John the Fearless, duke of Burgundy and count of Flanders, Philip was twentythree years old when the assassination of his father in 1419 made him the mightiest peer of France and the most important prince of the Low Countries. His reign of forty-seven years brought prosperity, prestige, and territorial expansion to his lands. He guided the ill-fated Burgundian state to the peak of its power, but its greatness, dependant on the weakness of the French monarchy, dissipated after the end of the Hundred Years' War.

An astute diplomat and judicious in the use of force, Philip sought to overcome ducal Burgundy's status as a French apanage by enmeshing it in an independent polity in the territories between France and Germany. The Treaty of Troyes (1420) allied him with Henry V of England, secured his French holdings, and allowed him to concentrate on the Low Countries. His second (1422) and third (1430) marriages secured political allies and territorial claims. Conquests of Holland (1425–33) and Luxembourg (1443), and the peaceful acquisitions of Namur (1420) and Brabant (1430) doubled the size of his lands. Philip eventually sought the crown of a restored Lotharingia from the emperor Frederick 111 in 1447. His failure to obtain a crown had no immediate political consequences, but it foreshadowed the doom of the Burgundian polity, which remained an overextended Franco-imperial principality in an age of emerging sovereign states. Within France,

Philip provided minimal support for the government of Henry VI of England and later realigned himself with Charles VII in 1435 (Treaty of Arras). Fearing a revitalized monarchy, Philip abstained from the decisive campaigns of the Hundred Years' War and sheltered the fugitive dauphin after 1456. The failure of such efforts became manifest when his son, the future Charles the Bold, assumed control of Burgundy in 1464 and launched the *Guerre du bien publique* against Louis XI. Philip's rule thus ended as it began, with Valois France and Valois Burgundy inextricably locked in mortal conflict.

Philip's most celebrated achievement was to make chivalric culture an instrument of policy. The creation of the Order of the Golden Fleece in 1430 provided a diplomatic tool linking the nobility of his disparate territories and precluding their affiliation with any other prince. Even such ostentatious festivals as the Pheasant Banquet in 1454 had political value, for through such devices the prestige of the Valois dukes reached its zenith. Philip himself was a model of late-medieval chivalry: handsome, courageous, pious, self-indulgent, extravagant. He maintained mistresses and bastards throughout his lands yet made heartfelt, albeit unfulfilled, promises to go on crusade. He is remembered as "the Good" above all for the talented artists who gave him the accolade and immortalized Burgundy in tapestries, the paintings of van Eyck, and literature ranging from the *Cent nouvelles nouvelles* to the histories of Chastellain. He may seem less successful in retrospect than he did at the time, but Burgundy was a phantasm and Philip sustained it the best of all his line.

# PHILIPPE D'ALSACE

(1144–1191). The son of Thierry d'Alsace, count of Flanders, Philippe d'Alsace assumed power in the county when his father went to Palestine in 1157. He promoted clearance and new settlements and furthered the cities' economic interests while refusing them any role in the governance of Flanders. His marriage to Elizabeth, daughter of Raoul V de Vermandois, was childless, but he became count of Vermandois in 1163 and thereby ruled the largest territory ever held by a Flemish count.

The bonds between the count of Flanders and the French crown became intimate under Philippe. His heir was the son of his sister Marguerite, wife of Baudouin V of Hainaut.

As head of the regency for the young king Philip Augustus, Philippe d'Alsace arranged for the king to marry his niece, Isabelle de Hainaut, in 1180, with Artois as her dowry. When his own wife, Elizabeth, died in 1182, Philippe d'Alsace refused to give up her lands in the Vermandois and so damaged his relations with the crown. In 1185, with the Treaty of Boves, the count had to give in, and he lost practical influence in Vermandois. When Queen Isabelle died in 1190, the county of Artois, her dowry, passed to her child, the future Louis VIII.

Philippe d'Alsace joined the Third Crusade and died in Palestine in 1191. He was succeeded by his nephew Baudouin of Hainaut, who became Baudouin VIII of Flanders.

# PHILIPPE DE NOVARE

(ca. 1195–ca. 1265). A native of Lombardy, Philippe de Novare lived as a knight, legal expert, and diplomat in the Latin kingdoms of Cyprus and Jerusalem. His prose memoirs, which incorporate three crusade poems and an episode modeled on the *Roman de Renart,* recount his life in the East from 1218 until 1243 and detail the war between Emperor Frederick II and the Ibelins. In the *Livre a un sien ami en forme de plait,* part of the *Assises de Jérusalem,* he compiled and explained customary law in the courts of Outremer. When he was over seventy, Philippe wrote *Des quatre tens d'aage d'ome* (ca. 1265; five manuscripts), a prose treatise on childhood, youth, middle age, and old age that dispenses moral counsel, derived largely from personal experience, at each stage to both sexes. More personal in its tone than some other didactic works, the *Quatre tens* conveys a pessimistic view of human nature and advocates particularly restrictive roles for women.

# PHILIPPE DE THAÜN

(fl. late 11th-early 12th c.). Author of the earliest surviving scientific works in French. Philippe's Anglo-Norman dialect, which he helped establish as a literary medium, probably indicates that he was born in England, but he was of continental parentage originating in Thaon in lower Normandy, 13 miles northwest of Caen. His *Cumpoz* (probably 1113) is dedicated to an uncle, Humphrey (Honfroi) of Thaon, chaplain to Eudo Fitz-Hubert, also known as Eudo Dapifer, steward of Henry I of England, whose royal court was a center of learned activity. Philippe's two signed works, the *Cumpoz* and the *Bestiaire,* are in hexasyllabic rhymed, occasionally assonanced, couplets, but the *Bestiaire* ends with an octosyllabic lapidary. Several anonymous works have also been attributed to him.

The *Cumpoz* ("computus") is a practical treatise on the calendar that tells how to predict the dates of Easter and the movable feasts governed by Easter. The problem is reconciliation of the lunar calendar, which determines the date of Easter by its association with Passover, with the Julian solar calendar. Along with accurately detailed computational material, Philippe gives free rein to an allegorical bent in discussions of the zodiac and the names of the days and the months. He twice uses the year 1113 as an example for computing, once implying that it is the current year; in any case, the *Cumpoz* was dedicated before Eudo's death in 1120, for he is referred to as though still alive.

The *Bestiaire* (ca. 1125) is a "Book of Nature" divided into three sections: land animals and sea creatures, birds, and precious gems; it draws on traditional bestiary material from ancient myth and biblical sources. An article on a creature or stone generally opens with a physical description, often incorporating drawings with the text, followed by discussion of specific properties or habits. Allegorical commentary derived from the descriptive material then demonstrates the revelation of God in the natural world. The articles in the first two sections are arranged hierarchically, from the "kings" of each species (the lion, the eagle), which signify Christ, to the "lower" (land-bound birds, and fish), which refer to Satan; precious gems, beginning with their "king," the diamond, are associated with the powers of good. The *Bestiaire* is dedicated to Adeliza (Aaliz de Louvain), whom Henry I married in 1121; she retained the title of queen four years after Henry's death in 1135. Scholars tend to date the *Bestiaire* from early in Adeliza's marriage because of the date of the *Cumpoz.* One manuscript of the *Bestiaire* bears a rededication to Eleanor of Aquitaine, Henry II's queen, written after 1154.

The anonymous *Livre de Sibile* (1135–54), dedicated to the empress Matilda, Henry I's daughter, is a book of prophecies. Authorship has been ascribed to Philippe primarily because the text bears striking linguistic and stylistic resemblances to the signed works; in addition, personal content in the dedication parallels information found in the rededication of the *Bestiaire* to Eleanor of Aquitaine. On the basis of less convincing evidence, two early Anglo-Norman lapidaries, the *Alphabetical* and the *Apocalyptic,* an Anglo-Norman allegorical *Desputeisun del cors e de l'arme,* and a geographical treatise, *Les Divisiuns del mund,* have also been attributed to Philippe.

# PHILIPPE DE VITRY

(1291–1361). Official of the French court under Charles IV, Philip VI, and John II; bishop of Meaux from 1361; poet; and the most important composer of the early Ars Nova. Philippe's many services to the Valois included appointment as one of the nine reformers-general of 1357. Although Philippe's contributions to poetry and music have been difficult to establish unequivocally due to the state of the sources, his authority and reputation, extending into the 15th century, were enormous. As a young man, he probably contributed to the new developments in Ars Nova notation (ca. 1315–20) and probably taught the new techniques to others; he seems not to have written a theoretical treatise himself. Philippe was possibly the inventor of the isorhythmic motet, and there is evidence that he helped to establish the *formes fixes* as the preeminent musical-lyrical forms of the 14th century. Guillaume de Machaut probably numbered him self among Philippe's musical pupils. Philippe's most influential work of poetry was the *Dit de Franc Gontier,* which in the 15th century elicited a companion work by Pierre d'Ailly and a parody by François Villon.

# PHILIPPE MOUSKÉS

(b. ca. 1193). Fourth son of aristocratic parents, Juliane Mouskete and N.Mouskés of Tournai, Philippe Mouskés wrote before 1243 a *Chronique rimée* (15,628 octosyllabic couplets) of the French kings, from the legendary Marcomire, grandson of Priam of Troy and first king of the Gauls, to the middle of the reign of Louis IX. He is remembered primarily for having used a now lost French translation (related to B.N. fr. 2137 and 17203) of the Latin Pseudo-Turpin chronicle for the almost 5,000 couplets dealing with the history of Charle-magne and for preserving otherwise unknown chansons de geste by borrowing extensively from them. His other sources are French and Norman chronicles; on the reigns of Philip II Augustus, Louis VIII, and Louis IX, he often reports as an eyewitness. His *Chronique* reflects the 13th-century tendency toward popularized history and differs from other chronicles by the fact that Mouskés worked without a patron, simply to amuse himself *(pour resgoïr).*

# PHILIPPUS DE CASERTA

(fl. ca. 1370). Italian composer of French chansons, represented in the Chantilly codex (Chantilly, Musée Condé 564) by six ballades and possibly one rondeau. Some of his works borrow bits of text from ballades of Machaut. Philippus was active in the papal choir at Avignon in the 1370s, and one of his ballades celebrates Pope Clement VII. His works feature complex and irregular rhythms, and he is possibly the author of the *Tractatus de diversis figuris* on complex Ars Subtilior note shapes. Johannes Ciconia quoted both text and music of three of Philippus's ballades in his virelai *Sus un'fontayne,* perhaps in homage to his teacher.

# PHILOSOPHY

. As the Roman Empire was crumbling in Gaul, so too was the classical tradition of both pagan and Christian Greek and Latin learning. The age of the Latin fathers ended effectively with the death of Augustine of Hippo in North Africa in 430, and the heritage of classical thought was summed up and passed on to the western Middle Ages largely in the philosophical and theological works of "the last Roman," Boethius, who was executed at the Pavian court of King Theodoric in 524. It was not until the Carolingian period, and especially the era of intellectual contacts with Muslim and Jewish Arabic scholars in southern Europe, that more classical texts, particularly by Greek authors, became available.

Traditionally, Latin Europe from the 6th to the 9th century is thought of as barren of philosophy and theology, but as *Romanitas* was being replaced by *Christianitas* in the Gaul of the 5th century, there are sporadic signs of continuing literary and philosophical learning in a world otherwise fraught with a lack of intellectual activity. Thus Sidonius Apollinaris (ca. 432-ca. 485), bishop of Clermont-Ferrand, kept alive the humanist arts of letter writing and historical narrative. Philosophically important for this period is the exchange between Faustus of Riez in Provence (d. ca. 495) and Claudianus Mamertus of Vienne (d. ca. 474) on the locality and materiality of the soul. Merovingian culture continued to evince love for traditional classical culture, especially among Romano-Gallic aristocrats and the bishops who were related to them. The Council of Vaison (529), besides reforming church liturgy, played an important role in this conservation by prescribing the teaching of Latin to ensure the education in arts (philosophy in a broad sense) and in theology of future clerics.

The establishment of monasteries at Annegray, Luxeuil, and Fontaines by the Irish *peregrinus* Columbanus (fl. 600) and the Benedictine *Rule,* introduced into France from Italy at the end of the 7th century, both created a new emphasis in studies. Secular classical learning was downgraded in favor of exegetical studies of the Bible and the organization of the liturgy. Especially illustrative of this period is the dispute between Pope Gregory the Great (ca. 540–604) and Desiderius (Didier) of Vienne (fl. 596–601) on the love for and merits of pagan classical, particularly Greek, literature, grammar, and rhetoric. Gregory set the stage for medieval intellectual life by claiming that the liberal arts and what we today would call philosophical methodology are indispensable for the correct interpretation of the written Word of God but that they should be used for that purpose alone. Elements of the classical tradition were, however, preserved in the works of men like Gregory of Tours (d. 594) and Venantius Fortunatus (540–600), who died as bishop of Poitiers.

It must be noted, too, that the role of women in the preservation of classical education in Merovingian Gaul was not insignificant. Regrettably, few sources have survived. An indicative example, though, is a letter from Caesaria, abbess of the convent at Arles, to

King Clotar I's wife, Radegund, who was establishing a house at Poitiers. Caesaria enjoins Radegund to allow no nun to enter who does not learn the liberal arts.

The contribution of Merovingian culture to the history of philosophy was basically that of preserving the scholarship of the ancients. Carolingian scholars and philosophers were generally intent on the classification of what is and can be known about the world. The foundation for intellectual life in the Carolingian era was laid by Alcuin of York (ca. 735–804), who had been invited by Charlemagne to become the head of his palace school at Aix-la-Chapelle. Here, Alcuin revitalized teaching in the Trivium by writing textbooks like *De grammatica* (which has a Boethian introduction entitled "De vera philosophia"), *De rhetorica et virtutibus,* and *De dialectica;* he was also intent on giving rules for the correct transcription of manuscripts. As abbot of Tours for the last eight years of his life, he was especially interested in building up the library and in developing the Liberal Arts with a view to exegetical studies of the Scriptures, which were to provide *sapientia,* or true philosophy.

The early 9th century witnessed some philosophical discussion of Aristotle's methodology, as well as discussion of the relation between grammar and ontology; of the perennial question of the exact status of the soul; and even, in the realm of political theory, of the duties of princes. But without doubt the greatest philosophical impact was made by the gift of the Greek text of the works of Pseudo-Dionysius the Areopagite (the *Corpus areopagiticum*) from the Byzantine emperor Michael the Stammerer to Louis the Pious in 827. Charles the Bald (r. 840–77) can be seen as France's first great patron of philosophy, for in 860 it was he who asked Johannes Scottus Eriugena (d. 877) to translate this collection of Neoplatonic works into Latin. Perhaps most noteworthy in Pseudo-Dionysius's work is the idea that evil *qua* evil is nonexistent; evil must be regarded merely as a lack of goodness, and it can therefore be described only in negative terms. On the other hand, God as Essence *par excellence* can never be adequately described in nonessential language. In this way, the foundation was laid down for the reception of ideas of learned ignorance that played an important role especially in medieval philosophical and theological mysticism, such as that of the Victorines in the 12th century and the Parisian Lullists of the late 14th. Thus, Greek Christian texts by Pseudo-Dionysius and later by Maximus the Confessor, Gregory of Nyssa, and perhaps Epiphanius of Salamis (Cyprus) entered into Latin European thought, strongly influencing such later thinkers as Bonaventure, Thomas Aquinas, and Nicholas of Cusa. The influence of Eriugena's work has not yet been fully traced, but it is safe to say that it had a wide circulation especially through *florilegia* and glosses in manuscripts of his text. A nexus seems to have been the school of Auxerre, with scholars like Heiric (841ca. 876) and Remigius (ca. 841-ca. 908). Remigius also wrote many commentaries on grammar (Donatus, Priscian, Eutyches, Phokas), on style (Bede), and on the arts in general (Martianus Capella). Though not very innovative, they did serve to keep alive in France and the rest of northern Europe the tradition of the Liberal Arts on which philosophy must build.

Philosophy in 10th- and early 11th-century France was limited. There is some teaching of logic, mathematics, and astronomy and discussion of the problem of how reason is to be used, notably by Gerbert of Aurillac at Reims (ca. 945–1003), who may have had access to Arabic learning through his studies in the Catalan monastery of Ripoll. But it is not until the middle of the 11th century that philosophy in France receives new impulses,

especially from debates on the relationship of logic and grammar to theology and biblical exegesis, such as that between Berengar of Tours (ca. 1010–1088) and Lanfranc of Bec (ca. 1005–1089) on the interpretation of the wording of the eucharist. The stage was being set for the development of the scholastic method of solving intellectual problems that is the hallmark of medieval philosophy.

The scholastic method, the central method of medieval philosophy, is a technique of teaching and interpreting texts by using a system of distinctions, definitions, and disputation deriving from the logic of Aristotle and Boethius. In the 11th and 12th centuries, this narrow basis was broadened to include other authors, and later the scholastic method developed a terministic and semantic logic that made its work in discovering meaning ever more subtle. Many of the important developments of the scholastic method took place in France. Thus, Anselm of Bec (1033–1109), who hailed from Aosta in northern Italy, can be called the "father of scholasticism" on the basis of the treatises he wrote at the Benedictine monastery of Bec in Normandy on how grammar and logic should be used to study the Scriptures.

Three important elements of the scholastic method are the textual commentary, the *quaestio* (or *disputatio*), and the harmonization of authoritative texts. Hugh of Saint-Victor's (ca. 1096–1141) *Didascalicon* defined the commentary as a combination of *lectio* (reading) and *meditatio* (understanding). Peter Abélard (1079–1142), working in Paris, helped calibrate the scholastic method by the structure of his famous *Sic et non,* in which arguments for and against theological and philosophical statements are systematized. The great standard-bearers of the value of the *quaestio* in scholarship are the masters of the so-called school of Chartres. Gilbert of Poitiers (ca. 1075/80–1154) and Clarembald of Arras (ca. 1110-after 1170) stressed how important it was that the *quaestio* be structured in terms of statement and contradiction. The masters of Chartres used their method especially in the interpretation of Platonic texts, notably Plato's *Timaeus* and Boethius's *De consolatione Philosophiae*. Peter Lombard (ca.1100–1160), at Paris, wrote the standard harmonization of theological and philosophical knowledge, *Quattuor libri sententiarum,* whose influence as the official textbook of theology in the Middle Ages can hardly be exaggerated.

One of the most sustained developers and applicators of scholasticism is Thomas Aquinas (ca. 1224–1274), who taught at Paris in 1256–59 and again after 1269. His *Summa theologica,* the second part of which he wrote at Paris, is a model of medieval methodology. Medieval philosophers themselves had the highest regard for Henry of Ghent (ca. 1217–1293), a secular master of theology at Paris from 1276; his practice of philosophy, too, is a good example of scholastic method.

Even if philosophical discussions were generally structured along the lines of the scholastic method, there was speculation on the borderlines between philosophy and theology on the one hand and cosmology and mysticism on the other. A literary style was employed that was far removed from the clear distinctions of the *quaestio*. An example of poetic cosmology is Bernard Silvestris's (fl. 1147–77) *Cosmographia*. This work has been rightly called an epic poem. In it, Silvestris made a brilliant synthesis of Chartrian understanding of the Platonism of the *Timaeus,* Calcidius, Macrobius, Martianus Capella, and Boethius. The *Cosmographia* combines 12th-century knowledge of science and medicine—often derived from Arabic sources—with Platonism to form a veritable encyclopedia in literary style.

A scholastic who practiced the scholastic method but also tried his hand at literary style when writing on mystical topics is Bonaventure (ca. 1217–1274), who taught at Paris in 1248–55. His *Itinerarium mentis in Deum* shows how philosophy functions in the ascent of the soul from the visible world to the unificatory mystical experience where scholastic *distinctiones* and *quaestiones* are no longer necessary or possible. Here, the text does not impart information or provide analysis but becomes itself part of the process toward illumination.

The basic presupposition of the scholastic method is that knowledge can be acquired only on the basis of the interpretation of authoritative *texts*. The late 13th and 14th centuries saw a shift to the critical examination of how *words* have meaning, how they function in propositions and in wider contexts, and what their relations are to the external world. Important French names in these discussions are Lambert of Auxerre (fl. 1250) and the Parisian masters Jean Buridan (ca. 1295-after 1358) and Marsilius of Inghen (d. 1396). Not all philosophers in France during the Middle Ages used the scholastic method. Through the influence of the Catalan thinker Ramon Lull (ca. 1232–1316), a way of doing philosophy entered into France and especially Paris in the 14th century that leads into the mystical and even alchemical aspects of Renaissance thought.

Debate and discussion are the life's blood of philosophy, and the liveliness of philosophers in medieval France can be illustrated by mentioning three controversies: the debate between Anselm of Bec and Gaunilo, a Benedictine monk of Marmoutier (d. 1083), on proving the existence of God; the acrimonious interchange between Peter Abélard and William of Champeaux (ca. 1070–1121) on the status of universal terms; and the attack of Nicholas of Autrecourt (ca. 1300-after 1350) on Aristotelian scholasticism.

Anselm wrote two works that on philosophical grounds argue for the existence of God. In the *Monologion* (1076), he uses traditional Platonic and Aristotelian arguments to prove the existence of a single supreme nature that is self-sufficient and causes all other things to be. All this is couched in an analysis of the way that language works and constantly employs metaphors, examples, and models derived from Augustine. This makes for a complicated and difficult argument. So, in the *Proslogion* (1077–78) he sets out to find a single, self-evident argument to demonstrate God's existence and to describe a number of his attributes. Anselm begins from the definition of the word "God" as "that than which no greater can be thought." Using only this definition, he demonstrates that it entails God's existence both in the mind of the person who thinks on God's existence and in the real world. In the history of philosophy, this argument is called the "ontological proof" of God's existence. Although the monk Gaunilo did not deny the existence of God in replying to Anselm, he felt that Anselm's proof was philosophically unsound on the grounds that it appears to confuse conventional language *(voces)* and logic with the real world. For Anselm, however, real language *(verbum)* is the structure itself of the created world and serves as the connecting link between the human being who contemplates God and God's answer to his prayer for the enlightenment of his intellect to show that God really exists. This debate can be closely examined today because Anselm instructed manuscript copyists always to add Gaunilo's objections and his own replies to them as appendices to the *Proslogion*.

The bitter controversy between Peter Abélard and William of Champeaux concerned the problem of the status of "universals," terms or concepts like "man" or "animal."

William holds the view that genera and species exist ontologically in a real world beyond sense experience; his position can be described as an extreme sort of Platonist realism. Abélard makes a careful distinction between thought and language on the one hand and reality on the other. Genera and species exist as concepts in the mind but they also signify the same real things that particular concepts represent. Insofar as they are words, they are corporeal and sensible; but insofar as they are able to signify many individual things, they are incorporeal, for sense experience does not show them to us. Aristotle is correct when he says that universals exist in sensible things as their forms, but at the same time Plato is also right to believe that universals exist independently of the sensible world when they are abstracted from it by the mind that thinks about the empirical world or as they exist in the Divine Mind. Abélard also asks whether universals continue to have meaning if the individual things that they signify stop existing. His answer is that indeed they have meaning in the mind, because it makes sense to say that something that has existed no longer exists.

These views of Abélard's became especially controversial when he began applying them to theological doctrines, such as that of the Trinity. For example, an analysis of the the word "God" in Abélard's terms as a universal concept signifying the three individual divine persons but itself not existing in the real world, could easily lead to the heresy of tritheism or alternatively to the idea of the three persons as mere modes of the single God. Small wonder, then, that Abélard was several times condemned at church councils: at Soissons in 1121, and especially through the efforts of Bernard of Clairvaux and William of Saint-Thierry again at Sens in 1140. The issues that Abélard raised were of great importance because they helped set the stage for later discussions on the status of language and meaning. Besides, Abélard's way of reasoning and the style of his writing contributed in an important way to the development of the scholastic method, especially to its ahistorical character.

A third philosophical debate that moved the minds of many theologians and philosophers in medieval Paris centered on the Parisian master Nicholas of Autrecourt. Nicholas seems to have been regarded by the university as the leader of a group of philosophers who questioned the authority of Aristotle in philosophical matters. Nicholas held that Aristotle was mistaken about the principle of causation, on which rests the entire system of scholastic theology. According to Nicholas, certitude in scientific demonstration depends only on the principle of contradiction. It is the application of this principle that makes syllogisms viable, and syllogisms are the building blocks of science. Now, the premises of syllogisms are derived from sense experience, but sense experience tells us nothing about substances, only about appearances. Thus syllogisms—and science—can tell us nothing about either substances or about any causal connections between them. Only analytic propositions make sense, and for this reason it is obvious that any traditional proof, whether cosmological or physico-teleological, for the existence of God does not stand up to scrutiny.

Nicholas's philosophy put the ax to the very roots of scholasticism, and his contemporaries fully understood this. In 1346, under Pope Clement VI, his teachings were condemned and his degrees revoked, and he was forced to recant his doctrines; a year later, he had to burn his writings at the University of Paris. He then fled to Germany but later was appointed dean of the cathedral of Metz. Nicholas's ideas, however, were not lost: toward the end of the 14th century, much of his analysis of propositions found

its way into the writings of nominalist and realist theologians alike. He was more or less rehabilitated by Pierre d'Ailly (1350–1420), who had studied at Paris and himself debated vehemently against causal connections with regard to future contingent truths.

# PIERRE DE BEAUVAIS

(fl. early 13th c.). Little is known of Pierre de Beauvais other than what can be surmised from his writings. In the early part of the 13th century, he lived at the abbey of Saint-Denis outside Paris and in the city of Beauvais. There, he found protectors in the Dreux family, with Philippe, bishop of Beauvais, and his brother, Count Robert. In the episcopal palace, Pierre de Beauvais was able to devote himself to writing, composing saints' lives and other works of theological or moral inspiration. He is best known for his prose *Bestiaire divin,* dedicated to Philippe de Dreux, which is a close translation of the Latin *Physiologus*. Two versions of the *Bestiaire divin* are known. The shorter and earlier version (before 1206) comprises thirtyeight chapters in which the nature and attributes of beasts and birds, not all of them real, are used to teach lessons in Christian morality. This didactic approach is also used in the seventy-one chapters of the longer version, whose

attribution to Pierre is not certain. At about the same time, Pierre completed a translation of the *Iter Hierosolymitanum,* the *Voyage de Charlemagne en Orient.*

In verse, Pierre de Beauvais composed a *Mappemonde* (954 lines) dedicated to Robert. It claims to be based on the *De naturis rerum* of Solinus (3rd c.), which Simon de Boulogne had translated in the late 12th century, but is actually a translation of Honorius of Autun's *Imago mundi.* Other verse works include Lives of SS.Eustache, Germer, and Josse; a treatise on the Psalms; a celebration of Christ the Physician; and a poem on the Three Marys.

# PIERRE DE CHELLES

(fl. late 13th-early 14th c.). In royal accounts for 1307, Pierre de Chelles was paid for six months of work on the tomb of Philip III and its delivery to the abbey of Saint-Denis. However, Pierre's contribution is uncertain: did he continue sculptural work of Jean d'Arras (d. 1298/99) on the effigy of the late king, or did he make its black-marble base and the canopy framing the recumbent figure? Whatever the ambiguities of his activity as a sculptor, Pierre de Chelles indisputably pursued a career as a master mason. The 1316 report at Chartres cathedral qualifies him as master of the fabric at Notre-Dame, Paris, while other texts name him as "master of the work of Paris" and "master of the city and suburbs of Paris." During his tenure at Notre-Dame, ca. 1296 to ca. 1318, Pierre supervised construction of the fifteen chapels that ring the eastern extremity of the chevet and the north wall of the sculpted choir enclosure. He may also have been responsible for the design of the Virgin Chapel at Saint-Mathurin, Larchant. Pierre based his chapels, with their huge windows and delicate gables, on the work of his predecessors, Jean de Chelles and Pierre de Montreuil. At the same time, his emphasis on the contrast of a robust armature of piers and arches with flat surfaces of tracery as well as his syncopated formal rhythms anticipate directions explored by later generations of Gothic builders.

# PIERRE DE LA CROIX

(Petrus de Cruce; fl. 1280–1310). Composer and music theorist. Pierre's treatise *Tractatus de tonis* deals with plainchant. The English theorist Robert de Handlo in his *Regule* (1326) attributed a treatise on mensural theory to him, which has not survived. Documents of the royal treasury indicate that a *maître Pierre de la Croix d'Amiens* completed an *hystoria* of St. Louis in 1297, the year Louis IX was canonized. The sole source for his plainchant treatise also described Pierre as being from Amiens. Jacques de Liège commented in the seventh book of his *Speculum musicae* upon two of Pierre's motets, *S'amours eust/Au renouveler du joli tans/Ecce* and *Aucun ont trouvé/Lonc tans me sui tenu/Annuntiates,* both of which appear at the beginning of the seventh fascicle of the Montpellier codex. Petronian notation, characterized as the first modification of Franconian mensural notation because it allowed as many as seven semibreves to be sung in the time of a breve, has been viewed at times as merely ornamental and at others as an evolutionary basis for the Ars Nova. Identification of Pierre de la Croix with the Petrus Picardus to whom Jerome of Moravia attributed the Franconian treatise *Ars motettorum* is doubtful, and there is no evidence that the anonymous *Ars cantus mensurabilis secundum Franconem* is his lost treatise on mensural theory.

# PIERRE DE MONTREUIL

(d. 1267). Pierre de Montreuil is the most celebrated French master mason of the 13th century. He has been credited with the construction of every major building in Paris between 1230 and 1270, including the abbey of Saint-Denis and the Sainte-Chapelle. Unquestionably the master mason of the refectory, begun in 1239, and the Virgin Chapel, built from 1245, of the abbey of Saint-Germain-des-Prés, Pierre created an architecture

marked by spatial unity, luminosity, and rich rhythms of tracery forms meticulously organized in depth. In the Virgin Chapel, his combination of fully colored windows with *grisaille* glass was the first example of a concept of glazing generalized in the later 13th century. A 1247 document naming Pierre as a *cementarius* (or stone mason) at Saint-Denis suggests that, although active at the abbey, he did not head its workshop and cannot be credited with the design of the Rayonnant structure. Referred to as "mason, master of the works at Notre-Dame of Paris" *(cementarius, magister operum Beate Marie Parisiensiis)* in 1265, Pierre built the cathedral's south-transept façade. This brilliant work was inspired by Jean de Chelles's north transept but achieved greater unity through the physical linkage of different zones and the formal relationships produced by new motifs, such as the pointed trilobe. Pierre de Montreuil died March 17, 1267. The inscription from his tomb in the Virgin Chapel of Saint-Germain-des-Prés, which lionizes him as "a teacher of masons," testifies to contemporary recognition of his architectural abilities.

# PIERRE DE PROVENCEET LA BELLE MAGUELONNE.

A short hagiographical account in prose of the founding of a hospital at Maguelone, south of Montpellier. Cast as an idyllic romance, *Pierre de Provence* was composed in the first half of the 15th century. It exists in two Middle French redactions (the second and longer dated 1453), a 1480 printed edition, as well as several German adaptations.

# PIERRE DE SAINT-CLOUD

(fl. late 12th c.). This skillful and cultured poet brought the adventures of Renart the Fox, known previously only in Latin, to a wider, French-speaking public. The two earliest branches of the *Roman de Renart,* II and Va (ca. 1174–77), which relate the love affair of Renart and Hersent the she-wolf, are attributed to him. Though he imitated *Ysengrimus* for three episodes ("Renart and Chantecler," "Renart and the Titmouse," "Renart and Hersent") and Marie de France for another ("The Fox and the Crow"), "Renart and Tibert the Cat" is his own invention. He pokes fun at the legal system, pontifical legates and certain religious institutions, princes and nobles, through a subtle parody, intended largely to evoke laughter, of the chansons de geste and Arthurian romance. He was read and imitated by French and foreign authors of beast epics, such as Jacquemart Gielée, Heinrich der Glîchezâre, and Chaucer), by fabulists and writers of exempla (Eudes de Cheriton, Nicole Bozon, Jacques de Vitry), and by Philippe de Novare. After 1180, he assisted Alexandre de Paris in reworking the *Roman d'Alexandre* into dodecasyllabic *laisses.*

# PIERRE MAUCLERC

(ca. 1189/90–1250). Pierre de Dreux (or de Braine), better known as Pierre Mauclerc, was a member of the distinguished Dreux family, a cadet branch of the Capetian line. He was a younger son of Louis VII's nephew Robert II, count of the small fiefs of Dreux and Braine. Although not a landless baron, Pierre's original endowment of lands from his father was small, the villas and manors of Fère-en-Tardenois, Brie-Comte-Robert, Chilly, and Longjumeau. By his marriage in 1212 to Alix, the heiress of Brittany and claimant to the English honor of Richmond, however, he became titular earl of Richmond and titular duke of Brittany (or count, in the view of French authorities unwilling to acknowledge Brittany's ducal status).

Pierre immediately set about imposing his will on the fiercely independent Breton baronage, exacting reliefs and wardships contrary to custom, despoiling or seizing seigneuries whose lords resisted, and commencing a concerted attack against the privileges of the episcopate. This last action precipitated his excommunication and, in retaliation, his expulsion of six of the seven bishops of Brittany. Although his wife died in 1221, he continued as guard *(custos)* and effective ruler of Brittany until his son came of age in late 1237.

Knighted in 1209 by Philip II Augustus, Pierre was secure in his position as ruler of Brittany as long as Philip, with whom he got along well, continued to reign. But with the old king's death in 1223, Pierre became a less trustworthy ally of the new king, Louis VIII (r. 1223–26), although he did take part in crusading expeditions against the Albigensian heretics led by Louis as prince (1219) and king (1226). His emerging lack of devotion to royal policies originated partly from his claims to land in England, claims that made him always eager to cultivate the Capetians' traditional enemy, the Plantagenêts. His own overweening ambition to be the preeminent baron in northwest Europe fueled his political maneuvering. After the death of his first wife, he aspired to the hand of the countess of Flanders in 1226 and the queen of Cyprus (who had claims in the great fief of Champagne) in 1229, only to be thwarted by the king and the pope, who had their own interests to preserve in the disposition of the heiresses and their fiefs. He was reduced to marrying a minor baroness, Marguerite de Montaigu, in 1230; and his resentment was strong. He had already become an open rebel in 1227 because of the failure of the regent, Blanche of Castile, to submit to his influence or cede the regency of the young Louis IX. He was instrumental in 1229 in attacking the count of Champagne, a supporter of the regent whose fief Pierre coveted. He courted the favor of the English king, received military support and large subsidies from him, and rebelled against the French crown again in 1230–31 and still again briefly in 1234. In all of these efforts, his forces were soundly thrashed, though never completely eliminated, by the royal troops.

In November 1237, after his son reached majority and took over control of Brittany, Pierre succeeded in consolidating a small lordship around the nucleus of his wife's lands in the Breton-Poitevin march. His subsequent career saw him active as a crusader against the Muslims, an effort that achieved a reconciliation with the papacy (1235) if not with local clerics, whom he continued to harass whenever he was in a position to do so. He served with distinction on the crusade of Thibaut de Navarre (1239–40) and died of illness and wounds in 1250 on the return home from St. Louis's crusade.

# PILGRIMAGE

. Pilgrimage—journeying from one's home to a hallowed site—has a long tradition. In ancient and modem times, and in many cultures and religions, adherents have traveled to venerate holy places, to visit tombs of holy persons or heroes, to seek counsel from oracles or cures.

Although the earliest Christian pilgrimages seem to have been to the Holy Land, the practice of pilgrimage soon expanded to include sites of veneration of the Virgin, martyrs, and saints. Of particular importance for early Christian pilgrimage and its development in France was the growth of the cult of saints. Early Christianity introduced the concept of Heaven and Earth joined at the tomb of a saint, who was a martyr or holy

person seen as able to intercede with God on behalf of humans. The bodies of saints, left on earth to aid the living, could work miracles, just as the saint, or Christ himself, had done while alive. Thus, relics—the physical remains, or closely associated objects, of the holy person—formed the *sine qua non* of the shrine to which pilgrims journeyed.

Well over 1,000 centers of pilgrimage existed in France from the Gallo-Roman period to the end of the Middle Ages. Relics at shrines varied greatly, and many shrines, such as Aix-la-Chapelle, contained a large number. Cultic shrines also developed around miraculous statues of the Virgin (Rocamadour [12th c.] and Mauriac [13th c.]), as well as at sites designated as holy through supernatural apparitions (the Virgin at Rocheville [14th c.] or the archangel Michael at Mont-Saint-Michel [8th c.]).

A number of important shrines are located at places of great height (Le Puy) or near springs (Conques). Some were erected over pagan sanctuaries and Gallo-Roman healing centers. Some Christian shrines were known as particularly efficacious for specific healing, such as Sainte-Foy at Conques for eye ailments and the church of John the Baptist at Saint-Denis for epilepsy.

Pilgrimage was motivated by a variety of reasons. Besides being an act of piety and veneration, a pilgrimage might be undertaken for remission of sins or for purification and absolution and, from the 6th century at least, could be imposed as penance. Many went on pilgrimage seeking miracles and cures or to give thanks for divine assistance. Some went to shrines to die in the presence of relics.

Kings, queens, nobles, and high ecclesiastics have been recorded as pilgrims through the centuries, but shrines attracted untold numbers of ordinary folk, especially in times of calamity like plagues and civil unrest. For the ordinary pilgrim, a journey to a shrine within France had the advantages of requiring less cost and less time than the great international pilgrimages to the Holy Land, Rome, or Santiago de Compostela.

By the 12th century, pilgrims set out from their home parishes after receiving special blessings, and they wore clothing that identified them as pilgrims. Customary garb was a cloak, a low-crowned and broad-brimmed hat, a pouch (called a "scrip"), and a pilgrim's staff. Pilgrims carried letters from ecclesiastical authorities to identify them officially for their protection, although their efficacy was not always certain.

Most pilgrimages were made on foot, but those wealthy enough could travel by horse. Walking barefoot was not common, although some penitents and pious pilgrims did so. Louis IX is said to have walked barefoot about 15 miles to Chartres. Travel on roads was especially dangerous in some periods (the 7th to mid-11th centuries, in particular) due to civil unrest, invasions, and robbery.

Food and water could be brought from home if the pilgrimage was for only a few days, but if the pilgrim was away longer resources had to be found along the roads. During periods of civil unrest and invasions, this was not always easy, nor were accommodations always to be found. A system of hospices for pilgrims within France is not apparent before the late 11th century, when the Augustinians were active in establishing shelters, especially in inhospitable regions. The Templars, by the 12th century, also provided assistance to pilgrims, and by the 13th century many confraternities were organized to help. By the 12th century, inns were no longer so difficult to find. Accommodations could be difficult even when the shrine was reached. Pilgrims to Rocamadour were frequently sheltered in tents because the town was so

small; in other towns, like Vézelay, conflict arose between the inhabitants and the abbey over pilgrims' accommodations.

Pilgrims brought gifts and tokens with them to shrines. In keeping with the practice at pre-Christian healing centers in Gaul, pilgrims seeking a cure for an illness might bring to the saint's shrine a representation of the afflicted part of the body, frequently crudely made of wood, wax, or metal. If Christian pilgrims were making their pilgrimage to thank the holy patron for a cure, they might also bring such a token as well as gifts (frequently money, gold, gems, or oil). Pilgrims to Saint-Léonard-de-Noblat who were freed from prison after praying to St. Léonard brought their chains to hang near the saint's tomb.

In addition to leaving offerings at shrines, pilgrims brought away objects in some way sanctified by relics. In some instances, these relics-by-association were thought to possess the power of the saint. While on pilgrimage to the shrine of St. Julian of Brioude, Gregory of Tours broke off a piece of the tomb and brought it back to Tours, where it was reported to have worked miracles. Pilgrims also brought away badges to indicate they had been to shrines. These had images symbolic of the shrine visited, as the head of John the Baptist for Amiens, the Virgin for Rocamadour, Le Puy, and other Marian sanctuaries. Trade in pilgrims' badges was so extensive and open to abuse that it was regulated by legal and episcopal decrees by the 13th century.

The earliest Christian pilgrimages were those to the Holy Land to retrace the footsteps of Christ (2nd c.) and to Rome to visit the tombs of Peter, Paul, and the martyrs. Pilgrimage within France was enhanced by these distant journeys, because pilgrims from the British Isles, Spain, and the Low Countries traveled through France on the way to Rome, and Marseille and Saint-Gilles-du-Gard were major ports of embarkation for ships to Rome and the Holy Land. One of the earliest extant itineraries of a Jerusalem pilgrimage was left by a Gallo-Roman from Bordeaux traveling ca. 333. He gives the route taken from Bordeaux to the Holy Land, indicating the stopping places along the way.

Pilgrimage to shrines within France was well established in the Gallo-Roman and Merovingian periods. Most early sanctuaries seem to be centered in established Gallo-Roman towns with Christian communities, or those where early missionary-martyrs preached. The best-documented early shrine is that of St. Martin (d. 397/400) at Tours. Known for miracles worked during his lifetime, his *vita* was written while he was still alive by his friend Sulpicius Severus (ca. 360–420/25) but was not published until after Martin's death. So many pilgrims came to his tomb that the small chapel built after his death was replaced by a larger church within a century. An account of his miracles was written by Gregory of Tours (ca. 539–594), and by the end of the 6th century Martin's tomb contained the inscription "Here lies Martin the Bishop, of holy memory, whose soul is in the hand of God; but he is fully here, present and made plain in miracles of every kind." The town, and especially the saint's shrine, remained a major pilgrimage center throughout the Middle Ages.

Another Gallo-Roman city with important shrines was Lyon, which had an active Christian community from the end of the 2nd century. The city had early bishops' shrines (St. Irenaeus, St. Justus) as well as sanctuaries of martyrs (Epipodius, Alexander). Nearby at Fourvières was a shrine dedicated to the Virgin, where previously a statue of Mercury had been venerated. Limoges had a sanctuary dedicated to St. Martial (known from the 4th c.), and other shrines were located in the cities of Arles, Auxerre, Marseille, Dijon,

Clermont, Cahors, Agde, and Paris. During this early period, relics were also imported from Rome. In 397, Victor of Rouen brought relics of twenty-three martyrs from Rome to Rouen.

Relics were so important in the conversion of pagan Gaul that parts, and entire bodies, of saints were bought, sold, and stolen. Augustine mentions relic sellers in the 5th century, and Gregory of Tours writes about Syrian relic mongers in France in the 6th. In the 7th century, the body of St. Benedict of Nursia was stolen from Monte Cassino after the abbey was destroyed by the Lombards and brought to Fleury (which became Saint-Benoît-sur-Loire), where his relics attracted pilgrims until the 11th century, when the monks of Monte Cassino claimed to have found the true relics still at their abbey.

The establishment of sanctuaries and pilgrimages to shrines continued throughout the tempestuous reigns of the Merovingians, who supported such shrines. Clovis (d. 511) had a shrine built over the tomb of St. Geneviève (d. ca. 500) in Paris, and Dagobert (d. ca. 639) has been credited with revitalizing the shrine of St. Denis, who became the patron saint of France. It is also from the Merovingian period that the early Marian pilgrimage to Ambronay in Burgundy is dated (7th c.), and we begin to see the establishment of shrines in rural monastic settings.

The ever-increasing interest in sanctuaries and pilgrimages received impetus during the Carolingian dynasty. Charlemagne was an ardent collector of relics, which were kept at Aix-la-Chapelle (Aachen). The most important, the swaddling clothes and loincloth of Christ, were exhibited once every seven years and attracted hordes of pilgrims. Carolingian aristocrats also donated relics: Charles the Bald gave the Virgin's tunic to Chartres in 876, from which time the pilgrimage to the cathedral can be dated.

Even more important for the history of pilgrimage, the Carolingian hierarchy reinstated the ruling, first decreed at the Fifth Council of Carthage in 401, that required all altars to contain relics. This necessitated the procuring of more relics than were present in the Frankish kingdoms, and Carolingian ecclesiastics were major movers in procuring saints' bodies and other relics, especially from Rome but also from Spain. For example, in the early 9th century, Abbot Hilduin acquired the body of St. Sebastian from Rome for Saint-Médard in Soissons.

Trade in relics flourished, and the frequency of theft increased, with more than fifty documented instances from 800 to 1100. Among the most famous of these thefts in the Frankish lands were that of St. Foy's body, stolen from Agen by a monk of Conques in the 860s, and that of Mary Magdalene's, said to have been stolen from Provence and brought to Vézelay in the late 9th century. Both became objects of major pilgrimages.

Despite the political fragmentation after the collapse of the Carolingian empire and the incursions of the Vi-kings, pilgrimage to sites of cultic worship increased during the 9th and 10th centuries. By the 11th century, the cult of relics and pilgrimage were major aspects of religious practice, and they provided important sources of financial support for French monasticism. Funds brought in by pilgrims helped in the ambitious building projects begun in the 11th century by many monastic houses.

Typical of this development is Mont-Saint-Michel. Pilgrimage to this sanctuary began after an apparition of the archangel Michael to Aubert of Avranches while the bishop slept (708). The archangel directed the bishop to build a sanctuary at the top of Mont-Tombe, a granite rock some 550 feet high in the bay near Avranches. A small sanctuary was built and relics were received from the archangel's shrine on Monte Gargano in Italy.

By the 11th century, the structure at the top of the mountain was inadequate for pilgrims, and construction of the massive hilltop abbey was begun. By the 12th century, additional lodgings were added, and the lower town began to grow. The 13th century saw Gothic additions to the monastery. The town increased in size each successive century, moving farther up the mount to meet the abbey perched on top.

The 12th century saw ever-greater numbers of people going on pilgrimage. Without doubt, the Crusades popularized the idea of pilgrimage. It was, however, the enormous popularity of the pilgrimage to Santiago de Compostela in Spain that increased the numbers of pilgrims traveling through France and visiting shrines on the route. The tomb of St. James, discovered at Compostela in the northwest corner of Spain in the 9th century, saw its first recorded French pilgrim, Godescalc of Le Puy, in 950–51. Large numbers of pilgrims from all over Europe were arriving by the end of the 11th century, and except for those traveling by sea almost all had to go through France.

The earliest western European guidebook for pilgrims was written by a Frenchman (ca. 1135–39) for those going from France to Compostela. The author gives four routes through France toward Spain, mostly following old Roman roads. Each route began at a major cultic center: Paris, Vézelay, Le Puy, or Arles. The three westernmost routes met at Ostabat and crossed the Pyrénées at Roncevaux, while the route from Arles crossed the Somport pass farther east. Hospices at both passes existed from the late 11th or early 12th century.

A forerunner of the modern travel guide, the text of this guidebook provides information on where to find provisions and drinking water, describes the characteristics of the peoples to be encountered along the way, and provides cautionary tales on the location of thieves and other hazards, as well as instruction on the proper treatment of pilgrims. Of importance for French pilgrimage is a long chapter describing twenty-one shrines in France (and four in Spain) to be visited along the way. It is clear that those on long pilgrimages would visit many shrines and that shrines with important relics located on major pilgrimage routes could benefit greatly. Competition for pilgrims and the funds they donated was so strong during the 12th century that some institutions resorted to advertising to attract pilgrims. The Norman abbey of the Trinity at Fècamp had a vial of Christ's blood by 1120, which they advertised in a poem: "…remember that you are never far from Fécamp, where the Lord has sent his precious blood for your benefit…."

The late 11th, 12th, and 13th centuries appear to have been the high point of pilgrimage in France, coinciding with a period when roads were safest and travel most se-

cure. The Hundred Years' War impeded traffic on roads, and while pilgrimage remained an important aspect of late-medieval religion, private devotion seems to have offered greater consolation.

The later Middle Ages witnessed a decline in the cult of saints and an increasing veneration of the Virgin. Relics of Mary, discovered with greater frequency from the 12th century on, stimulated pilgrimages. Relics of the Virgin's hair were found at, or acquired by, Coutances, Saint-Omer, Mâcon, Sainte-Chapelle, and Saint-Denis. In addition to Mary's tunic at Chartres (9th c.), one finds her slipper at Soissons, as well as other pieces of clothing at Marseille, Toulon, and Arles. Relics at other sanctuaries included the Virgin's milk and nail parings. While pilgrimages to sites of the apparition of the Virgin are known in the later Middle Ages (as at Rocheville, 1315), they are a much more common manifestation of postmedieval religiosity.

# PLAGUE

. *See* **BLACK DEATH**

# *PLANH/COMPLAINTE*

. Dating from 1137 to 1343, over forty *planhs,* or Occitan funeral laments in lyric form, have survived. Most of them are on the death of a powerful man, a few on the death of a relative or friend of the poet, and a few on the death of his lady. The topoi of the genre are ritualized in a tradition descending from the Latin *planctus,* but the grief that the songs express need not be considered insincere. In some *planhs,* the poet grieves for the loss of his patron, but he almost never praises the expected successor, as he might do if his motivation were thoroughly materialistic. In other *planhs,* the poet's grief is disinterested, as when the nobleman Guilhem de Berguedà grieves generously for his enemy Pons de Mataplana, or when Bertran de Born grieves for Henry, the Young King. The practice of metrical imitation, by which one song was set to the tune and metrical form of another (most often a *canso,* or love song), originated in the *sirventes,* or satire, and spread to the *planh* but was never considered obligatory. The generic status of the *planh* is ensured by its codification in the *Doctrina de compondre dictatz* (ca. 1290–1300) and in the *Leys d'Amors* (1341).

The French *complainte,* unlike the *planh,* is not a lyric genre but a thematic one in didactic or narrative form, written in nonlyric stanzas or in octosyllabic couplets and often influenced by the *Vers de la Mort* of Hélinant de Froidmont (ca. 1193–97). The *complainte is* attested from 1226 (Robert de Saincériaux on the death of Louis VIII) through the anonymous *Regrés de la mort saint Loys* (1270), several poems by Rutebeuf, and Alain Chartier's lament for the death of his lady, among other texts; it continued to be cultivated as late as the Grands Rhétoriqueurs.

The theme of the funeral lament has also been studied in its occurrences in narrative verse, both epic and romance.

# PLATO, INFLUENCE OF

. The Athenian philosopher Plato (427–347 B.C.), pupil of Socrates and teacher of Aristotle, is undoubtedly the most influential non-Christian thinker in the history of Christian philosophy. Although Plato's own works were not well known—by the 13th century, only his *Timaeus* (translated by Calcidius) and *Phaedo* and *Meno* (both translated by Aristippus) were available in Latin—Platonic ideas and style were endemic in all learned minds, made known by Calcidius's *Commentary* on the *Timaeus,* Apuleius's *Golden Ass,* Macrobius's commentary on the *Somnium Scipionis,* and the works of Boethius, especially his *De consolatione Philosophiae.*

Two early Christian authors in particular, Augustine and Pseudo-Dionysius the Areopagite, were highly influenced by Platonist thinkers, especially Plotinus *(Enneads),* Porphyry *(Isagoge),* and Proclus. Plotinus (ca. A.D. 205–270) was responsible for a development of Plato's ideas in specifically religious, although non-Christian, terms, and it is his system, known as Neoplatonism, that spread Platonic ideas throughout Christianity. Neoplatonism held there to be a dualism between thought and reality, which could only be unified in God, who is One, a being with its center everywhere and its circumference nowhere. This being could be known by mystical experience.

Augustine's work is suffused with Neoplatonic ideas. His early Manichaean beliefs, with their emphasis on the division of body and spirit, light and darkness, are Platonic in content as well as tone, as is Pseudo-Dionysius's *Celestial Hierarchy.* In this Christian Platonism, Creation is seen as patterned after the Ideas in the mind of God. Their earthly forms are mere shadows of their real selves, existing in the divine intellect.

The largest single outcrop of Neoplatonism is usually said to have occurred in the works of the scholars of Chartres, in the 12th century; but the ideas had been kept alive in the Carolingian renaissance, especially by Johannes Scottus Eriugena, whose use of Maximus the Confessor and the *Celestial Hierarchy* created a somewhat singular and unorthodox Christian cosmology and anthropology. The Chartrians are usually said to

have promulgated a Neoplatonic cosmology, but what exactly this may mean is a moot point. Orthodox Christian teaching did not allow for a separation between body and spirit, or indeed of any of the Platonic divisions between light and darkness, good and evil, and the like. Rather, in typical medieval fashion, Chartrian cosmology attempts to express the unity of Truth and Creation. "Oneness" is crucial to being: in Boethius's words, "everything that is, is because it is one."

There are particular difficulties in tracing the influence of Plato in the Middle Ages. Patristic writers were saturated with Platonic influences, which were often inseparable from the rest of the usual, classically educated mind; and although some Platonic distinctions, such as that highlighted by Calcidius among the supreme God, the mind of God (the place of Ideas), and the World Soul (fate; identified by William of Conches with the Holy Spirit), were identifiable, much that is Platonic can be seen only in style and tone rather than content. Perhaps as influential as its content was the *form* of the *Timaeus*—philosophy by myth and metaphor. Plato, with his language of surface and integument, of fable and hidden truth, supported the rationale of Christian biblical exegesis. And Chartrian cosmology was intended, in Platonist fashion, to prefigure a new moral order: from the macrocosm of the universe to the microcosm of the soul.

The long-running debate over universals—whether general concepts ("universals") have reality (a view called "realism") or are simply convenient names ("nominalism")—originated in Neoplatonism and the question of Forms. Translation of the works of Aristotle and the introduction of Arabic philosophy, Neoplatonist in style, into the early 13th-century University of Paris did not bring about a corresponding decrease in the influence of Plato. Augustine continued to be the most influential Christian theologian, and some "Aristotelian" works, in particular the *Isagoge* of Porphyry and the *Liber de causis* (pure Proclus), were themselves infused with Neoplatonist ideas.

# *POIRE, ROMAN DE LA.*

Composed ca. 1250 by an unknown poet who calls himself Tibaut, the *Roman de la Poire* (3,034 lines) is a lyrical romance strongly influenced by the *Roman de la Rose* of Guillaume de Lorris. The author tells how he falls secretly in love, how Love sends his heart to his lady, how she reciprocates, and how they further their love through an exchange of lyric pieces. The oldest *Poire* manuscript, B.N. fr. 2186, presents the poem as a complete audiovisual experience in which paintings and music complement the text and its word games.

# POISSY

. The origins of Poissy (Yvelines) lie in the Merovingian period, according to finds in the cemetery, but precise dates are lacking. Helgaud's biography of Robert II the Pious names three churches at Poissy (Notre-Dame, Saint-Jean, and Saint-Martin) and describes the lavish rebuilding of Notre-Dame begun by the king. The new building was dedicated in 1061. The interior of the west tower dates from the later 11th century, and Viollet-le-Duc found bases and fragments of capitals and abacus blocks below the present floor. The present church was begun ca. 1140 by a builder who had worked with the first 12th-century builder at Saint-Denis. The original plan called for an ambulatory with a single axial chapel on a rectangular plan around a deep choir flanked by two chapels set beyond the side aisles. The liturgical choir included three nearly square bays and the apse. The straight bays were marked by heavy compound piers and a three-story elevation (arcades, subdivided openings into the roof space, and low clerestory windows) that recall the west bays at Saint-Denis.

Construction of the nave proceeded slowly toward the west tower. The two westernmost bays were rebuilt in the French Renaissance style, although the contemporary portal opening into them is one of the finer Flamboyant ensembles of the region. Chapels were added to the nave in the 15th century.

Until the Revolution, Poissy also had a famous priory church dedicated to St. Louis, constructed west of Notre-Dame. The choice of Poissy was intentional: Louis IX was born there in 1215, and it was in the church of Notre-Dame that he was baptized. Philip IV the Fair probably decided on Poissy even prior to the bull of canonization in August 1297, because work was already in progress by November 1297. It went quickly, because the church was said to be finished when the monks took possession in 1304. The charters suggest, however, that this was not the case and that construction of the church and the monastic buildings was still ongoing after Philip's death in 1314; the church was solemnly dedicated only in 1331. Plans and drawings made prior to its destruction give a general sense of the building as an intentional look back to buildings directly associated with Louis IX, such as Royaumont and the nave of Saint-Denis. The south transept contained statues of the six children of St. Louis, as well as figures of the king and his queen placed on either side of the choir enclosure. The two remaining ones can be identified by comparison with the Gaignières drawings as Isabelle and Pierre d'Alençon. Two statues of angels, one in the Louvre and the other in the Musée National du Moyen Âge, stood atop columns flanking one of the altars on the eastern side of the jubé.

# POITIERS

. The Roman city of Limonum, later Poitiers (Vienne), became the capital of the area corresponding to the tribal lands of the Pictones, who had been conquered by Rome in the first century B.C. Early Christians appeared in the city in the 3rd and 4th centuries, and their first great bishop was St. Hilary (d. 368). A second important early Christian was St. Radegund, the wife of Clotar I, who founded the monastery of Sainte-Croix after retiring to Poitiers ca. 550. It was at Moussais near Poitiers in 732 that Charles Martel met and defeated a Muslim raiding party that was pushing northward into France after having conquered Spain. The advance of the Muslims into southern France threatened the Aquitanians, whose duke, Eudes, having been crushed at Bordeaux, appealed to Charles for aid. The Muslims burned the church of Saint-Hilaire but were decimated by the Frankish cavalry and were eventually chased by Charles Martel and his army back across the Pyrénées. Poitiers and much of Aquitaine passed into Frankish hands as a result.

One of the most important historical, religious, and intellectual centers in France, Poitiers is exceptionally rich

Poitiers (Vienne), Baptistry of Saint-Jean, east side. *Photograph courtesy of Whitney S.Stoddard.*

in monuments, the oldest of which are the hypogeum of Abbot Mellébaude in the Faubourg Saint-Saturnin (7th c.) and the former baptistery of Saint-Jean, a 7th-century Merovingian structure on 4th-century foundations (preRomanesque narthex, Romanesque frescoes). The majority of the city's extant churches date from the Romanesque period.

The plans of both Saint-Hilaire-le-Grand and Sainte-Radegonde were determined in part (elevated sanctuary above the crypt, ambulatory, and radiating chapels) by their early prominence as pilgrimage shrines. The oldest portions of the church of Saint-Hilaire-le-Grand (dedicated 1049), built over the tomb of the celebrated bishop, are the lower part of the once isolated bell tower and the transept. The present chevet and eastern-transept apsidioles followed, the tower was incorporated into the structure, and the width of the

original nave (alternating columns and piers) was reduced by the erection of additional supports to carry the curious stone cupolas. Remarkable are the vaulting of the tower, the carved corbels and metopes, the 11th-century capitals, and the frescoes of the bishops of Poitiers (12th c.). The crypt (ambulatory, three radiating chapels) of the church of Sainte-Radegonde (1099) houses the venerated tomb of the queen of the Franks. A 13th-century aisleless nave with Angevin vaults links the Romanesque chevet (carved capitals) with the majestic tower porch. The present portal is Flamboyant Gothic; within the porch are two reliefs (Christ blessing and a seated St. Radegund or the Virgin). Stained-glass windows include episodes from the life of St. Radegund.

Despite its name, the former collegiate church of Notre-Dame-la-Grande (late 1 1th-early 12th c.) is relatively small, yet its lavishly sculptured screen façade and harmoniously proportioned crossing tower are among the most famous in western France. In typically "Poitevin" format, the pronounced horizontals of the three-storied façade are framed by vertical clusters of columns supporting open-arcaded corner turrets with conical roofs. A frieze of Old and New

Poitiers, Notre-Dame-la-Grande, façade. *Photograph courtesy of Whitney S.Stoddard.*

Testament scenes and personages, evoking the Fall and the Incarnation, fills the area above the three elaborately decorated arches of the lower story. Between the corbel tables, a large central window separates two rows of superimposed arcades containing Apostles and bishops. Within the almond-shaped mandorla of the gable are the

Triumphant Christ with symbols of the four Evangelists, the sun, and the moon. The beautiful arcading, the richly carved radiating voussoirs, and the ornamental masonry of gable, roofs, and crossing tower enrich the decorative effect. The remains of Romanesque frescoes decorate both the choir and the small crypt.

The cathedral of Saint-Pierre (begun ca. 1162) is a "hall church," with ribbed vaults and flat chevet enclosing three apsidioles, whose construction spans several centuries. The tripartite façade with a central rose, like the tympana of the portals, reflects northern Gothic influence. The cathedral contains fine stained-glass windows, the most outstanding of which is a magnificent Crucifixion (ca. 1150–70), with the Ascension above and the crucifixion of St. Peter below. The choirstalls with carved misericords are among the oldest in France (ca. 1235–57).

The former abbey church of Saint-Jean de Montierneuf (1076–96) was mutilated following the partial collapse of the crossing tower in 1640. The disposition of the original chevet, similar to that of Saint-Hilaire-le-Grand, is nevertheless striking in its amplitude: apse with ambulatory and radiating chapels, a broad transept with eastern apsidioles. The superstructure of the choir is Gothic.

All that remains of the Romanesque church of Saint-Porchaire that housed the relics of the 6th-century abbot of Saint-Hilaire-le-Grand is the impressive three-storied tower porch (11th c.) built against a primitive façade. The arcading of the porch rests on sculptured capitals; above the portal is a relief of Christ in Majesty surrounded by the four Evangelists and two angels. The body of the church is 16th-century. In the tower hangs the old bell of the university, founded in 1431.

Now a book depot for the university library, the former abbey church of Saint-Hilaire-de-la-Celle (late 12th c.), built over the foundations of St. Hilary's house, retains its deep choir and semicircular apse, strongly projecting transept with eastern apsidioles, and the remarkable octagonal ribbed cupola of the crossing.

The remains of the palace of the counts of Poitiers consist of a 12th-century donjon rebuilt under John, duke of Berry, and a large hall of the late 12th-early 13th century. The wall with monumental triple chimney was also rebuilt under John of Berry, whose statue accompanies those of Charles VI, Isabeau of Bavaria, and Jeanne de Boulogne.

# POITIERS, BATTLE OF

. Poitiers was the site of a major English victory in the Hundred Years' War (September 19, 1356). In 1355, peace negotiations between France and England broke down. In response, Edward, the Black Prince, led what has come to be known as the *grande chevauchée* from Bordeaux to Narbonne and back. This expedition, a great success with considerable booty taken, added to the difficulties faced by the French king, John II, then embroiled in a political controversy with Charles the Bad, king of Navarre.

The English took advantage of John's continuing political problems the following year when they planned a threefold attack on north-central France. The Black Prince was to lead his troops from Bordeaux; Henry, the duke of Lancaster, was to lead his from Normandy; and Edward III was to lead his from Calais. The French army, in an effort to protect this part of France, including Paris itself, moved to stop the English advance and met the Black Prince's force outside of Poitiers on September 17, 1356. The English army numbered 6,000, the French 20,000. As at the Battle of Crécy (1346), it looked as if the larger French numbers might easily defeat the English. Early on the morning of September 19, after a day of maneuvering and attempts by papal mediators to arrive at a peaceful solution, the battle began. The English, being the smaller army, dismounted and took a defensive position behind a hedge facing the road to Poitiers. The French also dismounted, formed into four divisions, and faced the English troops. After some ineffective English archery fire, the first French column, led by the dauphin, later Charles V, attacked the English line. The two armies engaged in hand-to-hand combat until the dauphin's soldiers were forced to retreat. Other soldiers then fled the battlefield, leaving only John II's own force, the largest and freshest of the French contingents, to continue the battle. John moved his troops forward, but at the same time the Black Prince remounted his army and began his own offensive attack on the French, who were unprepared for this mounted assault. Hit with both a frontal and a flank attack, they were caught by the English knights in complete disarray. French losses were high, numbering nearly 4,000 dead or captured. Among those captured was John II himself.

# POITOU

. One of the largest counties of France, Poitou played a role of major importance in medieval history. Poitiers, its capital and most influential town, was the seat of a large diocese, mostly coterminous with the county, and its bishops figured prominently in councils of international scope in the 11th and 12th centuries. Two of the earliest and most famous French monasteries, Saint-Hilaire and Sainte-Croix (Sainte-Radegonde), were also located in the town and attracted pilgrims in large numbers throughout the medieval period. So also did the beauty of its striking Romanesque churches—Notre-Dame-la-Grande, Saint-Hilaire-le-Grand, Sainte-Croix, Saint-Jean de Montierneuf, among others—which made Poitiers an artistic center of the first order, a development helped by its location on one of the principal pilgrimage routes to Santiago in Spain. Its schools—Saint-Hilaire and Saint-Pierre, the cathedral—never attained quite the same fame, although they were among the best in France south of the Loire; in 1431, Charles VII approved the foundation of a university in Poitiers. During the lifetime of Eleanor of Aquitaine, and possibly even earlier under her grandfather the troubadour Duke Guilhem IX, Poitiers became a center for courtly-love poetry in Occitan, the first of its kind in France. The city was also commercially important for trade both on an international scale (Poitevin wines were well known in England, Normandy, and the Low Countries) and within the province. Finally, from the mid-10th to the mid-12th century, Poitiers ranked as one of the political centers of gravity in France as the capital of the vast duchy of Aquitaine, which comprised a dozen counties in addition to Poitou and covered nearly a third of the southwestern part of the country from the Loire to the Pyrénées.

Territorially, the medieval county corresponded to the tribal lands of the Pictones conquered by Rome in the first century B.C. Under Roman administration, Poitiers, then called Limonum, became the capital, and it was here that Christian conversion began in the 4th century. The earliest monastic foundation in France was at Ligugé just south of Poitiers, in the 360s. After coming briefly under Visigothic rule in the the 5th century, Poitou became the vital northern outpost of the duchy of Aquitaine, which fell to the Franks in the late 8th century. Charlemagne appointed the first known count of Poitou. One of the greatest aristocratic dynasties of medieval France was that of the counts of Poitou/dukes of Aquitaine, eight of whom, all named William, ruled from the 950s to 1137. Briefly allied with the Capetians through the marriage of Eleanor of Aquitaine to Louis VII (r. 1137–52), Poitou then became part of the Angevin empire through her second marriage, to Henry II of England, in 1154. English rule lasted only a short time. The Capetian kings conquered and absorbed Poitou into the royal domain in the 13th century, and its history as an independant county came to an end.

# PONTIGNY

**.** The Cistercian abbey of Pontigny (Yonne) was founded in 1114 as the second daughter house of

Pontigny (Yonne), Notre-Dame, nave.
*Photograph: Clarence Ward
Collection. Courtesy of Oberlin
College.*

Cîteaux by Hugues de Mâcon. It was itself the mother house of thirty-four French abbeys and priories. In the Middle Ages, it served as a refuge for three successive archbishops of Canterbury. Thomas Becket fled here in 1164 and remained until Henry's threat to expel the Cistercians from England forced him in 1166 to move to Sens. Four years later, he would be assassinated at Canterbury. Stephen Langton sought refuge here from 1208 to

1213 during his struggles with King John Lackland; and Edmund Rich was buried here in 1240.

The abbey's most generous benefactor was Thibaut II le Grand of Champagne, who in 1150 gave the abbey the means to build its current church (ca. 1150–1210) and to surround its properties with a 13-foot stone wall. The church is an imposing if severe example of Burgundian Gothic style; its long nave with seven bays is the earliest example of Cistercian rib vaulting. The early 13th-century choir, with its ambulatory and eleven radiating chapels, is especially elegant. Little remains of the other conventual buildings.

# PONTOISE

. Saint-Maclou, the only surviving medieval church of Pontoise (Val-d'Oise), was raised to the status of cathedral in 1966. The first church of Saint-Maclou was built ca. 1145–60 by a builder who had worked for Abbot Suger on the chevet of Saint-Denis. The plan of the chevet of Saint-Maclou, a shallow choir bay surrounded by an ambulatory with five contiguous chapels, is in fact an attempt to simplify the ambitious plan of the upper level of the chevet of Saint-Denis. At Saint-Maclou, the deep chapels and the ambulatory bays in front of them are covered by single five-part rib-vault units, the design of which is based on the vaults of the Saint-Denis chapels. The projecting transept arms flank a crossing tower and announce the height of the nave of six bays. The original nave elevation may have had three stories, but the Flamboyant redecoration left only the clerestory windows and their flanking columns and capitals in place. The 1453 enlargement also resulted in the splendid but incomplete Flamboyant façade. The north nave aisle was doubled in the 16th century and remains one of the gems of early French Renaissance architecture.

Pontoise also housed the important Benedictine abbey of Saint-Martin, founded by St. Gautier (d. 1099). The church disappeared without a trace after the Revolution, although old plans and views confirm that it too had a chevet plan based on the work of Abbot Suger at Saint-Denis.

# POPULAR DEVOTION

. Until recently, studies of medieval spirituality and devotion have concentrated on the ascetic and mystical writings of a monastic or clerical elite. However, the emergence of a broader understanding of the spirituality of a people as the dynamic unity of the content of a faith, and the manner in which that faith is lived and expressed by people in a given historical and cultural setting, has led to a recognition that the inarticulate and illiterate might have a spiritual life. Efforts are now being made to uncover the ideas implicit in devotional actions and to recover a spirituality written in bod ies rather than books. Recent studies show that devotional practices and attitudes cut across the lines separating aristocrat and peasant, clerical and lay persons, literate/elite and illiterate/masses, and other social distinctions. Devotional practices were shared rituals, gestures, and attitudes reflecting group and individual piety.

Christianity came to France in many ways, but perhaps the most public was the conversion of Clovis, king of the Franks, ca. 497, as narrated by Gregory of Tours. At a critical moment in a battle, when defeat seemed imminent, Clovis appealed to the God favored by his Catholic wife, Clotilde, and the sudden and complete victory that followed persuaded him to accept her faith. One thought, however, gave him pause. How would the Franks react when their ruler abandoned their ancestral gods? But before Clovis could even begin to address his people, they cried in unison: "We will give up worshiping our mortal gods, pious King, and are prepared to follow the immortal God about whom Remi preaches." And so, in a church adorned with white hangings, perfumed tapers, and clouds of incense, Clovis and his warriors were baptized by the holy Remi, bishop of Reims.

With this act, the Franks officially became Catholic, the first of the Germanic peoples to do so. Their conversion indicates the character of their religion: formal, public, gestural, perhaps superficial; a religion defined by actions and objects rather than by belief. Indeed, what belief was involved, beyond the conviction that God was powerful and acted for the Franks? The notion of spirituality, the interior dimension of the religious life, seems foreign to such a religion.

The conversion of the Franks suggests the difficulties inherent in any attempt to treat this religion as "popular" devotion. No cultural distinction separated Clovis from the mass of the populace; given the general illiteracy of the Germanic peoples, the greatest lords were as uneducated as any of their followers and fully shared their oral culture. That culture was distinct from the written, Latin, Catholic culture of Gallo-Roman bishops like Remi—distinct, but not detached. To reach the Frankish (and Gallo-Roman) populace, Remi and the other Gallo-Roman bishops had to be effectively bicultural, able to communicate in terms of the general culture. The "popular" devotion of the Franks and the learned culture of the ecclesiastical leadership developed in a continuous dialogue.

The monks who first spread Christianity to the countryside encountered a folk religion localized in springs, rocks, trees, and statues of the gods. They often attacked these objects: Martin of Tours (d. 397/400) induced some pagans to chop down their sacred tree by promising that he would let it fall on him; St. Gall (d. ca. 627) smashed statues and threw the pieces into Lake Constance. But they also followed guidelines proposed by Pope Gregory the Great in 601: the idols should be destroyed, but the temples themselves purified with holy water and converted to Christian use; pagan sacrifices should be

replaced by Chris-tian festivities. In short, existing holy places and times were to become christianized and so remain holy.

The holiest objects at these new Christian shrines were the bodily remains of people like Martin of Tours. Crowds flocked to their tombs to ask these friends of God to intercede on their behalf, and the keepers of their shrines recorded and proclaimed their miracles. Oaths sworn on relics became a normal part of judicial procedure, and at the beginning of the 9th century relics were declared an essential element of all churches in the Frankish realm: altars lacking them were to be destroyed, and any newly consecrated churches had to contain them. Access to the necessary relics became an important element in the alliance between the Carolingian rulers and the papacy, since Rome was the great repository of the bones of saints and martyrs; and from Rome these relics flowed north to France, as items of legitimate commerce or objects of pious theft.

In the 11th century, a renewed interest in the lives of Jesus and the Apostles redirected devotion and inspired new forms of piety. Pilgrims continued to frequent local shrines, but increasingly they plied the routes that led across France to Rome or Santiago de Compostela in northwestern Spain, stopping along the way to visit the shrine of Mary Magdalene at Vézelay or the statue of the Virgin at Le Puy—or worship at any of the hundreds of other churches dedicated to Mary. Others set off for the Holy Land, where they could follow the footsteps of Jesus himself. Concern for these holy places helped inspire those armed pilgrimages known as the Crusades. Returning crusaders brought back a fresh harvest of relics: a lumberyard's worth of fragments of the True Cross and the crown of thorns for which Louis IX (r. 1226–70) built that great reliquary known as the Sainte-Chapelle.

Renewed interest in the apostolic life also encouraged reverence for those living holy men who best embodied the evangelical ideal, which was increasingly defined in terms of apostolic poverty. Making a striking contrast to the gold and jewels that adorned the relics of the saints, popular preachers like Robert d'Arbrissel, Bernard de Tiron, and Vitalis de Savigny abandoned secure clerical livelihoods, dressed in rags, and withdrew to the wilderness. But paradoxically, those who most resolutely renounced the world found that an awestruck world pursued and enfolded them. Throngs of admirers gathered around her-mits like Eon de l'Étoile in Brittany or followed Peter the Hermit to disaster on the First Crusade. Occasionally, these unstable groupings achieved a more regular and enduring structure, as when Norbert of Xanten (d. 1134) and his followers gave rise to the Premonstratensian order; far more often, these holy hermits left no trace in the historical record, beyond a brief and disapproving notice from some ecclesiastical chronicler.

Of much greater concern to the authorities was the spread of heresy, which in the 12th century, for the first time since the conversion of the Franks, evoked a broad popular response. Some heretics reacted violently to what they saw as an excessive materialization of worship. Peter de Bruys attacked the central elements of Catholic worship, rejecting infant baptism, the doctrine of the Mass as a sacrifice, the value of intercessory prayers for the dead, and even the use of church buildings; he trampled on the cross, and eventually was consigned to a bonfire that he had prepared to consume crucifixes. But for the most part, heterodox spirituality was informed by the same apostolic and ascetic ideals that inspired orthodox movements of reform and religious revival. Between 1116 and 1145, Henry, a renegade monk from western France, called

for simplicity of worship and poverty of life, much like other wandering preachers; a few decades later, a rich merchant from Lyon named Waldo gave up his worldly goods and embarked on an apostolic life of preaching and poverty. Both ran afoul of ecclesiastical authorities when their personal ideals led them to denounce clerical immorality, question the church's accumulation of property, and challenge the efficacy of sacraments performed by a wealthy and corrupt clergy.

Even more numerous were the Cathars, or Albigensi-ans, who believed in the existence of two equal and eternal divine powers. Their dualist theory opposed spirit, goodness, and light to matter, evil, and darkness and replaced the Catholic version of sacred history with an elaborate mythology of cosmic struggle between the forces of good and evil. It may be that the Cathar heresy owed its success less to the inherent drama of its theology than to the heroic asceticism of its leaders. Whatever the reason, the Cathars attracted many adherents in southern France and northern Italy and even developed an ecclesiastical structure that rivaled the Catholic church in such regions as Languedoc until it was smashed by crusaders and inquisitors.

The triumph of orthodoxy in the 13th century owed something to the elaboration of ecclesiastical structures and the calculated application of force, but even more to the proliferation of opportunities for the faithful to take an active part in religious life. The spread of the mendicant orders meant more, better, and longer sermons for laity to hear. Prolonged or repeated elevation of the host during the Mass, the use of monstrances to display the consecrated eucharist, and the introduction of Corpus Christi processions all served to satisfy the laity's fervent desire to see the body of Christ, made present by the priest's words and the miracle of Transubstantiation. Urban parishes paraded the relics of their saints in annual processions; villagers followed their priests each spring as they blessed the fields.

In addition to more or less passive attendance at Mass, sermons, and processions, the laity formed religious guilds or confraternities, thousands of which were founded in the late Middle Ages. Every village had its confraternity, and each city had several; there were thirteen confraterni-ties in Aix-en-Provence by 1400, and thirty in Dijon by the end of the 15th century. These pious associations were an important source of charity: they fed the hungry, clothed the poor, dowered young women, visited the sick, and buried the dead. Confraternities staged religious processions or performances on major festivals and met for private devotions. At their weekly or monthly meetings, the members heard Mass or listened to sermons. They also performed devotional exercises—prayer, the singing of hymns, penitential flagellation—according to the bent of the group. Confraternities thus provided an institutional framework within which laypeople could appropriate such monastic practices as flagellation and meditative prayer. Not all of their activities were equally edifying. The Confraternity of the Madonna of Le Puy, founded in 1182 by a carpenter, was intended to be a devout militia that would preserve the peace and defend the faith against heretics; but it had to be suppressed when it turned its arms against some of the local barons. Councils at Avignon (1326) and Lavaur (1368) condemned confraternities for engaging in acts of brigandage. A more common though less serious problem was simple rowdiness. Confraternities typically spent substantial sums on wine for their annual feast, and what was supposed to be a celebration of Christian brotherhood could degenerate into a drunken brawl or raucous gallop through the forest.

An increasingly literate laity made use of a variety of religious books, whose numbers were further multiplied with the introduction of printing at the end of the 15th century. Luxury items, such as the *Très Riches Heures,* a magnificent book of hours commissioned by the duke of Berry, matched the religious tastes of the wealthy, while the populace at large relied on cheap handbooks designed for mass consumption. Vernacular literacy normally began with the memorization of simple prayers and psalms and continued with the reading of catechisms, saints' lives, and moral tracts.

In their testaments, laypeople often left considerable sums to endow Masses for the benefit of their souls and the souls of their ancestors. In much the same way that prayers to the Virgin were multiplied to the point that rosaries had to be used to keep track of them, this investment in the afterlife could lead to an obsessive multiplication of Masses: in the region of Bordeaux, Bernard d'Escoussans, lord of Langoiran, stipulated in 1338 that 25,000 Masses be said for the repose of his soul, while some thirty years later another nobleman, Jean de Grailly, endowed 50,000. To fulfill the terms of such bequests, church aisles filled with side chapels, where squadrons of chantry priests, a sort of clerical proletariat without pastoral responsibilities or secure incomes, celebrated private Masses without pause.

While the majority of people rested their hopes for salvation on the ministrations of the clergy, some sought to dispense with priestly intercession. In the wake of the Black Death of 1348, processions of flagellants spread through parts of northern France, Flanders, Germany, and Austria. Flagellation had long been accepted as a penitential practice when performed in monasteries or lay confraternities; but when performed like this in public, and by people who rejected clerical supervision and themselves assumed the authority to preach and hear each other's confessions, conflict with ecclesiastical authorities was inevitable. Opposition from the pope, resident in Avignon, and the king of France prevented the flagellant movement from penetrating deeply into French territory.

A more subtle challenge to ecclesiastical authority came from the mystics and visionaries, many of them women, who assumed greater prominence in the 14th and 15th centuries. A few were condemned as heretics, but most managed to convince the suspicious authorities that their inspiration was authentic and their teachings orthodox and so escaped being burned at the stake like Marguerite Porete (d. 1310), Na Prous Boneta (d. 1325), and Jeanne d'Arc (d. 1431). What made even the most orthodox mysticism subversive was its claim of direct and unmediated access to God, without the need for priestly intercession or institutional guidance. In this, as in the emotional intensity of their devotion to the person of Jesus, the mystics were simply extreme examples of a more general interiorization of devotional life. The solitary recitation of the rosary, the multiplication of side chapels and private Masses, and the proliferation of confraternities were other signs of the fragmentation of the Christian collectivity at the end of the Middle Ages.

These later developments, however, were added to earlier ones without replacing them. What we see is an overlay of devotions, in which the early dedication to such objects as relics and shrines was supplemented first by reverence for those living holy men and women who best embodied the evangelical ideal, and then by an effort to sanctify one's own self through the performance of charitable and pious acts. Those acts were often directed toward the most traditional of sacred objects; the cult of relics was as important at the end of the Middle Ages as it was at the start. And for many of the

French, the powerful hand of God was as clearly visible in the victories of Jeanne d'Arc as it had been, nearly a millennium earlier, in Clovis's triumph.

# POPULATION AND DEMOGRAPHY

. All demographic figures from the Middle Ages are approximate, but about general trends and sizes a consensus is developing, except in regard to sex ratios and age at marriage. From a high of perhaps 5.7 million ca. A.D. 165, the population of Gaul fell to fewer than 4 million by 500. Germanic tribes raided Gaul in the 3rd century and occupied it in the 5th, becoming a majority in sparsely populated Flanders, where their language predominated, but remaining a minority of less than 10 percent in distant Aquitaine. The population reached its nadir despite their influx and that of British refugees to Armorica (Brittany). Villages that grew from Gallic settlements or Roman villas predominated over hamlets and isolated farmsteads, except in hilly or mountainous regions too poor to support denser settlement.

In the 6th century, the population grew somewhat, but the Arab conquests in the Mediterranean world between 636 and 732 disrupted external trade and hastened urban

decay. Gold coinage ceased, merchants from the eastern Mediterranean no longer appear in the sources, and cities that were walled during the chaos of the 3rd century became so depopulated that they reduced the circuits of the walls, sometimes enclosing little more than a fortified cathedral.

Like his father and grandfather, Charlemagne (d. 814) pushed back the Muslims, creating the Spanish March. He annexed Lombardy and Germany, creating a large, safe, and prosperous empire with a good silver coinage. Gaul's population regained 5 million, and for the first time the region surpassed Italy as Europe's most populous. It remained almost entirely rural. A modest revival of some towns ended with the disintegration of the Carolingian empire in the face of Viking raids. Population suffered a new decline in the 9th and 10th centuries, as Danes seized Normandy and destroyed the Flemish ports; Muslims attacking from the south established a base at La Garde Freinet in Provence. Survivors fled to the interior, often to hills, where local lords could defend them more easily against raiders following the river valleys.

After the raids ended, improved agricultural technology by the 11th century made the deep, well-watered fields of northern and western France much more productive than the shallow, sandy soils of the Mediterranean valleys south of the Massif Central. In the north, the French augmented plowlands by clearing forests that may have come to cover three-fourths of the surface. Three centuries of expansion followed, and Europe's population doubled, while that of France nearly quadrupled, from about 4 to 15 million. A royal census of 1328, which did not cover the entire kingdom, listed 23,800 parishes and 2,470,000 hearths. Adding 893,752 hearths to cover the rest of the kingdom, Ferdinand Lot used a multiplier of five per hearth (except for Paris, where he used 3.5) and calculated that the French king then ruled 17.6 million people. Other authorities have since argued for a lower coefficient and a population of 15 million.

Pirenne has described the urbanization of these centuries, as a revival of trade and industry coincided with the agricultural revolution. Although over 90 percent still lived in rural settlements, town populations soared. Abandoned Roman sites were reoccupied and new ones formed under castle walls, *faubourgs,* or suburbs (burg means fortress), where merchants wintered. Most of the *villeneuves* founded during the *grands défrichements* remained merely large agricultural villages, although sometimes as large as true towns of 2,000–3,000 people who lived mainly on commerce and industry. Except for the great towns of Flanders, and Paris (which may have grown from 25,000 in 1200 to 210,000 by 1328), only Marseille, Montpellier, Lyon, and Bordeaux ever attained a population of 30,000. Few other French towns, even important trading or administrative centers, reached as many as 10,000 people. Because of congestion and poor sanitation, towns always had a higher mortality rate than rural areas. In spite of considerable emigration, some areas of Normandy and Burgundy contained as many people ca. 1300 as they do today.

In the wake of the Black Death of 1348 and extended periods of warfare, France's population plunged to about 10 million by 1450, recovering gradually thereafter as plague recurred less frequently. By 1500, it had still not regained the pre-Black Death level. After the first visitation wiped out over half their population, some villages and towns were abandoned and never recovered, but fresh immigrants from the countryside repopulated most communities, raising the urban percentage of the entire population. Paris and other cities soon exceeded their preplague totals. The ensuing shortage of rural

labor brought lower rents, higher wages, and a drastic reduction in the number of bondsmen, from about 50 percent to about 10 percent of the rural population.

Perhaps a third of all medieval infants failed to reach the age of six, half of these dying in the first year. Death tolls for both sexes remained high until the mid-teens. Those who survived the dangerous childhood diseases gained a basic immunity from the most common scourges, and most who reached maturity could expect to live until fifty, although most of those in their forties were decrepit and disease-ridden. Average nuclear-family size was perhaps only four, because children left the hearth early (seven to twelve years of age) to become apprentices or domestic servants.

Diet, hygiene, and living standards improved after the waves of plague carried off the excess population, but for most of the Middle Ages average life expectancy was only about thirty-four for males and twenty-eight for females. Many more females were exposed or killed at birth, and the mortality of women in childbirth may have exceeded that of men in war, hunting, and accidents. The sex ratio was between 6:5 and 4:3. David Herlihy, who has studied some major demographic documents of the Middle Ages, has argued that more female than male servants may have eluded the enumerators, but this factor alone cannot explain the preponderance of males indicated in virtually all surveys of population in Europe before the 18th century.

Like most slaves, perhaps one-third of the free or freed men could never afford to marry, as in 19th-century Ireland or the Roman Empire. That fact, along with the sex ratio, may have encouraged situational homosexuality, while many exclusives joined the clergy, the celibacy of which held down the population. The newly created orphanages became charnel houses whose horrors and deprivations few survived.

Except for royalty and aristocracy—whose members often married young, boys of eighteen to girls of fifteen or younger—most French people seem to have waited to marry. After plagues or other disasters, when heirs came prematurely into their inheritances, the marriage ages of even common males plunged. Contrariwise, on the over-crowded farms before the Black Death, marriages were postponed. Merchants often waited until they had established their fortunes, or professionals until their careers flourished. We encounter marriages of a "Mediterranean type" (twenty-four-year-old men who could afford their own dwelling marrying fourteen- or fifteen-year-old girls), intermediate between the "European type" that has prevailed in the West since ca. 1500 (men in their late twenties marrying women in their mid-twenties) and the "eastern type" (males at puberty taking women of about twelve and continuing to live with the groom's family).

France had Europe's largest population from Charlemagne to Napoleon, but its rate of growth has since been the slowest in Europe.

# POST-VULGATE ROMANCE

. The popularity of the Arthurian Vulgate Cycle (ca. 1215–35) is attested in part by varied literary continuations, among them the Post-Vulgate Arthuriad (also known as the Post-Vulgate *Romance of the Grail,* or *Roman du Graal,* or the Pseudo-Robert de Boron Cycle; ca. 1230–40). This anonymous corpus of prose narratives follows roughly the structure of the Vulgate romances, providing versions of the *Estoire del saint Graal,* the *Merlin,* the *Queste del saint Graal,* and the *Mort le roi Artu* but omitting the lengthy *Prose Lancelot,* which constitutes nearly half of the Vulgate corpus. To bridge the narrative gap between his *Merlin* and *Queste,* the Post-Vulgate continuator recast selected scenes from the Agravain section of the Vulgate *Lancelot,* combining them with elements from the first version of the *Prose Tristan* and other material of his own invention.

The resultant "text" is nowhere preserved *in toto;* it has been reconstructed from French fragments and from Portuguese and Spanish translations. To judge from the translations, the Post-Vulgate *Estoire del saint Graal* probably differed little from its predecessor in the Vulgate Cycle. The Post-Vulgate *Merlin* (known commonly as the Huth *Merlin* or the *Suite du Merlin*) reduplicates the prose rendering of Robert de Boron's verse text that constitutes the first part of the Vulgate *Merlin* but adds to this base narrative a new elaboration. Whereas the Vulgate *Merlin* expands Robert de Boron's account by chronicling the military exploits of King Arthur, the Huth *Merlin* provides an elaborate scenario of more fantastic incidents. The text is found in two manuscripts, both incomplete at the end: the Huth manuscript, B.L. Add. 38117 and Cambridge Univ. Lib. Add. 7071. The Post-Vulgate *Queste* and *Mort Artu* offer completely remodeled versions of their predecessors in the Vulgate Cycle.

# PRAGMATIC SANCTION OF BOURGES

. Promulgated by Charles VII in 1438, the royal decree known as the Pragmatic Sanction of Bourges regulated the relationship among the crown, the French church, and the papacy. The crown reformed church governance stressing French independence from papal authority: it suppressed papal taxation, subjected church courts to royal courts, and reaffirmed the right of local clerical bodies to elect or appoint ecclesiastical dignitaries. The occasion for the decree was the meeting of a French synod in support of the Council of Basel, which had asserted the supremacy of the council over the papacy.

The twenty-three articles of the decree represent the fulfillment of the Gallican tradition in development since the reign of Philip IV. It was issued in the Roman-law form of a "Pragmatic" to emphasize historical sources of secular authority in this domain. Clergy and crown shared an interest in rejecting papal authority, but the vexatious question of whether the king could impose his will on the clergy remained unresolved. Political circumstance led both Louis X and Charles VIII to suspend the decree, but Louis XII insisted on its enforcement after 1499, and it remained the basis of church governance in France until superseded by the Concordat of Bologna in 1516.

# PRAYERS AND DEVOTIONAL MATERIALS

. Prayers and devotional materials in Old French belong to two broad categories: those derived from the liturgy and those of more literary and personal inspiration. The liturgical works include French versions of the *Te Deum,* the Kyrie, the Gloria, the Sanctus, and the Agnus Dei; translations and paraphrases of the Credo and the Pater Noster, including the

commentaries by Maurice de Sully; and formulae for confession. The liturgical collection deemed most suitable for the laity was the psalter, which explains its early translation into the vernacular. The oldest psalters were in Latin, however, as were most of the books of hours (consisting of the Penitential psalms and the Office of the Dead), but these were sometimes combined with prayers in the vernacular. The earliest prayerbook containing vernacular prayers, the *Psalter of Lambert de Bègue,* was produced early in the 13th century in the vicinity of Liège.

Vernacular prayers, more independent of Latin models than the liturgical pieces, address the heavenly hierarchy: God, Jesus, the Virgin, and the saints. The *Ave Maria* appears in French only in the 13th century and is not included in a psalter until the 14th, but paraphrases of the prayer were composed by such well-known authors as Baudouin de Condé, Rutebeuf, Gautier de Coinci, and Philippe de Beaumanoir. The *Saluts* to the Virgin are derived from the *Aves,* but the Marian chansons, especially those by Rutebeuf and Gautier de Coinci, are more closely related to the secular lyric. Another popular genre was the *complainte* portraying the Virgin's suffering during the Passion. Some of these are based on the Latin *Stabat mater,* others, such as the *Regrets de Nostre Dame* by Huon le Roi de Cambrai, the *Débat de la Vierge et de la Croix,* and the *Plainte Nostre Dame,* are longer and more complex. Related to these materials, but different in genre, are the works that combine biblical and apocryphal materials in narrative form.

# PREACHING

. The Frankish church inherited from late antiquity a range of pastoral acts identified with preaching and an ecclesiological framework by means of which these acts were authorized. Patristic preaching was centered on the address of the faithful, which occurred within worship on Sundays and feast days, an address centered on exegesis of biblical readings by which the preacher articulated Christian belief and cult on the one hand, Christian life and practice on the other.

Little is known of the preaching practice of the Frankish church during the Merovingian period (ca. 450–751). Its episcopate was filled largely by scions of the old Roman provincial aristocracy, who tended to maintain the rhetorical and theological

traditions of the patristic world. Few monuments to their early homiletic effort survive. The sermons of Caesarius of Arles represent an exception that allows one to see both the continuity of context and pastoral intent between his preaching and that of his patristic predecessors, even while noting the considerable changes in circumstance and a heightened awareness of the countryside and of the enormous dislocations of the day.

The pastoral situation of the Merovingian church was poorly fitted to the rhetorical and institutional framework evolved in the ancient church, which had concentrated pastoral (preaching) efforts in the hands of a bishop and the clergy who made up his immediate household. Merovingian dioceses were sprawling affairs whose sheer physical size necessitated the development of subdiocesan centers of pastoral care, that is, parishes endowed with clerical communities. Who were these parish priests to be? How were they to be trained to pastoral office? And how was their pastoral activity to relate to that carried on by the bishop and his household clergy?

Clear attempts to answer such questions survive only in Carolingian sources (751–989), such as capitularies. The *Admonitio generalis* (789) established doctrinal ends of preaching—faith in the Trinity, Incarnation, Passion, and Resurrection. It recommended that preachers make use of the Articles of Faith, the list of sins contained in Galatians 5, and the spiritual counsels found in the Sermon on the Mount. At Tours in 813, bishops were admonished to preach to their subjects concerning the Last Things and to do so in the vernacular. At Attigny in 822, they were exhorted to establish assistants within their dioceses who would be competent to help them fulfill their preaching office. The capitulary of Haito, bishop of Basel, demanded that parish priests have in their possession all books requisite to the administration of their responsibilities, among which was to be a collection of sermons covering all Sundays and feast days.

This legislation suggests that by the 8th and 9th centuries the Frankish church had begun to adjust to the logistics of its situation. While the identification of the church's "order of preachers" with the episcopacy remained current, the bishop's office, including his preaching ministry, was assumed to be carried on with a fair degree of autonomy by clerical delegates at the parish level. Preaching was for the most part conceived in terms of the public worship of the faithful. The bishop's preaching, to be carried on in the vernacular, was intended to instruct the faithful in the obligations of membership in the community, obligations of both word and deed.

Haito of Basel's capitulary alludes to another Carolingian initiative. Bishops and clerics became increasingly busy with the compilation and dissemination of homiliaries, collections of sermons covering the readings of the liturgical year. Many were produced in a monastic context with the contemplative *lectio divina* in mind; others were produced primarily for the edification of the clergy. Some, however, were compiled in response to the desire recorded in Haito's capitulary that every parish priest have access to a collection of sermons covering the readings of the entire liturgical year.

This survey of early-medieval preaching must be modified somewhat by pointing to a revival of kerygmatic preaching in the Frankish church. The Gallo-Roman domination of the episcopacy gave way in the latter half of the 7th century. The new willingness of the Frankish nobility to pursue ecclesiastical careers went hand in hand with the wanderings of St. Columbanus and the establishment of Irish monasticism throughout the Frankish lands. A new missionary spirit emerged among Frankish ecclesiastics that culminated in a

move to evangelize the Germanic peoples of the Rhineland and Frisia, a mission that culminated in the mid-8th-century missions led by St. Boniface.

The history of preaching takes a significant turn in the 11th century. The advent of the eremetical movement ca. 1000, the birth and spread of the movement of regular canons in the middle decades of the century, and the policies of the reform popes at the century's close all gave voice to a new spirit that sought to dissociate preaching from certain of its old moorings and associate it with new spiritual aims. The episcopal care of the Frankish centuries had addressed communities rather than persons. Its form and focus were adapted accordingly, expressing them-selves in large-scale events constituted by highly stylized acts in public liturgical settings. Bishops could be counted on to maintain the required pomp in their preaching in the vernacular, but not so their proxies in the country parishes. Consequently, it would seem that the preaching of the latter remained in the Latin of the homiliaries themselves. Such a preaching, because it was literally unintelligible, addressed the community with a verbal mystery, a fitting adumbration of the subsequent mystery of Word-made-Flesh on the altar at the climax of the Mass.

Many of the French hermits, taking John the Baptist as their patron and model, returned to the edges of the settled land to preach a message of repentance to individuals. In the Frankish church, repentance had been the special concern of the monastic order, which shouldered the burden of a constant repentance on behalf of the faithful as a whole. In the preaching of the 11th-century itinerant preachers, however, the penitent life was democratized and addressed to each of the faithful. As a result, the 11th and 12th centuries can be seen as a great age of religious and lay preaching, and as an age of immense institutional and pastoral ferment, as the church struggled to adapt to this outburst of new needs and feelings. The earliest of these wandering preachers remain largely nameless, but we know the names of many who came to be allied with the movement of reform emanating from and under the auspices of the popes of Rome: Peter the Hermit (1050–1115), Robert d'Arbrissel (1060–1115), St. Norbert of Xanten (1082–1134), to name only a few.

From the 11th century, Benedictine houses began staffing their dependent parishes with monks of the community. Orders of regular canons proliferated, several of which, such as the Premonstratensians, took on pastoral care in rural churches or, like the Victorines in northern France, the care of women religious, including the office of preaching. Nor should one forget the extensive use made of preachers and preaching missions by the popes of the 11th and 12th centuries. One thinks of the Cistercians Bernard of Clairvaux and Alain de Lille commissioned to preach the Second and Third Crusades, of religious sent to preach against heretics in southern France, of the dispirited troop of Cistercians whom St. Dominic met and encouraged in 1206. Examples of lay preaching and preachers are equally plentiful. In particular, one thinks of the career of Peter Waldo.

Just as the hermits of the early 11th century had taken on a biblical exemplar in John the Baptist, so too did lay preachers take on exemplars: the Apostles and the apostolic life described in Matthew 10. In emulation of the Apostles, they moved about two by two, barefoot and penniless, preaching the coming of the Kingdom of God. This flowering of lay preaching, this apostolic movement, by its embrace of mendicancy also drew strength from a development within the rapidly urbanizing regions of Europe: the embrace of a

life of voluntary poverty in response to the blatant excesses of monied wealth among townsfolk.

All this ferment provoked anxiety in many quarters. A controversy broke out in the 12th century as to the very possibility of a religious office of preaching: was not the "order of preachers" the episcopacy and those whom bishops delegated to carry out their pastoral functions in parish churches? How was the increasingly widespread claim among religious to an intrinsic preaching office, much less the swarming groups of lay "apostles," to be accommodated to the pastoral institutions of the western church?

The pontificate of Innocent III (r. 1198–1216) would create a framework transforming the church's pastoral care that won the adherence of the majority of religious and lay preachers. In a first phase, Innocent created space for lay and religious preachers by his efforts to reconcile groups of heretical preachers, the Humiliati (1201) and Walden-sians (1208 and 1210). His work with St. Francis in Italy and with Bishop Foulques of Toulouse and St. Dominic in southern France went far to establishing the two greatest mendicant orders, the Franciscans and Dominicans. He narrowed the definition of properly clerical preaching *(praedicatio)* by splitting off from it two activities formerly bound to it: the telling of one's faith to another *(professio fidei)* and the defense of orthodoxy in debate with heretics *(defensio fidei)*. In a second phase, Innocent crystallized a new pastoral order in the constitutions of the Fourth Lateran Council (1215). He gave universal force to the old Carolingian admonition that bishops recruit preachers competent to preach throughout their diocese. In so doing, however, he associated preaching with the sacrament of penance, for he added that bishops should also recruit competent confessors. In addition, he underscored the importance of confession by establishing a universal obligation to make annual confession to one's "proper priest," further associating this confession with the obligation to receive communion at Easter. The net effect of this legislation was to bind preaching to the sacrament of penance and to institutionalize the spiritual impulses of the previous two centuries by making the sacrament of penance with its prolegomenon, repentance, into an obligatory and annual feature of adult Christian living. This new pastoral axis of preaching-for-confession demanded far-ranging modifications to the church's pastoral institutions.

Preaching could no longer be seen as the preserve of an "order of preachers" identified narrowly with the episcopacy and the homily at Mass celebrated in the cathedral church. Preaching-for-confession assumed a more intimate interaction between preacher and hearer, one more obviously possible at the parish level in the countryside. In the towns, where parish structure was underdeveloped, parish churches needed the supplement of religious oratories open to the faithful. The 13th century saw the formation of many new parishes and the establishment of mendicant priories throughout the towns of Europe.

Preaching-for-confession demanded not only familiarity but also knowledge, a theoretical understanding of what motivated human action. The 13th century saw a considerable expansion of clerical opportunities to study and the proliferation of a vast pastoral literature, much of which was designed to help parish and mendicant priests prepare for their roles as preachers and confessors to the faithful. From the University of Paris especially, there poured forth a torrent of treatises: manuals of confession, guides to confessors, biblical distinctions, collections of model sermons, *summae* of preaching, arts of preaching, biblical postillae, and the like.

By ca. 1300, a new framework of pastoral institutions had been worked out. The locus of pastoral care had been lowered from the cathedral church to the parish church, supplemented in urban areas by the oratories of the religious. The "order of preachers" had been expanded to include parish and religious clergy. Indeed, that old Gregorian term had come to rest upon one order of religious in particular, the Dominican Order of Friars Preachers.

These transformations led to the exclusion of certain possibilities. From the mid-13th century, lay preaching came to be proscribed. Even those lay functions given papal sanction by Innocent III, profession and defense of the faith, came to be viewed with suspicion. The orders founded by Innocent's policy of reconciliation had ceased to be by the end of the century. Nevertheless, a long and uninterrupted tradition of monastic preaching continued with little change. Within the monastery, religious superiors, male and female, preached to their subordinates so as to form them to their religious callings. In France, sermons of the Mistress of Paris's Grand Béguinage are preserved in manuscripts B.N. lat. 16481 and 16482.

Literary witnesses to medieval preaching abound. Although they bear a problematic relationship to actual preaching, they do provide some sense of the rhetorical modes that held sway at different periods of medieval history. In general, a patristic mode of preaching predominated in both monastery and public preaching until the close of the 12th century. This mode, the homily *(tractatus, omelia),* represented a more or less continuous commentary on the biblical readings chosen for exposition, whereby the preacher exposited his text by associating it with other biblical passages that shared a significant word or concept. This mode of preaching continued in monastic circles even after it began to give way to other modes outside of monastery walls.

Word-associative approaches to the biblical text crystallized in the course of the 12th century into a set form, the biblical distinction, under the influence of the cathedral schools. The use of biblical distinctions to provide an architectonic for sermons is clearly visible in the sermon collections of late 12th-century bishops like Maurice de Sully. This represents a first step away from the homily tradition and toward a new mode of preaching, the "thematic sermon."

The thematic sermon proper emerges at the dawn of the 13th century and continues to be developed well into the 14th. Here, attention has come to focus upon a single, small passage of the Mass readings. This "theme" is then divided into a number of "parts," usually between two and four. These divisions serve subsequently as occasions for doctrinal, mystical, or moral instruction. Instruction or correction occurs via the process of expansion or dilation by which the meaning of each part is articulated, with or without subdivision, and confirmed by means of "authorities," "arguments," or "examples." The latter category often meant a narrative vignette drawn from a common stock of colorful stories. It could also mean a parallel moment from the nonhuman world, a similitude that drew its power from the assumption of the human microcosm. The more educated the context, the more preachers would be expected to confirm their divisions and subdivisions by recourse to arguments and authorities. When preaching to the ordinary faithful, however, one was expected to use examples and similitudes. The *Sermones vulgares* of Jacques de Vitry show how effectively the thematic sermon could be adapted to the needs of popular preaching.

The 13th-century transformation of preaching in response to the spiritual ferment of the 11th and 12th centuries was largely completed by the mid-14th century. The last two centuries of the medieval era saw a refining and elaboration of the system. Everywhere, there came to be more preachers, more sermon aids of every sort, more opportunities for study. France continued to be blessed with gifted preachers of every stripe, whether a pope like Clement VI, an academic like Jean Gerson, or a mendicant like Vincent Ferrer. None of these gifted men, however, came from an unexpected quarter; the system was firmly in place. There would be no substantial change to the office of preaching until the 16th century, the advent of Calvinist preaching, and the Catholic response inaugurated at the Council of Trent (1563).

# *PRECARIA*

. A contract by which land was leased in perpetual usage by ecclesiastics for a nominal annual rent to local knights and lords of castles. The *precaria* was in use throughout the early Middle Ages. The precarial grant frequently was made to knights who would be expected in return to protect the church in question (protofeudal contracts), and it may have been by such contracts that the early Carolingians provided support to the warriors needed to defeat the Muslims. In the upheavals of the 10th and 11th centuries, the precarial grant was often used to regularize a usurpation of church land by knights; in such a case, in return for the church's grant of precarial rights the warrior, who continued to exploit the land, would concede allodial rights to the monks or bishop. Precarial grants could also be used to retrieve for heirs of donors to the church what those heirs

considered undue usurpation of family land by ecclesiastics who had persuaded dying men and women to make deathbed grants for their souls.

*Constance H.Berman*

# PREMIERFAIT, LAURENT DE

(1388–1420). Humanist and translator from Premierfait, near Troyes. Laurent produced French versions of major Latin and Italian texts, such as Cicero's *De senectute* in 1405 and *De amicitia* in 1410 and Boccaccio's *De casibus virorum illustrium* in 1409 and *Decameron* in 1414. He may also have translated Aristotle's *Economics* into French.

The *Decameron* translation, dedicated to John, duke of Berry, is commonly known as the *Cent nouvelles*. Its popularity is attested by its preservation in fifteen manuscripts and in eight editions of the 1485 Vérard printed text. Laurent's remained the only French version of the *Decameron* for well over a century, until Marguerite de Navarre in 1545 commissioned Anthoine le Maçon to prepare a new translation.

Assessments of Laurent's skill as a translator vary. Evaluation of the *Cent nouvelles* in particular is difficult, both because it still awaits a modern edition and because Laurent, whose command of Florentine was inadequate, translated not Boccaccio's text but a Latin intermediary prepared by Antonio d'Arezzo. Moreover, scholars consulting less than reliable manuscripts have concluded that Laurent was guilty of verbosity and wearisome moralizing. Study of the best manuscripts (e.g., Vatican, Pal. lat. 1989) reveals that he respected his sources far more than has generally been thought, limiting himself to the small interpolations and modifications characteristic of early translators.

# PREMONSTRATENSIAN ARCHITECTURE

. The study of Premonstratensian architecture has been dominated by the idea that the churches of Prémontré followed Cistercian plans. The evidence suggests that there were some built on a plan that loosely resembled the so-called "Bernardine" plan: square chevet and projecting transept with contiguous eastern chapels. This is by no means the rule, however, as comparison of the plans of Braine, Dommartin, and Saint-Martin at

Laon reveals. The resemblance is strictly confined to the plan. The churches of Prémontré were much more richly decorated and emphatically followed local practices in style and technique, as befits the churches of regular canons. Very few of them seem to have accepted Cistercian austerity in architecture and decoration.

# PRÉMONTRÉ

. Located in the wilderness near Laon, Prémontré (Aisne) was the site of a community of regular canons and lay persons and the mother house of the Premonstratensian order, founded ca. 1120 by Norbert of Xanten. A wealthy and worldly cleric associated with the imperial court, Norbert was converted to a life of eremitic asceticism in 1115. After an abortive attempt to reform the priests at Xanten, Norbert received papal authorization as an itinerant preacher. He proved to be a gifted preacher whose attacks on ecclesiastical abuses and calls for spiritual reform attracted many followers. He was finally persuaded to found a community composed of clerical and lay, male and female members in the isolation of Prémontré. From the beginning, this group was dedicated to poverty, manual labor, personal asceticism, and contemplative prayer, much in line with the other movements of reform—lay, clerical, and monastic—of the day. Norbert also incorporated clerical functions and isolation from the world into the communal ideal. In 1126, Norbert left Prémontré to become archbishop of Magdeburg, where he continued his efforts to reform the clergy and to launch missionary efforts in northern Germany, until his death in 1134. As a wandering preacher, Norbert, like Robert d'Arbrissel, attracted numerous female followers. He organized these women into convents alongside the male monasteries of the order, and initially they shared a church while living in separate buildings. Later, in the 1130s, the separation of communities of women from communities of men was initiated, a move that led to the gradual decline of houses of canonesses.

The Premonstratensians followed the *Rule of St. Augustine* but amplified and modified it with their own *Statutes,* first drawn up (1131–34) under Hugh of Fosses, who succeeded Norbert in 1126. These statutes and later versions were significantly indebted to Cistercian customs with regard to the details of daily life and discipline. Premonstratensians also adopted the Cistercian practice of an annual chapter-general. Communities were soon to be found not only in France, England, and Italy but also in Palestine and eastern Europe. The White Canons, as they were called because of their white (i.e., undyed) wool habits, became known especially for their dedication to poverty, to the care of the poor, to quiet (as a result of communal isolation and/or individual discipline), and to the clerical responsibility for the cure of souls.

# PRESLES, RAOUL DE

(1316–1382). After legal studies at Orléans, Raoul was attached to the Châtelet in Paris and eventually to the household of Charles V, where he enjoyed considerable royal favor. His works include a Latin *Compendium morale de re publica* (1363), a French *Discours de l'oriflamme* (1369), and the Muse, an imaginary quest for a solution to France's contemporary problems. Raoul is best known for his translation (1371–75) of Augustine's *De civitate Dei (Cité de Dieu),* with his own important commentary. Many illustrated manuscripts, including the king's own copy of this text, still exist. He began a translation of the Bible at the request of Charles V, but it remained incomplete at his death.

# *PRÉVÔT/PRÉVÔTÉ*

. *Prévôt* (Lat. *praepositus*) was one of several titles given to seigneurial officers involved in managing rural estates. The first Capetian kings used *prévôts* to administer the scattered parts of the royal domain. At a local level, they were responsible for justice, military defense, and collection of the king's seigneurial revenues. In the 11th century, the *prévôts* tended increasingly to make their positions hereditary and thus became more difficult to control. One of the king's "great officers," the seneschal, became their supervisor. In the 12th century, the office of *prévôt* was put up for bidding, and henceforth the *prévôts* were farmers of revenues. To monitor their performance and curtail abuses, the crown established roving justices, *baillis,* to hear complaints against them. The office of seneschal was vacant after 1191, and in the next few years the *baillis*

became established in geographical regions as powerful officials superior to the *prévôts*. The district for which a *prévôt* was responsible was called the prévôté, and there were half a dozen of these in each *bailliage*.

*John Bell Henneman, Jr.*

[**See also:** *BAILLI/BAILLIAGE; PRÉVÔT DE PARIS*]

# PRÉVÔT DE PARIS

. The *prévôt de Paris* was the official charged with protection of royal rights, oversight of royal administration, and execution of royal justice in the *prévôté* or *vicomté* of Paris throughout the late Middle Ages. It is not known precisely when the first *prévôt* was appointed (probably not before the 11th century), but the office was similar to that held by administrators of noble and royal estates elsewhere in Europe, many of whom, like the *prévôt de Paris,* were originally farmers of income. The Parisian *prévôt* became important because Paris became the principal seat of government for the realm in the late 12th century. Sometime in the reign of Philip II Augustus (r. 1180–1223), another official, salaried, was appointed to supervise the *prévôt de Paris*. Technically, he may have had the title of *bailli,* but the sources ordinarily call him *prévôt* as well. Consequently, in the first half of the 13th century there were two *prévôts de Paris*. No precise line of demarcation has been drawn between their powers, although the *prévôt-bailli* was probably a delegate of the royal court, Parlement, and the judicial superior of the two. In general, they acted jointly and with a single seal. Louis IX, ca. 1260, combined the two positions into one, assigned a huge salary to it, and appointed Étienne Boileau to the new office, a man whom Jean de Joinville praised for his probity.

The court of the *prévôt(s)* was the Châtelet, and though always subordinate to the Parlement de Paris it had extensive criminal and civil jurisdiction; by 1274, it was providing a forum for private registering of acts (voluntary or gracious jurisdiction). It came to exercise even greater powers in the troubled 14th and 15th centuries, when treason cases were frequently tried there. Mercantile jurisdiction in the city, however, lay largely with the *prévôt des marchands,* a "private" official, but one usually under the close supervision of the royal *prévôt* of Paris or of Parlement.

# PRINCE/PRINCIPALITY

**.** The Old French words *prince* and *princ(h)ier,* the Old Occitan *prince(p)/princi(p)* and princeer, and the English "prince" are all derived from the Classical Latin *princeps* (pl. *principes*), whose basic sense was "first in order." Throughout the classical and medieval periods, *princeps* was applied to men both as a specific and as a generic title indicative of high political and social rank, but the range of statuses with which it was associated in both senses changed significantly over time.

As a specific and formal title, applicable to the holders of particular political dignities as such rather than as members of broad social categories, *princeps* was used between 500 and 1100 only with the juridical sense it had acquired by 300 in Roman law: "ruler with full monarchical powers" or "sovereign territorial lord." In Gaul, after the collapse of Roman power, it was progressively usurped (before 1020, only as an additional or alternative title) by ever lesser rulers as a sign of their effective independence of higher authority: by the Frankish kings in the 6th century; by their mayors of the palace, ca. 700–51; by the official dukes governing the peripheral provinces of the Frankish kingdom, ca. 700–80; by the rulers of the new marches and duchies and of certain counties (in alternation or combination with other titles in such phrases as *princeps et dux Normannorum*), ca. 900–1100; and by the rulers of certain of the newly formed castellanies, ca. 1020–1120. To both the personal status and the jurisdictional territory of all of these French "princes," the term "principate" (Lat. *principatus,* OFr. *princté,* princé(e), Old Occitan *principat)* was commonly applied, but before 1020 only as a secondary title.

Between 1120 and 1481, no lord in France is known to have made any regular use of *prince* as a title of lordship, but the title was born throughout this period by a handful of great lords of French origin in Italy (from 1062), the Holy Land (from 1099), and Greece (from 1204), all of whom ruled dominions whose primary title was "principate." Between 1481 and 1515, seven relatively minor barons, six of them in Angoumois or Saintonge and one in Picardy, usurped the title of *prince*. The first titular principality to be officially erected in France was that of Joinville, elevated in April 1552 for the duke of Guise, and thereafter the dignity was occasionally conferred on members of houses that were already princely in the generic sense.

In their generic sense, princeps and its vernacular derivatives were applied informally, and usually in the plural, to the members of some loosely defined class of "leading men"

within a community or dominion. *Principes* was applied in this sense to the leading members of the Frankish tribe, of the kingdom of the Franks as a whole, and of the duchies, marches, counties, and castellanies down to ca. 1150. In Latin documents before ca. 1150, it was normally employed in alternation or combination with such other generic terms as *magnates,* proceres, and potentes, all roughly synonymous; but of these terms, only *princeps* gave rise to a vernacular derivative, so it must have prevailed in the spoken language. During the 12th century, both the Latin word and its vernacular derivatives were largely replaced in France in the generic sense of "leading man" by the newly synonymous title *baron,* but *prince* continued to be used, to 1500 and beyond, of the greater barons of the kingdom who were not only the "leading men" of the realm but virtually sovereign rulers. In consequence, the titles "principate" and "principality" were used as generic titles for the dominions of greater barons, the former before and the latter after ca. 1300. A feminine version of the personal title, princess, first appeared only ca. 1320.

From 1441, the generic title *prince* was employed with gradually increasing frequency in the expression *princes du sang (royal),* or "princes of the blood (royal)," to designate the members of the royal house. As all such princes were rulers of major baronies, however, this did not at first alter the basic sense of the title *prince* itself, and the royal princes were just as often referred to at first as "seigneurs" or "lords of the blood." Not until the 16th century did the generic title *prince* and its feminine equivalent, *princess,* begin to acquire their modern sense, "member of the lineage of a sovereign lord," when used by themselves. In France, unlike England, royal princes were always distinguished by the phrase "of the blood."

# *PRISE D'ORANGE*

**.** A post-1160 imitation of a lost *Siège d'Orange,* this chanson de geste of 1,888 assonanced decasyllables recounts the exploits that bring together in the Guillaume d'Orange Cycle the name of the hero and that of his city. The lost text, known principally through the *Vita sancti Wilhelmi* (1125), told of the siege of Or-ange by the Saracens after the conquest of the city (and undoubtedly of its queen, Orable, as well) by Guillaume de Toulouse. This story, perhaps linked to memories of Guillaume de

Provence, victor over the Muslims in 972, marks the point of encounter between the traditions relative to Guillaume de Toulouse and the Occitan region.

The reworked version, found in nine cyclical manuscripts, is directly tied to the *Charroi de Nîmes,* which serves as its point of departure. Once installed in Nîmes, Guillaume becomes bored: the Saracens are no longer rebellious, there are no women or minstrels around. Thus, when Guillebert de Laon, who has just escaped from Or-ange, praises the charms of the town and the beautiful Orable, the hero determines to win them both. He reaches Orange in disguise, with Guillebert and his nephew Guielin, and manages to speak with Orable. Unmasked by a fugitive from Nîmes, he locks himself within the tower Gloriete, convinces Orable to arm the Christians, but is captured. Orable is given charge of the prisoners while a deputation is sent to her husband Thibaut, who, except in a single late manuscript, never arrives. Orable frees the prisoners, who are recaptured but manage to escape again and send Guillebert to Nîmes for help. Guillaume's nephew Bertrand arrives with an army, and after a short battle the Christians are victorious and Guillaume weds Orable.

Borrowing certain motifs from the *Charroi,* such as the use of disguise that allows the hero to praise himself before Orable, the *Prise* is a courtly and humorous, rather than parodic, retelling of a knightly expedition. Love pangs torment Guillaume from the moment he hears Guillebert's tale, and if in his desire for conquest he constantly associates Orange and Orable it seems clear that he undertakes to win the city *par amistié* ("for love," 1. 1,564). Related to the theme of the amorous Saracen princess, the hero's conduct, constantly mocked by his two companions, shows his character in a new light and gives the poem a heroiccomic tone.

# PRIVATE WAR

. The phenomenon of private war reveals essential aspects of medieval French society and government, particularly those relating to chivalry, violence, and the growth of royal sovereignty. Private war in fact existed long before it took on codified form in law. The ancient Germanic feud generated a thriving medieval offspring that flourished in the post-Carolingian decay of royal authority and blossomed into a recognized *droit de guerre* during what Marc Bloch called the "first feudal age." The chivalric ethos glorified the defense of honor through violence. As the legal writer Philippe de Beaumanoir acknowledged in the late 13th century, "Gentlemen may make war according to our custom." It was a cherished right, insisted upon as a sign of noble status and freedom, exercised vigorously by lords who viewed fighting as one of the chief joys and most

meaningful occupations of life. The nobles of Picardy and Burgundy insisted on writing their right to private war into the charters they secured from Louis X in the movement of 1314–15.

So important was private war to the demonstration of privileged status and the securing of its material advan tages that collectivities of townsmen claimed and exercised the right whenever possible. Their wars were as frequent, lasting, and legal as those between lords of fiefs. Feudal lords indeed often treated towns as collective lord-ships, formally defied them, and fought them in the most accepted style of private war.

The later Capetian kings, however, busily moving their power in the direction of sovereignty, looked on control of lordly violence, and its bourgeois imitation, within their realms as an essential attribute of royal authority. They could scarcely abolish by fiat a custom so old and deeply rooted, but they tried by a wide range of measures to bring it under royal regulation. Royal *ordonnances* periodically prohibited private wars during the king's war and in general portrayed private wars as regulated affairs. Royal *asseurements* forced peace upon quarrelsome parties. Royal *panonceaux,* batons embellished with the fleur-de-lis, theoretically spread the king's protection wherever they were placed, on homes, ships, and so on. Royal charges of *port d'armes* (illegal use of weapons) brought hundreds of cases into the king's jurisdiction.

Yet private war survived throughout the Middle Ages. The efforts of emerging royal sovereignty were significant, but the privileged very slowly yielded the right to violence within the realm of France.

# PRIVILEGE

**.** When applied to medieval France, "privilege" is difficult to separate from such terms as "liberties" or "franchises," which implied protection against arbitrary, capricious, or exploitative treatment. "Privilege" could have the same connotation, but it usually tended to confer on someone a special or superior position in society.

Liberties that afforded protection could evolve into what we would recognize as privilege. A document protecting a church and its lands from arbitrary treatment by royal officials might be cited, much later, to justify oppressive treatment of its tenants or exemption from obligations to which the population as a whole was subject. Privileges or liberties might be defined in documents or claimed as part of the customary law of the

land. Those with privileges might be corporate bodies (towns, universities, monasteries), members of some occupational or social group, such as students, moneyers, nobles, or royal officials, or even individuals. Individuals generally claimed privileges by virtue of being members of some privileged group or corporate body.

It was not always clear what privileges of a corporate body extended to its members, nor was it clear how privileges applied in situations not foreseen when granted or not provided for in customary law. Regional differences in customary law created further complications. Since France did not have a common customary law, lawyers and judges trained in Roman and canon law often invoked principles from these legal systems to describe what and when privileges might be overriden and what procedures were required to override them. Not surprisingly, privileges and liberties gave rise to much litigation.

When privileges or liberties afforded protection against arbitrary power, they might place one under a jurisdiction other than that of royal officials or authorize one to exercise jurisdiction that normally belonged to the king. Conversely, they might entitle one to come under royal jurisdiction instead of that of a town or seigneur. Those placed under royal protection could escape the jurisdiction of others, but this type of protection did not spare one from arbitrary treatment by the crown. Foreign merchants enjoyed this ambiguous royal "protection" and were prepared to invoke it in court, but they were vulnerable to exactions from their royal protector that could be ruinous.

Many privileges or liberties had fiscal implications. Members of some corporate body or occupational group would gain exemption from royal or seigneurial exactions by paying a lump sum or a nominal annual fee. By the end of the 13th century, however, expensive wars led the monarchy to introduce taxation based on the principle, from Roman law, that the common utility and "evident necessity" justified overriding fiscal privileges. Rarely did courts uphold objections by taxpayers claiming privileges, but the crown usually needed money quickly and often preferred to "settle out of court," getting an immediate payment in return for "letters of nonprejudice" specifying that the payment did not constitute a precedent that could damage alleged privileges. This policy made future litigation a virtual certainty. So also did another royal policy, that of negotiating lump-sum payments from a region or a town, which then had to levy taxes of its own in order to raise the money. People with exemptions from local taxes usually resisted paying those that contributed to royal ones until a court required them to do so.

Such litigation is our best source as to what groups claimed privileges. In 1353, for example, a court required clergy, nobles, moneyers, sergeants, notaries, and other officers of the crown to contribute to a tax they had resisted. Communities like communes, *bastides,* and *villeneuves* had charters dating from the 11th or 12th century exempting them from royal exactions. When the 14th century produced new taxes under new conditions, these privileges ran counter to the doctrine of "evident necessity." Numerous court decisions attempted to resolve the issue, but the matter remained contentious until the French Revolution.

The church desired primarily to establish its right to give consent each time a tax ran counter to its privileges. If proper procedures were followed, the clergy generally were prepared to pay. The right to consent, however, did not in this period imply a right to withhold consent, and most royal subjects resisted taxes on the grounds of precedent or insufficient necessity.

The nobles were the most privileged of all in medieval France, and their concern was to be treated as a separate caste. They might demand the right to render personal military service (the "tax in blood") instead of paying to finance a war. They might be willing to pay a tax based on some established feudal obligation, such as funding the ransom of a captured king. They even acquiesced, reluctantly, in taxes designed exclusively to pay military salaries. If possible, however, they wanted to make their contributions in a different way from others so that their separate status might be underscored.

In general, noble claims of privileges exempting them from taxation were increasingly denied in court by the third quarter of the 14th century, but the political turmoil of Charles VI's reign improved the bargaining position of the nobility. Ordinances of 1388 and 1393 granted nobles exemption from the *taille* and the *aides,* respectively, subject to certain conditions. In the end, the most important of these conditions required that they "live nobly" and avoid actions, such as engaging in trade, incompatible with noble status. Failure to "live nobly," known as *dérogeance,* could in principle cause a loss of fiscal exemptions. Nobles with fiscal exemptions were defined strictly at first, but by the mid-15th century the exemption was broader and few nobles could fail to qualify.

Fiscal privileges were an important matter to nobles who lacked great wealth, as many did by 1450, but it had real significance only when royal taxes became heavy and regular. The nobles had many other privileges, however, some deeply rooted in custom; these included judicial privileges, those attached to certain offices, honorific privileges, and many rights associated with the medieval lordship, or seigneurie. The real heyday of privileges, especially those of the nobles, was not the medieval period but the three centuries that ended in 1789.

# PROCESSION

. The ceremonial procession is a common ritual element of virtually all religions. Biblical processions that might have affected Christian practice are those that were held with the Ark of the Covenant and that of Christ's entry into Jerusalem on Palm Sunday. There is already frequent mention of processions in the patristic period, and by the early Middle Ages they are firmly established in the liturgy. The pope, attended by Roman officials and clergy, was conducted in solemn procession to the stational church on each of some ninety dates throughout the year; upon arrival, he vested and was led again through the nave of the church to the sanctuary as the Introit antiphon and psalm were chanted.

Several liturgical dates called for processions; among these are Palm Sunday, Candlemas Day (February 2), and the Rogation Days (the day of the Greater Litany, April 15; and the lesser Rogation Days, the three days before Ascension Thursday). During the Rogation processions, and many others as well, the Litany of All Saints was chanted, accounting for use of the word *litania* as a synonym for "procession."

In addition to processions required by the liturgical calendar, it was customary to arrange for them in special circumstances, for example, to pray for rain, peace, or relief from plague. Processions might be held within the confines of the church, and in fact the ambulatories and aisles of the great French Romanesque and Gothic churches must have been planned with this in mind. Saint-Denis saw a marked proliferation of processions after the 13th-century additions to Suger's early Gothic east-end ambulatory. Rogation processions, and others of agricultural significance, moved out into the countryside, while the late-medieval Corpus Christi procession made its way through the streets of the town in a carnival-like atmosphere. Processions were led by an individual carrying the processional cross; originally associated with the movement of some ecclesiastical dignitary, this was simply a cross or crucifix mounted on a long staff so that it would be easily visible.

# PROCESSIONAL THEATER

**.** Processions have been an integral part of culture from the earliest times. In medieval France, they were associated with many ritual and ceremonial activities, taking the form of religious processions, royal and princely entries, funeral cortèges, and carnival parades. There were also processions of petition in times of plague and war, processions of thanksgiving for prayers answered, and processions of joy for royal weddings and births. In addition, jousters and their retinues processed into the lists at tournaments, and players advertised the Passion plays with *montres* in which they paraded through the streets in costume.

All such activities had a theatrical aspect about them, but they were not plays in the modern sense. In the late Middle Ages, however, plays were routinely integrated into many civic and religious processions. The practice of staging biblical or allegorical scenes at royal entries, for example, seems to have begun in northern France in the second half of the 14th century. Such scenes were often *tableaux vivants* or mimed actions, but in many cases they were fully developed plays. In Tournai in 1368, *histoires* were played before the king at a royal entry, but only after the procession. The earliest record of plays or *tableaux vivants* staged along the route of an entry procession is from

the entry of Charles VI into Paris in 1380. The custom spread throughout France in the course of the 15th century.

In the northern French provinces, dramatic spectacles were often staged on horse-drawn wagons similar to the pageant wagons of England. This permitted mimed plays and *tableaux vivants* to move with a procession and thus be seen by a greater number of spectators. From the early 15th century, the Corpus Christi procession in the town of Saint-Omer, for example, included a mystère that preceded the Sacrament. Staging practice varied from one city to another in the region, but generally the silent spectacles were presented either on fixed stages along the route of march or on moving stages in the procession. The spoken plays were then presented after the procession.

The best-documented example of processional theater comes from the city of Lille, which had a "Grand Procession" every year on the second Sunday after Pentecost. Founded in 1270 as a religious procession in honor of the Virgin Mary, it came to include the trade guilds and other civic institutions. In the 14th century, neighborhood groups began to stage plays at the procession, and prizes were given for the best ones. In the course of the next century, the contest was organized by the Bishop of Fools, a dignitary elected each Twelfth Night by the canons of the col-legiate church of Saint-Pierre. In 1463, the "bishop" issued a proclamation calling for new plays to be written for the procession based on the Bible, Roman history, or the lives of the saints. He called for farces as well. Each neighborhood group presented a serious and a comic play, and prizes were given for the best of each. All were staged on pageant wagons. On the morning of the procession, the edifying plays were mimed at designated intervals along the route of march as the procession passed. In the afternoon, all the wagons were brought to the main square, where the plays were performed with spoken dialogue. In the evening, the crowds were entertained with the farces.

A remarkable collection of seventy-two plays written for the Grand Procession of Lille has been preserved in a manuscript in the Herzog August Library in Wolfenbüttel, Germany. The anonymous plays, ranging from 200 to 1,900 lines of verse, were most likely written by clerics attached to the church of Saint-Pierre. Of the sixty-four biblical plays, forty-three derive from the Old Testament and twenty-one from the New Testament. The former treat events in the lives of Abraham, Moses, Joseph, Ruth, David, and Esther, among others. Five of the plays are drawn from the Roman histories of Livy and Valerius Maximus and deal with heroes like Actilius Regulus and Mucius Scaevola. In addition, there are a morality play on the Assumption of Mary, a play on the life of St. Euphrosina, and a miracle play based on the story of the pregnant ab-bess. The manuscript was written in the 1480s, but plays of this kind continued to be performed at the procession in Lille through most of the 16th century.

# *PROPHÉCIES DE MERLIN*

. Not to be confused with Geoffrey of Monmouth's *Prophetiae Merlini,* with which it has nothing in common beyond the title, the *Prophecies de Merlin* dates from the 1270s and is attributed to Maistre Richart d'Irlande. The prose work, purporting to record Merlin's conversations with his scribes, has the magician make prophecies that are actually references to political events of the 12th and 13th centuries. It is found in at least a dozen late medieval manuscripts and was first printed in 1498 by Vérard.

# PROSE ROMANCE (ARTHURIAN)

. The turn of the 13th century marks a crucial shift in the writing of Arthurian romance, when, due to reasons not yet fully understood, prose becomes a viable medium for telling stories of love and adventure. Previously, Old French prose, like its Latin counterpart, had been reserved largely for recording legal and religious truths. It appeared in juridical texts, charters, religious writings, translations of the Bible, and sermons. Prose was also used to document historical events in the chronicles of Villehardouin, Robert de Clari, and Henri de Valenciennes. But fictive tales of Arthurian knights had before this time appeared only in verse. By the 13th century, the Arthurian adventure story had undergone significant thematic changes, incorporating within the realm of chivalric exploits the spiritual quest for the Holy Grail. Following the examples set in Chrétien de Troyes's verse *Perceval* (ca. 1181–90) and Robert de Boron's even more christianized *Joseph d'Arimathie* (ca. 1200), the Arthurian adventure story moved into the 13th century with an expansive prose format that matched its expanded narrative scope.

As Robert de Boron's Joseph and the fragmentary verse *Merlin* appended to it were recast into prose beginning ca. 1210, they emerged sometimes in a trilogy, the *Roman du Graal,* that recounts the history of the Grail vessel *(Joseph d'Arimathie),* its arrival in Great Britain along with the discovery of the future King Arthur (Merlin), the quest for the Holy Grail, and the subsequent demise of Arthur's world (*Perceval,* known as the Didot *Perceval*). This basic pattern is followed with variation in subsequent prose rewritings of the ever-popular Grail material. The Arthurian Vulgate Cycle (ca. 1215–35) offers an expanded version of the literary scenario, transforming the *Joseph* into the *Estoire del saint Graal,* the *Merlin* into the Vulgate *Merlin,* and the prose *Perceval* into the *Queste del saint Graal* and *Mort Artu*. To these, the Vulgate adds an elaborate and lengthy version of the Lancelot story. Known generally as the *Prose Lancelot,* this cyclic romance must be distinguished from the noncyclic *Prose Lancelot* conceived, it is thought, in a more secular vein to stand independently of the highly religious *Queste del*

*saint Graal.* A noncyclic and highly elaborated version of the Perceval story is found in the early 13th-century *Perlesvaus,* a tale that mixes familiar exploits of Gawain, Lancelot, and Perceval with political intrigue and savage bloodshed.

The Vulgate *Merlin,* characterized by a historical "suite" that details Arthur's military successes under Merlin's guidance, is rewritten with a more fanciful "suite" in the Post-Vulgate *Roman du Graal* (ca. 1230–40). Formerly known as the Pseudo-Robert de Boron Cycle, this corpus contains a remodeled Vulgate *Estoire,* Queste, and *Mort Artu,* portions of the Vulgate *Lancelot,* and the revised *Merlin* (known as the Huth *Merlin*).

Dating from the second and third quarters of the 13th century, the *Prose Tristan* expands the earlier Grail narratives by adding to the world of Arthur's knights King Marc, his wife, Iseut, and nephew, Tristan. Another character introduced here is Palamedes, who also appears in a prose romance called either *Palamedes, Meliadus,* or *Guiron le Courtois*. This romance, which predates the cyclic version of the *Prose Tristan,* chronicles the deeds of an older Arthurian generation, following the fathers of Palamedes, Arthur, Tristan, and Erec. In the 14th century, the Middle French *Perceforest* details the pre-Arthurian history of Britain from the time of Alexander the Great, including the arrival of Joseph of Arimathea in Britain and incidents involving the Holy Grail.

# *PROSE TRISTAN*

. Composed ca. 1230, the *Prose Tristan,* with all its successive versions in numerous manuscripts and 15th-century printed editions, is nothing less than a *summa* of the Matter of Britain. A highly developed technique of compilation in effect led to the progressive

unification of the story of Tristan and his ancestors with that of King Arthur, the Grail quest, and the loss of Arthur's and Tristan's worlds.

In a smooth and effective prose, the *Prose Tristan* presents in a single text nearly all modes of literary discourse: lyric insertions, love monologues, letters, descriptions, political discourses. It perfects the art of dialogue and debate and skillfully exploits the most diversified techniques for organizing romance narratives.

Its authors, the Pseudo-Luce del Gast and the Pseudo-Hélie de Boron, reformulating and integrating into their story the episodes inherited from Béroul and Thomas d'Angleterre, refashioned the love story on that of Lancelot and Guenevere, making Tristan a knight-errant seeking adventure, a member of the Round Table, a Grail knight. The "sad" knight becomes above all a knight in search of love's "joy," experienced fully if briefly only in the Arthurian world. However, the tradition of the poetic versions, and the power of the theme of love and death, posed an obstacle to this radical transformation of Tristan and his destiny. The most evident sign of this resistance is the systematic degradation of King Mark, who ends by slaying his nephew. The interest of the *Prose Tristan* resides in this tension, between a myth of fatal passion and the sentimentalism and chivalric idealism of the *Prose Lancelot,* between the hero's desire to stay in Cornwall with Iseut and the need he feels to live in the Arthurian world to achieve glory. The lovers underestimate these tensions, which nonetheless reshape the narrative and explain the hero's lengthy sojourns in Arthur's kingdom. But the secondary characters, such as Kaherdin, Palamedes, and Dinadan, underscore through their words and actions the vanity of knight-errantry and of chivalric deeds, the absurdity of the Arthurian world and its customs, and the tragic misunderstandings of passion.

Revised and expanded as late as the 15th century, translated and assimilated into such compilations as the Italian *Tavola Ritonda,* the Spanish and Portuguese *Demandas* (or *Questes del saint Graal*), the *Compilation* of Rusticien of Pisa, Malory's *Morte Darthur,* and other works, and preserved in manuscripts that are often richly decorated, the *Prose Tristan* was immensely popular into the 15th century and beyond. Until the rediscovery of the poetic texts in the 19th century, the story of the love of Tristan and Iseut was known only through its prose versions.

# PROSTITUTION

. Prostitution was not an important social phenomenon in France until the urban revival of the high Middle Ages, when the use of the term *meretrix publica* allowed the clear distinction of the professional prostitute from the privately "loose" woman, and when towns began to regulate the profession. In the south of France, prostitutes were generally banned from the centers of towns in the 12th and early 13th centuries but by the late 13th and 14th centuries official red-light districts were protected by the public authorities and sometimes guaranteed as zones where no arrests for adultery could be made. These districts were generally reduced to one house, often owned by the municipality or by the great bourgeois, and sometimes protected by seigneurial or royal safeguard, in the late 14th and 15th centuries. At the same time, repression of competition (procuring and freelance prostitution) was intensified, as was that of concubinage and adultery. These houses were finally closed under Protestant influence in the 16th century.

The prostitute enjoyed full legal capacity in the late Middle Ages and was protected under rape laws. She had to observe regulations concerning dress and behavior and toward the end of the Middle Ages was virtually cloistered in the official brothel under the direction of the person who "farmed" the brothel (paid a fixed sum to the owner yearly in exchange for rights to all profits). In the bigger towns, religious communities of repentant women, founded by clerics and bourgeois, welcomed retired or penitent prostitutes.

# PROSULA

. A new text added to a preexisting melody, often to a melismatic portion of a chant (i.e., to those places where a single vowel sound is prolonged for many notes) or sometimes to an entire chant. Prosulae are found chiefly for Proper and Ordinary chants that contain significant melismas: Alleluias, Offertories (usually for melismas of final verses), Kyries, Glorias (in particular at the "Regnum"), and some Great Responsories. Prosulae were written by the Franks in the 9th-11th 1th centuries, with important repertories existing in southern France. The prosulae from the area around Limoges edited by Odelman are extreme in that they are texts for entire Alleluia melodies; more typically, prosulae are short texts, interposed only for a single melisma within a longer chant. The literary quality of these texts is often high.

# PROVENCE

. For some medieval writers, "Provence" was that vast area of southern France where the Langue d'oc was spoken. Most, however, used the name in a more restricted way to identify an area of approximately 18,700 square miles in the southeastern corner of France, bounded on the east by the Alps, on the south by the Mediterra-nean, and on the west by the Rhône. Because of its easy access both to Italy and to northern Europe, Provence played an active role during the Roman Empire and in medieval Europe. Kings, emperors, popes, merchants, and pilgrims regularly passed through this region to conduct their affairs.

The ties of Provence to the Roman Empire and Roman traditions were deeper and more lasting than anywhere else in the West outside of Italy. By the end of the 5th century, as the Germanic tribes established themselves throughout most of the empire, "Provence" came to iden-tify the last province in Gaul to remain under imperial control.

During the early 6th century, several Germanic peoples competed for control of Provence, with the Ostrogoths ultimately becoming dominant. In 536, confronted with the invasion of the emperor Justinian's armies, the Ostrogoths withdrew, thereby permitting the Franks to enter unopposed. Although Provence would remain under Frankish control well after the breakup of the Carolingian empire, it was only when Charles Martel succeeded in crushing local rebellions between 735 and 738 that this region was finally incorporated into the Carolingian state.

Following the death of Louis I, by the Treaty of Verdun Provence became part of the middle kingdom of Lothair I. As was the case for much of Europe, Provence during the late 9th and 10th centuries fell victim to the ambitions of rival aristocratic factions. The ensuing civil strife exposed Provence to attacks by Greek, Viking, and Muslim pirates. The most serious of these began ca. 884, when Muslims established a base at Garde Freinet and launched a series of raids throughout much of the region. It was only in 972 that Count William II, the *pater patriae,* drove them from Provence.

This event marked the beginning of a social and economic revival. Benefiting both from increased Mediterra-nean trade and from the Crusades, the major Provençal cities,

particularly Marseille and Arles, became among the most vibrant and wealthy commercial centers in the West.

Although technically part of the kingdom of Burgundy until 1032 and then part of the Holy Roman Empire, Provence was in fact ruled until the end of the 11th century by the heirs of William II. During the early 12th century, the counts of Toulouse and Barcelona struggled to control Provence, finally agreeing in 1125 to divide the county. As a result, Raymond-Berenguer I of Barcelona acquired the entire region south of the Durance. The house of Barcelona ruled Provence until 1246, when the daughter and heiress of Raymond-Berenguer IV married Charles of Anjou, the brother of Louis IX. This event marked not only the beginning of Angevin rule that would continue until 1481 but also the prolonged involvement of Provence in the ultimately disastrous Angevin policies in southern Italy. The resulting drain on its resources produced an extended economic decline for Provence. After the death of the last Angevin ruler, Charles III (1481), Louis XI incorporated Provence into the kingdom of France.

DAUPHINÉ/PROVENCE

# PROVERB

**.** Although nearly impossible to define, proverbs—statements of a universal nature borrowed from philosophers, the fathers of the church, the Bible, or popular wisdom—are found in every genre of medieval literature. The Middle Ages collected proverbs, with little care as to their origin. Widely used as a textbook in medieval schools, the *Disticha Catonis,* a proverb collection wrongly attributed to Cato, was paraphrased in Occitan (two 12th-c. fragments extant) and translated by three Anglo-Norman authors, each of whom appended commentary to the text. There are also two Francien versions of the *Disticha,* one of the most widely diffused works of the Middle Ages. Another collection, actually an anthology of biblical and medieval sententious statements attributed to classical authors, the *Moralium dogma philosophorum,* was translated into French in the 13th century, again by three different authors, including Alard de Cambrai.

Popular proverbs were also collected. The first of these collections is the *Proverbia magistri Serlonis* (1150–70), an anthology of French proverbs with Latin translations. The *Proverbes Seneke le philosophe* (1278–81) uses a similar format, attributing to Seneca proverbs from a variety of sources. In a more developed vein is the *Proverbes au vilain* (1174–91), composed of *sixains* that explain a proverb, followed by the proverb itself, which acts as commentary on the preceding verses. The *Proverbes de Marcoul et de Salemon* (early 13th c.) present a dialogue between the wise King Solomon and the boorish peasant Marcoul, the whole punctuated with proverbs. Eight manuscripts preserve three distinct versions, the first two being obscene and scatological, while the third is quite proper. Proverb collections were also assembled for preachers; these anthologies include an allegorical commentary on each proverb. Some 2,500 French proverbs are recorded prior to 1400.

Medieval authors mined anthologies for proverbs to insert into their works. The fabliaux, in particular, are notable for the use of proverbial material as commentary on the story. By the 15th century, use of the proverb had become so fashionable that there are poems composed entirely of proverbs, such as Villon's *Ballade des proverbes.*

# PROVINS

. Founded during the Merovingian period around a Benedictine priory, Provins (Seine-et-Marne) became one of the leading commercial centers, after Paris and Rouen, of medieval France and was the site of two of the principal Champagne fairs (the first in May-June, the second in September-October). Provins was a favorite residence of the counts of Champagne, notably the trouvère Thibaut IV, and counted over 10,000 inhabitants in the 13th century. Ruined by the 1373 plague and the loss of its fairs in the same century, due in large measure to the Hundred Years' War, Provins is one of the best-preserved medieval cities in France.

The 12th- and 13th-century ramparts, with their impressive twin-towered Porte Saint-Jean, are an important example of medieval military architecture. A wide dry moat precedes the crenellated walls, which average about 10 feet thick. The massive church of Saint-Quiriace, begun under Henri le Libéral in the 1160s, boasts an Early Gothic choir and ambulatory, opening onto three rectangular chapels on the flat east end. The 13th-century nave remains incompleted. The church of Saint-Ayoul preserves its 11th-century transept. After a fire in 1157, the nave and aisles were rebuilt, as was the large projecting façade with its three portals. The church of Sainte-Croix has a Romanesque transept, Gothic nave, and south side aisles from the 13th century and a Flamboyant façade, choir, ambulatory, and double north aisle from the 16th.

The most characteristic building of Provins is the Tour de César, a 12th-century keep erected on a motte that was once the site of a Roman fortress. It consists of an octagonal donjon with four angle turrets built upon a square base. The curtain wall that now surrounds its base was constructed by the English during the Hundred Years' War as an artillery site. The octagonal guard room on the first level has an impressive vault formed of four ogival arches ending in an eye through which arms and provisions could be hoisted to the levels above.

Other medieval vestiges in Provins include a Romanesque house (possibly 11th c.) in the Rue du Palais; the Hotel de Vauluisant and Hotel de la Croix-d'Or of the 13th century; and the celebrated Grange aux Dîmes (tithe barn) of the 12th and 13th centuries. Originally rented to merchants by the canons of Saint-Quiriace, after the demise of the fairs it served to store the tenth-part *(dîme)* of the harvest destined for the church.

# PSEUDO-DIONYSIUS THE AREOPAGITE

(fl. ca. 500). A collection of treatises and letters concerning mysticism and theology circulated in the medieval period under the name of Dionysius the Areopagite, a convert

of St. Paul in Athens. Modern scholarship has concluded that the works were not written in the 1st century but rather ca. 500, probably by a Syrian monk well versed in Christian and Neoplatonic thought. The author sought "apostolic" credentials by writing under a pseudonym.

The Pseudo-Dionysian writings comprise four treatises in Greek *(Celestial Hierarchy, Ecclesiastical Hierarchy, Divine Names, Mystical Theology)* and ten letters, with internal references to other works that were probably never written. The author conceives of a mystical quest with three basic stages: purgation, illumination, and union. The material world is seen as both a barrier to and a "ladder" for ascent toward the divine. On the one hand, all concepts and images must be purged from the mind in order to arrive at a state of darkness and "unknowing" in which God, who is beyond all concepts and images, will be experienced in the "dazzling darkness" of divine presence. On the other hand, the world is conceived as a series of partial symbols of the divine. These two "theologies," one negative or "apophatic" and the other positive (symbolic) or "cataphatic," exerted a powerful effect upon western Latin theology and spirituality from the 12th century forward. Pseudo-Dionysius also conceived of a hierarchy of spiritual beings linking material and spiritual worlds and the divine. Nine "ranks" of angels were arranged in three "orders" of three ranks each in a descent from God to seraphs through the hierarchy to ordinary angels. The earthly ecclesiastical hierarchy echoed this threefold division in the orders of bishops, priests, and deacons. The sacraments, being a material mediation of divine presence, effected a participation in the divine under the ministry of the ecclesiastical hierarchy. Especially influential in the work of Pseudo-Dionysius was the notion that evil *qua* evil was nonexistent; evil was merely a lack of goodness that can only be described in negative terms.

In the medieval period, "Dionysius the Areopagite" (Fr. "Denis") came to be identified with other persons. He was taken to be a missionary to Gaul who was martyred outside of Paris and whose remains became the major relic at the royal abbey of Saint-Denis. In 827, the Byzantine emperor Michael the Stammerer sent a manuscript of Pseudo-Dionysius's works to Louis the Pious. The abbot of Saint-Denis, Hilduin, produced a rough translation. Later, Johannes Scottus Eriugena translated the works again and wrote a commentary on the *Celestial Hierarchy* that was destined to be influential but had little effect in Eriugena's own day. In the 12th century, Hugh and Richard of Saint-Victor brought Pseudo-Dionysian thought into the mainstream of mystical and theological writing. In the 13th century, new translations appeared. The influence of Pseudo-Dionysius was felt in the analysis of the attributes of God, the ideas of symbolism that informed art and writing about art, sacramental theology, and mysticism. Albert the Great and Thomas Aquinas wrote commentaries on Pseudo-Dionysian works, and Bonaventure made extensive use of Pseudo-Dionysian ideas in his mystical writings. In the 14th century, Jean Gerson and Nicholas of Cusa were much influenced by Pseudo-Dionysius, especially Cusa's ideas of the "coincidence of opposites."

# PSEUDO-TURPIN

. In the first half of the 12th century, an unidentifiable cleric composed in Latin prose an alleged eyewitness *Historia Caroli Magni et Rotholandi* under the assumed name of Archbishop Turpin, borrowed from the *Chanson de Roland*. His Pseudo-Turpin chronicle was extensively copied (more than 200 manuscripts are known) and was translated into all major languages and admitted into official hagiography and historiography. It found its way into the famous *Liber sancti Jacobi* and into the biography of Charlemagne; the *Grandes chroniques de France* of Saint-Denis, among others, relies on it.

The French translations of the *Historia* and their numerous manuscripts have been divided into seven groupings. Version I was written between 1195 and 1205 by Nicolas de Senlis. Version II (sometimes called the Turpin III) by a certain Johannes (before 1206) and Version III by Pierre de Beauvais (ca. 1212) are closely intertwined. The Anglo-Norman Version IV was written ca. 1216–18 by William de Briane. Version V, usually referred to as the Turpin 1, dates from 1210–20 and has been contaminated, in six of nine manuscripts, by the Johannes translation. In two manuscripts, Version V forms part of the *Chronique française des rois de France*. A now lost manuscript related to Paris manuscripts B.N. fr. 2137 and 17203 of Version VI (the Turpin II; before 1243) was used by Philippe Mouskés in his *Chronique rimée;* in five manuscripts, Version VI has been integrated into the *Chronique de Baudouin d'Avesnes*. Version VII is a translation in the Burgundian dialect dating from the latter part of the 13th century. There is also an Occitan version.

The *Historia* begins with the conquest of Spain by Charlemagne, who christianizes the country under the patronage of St. James of Compostela and, upon his return to France, founds churches in the saint's name. There follows a new series of successful wars

against King Aigolan-dus, Altumaior of Cordova and Furre of Navarre, the giant Ferracutus, and Ebrahim of Seville. Having reaffirmed his supremacy, Charlemagne undertakes a pilgrimage to St. James's tomb in Compostela. The remainder of the chronicle recounts the Spanish campaign of Charlemagne, Roland, Oliver, and Turpin against Marsile and Baligant, known from the *Chanson de Roland*. After the defeat at Roncevaux, Charlemagne elevates the abbey of Saint-Denis to the rank of most important church in France and builds a basilica in honor of the Virgin Mary in Aix-la-Chapelle. Some time later, Turpin learns in a vision of Charlemagne's death and of the intervention of St. James, who saves the emperor's soul from a horde of black devils.

One of the reasons for the great success of the *Historia* is the ingenious combination of the powerful medieval legends of St. James and Charlemagne and the attempt at subsuming the former under the latter. As a work of church propaganda, the *Historia* promotes Saint-Denis as the center of French political and ecclesiastical power, equal, and ideally superior, to St. James's at Compostela. But the chronicle also marks the transition, in the cultural and literary spheres, from rhymed epic and hagiography, considered unreliable, to authoritative historiography in prose and based on Latin prose. The amalgam of legendary, historic, and didactic elements that is the Pseudo-Turpin marks the demise of hagiography, the birth of historiography, and the conception of the prose romance.

# PUCELLE, JEAN

(d. 1334). An artist documented as producing the seal of the confraternity of Saint-Jacques-aux-Pèlerins in Paris between 1319 and 1324 and whose name appears in marginal notes along with two other illumina-tors in the *Belleville Breviary* (*B.N.* lat. 10483–84), dated 1323–26. His name is also mentioned with two other illu-minators in the Bible written by Robert de Billyng (B.N. lat. 11935), and inventory entries of the collection of John, duke of Berry, have suggested that between 1325 and 1328 he made the book known as the *Heures de Jeanne d'Évreux* (New York, The Cloisters) with miniatures and marginalia in *grisaille*. The styles of the miniatures in these manuscripts, however, are all different, and their authorship is the subject of ongoing controversy. At best, one can speak of a "Pucelle style" that manifests a new sense of threedimensionality in modeled figures and architectural space in manuscripts produced for the royal court in the second quarter of the 14th century.

# PULLOYS, JOHANNES

(ca. 1420–1478). Composer, master of the boys at Antwerp cathedral (1444–47), singer in the papal chapel (1447–68/69), thereafter apparently in Antwerp. Pulloys's motet *Flos de spina* reappears in manuscripts to the end of the century. The one Mass cycle ascribed to him so closely reflects the English style of the time that some question its authorship. Of his ten songs, which appear in several mid-century sources, *S'ung bien peu d'esperance* seems to have had the greatest impact.

*David Fallows*

# PURGATORY

. Over the course of late antiquity and the Middle Ages, Christians developed an understanding of life after death that included the idea of a purification (purgation, purgatorial fires) of the soul for sins committed, with the gradual definition of a place, Purgatory, where this takes place. From earliest times, Christians spoke of a Last Judgment when Christ would return to judge the living and the dead, with evil persons condemned to Hell and the good established in Heaven. Concern for the fate of the soul immediately after death led to varied ideas, but Augustine's position became generally accepted: the truly good, martyrs especially, went directly to Heaven at death; the truly evil went directly to Hell; all other souls, the great majority, remained, until the Last Judgment, in places vaguely described but divided into two categories: places of punishment with fire for the "not completely evil" and places of rest for the "not completely good." These two groups can be helped by the living, who may offer "suffrages" on their behalf: prayers, alms, and the sacrifice of the eucharist. Such suffrages can mitigate punishment, but not ultimate condemnation, or diminish the time

waiting for admission to Heaven. By the time of Pope Gregory the Great (d. 604), it was clearly defined that Heaven as a place for the souls of the dead had not been "opened" until Christ's resurrection, hence the good dead of the pre-Chris-tian era had been waiting in the upper reaches of Hell for Christ's advent and their deliverance.

A number of "visions" of the otherworld in the form of "dream" or "out-of-body" journeys were reported in medieval texts and conveyed a vivid understanding of the sufferings of those in Hell and especially in the upper re gions thereof, the place where those being purified for eventual entry into Heaven were enduring appropriate torment. Among these were three visions recorded in Gregory the Great, *Dialogues,* 4. 36; the vision of Drythelm (in Bede, *Historia ecclesiastica gentis anglorum*); the *Visio Wettini* by Walafrid Strabo; visions associated with St. Patrick's Purgatory in Ireland; and the Vision of Tundal recorded in numerous works, including Vincent de Beauvais's *Speculum historiale*.

Biblical commentators and theologians gradually began a clarification of the nature of purification, the definition of the place of purgation, and the relation of this to the penitential system of the church, and eventually to the system of indulgences granted by papal decree or initiative. In France, the Parisian theologians Hugh of Saint-Victor (d. 1141) and Peter Lombard (d. 1160) continued with the Augustinian fourfold division of the dead, the necessity of purgation, and the vagueness of the place for that purification. The late 12th and 13th centuries saw the development in the writings of the Parisian theologians of a clearer definition of the place for purgation and something of a recasting of the division of the dead into three groups: they now became the entirely good (to Heaven), the entirely damned (to Hell, with no possibility of deliverance), and the medium *(mediocriter)* good, who have confessed and done penance but need further purification. Purgatory now becomes a place in which souls that have begun to work out punishment in this world for sins, through the sacrament of penance, can continue that process beyond the grave. Augustine's idea that various suffrages could benefit the good souls in Purgatory continued to bear rich fruit in the numerous actions, especially the endowment of Masses, carried out on behalf of the dead. The requirement promulgated by the Fourth Lateran Council (1215) that all faithful Christians had to confess yearly to a priest and the continuing "quantification" of penitential punishment for sins in handbooks for confessors, books developed by masters at Paris and elsewhere especially in light of the decision of the Lateran Council, led to both a more specific measure for and a more thorough presence of penance in this life and a deeper concern with the continuation of penitential suffering in the place of purification after death. Beginining with the call for the First Crusade and continuing throughout the later Middle Ages, the doctrine of indulgences, the specific forgiveness of all or part of the assigned penitential punishment due for sin, led to the development of a complex process in which an ecclesiastically sanctioned grant might mitigate the time in Purgatory. In the 15th century, the papacy declared that the treasury of merits applicable to the living for indulgences might be applied to those in Purgatory as well, thus widening again the field of interaction between the living and the dead in Purgatory.

## *PUY*

. *Puys* were poetic societies that thrived mainly in northern French towns, some from as early as the 11th century, most from the 13th and 14th centuries. The earliest surviving records are those of the Confrérie des Jongleurs et des Bourgeois d'Arras, written in 1194, with later additions. These tell of the miraculous origin of the society, in which the Virgin gave two jongleurs a holy candle with powers to heal plague victims. The other two oldest *puys,* those of Rouen (1072) and Valenciennes (1229), share some details with the Arras foundation story: Rouen by having a similar legendary origin in a miracle of Notre Dame, Valenciennes by claiming to possess its own candle formed from wax gathered from the holy candle at Arras. Most of the *puys* from this region, such as Douai (1330), Amiens (1388), Abbeville (late 14th c.), Dieppe (15th c.), and Caen (1527), were dedicated to the Virgin. *Puys* are also known to have existed at Lille, Tournai, Cambrai, and Béthune; *princes des sots* were elected in Ath, Bouchain, Denain, and Condé. A poetic *companhia* was founded at Toulouse in 1323, which drew up its own rules of poetry known as the *Flors del gay saber*. Further allusions to southern *puys* occur in poems by 12th-century troubadours, such as Peire d'Alvernhe. We also possess detailed records from the end of the 13th century of a *puy* at London.

It is not always easy to distinguish the puys from other kinds of poetic and charitable fraternities, such as professional guilds, the *chambres de rhétorique,* and the (perhaps imaginary) Courts of Love. For instance, Arras possessed a separate Puy de Notre-Dame as well as the Confrérie, and Abbeville has references not only to a Puys d'Amours, but also a Puy de la Conception, to a feast where a *prince des sots* was elected, and a minstrel contest on Mardi Gras at the Fosse-aux-Ballades. Douai had both a Confrérie and a Chambre de Rhétorique. Paris has no records of a *puy* as such, only of a corporation of musicians founded in 1321; of a huge series of plays sponsored between 1339 and 1382 by the Goldsmiths' Guild, which also gave prizes for *serventois;* and of a Cour d'Amour, instituted in 1400 or 1401, with apparently over 600 members.

The *puys* usually have several features in common: a major annual festival, often on the feast of the Conception of the Virgin (December 8), with a dinner at which a *maître* would be elected and a contest held for the best song (*chant royal,* ballade, *serventois, fatras divin,* or rondeau). All the entries would be performed in front of the company (with music, according to the London puy regulations), the winner receiving a silver crown and the title *prince du puy:* The poems had to be written on a set refrain, which was composed by the old *maître* and given out some days before the feast. Certain *puys* specialized in a single lyric genre; others, such as Amiens and Dieppe, gave a range of prizes for a variety of genres. Many *puy* poems have survived, identifiable from their refrains, internal allusions, or, if they won, from being marked in the manuscript with a crown.

## *QUAESTIO*

. *See* SCHOLASTICISM

## QUARREL OF THE *BELLE DAME SANS MERCI*

. Nothing attests so accurately to the continuing popularity of Alain Chartier's poem (1424) as the debate and the imitations it continued to inspire for more than a century. It is doubtful, however, that it caused as much of a scandal as has sometimes been claimed; the debate rather suggests a literary game like those that continued to be popular into the 17th century. At the court of the dauphin Charles (the future Charles VII), where the poem was written, some courtiers and ladies reproached Chartier for the attitude toward women reflected in the poem. He replied with his *Excusacion aux dames,* in which the God of Love defends the ladies, accusing the poet of heresy. Neither this nor the ladies' complaints can be taken too seriously.

Chartier's *Excusacion,* ca. 1430, inspired an exchange of poems by members of a literary group in Tournai, the most important of which were Baudet Herenc's *Parlement d'Amour,* the anonymous *Dame loyale en amours,* Achille Caulier's *Cruelle femme en amours,* and the *Hôpital d'amour.* The latter, preserved in twenty-one manuscripts and inspired in large part by the *Roman de la Rose,* was long attributed to Chartier himself. Other poems in the same vein debating the merits of the lover or the lady, or presenting a trial of the lovers, usually in Love's court, are the anonymous *Belle dame qui eut merci,* the *Jugement du povre triste amant banni,* and the *Amant rendu cordelier.* The suits of the rejected lover in the God of Love's court would lead eventually to Martial d'Auvergne's *Arrêts d'Amour* (1450), in which the lover's debates of the earlier poems have been transformed into court trials.

Chartier's poem was copied (thirty-four known manuscripts), refuted, approved, and imitated with varying degrees of talent. It was translated into Italian, English, and Catalan and was turned into a series of rondeaux by Anne de Graville in the 16th century, when the debate was also mentioned in Marguerite de Navarre's *Heptameron.*

# QUARREL OF THE *ROMAN DE LA ROSE*

. Although it is no longer believed that Christine de Pizan's *Épistre au Dieu d'Amour* (1399) launched the debate over the merit of Jean de Meun's continuation of the *Roman de la Rose,* she publicized the affair by presenting copies of the letters it inspired to the queen of France and the provost of Paris (1402). The debate was begun by Jean de Montreuil (1401). He and colleagues at the royal chancellery enjoyed literary debates, as his correspondence shows. They underestimated Christine de Pizan's reaction when they engaged her participation, although she had already criticized Jean de Meun's attitude toward women and his questionable influence on young contemporaries.

The letters grew out of a conversation by Jean de Montreuil with Christine and a "notable clerk" who seems to have shared Christine's views. Later, Jean de Montreuil sent them both a treatise insisting on the poem's merits. Christine's polite reply expressed support for the other person. Her tone changed only after others entered the debate. For Christine, the most important of these was Jean Gerson, who on August 25 preached a sermon taking Jean de Montreuil's views to task. Gontier Col then wrote to Christine playfully expressing his astonishment that anyone should attack such a learned man as Jean de Meun and suggesting that her views merely reflected those of others more wise than she. In reply, Christine, like Gerson, questioned the propriety of some of Jean de Meun's language, suspecting his motives in using it, and even more those of his admiring disciples. Col's patronizing reply annoyed Christine and perhaps encouraged her to make the correspondence public. For her, the issue had become Jean de Meun's unjust slander of women.

On May 18, 1402, Gerson attacked Jean de Meun in an allegorical *Vision,* where he referred to obscene illustrations in some contemporary manuscripts of the poem. Although Gerson and Christine were not objecting to exactly the same things, together they formed a powerful opposition.

In the debate's final round, Pierre Col took issue with both Gerson and Christine in an even more offensive tone, which Christine reproved in her reply. Gerson expressed his disapproval to Col in Latin, suggesting that his ideas skirted heresy and that a canon of Notre-Dame cathedral should turn his mind to more serious matters. The debate ended at

once, although there is a final echo in some sermons on Penitence preached by Gerson the following December.

An examination of the documents shows that the quarrel was less between Christine and the Cols than between Jean de Montreuil and Gerson concerning Jean de Meun's influence on public morality. The antifeminist aspect was perhaps accidental but attracted lasting attention, for although Christine's position has sometimes been misrepresented, for the first time a woman dared to defend her sex against traditional clerical misogyny.

# *QUATRE FILS AYMON*

(or *Renaut de Montauban;* 18,489 Alexandrines; early 13th c.). The most popular epic of the Rebellious Vassal Cycle, as evidenced by the great number of manuscripts and versions in verse and prose composed during the 13th century, as well as numerous allusions to it. Renaut (Rinaldo) also became, with Roland (Orlando), the protagonist of the chivalric romances *Orlando Innamorato* by Boiardo (1495) and *Orlando Furioso* by Ariosto (1516–21); Tasso wrote a *Rinaldo* (1562) and utilized this character in an episode of *Gerusalemme liberata* (1580).

After Renaut has killed Charlemagne's nephew Bertolai in a brawl, he and his three brothers, sons of Aymon of Dordogne, flee the royal court. With the help of their cousin, the sorcerer Maugis, and their wonderful horse, Bayard, they first take refuge in the Ardennes, then in Gascony, where the king marries his daughter to Renaut but later betrays him under pressure from the king of France. Charlemagne pursues the brothers relentlessly; only after many tribulations does he consent to make peace, on condition that Renaut go to Jerusalem and Bayard be surrendered. The horse, thrown into the Meuse by the emperor himself, escapes into the Ardennes. Returning from Palestine with Maugis, whom he met in Constantinople, Renaut learns of the recent death of his wife and, while Maugis retires to a hermitage, leaves his family in order to expiate his faults, which had caused the death of the duchess. He is killed by jealous colleagues while helping carry stones for the construction of the cathedral of St. Peter at Cologne; but his body, thrown into the Rhine, is miraculously saved and returns by itself to be enshrined in Renaut's castle in Dortmund.

# QUERCY

**.** This large and important county, dominated by the city of Cahors, extended over much of southwestern France transected by the River Lot. To the north of the river, the region of Haut-Quercy included the towns of Gourdon, Figeac, and Martel and the viscounty of Turenne. The Bas-Quercy, south of the Lot, extended to the valleys of the Tarn and Garonne and to the new city of Montauban.

From the 9th century, Quercy remained in the hands of the counts of Toulouse, who held it against frequent pressure from the dukes of Aquitaine, later kings of England. The death in 1249 of the last count, Raymond VII, who was succeeded by his son-in-law Alphonse of Poitiers, brother of Louis IX, commenced the long dispute over Quercy between the kings of France and England. The Treaty of Paris in 1259 established the latter in possession of Haut-Quercy and provided for his eventual succession in Bas-Quercy, but its terms remained imperfectly fulfilled. In 1286, Edward I of England yielded Bas-Quercy to France in exchange for guaranteed revenues. The seeds of the dispute, however, lingered through the Hundred Years' War.

Quercy's advantageous geographic position assured it an important economic role. By the close of the Middle Ages, it possessed two major centers of commerce, Montauban, founded in 1144, and Cahors. Cahors especially capitalized on the local resources of wool and wine and its position on the axis linking Languedoc to France and to England through Bordeaux to the west. By the 13th cen-tury, the Cahorsins had established trading colonies in Italy, Provence, and Bordeaux as well as England. To their commercial activities, they joined those of banking. The name "Cahorsin" became by the end of the century synonymous with "usurer" and Cahors with sin, as Dante expressed in the *Inferno* 11.50: "the smallest round stamps with its seal both Sodom and Cahors."

Quercy suffered extensively in the campaigns of the Hundred Years' War. The commerce of Cahors, already declining, was badly reduced. The last English troops were not expelled from Haut-Quercy until 1443.

# QUIMPER

. Capital of Cornouaille. Founded, according to tradition, in the 5th century by King Gradlon, who brought with him from England the name "Cornwall," the city was made a bishopric in the 6th century. Walled in the 13th, it suffered during the Breton civil war, being sacked by Charles de Blois in 1344 and besieged the following year by Jean de Montfort.

Quimper's cathedral of Saint-Corentin, named for the city's first bishop, is the most representative Gothic church in Brittany, in spite of unfortunate 19th-century additions and "restorations." The choir and ambulatory are 13th-century; the nave, side aisles, and transept—all on an axis different from that of the choir—are 15th-century, as is the Flamboyant façade with towers. Between the towers is an equestrian statue of King Gradlon. Some 15th-century glass is preserved.

The nearby Romanesque church of Sainte-Croix (12th c.) at Quimperlé is notable for its trefoil plan with central rotunda, which is reminiscent of the church of the Holy Sepulcher in Jerusalem.

# *QUINZE JOIES DE MARIAGE.*

Nominally inspired by the genre of devotional poetry praising the "joys" of the Virgin— her attributes or celebrated episodes in her life—the *Quinze joies de mariage* portrays the miseries of married life through satirical vignettes. Four complete manuscripts of the work survive, all from the late 15th century: *R* (Rouen, Bibl. mun. 1052), *C* (Chantilly, Musée Condé 686), *L* (Leningrad, Saltykov-Chtchedrin State Lib. f. fr. p. XV. 4), and *P* (London, Phillipps 8338). The author and date remain uncertain. References to costume and events in the Hundred Years' War situate composition in the early 15th century. The author confesses in the prologue that he has never been married but that he has entered another type of servitude, presumably holy orders. Language and textual allusions suggest that the *Quinze joies* was composed in west-central France, and most of the vignettes are set in a small-town, bourgeois milieu.

Framed by prologue and epilogue, each of the fifteen "joys" recounts a stage of married life. The vantage throughout is that of the afflicted husband; the advantage is

nearly always that of the demanding or conniving wife. Material and financial concerns—the need to furnish a new household, to keep the wife in finery, to finance her "pilgrimages"—are one testimony to the obvious vein of bourgeois realism in the work. Although the fifteen vignettes do not constitute a continuous narrative, the first ten progress chronologically through the expected stages of marital development and dilemma. The first "joy" shows the newlywed husband straining to keep his young wife well dressed and to satisfy her every whim. In the second, the husband is already hoodwinked into providing for the wife's visits to various "relatives." By the third "joy," the *ménage* is well established, a child is expected, and the poor husband waits obediently on his pregnant wife, only to find himself later excluded as the women of the family cluster around the mother and newborn. Subsequent episodes depict the disarray of the household after the birth of five or six children, the fatigue and responsibility weighing on the husband, the agonizingly separate aspirations of husband and wife, and the predicaments of various mismatched couples. The eleventh through fifteenth "joys" seem to be case studies of less usual situations, such as the remarriage of a woman who thinks her husband has died in combat and his ill fortune to discover her remarriage.

All fifteen "joys" bear similar refrains of condemnation and despair, reminiscent of the Old Woman's discourse in Jean de Meun's *Roman de la Rose* (11. 13,967ff.): the husband is the fish caught in the net, doomed to finish his days in pain and anguish, without hope of escape from his miserable condition. Both prologue and epilogue to the *Quinze joies* offer context for the fifteen "joys," on the one hand justifying an antimatrimonial stance by a defense of human liberty and of the exercise of common intelligence, and on the other rationalizing marriage as Christian penance.

The *Quinze joies* seems to have contributed less to the formal development of narrative prose genres at the close of the Middle Ages and more to the popularity of fictional inventories of misfortunes. The work's anecdotal character and its satirical stance on domesticity guaranteed its appeal both in England and France. In shortened and liberally adapted versions, the *Quinze joies* continued to be popular in printed editions from the late 15th through the 18th century.

# RABANUS MAURUS

(Hrabanus, Rhabanus, also known as Magnentius; ca. 780–856). Born in Mainz of a noble family, Rabanus (which means "raven" in Old High German) received the best education available in his day. A favorite pupil of Alcuin, he was called "Maurus" after a disciple of St. Benedict. Rabanus moved in the highest circles of power of the Carolingian world. He became abbot of Fulda in 822 and solicited the patronage of Lothair I to make this one of the outstanding monastic foundations of the age. Rabanus supported Louis the Pious in the political turmoil of the 830s and 840s, and Lothair I on Louis's death. The victory of Louis the German in 840 forced him into exile for about a year; upon his return to German lands, he retired to the abbey of Petersburg until named archbishop of Mainz in 847.

Rabanus was a prolific author and the teacher of some of the most outstanding of the Carolingian scholars, among them Walafrid Strabo. Many of his works have a pedagogical intent. *De institutione clericorum* (before 819) covers ecclesiastical grades, liturgy, liturgical vestments, catechetical instruction, and the Liberal Arts. *De rerum naturis* (after 840; also known as *De universo*) is an encyclopedic work in the style of Isidore of Seville but with an allegorical level of interpretation. His extensive corpus of poetry includes a number of *carmina figurata,* in which the words of poems are arranged in designs to illustrate them. However, it is for his biblical interpretation that Rabanus was most famous in the Middle Ages and early-modern period, even though this material has not been widely studied by modern scholars.

Rabanus wrote commentaries on most books of the Bible: all of the historical books of the Old Testament, many of the books of wisdom literature (significantly, not the Song of Songs), the Major Prophets, Maccabees, the Gospel of Matthew, the Acts of the Apostles, and the Pauline epistles. These are composites of patristic sources, but the extracts from the various patristic works are carefully arranged so as to present allegorical interpretations, mostly having to do with Christ and the church, in a coherent and easily accessible form. These interpretations were widely read before the modern period; they survive in many manuscripts and in printed versions through the 16th century. For his role as a Christian educator, Rabanus earned the title *praeceptor Germaniae*.

# RADEGUND

(ca. 525–587). This "queen saint," born a Thuringian princess, was captured in 531 by the Franks and betrothed to Clotar I. The polygamous king raised her at Athies as his future spouse. In her twenties, Radegund left her husband to found the monastery of Sainte-Croix at Poitiers, which was eventually richly endowed by Clotar. Her life at the convent is marked by the often violent political fighting among members of the royal family, but also by an appreciation for learning and literary pursuits. The poet and apologist Venantius Fortunatus (ca. 530–600) became her friend and eventually wrote one of her biographies, the others being composed by Baudonivia, a sister nun, and Gregory of Tours (ca. 538–594). In the biographies, Radegund is praised as an ardent ascetic and exemplary leader of her religious house. The monastery, organized according to the rule of Caesarius of Arles, stressed strict enclosure and education. Radegund left three lengthy verse epistles (perhaps in part coauthored with Venantius Fortunatus) addressed to the emperor Justin II and the empress Sophia of Byzantium, and to her cousin Hamalafred and her nephew Artachis. All three texts testify to Radegund's extensive education in classical Latin and Germanic poetry and her skillful use of the genres.

# RAIMBAUT D'AURENGA

(ca. 1144–1173). In his short life, the troubadour Raimbaut, count of Orange, composed some forty lyrics distinguished by their originality and idiosyncrasy. As a follower of the "difficult style," or *trobar* clus, Raimbaut experimented with new forms, developed an unusual vocabulary, and cultivated obscurity. He opposed his fellow poet and friend Giraut de Bornelh by defending *trobar clus* in a debate over the relative virtues of the clear, accessible style known as *trobar leu.* Raimbaut's preoccupation with formal refinement anticipates the rich style and technical virtuosity of *trobar ric* in Arnaut Daniel.

# RAIMBAUT DE VAQUEIRAS

(fl. 1180–1205). A troubadour adept in many styles, genres, and languages, Raimbaut de Vaqueiras participated in the Fourth Crusade under his patron, Boniface de Montferrat. Twenty-six lyrics of certain attribution survive, in addition to his letter in epic laisses addresed to Boniface in 1205. His songs include the *estampida Kalenda maia,* a bilingual debate with a Genoese woman and another with the trouvère Conon de Béthune, a multilingual and a monolingual descort, other debates and *cansos,* a *sirventes,* a crusade song, an *alba,* a woman's song, and examples of other, lesser genres. These reflect the composite portrait of a polished versifier and ironic wit who balanced his commitment to chivalric causes with an attitude of detached amusement toward courtly styles.

# RAIMON DE MIRAVAL

(ca. 1160-after 1229). Born near Carcassonne, the troubadour Raimon de Miraval ruled over the small castle of Miraval. Protected by Raymond VI of Toulouse, whom he addressed as "Audiart," Miraval lost his castle to French troops and fled to Catalonia after the Battle of Muret (1213). A favorite of the Catalan lord and troubadour Uc de Mataplana, who directed a *sirventes* against Raimon criticizing him for the uncourtly dismissal of his wife, Miraval died in Lérida sometime after 1229. His surviving work includes thirty-seven *cansos* and five *sirventes*. His clear statements about the mutual responsibilities binding him and his lady, Mais d'Amic, earned him the respect of other poets, notably Raimon Vidal, who considered him the ultimate authority on love.

# RAIS, GILLES DE

(1404–1440). Gilles de Laval, lord of Rais (now Retz) in Brittany, and marshal of France from 1429, was born at Champtocé castle in Anjou and executed at Nantes on October 26, 1440, after a spectacular trial. His parents were heirs to the important lordship of Rais in southern Brittany as well as that of Marchecoul, part of the Laval family holdings and those of the La Suze branch of the Craon family. Gilles's wife, Catherine de Thouars, was the heiress of important lands in Poitou. While still in his teens, therefore, Gilles de Rais was one of the richest men in Europe.

Already well known as a brutal warrior and a man of extravagant tastes, Gilles de Rais rose to favor at the court of Charles VII thanks to the influence of his cousin Georges de La Trémoille, and he was named marshal of France in 1429, when he was not yet twenty-five years old. In that year, he served on campaigns with Jeanne d'Arc. Toward 1432, Gilles withdrew to his estates, surrounded himself with unsavory henchmen, and began abducting, sexually abusing, and murdering local children. More than thirty of his victims are known; their number may have approached 150.

When Gilles extended his extravagant behavior to alchemy and to practices that looked suspiciously like witchcraft, the duke of Brittany and the bishop of Nantes decided to move against him, perhaps also with a view to confiscating his strategic

possessions. Long after his trial and execution, Gilles de Rais was associated in Breton oral tradition with the story of Bluebeard, although that legendary figure has come down to us in folklore as a killer of successive wives, not children.

# RALPH OF LAON

(d. 1134/36). Brother and collaborator of Anselm of Laon, Ralph shares in the authorship (or, perhaps more accurately, editorship) of the commentary on the Bible that eventually became known as the *Glossa ordinaria.* Certain other commentaries on the Psalms and the epistles of Paul also bear his name. Ralph appears to have assisted as well in the task of collecting theological opinions, some touching dogma, but most dealing with contemporary pastoral concerns, used for clerical instruction in the cathedral school at Laon.

# RAMPILLON

. Situated on a gentle rise in a fertile plain and surrounded by farms, the church of Saint-Éliphe at Rampillon (Seine-et-Marne) is a High Gothic cathedral in miniature. It is 122 feet long, and the vaults rise only 46 feet, about a third the height of Reims. Following the High Gothic format, the nave is divided into three stories (nave arcade, triforium, and clerestory), yet because of its smallness the triforium is the same height as the clerestory and only half the size of the nave arcade. Since the triforium is a passageway related to human size, its height establishes the scale of the church. Thus, by this change in the

relative size of the three zones of the elevation, the master builder distinguishes the parish church from the cathedral.

The choir of Rampillon is a single vessel illuminated by windows with oculi above. The oldest part of the church is the bay in the south tower that supports a clock tower. Work progressed from east to west with larger windows in the nave, which was completed around the middle of the 13th century. The springing of the ribs from capitals below the top of the triforium is markedly different from High Gothic cathedrals, where the vaults spring from a point a third of the way up the clerestory.

The simple flank of Rampillon is animated by flying buttresses with a single flier and by the earlier clock tower. The façade is simply composed; the width of the nave is echoed in the central bay, with its splayed portal and large round-headed clerestory window flanked by wall buttresses. The central bay is flanked by the flat terminations of the aisles and on the northwest corner by the squat, circular tower. The portal, containing the Last Judgment in its tympanum and twelve Apostles on the jambs, is clearly related to the sculpture of Reims.

Rampillon is more than a country simplification and reduction of a cathedral. Features derived from the High Gothic cathedrals, such as Reims, are combined with regional traditions of transeptless plan (Paris area) and unusual handling of clerestory (Burgundy). The homogeneity and clarity of statement and the imaginative transformation of High Gothic ideas at Rampillon point up the universal quality of High Gothic, whether in the great cathedrals or in a little church on the fertile plain of Brie.

# RANSOMS

. Prisoners captured in medieval warfare were spoils. Roman law had established that prisoners taken in a just war became slaves of the enemy. But canon law later altered this to declare that Christians taken by other Christians were not to be slaves but were to be freed on the payment of a ransom. During the Middle Ages, the capture of prisoners, especially noble prisoners, became one of the most valuable gains of warfare.

In battle, if one man was captured by another, the prisoner had the right to purchase his freedom with a ransom. A payment was agreed upon, depending on the wealth and nobility of the prisoner, and the captor then kept the prisoner until this payment was made. During this imprisonment, the captor could do whatever he needed to ensure due payment of the agreed-upon sum, although he could not threaten the prisoner with death. The prisoner then became a noncombatant, and his lands, from which the ransom revenues must come, became technically immune from war.

The ransoming of prisoners was practiced in most military engagements of the Middle Ages. In some battles, however, this course of action was seen as detrimental to an army, as a large number of soldiers might choose to withdraw with their prisoners rather than

keep fighting. In these instances (for example, the Battle of Agincourt in 1415), the military leader would command the killing of prisoners.

Perhaps the most famous medieval ransom was that agreed to by the French king John II after his capture at the Battle of Poitiers in 1356. It was set initially at the exorbitant amount of 4 million crowns, and only a partial sum was eventually paid, even though the amount was later decreased to 3 million crowns by the Treaty of Bré-tigny. Although John was eventually freed, the ransom remained unpaid and, bound by his ransom agreement, he later returned to England, where he died.

# *RAOUL DE CAMBRAI*

**.** This 8,726-line chanson de geste in the Rebellious Vassal Cycle, aside from a manuscript fragment and brief 16th-century extracts, has survived in one complete manuscript (B.N. fr. 2493). Dated ca. 1180–1200, it is a revision of one or more earlier texts now lost. The first 5,555 lines, in rhyme, tell of feudal rebellion and clan feuding. The remainder, in assonance, treat largely of love and adventure, with Saracen motifs. The majority of scholars consider the first part to be the genuine *Chanson de Raoul de Cambrai,* and the romantic second half to be a sequel, a *Raoul II* or *Chanson de Bernier.*

Young Raoul, wrongly disinherited of the Cambrésis by King Louis, demands his patrimony; the king offers him instead the first fief to become vacant. Herbert, count of Vermandois, dies, and Raoul takes up the challenge by invading the Vermandois. Herbert's sons, defending their inheritance, include the father of Raoul's squire, Bernier, born out of wedlock. Bernier eventually quarrels with his lord and takes refuge with the Vermandois. In the ensuing battle, he slays Raoul. War flares up again when Raoul's kin seek to avenge his death. The poem ends with a reconciliation of sorts between the former enemies, who then turn upon King Louis and burn Paris.

*Raoul de Cambrai* treats the problems that beset society and questions the old heroic values: it depicts a world in chaos, with barons driven to assault each other and the king in senseless battles where no one can prevail. The poet explores in a powerful manner the issues of feudal law, the role of the family, and the reality of the quest for land and power in a time, and for a social class, in a state of crisis.

# RAOUL DE HOUDENC

(fl. 1210–20). Radulfus de Hosdenc, *miles,* of Hodenc-en-Bray (Beauvaisis), was the author of an Arthurian romance of 5,938 octosyllabic lines, *Meraugis de Portlesguez,* and three short didactic poems, the *Songe d'enfer,* the *Roman des eles,* and a *Dit.* A second Arthurian romance, the *Vengeance Raguidel* (6,182 lines), whose author names himself as "Raols" is probably also by Raoul de Houdenc. Raoul is one of the most talented of the Chrétien epigones, and *Meraugis de Portlesguez,* concerned with the rivalry of two friends for the love of the fair Lidoine, is one of the best examples of the genre. Both *Meraugis* and the *Vengeance Raguidel,* which is concerned with the avenging of a murdered knight called Raguidel, can best be seen as the work of an author coming to grips with the specter of Chrétien de Troyes. All kinds of humor abound in the two romances, as well as in the short didactic pieces. The *Songe d'enfer* is a vision of Hell notable for a particularly gruesome banquet and some allegorical heraldry; the *Roman des eles* is a guide to *courtoisie.* Raoul was acknowledged, along with Chrétien, to be one of the greatest French poets by Huon de Méry in the *Tournoiement Antécrist* (ca. 1230).

# RAOUL DE VERMANDOIS

(d. 1152). Seneschal of France. An ardent supporter of the Capetian monarchy, Raoul was the eldest son of Adèle, heiress of Herbert IV, count of Vermandois, and Hugues le

Grand (d. 1102), brother of Philip I of France. He became count of Verman-dois in 1117, answered the royal summons to oppose an imperial invasion in 1124, lost an eye in royal service in 1128, and was the sole supporter of Louis VI against the revolt of the Garlande family in 1131. In that year, he first appears as royal seneschal. In 1137, he and his archrival, Thibaut II le Grand, count of Champagne, led the entourage that escorted the future Louis VII to Bordeaux for his marriage to Eleanor, heiress of Aquitaine.

Raoul's influence continued under Louis VII (r. 1137–80). His repudiation in 1142 of Thibaut II's niece Eleanor to wed Petronilla (Alix), the queen's sister, led not only to his excommunication but also to war in Champagne. He refused to put Petronilla aside, even after the burning of Vitry led to the king's accommodation with the church. He became co-regent with Suger, abbot of Saint-Denis, during the king's absence on the Second Crusade (1147–49). Upon the death of Suger in 1151, Raoul was replaced as royal seneschal, and he died the following year.

Raoul left three children by Petronilla: Raoul le Lépreux, count of Vermandois (r. 1152–67); Elizabeth (d. 1183), whose husband, Philippe d'Alsace, count of Flan-ders, ruled Vermandois until 1191; and Eleanor, who was forced to divide the inheritance of Vermandois with the king, Philip II Augustus, who acquired the remainder on her death in 1213.

*R.Thomas McDonald*

# RAOUL GLABER

(ca. 985-ca. 1046). Born in Burgundy, perhaps out of wedlock, Raoul entered the monastery of Saint-Germain of Auxerre when he was about twelve. By nature restive and averse to discipline, he wandered from monastery to monastery, where, thanks to his literary talents, he was welcomed. From ca. 1015 to 1031, he was the traveling companion of William of Volpiano, abbot of Saint-Bénigne of Dijon and one of the foremost monastic reformers of the day. At William's command, he began a history of the prodigies and wonders surrounding the advent of the year 1000, which he kept with him and added to for the rest of his life. After William's death, Raoul spent time at Cluny (ca. 1031–35), then briefly at Bèze, finally returning to Auxerre.

In addition to his Latin *Five Books of Histories,* Glaber wrote a hagiographical *vita* of William and some epigraphy that, due to the jealousy of the monks, was destroyed. He seems to have had difficult relations with a number of people, including his mentor, William, and some of his independence of mind shows up in his writing. His history, dedicated in a later recension to Odilo of Cluny, began with the year 900 and presented the history of the German emperors and French kings, which, as it reached Raoul's own time (Books 3–4), included events from all over the known world and, in his old age (Book 5), included a brief autobiography and anecdotes about anonymous people. Several accounts of the same global material also appear in the independently composed but contemporary history of Adémar de Chabannes.

Often criticized for inaccuracy, gossip, disorganization, and prodigy mongering by modern political historians, Raoul has proven a rich source for social history and mentalities; his theology of history, though crude, prefigures such 12th-century historians as Hugh of Saint-Victor, Otto of Freising, and Joachim of Fiore. Raoul is best known for his apocalyptic interpretation of the two millennial dates 1000 (Incarnation) and 1033 (Passion), which he linked to mass manifestations of religious fervor—heresy, church building, pilgrimage (especially to Jerusalem), and the Peace of God movement. He has accordingly suffered from polemical treatment at the hands of modern historians opposed to the romantic notion of the "terrors of the year 1000."

# RATRAMNUS OF CORBIE

(d. ca. 875). Born in the early 9th century, Ratramnus became a monk at the abbey of Corbie, where he died. One of the most original thinkers of medieval France, he was a friend of Paschasius Radbertus, Gottschalk, and Lupus of Ferrières. A spirited author, he directly confronted Paschasius Radbertus on the eucharist and the virginity of Mary *in partu* (i.e., during and after Jesus's birth) and Hincmar of Reims on predestination, the nature of the soul, and (in a lost work) the Trinity. Ra-tramnus warned against "gross corporeality" in eucharistic thought, maintaining the continued reality of the bread and wine, while also asserting the real presence of Christ in the sacrament. His eucharistic treatise was championed by Berengar of Tours and the Protestant Reformers. He was a favorite of Charles the Bald, and he wrote the *Contra Graecorum* for Pope Nicholas I, in defense of papal primacy, clerical celibacy, and the use of the *filioque* (the procession of the Holy Spirit from both the Father and the Son) in the Creed. Ratramnus ridiculed superstition in his treatise on the virginity of Mary and in his *Epistola de cynocephalis,* concerning the "dog-man" mentioned by Augustine in *City of God* (*De civitate Dei* 16.8).

# REALISTIC ROMANCES

. Term that designates disparate verse romances that, from the late 12th to the late 13th century, shunned the fantastic, lingered on the depiction of everyday *realia,* and made reference to contemporary persons or situations. They are not, however, "realistic" in the modern sense. No author claimed, like Stendhal, "to hold a mirror to reality"—a notion foreign to a literature that had no preoccupation with mimesis.

Gautier d'Arras, no doubt to set himself apart from his rival Chrétien de Troyes, as well as from Marie de France, whose work inspired him, claimed that his romance *Ille et Galeron* had no "phantoms" or "lies," by contrast with the *lais,* which gave their audience the impression of having slept or dreamed (ll. 931–36). Several years later, Jean Renart, the first of the "realistic" writers of the 13th century, expressed himself in similar terms in the prologue to *Escoufle:* his heart, he says, cannot accept many stories he has heard, because his reason prevents it; lies ought not to prevail over truth in a tale (ll. 12–23). Jean's reflections on the art of romance are headed confusedly toward what a later age will call "verisimilitude."

In fact, the "realistic romances" are each more improbable than the other, though they do avoid the Arthurian world and the supernatural. Forgoing the Breton love of the fantastic appears sufficient in their eyes to satisfy reason. Yet if their plots, which often develop folklore motifs, do not seek verisimilitude, they nonetheless seek some foundation in everyday reality. They offer their aristocratic public a reflection of courtly life, sympathetic but also faithful, sometimes detailed and precise. They are concerned with geographical setting and occasionally evoke contemporary people or events. In *Guillaume de Dole,* Jean Renart uses several of his contemporaries as characters, although the romance is set in the distant past. The procedure's lack of verisimilitude, almost ostentatious, but nonetheless dependent on the "real," invites us to question not only the sort of acceptance medieval romances required of their readers but, more generally, the value of anachronism. The projection of the present onto the past is often deliberate.

To Jean Renart are attributed two romances, *Escoufle* (ca. 1200–02) and the *Roman de la Rose* (ca. 1210–12 or ca. 1228), today called *Guillaume de Dole* to distinguish it from the more illustrious romance of that name, as well as the *Lai de l'ombre* (ca. 1221–22). Born in Dammartin-en-Goële and undoubtedly a clerc, Jean spent most of his life in the courts in the northern part of the Francophone region and seems to have been linked to the French-speaking Guelf milieu, as John Baldwin has shown. He dedicated *Escoufle* to Count Baudouin VI of Hainaut, future emperor of Constantinople, and *Guillaume de Dole to* Milon de Nanteuil, bishop of Beauvais. *Guillaume* evokes numerous people connected with the principality of Liège and the entourage of Archbishop Hugues de

Pierrepont. With an original turn of mind and a malicious sense of humor, the author hides behind his persona the better to impose his presence. In a style both spontaneous and convoluted, he gives an unexpected twist to commonplace motifs.

After a lengthy prologue devoted to the exploits of Count Richart de Montivilliers, here made duke of Nor-mandy, *Escoufle* recounts the star-crossed love affair of Richart's son Guillaume and Aelis, daughter of the Emperor of Rome. The two young lovers run off together. In a forest in Lorraine, while Aelis is asleep, a kite (OFr. escoufle) flies off with her red silk alms purse. Guillaume becomes lost while seeking it; Aelis awakens in the interval and thinks she has been abandoned. The separated lovers are reunited after many wanderings at the court of the Count of Saint-Gilles. In *Guillaume de* Dole, the young German emperor Conrad, a confirmed bachelor, hears his jongleur Jouglet singing the praises of Guillaume de Dole and his sister, the beautiful Liénor, and promptly falls in love. He becomes friendly with her brother, telling him of his intention to wed Liénor. His seneschal, jealous of Guillaume's good fortune, goes to Dole and learns from Liénor's naive mother that the young girl has a rose-shaped birthmark on her thigh. In a version of the wager story, popular in the Middle Ages, he uses this information to lead others to believe he has obtained her favors. But Liénor comes to court and easily proves him wrong. In the prologue, Jean Renart boasts of being the first to include lyric selections in a romance. Indeed, he uses this procedure, which was to become enormously successful in succeeding generations, with a remarkable aptness, sense of citation, and mirror-like effect. The *chansons de toile* that he places in the mouths of Liénor and her mother have been particularly admired.

The *Roman de la Violette* (or the *Roman de Gérard de Nevers)* by Gerbert de Montreuil, possibly the author of a Perceval continuation, was written between 1227 and 1229. Although the plot is more like that of the *Roman du comte de Poitiers,* the romance is also imitative of *Guillaume de Dole,* with its inserted lyrics, including a *chanson de toile;* and its use of the wager motif (in its usual form, a wager between the hero, sure of the faithfulness of his beloved, and the traitor); and the birthmark (here, a violet on the breast rather than a rose on the thigh), the traitor's knowledge of which, thanks to the indiscretion of an evil duenna, is interpreted as proof of his success. Convinced of Eurïaut's infidelity, Gérard, who has lost his lands by losing the wager, wishes to kill her but decides to abandon her in the forest after she saves his life. He lives the life of a wanderer, while Eurïaut, rescued by the Duke of Metz, becomes the object of his attentions. The lovers finally are reunited, and Eurïaut's innocence is proven through trial by combat.

The anonymous *Galeran de Bretagne* (ca. 1220) develops the theme already treated by Marie de France in *Fresne.* A woman slanders a neighbor who has given birth to twin sons, claiming that she must have known two men. Shortly afterward, the slanderer herself gives birth to twin daughters. Caught in her own trap, she has one infant abandoned outside a nunnery, where she is found and baptized Fresne, for the ash-tree in which her cradle was hung. She is raised alongside the abbess's nephew, Galeran, son of the count of Brittany, and as they grow older they fall in love. But Galeran, who has become count after his father's death, must set off on adventures that take him to the home of Fresne's parents, while she, mistreated and despised, is driven from the nunnery. A general recognition, pardon, and marriage end the romance.

The *Roman du castelain de Coucy et de la dame de Fayel* by Jakemés (second half of the 13th c.) has as hero the trouvère of the preceding century known as the Châtelain de Coucy and quotes from his songs. This lengthy romance, which uses the traditional situations and peripeties of courtly love, ends with the well-known motif of the eaten heart. It is one of the few medieval romances that do not have a happy conclusion. The author, who presents himself as a dilettante, is perhaps from the region of Saint-Quentin.

*Joufroi de Poitiers* (after ca. 1250) is a bizarre and unselfconscious romance that demonstrates the mingling, characteristic for its period, of personal outpourings and narrative fiction. A lengthy prologue gives voice to the plaints of a bashful lover, without in the least seeking to introduce the work that follows. Throughout the romance, the author's confessions and comments on his own love affair and on the story disrupt the rambling and disjointed episodes, devoted mostly to the good fortune of the hero, who is inspired by the first troubadour, Count Guilhem IX of Poitiers and Aquitaine. The historical figures appear in happy confusion: Joufroi's mother is named Eleanor, the English king is Henry, and the troubadour Marcabru has a cameo role. The story unfolds with a cynical wit that reminds one of the Occitan romance *Flamenca.*

*La Manekine* and *Jehan et Blonde* are today generally attributed not to the jurist Philippe de Remi, lord of Beaumanoir and author of the *Coutumes du Beauvaisis* (ca. 1283), but to his father, also named Philippe de Remi. *La Manekine* is one of the many works known throughout all Europe that develop the motif of "The Maiden Without Hands." A princess must flee in disguise to escape the incestuous love of her father; she is taken in by a king who marries her, but later her wicked mother-in-law falsely tells her son that his wife has given birth to a monster and tries to have her killed. Her only salvation is to flee once more. Finally, she is reconciled with her husband and her father and, in *La Manekine,* also with her left hand, which she had cut off herself, hoping the deformity would discourage her father's wicked intentions. In this romance, the heroine Joie's father is king of Hungary and her husband king of Scotland; the reconciliation occurs in Rome. *Jehan et Blonde* tells in great detail how Jehan, a penniless young noble from Dammartin, wins the love of Blonde, daughter of the Count of Oxford, by his valor. He is able to marry her even though her father had promised her to the Count of Gloucester.

Jean Maillart's *Roman du comte d'Anjou* (1316) treats the same theme as *La Manekine* but shows more moderation in the choice of episodes, if not in style. The heroine is the daughter of the Count of Anjou, her husband is the Count of Bourges, and the wicked mother-in-law is replaced by a wicked aunt, the Countess of Chartres.

All these romances are very similar yet at the same time different. Paradoxically, it is their very banality, their whimsical and hackneyed plots—indeed, their lack of verisimilitude—that focuses attention on the settings, the customs, the everyday activities, and the geographical and historical allusions. Would we be aware of their "realism" if it were not grafted onto a fairy-tale universe? The true originality of these romances and their most remarkable common trait is the important place the writers give to themselves. Whether they intervene directly or show their virtuosity through intertextual effects born of lyrical insertions, they never let their presence be forgotten.

# REBELLIOUS VASSAL CYCLE

**.** Cycle of chansons de geste that depict the struggles of a feudal baron and his family against another house or the king. This is the third cycle defined by Bertrand de Bar-sur-Aube in a passage from *Girart de Vienne,* The King Cycle concerns the exploits of Charlemagne and Roland as defenders of the faith; in the Guillaume d'Orange Cycle, the warriors defend the southern frontier. In these first two *gestes,* texts were composed following the principles of medieval cycle formation: epic poets composed sequels to famous poems, telling the early exploits *(enfances)* of a renowned warrior or those of his ancestors. Such was seldom the case in the third cycle. Only in the 13th century were the rebel heroes gathered into a "clan" of their own, known as the Rebellious Vassal (or "Doon de Mayence") Cycle, which then took its place beside the other two.

Epics belonging to the Rebellious Vassal Cycle reflect cultural tensions in the medieval world, especially the crisis of the aristocracy at a time when the barons sensed, in the face of increasing royal power, that for the first time since Charlemagne they were no longer the dominant force in society. The best epics of revolt, *Girart de Roussillon, Raoul de Cambrai, Garin le Lorrain, Chevalerie Ogier,* and *Quatre fils Aymon* (or *Renaut de Montauban*), strove to come to grips with the malaise of their society. They portray a situation in which a weak and tyrannical king is readily swayed by traitors, preferring his favorites to the barons of the realm. Disinherited and insulted, the nobles

are forced into rebellion or civil war. Although selfish, vindictive barons are criticized as much as the king, the author takes the side of the aristocracy; and the poor, exiled count or duke, who in the end wins (back) prerogatives and land, is perhaps a projection of the landless petty nobility, the *povres bachelers,* whose aspirations are not at all the same as those of the great barons and the king. The enthusiasm and spontaneity that it was possible to idealize in the *Chanson de Roland* became dangerous in the context of a more complex national society. Valor, so prized in older epics, can be exercised only against one's own people, and good in the individual becomes a social curse, for individual and group interests enter into conflict.

The solutions arrived at by the epic poets are more than a little ambiguous. In most of these texts, the rebel yields to the king even though he is in the right, then sets out on a crusade or pilgrimage to the Holy Land. He fails because the ultimate lesson of the chanson de geste is one of order and harmony, an all-inclusive peace that goes beyond individual, family, and feudal honor to preach submission to authority. Even in *Raoul de Cambrai* and the Lorraine Cycle, although the emperor is humiliated, his life and office remain sacrosanct. None of the rebels could have dreamed of abolishing the kingship, assassi-nating the king, or even forcing him to abdicate. Rebellion results in no program for reform. The poet asks questions; he provides no easy answers.

# RECLUS DE MOLLIENS

(fl. early 13th c.). Identified as Barthélémy, monk of the abbey of Saint-Fuscien-au-Bois who went into seclusion at the church of Sainte-Marie de Molliens-Vidame, the Reclus de Molliens wrote two didactic poems in the first third of the 13th century, the *Roman de carité* and *Miserere*. Twenty-one manuscripts and six fragments are extant for *Carité,* twenty-six complete and ten partial manuscripts for *Miserere*. The poems have octosyllabic twelve-line stanzas, rhyming aab/aab/bba/bba, a form found earlier in Hélinant de Froidmont's *Vers de la Mort. Carité* (ca. 1224) recounts in 242 stanzas the poet's abortive quest for Charity amid all the social orders in Christendom. *Miserere* (ca. 1230), in 273 stanzas, adopts the mode of catechism to expound upon the Deadly Sins and the five senses, among other questions. Skillful alle-gorization, alliteration, assonance, and word play enliven the Reclus de Molliens's stern condemnation of human foibles. In 1360, the city of Amiens offered a copy of both poems as a gift to King Charles V.

# RECONQUEST OF FRANCE

. The Valois campaigns of 1449–53 ended in triumph for Charles VII, with the En-glish expelled from Normandy and Guyenne. In July 1449, armies under Dunois had entered Normandy, meeting feeble resistance. His troops were welcomed as liberators. Although English reinforcements landed in March 1450, on April 15 the French won a decisive victory at Formigny. More formidable resistance came in Guyenne. Dunois's main force entered the region in April 1451, and, after a series of sieges the final Lancastrian citadel at Bayonne fell on August 20, 1451. The English returned in autumn 1452 with considerable local support, and a second Valois army was dispatched. The destruction of Talbot's army at Castillon, July 17, 1453, effectively ended the war, though the threat of renewed English incursions troubled France for many decades.

These campaigns revealed not only the bankruptcy of Lancastrian government but the wisdom of the recent French reforms that had professionalized the army, mobilized a popular militia, and regularized an effective artillery force. The real genius of Charles VII, however, was to be revealed not in his reforms and conquests but in the subsequent retention of these territories and the reconciliation of their people to Valois rule.

# REFRAIN

. A recurring segment, from one word to a verse or more, that sets off a strophic form. Music for a refrain, if present, also recurs. In *Guillaume de Dole* and other 13th-century narratives with lyrical insertions, refrains appear as parts of convivial dance songs, or *caroles*. They may also appear isolated—courtly amorous aphorisms—sometimes with melody. Refrains apparently form part of a vast, for the most part orally transmitted

repertory and were not always connected to the dance. Besides narratives with lyrical insertions, refrains also appear in *chan-sons à refrain* and *chansons avec des refrains,* and with music in many 13th-century motets. In the 14th and 15th centuries, refrains are essential components of the *formes fixes*.

# REGALE/REGALIA

. Legal historians describe as "regalian" those rights, powers, and prerogatives associated with royal sovereignty, such as minting money, collecting taxes, punishing or pardoning criminals, or making war. In theory, these were, or should have been, a royal monopoly, but through most of the Middle Ages many great seigneurs exercised and profited from some regalian rights. In most cases, their ancestors had acquired these by delegation or usurpation and had transmitted them to their heirs as in-heritable private property. Although only the greater territorial lords wielded significant regalian powers by the end of the Middle Ages, some private exercise of these rights survived until the French Revolution.

Prelates and religious bodies were among the seigneurs with some regalian powers, generally as a result of "immunities" granted to churches as far back as Merovingian times. When exercised by ecclesiastics, regalian rights formed part of the temporal possessions ("temporalities") of the church. Yet while the crown had conferred rights on churches, it also took from them, the most famous example being Charles Martel's appropriation of church lands to provide income to support his warriors. Kings had long been accustomed to intervening in the temporal affairs of the church, often to the consternation of ecclesiastical reformers. Because of the assumption that the lands and temporalities of the church derived ultimately from the crown, these were known as "regalia."

The term "regale" came to refer to a special regalian right over the temporalities of a bishopric or monastery when the position of bishop or abbot was vacant. Although some lords other than the king exercised the regale, it was much less widely dispersed than other regalian powers, was gradually becoming a royal monopoly, and was not granted to princes with apanages. The expanding royal control of the regale was one measure of the growth of royal authority under the Capetian monarchy, but it was never a universal right exercised in every diocese.

The regale entitled the king to collect the revenues of (typically) a bishopric after the bishop died, was promoted to cardinal, resigned, was translated to another bishopric, or engaged in public rebellion. This enjoyment of ecclesiastical revenues, known as the "temporal regale," gave the king incentive to prolong a vacancy. A newly installed bishop had to request that the king deliver to him the regalia before he could have access to the revenues of his episcopacy. The king would sometimes seek to delay doing so.

A more controversial part of the regale was the king's right of appointment to ecclesiastical benefices in a dio-cese during an episcopal vacancy, the so-called "spiritual regale." This right concerned only benefices without cure of souls, but it occasioned serious friction between the French crown and the papacy, especially in the 14th and 15th centuries, when each wanted control of as many benefices as possible.

The regale was most important economically when the crown's ordinary revenues were proving inadequate and the temporalities of the church still generated considerable wealth (i.e., ca. 1250–1350). Thereafter, as royal taxation grew to maturity and the profits of ecclesiastical estates were in decline, it was not an important source of royal income, and in 1465 Louis XI assigned the profits of the temporal regale to the Sainte-Chapelle in Paris.

# REGIS, JOHANNES

(ca. 1425–1496). Composer. From 1451 until his death, Regis was at the church of Saint-Vincent in Soignies, first as master of the boys and then, from 1462, as canon and *escollastre* (master of the school). In the 1440s, he appears to have been a singer at Cambrai cathedral and acted as *clerc* for the most famous composer of the day, Dufay. His two known Mass cycles are unusual in both texture and structure, as are his two known songs. But Regis's main success appears to have been as a composer of motets; with their flowing lines, rich chording, and ambitious design, those in five and six voices on a *cantus firmus* line may be the first of their kind and were certainly among the works that generated a new style in the 1470s.

# RÉGNIER, JEAN

(ca. 1390–ca. 1467). The author of the *Fortunes et adversitez de Jean Régnier* was born into an influential family of Auxerre. The *Fortunes* refers to numerous crucial episodes of his life. As a young squire, he was educated in music, art, and letters in preparation for his years of service to the dukes of Burgundy. In 1403, when he was about thirteen, Régnier participated in an expedition to Jerusalem, most likely a spiritual pilgrimage, with the Marshal Boucicaut. Later in the service of Philip the Good, duke of Burgundy, to whom the English had given the Auxerrois, Régnier was named *bailli* of Auxerre in 1424. He served as the duke's delegate there and took part in negotiations with the French during the next several years. On January 14, 1432, near Beauvais, while on a mission to Normandy, Régnier was taken captive by brigands *(les compagnons de la feuillée).* Realizing his importance, they turned him over to the French for ransom. Held in the episcopal prison in Beauvais, then under the infamous Pierre Cauchon, and later in Lisieux, Régnier was unable to arrange for his release. At one point, enemies close to the dauphin asked for Régnier's execution, but La Hire and others intervened. As Charles d'Orléans had done, Régnier turned to poetry, composing and assembling most of his *Fortunes* while a prisoner. At last, on May 1, 1433, he was released, having paid a third of his ransom and leaving his wife, Isabeau Chrétien, and his eldest son as hostages until the remaining 2,000 *écus* were paid. Restored to his duties by the duke and eventually recovering financially, in 1441 Régnier purchased the castle of Guerchy and its land, becoming lord of Guerchy. He continued his official duties as *bailli* until 1465, shortly before his death.

No manuscript of the *Fortunes et adversitez de Jean Régnier* is extant. Its 1526 printed edition by Jean de la Garde survives in only five copies. The major portion of the work, the *Livre de la* prison, nearly 5,000 lines, seems to have been composed during Régnier's imprisonment. The *Livre* may have been significantly edited by the author after his release, since he explicitly reserves the right to revise his work and to say things he could not while in prison (11. 4,299–302). The *Livre de la prison* combines narrative verse with short lyric pieces and draws generously on previous lyric tradition both formally and thematically. His debt to Charles d'Orléans and Alain Chartier is noticeable. Translating the captive Régnier's changing frame of mind, the work moves from his own dilemma to the vast disarray of the French nation. The *Livre* contains a testament suggestive of Villon's, although Régnier's is in a more serious vein. An enumeration of poignant adieux draws an impressive panorama of Régnier's world, conveying both the intensity of his feeling and a keen sense of his political surroundings.

# REGULAR CANONS

**.** When applied to a person, the term "canon" generally means a member of a group of priests attached to a larger church, usually a cathedral; "regular canon" indicates a priest living in a community in obedience to a rule. (Priests who did not live in a community under a rule came to be called "secular" priests or canons.) During the 9th century in the Carolingian empire and again during the 11th and 12th centuries in Europe generally, there were attempts to organize clerics into communities governed by a rule, much like monks. In the early 9th century, Chrodegang, bishop of Metz, composed for the clergy of his cathedral a *Rule* that expected some elements of a common life but allowed private property and private houses for the canons. This *Rule* was sanctioned by the Synod of Aachen in 816.

In the mid-11th century, communities of regular canons began to appear in Italy and southern France and then to spread throughout Europe in the 12th century. In some cases, these groups were the result of stricter discipline for the clergy of a cathedral; other instances represented the decision of a group of clergy to embrace a life of communal discipline, even apart from an extant church. In contrast to their 9th-century counterparts, these new groups of priests rejected all personal possessions and embraced a fully common life, eating and sleeping in common, like monks. The rise of regular canons as a form of religious life coincided with the general wave of ecclesiastical reform and spiritual renewal that produced the Gregorian Reform movement associated with the papacy, varied attempts by individuals and groups to chart new kinds of "apostolic life" *(vita apostolica)* modeled on concepts associated with the "primitive church" *(ecclesia primitiva),* and such monastic reforms as the founding of Cîteaux and the Cistercian order.

Among significant independent foundations of communities of regular canons in France were Prémontré (near Laon), Arrouaise, Saint-Victor (Paris), and Saint-Ruf (Avignon). Each of these began as a distinctive new foundation, and each became the mother house of an order. The intentions and purposes of these early foundations varied. Prémontré was founded in a forest for purposes of discipline and prayer in a community of priests; Saint-Victor, established just outside Paris by William of Champeaux when he left the schools of Paris, was a center of liturgical piety, scholarly inquiry and instruction, and ecstatic mystical experience; Saint-Ruf was begun by four priests who dedicated themselves to a life of community and discipline in an abandoned church outside Avignon. Arrouaise began with three hermits. By way of contrast, Ivo, bishop of Chartres and himself formerly abbot of a house of regular canons in Beauvais, failed in his attempt to reform his cathedral clergy in Chartres and had to be content with establishing a group of regular canons in the parish church of Saint-André.

While looking to the early church for inspiration, and especially to the sharing of possessions in the Jerusalem community as described in Acts 4:32ff., the regular canons could also call upon Augustine of Hippo as a model and guide (parallel to the place of Benedict of Nursia as the authority, via his *Rule,* for Benedictines and Cistercians). In his episcopal household in Hippo, Augustine had required of his priests personal poverty and a fully common life together. Moreover, he had written a letter (no. 211) instructing a group of female ascetics. By the 12th century, there existed a *Rule of St. Augustine* that

consisted of a preface, entitled *Ordo monasterii,* and the body of the *Rule,* the so-called *Praeceptum.*

Regular canons found support and acceptance especially among bishops and clerics dedicated to the Gregorian Reform, with its insistence on clerical celibacy. Monks were sometimes hostile, being opposed to the regular canons' claim to have ancient authority through Augustine for their "new" form of disciplined life that was much like a monastic regimen in almost all respects, save for priestly ordination and responsibilities. Moreover, as the 12th century progressed, ordination of monks to the priesthood, with responsibilities for preaching and the cure of souls, became more and more widespread, so that this was no longer a significant differentiating factor. Nor did all communities of regular canons seek actively to have parish responsibilities. If a differentiating factor can be found for canonical spirituality, it may well be encapsulated in the phrase: "to teach by word and example" *(docere verbo et exemplo),* implying responsibility for teaching others, while Benedictines and Cistercians tended to emphasize the idea of the monk embarking as a learner on a way dedicated to individual salvation.

As one of the three major types of medieval religious orders (the others being monks and mendicant friars), the canons proved to be something of a mediating group. They drew on examples of monastic practice to shape their lives, while in turn providing the basis for St. Dominic's formation of the mendicant Order of Preachers (Dominicans) on the basis of his life as a regular canon.

# REIMS

. Throughout the Middle Ages, Reims (Marne) played a significant role in the political, religious, and artistic history of western Europe. As Durocortorum, it served as the administrative capital of the Roman province of Belgica Secunda, and its presumed population of approximately 20,000 would have ranked it with Lyon, Nîmes, or Narbonne. The city's importance as a provincial center is attested by the monumental gateway, the Porte de Mars, a spacious forum and cryptoporticus, villas embellished with rich mosaic pavements, and extensive cemeteries. Christianity, established during the second half of the 3rd century, weathered the successive assaults of Germanic tribes,

although Bishop Nicasius was martyred on the threshold of his cathedral by the Vandals in 406/07.

In an effort to win a greater measure of security amid the political turmoil of the 5th century, the bishops of Reims established ties to the local Frankish kings. This rapprochement culminated with the conversion to Christianity of Clovis. His baptism at the cathedral on Christmas day in 498 or 499 by St. Remi (459-ca. 530) became the basis for later royal coronation rituals, beginning with that of Louis the Pious at Reims in 816 and persisting into the 19th century. Raised to the rank of archbishopric in the mid-8th century, Reims ecclesiastics were major figures in Carolingian politics: Ebbo (r. 816–35) backed the deposition of Louis the Pious; his successor, Hincmar (r.

845–882), served as chief counselor to Emperor Charles the Bald. Hincmar's *Vita Remigii,* by promoting the primacy of the saint, sought to elevate the archbishop to the status of a protector of the Frankish kingdom.

The power of the archbishops in the city remained uncontested until the 12th century, when Reims entered a period of dynamic development as a center of cloth production. Rapid population increase resulted in the urbanization of the area between the Roman *cité,* centered on the cathedral, and the settlement that had grown up around the ab-bey of Saint-Remi to the south. Industrialization led to a growing secular presence in the city, and the rising bour-geoisie established a communal government in 1139. Clashes with church authorities over matters of taxation and jurisdiction grew frequent; civic unrest chased the cathedral clergy out of Reims between 1234 and 1237. The abolition of ecclesiastical courts at the end of the 14th century completed the secularization of Reims's civic institutions.

The 14th and 15th centuries were a period of crisis for Reims, along with the rest of Champagne. Stagnation in the textile industry and the collapse of the Champagne fairs in the years immediately after 1300 led to a new network of relationships with the Low Countries that was to have enormous consequences during the Hundred Years' War. Located strategically between the two poles of Bur-gundian power in Burgundy and Flanders, Reims was pulled toward England through its economic ties, while its continuing identity as the site of French royal coronations formed an unbreakable link to Paris. The political impor-

Reims, Notre-Dame, west façade, central portal, Annunciation and Visitation. *Photograph courtesy of Whitney S.Stoddard.*
Reims, Saint-Remi, plan of 11th-century church (above) and present plan (below). After Ravaux and Deneux.

tance of Reims in this struggle is illustrated by the coronation of Charles VII at the cathedral on July 17, 1429, fol-lowing a three-month march from Orléans led by Jeanne d'Arc. Erasing doubts about Charles's legitimacy, the ceremony provided a powerful stimulus for the French, who were able to expel hostile forces from Champagne within a decade.

The works of art and architecture produced in Reims between the 9th and the 13th centuries testify to the luster of its ecclesiastical institutions and their intimate connections with royal power. During the Carolingian era, a brilliant school of manuscript painting, flourishing at the nearby abbey of Hautvillers, produced the incomparable *Ebbo Gospels* (Épernay, Bibl. mun. 1) and *Utrecht Psalter.* Closely allied to the imperial scriptorium at Aix-la-Chapelle, the energetic, classically based style of the Reims school typified the innovative retrospection of the Car-olingian *renovatio.* In the realm of architecture, the nave and sections of the transept of the abbey of Saint-Remi survive from a vast Romanesque project (1005–49) intended as a shrine for the saint's relics as well as a storehouse for the miraculous oil delivered for the baptism of Clovis and used in royal unctions. Its T-shaped basilican plan may recall St. Peter's in Rome; the tall three-story elevation of arcade, gallery, and clerestory, originally wooden-roofed, sounds an emphatic note of spacious verticality. An expanded choir, erected ca. 1170–90 under Abbot Peter of Celle, reflects the new Gothic style in its ground plan with a series of contiguous radiating chapels around an ambulatory and a diaphanous four-story elevation stayed by flying buttresses.

A fire on May 6, 1210, destroyed the cathedral of Notre-Dame, a heterogeneous assemblage of 9th- and 12th-century campaigns. Reconstructed beginning in 1211, the new edifice absorbed and modernized elements of Saint-Remi within the framework of a uniform, three-story bay structure influenced by ideas from Chartres and Soissons. A

similar barometer of architectural change is seen at the parish church of Saint-Jacques, where the late 12th-cen-tury phases of construction in the transept were shaped by Saint-Remi, whereas the later nave was conceived as a simplified version of the cathedral scheme. The glory of the cathedral, however, is its sculptural decoration. From the angels placed on the choir chapels and the north-transept portals of the 1220s and 1230s, which reveal a clear dependency on ancient Roman art, one witnesses the development of a vital naturalism in the work of the Joseph Master and his successors on the west façade and inner west wall, ca. 1255–70. The elegant animation and expressive intensity of these figures set a tone and provided models that inspired artists for the next two centuries. The architecture of the west façade, with its screen of gables, is connected with that of the Benedictine abbey of Saint-Nicaise, begun in 1231 and demolished during the Revolution. Its architect, Hugues Libergier, combined the precious effects of metalwork with the monumentality of the twin-towered triple-portal format to create one of the most innovative frontispieces of the Gothic age.

# RELICS AND RELIQUARIES

. Relics are the remains of a dead holy person or objects closely related to that person. The Middle Ages recognized three classes of relics: the body, or parts of the body, of the holy person; objects closely related to the person, such as garments; and objects that touched these remains, as oils from the tomb collected in ampullae. While relics constituting the whole bodies of holy persons were placed in tombs, from the early Christian period on fragmentary parts of these bodies or objects closely related to the dead person were placed in smaller receptacles called reliquaries, usually crafted of ivory, precious metals, enamelwork, and gems.

The most important relics were those of Christ. Because Christian belief held that Christ was resurrected and ascended into Heaven, nothing of his adult body remained as a relic, although "relics" of his foreskin were recorded at Conques (9th c.), at Charroux in Poitou (from the end of the 11th c.), and at Boulogne (15th c.). Some relics of his clothing are found in France, such as his swaddling clothes and loincloth at Aix-la-Chapelle (by the 9th c.) and the Holy Cloak at Argenteuil (13th c.). By far the most numerous relics are those of the Passion (pieces of the True Cross, nails from the Crucifixion, thorns from the Crown of Thorns). The most famous group of Passion relics in France was that acquired by King Louis IX in the mid-13th century. The expense of creating the gold and jeweled receptacles to hold these relics was actually greater than the cost of the Sainte-Chapelle, which was built to house them.

Relics of the Virgin were next in importance. As she, too, was believed to have been assumed bodily into Heaven, her relics tend to be objects closely related to her, such as the tunic she wore at Christ's birth (at Chartres by the 9th c.) and other garments at Soissons, Marseille, and Arles. Also venerated were her hair (Coutances, Saint-Omer, Saint-Denis), nail parings, and milk.

Relics of the Apostles and saints remain the largest category. Between the 3rd and 6th centuries, veneration of

Casket-type reliquary. Martyrdom and Burial of Thomas Becket (Limoges, early 13th century). *Courtesy of the Allen Memorial Art Museum, Oberlin College, Oberlin, Ohio. Gift of Baroness René de Kerchove, 1952.*

saints became a major part of Christianity, and by the 6th century it was generally believed that the relics of deceased Apostles and saints have been left on earth for the benefit of the living, and specifically that these relics could perform miracles. Relics were not only objects of veneration in and of themselves but were also appealed to for miraculous cures, assistance in childbirth, or help in coping with the woes of life.

From the early Christian period through the Middle Ages, relics were the object of pilgrimage. Under the Merovingians, relics and their miraculous properties were used to convert pagans. In the Carolingian period, the role

of relics was extended when Charlemagne decreed that all oaths had to be sworn on or over them.

During the Gallo-Roman period and throughout the Merovingian period, when entire bodies of French saints were intact they were placed in rectangular stone sar-cophagi, following Roman burial tradition. Such sarcophagi were used for the lay population as well as for saints. A 6th-century example is the sarcophagus of St. Clarus, bishop of Euze (d. ca. 510). Many more are extant from the 7th and 8th centuries, including the sarcophagus of St. Raimundus (7th c.) at Moissac, the sarcophagus of St. Drausius, bishop of Soissons (7th c.), now in the Louvre, and the extraordinary group at the abbey of Jouarre (St. Theodechilde, late 7th-early 8th c.; St. Agilbert, 7th c., with scenes of the Last Judgment; St. Agilberta, 7th c.). By the 12th century, many stone sarcophagi of saints were replaced by those made of precious metals and gems.

While the stone sarcophagi of saints were heavy and not easily moved, from at least the 7th century on we also find in France smaller reliquaries that could be carried in liturgical processions or brought to ecclesiastic councils. These reliquaries are made of gilded copper, sometimes set with enamels or precious gems, the workmanship of the 7th- and 8th-century examples showing the influence of northern European Migrations art. They are most frequently shaped like miniature sarcophagi (reliquary casket of St. Maurice d'Agaune, 7th c.; reliquary casket of St. Mommola, 8th c., Saint-Benoît-sur-Loire; reliquary casket with Christ blessing between the archangels Michael and Gabriel, 8th c., church of Saint-Evrault, Mortain), or they were fashioned like purses (purse reliquary of Saint-Bon-net-Avalouze, 7th c.; purse reliquary with Virgin and Child between SS.Peter and Paul, 8th c., now in the Cluny Museum).

During the Carolingian period, the demand for relics increased. Although dead bodies were supposed to remain intact for the Final Resurrection, after considerable negotiation the ecclesiastic hierarchy in Rome agreed to the dismemberment of saints' bodies, having placed them in a special category. Relic fragments in this period found their way into altars and reliquaries of the casket and purse type.

It is during the Carolingian period that a new type of reliquary appears in France, one that imitates the shape of the body part within. The tradition of body-part reliquaries may have originated in the East: the Piacenza pilgrim (ca. 570) saw a gold-encased and jeweled head reliquary of St. Theodota in Jerusalem. The earliest record of a body-part reliquary in the West is the 9th-century Carolingian head reliquary of St. Mauritius, given to Vienne cathedral by King Boso of Provence (d. 887). Head reliquaries be-come common in the Middle Ages, with many French examples. In addition to head reliquaries (Alexander head, 12th c.; St. Yrieux, 13th c.), there are bust reliquaries (St. Baudine, St. Césaire, St. Chaffre, all from the 12th c.) and a considerable number of arm reliquaries and some foot reliquaries, which seem to have been most popular during the 12th and 13th centuries.

Whole-figure reliquary statues in France are found from at least the 10th century. The only extant reliquary of this type from this period is that of St. Foy in Conques (probably assembled ca. 984), but Bernard of Angers writes of four such figure reliquaries brought to a synod at Rodez in the early 11th century. A surviving 13th-century example is the St. Stephen reliquary now at The Cloisters in New York.

By the 12th century, many types of reliquaries can be found, most of which continue to be made to the end of the Middle Ages. In addition to the casket, purse, body-part, and figure reliquaries, a number of relics of the True Cross are placed within cross-shaped reliquaries (Cross of Clairmaris, Saint-Omer, 13th c.) and reliquaries in the shape of a miniature church (reliquary of St. Romain, Rouen, and of St. Taurin at Évreux, both 13th c.) became popular. Monstrance reliquaries, known from at least the 12th century, become popular in the late Middle Ages. These reliquaries are in many shapes, but all include a glass or crystal compartment in which the relic can be clearly seen (reliquary of the hand of St. Attale, Strasbourg, 12th-15th c.; carriage reliquary, Orléans, 13th c.; reliquary of the Holy Thorn, Arras, 13th c.). Reliquaries with the contemplative aid of narrative scenes can also be dated from the 12th century on (Stavelot Triptych with relics of the True Cross and scenes of the finding of the True Cross, Pierpont Morgan Library, 12th c.; reliquary of the Virgin and Child with scenes of Christ's infancy, The Cloisters, 14th c.).

# REMIGIUS OF AUXERRE

(ca. 841–ca. 908). Carolingian grammarian and teacher, first at the Benedictine school of Saint-Germain of Auxerre, where he studied with Heiric, later at the cathedral schools of Reims and Paris. Through Heiric, Remigius was influenced by both Haimo of Auxerre and Johannes Scottus Eriugena; his life and works represent both the traditional and the innovative in Carolingian thought and span the change from monastic to cathedral schools as the primary centers of learning. Among his students at Paris was Odo, later abbot of Cluny. Remigius wrote commentaries on grammatical and rhetorical works by Bede, Martianus Capella, and Boethius, as well as commentaries on biblical books, including Genesis, the Psalms, the Gospels, and perhaps the Pauline epistles. The biblical exegesis of Remigius has long been intertwined with that of Haimo of Auxerre and is just now being systematically sorted out. Seen by modern scholars as a protoscholastic, Remigius was in the vanguard of the gloss tradition of biblical learning.

# *RENART, ROMAN DE*

**.** The twenty-six "branches" of the *Roman de Renart* were composed by some twenty authors of varying talent between ca. 1174 and 1250. This episodic narrative in octosyllabic verse has come down to us in thirteen major manuscripts. Ceaselessly modified by oral and written transmission, it is a fluid work that reflects the constant interaction of language, imagination, and reality—so much so that its component parts are difficult to date with precision. It is possible to identify three principal collections, differing in organization, content, and length. To designate the parts of each collection, the term *branche* is used. Each episode grows from the main Renardian trunk like the branch of a tree, and one can sense here a bit of mischievous fun, for until its use in the *Renart,* the comparison had been found in religious and moral literature to designate the good qualities flowing from a cardinal virtue or the vices from a mortal sin.

The earliest branches (II and Va; ca. 1175) show the trickster Renart the fox impelled by an all-devouring hunger, both physical and sexual, triumphing over such opponents as Tibert the cat, Chantecler the rooster, and Tiecelin the crow. They also narrate Renart's rape of the she-wolf Hersent, the cause of the enmity between Renart and Isengrin the wolf. Branches I and Ia recount the consequences of these actions, whereby Renart is summoned to judgment at the court of Noble the lion. Branch IV (ca. 1177) tells the delightful tale of Renart and Isengrin in the well. Other early branches, composed 1180–90, develop the themes of these first branches into a lighthearted parody of contemporary society. Seven branches composed between 1190 and 1205 round out the beast epic; similar in spirit but introducing new episodes, they present a full picture of contemporary peasant society. A series of ten later branches (1205–50) is inferior in inspiration, full of contradictions, and tending toward heavy-handed satire.

Renart is the man-beast of unbridled violence and sexuality; like the bear and the wolf, he symbolizes the destructive forces at work in creation; he incarnates the primitive forces of nature, which, goaded by voracious physical and sexual appetites, violate and mutilate both animals and men. Beyond these mythemes, one finds, in the movement from orality to textuality, a folktale structure, as in the episodes with Tibert the cat. But the cultured clerics who first wrote down these tales, only a few of whom—Pierre de Saint-Cloud, Richard de Lison, the Priest of La Croix-en-Brie—we know by name, have also drawn from French and Latin literary sources (Aesop's fables in prose and verse, *Ecbasis captivi,* and especially *Ysengrimus*). *Renart has* close ties to the Tristan material, which likewise uses division into branches and whose hero, also a trickster, is in the same triangular relationship with Iseut and his uncle Mark as Renart is with Hersent and his uncle Isengrin. In Branch XIII, the animals search for Renart in the castle in a scene reminiscent of Chrétien's *Yvain;* in other branches, they go on pilgrimage to the hen Pinte's tomb as they do to Muldumarec's in Marie de France's Yonec; and the fox and the wolf wage war on one another like the feudal barons of the chansons de geste; Branch IX ends in an apocalypse of the chivalric world reminiscent of the *Mort Artu.*

Rewriting is also present within the *Roman de Renart,* both in a single branch that exists in multiple versions and between branches, through repetition of formulae and motifs or structure: Branch XII is grafted on Branch XV, Branch VII on IV, with a subtle play of variations, inversions, and amplifications. Moreover, the *Roman de Renart* was rewritten through the centuries: in Rutebeuf's *Renart le bétourné,* in the 13th-century *Couronnement de Renart,* in Jacquemart Gielée's *Renart le nouvel* (late 13th c.), in the Priest of Troyes's *Renart le contrefait* (1319–28), in Jean Tenessax's *Livre de maistre Renart* (15th c.), as well as in modern adaptations.

An animal behaving like a man, Renart plays a wide variety of roles, changing his name (to Galopin or Chuflet) and his color (red, yellow, black); he is a genius at ruse and metamorphosis who makes a mockery of all taboos, seeking adventure like a knight-errant, compelled ever onward by his insatiable desires. What creates the charm of the work and of its central character is the constant interplay between the animal and the human worlds, as the former, increasingly anthropomorphic, apes the feudal world. The animals mimic human gestures—they speak, ride horses, assault castles, pray to God—in metaphors that the reader accepts without ever losing sight of their underlying animal nature. Renart's world is one of physical joy, of nonintellectual relaxation, of the triumph of instinct. A joyful work paradoxically abounding in death, injury, and mutilation, the *Roman de Renart* depicts a cruel universe where action is motivated by hunger and danger. But the reader senses a feeling of physical, moral, and religious liberation, and the laughter, both satiric and parodic, is also the anarchic and amoral expression of the feast of fools. It is a desacralized universe that holds all conduct to be folly and rests finally on the reality of nature, as does Jean de Meun's *Roman de la Rose.* The greatest value in Renart's world is life, and to survive is to triumph.

# *RENART LE CONTREFAIT*

**.** It was an unnamed priest of Troyes, defrocked for bigamy, who composed this final avatar of the *Roman de Renart,* in eight branches, of which we have two redactions. The first (*A:* 32,000 lines) was composed between 1319 and 1322, and the second (*B:* 41,150 lines) appeared between 1328 and 1342. There is also a prose section. The whole is an incoherent but rich monster, a lively reflection of its age, as well as a conglomeration of tales, incidents, reflections, and commentaries of every sort.

A virulent satire of the monarchy, aristocracy, ecclesiastical abuses, and vices of women, this defense of the weak is above all a compendium of medieval moral and philosophical thought that bears witness to the wide-ranging culture of its author as well as to the influence of Jean de Meun. The poet makes explicit much of what was only hinted at in the earlier *Roman de Renart*. Renart is at times the mischievous fox of the early branches, at other times the symbol of evil in all its manifestations, and even the repentent philosopher commenting on human vices under the guise of Reason, Nature, and God.

# **RENAUT DE BEAUJEU**

(de Bâgé; ca. 1165–1230). Author of an Arthurian verse romance of over 6,000 lines, the *Bel Inconnu,* written ca. 1185–90. The hero of the poem is Gawain's son, Guinglain, who releases Esmeree, daughter of the King of Wales, from the enchantment of two sorcerers, who had transformed her into a serpent. Guinglain marries Esmeree after liberating her and resisting seduction by a supernatural woman. Many narrative elements of the *Bel Inconnu* are traditional and occur elsewhere in romance: the sparrowhawk contest, the seduction of a mortal by a fairy, the *fier baiser,* and so on. Even the primary plot of the *Bel Inconnu* recurs as the basis of other romances, such as the Middle English adaptation of Renaut, *Libeaus Desconus,* the Italian *Carduino,* and the Middle High German *Wigalois*. There are grounds for believing that the story of the Fair Unknown was associated originally with Gawain, as part of a complex of tales about him; later versions probably transferred it to his son.

Renaut de Beaujeu presents his poem in a personal manner, saying that he is writing it for his own beloved. This personal touch in some ways exemplifies the differences

between the *Bel Inconnu* and the romances of Chrétien de Troyes. Chrétien is concerned with issues of human existence and courtly values, whereas Renaut is more intent on telling a good story. This seems to have been Renaut's way of responding to Chrétien's reputation. Nevertheless, the latter's influence, on both verbal and narrative levels, is clear in the *Bel Inconnu*. The prologue, for example, is worded in such a manner as to recall that of *Lancelot,* and the sparrowhawk episode inevitably calls to mind *Erec et Enide*.

The *Bel Inconnu* seems to be the only full-length Arthurian romance written in the two decades following the death of Chrétien de Troyes.

# RENAUT DE LOUENS

(fl. 1330s). A Dominican friar from Poligny in the Jura Mountains, Renaut wrote the *Livre de Mellibee et Prudence* in 1336 or 1337. Renaut's *Mellibee,* in French prose, is a loose translation of the *Liber de consolationis et consilii* by Albertano of Brescia (1246). Albertano's book was translated also into Italian, German, and Dutch. Of the four versions in French, the earliest, from the second half of the 13th century, was a close translation of the Latin prose; two others, one in prose and one in verse, are of unknown authorship and date. The fourth version, by Renaut de Louens, was the most popular, surviving in at least twenty-six manuscripts, and was Chaucer's source for the *Tale of Melibee*. Renaut de Louens also produced a verse translation of Boethius's *De consolatione Philosophiae* during the same period (1336–37) that he wrote the *Mellibee*. He undertook both of these books of consolation for an unnamed lady's benefit and instruction.

The *Livre de Mellibee et Prudence* is a moral allegory. The house of Melibeus is attacked while he is away; his wife, Prudence, is beaten and his daughter, Sophie, is wounded. Melibeus calls for revenge and plans to make war on his enemies, but Prudence convinces him to control his anger, maintaining that war is terrible and useless and that reconciliation and peace are altogether more desirable. Arguing from biblical and philosophical authorities, she succeeds in counseling him to pardon his enemies.

# RENÉ D'ANJOU

(1409–1480). Son of Louis II, duke of Anjou, and Yolande of Aragon, the "Good King René" is known for his accomplishments in several areas. This second son of the politically ambitious Yolande was, for strategic reasons, adopted by the duke of Bar. He was married in 1420 to Isabelle of Lorraine. He became duke of Bar in 1430 and duke of Lorraine in 1431, but his claim to the latter title cost him five years in prison. At the death of his elder brother Louis in 1434, René inherited the duchy of Anjou and the family claim to the kingdom of Naples. Although he lost the latter throne to Alfonso of Aragon in 1442, René's prestige and influence nonetheless continued to grow at the court of his brother-in-law, Charles VII, and in France generally. After the death of Isabelle in 1453, he married Jeanne de Laval. René, whose titles derived from the circumstances of aristocratic inheritance, was one of the last obstacles to the unification of France by Louis XI. Deprived of Bar and Anjou by Louis, René retreated in his later years to Provence.

Despite his political reversals, René d'Anjou was known as a good strategist in battle and an expert in warfare. He wrote a treatise on tournaments, the *Traictié de la forme et devis d'un tornoy* (1445–50), and organized several celebrated tournaments on Charles VII's behalf. He was a generous patron of the arts and himself a painter and writer. He composed two richly illuminated allegorical works in verse and prose: the *Mortifiement de vaine plaisance* (1455) and the *Livre du cuer d'amours espris* (1457).

# RENNES

. Condate, at the confluence of the small rivers Ille and Vilaine in east-central Armorica, or Brittany, was the chief city of the Redones. It was fortified in the late 3rd century; an

important abbey commemorated the cult of an early bishop, St. Mélaine (d. ca. 530). Frankish influence was strong, and with Nantes, Rennes formed part of the March of Brittany. In 831, however, Emperor Louis the Pious, unable to defeat the Bretons by force, appointed Nominoe *missus* of both the Celtic and Frankish parts of Brittany, and Rennes came under Breton political control. Factional disputes and Viking invasions allowed a new comital dynasty to emerge; ties with royal France remained strong. The 10th and 11th centuries witnessed an intense rivalry with the counts of Nantes for the ducal title, which Conan I of Rennes (d. 992) obtained. A family quarrel allowed Eudo, brother of Alain III (r. 1008–40), to seize Rennes after his death. From 1084, Alain Fergent (r. 1084–1113) reunited it with the rest of the ducal domain. With Nantes and Vannes, Rennes remained a center of ducal administration.

The court of the seneschal at Rennes received appeals from other Breton *sénéchaussées,* with the exception of Nantes. The city, politically and strategically important, was frequently attacked. Its Roman walls, which had enclosed 22 acres, were strengthened by a ducal castle after the late 10th century. Henry II of England took the town in 1182 and destroyed the castle. During the Breton civil war (1341–64), Rennes was held for Charles de Blois and Jeanne de Penthièvre; it withstood a nine-month siege by the English (1356–57). But the need to defend new suburbs and a total population of around 14,000, living in nine parishes, led between 1421 and 1476 to the construction of two further *enceintes*. Some 155 acres were eventually enclosed, including the abbey of Saint-Georges, a ducal foundation (ca. 1030) for Benedictine nuns, and low-lying quarters south of the Vilaine, where small craft industries, notably textile and leatherworking, had developed. The defenses were tested for the last time by a French siege in 1491, before Duchess Anne married Charles VIII and delivered Rennes, and Brittany, into royal hands. Among the distinguished bishops of Rennes may be noted the poet and reformer Marbode (r. 1096–1120) and Étienne de Fougères (r. 1168–78), author and servant of Henry II of England. St. Yves Helory (d. 1303) was briefly the bishop's official. A Franciscan convent was established ca. 1238; the Dominicans arrived in 1368 and the Carmelites in 1448. Printing was introduced in 1483. Medieval Rennes was almost totally destroyed in a great fire in 1720. The church of Saint-Mélaine has some Romanesque portions but was poorly rebuilt in the 14th, 15th, and 17th centuries.

# *REQUÊTES, MAÎTRE DES*

**.** The name Requêtes de l'Hôtel, or "Requests of the Household," was first given in the reign of Philip III (r. 1270–85) to the informal judicial sessions at which the king presided in person, earlier known as the Plaids de la Porte, or "Pleas of the Doorway."

The king had long been assisted on these occasions by officers who, because they never left his side, had been called *poursuivants du roi,* and when the new name for these proceedings began to prevail, the *poursuivants* began to bear the new designation *maîtres des requêtes de l'hôtel.* Under Philip IV (r. 1285–1314), the king gradually ceased to attend the sessions of the tribunal traditionally identified with him, and from ca. 1300 the *maîtres* normally presided alone. This raised some difficulties about the competence of the Court of Requests, and these were finally settled by an ordinance of 1346 that limited the number of *maîtres* to five and limited their competence to cases concerned with disputes over a royal office and personal claims against royal officers. The Court of the Requests of the Household was thus largely reduced to a kind of domestic court, though from 1344 it also had the right to judge charges of error against *arrêts* of the Parlement.

# RESVERIE

. A nonsense genre practiced in 13th-century Picardy. The *resverie* alternates long and short verses; the short verse simultaneously provides the logical conclusion to the thought introduced in the previous verse and establishes the rhyme for the following verse, which otherwise has no logical connection with it. Only three *resveries* survive: Oiseuses by Beaumanoir, and the anonymous *Dit des traverses* and *Resveries.*

# *REVERDIE*

. A northern French lyrico-narrative genre of the 13th century. The *reverdie* is a joyful song celebrating springtime greenery and recounting an amorous meeting between poet-knight and lady. The loosely defined genre, of which eight specimens survive, is characterized by stanzaic structure, dialogue, and the conspicuous use of diminutives, such as *roussignolet, praelet, matinet.*

# RHETORIC

. *See* **LIBERAL ARTS**

# RHYMED OFFICE

. Poetic texts and chants were written in the thousands during the later Middle Ages, both for newly instituted feasts of the Lord and for saints' feasts. The development of this genre of liturgical poetry and music reflects the increasing use of rhymed, accentual texts, until after the 12th century, when this style predominated. This vast repertory of poetic texts and music, although often reflective of the most intense spiritual or political drives of individual regions, religious orders, monasteries, and churches, is not comprehensively catalogued, edited, or even much studied.

The versified texts are primarily antiphons and great responsories as sung in First and Second Vespers, Matins, and Lauds; the little Hours commonly repeat the antiphons of Lauds, and new material is not usually fashioned for Compline. The long series of antiphons and responsories sung at Matins was often compiled so that the chants, which were commonly adapted for the new texts from earlier sources, were arranged in modal order.

# RHYTHM

. The question of whether rhythm was essential or even appropriate to the performance of the songs of the troubadours and trouvères before the graphic means of notating it developed in the 13th century occupied a large and often contentious part of early 20th-century scholarship in medieval music. Central to the issue was the *Modaltheorie* developed by Friedrich Ludwig and his students Pierre Aubry and Jean Beck. According to the *Modaltheorie,* the accentual patterns of poetic texts of trouvère and troubadour chansons paralleled the six rhythmic modes prevalent in early 13th-century theoretical works, and thus the musical rhythm of a chanson could be determined from the poetic accents of its text.

Hendrik van der Werf rejected *Modaltheorie* in the 1960s, initiating a reassessment of the question of applying 13th-century modal rhythm, which arose in the context of untexted liturgical polyphony, to texted monophony in secular and usually courtly settings. Since that time, many editions of medieval monophony have notated the melodies with rhythmically undifferentiated notes (note heads without stems) when the notation of the source is indubitably nonmensural.

Current scholarship is exploring rhythmic distinctions among the genres of secular monophony. The supposition that the declamatory rhythm of the troubadour and trouvère *grand chant* has a different style and origin from that of the dance song, like the *estampie* or *carole,* seems reasonable.

# RHYTHMIC MODE

. Rhythmic patterns governing some music of the Notre-Dame School, which were probably modeled on poetic metrics of ancient Greek and Latin. A series of rhythmic modes most likely predated the graphic notation, developed in the early 13th century within the Notre-Dame School, providing the earliest western musical notation indicating rhythm. The earliest systematic

**The Six Garlandian Rhythmic Modes**

theoretical treatment of rhythmic modes was probably a distillation of performance practices at the cathedral, subsequently edited and revised by Johannes de Garlandia (not the English poet and scholar of the same name). Garlandia provided notational patterns for six rhythmic modes, all intended for untexted music, and undoubtedly developed for the discant clausulae composed at Notre-Dame as parts of organa, the polyphonic embellishment of the liturgical service. Such modally rhythmized discant clausulae gave rise to the motet early in the 13th century.

# RICHARD (DUKES OF NORMANDY)

. Richard I the Fearless (r. 942–96) was the grandson of the Viking chieftain Rollo, the founder of Normandy. A child when his father William Longsword was murdered by Arnulf of Flanders, Richard barely survived an alliance of King Louis IV and Hugues le Grand against him during his minority. He faced another crisis in the 960s, when King Lothair joined forces with the counts of Anjou, Blois-Chartres, and Flanders to invade Normandy. Peace was settled at Gisors in 965. Richard then concentrated on strengthening his position within his lands, allying his family with other Scandinavian clans in the region through marriage ties, and gaining ecclesiastical support for his rule by rebuilding churches and promoting reform.

Richard I's son and heir, Richard II (r. 996–1026), also used family ties and the church to bolster his authority. The duke's brothers and cousins staffed the secular and ecclesiastical administration through which he governed, and the marriages of his female relatives secured alliances with neighboring lords. His powerful uncle Count Rodulf effectively put down a peasant rebellion early in Richard II's reign. In 1013–14, Richard II waged a successful campaign against Eudes II of Blois-Chartres, which helped secure the duchy's southern border along the River Avre, and he also allegedly supported King Robert II the Pious against Burgundy. His son Richard III reigned less than a year.

# RICHARD I THE LIONHEARTED

(1157–1199). King of England (r. 1189–99). Richard I, second son of Henry II of England and Eleanor of Aquitaine, was installed as duke of Aquitaine in 1172 and played a nominal role in the rebellion of his brother and mother against his father in 1173–74. His first independent exercise of political authority came later in the 1170s, when he put down a number of Aquitanian revolts. From 1182, Richard became involved in wars between Henry and his sons over plans for the succession to the various parts of the vast Angevin empire, which included England, Normandy, Anjou, Brittany, and Aquitaine. In 1188, Richard allied with his father's enemy Philip II Augustus of France, and their successful opposition to the dying Henry brought Richard all the Angevin holdings on Henry's death in 1189.

Richard, like Philip, departed for the Third Crusade in 1190. On the way, at Messina in 1191, the two made a treaty that redefined the relationship of Richard's fiefs with the French crown. Richard's capture in Germany when returning from crusade in 1192 allowed Philip to attempt the dismemberment of the Angevin possessions, with the collusion of Richard's younger brother John. Ransomed in 1194, Richard began a set of campaigns against Philip that consumed the next five years. Richard pursued two strategies: conquest of the strategic Vexin from his newly built fortress of Château-Gaillard and the detachment of the counts of Toulouse and Flanders from alliance with Philip. Despite the overall success of these policies and two victories over Philip personally on the battlefield, Richard had not yet regained all of Normandy when he died in 1199 while putting down a revolt in the Limousin.

Richard was the friend of many troubadours and trouvères and is himself credited with two French lyrics. The more famous, a *rotrouenge* composed while he was a prisoner in Germany, complains of Philip's perfidy and the inconstancy of his own friends; the

second, a *sirventes* of 1196, reproaches his vassal the troubadour Dalfin d'Alvernhe and his cousin for not having come to his aid against Philip.

# RICHARD II

(1367–1399). King of England (r. 1377–99). Richard was born at Bordeaux, the only son of Ed-ward, the Black Prince, and the grandson and successor of Edward III. He came to the throne in 1377, as a minor, inheriting a war with France that by the 1370s had turned against England and seemed unending. His turbulent reign, which ended with his violent overthrow and murder, was characterized by two policies, peace abroad and quasiabsolutism at home, which drew from the English nobility and especially his uncles a stubborn resistance. Domestically, his reign virtually began with the Peasants' Revolt of 1381, the greatest popular uprising of English history, sparked largely by the unprecedented taxation required by the war with France. If it was not this event that convinced Richard to end the war, he might have found many other reasons to do so; since the early 1370s, France under Charles V had been on the offensive, retaking all the gains of Richard's father and grandfather and threatening England itself with invasion. Despite the obvious necessity of peace, this policy was stubbornly opposed by the most important figures of the English nobility: Richard's uncles, John of Gaunt and the duke of Gloucester; Gaunt's son Henry, earl of Derby (the future Henry IV); and the earls of Arundel, Warwick, and Nottingham.

These same men were little enamored of Richard's domestic policy of autocratic kingship and his exalted view of the royal prerogative. In 1386, with Gaunt out of the country pursuing, literally, castles in Spain, the remaining five magnates, incensed at the result of Richard's first few months of personal rule, temporarily took over the government of the realm and resumed the war. Richard regained power in 1389, and in 1390 Gaunt negotiated a treaty with France, heralding the first significant period of peace with that country since the Treaty of Brétigny in 1360. The new state of relations between the two kingdoms was sealed by Richard's marriage in 1396 with Isabella, the seven-year-old daughter of the king of France. Richard used this respite from foreign commitments to secure his position at home, but his autocratic methods caused a resentment that, when the exiled Henry of Derby returned in 1399, left him alone and without support. He was forced to abdicate in Derby's favor, and later that year he was murdered in his prison at Pontefract castle.

# RICHARD DE FOURNIVAL

(1201-before 1260). Poet, canon, and chancellor at Amiens cathedral and canon of Rouen, Richard de Fournival produced a rich and varied corpus, composing songs in the trouvère style, the prose *Bestiaire d'amours* and its fragmentary verse redaction, and the Latin *Biblionomia,* the catalogue of his remarkable library. Three other prose treatises, the *Commens d'amours,* the *Consaus d'amours,* and the *Poissance d'amours,* are of questionable attribution.

It is for the *Bestiaire d'amours* that Richard is chiefly known. In this adaptation of the bestiary format, birds and animals represent aspects of the love experience. The text, immediately popular, has been transmitted in numerous manuscripts, richly illuminated. It inspired several literary responses, all anonymous. The earliest is the *Response au bestiaire,* in which the lady to whom the *Bestiaire d'amours* was addressed supposedly replies, turning each of the bestiary examples into an illustration of her need to take care to protect herself against male sexual advances. A verse adaptation, different from the fragmentary verse redaction apparently by Richard himself, also survives; although the author gives his name, he does so in an anagram of such complexity that it remains unsolved. In two 14th-century manuscripts, the *Bestiaire d'amours* is given a narrative continuation, in which the lover captures the lady and receives from her a red rose. In another 14th-century manuscript, the *Bestiaire* and its *Response* are embedded in a sequence of prose texts that form a dialogue between lover and lady; although none is a bestiary, all refer to the *Bestiaire,* which clearly inspired the sequence.

We know from the *Biblionomia* that Richard owned some unusual books, including the only known complete copy of the poems of Tibullus. At his death, his library passed to Gérard d'Abbeville and then to the Sorbonne.

# RICHARD OF SAINT-VICTOR

(d. 1173). A major writer on mysticism in the second half of the 12th century, Richard joined the regular canons of the abbey of Saint-Victor at Paris sometime near the middle of the century (certainly by the early 1150s but perhaps before the death of Hugh of Saint-Victor in 1141). He may have been born in Scotland. He served as subprior and was elected prior in 1161. His writings on the contemplative life were widely known and influenced Bonaventure's treatise *Itinerarium mentis in Deum*.

Richard followed the tradition of Victorine spirituality established by Hugh, but he concentrated more on the stages of development in the mystical life and on what today would be called the psychological aspects of that development. Two of his major mystical writings are symbolic interpretations of biblical persons, objects, and narratives. *De duodecim patriarchiis* (also called *Benjamin minor*) interprets the births and lives of the twelve sons and one daughter of Jacob, recorded in Genesis, as representing the stages of ascetic practice, mental discipline, and spiritual guidance that lead to contemplative ecstasy. *De arca mystica* (also called *Benjamin major*) presents the Ark of the Covenant and the two cherubim that stood on either side of it, described in Exodus, as symbolic of the six kinds or levels of contemplation. Books 4 and 5 of *De arca* give a subtle and influential analysis of types of visionary and ecstatic experience. Richard's *De IV gradibus violentae caritatis* analyzes the stages of the love of God and the transformation of the self by love in the mystical quest. Richard also wrote a commentary on the Book of Revelation, a treatise on the Trinity, mystical comments on various Psalms, a handbook for the Liberal Arts and the study of history (*Liber exceptionum;* digested primarily from works by Hugh of Saint-Victor), a collection of allegorical sermons, and treatises on biblical and mystical topics.

# *RICHARS LI BIAUS*

**.** Preserved by a single manuscript (Turin, Bibl. Univ. L 13), *Richars li biaus* was composed by an otherwise unknown "maistre Requis" in the second half of the 13th century in the extreme northern part of Picardy or in Walloonie. Realistic rather than courtly in tone, the romance combines in 5,454 octosyllabic rhyming couplets two important folklore motifs: "The Son Who Sets Out to Find His Parents" and "The Grateful Dead."

*William W.Kibler*

Holden, Anthony J., ed. *Richars li biaus, roman du XIIIe siècle*. Paris: Champion, 1983.

# RICHEMONT, ARTHUR DE

(1393–1458). Constable of France and duke of Brittany. The second son of Jean IV, duke of Brittany, Arthur inherited title to his father's English earldom of Richmond in 1399 and for most of his life was known by its French form, *comte de Richemont,* until he finally became duke of Brittany as Arthur III near the end of his life. A title derived from English lands was singularly ill suited for the man who would mold and command the Valois armies that reconquered France for Charles VII. Captured at Agincourt (1415), Richemont won freedom in 1420 by helping persuade his brother, Duke Jean V of Brittany, to support the Treaty of Troyes. The ambitious Richemont married a sister of Philip the Good but abandoned Burgundy to accept the office of constable of France when his brother reconciled Brittany to the Valois cause in 1425.

Despite his office, Richemont's importance was more administrative and diplomatic than military. He was as proud and fractious a counselor as might be expected from one of his lineage. He sought to dominate Charles's court and was involved in the assassination of counselors who opposed his interests. A bitter struggle for favor with Georges de La Trémoille led to his exile from court after 1428. Though he fought at Patay, he returned to court only in 1433 to work for a reconciliation with Burgundy, which, after the Treaty of Arras, made possible his entry into Paris at the head of Charles's army in 1436.

Richemont's greatest achievement was to draw on his familiarity with English military administration in directing the French military reforms of 1445. He dispersed many undisciplined companies and prepared the remainder for the final victories of 1449–53. During the Norman campaign, Richemont commanded the armies entering lower Normandy. His timely arrival at Formigny clinched the decisive victory of the campaign. After 1450, Richemont became regent of Brittany but continued to serve Charles as

constable and military governor of lower Normandy. He unexpectedly became duke himself in 1457 but died a year later without legitimate heirs.

# RIGAUT DE BERBEZILH

(fl. 1150s–1160s). Long misassigned to the late 12th century, the troubadour Rigaut de Berbezilh's extant work—consisting of nine *cansos,* including the famous *Atressi con l'orifanz*—stands out for its overt reference to Ovid, its allusion to Perceval and the Grail, and its striking animal imagery.

# RIGORD

(ca. 1150–ca. 1209). Chronicler. Born in Languedoc, this monk of Argenteuil and then of Saint-Denis, who gave up practicing medicine in 1186, described himself as *Regis francorum chronographus.* Besides a brief chronicle of the kings of France from the earliest times, only fragments of which survive, he wrote the *Gesta Philippi Augusti,* covering the period 1179–1206, of which the later part flatters the king much less than the earlier part. Rigord inserted in his chronicle Philip's arrangements of June 1190 for the government by his mother and the archbishop of Reims during his absence on crusade, indicating that *baillis,* who were ordered to hold monthly assizes and to supervise the *prévôtés,* already administered the royal domain. Guillaume le Breton abridged and continued the *Gesta* to 1220.

# RIOM

. Founded in the 5th century by St. Amable, Riom (Puy-de-Dôme) was a sleepy town clustered around its church until Philip II Augustus made it his administrative capital for Auvergne in the early 13th century. In 1360, Riom passed with the rest of Auvergne to John, duke of Berry, who built a magnificent castle here that has since disappeared, but for its chapel. It was in this 14th-century Sainte-Chapelle, with its beautiful stained glass, that John married Jeanne de Boulogne in 1389 and, in 1410, the poet Charles d'Orléans wed Bonne d'Armagnac. The much-restored collegiate church of Saint-Amable (begun 1160) has preserved its Romanesque 12th-century nave and transept in Auvergnat style. The nave has a pointed barrel vault without cross-arches; its bay arches are likewise pointed. Above the groin-vaulted aisles are galleries that open onto the nave through twin arcades. The Gothic choir, of the early 13th century, shows Parisian influence. The church of Notre-Dame-du-Marthuret is notable for its Flamboyant Gothic façade as well as for a beautiful 15th-century sculpture, Our Lady with Child and Bird, within.

# ROBERT (COUNTS OF FLANDERS)

. Name of three counts of Flanders. Robert I the Frisian (r. 1071–93), the younger son of Count Baudouin V, usurped the countship from his nephew Arnulf III in 1071. Robert had married the widow of Count Florence I of Holland and Frisia, hence his nickname. Robert quickly repaired his diplomatic fences by marrying his stepdaughter, Bertha, to King Philip I of France, who had supported Arnulf III, and by supporting Philip against William of Normandy and England. Robert I and his son Robert II (r. 1093–1111) extended their influence in the bishopric and city of Cambrai, detaching the diocese of Arras from it in the interests of having a purely Flemish archbishopric outside the empire. The first significant evidence of the Flemish central administration comes from the period of Robert I, with the attachment of the chancery to the provostship of the church of Saint-Donatien of Bruges.

Robert II, known as Robert of Jerusalem for his participation in the First Crusade, became an active church reformer under the influence of his wife, Clementia, whose

brother would become Pope Calixtus II. The Cluniac rule was introduced at Saint-Martin de Tournai, Saint-Bertin, and Bergues-Saint-Winoc. Robert proclaimed a peace in 1111, shortly before he died, forbidding the construction of fortifications without his authorization. He extended the local governmental organizations based on the castellanies introduced by Baudouin V.

Robert III de Béthune (r. 1305–22), the son of Gui de Dampierre, had to implement the Peace of Athis, which provided a huge indemnity to France in return for the restoration of the Dampierres to governance in Flanders. Realizing that the financial terms were impossible, Philip IV agreed to take the towns and castellanies of Lille, Douai, and Orchies from Flanders in exchange for part of the indemnity. This caused resentment, as did the demand that the Flemings indemnify Francophile patricians who had fled in 1302 and demolish their fortifications. The issue of further concessions to the French divided Robert's sons Louis I de Nevers and Robert de Cassel. To secure his position in Flanders, Robert III became more independent of the crown and was condemned by the court of peers in 1315. Rains that autumn prevented an invasion by the French and their Avesnes allies in Hainaut and Holland. Robert de Béthune was succeeded by his grandson Louis I (II de Nevers) in late 1322.

# ROBERT (DUKES OF NORMANDY)

. The Viking war leader Rollo, founder of the Norman ducal dynasty, assumed the name Robert when he accepted baptism ca. 911. Although he was technically no more than the first Norman count of Rouen, later writers often referred to "Duke Rollo" or, occasionally, "Robert."

Rollo's great-great-grandson, Robert the Magnificent, was the father of William the Conqueror. He became duke in 1027, suspected of having poisoned his brother, Richard 111, and in conflict with his powerful kinsmen Robert, archbishop of Rouen, and Hugh, bishop of Bayeux. William of Bellême soon threatened Robert's authority along the southern border, and later, in the 1030s, Alain of Brittany struck in the west. Robert the Magnificent met these challenges successfully and gained the southern part of the French Vexin from King Henry I in 1033. In his mid-twenties, Robert resolved to journey on a pilgrimage to Jerusalem. He died during his return in 1035, leaving the duchy in the

unsteady hands of his seven-year-old illegitimate son, William, the future conqueror of England.

Robert Curthose, William the Conqueror's eldest son, was twice designated heir of all his father's dominions, but he destroyed that prospect through open rebellion. In exile when his father died in 1087, Robert nevertheless became duke of Normandy. A weak and prodigal ruler, he attempted unsuccessfully in 1088 to overthrow his brother William II Rufus, who had inherited the kingdom of England. In 1096, he joined the First Crusade, pledging the duchy to William Rufus for a loan of 10,000 marks of silver. When he returned in 1100, his youngest brother, Henry, had succeeded Rufus in England. Robert made another unsuccessful attempt to gain the English crown in 1101, then returned to Normandy, only to lose the duchy to Henry 1 in 1106 at the Battle of Tinchebrai. Imprisoned by his brother in Cardiff, Wales, Robert Curthose died in 1134.

# ROBERT II THE PIOUS

(972–1031). King of France (r. 987–1031). The son of Hugh Capet, Robert II was the sec ond king in the Capetian line. He was crowned at Orléans in December 987 and reigned jointly with his father until Hugh's death in 996. At that point, he left his first wife, Susanna of Denmark, and married his cousin Bertha, a recent widow of the count of Blois. This ill-advised move aroused the hostility of his father's allies, especially the count of Anjou, Foulques Nerra, and Pope Gregory V, who condemned the incestuous union and excommunicated the king. Robert resisted, apparently from passionate love for Bertha, until sometime between 999 and 1001, when she was repudiated. He subsequently married Constance of Arles ca. 1005, and the couple had three sons, Hugh (joint king 1017–25), Henry (his successor), and Robert (later duke of Burgundy).

Trends appearing under Hugh Capet became more pronounced in his son's long reign. Royal authority and prestige among the lay aristocracy continued to decline, and late in the reign one disgruntled bishop even spoke of the king's impotence *(imbecillitas).* On the other hand, by the mid-1010s Robert's reputation for piety had gained him such strong support among ecclesiastics that even places that had resisted his father's accession accepted his hereditary claim to the throne, acknowledging the failure of the Carolingian line. His renowned piety (he was the first Capétian reputed to have healing

powers), as well as his policies of supporting Cluny, encouraging pilgrimage, sponsoring the Peace of God, and appointing learned nonaristocratic bishops, all earned him the enthusiastic support of the laity and the reforming church. In 1010, he had a Jew burned outside Orléans for allegedly plotting the destruction of the Holy Sepulcher; and in 1022, at the prompting of his ecclesiastical advisers, Robert had thirteen convicted heretics burned at Orléans, the first official execution of heretics in western Europe. His final years were complicated by the death of his chosen heir, Hugues (1026), and the battle for succession between his choice, Henry, and his wife's candidate, Robert.

# ROBERT D'ARBRISSEL

(ca. 1047–1117). Born in Brittany, the son of a priest, Robert became known as a preacher supporting Gregorian clerical reform in Rennes in 1089. Soon thereafter, he became a forest hermit, practicing extreme asceticism. He attracted many followers from all levels of society and formed them into a community, but he soon left this group to become a popular and powerful wandering preacher in France. He again attracted many followers, especially women, and in 1101 he decided to found a community for them. The site selected was at Fontevrault (Maine-et-Loire), near the Loire River in the diocese of Poitiers. The result was a "double monastery" of women and men, living in separate buildings but sharing a church. As finally organized, the community was ruled by an abbess, with the women following a modified Benedictine *Rule* and the men, who provided manual labor and sacramental services for the abbey, under the Augustinian *Rule*. Robert founded a number of priories dependent upon Fontevrault and was effective in attracting donations from the nobility in support of the resulting Order of Fontevrault. Robert was buried in the church at Fontevrault, which also was the burial site for Henry II Plantagenêt, Eleanor of Aquitaine, and Richard I the Lionhearted of England.

# ROBERT DE BLOIS

(fl. mid-13th c.). The little we know about this author can be deduced from his works: he most likely lived during the second third of the 13th century and exercised his talents in several literary domains. The two most nearly complete manuscripts to have transmitted his works contain two Arthurian romances, *Floris et Lyriopé* and *Beaudous,* as well as poetry and moralistic and didactic works. The fullest manuscript, B.N. fr. 24301, presents the opening section of *Beaudous,* followed by the insertion, under the guise of advice given by Beaudous's mother, of Robert's complete works, after which the romance is taken up again—an apparent attempt to put all of one's works in one neat package. His lyrical pieces appear in various chansonniers. Robert's didactic works have been particularly appreciated in modern times, with the *Chastoiement des dames* and the *Enseignement des princes* finding their way into anthologies. In the *Chastoiement,* under the guise of moralistic instruction, Robert has written a work imbued with humor. And this ambiguity extends to other works, such as *Floris et Lyriopé*.

Robert's most extensive works are his two Arthurian romances. The more modest one, *Floris et Lyriopé* (1,758 lines), clearly shows what an educated writer of the period had learned: one portion of the tale is based on the Latin "comedy" *Alda,* the other on the Narcissus legend from Ovid's *Metamorphoses*. The two sections are united genealogically and through a common moralistic theme: the evil of pride. Though some feel the work is contrived and derivative, most agree that Robert shows skill in weaving strands of different tales into a neat whole. His longest poem, *Beaudous* (4,829 lines), is marked throughout by the influence of other writers of romance, chiefly Chrétien de Troyes; indeed, some of the most important features of the romance are derived from Chrétien's works, especially the *Conte du Graal*. The hero leaves his mother to seek adventure at Arthur's court; his mother treats him to words of wisdom as he departs (Robert's complete works!); after many adventures and tourneys, he will be wed, to the delight of his mother, Amie, and his father, Gawain. Along the way, we encounter most of the principal knights of the Round Table. The very end of the romance, which probably consists of a few closing remarks, is missing.

Among Robert's other works are poems on the Creation, on confession, and on the joys of Paradise and pains of Hell.

# ROBERT DE BORON

(fl. 1180s–1190s). The few facts known about the most important early Grail poet after Chrétien de Troyes are inferred from the epilogue of Robert's *Joseph d'Arimathie,* also called the *Roman de l'estoire dou Graal,* where he names himself and the nobleman in whose company he was writing, Gautier de Montbéliard. Montbéliard is in northern Franche-Comté; Boron is a small village about 12 miles to the northeast. Robert's verse bears traces of his eastern dialect. Gautier left on crusade in 1201, to remain in Palestine until his death in 1212; Robert must have finished the *Joseph* at or before the turn of the century. Robert's incorporation of material from Chrétien's *Conte du Graal* indicates that he wrote after the early 1180s. Other evidence suggests that the *Joseph* might be dated after 1191: Joseph foretells that the Grail will be taken to the "vales of Avaron [Avalon]"—that is, Glastonbury in Somerset; association of the Grail and of Arthurian matter with the abbey was not widespread before 1190–91, when the discovery there of a grave marked as Arthur's was announced.

*Joseph d'Arimathie* is a verse romance (3,500 octosyl-lables) that recounts the history of the Grail from the Last Supper and the Descent from the Cross, when Joseph used it to collect Christ's blood, through the imprisonment of Joseph, whom Christ visits and comforts with the holy vessel, until the moment when Joseph's brother-in-law, Bron (or Hebron), the Rich Fisher, is poised to take the Grail from a place of exile outside Palestine to Great Brit-ain. As the *Joseph* draws to a close, the narrator announces that he will relate stories of adventures that Joseph has foretold, including that of the Rich Fisher, if he has time and strength and if he can find them written down in Latin; meanwhile, he will continue with the matter he has at hand.

Robert thus seems to project a complex work consisting of the *Joseph/Estoire,* the narrative to which he will pass immediately, and the fulfillment of Joseph's prophecies. The only manuscript to transmit Robert's verse *Joseph* (B.N. fr. 20047) in fact continues with the fragment of a *Merlin* romance (504 octosyllables), apparently the beginning of the second part; no more of Robert's original work survives.

However, a prose adaptation of the Joseph, by an anony mous author referred to as the Pseudo-Robert de Boron, was executed within a few years, and this is linked to a *Merlin* in prose, conjoining the history of the Grail and the history of Britain, that is found complete in a large number of manuscripts (forty-six) and fragments. Two manuscripts also contain a third prose romance, which portrays the Rich Fisher: the Didot *Perceval* (so called because one of the manuscripts was in the Firmin Didot collection). Unlike the first two romances, the Didot *Perceval* is never ascribed to Robert de Boron, nor is there any proof that a verse original of this text existed, yet it is clear that the Didot *Perceval* logically concludes the trilogy. It resembles one of the works projected at the end of the *Joseph/Estoire* and recounts the fulfillment of God's prophecy in the *Joseph* that the Rich Fisher will not die until he is visited by his son's son; it is also closely linked to the prose *Merlin:* finally succeeding at the Grail castle with Merlin's help, Perceval replaces his uncle as Rich Fisher; the hero's triumph coincides with the downfall of the Arthurian kingdom, the founding of which the *Merlin* had recounted.

In the *Joseph/Estoire* and what must have been the original verse *Merlin,* Robert de Boron in effect rewrites the *Conte du Graal* of Chrétien de Troyes. He expands the

religious content of the original to provide the Grail's "sacred history," identifying it for the first time with the cup of the Last Supper. In addition, he extends Chrétien's references to pre-Arthurian Britain, which echo Wace's *Brut,* to provide the Grail's "secular history."

Robert's most important contribution is the generative power that infuses his verse. Not only are the prose adaptations of the *Joseph/Estoire* and *Merlin* among the earliest examples of literary prose in French, they also stand at the head of a long tradition that promoted the "translation" of imaginative and historical works written in "unreliable" verse into the "more stable" and "more authoritative" medium of prose. The better-known, more highly respected, Pseudo-Robert de Boron who was thus created, the one to whose authorship the more widely transmitted prose works are attributed, became in the early 13th century an even stronger literary force. He inspired the "completion" of Chrétien de Troyes's unfinished *Conte du Graal* in the anonymous Didot *Perceval,* and he is ultimately responsible for the germination of the Vulgate Cycle.

# ROBERT DE CLARI

(fl. early 13th c.). Chronicler. The *Conquête de Constantinople* (ca. 1219) of Robert de Clari is a valuable source for the Fourth Crusade. Robert begins with Foulques de Neuilly's preaching of the crusade in 1198 and continues in detail to 1205; from 1205 to 1219, he summarizes the events. Robert was neither well educated nor privy to the councils of the mighty; we cannot understand the politics of the crusade from him. His strength is his rendering of ambient rumors and his brilliant descriptions of what ordinary knights experienced, such as the marvels of Constantinople. The single manuscript

(Copenhagen, Bibl. roy. 487) was copied in the 13th century at Corbie, to which Robert gave relics he had stolen in Constantinople.

# ROBERT DE COURÇON

(ca. 1160–1219). Robert, a sometimes brusque and unpopular Englishman, studied with Peter the Chanter toward the end of the 12th century at Paris. Within a few years of Peter's death (1197), Robert was teaching in Paris, where he composed a theological *Summa* and served on several missions as papal judge-delegate. On March 15, 1212, Pope Innocent III named him cardinal and the following year charged him with the task of making preparations in France for the Fourth Lateran Council, which was held in 1215. At the same time, Robert was to rally support for another Crusade to the Holy Land. During these years, Robert also accompanied the Albigensian Crusade, confirming in 1214 the conquests of Simon de Montfort.

In August 1215, in perhaps his most lasting contribution, Robert promulgated a papal charter for the University of Paris (a royal corporation since 1200) that set out the relationship between the schools and the cathedral chapter, regulated the number of chairs in theology, and stipulated the qualifications of masters in theology. Of special interest here is the prohibition of the arts faculty to teach the *Metaphysics* of Aristotle; the arts masters, especially in the medical faculty, were thought to have exceeded the limits of their expertise in dealing with this subject.

In the fall of the same year, at the beginning of the Lateran Council, Robert was recalled to Rome, where he remained until 1218, when he joined the Fifth Crusade. He died the following year at the siege of Damietta.

# ROBERT DE GRETHAM

(fl. first half of the 13th c.). An English cleric, Robert de Gretham wrote two didactic works. The *Corset* is a treatise of 2,400 octosyllabic lines on the sacraments of penance, marriage, holy orders, and extreme unction, presumably incomplete. The *Miroir,* or *Évangiles des domnées,* is a sermon cycle of some 19,000 lines, each sermon consisting of a translation of the day's gospel, a doctrinal explanation, and an exemplum.

# ROBERT DE LUZARCHES

(fl. early 13th c.). The labyrinth set into the nave pavement of Amiens cathedral states that Robert de Luzarches was the first master mason, succeeded by Thomas de Cormont and his son Renaud. Robert began his work at Amiens ca. 1220. He was responsible for the plan and construction of the lower level of the nave and western bays of the chevet. Robert's origins and early work are obscure, but details at Amiens are close to such earlier Picard churches as Laon, Soissons, and Longpont. Although he probably died before the upper levels at Amiens were begun in the 1230s, his architectural design formed the basic characteristics of this great Gothic cathedral.

# ROBERT OF TORIGNY

(d. 1186). Robert entered the Benedictine abbey of Bec in 1128. He became prior of Mont-Saint-Michel in 1149, and in 1154 he was elected abbot. Robert was both an able administrator and enthusiastic bibliophile. Among his collected works is a revision and continuation of the *Gesta Normannorum ducum* of Guillaume de Jumièges; Robert added material that pertained to the reigns of Henry I and Henry II. His principal work, however, is the continuation of the chronicle of Sigebert de Gembloux for the years 1100 to 1182. Contemporaries praised the work for its literary style, and despite its suspect

chronology it remains an important source of Anglo-French history. Robert's narratives are replete with accounts of the marvelous, and he was careful to avoid incorporating into his histories any matter that would jeopardize the church, his monastery, or the reputations of kings Henry I and Henry II. He was responsible for the annals of Mont-Saint-Michel from 1135 to 1173, and he contributed significantly to the abbey's collection of cartulary documents.

# ROBERT LE DIABLE

. Hagiographical legend. Identified in medieval French literature as the son of a Norman duke and duchess, Robert is Satan's liege from birth because his mother, long barren, had in desperation asked the Devil to give her a child. After a youth filled with violent crimes, Robert suddenly repents and spends the rest of his life expiating his sins. In the earliest French version, a hagiographical romance composed in the late 12th century (5,078 lines in octosyllabic couplets; two manuscripts), he dies a holy hermit. In the 14th-century *Dit de Robert le diable* (1,016 Alexandrines in 254 monorhymed quatrains; three manuscripts), Robert marries the daughter of a Roman emperor after completing his penance. From the *Dit* derive the later 14th-century *Miracle de Robert le diable* (2,279 verses, with speeches in octosyllabic couplets ending in a four-syllable cue-line) and a 15th-century French prose rendering extant in a dozen editions printed between 1496 and 1600, as well as adaptations in English, German, Dutch, and Spanish. Another version in French prose, composed probably in the late 13th century, supplies the opening chapters of the *Chroniques de Normandie,* found in numerous manuscripts and early printed editions. The legend also appears among the Latin exempla collected by the 13th-century Dominican, Étienne de Bourbon in his *Tractatus de diversis materiis predicabilibus.*

# ROBERT LE FORT

(d. 866). Count of Anjou, Blois, Tours, Auxerre, and Nevers; the earliest known ancestor of the Capetians. First called "the Strong" *(vir strenuus)* by the chronicler Regino of Prüm, who wrote a generation later, Robert was a powerful count best known for leading the fight against the Vikings. He was one of the great lords whose power was nearly as well established as that of the Carolingians.

The sources are virtually silent on Robert's ancestry, but there have been many ingenious attempts to determine his origins. It seems most likely that he was from the Rhine region, but the family trees proposed for him by modern scholars have persuaded few but their creators. When he died fighting the Vikings, his sons, Eudes and Robert I, were still too young to succeed, although both later became kings of the Franks.

# ROBERT OF FLAMBOROUGH

(ca.1135/80–ca. 1219/ 33). Born probably in Flamborough, Yorkshire, Robert became a canon regular and later subprior at the Parisian abbey of Saint-Victor early in the 13th century. Contemporary documents refer to him as a canon penitentiary, and indeed his only known work is the *Liber poenitentialis.* Robert's penitential was the first such work to make available to ordinary priests the important 11th- and 12th-century developments in canon law on the matter of penance. The *Liber poenitentialis* was soon followed by similar handbooks for confessors. Completed between 1208 and 1213, Robert's penitential is in the form of a dialogue, a confession between a priest and a penitent. Although criticized by contemporaries for relying heavily and uncritically on outdated decretals, the penitential was nevertheless influential and survives in a number of manuscripts.

# ROBERT OF MELUN

(d. 1167). Born in England, Robert studied in the schools of Paris. He succeeded Peter Abélard in the school at Mont-Sainte-Geneviève in Paris, where he taught John of Salisbury, who mentions him in the *Metalogicon*. Sometime ca. 1142, Robert moved to Melun, where he taught theology. He returned to England ca. 1160 and was elected bishop of Hereford in 1163.

Robert's main theological writings were three: an unfinished *Sententie, Quaestiones de divina pagina,* and *Quaestiones de epistolis Pauli*. In each of these works, Robert draws upon two of the great theologians of the immediate past, Abélard and Hugh of Saint-Victor, and in so doing represents the tendency of later 12th-century authors to draw together viewpoints that would have been more clearly opposed in the early to mid-12th century. One can see the influence of Hugh's thought in the structure of Robert's *Sententiae*. At the same time, Robert mounted a spirited defense, in opposition to Bernard of Clairvaux, of Abélard's description of the Trinity in terms of predicating power of the Father, wisdom of the Son, and love of the Holy Spirit.

# ROBERT OF MOLESME

(ca. 1027–1111). The founder of the monasteries of both Molesme and Cîteaux, Robert had spent much of his life trying to find or to establish a house where he thought the Benedictine *Rule* was being practiced with sufficient rigor. He spent time in the abbey of Moutier-la-Celle, in the diocese of Troyes; was briefly abbot of Saint-Michel of Langres, then prior of Saint-Ayoul of Provins; and for a period lived as a hermit. In 1075, deciding to try an entirely new Benedictine house, he and a small group of monks founded Molesme, of which he became first abbot (r. 1075–1111). In 1098, believing that even this house was not sufficiently rigorous, he left with a few brothers to found the New Monastery of Cîteaux. Although the monks at Molesme, feeling destitute, had the pope order Robert back to their house in the following year, Cîteaux flourished even without him and became in the 12th century the head of a large and influential order. Molesme, meanwhile, although overshadowed by Cîteaux, also acquired numerous gifts of property, including many priories and cells.

# ROBERT PULLEN

(ca. 1080–1146). A noted English theologian of the first half of the 12th century, Robert Pullen enjoys the distinction of being the first cardinal to have been born in the British Isles. He is known to have studied at Paris under the tutelage of William of Champeaux, sometime after 1103. In 1133, Robert moved from Exeter to Oxford, where he lectured on the Bible for five years. From 1134, he held the prebend of the archdeaconry of Rochester. Bernard of Clairvaux encouraged him to go to Paris to teach, which he did ca. 1142; but his travels soon took him to Rome as a cardinal, appointed by Pope Lucius II (r. 1144–45). Robert published several sermons and the *Sententiarum libri VIII* (composed at Oxford before 1142). This latter work seems to have had no apparent influence on Peter Lombard, the author of the most famous sentence collection of the day. Robert died at Viterbo in September of 1146.

# ROCAMADOUR

. From the 12th century to the end of the 14th, the pilgrimage to Our Lady of Rocamadour (Lot) was one of the most famous in Christendom. The holy city is set in tiers up a rugged rock face rising 500 feet above the Alzou Canyon. The Great Stairway (216 steps) leads from the lower town to the sacred precinct, where a small parvis, formerly a cemetery, is enclosed by seven sanctuaries, the majority of which underwent extensive restoration and rebuilding in the 19th century. The heart of Rocamadour is the Miraculous Chapel of Our Lady, a small oratory (Gothic portal) that houses the famous "Black Virgin," an austere, 12th-century wooden reliquary statue, once covered with silver and decorated with gold. On the façade are painted fragments of the Three Living and Three Dead (15th c.). Two 12th-century sanctuaries virtually intact are St.

Amadour's Crypt, below the basilica, and the funerary chapel of St. Michael, perched like a watchtower set into the cliff. In the apse are vestiges of a Majestas Domini (13th c.); on the exterior façade are frescoes of St. Christopher (14th c.) and a fine 12th-century Annunciation and Visitation (supposedly unrestored), akin to Limousin reliquaries. Above the sacred precinct, 14th-century ramparts enclose the 19th-century castle; below, the reconstruction of the bishops' palace is a Neo-Gothic fantasy.

# RODEZ

. Perched on a butte some 400 feet above the Aveyron, Rodez was once the capital of the Rouergue. Originally a Gallo-Roman center named Segodunum, it was overrun by the Romans and renamed Ruthena. It was made a bishopric in 401. Much of the medieval history of the town involves the struggle between the bishops, who controlled the cité, and the counts of Rouergue, who dominated the *bourg*. The enmity was so intense that it led to the creation of adjacent walled communities. The town fell briefly into English hands at the start of the Hundred Years' War (1360–68), and later its bishop was suspected of collaboration.

The red-sandstone cathedral of Notre-Dame dominates the old town. The earliest part is the eastern end, begun in 1277, with an ambulatory in Parisian style. The fortified western façade (15th c.), with its massive twin towers, has no porches or portals, since it projected beyond the city walls and served itself as part of the ramparts. The Flamboyant Gothic bell tower on the northeast corner rises nearly 290 feet. The interior, spare but impressive for its size and proportions (560 feet by 119 feet), is notable for its quatrefoil-shaped pillars with ring capitals. Within can be found two marble sarcophagi of early bishops (5th-6th c.) and a 10th-century altar table.

# ROGATION DAYS

. *See* **LITURGICAL YEAR**

# ROHAN

. The small Breton community of Rohan (Morbihan) gave its name to a noble family that has remained prominent in Brittany for nearly nine centuries. The family was founded by Alain I, younger son of a 12th-century count of Porhoet. Known as viscounts of Rohan, his descendants were prominent figures by 1300, with important rights over the religious houses of the region and an administrative center at Pontivy, where their 15th-century castle remains intact.

The wealth and influence of the Rohan family grew enormously in the late 14th and early 15th centuries as a result of favorable marriages. Viscount Jean I (r. 1352–95) married Jeanne, heiress to the important lordship of Léon in Brittany. Their son, Alain VIII (d. 1429), married Beatrix de Clisson, daughter and principal heiress of the fabulously wealthy Olivier de Clisson, constable of France, whose second wife was Jean I's sister. Jean I also was remarried, to a sister of Charles II of Navarre and aunt of the duchess of Brittany. In 1407, when they came into the Clisson inheritance, Alain VIII and Beatrix arranged for their son, Alain IX (d. 1452), to marry a sister of Duke Jean V of Brittany. These brilliant marriages made the Rohan family the most powerful in central Brittany. Rohan became a duchy and peerage in 1603.

# ROI FAINÉANT

. The last Merovingian kings, in the first half of the 8th century, are frequently referred to as *rois fainéants,* or "do-nothing" kings. This image owes a great deal to Einhard, contemporary biographer of Charlemagne, who stressed their weakness in order to help justify the Carolingians' assumption of the Frankish throne; Einhard even described the kings as going about, degraded, in ox carts rather than riding horses. Even aside from

Einhard's picture, the last Merovingians did little that left any historical record. Childeric III, the final king of his line, was deposed, shaved of his symbolically uncut hair, and put in a monastery in 751 by Pepin the Short, who became the first Carolingian king. Childeric was the first king in the West to be deposed not for tyranny or for injustice but for incompetence.

# *ROI FLORE ET LA BELLE JEANNE*

. A mid-13th-century anonymous prose romance found in a single manuscript (B.N. fr. 24430; dated 1290), *Roi Flore et la belle Jeanne* is really two distinct stories forcibly combined. Written in Picard-Wallon dialect, the tale relates the adventures of Jehane, first as third wife of Flore, then as cross-dressed squire to her husband, Robert.

# *ROLAND, CHANSON DE*

. Bearing the marks of the enthusiasm engendered by the First Crusade, the *Chanson de Roland* is probably the earliest preserved chanson de geste, and the masterpiece of the genre. It seems to have been composed ca. 1100 by an anonymous poet (unless the mysterious Turoldus of the last line is considered to be the author—a controversial matter), who may well have been a Norman. Like other chansons de geste, it was certainly intended for singing, to a stringed instrument called a vielle, by a jongleur; whether this performer was also the composer is a debated question.

The earliest extant version, 4,002 decasyllabic lines grouped into some 290 assonanced laisses (stanzas of irregular length; the exact divisions are in some cases a

matter of editorial controversy), is preserved in one Anglo-Norman manuscript of the second half of the 12th century, Oxford, Bodl., Digby 23 (O). Another manuscript, the FrancoItalian $V^4$, preserves an assonanced text of the same type down to a line corresponding to line 3,683 of *O,* after which it joins the rhymed versions. Ms *O* came to the Bodleian in 1634, having belonged to Sir Kenelm Digby; it was rediscovered in the early 19th century by Francisque Michel, who published the *editio princeps* in 1837 and who gave the poem its modern title (it has none in the manuscript). This edition undoubtedly contributed to the resurgence of the study of medieval literature in the 19th century: the poem, with other chansons de geste, inspired Victor Hugo for parts of his *Légende des* siècles, and Gaston Paris chose to lecture on it at the Sorbonne in 1871 as a contribution to the restoration of French national feeling and morale after the Franco-Prussian war.

Although isolated, the Oxford *Roland* was a poem of great influence. It is imitated stylistically by many other chansons de geste, and its main personages play important roles elsewhere. Thus, *Girart de Vienne,* by Bertrand de Bar-sur-Aube, sets out, some eighty years later, to explain how the hero came to be the sworn comrade of Oliver and the betrothed of the latter's sister Aude, as he is in the *Chanson de Roland*. Roland, Charlemagne, Oliver, and even Ganelon are important figures in *Fierabras,* the *Voyage de Charlemagne,* the *Chanson d'Aspremont,* and other poems that make up the King Cycle (the cycle of epics devoted to Charlemagne and his exploits), but also in epics of the Rebellious Vassal Cycle, such as the *Quatre fils Aymon* and *Girart de Vienne,* in which Charlemagne ceases to be idealized as he is in the *Chanson de Roland*.

Toward the end of the 12th century, there was an important rhymed *remaniement* (twice as long as O), based on the assonanced version and preserved in five major manuscripts, the end of $V^4$, and some fragments. This version, which seems to have largely replaced the assonanced version (summarized below), has lengthy extra episodes recounting an escape by Ganelon on the return journey to France and the death of Aude, the latter being much expanded with exploitation of the link with *Girart de Vienne,* a premonitory dream, and a death preceded by a conver sation with her brother, whose corpse speaks and invites her to join him and Roland in Heaven. Later, the material goes into prose versions, such as that compiled or written by David Aubert in 1458 *(Croniques et conquestes de Charlemaine)*. It is no doubt a sign of the popularity of the subject that from the early 13th century there was a college of the twelve peers of France, magnates (six ecclesiastical, six lay) who took part in the *lits de justice* of the Parlement.

The poem's influence is also to be seen in non-French versions of the subject. It was adapted into Middle High German (the *Ruolandes liet* by the Pfaffe Konrad, whose version was used by Der Stricker for his *Karl der Grosse* and by an anonymous author for *Karl Meinet*), Old Norse (the *Karlamagnús saga*), Middle English (*Song of Roland* fragment), medieval Welsh *(Can Rolant),* and Dutch (fragments only); there are related Latin texts in verse *(Carmen de prodicione Guenonis)* and prose (the Pseudo-Turpin chronicle); others in Occitan *(Ronsasvals)* and Spanish; later, via the Franco-Italian tradition, the subject reaches Pulci, Boiardo, and Ariosto, not to mention the Italian puppet theater, which survives to this day. Three of these texts were most likely composed in France. The Latin *Carmen de prodicione Guenonis* (482 lines) has been the subject of controversies over both dating and localization but was certainly composed after the Oxford text and probably in France. Preserved in a single manuscript, it is a

school exercise in rhetoric that focuses on Ganelon's treason and the battle proper. The anonymous Occitan *Ron-sasvals* (1,802 lines; one 14th-c. manuscript, in Apt) likewise centers the action on the battle itself. Although it alters characterizations and introduces Oliver's son Galien into the battle, it is a well-constructed and emotionally elevated work. In the same manuscript with *Ronsasvals* is the heroic-comic *Rollan a Saragossa,* which recounts in 1,410 lines Roland's amorous encounter with Bramimonde in Saragossa and his ensuing rift and conciliation with Oliver.

The poem is based ultimately on the historical ambush by Christian Basques or Gascons that destroyed Charlemagne's baggage train on August 15, 778, during his return from an unsuccessful campaign in Spain. It recounts the heroic death of the emperor's nephew Roland in an unequal fight with an enormous host of Spanish Saracens and Charlemagne's vengeance and imposition of Christianity on the vanquished. Faced with inevitable defeat in the last Saracen stronghold left after a campaign of seven years by Charlemagne, King Marsile of Saragossa sues for peace, giving false guarantees. In anger at being nominated by his hated stepson Roland for the dangerous peace negotiations, Count Ganelon persuades the Saracens to commit their 400,000 men to overwhelm the French rearguard of 20,000, to be led by Roland, whom he describes as the Frankish "hawk." In spite of Charlemagne's fears, provoked by prophetic dreams, the French host sets off, leaving the rearguard behind. When Roland's comrade Oliver hears the Saracen army's approach, Roland emphatically rejects his friend's advice to sound his elephant-tusk horn (the *olifant*) to recall the main army; he fears personal and family dishonor, a point of view that Oliver does not accept. After great deeds and initial successes by the French, led by Roland, Oliver, and the battling archbishop Turpin, the weight of numbers reduces the Christians to sixty survivors; Roland now at last decides to sound the horn, but Oliver angrily says that this would indeed be dishonorable now that the battle is on, and he accuses Roland of a monumental error of judgment, motivated by recklessness. Turpin points out that it can no longer be a matter of help, only of vengeance and Christian burial for the dead, so that no dishonor is involved. Roland's sounding of the *olifant* brings the army back but fatally injures the arteries of his temple. After witnessing the deaths of Oliver, with whom he is reconciled at the last, and Turpin, Roland himself dies as a conqueror, the Saracens having fled on hearing the trumpets of the returning army. Angels bear his soul to Heaven. Charles returns and, with the aid of a divine miracle that prolongs the daylight, catches up with the Saracens and kills all of Marsile's surviving men.

As the emperor prepares next day to leave for *dulce France* with the bodies of Roland, Oliver, and Turpin, we suddenly learn that Marsile's overlord, the emir Baligant, summoned seven years earlier, when Charles had first invaded, has arrived. (This development has not been prepared in any way, and the status of this long episode is a subject for controversy.) Charles fights a second great battle, in which he finally kills Baligant. Saragossa is taken, and the remaining Saracens are converted or killed. Charles returns to Aix-la-Chapelle, where Oliver's sister Aude, whom Roland was to have married, dies at the news of his death. Ganelon, accused by Charlemagne of treason, is protected by his powerful kinsman Pinabel, who nearly secures his acquittal by his threatening influence; but Tierri d'Anjou proves by judicial combat against Pinabel that Ganelon has committed treason, against the emperor as much as against Roland, and Ganelon is quartered by horses. As he sits alone at night, discouraged and desolate,

Charles is summoned by the Archangel Gabriel, who is throughout the poem God's messenger to the patriarchal figure of the emperor, to further efforts against the Muslims far away. Charles is deeply unwilling to go, but we know that he will not fail.

However he himself composed, the poet of the *Chanson de Roland* drew on what were surely well-worn formulaic expressions and metric techniques belonging to a tradition of sung epic. How he uses these expressions and techniques is what sets him apart. His exploitation of the laisse is particularly striking: in the *Roland,* the laisses remain relatively short, fewer than fourteen lines on average, so that most have a unity that is often absent in later poems. Each is like a good paragraph, dealing comprehensively with one motif or unit of narration; the first and last lines often link thematically across the boundaries of the laisses and are frequently lapidary and memorable. Although epic is primarily a narrative genre, the laisses are sometimes grouped in twos or threes (*laisses similaires* and *laisses parallèles*), where a single event or conversation is repeated on different assonances to produce an emphasis on important elements of story or motivation, as well as to provide a lyrical pause. Other poems have such devices, but the *Roland-poet* is a particularly skillful exponent of the technique: see, for example, the first horn scene, which is formally perfect in a static mode, or the three laisses leading up to the death of Roland, where the technique is used in a more dynamic way. The poet is a master of concise, evocative use of words, within the limitations imposed by the formulaic epic tradition; he rarely uses formulae in a mechanical way, and his use of repetition links laisses and episodes with recall and echo. Flashback techniques are sometimes reminiscent of the cinema, as when Roland sounds his horn and we see the effect alternately on the main army and on him. The poet revels in colors, bright light reflecting from armor and weapons, the sound of trumpets and horns. His sober, economical, yet vivid descriptions give an immediacy to his scenes; hearers or readers feel that they are spectators of events. This remains true in spite of the omnipresent epic idealization—exaggeration of numbers of combatants and the power of blows, the emphasis on single combats and battle scenes.

Executed with precision, variety, and evocative language, this poem, like other chansons de geste, nevertheless exploits to a considerable extent essentially dramatic techniques. Some 40 percent of the text consists of direct speech; we learn about the characters by what they say and do rather than by the poet's analysis. Although we do not usually expect to find detailed psychological analysis in epic poetry, the characters of the *Chanson de Roland* ring remarkably true, at least over the range of emotions and beliefs the poet needs to show. They express themselves in dialogue that is concise, telling, and suitable. The traditional formulaic style does not prevent the individualization of the characters; compare, for example, the first words of Roland with those of Ganelon. This characterization remains subordinate to the development of the action, but it is done with precision.

The importance of the issues that the poem addresses, and the passion with which they are debated; the precision and affectivity of the language; the dignity, order, and sober understatement of the most moving moments; the dramatic technique that involves the hearer—all this makes the *Chanson de Roland* one of the great epics of the world and a brilliant opening to the rich 12th century.

In spite of its clarity, the *Roland* provokes debate. One of its liveliest controversies is over the interpretation of the moral conception of the subject. Traditional exegesis held

that Roland's decision not to recall his uncle is caused by pride, by *desmesure,* the epic fault of failing to keep a proper sense of proportion, which leads to fatal consequences; when he sees the slaughter caused by his decision, he repents or at least changes course to remedy his mistake as far as possible by recalling Charlemagne, and his self-inflicted death leads to his apotheosis and to the Christian revenge. More recently, scholars have questioned this view, seeing Roland as being right in his decision; on this hypothesis, he deliberately sacrifices his men and himself in order to ensure that Charles, who is seen as being ready to abandon the war prematurely because weary of it, achieves the final victory. Roland is seen either as a fervent Christian saint and martyr, an imitator of Christ, or, on the contrary, as exhibiting the pagan virtues of a Germanic tradition of heroism, with a thin veneer of Christianity.

The Baligant episode has also caused controversy. It is not prepared for earlier in the poem, and many scholars believe it to have been added by the *remanieur* to whom we owe the Oxford version, while others argue for its authenticity as part of the conception of the subject at an earlier stage of development; some find it stylistically different from the rest of the epic, while others see homogeneity. What can be said is that the episode adds to the Christian dimension of the poem, reflecting the structure of some saints' lives, in which the death of the saint is put in the context of the struggle of the Church Militant. This does not mean, however, that the view of the hero as profoundly religious in his actions is necessarily the right one: it is a matter of deciding whether Roland attains his apotheosis by his original merits or by repentance.

A final controversy over the *Chanson de Roland,* and the other chansons de geste, concerns origin and method of composition. The old question as to how the kernel of historical truth underlying the poem could have reached the author, and in so distorted a form, has in the last thirty years been associated with the problem of oral as against written composition. This controversy, between "Traditionalists" and "Individualists," is discussed in the article on CHANSON DE GESTE.

# ROMANCE

**.** In Old French, the term *roman,* used as early as 1150 in the Romances of Antiquity, originally designated a work in French as opposed to Latin. Even when Chrétien de Troyes employs an expression like *entreprendre/faire un roman* ("to embark on/to make a *roman*") a usage that emphasizes the writer's creative activity, *roman* still maintains its primary meaning of a "story composed in French," intended for a lay courtly public that did not know Latin. Only later did the term take on the generic meaning of "romance" (and, even later, "novel") associated with it today.

With the important exception of the *Roman d'Alexandre,* written in epic laisses, romances of the 12th century were composed in octosyllabic rhyming couplets, a form used also in didactic and scientific literature of the period, as well as in historical chronicles in French. In the 13th century, with the appearance of literary prose, romances in verse and prose existed side by side. Only in the course of the 14th century did prose become the preferred medium of romance.

Unlike chansons de geste and lyric poetry, which were sung, romances were intended to be read, aloud and before a select company, from manuscript books. Their prologues often insist upon the talent of the writer and generally give the author's name and the title of the work. Romances assert their status as a written product.

The first text considered a "romance" is the Alexander fragment by Albéric de Pisançon (first third of the 12th c.). In the decade after 1150, the Romances of Antiquity and vernacular chronicles, which evoked Britain's past, appeared simultaneously (Geffrei Gaimar's *Estoire des Engleis,* Wace's *Brut* and *Rou,* Benoît de Sainte-Maure's *Chronique des ducs de Normandie*). Both romances and chronicles sought to celebrate the past for the benefit of the men and women of their day. The act of writing, above all an act of remembering, also represents the diffusion of knowledge and wisdom. Several romances open with references to classical, pagan, or biblical wisdom and repeatedly invoke the writers' obligation to exploit their God-given talent. Blessed by their historical situation, writers of romance could build upon the inherited Latin sources and interpret them in a definitive manner, giving them, in Marie de France's words, a *surplus de sens* ("an abundance of meaning"). Writers of romance thus saw themselves as the privileged heirs of a secular *translatio* of learning and chivalry, from Greece through Rome to France and Norman England, whose destiny and deeds they were to celebrate.

Jehan Bodel's famous distinction among the Matter of France (chansons de geste), the Matter of Rome (Romances of Antiquity), and the Matter of Britain:

N'en sont que trois materes a nul home vivant:
De France et de Bretaigne et de Ronme la grant;
Ne de ces trois materes n'i a nule samblant.
Li conte de Bretaigne si sont vain et plaisant,
E cil de Ronme sage et de sens aprendant,
Cil de France sont voir chascun jour aparant. (*Saisnes,* ed. A.Brasseur, 11. 6–11) masks a continuity that the romances themselves exploit between the Matter of Rome and that of Britain: Brutus and the British nation are, in the fiction of the chronicles, both the descendants of Aeneas and his Trojans and also the ancestors of King Arthur. This distinction nonetheless takes into account the two principal sources of romance inspiration in the 12th century and the differences in their expression.

Composed in the continental domains of Eleanor of Aquitaine after 1150, the Romances of Antiquity (*Thèbes, Énéas, Troie, Alexandre,* and the Ovidian tales) are on one level a vulgarization of myths, legends, and historical figures of classical antiquity. Their didactic intent is evident in the role accorded to descriptions, which offer scientific knowledge (as in Alexandre de Paris's third branch of the *Roman d'Alexandre*) as well as idealized models of the beautiful (portraits, descriptions of towns, art objects). It is also seen in extensive discourses on politics and on love, notably in the *Roman de Troie*.

The Matter of Britain is represented in the 12th century principally by the Arthurian romances of Chrétien de Troyes and by the verse romances about Tristan and Iseut. The anonymous Breton *lais* and those by Marie de France exploit a wide variety of motifs and legends, in which the Fairy Mistress and the rivalry between the otherworld and this world play an essential role. Originally transmitted orally, the Matter of Britain was first written down in French in Wace's *Brut*. The account he gave of Arthur's reign and deeds provided the setting and time frame for key characters and motifs—Arthur and Guenevere, Merlin, Gawain, Kay, the Round Table—exploited by Chrétien and his immediate followers and, in the 13th century, by the Vulgate and Post-Vulgate cycles. Better than the Matter of Rome, which was seen as more or less historical, the Matter of Britain was the ideal locus, with its blend of the real and the fantastic, in which to explore other modes of structuring romance materials (focused on the knight-errant and the quest for adventure) and to test a complex meditation upon the nature of love and its relation to bravery. Exemplified in the "Breton romance," this meditation reached its highest expression in the Grail.

Introduced by Chrétien de Troyes in the *Conte du Graal,* where it was attached to the person of Perceval, the motif of the Grail offered an alternative to the quest for earthly love. But it quickly became, with the story of Grail origins launched by Robert de Boron in the verse *Roman de l'estoire dou Graal,* a myth of origins relating simultaneously to the central figure of Joseph of Arimathea, the holy vessel, and chivalry itself. The interrelated stories of the Grail and Arthur's kingdom became, in the first third of the 13th century, the subject of immense cyclical prose romances: the trilogy of the Pseudo-Robert de Boron (*Jo seph, Merlin,* the Didot *Perceval*), the *Perlesvaus,* and above all the Vulgate Cycle, or *Lancelot-Grail*. Organized around the motif of the Grail quest, these works function as a *summa* of the Matter of Britain and as a rewriting of the Arthurian "pre-text." They also offer a reflection on "courtly" chivalry and on its relation to royal authority and its ability to penetrate the sphere of the sacred (*Perlesvaus,* the *Queste del saint Graal*). The choice of prose is explained by the belief in its greater veracity and by

the very form of these stories, which were written to resemble historical chronicles. Above all, prose was the medium most suitable to a form of writing that sought to saturate narrative time and space and capture its fictional universe in its fullness and complexity.

Similarly attached to a Celtic framework, but with less emphasis on the fantastic (the love potion is but another name for carnal lust) and with a biographical structure, the 12th-century Tristan romances by Béroul and Thomas d'Angleterre present a more realistic but also darker view of the passion of love, which cuts off the individual from society and admits of no outcome other than death.

The Britain of King Arthur remained the favorite setting for romance throughout the Middle Ages (Perceforest, *Ysaie le Triste,* Froissart's *Méliador*). But after 1150, a number of works were set in an equally imaginary Near East. Prime among these are the idyllic romance of *Floire et Blancheflor,* Chrétien's "Byzantine" romance *Cligés,* and, at the end of the 12th century, poems like *Florimont, Ipomedon,* and *Partonopeu de Blois.* These substitute for the wonders of the fairy otherworld the more concrete marvels of Byzantium, a city that becomes, in Gautier d'Arras's *Eracle,* a story that hovers between hagiography and romance, the site of an exemplary and creative past.

Gautier's other romance, *Ille et Galeron,* which though based on Marie de France's *lai* of *Eliduc* locates the adventures of its heroes in a "real" world, is one of the first examples, in the late 12th century, of a new form of romance writing, sometimes termed "realistic." The most representative writer of realistic romances is Jean Renart *(Guillaume de Dole, Escoufle, Lai de l'ombre).* Also of this type are texts that, like *Galeran de Bretagne,* the *Roman de la Violette, Joufroi de Poitiers,* the *Roman du castelain de Coucy et de la dame de Fayel* by Jakemés, the Occitan romance *Flamenca,* and others, strive for the illusion of reality. But the narrative cohesiveness of these works comes primarily from preexisting literary traditions, such as popular stories and courtly lyrics.

The interpenetration of the lyric and the romance occurs first in the form of lyric inserts in *Guillaume de Dole,* then in the *Violette,* the *Castelain de Coucy,* and other works. But it is the very source of the *Roman de la Rose* of Guillaume de Lorris, a poem that works the motifs of the courtly lyric into a narrative while using the methods of allegorical writing to create an exemplary erotic quest that is also an art of love. It is this latter dimension that Jean de Meun prefers to exploit, turning the second *Roman de la Rose* into a "Mirror for Lovers," a didactic locus of philosophical reflections with encyclopedic pretentions, on the relation of humankind to love and nature.

Also significant among 13th-century romances are tales of extraordinary adventures, such as Adenet le Roi's *Cleomadés* and Girart d'Amiens's *Meliacin,* or of edifying adventures (Philippe de Beaumanoir's *La Manekine or Belle Helaine de Constantinople*), or tales, like *Amadas et Ydoine and Jehan et Blonde,* that develop the theme of social climbing by a hero, either a bastard or of lower rank, who triumphs over all obstacles and wins the hand of his lady.

From its appearance in the 12th century, medieval romance gives an impression of astonishing diversity, with stories that examine both mythical and historical regions and time. One theme that stands out, however, is that of the bride quest, which is a vehicle for exploring the relationship of love with independence and power, love being the means by which the hero achieves that ideal model of civilization that the 12th century called

courtliness. The romance transforms the warrior hero of the chanson de geste into a bold but courtly knight, worthy of inspiring love and ensuring his power over his own world.

# ROMANESQUE ARCHITECTURE

. Romanesque architecture of the 11th and 12th centuries represents a fusion of two architectural traditions from late antiquity—that of the massively vaulted structure, such as the basilica of Constantine in Rome, and that of the huge wooden-roofed building, characterized by vast interior spaces, such as Old St. Peter's in Rome, now destroyed, and St. John Lateran. Both traditions survived from late antiquity to the preRomanesque period. Basilical structures in the larger towns and wealthier abbeys generally followed the Old St. Peter's model, although the old Roman tradition of brick-faced concrete was abandoned. These monuments, found mostly in the river valleys of France, were of impressive size and constructed of large, carefully dressed stones. The style they reflect at the beginning of the 11th century has come to be known as the Early Romanesque of

the North, the *zone septentrionale* as defined by the French scholar Henri Focillon, who contrasted this northern Early Romanesque to that of the southern, mountainous regions of France and Europe. Northern Early Romanesque monuments of major significance and interest, military architecture excepted, are almost exclusively churches.

Monuments found in the poorer, mountainous areas of the south were usually of the vaulted type, without transept, compact, smaller in scale, and constructed of small, semidressed stones. External walls were invariably decorated with shallow, irregular arcades framed by flat pilasters engaged onto roughly coursed walls and towers. This style, European in scope, was labeled *le premier art roman*

by the Catalan scholar J.Puig i Cadafalch, who gave it its art-historical identity. Such churches have survived in relatively large numbers. Their counterparts in the wealthier cities and abbeys of France, however, were almost always remodeled or replaced in later times, but their characteristics can often be determined from excavations, from archaeological traces surviving in the remodeled structure, or from old drawings and photographs.

Early Romanesque in the south flourished in the Alps, in the Pyrénées, in the Languedoc, and in other mountainous regions of southern France. Fine examples can be seen at Saint-Michel-de-Cuxa and Saint-Martin-du-Canigou in the Pyrénées, or at Saint-Guilhem-le-Désert in the Languedoc. Important churches in this style can also be found in the plains and river valleys, or in small villages, such as Chapaize in Burgundy.

Perhaps even more surprising, because of its northern location, is Saint-Vorles at Châtillon-sur-Seine, between Dijon and Troyes. The decorative vocabulary of southern Early Romanesque was so pervasive that scholars often overlook its vital contribution to the fully developed Romanesque structure, in particular, the vaulting of major spaces.

North of the Alps, in addition to the early Christian tradition of the unvaulted structure, as at Old St. Peter's or St. John Lateran, there is the indigenous tradition of timber architecture. Although none of these great structures survive, they are described in such sources as *Beowulf* and the writings of Fortunatus, bishop of Poitiers. This tradition of the great public building in wood facilitated the acceptance of the early Christian wood-roofed basilica during the early-medieval, Carolingian, and Ottonian periods. The great unvaulted basilicas of the Loire Valley from the end of the 10th century and beginning of the 11th were in harmony with this tradition.

Two major innovations distinguish the emerging Romanesque basilica in the north: the twin-towered façade, which replaced the Carolingian westwork, and the choir with ambulatory and radiating chapels, which reflected new liturgical practices. These stylistic characteristics are found only in the major cathedral and abbey churches of the first half of the 11th century: Orléans cathedral, Saint-Aignan in Orléans, Saint-Martin in Tours, Notre-Dame at Jumièges, and Bishop Fulbert's cathedral in Chartres. These great monuments are known to us in varying degrees through excavations, old drawings, and significant surviving fragments. They were vast, unvaulted thin-wall structures, often provided with tribunes or galleries over side aisles and with large, spacious transepts—monuments that reflected the immense agricultural wealth of the Loire Valley, Normandy, and the region to the south and east of Paris.

A fascinating example of the evolution of the twin-towered façade out of the Carolingian westwork is still to be seen in the church of Notre-Dame at Jumièges. Magnificent twin towers some 165 feet in height flank an atrophied westwork, which projects slightly on the exterior in the Carolingian manner, as at Corvey in Germany. Inside, a truncated platform remains, a downsizing of the elaborate Carolingian type, an example of which is still extant at Corvey. The nave at Jumièges, covered as always in large 11th-century buildings with a wooden roof, had galleries over the side aisles, in the manner of the Loire examples at Orléans and Tours, and was rhythmically subdivided into compartments by great transverse arches.

The nave and transept of the fine abbey church of Saint-Étienne at Caen, founded by William the Conqueror and destined to be his resting place, is well known. It still boasts its original though subsequently remodeled twin-towered façade, by which one enters this great structure. Although the nave was vaulted in the 12th century, and underwent major restoration subsequently, its original 11th-century form can be easily reconstructed: a vast, thickwall structure with vaulted tribune galleries over the side aisles, surmounted by a wall passage at the base of the clerestory windows. All three levels were lit by exterior windows. The church of Saint-Remi at Reims followed the same general architectural design in the first half of the 11th century: a thin-wall, wooden-roofed nave with galleries over side aisles, intersecting a transept of equal width and height, also unvaulted. Throughout the region to the north of the Loire this avant-garde building type prevailed. As we would expect, smaller structures were more conservative in nature and did not adhere to the format of the great monuments that were instrumental in the evolution of the 12th-century, fully developed Romanesque style.

The so-called High Romanesque style resulted from the slow and idiosyncratic fusion of the two Early Romanesque traditions. To the southern tradition, High Romanesque owes the practice of integrating and vaulting high spaces; to the northern, it owes the predilection for expanded, generous, and open spaces, especially as represented by the fully developed transept. Often, vaulting would be introduced under the original wooden roofs of Early Romanesque naves and transepts, and rectangular bays of choirs. A good example is the nave of the great abbey church of Saint-Philibert at Tournus, where transverse barrel vaults have been introduced under the original wooden roof. Even with the resulting contraction of volume, the nave of Tournus seems enormous. One can imagine how much more vast the original 11th-century vessel would have been.

The Romanesque style in France is habitually subdivided into a plethora of local styles, or "schools." This manner of classifying 12th-century production is most instructive in clarifying regional differences. We must not lose sight, however, of what these seemingly disparate monuments have in common. No longer are they constructed of small, irregularly shaped, and coursed stones; rather, fine ashlar walls are the rule in virtually all major monuments. Wooden roofs were replaced by superbly planned stone vaults over the high spaces of naves, transepts, and rectangular bays of choirs.

Only a small portion—the south arm of the major transept—of the great Burgundian abbey church at Cluny III survives, but it represents French Romanesque architecture at its finest. Some 109 feet in height, this stunning space anticipates French Gothic architecture in its vertical thrust and intricate wall design. The church itself was immense: a double-aisled nave with two transepts, barrelvaulted, with two magnificent crossing towers, and an ambulatory with radiating chapels. Already, a century ear-

PRINCIPAL CENTERS OF ROMANESQUE ARCHITECTURE

lier, the abbey church of Cluny II was vaulted throughout. Such churches reflected the wealth amassed and sometimes flaunted by the monastic order of Cluny. The abbey church at Vézelay, more modest in architectural scope, offered a luxury of sculptural decoration that was the only equal to Cluny.

A special type of Romanesque architecture prevailed in the southwest of France, the cupola church. The cathedral of Périgueux is an outstanding though abusively re stored example of this architectural type. What is so exceptional about this cupola church is that the walls are not articulated by engaged half-columns, which are the rule in French Romanesque architecture. Rather, they are flat in the Byzantine manner, and the filiation from Byzantium via Venice is certain. The nearby cathedral of Angoulême is much more "Gallicized" in this regard.

Another important Romanesque substyle is that associated with the Cistercian order. In contrast with that

Saint-Guilhem-le-Désert, abbey church. *Photograph courtesy of William W.Kibler.*

of Cluny, this style is sparse, minimalist, and often associated with St. Bernard, who fulminated against luxuriously decorated churches: "O vanity of vanities, yet no more vain than insane! The church is resplendent in her walls, beggarly in her poor. She clothes her stones in gold, and leaves her sons naked…" (*Apologia ad Guillelmum Abbatem* 28). The fine abbey church of Le Thoronet, in Provence, shows the Bernardin approach to church design, where austerity is the rule and decoration suspect.

Finally, there is another important Romanesque style that is linear in form and constituted by the great pilgrimage churches. Saint-Sernin at Toulouse is a superb example of the type. Other well-preserved examples can be seen at Compostela in Spain and at Sainte-Foy, Conques, in Auvergne. Two other celebrated examples are now lost: Saint-Martial at Limoges and Saint-Martin at Tours. All were characterized by two elements typical of the major monuments of French Romanesque architecture: their major spaces were covered with barrel vaults throughout, and their choirs were furnished with ambulatory and radiating chapels. In addition, the aisles of the nave, the transept arms, and the rectangular bays of the choir were surmounted with galleries, or tribunes, as was the practice in such northern Early Romanesque monuments as Saint-Martin at Tours or Orléans cathedral. The pilgrimage churches represent, like Cluny III, Romanesque architectural practice at its apogee.

The developing Gothic style in the region around Paris was much indebted to the Romanesque in its formative years and in fact adopted many of the features of Romanesque structures, such as the ambulatory with radiating chapel, the use of high vaults throughout, fine ashlar masonry, and the placing of galleries above the aisles to counteract the thrust of high vaults. In much of the rest of Europe, however, the earlier Carolingian and Ottonian approaches to architectural design prevailed down to Gothic times. In France, the Romanesque charted new directions in the design of great monuments. French Gothic continued this development.

# ROMANESQUE ART

. Romanesque painting and sculpture gave vibrant, expressive life to the pilgrimage churches and cathedrals in mid-11th to late 12th-century France. Invented by 19th-century archaeologists to describe medieval works of crude Roman derivation, the term "Romanesque" remains in use due to the relationship between the medieval world and its antique past from the middle of the 11th to the third quarter of the 12th century.

Ideas and images of the ancient Roman Empire, the development of trade routes and urban areas, the growth of pilgrimage roads, the Crusades, and the continuity of the Capetian line all contributed to the production of Romanesque art. In certain areas of France, classical remains directly inspired the revival of monumental sculpture. Fixed within architectural and liturgical contexts, monumental painting and sculpture appeared to the roaming pilgrim as a series of moving images.

Painting and sculpture were often interdependent media, as in the case of portable devotional objects like wooden statues of the enthroned Virgin and Child, painted with. polychromy on gesso. Architectural sculpture was often painted, and both painting and sculpture depicted similar themes. Yet fundamental differences in technique and other circumstances of production distinguish the two media. While both Romanesque sculpture and painting were intended to be didactic, the two media present their messages in different ways. Sculpture graced entrances, such as exterior portals and inner narthex portals, piers in cloisters, or capitals in parts of monasteries, and presented scenes and figures to the pilgrim. Wall painting occupied

areas that shape space—vaults, walls, and interior focal points—and thus could convey narrative to the processing pilgrim differently than did sculpture.

Other than illuminated manuscripts, wall paintings were the dominant and most accessible form of painting in Romanesque France. Apart from antependia from Catalonia and altar frontals from other European countries, few Romanesque panel paintings survive in France, although many must have been produced. Remains of French monumental painting abound. Compared with other regions in western Europe, French wall painting is diverse. Early scholarship formulated inadequate categories of workshops and schools that have led to a recent focus on the synthesis of painting styles of individual workshops and use of a variety of media. The lack of a recent in-depth survey or overview of French Romanesque wall painting may be at

Saint-Augustine (Marchiennes), mid-

Municipale, Douai.*

tributed to the poor state of preservation and destructive postmedieval "restorations."

Classical fresco technique remained in use throughout the 8th and 9th centuries, and by the 11th century fresco in western Europe largely resembled the Byzantine technique. Generally, three stages had to take place before painting began. First, painters established construction lines to indicate registers and axes of symmetry on the architectural fabric. Then, geometric diagrams of figures were drawn on the ground, and finally the preparatory drawings were laid down. Unlike Byzantine incised drawings, Romanesque drawings were visible up to the final stage of execution. Many Romanesque preparatory drawings remain on the surface underneath flaking fresco.

Rather than follow an iconographic canon, Romanesque artists must have started from *similia*—iconographic models from illuminations or in albums—and personal collections of notes and drawings. Model books served only as points of departure, for elaboration took place *in situ* on the wall.

The basic process involved fresco finished with lime or occasionally tempera. Writings of Theophilus (first half

Christ in Majesty, Sacrementary of Saint-Étienne at Limoges, ca. 1100. Lat. 9438, fol. 58v. *Courtesy of the Bibliothèque Nationale, Paris.*

of the 12th c.) and Pierre Saint-Audemar (late 12th c.) describe the process of wall painting as true fresco with lime later added to dry walls to fix the color by carbonization. Pierre Saint-Audemar writes about the use of oil and tempera on walls, possibly a later development in technique. Variations of binders for certain colors may have given rise to a style of wall painting that favors flat areas of color and no modeling. Contemporary sources do not mention the application of paint, but generally western European mural paintings have thin layers of paint and are more opaque than Byzantine murals.

Many of the Romanesque mural cycles in French churches followed a set iconographical scheme. A Christ in Majesty or enthroned Virgin with either Magi or Holy Women frequently adorned the apse, the longitudinal focal point of the basilican church. The vaulted ceiling often received a celestial design, in contrast to the lower part of the wall surface, which was painted in *trompe l'œil* with architectural motifs or with other earthly decorations ranging from embroiderylike designs to grotesques. Crossings tended to carry more architectonic designs, and the tran

Annunciation, Mont-Saint-Michel Sacrementary, late 11th century. M 641, fol. 24. *Courtesy of the Pierpont Morgan Library, New York.*

septs received no set subject. Figures in arches and spandrels usually turned toward the central scene in the apse. The west wall often held the acceptance and refusal of sacrifices or the Last Judgment. In the nave, a main narrative, such as the miracles and death of Christ or the Old and New Testament, occupied the upper part of vaults. Generally, smaller spaces, galleries, porches, and crypts held more articulate and systematic decoration.

Two examples of the diverse types of wall painting are found at the vast abbey church of Saint-Savin-sur-Gartempe and the grange at Berzé-la-Ville. The murals at Saint-Savin display the effects of wall painting on a large scale, while the paintings of Berzé-la-Ville are experienced in intimate space.

The abbey church of Saint-Savin contains the most comprehensive scheme of wall painting. Although much restored, the columnar piers in the nave are painted in *trompe l'oeil* to resemble colorful variegated marble. Four areas of the building—the west gallery, the barrel-vaulted nave, the crypt, and the porch—contain scenes from the life of Christ, thirty-six scenes from the Old Testament (including the Creation and the stories of Noah, Abraham, Joseph, and Moses), saints' legends, and the Apocalypse, respectively. Earth tones predominate, with red ocher, yellow ocher, green, and occasionally black. Demus, Deschamps, and Thibaut agree that several artists, or teams of artists with similar styles, accomplished the painting in a short period, sometime from the late 11th century to the early 12th.

Seven miles from the abbey of Cluny in Burgundy, the dependent grange of Berzé-la-Ville also possesses extensive wall painting in rich reds, greens, purples, and whites against a deep-blue background. In the semidome of the apse of the chapel, Christ in Majesty resides in a mandorla, with his right hand raised in blessing St. Paul and his left

hand giving a scroll to St. Peter. Peter and Paul, who lead a group of six Apostles to either side of Christ, were associated with Cluny, whose domains were dedicated to the two saints. The apse painting also includes the chapel patrons, SS.Vincent, Lawrence, and Blaise.

The rest of the chapel contains portrait busts of saints venerated at Cluny on the dado, two martyrdoms (of SS. Blaise and either Vincent or Lawrence) in blind niches, and figures of female saints in the spandrels of the arcade beneath the vault. Of ornamental painting, part of the dado has *trompe l'oeil* curtains, and a pattern of flowers and leaves defines the arch framing the apse. These paintings, displaying a strong Byzantine influence on style, iconography, and format, have been dated to the early 12th century.

Later Romanesque wall painting was influenced by other media and in some instances incorporated embellished reliefs. At the chapel of St. Michael in Rocamadour, the intense blue background and linearity of the Annunciation and Visitation paintings show the influence of Limoges enamels. In the Salle des Morts at the cathedral of Notre-Dame, Le Puy, a wall painting of the Crucifixion in a large lunette covers the south wall. The presence of proph

Crucifixion, Reims Sacrementary (Reims), mid-12th century. MS 28, fol. 6v. *Courtesy of the Walters Art Gallery, Baltimore.*

ets and philosophers bearing texts on the sacrifice of Christ and his victory over death is unique. On a technical level, the use of embellished reliefs suggests enamels and mosaic work.

# ROMANESQUE SCULPTURE

. A major aspect of the "Renaissance of the Twelfth Century" was the resurgence of monumental sculpture in stone. Production of luxury objects had never ceased (Limoges became a center of *champlevé* enameling), and wooden cult images of the Virgin and Child were popular, especially in the Auvergne. The outstanding innovations of the Romanesque period, however, were the proliferation of historiated capitals and the appearance of great sculptured church portals.

The earliest attempts at façade decoration occurred in the first half of the 11th century in the Roussillon, where traditional techniques of marble carving (altar tables and other ecclesiastical furniture) were applied to church exteriors (Saint-André-de-Sorède; Saint-Genis-des-Fontaines). It was not until the turn of the century that monumental portals evolved in Languedoc, northern Spain, and Burgundy.

This sculpture is architectonic in character, international in style, and often epic in iconography. It is an art of power, of energy in tension, imaginative, expressive, with a love of variation and decorative effect and of geometric, stylized, and even fantastic forms. Despite a certain homogeneity fostered by artistic exchange along trade routes and pilgrimage roads, distinctive regional tendencies may also be discerned.

The "school of Languedoc" comprises several related styles emanating from workshops at Toulouse and Moissac. The leading early sculptor was Bernard Gilduin, credited

Toulouse (Haute-Garonne), Saint-Sernin, Christ in Majesty, ambulatory relief. *Photograph courtesy of Whitney S.Stoddard.*

with the altar table (ca. 1096) of the church of Saint-Sernin, Toulouse, capitals in the tribunes, and the large marble reliefs now in the ambulatory. The fullness of his forms, suggestive of polished ivory carving, was further developed in the Porte Miègeville (ca. 1110–15); a similar style developed along the pilgrimage route in northern Spain (Jaca, León, Compostela).

The first Moissac workshop was responsible for the cloister capitals and pier reliefs (ca. 1100) of the abbey of Saint-Pierre, the oldest of the historiated cloisters that survives relatively intact. There is a new spirit at work, however, in the famous south portal, where a decorative richness suggestive of Islamic Spain is combined with Burgundian elements and with a more dynamic treatment of the figure. The resultant visionary effect was widely imitated; the characteristic elongated figures, in cross-legged and dancing poses, were repeated at Beaulieu (Corrèze) and culminated in the ecstatic image of the prophet Isaiah at Souillac (Lot). The sculpture of later Toulousan ateliers (La Daurade

and the chapter house of Saint-Étienne) may be studied in the Musée des Augustins in Toulouse.

The great church of Cluny III was among the earliest and most influential centers of Burgundian Romanesque sculpture. The dating of the choir capitals (ca. 1095), with their subtle carving, lively figures, and sophisticated iconography, has long been controversial. The great west portal, largely destroyed, was roughly contemporary with the Porte Miègeville in Toulouse. Characteristic of Cluniac ateliers is the distinctive plate drapery, possibly derived from German sources. Two outstanding sculptors, thought to have been trained at Cluny, developed individual styles that mark the apogee of Burgundian Romanesque: Gislebertus of Autun and the anonymous master of Vézelay. At Saint-Lazare, Autun, the style of Gislebertus, both lyrical and expressive, imparts a unity to the capitals of the choir and nave, the gigantic Last Judgment of the west doorway, and the fragments of the north portal. The "Mission of the Apostles" of the central doorway of the inner narthex of La Madeleine at Vézelay is charged with an energy unparalleled in Burgundian sculpture. The "multi-linear" style is activated with rhythmic patterns and swirls; the figures are elongated and angular, agitated in pose and gesture. It is a dynamic style, somewhat akin to the frescoes of Berzé-la-Ville. Later Burgundian portals are characterized by luxuriant foliage, detailed ornamentation, and by movement, almost restlessness, in the composition. Particularly important and complex are the rapports between Burgundian Romanesque and the first Gothic sculpture of the Île-de-France.

The flourishing culture of western France (Poitou, Saintonge, Angoumois) is reflected in the elaborate decoration of its screen façades. The focus is not on a central carved tympanum but on the multiplicity of richly carved archivolts, embellishing doorways, niches, windows and arcades, which activate the façade. At Saint-Pierre at Aulnay, two systems of carving the archivolts led to significantly different results in embellishment. The earlier method (south portal), imitated even in Spain and England, consists of small repetitive motifs (Elders of the Apocalypse, fantastic animals, etc.) placed radially, one motif to each voussoir. The alternative method (west portal), adopted at Saint-Denis and subsequent Gothic portals, allowed large figures (Virtues and Vices) to be placed along the curve of the arch, converging toward the keystone. At the cathedral of Angoulême and Notre-Dame-la-Grande at Poitiers, the sculptural program was expanded over the entire façade. The cumulative effect of multiple archivolts, superimposed arcades, friezes, and figures in niches is one of lavish decorative richness.

The Auvergne possesses some impressive capitals but few carved portals (see, however, Clermont-Ferrand), due in part to the intractable nature of the local stone. The most interesting series are those of Notre-Dame-du-Port (Clermont-Ferrand), Saint-Nectaire, Mozat, and Brioude, where motifs from Gallo-Roman art, such as centaurs, sirens, and griffins, are juxtaposed with Christian themes and with subjects from local folklore. The heavy figures with large heads approximate the appearance of Gallo-Roman bas-reliefs. Related to the Auvergne in style and format (stocky figures and triangular lintel) is the immense Last Judgment at Conques (Rouergue). The inventiveness of its demons and punishments and the diagrammatic layout, reinforced by explanatory text carved on banderoles and frames, make it one of the most accessible, and didactic, of Romanesque tympana.

Large sculptured ensembles made their appearance later in Provence than in Languedoc and Burgundy. Provence was rich in classical remains, and Romanesque

sculptors made full use of a classical vocabulary, including decorated cornices, Corinthian capitals, friezes, and figures in niches set between fluted pilasters. The façade of Saint-Gilles-du-Gard resembles Roman stage architecture; the figures and draperies, more classically conceived than elsewhere in France, display a distinctly Roman feel for monumental form. The Apostles of the west portal of Saint-Trophime at Arles have an equally classicizing flavor.

In the north of France, where a regional Romanesque was never as fully developed, the masters at Saint-Denis, Notre-Dame at Étampes, and Chartres were free to appropriate elements, and even craftsmen, from other regions. The result of this assimilation and experimentation was a revolutionary deployment of the figure and a new approach to the entire portal format.

The Royal Portal of Chartres, in which the triple portals and supporting elements are integrated within an iconographic whole, has been viewed as the culmination of the Romanesque, as Early Gothic, or as a unique transitional style. The serene column figures placed on the jambs of the portals assume the shape of architectural members lining the three entrance portals and embody a rare fusion of sculpture and architecture. In comparison with the reliefs of the jambs and trumeaux of Moissac and Vézelay, from which they ultimately descend, they are at the same time statues in their own right and integral parts of the structural columns.

# RONDEAU

(13th c.: *rondet* or *rondel*). A popular dance form of the 13th and 14th centuries and one of the *formes fixes* of the late 14th and 15th. The name perhaps derives from a round dance. The simplest fully developed form comprises eight lines in the pattern ABaAabAB, in which capital letters indicate the two refrain verses and lower-case letters are new text with the same rhyme scheme and syllable count as the corresponding refrain lines (musical settings have two sections that repeat as necessary, one for the A-sections and the other for the B-sections). Unlike the *carole,* and the later ballade and virelai, the rondeau refrain is partially repeated within the stanza. In the 15th century, rondeaux were enormously popular, with refrains three, four, or five lines long. How much of these long refrains recurred after the opening is still debated.

# *ROSE, ROMAN DE LA*

. Allegorical poem composed in the course of the 13th century by Guillaume de Lorris and Jean de Meun. For a description of the poem, see the articles under the names of its two authors; for an account of the literary debate occasioned by the *Rose,* see the article under QUARREL. The response to the *Rose* in the 14th and 15th centuries was phenomenal. It survives in over 250 manuscripts, more than exist for any other work of Old or Middle French literature. Most of these manuscripts are illuminated, many lavishly. Most are also equipped with extensive rubrics, occasionally in rhymed couplets, that chart the thematic and narrative structure of the poem. Some manuscripts, perhaps one-tenth of the surviving corpus, have marginal glosses and annotations added by medieval readers; a great many more have had memorable lines identified with the inscription *Nota*. These annotations are invaluable in assessing the interests of medieval readers of the *Rose*. Reactions to the poem can also be gauged from the numerous literary responses and rewritings that it generated. These in turn range from interpolated passages to extensive revisions and reworkings of the text to the composition of entirely new texts. Finally, the influence of the *Rose* spread well beyond France: by the end of the 14th century, it had been translated into Italian, Dutch, and English.

The number of miniatures varies considerably from one manuscript to another, ranging from none at all to well over a hundred. Most manuscripts have at least one miniature representing the Dreamer in bed at the beginning of the poem. Many begin

with a large four-part miniature that takes up most of the first page and, with some variation, illustrates the opening scenes of the poem: the Dreamer sleeping, rising, going out of doors, arriving at the garden wall. Aside from the opening miniature, other favorite motifs are the anticourtly images on the garden wall, nearly always represented in a series of miniatures; Idleness admitting the Lover to the garden; the *carole;* Narcissus at the fountain; the interactions of the Lover and the God of Love; and an author portrait at the beginning of Jean de Meun's continuation. Many manuscripts feature an illustration at the beginning of each of the major discourses, illustrating the character about to speak; many illustrate mythological exempla, especially Narcissus and Pygmalion; and many depict the events of the narrative. In addition to their aesthetic value, the illustrations can be useful as a guide to ways in which the poem was understood by its medieval readers.

Equally important are the numerous rubrics that, in most manuscripts, chart the narrative and thematic divisions of the poem. Rubrics, too, vary considerably; there was no standardized program. Most manuscripts, however, do use rubrics to identify which character is speaking throughout the poem; and by identifying the first-person voice as either *Amant* ("Lover") or *Acteur* ("Narrator"), according to the context, these rubrics allow us to study medieval readings of the complex narrative voice of the *Rose*. Rubrics identifying thematic divisions are often elaborate and show what different medieval readers found important in the poem. In some cases, rubrics even offer a moral gloss on the text. Such is the case, for example, in the late 13th-century manuscript B.N. fr. 1569, in which a series of rhymed rubrics establishes the allegorical framework for the poem as a celebration of love, stressing the values of joy, love, and beauty. In the 14th-century manuscript B.N. fr. 1574, on the other hand, the rubrics establish a moralizing critique of the erotic Garden of Delight, stressing the Lover's folly. The comparative study of these and other rubricated manuscripts shows that there was no single way of reading the *Rose* in the Middle Ages.

Rubrics indicate the formal structures perceived in the *Rose* by copyists; the reactions of other readers are revealed in marginal glosses and annotations. Even the terse comment *Nota* tells us that the line so marked was judged worthy of memory; and, as might be expected, different readers were attracted to different aspects of the poem. *Nota* often appears next to antifeminist passages, bearing out Christine de Pizan's assertion that the *Rose* fostered negative attitudes toward women. Some readers additionally focused on the satirical portrayal of marriage, courtship, and erotic love, annotating most heavily the discourses of Friend and the Old Woman; others, however, concentrated on the more erudite sections of the poem, such as the discourses of Reason and Nature. Where annotations are more extensive than the simple word *Nota,* they typically consist of literary citations and proverbs in either French or Latin. The author most frequently cited is Ovid, although one also finds citations of Seneca, Aristotle, *Pamphilus,* Gratian's Decretum, and others. Such glosses indicate that the *Rose* reached an educated readership, one interested in its character as a vernacular compendium drawing on the Latin tradition.

The *Rose* inspired several projects of revision, or *remaniements,* as well as numerous interpolations, some of which appear in as many as one-fourth of the 116 manuscripts collated by Ernest Langlois. The earliest is probably the brief anonymous conclusion, predating jean de Meun's longer and far more famous continuation, that allows Guillaume de Lorris's lover to spend a night of bliss with the Rose. The most extensive

*remaniement* and the only one that is not anonymous is that executed by Gui de Mori in the late 13th century. Gui suppressed allusions to pagan mythology, added considerable didactic material, and attempted to replace the ring structure that characterizes several of Jean de Meun's major discourses with a linear progression. Another important *remaniement* is that designated by Langlois as the *B* text, which survives in several recensions. The *B remanieur* in general sought to recast Jean de Meun's continuation in the more courtly framework of Guillaume de Lorris, suppressing in part or in whole both philosophical digressions and bawdy or satirical passages. But while these are the two most important and most widely diffused *remaniements,* the manuscript tradition contains other examples of both abridgment and interpolation, sometimes considerable. Among the passages most frequently rewritten are Reason's defense of plain speech, the discourse of False Seeming, and the discourse of Genius; but every part of the poem shows at least some variation.

Literary responses to the *Rose* are many and varied. Few medieval poets attempted to match the scope of the *Rose,* but a great many adopted aspects of it, such as first-person narrative, the dream-vision format, the garden setting, or mythological and allegorical characters and motifs. The most explicit imitation of the *Rose* is the late 14th-century *Échecs amoureux*. Evrart de Conty's voluminous prose commentary on the *Échecs* (ca. 1400) cites the *Rose* repeatedly and is one of the most important sources for late-medieval readings of that poem. Poets as diverse as Nicole de Margival, Guillaume de Digulleville, Christine de Pizan, René d'Anjou, and François Villon also cite the *Rose* explicitly. Guillaume de Machaut and Jean Froissart were profoundly influenced by it. Indeed, it would be impossible to imagine Middle French literature without the *Rose*.

The *Rose* continued to be popular well into the Renaissance. It went through several printed editions in the 15th century and, in the modernization attributed to Clément Marot, was printed several times in the 16th century as well. Jean Molinet's prose redaction, accompanied by an idiosyncratic reading of the text as sacred allegory, was also printed in the 16th century.

# *ROTROUENGE*

. A poetic form. Little is known regarding the *rotrouenge,* and the few extant examples differ from one another in versification; yet the designation of a given song as a *rotrouenge* often appears in the text, a fact that has led scholars to postulate that the genre's underlying formal structure is perhaps musical rather than textual. The text consists of an indeterminate number of stanzas, two to eight lines each, with a one- to two-line poststrophic refrain. The most representative rhyme scheme is aaa…(b)+(A)B/(B)B.

# ROUEN

. On the Seine between Paris and the English Channel, the city of Rouen (Seine-Maritime) was the starting point of the medieval duchy of Normandy. During the late Roman Empire, it had been the head of the secular and ecclesiastical province Lugdunensis Secunda, and it remained an important port in the Frankish territory of Neustria until Viking raids disrupted its political and religious life. Ceded to the Viking chieftain Rollo ca. 911, Rouen was the base of his authority, and it served as the capital of upper Normandy under Rollo's heirs. The city prospered in the later 10th and 11th centuries as a great trade center; the church, ruled by Rouen's archbishop, regained its former jurisdictional boundaries. The Norman conquest of England in 1066 added to Rouen's wealth. The following century witnessed the rise of its commune and other bourgeois associations to protect common economic and judicial privileges.
Rouen (Seine-Maritime), Notre-Dame,
plan of 11th century, present plan.
After Lanfrey.

In 1204, Rouen surrendered swiftly when Philip II Augustus conquered Normandy, and the French king confirmed important monopolies and liberties for the town. Until the resumption of war with the English in the mid-14th century, the city's trade and textile industries made Rouen one of the richest cities in France. The 13th and early 14th centuries witnessed the apogee of Gothic architecture; workers began to rebuild the cathedral of Rouen and the great abbey church of Saint-Ouen. But the Hundred Years' War brought higher taxes and disrupted trade. In 1418, King Henry V of England besieged Rouen for six months, reducing the population to starvation, before it surrendered. The English occupation of Rouen continued for over thirty years, in the course of which, in 1431, nineteen-year-old Jeanne d'Arc was executed in Rouen's marketplace. Eighteen years later, in 1449, King Charles VII of France entered the city victoriously.

*Cassandra Potts*

Rouen has many medieval monuments, of which the most important are the cathedral of Notre-Dame, the Benedictine abbey church of Saint-Ouen, and the church of Saint-Maclou. All date from the Gothic period, although some remains of earlier Romanesque structures are preserved in the cathedral (Tour Saint-Romain and crypt) and Saint-Ouen (Tour des Clercs).

The cathedral was rebuilt following a fire in 1200. Construction began at the west end under the direction of the architect, Jean d'Andelys. Work continued during the 13th and 14th centuries, with additional construction on the towers in the 15th and 16th centuries. The nave has eleven bays with side aisles opening onto chapels. The

Rouen, Notre-Dame, nave and aisle.

*Collection. Courtesy of Oberlin*
*College.*

transept has three bays with aisles and a chapel on the east side of each transept arm. The choir has five bays with ambulatory, two small radiating chapels, and a central chapel dedicated to the Virgin. The three-story elevation is elegantly proportioned, especially in the choir. Stained-glass windows of the 13th century are in the ambulatory, and 14th-century windows representing archbishops and saints of Rouen are in the Virgin Chapel. The cathedral houses tombs of several dukes of Normandy and the 15th-century duke of Bedford. The south-transept chapel is dedicated to Jeanne d'Arc.

The imposing west façade has three sculpted portals surmounted by gables, galleries, and a rose window. The left and right portals dedicated to St. John the Baptist and St. Stephen contain 13th-century sculpture; the Tree of Jesse in the central-portal tympanum dates from the 16th century. The Tour Saint-Romain with its Romanesque base on the north and the 15th-century Tour de Beurre on the south flank the façade. The transept portals, the Portail des Libraires on the north and the Portail de la Calende on the south, have interesting sculpture, especially the early 14th-century tympanum on the south transept representing the Passion.

The Benedictine abbey church dedicated to St. Ouen, a Merovingian bishop of Rouen, replaced an earlier Ro

Rouen, Saint-Ouen. *Photograph courtesy of Whitney S.Stoddard.*

manesque building. Construction began in 1318 at the east end and continued into the 15th century. The long, narrow structure is composed of ten bays in the nave with single aisles, three bays in the choir with radiating chapels, and a compact transept. The three-story elevation is filled with eighty bays of stained glass dating from the 14th and 15th centuries.

The church of Saint-Maclou, just east of the cathedral, is the third edifice on this site. Built between 1436 and 1520, it is a beautiful example of Flamboyant Gothic style as seen in the exterior silhouette with crocketed gables, arcades, and pinnacles with openwork tracery. The plan of nave, transept, and choir with surrounding aisle chapels forms a cross with equal arms that center on the crossing. The convex five-bay western porch echoes the curve of the eastern radiating chapels. Wooden door panels are carved with an extensive iconographic program.

# ROUERGUE

. From the period of the Carolingians, the region of the Rouergue formed an important and extensive county. Centered on the city of Rodez, it reached north to Conques, south to the towns of Saint-Félix-de-Sorgues and Sylvanès, west to include Najac and the viscounty of Saint-Antonin, and east to include the viscounty of Millau. In the 9th century, the Rouergue came under the authority of the counts of Toulouse. Separated from the Toulousain by a division of inheritance in 919, it was recovered by Raymond de Saint-Gilles in 1066 and reunited with the other domains of the elder branch of the family.

At the end of the 11th century, two centers of power emerged in the Rouergue: the viscounty of Millau and the county of Rodez. Viscounts of Millau appear as early as 920. By 1080, they had added to their possessions the Gévaudan, Carlat, and Lodève. Viscount Gilbert (r. 1092–1108), through his marriage to the heiress Gerberge, added the county of Provence, and his daughter, Dulcia, passed these extensive domains to her husband, Raymond-Berenguer, count of Barcelona. Until 1222, Millau and its territories formed a spearhead for the penetration of the house of Barcelona into Languedoc. At the same time, Richard de Lodève, brother of viscount Gilbert, was recognized as the first count of Rodez (ca. 1112).

The crisis of the Albigensian Crusade had little impact on the Rouergue, where Count Henri I of Rodez submitted to Simon de Montfort in 1214. Control of the Rouergue and Millau passed to Alphonse of Poitiers and thence to the crown of France. The line of the counts of Rodez continued until 1312, when its heiress, Cécile, was succeeded by her husband, Bernard VI, count of Armagnac. The Treaty of Brétigny in 1360 assigned the Rouergue to the English, who administered it until 1368. The downfall of the counts of Armagnac in 1473 prepared the way for the restoration of the county of Rodez to the crown, a reunion consummated with the accession of King Henry IV.

# ROYAL ADMINISTRATION AND FINANCE

. Although the Merovingian kings made some effort to preserve Roman institutions, early Frankish culture tended to think of government in private, personal terms. When movable wealth changed hands, the Franks understood gifts, booty, and tribute but not taxes and salaries. The Carolingians not only came from the least romanized part of the Frankish world but also took power at a time when the economy had become very local, warfare had disrupted administrative practice, and few laymen could write. Charlemagne tried to govern a large territory through family members, supportive clergy, household officials, and followers bound to him by a personal oath of loyalty. His strong personality and military prowess made the system work for awhile, but even he found that inadequate public institutions of government had to be supplemented by private, personal arrangements.

For nearly three centuries after the death of Charlemagne, monarchs, territorial lords, and many lesser nobles governed their lands in much the same way—deriving income mainly from the profits of rural estates and staffing military and judicial posts with household officers and men bound to service through private contracts of vassalage. The king's theoretical position at the apex of the social order and his ability to control more ecclesiastical appointments than other lords provided him with resources that others lacked, but royal administration and finance long involved little more than the management of those lands, rights, and jurisdictions that collectively made up the royal domain.

Under Philip I, obscure household officials emerged as important figures in the making and executing of royal policies. These were the earliest "great officers" of the crown—the seneschal, butler, chamberlain, and constable—to whom we should add the chancellor, who supervised those who wrote and authenticated royal documents. In this same period, the late 11th century, increasing urbanization, population, and trade made the revenues of the royal domain more substantial, but these were farmed by officials called *prévôts,* who were difficult to control and often corrupt.

Several modest achievements in the 12th century laid the basis for important developments in royal administration and finance. Louis VI forcibly pacified the unruly castellans of the Île-de-France, and these henceforth formed a pool of reliable men to fill administrative and military posts. The reduction of violence in the region also made the royal domain more profitable. Under the next two kings, the introduction of itinerant *baillis* helped bring the *prévôts* under better control, and the crown began building up a significant treasure, housed in the Temple and subject to audit by the *curia regis.*

The stage was now set for the large territorial additions to the royal domain under Philip II Augustus and his successors. The 13th-century *bailli* became more of a provincial governor, wielding judicial, financial, and military power over a group of *prévôtés*. When a great fief or large territorial block, such as Anjou, Normandy, or Languedoc, came into royal possession, the king left intact whatever local administrative structure he found, especially if it seemed superior to that existing in his other lands. Normandy, for instance, had an exchequer to monitor the revenues of the domain, so

Philip left that in place and his Norman *baillis* were concerned more with military and judicial matters. In other lands, where the chief political officer had been the seneschal of the previous lord, the crown used this title, instead of *bailli,* for its chief local representative. In Languedoc, which had more developed judicial institutions, the crown preserved and enhanced these, leaving the seneschals with functions that were mainly military and financial. Thus, the field administration did not achieve uniformity. It adapted royal practices in the old domain to traditions and practices already present in newly acquired lands, thereby smoothing the process of absorbing these lands but reinforcing regional differences that would later hamper centralization. This administration was not always honest or efficient, and Louis IX, who sent out *enquêteurs* to receive complaints of official malfeasance, enacted many improvements in his ordinance of 1254.

In the central government, the great officers of the crown entered a period of eclipse under Philip II, who allowed the powerful office of seneschal of France to remain vacant after 1191 and made increasing use of salaried officers. Because he lost his archives in a battle in 1194, we lack details about royal governmental operations in the preceding decades, but that debacle did lead Philip to establish permanent archives, the Trésor des Chartes, in Paris. The daily operations of the government were in the hands of the *curia regis,* which in the 13th century increasingly came to be called the "king's council" *(conseil).* This small body consisted of prelates and nobles in frequent attendance on the king, as well as household officers and trusted salaried officials. For important occasions, the king expanded this council into a much larger body by summoning his important vassals from farther afield. When such an assembly dealt with a matter of political policy, such as planning a crusade, it was called a "great council," but when its work was largely judicial it was called a "court" *(curia).*

The everyday *curia/conseil* contained (or had added to it when needed) experts specializing in law, finance, or the currency. The king named six bourgeois of Paris, for instance, to oversee finances when he went on crusade in 1190. Gradually, those with special expertise became detached from the council and achieved the status of a permanent, separate body. The judicial experts were functioning as a separate entity after 1254, becoming the Parlement de Paris, the kingdom's highest court. The financial experts, after operating somewhat separately for decades, received official status as the Chambre des Comptes in 1320. By this time, the royal council itself acquired a different character. To maintain authority in the difficult political environment of the 14th century, the king had to include on his council representatives of powerful political interests whose agenda might differ from his own. As the council became more of a political forum, the kings made greater use of the royal household *(hotel du roi)* where their most trusted followers served as *maîtres des requêtes* or *chambellans.*

Royal finances long remained the revenues of a great seigneur, including those from high justice, coinage, treasure-trove, forests and fisheries, fairs and markets, and mineral rights, which only the greatest lords possessed. Philip II built an abundant treasure from these "ordinary" revenues, but under Philip IV they were becoming insufficient because of the demands of more frequent war. By this time, the 1290s, evolving military technology was making warfare on any scale much more expensive. The reign of Philip IV was of great importance for the emergence of "extraordinary" revenues as a supplement to traditional ones, and although it ended in rebellion over this issue, the

momentum toward extraordinary revenues slowed only briefly. The reign of John II, fifty years later, was critical for the evolution of these extraordinary revenues into a system of taxation, while that of Charles VII, especially after 1435, would mark a third step: the taxes became, for all intents and purposes, permanent.

Intermittent war with England or Flanders, beginning in 1294, eventually gave way to the Hundred Years' War, which involved several extended periods of intense fighting. Successive kings, beginning with Philip IV, tried various expedients to augment revenues—expanding the feudal aids, manipulating the currency, squeezing money out of foreign residents—but they repeatedly had to ask their subjects for "war subsidies" to pay for the realm's defense. The frequency of these demands provoked growing opposition, particularly at moments when hostilities were suspended or at a low level. Underfinanced and poorly led French forces suffered severe defeats in the 1340s and 1350s, culminating in the capture of John II. The treaty that secured his release required payment of a heavy ransom. It was financed by indirect taxes, the *aides* and *gabelle,* which were collected in the years 1361–80 and 1382–1417 before being revived permanently in the 1430s.

The truce following the king's capture left thousands of soldiers unemployed; their violent behavior led the government in 1363 to impose the *fouage,* or graduated hearth tax, to pay an army that would both provide employment for the unruly military class and enable the crown to maintain order. This tax lasted seventeen years, began reappearing some years later as the *taille,* and continued as a recurrent extraordinary levy through the early decades of the 15th century. Charles VII and his successors levied the *taille* permanently after 1439, often raising the rate to suit escalating royal needs, and it became the major source of revenue.

The requirements of warfare and the accompanying rise of taxation had a significant impact on institutions of government but did not lead to any permanent role for the Estates General. Once persuaded that taxes were justified, French subjects showed little interest in a formal mechanism for consenting to them. They were, however, extremely suspicious of the officials who collected them, and the government had to develop a separate administration for those extraordinary revenues that became regular taxes. Supervising collection at the local level were *élus,* who themselves reported to a board of *généraux*. After 1390, the latter acquired institutional status as the Cour des Aides.

To ensure that tax receipts financed an effective army, the crown had to devise a system that made captains responsible for mustering their retinues regularly in the presence of designated officials. The *généraux* entrusted tax receipts to a war treasurer, who paid the captains on orders from the marshals of France after the muster had been recorded. Ordinances sought to develop and to enforce these rules and prevent corruption in the paying of troops. The most famous and successful was that of Charles VII in 1445, which established permanent *compagnies d'ordon-nance* consisting of 100 "lances"— six-man tactical units headed by a heavy cavalryman. This professionalization of the army, which had been in progress for more than a century, was the final step in restoring truly public institutions in lieu of those based on private, feudal arrangements.

# ROYAL DOMAIN

. Historians apply the term "royal domain" *(domaine, demesne)* to the lands, rights, and revenues directly controlled by the king, beginning in the 10th century, when it amounted to little. It has been described as the king's patrimony or as his personal seigneurie. No single synonym or brief description captures precisely the meaning of the term. It consisted of lands, revenueproducing rights, jurisdiction, and what we might call patronage. Contemporaries viewed the domain largely in economic terms, as that which provided the king with the revenues he required, but it also had a political aspect that had to do with power rather than wealth.

Nowadays, historians tend to view the royal domain from a territorial perspective, as the area in which the king exercised direct authority, contrasted with such lands as territorial principalities, great fiefs, or certain apanages, in which he lacked such authority. It has become customary to portray on maps the growth of the royal domain. For all its convenience, this territorial approach is probably the least accurate way to portray the domain. If the king tightened control over his local officials, suppressed public disorder, and compelled his nominal vassals to honor their obligations, he might derive sharply increased resources, and therefore power, from his domain without adding territory. If, on the contrary, he acquired direct control over a large but poorly organized territory, its addition to the domain might add little to his effective wealth and power.

The first Capetian kings controlled some remnants of the old Carolingian holdings, mostly around Laon and Soissons, as well as lands and rights in and around Paris, Orléans, Étampes, Corbeil, and other places in the Île-de-France. They also possessed rights of patronage over about one-fifth of the kingdom's bishoprics and around a dozen monasteries. They were continually adding to this domain and also giving away parts of it. In the 11th century, the crown added Dreux, Sens, Melun, the Gâtinais, and the French Vexin, plus scattered places of lesser importance. Philip I purchased the viscounty of Bourges ca. 1100. Louis VI, by contrast, added little territory, but his vigorous measures made the existing domain far more profitable, as did a favorable economy. Louis VII got little but trouble from his temporary acquisition of Aquitaine through his first marriage to Eleanor. He made more modest but enduring additions in the later years of his reign.

Philip II Augustus inherited a domain that made him at least the equal of such lords as those who ruled Flanders, Burgundy, or Normandy. His wealth and power were nevertheless dwarfed by the French resources of Henry II of England, who held Normandy, Anjou, Maine, Poitou, and the *mouvance* of most of southwestern France. Philip, however, secured Artois from Flanders as his wife's dowry, and in a series of steps acquired the counties of Amiens, Valois, and Vermandois following a disputed succession. His legal proceedings against King John of England in 1203 led to his conquest of Normandy, Anjou, and Maine. Louis VIII occupied Poitou in 1224 and laid the groundwork for the settlement of 1229 that secured lower Languedoc for the crown. In just twenty-five years, the territorial extent of the royal domain had increased explosively.

Louis VIII granted out much of the new territory other than Normandy and Languedoc as apanages to his younger sons, but dynastic marriages and fortuitous deaths brought much of this land back into royal hands along with additional territories like the county of Toulouse (1271). Philip IV, by marrying the heiress of Champagne, added that county to the domain of his successors. The accession of Philip VI in 1328 returned to the crown the vast holdings of the Valois family. Serious reversals during the Hundred Years' War reduced the domain substantially, but the crown finally made good these losses, seizing the last of Aquitaine in 1453 and the duchy of Burgundy in 1477. In 1481, the king regained the lands of the house of Anjou, including Provence, which lay outside the medieval French kingdom. The marriage of successive kings to the heiress of Brittany finally brought that stubbornly autonomous region under royal control.

This superficial survey of the most important territorial acquisitions does not take into account the steady gains of royal jurisdiction, the acquisition of scattered rights and properties all over France, and the administrative improvements that steadily augmented royal wealth and power throughout the 13th and early 14th centuries.

# ROYAUMONT

. The Cistercian abbey of Royaumont (Oise) was founded in 1228 by King Louis IX in fulfillment of his father's will. Although Louis VIII had stipulated a Victorine foundation, the execution of the will redirected the endowment to the Cistercians, perhaps as a result of the influence of the queen regent, Blanche of Castile. The new abbey was richly endowed by Louis and his noblemen, which permitted the rapid construction of the

church, probably essentially complete by its dedication in 1236. The abbey figures prominently in narratives about King Louis and was the site for several of the king's pious deeds early in his life. After the burial in 1234 of the king's younger brother, Philip Dagobert, it also became the necropolis for Louis's own children, several of whom died in infancy.

Disaffected in 1791, the church was the victim of its historic association with the royal family. Shortly after its acquisition by the Marquis de Travannet, it was pulled down, and only the eastern corner and stairtower of the north transept survive. The conventual buildings were not demolished, however, and now function as a conference center. Of particular note among the monastic buildings is the large 13th-century latrine.

It has been suggested that the foundation of Royau-mont in 1228 was inspired by Longpont, the dedication of which Louis IX and his mother had attended in 1227 on their return from the young king's coronation at Reims. Both churches have a three-story elevation with simple cylindrical supports in the arcade, but at Royaumont the triforium consisted of two pairs of trefoil arches surmounted by a trilobe and enclosed in a relieving arch. The triforium at Longpont is blind, but that at Royaumont included a passage. In spite of the differences in the design of the two elevations, the scale of the two churches was almost identical: the width of each church was about 86 feet; the height of the elevation at Longpont was 88 feet, at Royaumont 91 feet; the diameters of the cylindrical supports were also the same, 3½ feet. In each case, the width of the nave and aisles equaled the total height of the vaults, dimensions that correspond with the proportions of Cistercian churches of the 12th century, such as the abbey of Fontenay.

# RURAL SOCIAL STRUCTURE

. Medieval rural social structure was based on the patriarchal family unit, which was most frequently the nuclear or stem family. Occasionally, because castles and other "feudal" properties were held by groups of siblings, a more complicated family structure might be temporarily maintained. Although the patriarchal family involved obvious inequalities of power, family members generally had the same status as the head of the household. In the relatively fluid rural society of the early Middle Ages, marriage was the main means of social mobility—by marriage or concubinage, for instance, slaves became Merovingian queens. By marriage to heiresses of higher social status, knights associated themselves with ancient lineages and legitimized their power. Similarly, as unfree peasant men

married free women, their children then had the free status of their mother. In such fashion, the lowest level of servile status seems to have disappeared in many regions by ca. 1000.

It was the early-medieval world, almost entirely a rural society, that was most characterized by the tripartite division into those who fight, those who pray, and those who work the land. Through the Merovingian and Carolingian eras, moreover, there was little differentiation in economic status between men and women or between a lord and his dependents: all were poor and living not far from starvation. Although there were a few independent peasants who worked their own land for subsistence, or soldier-peasants who might be called up for Carolingian military service, the rural population was made up almost entirely of peasants tied to the villa or manor and their lords, whether simple knights living off the revenues of a single estate, or more important secular lords and ladies owning many estates and moving from one to the next throughout the year, or important ecclesiastics, particularly monks and abbots. In addition, the growing religious fervor and social change after the Carolingian era gave rise to increasing numbers of religious hermits and other marginal peoples—charcoal producers, poachers, thieves, beggars, outcasts—living in the forests on the edge of the cultivated lands.

Relations between a rural lord and his peers were by military ties of feudalism or mutual defensive pacts often recorded in *convenientia* contracts. Relations between lords and peasants were basically those of lord and man, with the peasants expected to work and produce for their lords in return for military protection; historians call this rural economic organization "manorialism." Manorialism had its roots in the old Roman estate system of landlords with dependent tenant cultivators, in the emperor Diocletian's legislation that tied free peasants to the land, in the settlement of Roman. and barbarian troops in territories devastated by invasion or peasant revolt, and in the commendation of free peasants to aristocrats who promised to protect them from late-imperial tax collection. In the 8th- and 9th-century polyptichs of the Carolingian church, these varying origins of the peasant population are still visible. Those documents differentiate among *liberi* (free peasants), *coloni* (free men who had been tied to the land by tax legislation), *laeti* (probably barbarian settlers), and *servi* (serfs). Serfs were descendants of slaves allowed by their Roman masters to settle on tenancies and marry. Their servile origins were reflected in the requirement that they perform several days of agricultural labor each week on the lands of their lord and in certain limitations on their freedom, in particular on the freedom to leave their holding, the right to marry outside of the lord's estate, and the right to bequeath property without interference. Often, such manors were also immune from royal control, and serfs on them were required to use their lord's rather than public courts.

Distinctions among peasants of the Carolingian era were blurred in the centuries that followed. As the power of the kings, emperors, and their officials waned, free and unfree alike became increasingly subject to the economic exploitation based on force imposed by lords of castles, particularly after the year 1000. In the name of their *bannum,* such lords introduced "new and evil customs" that effectively captured a growing share of the expanding agricultural production of this period. Such customs as requiring peasants to use their newly installed water mills or the village ovens for a fee, to contribute to upkeep of castle walls, and to allow the lord to sell his wine before their own were imposed not just on serfs belonging to a particular landlord but on all the inhabitants of the district

around a castle. Payments for such new customs were often more onerous than any previously paid rents and dues, and the universal application of such exactions tended to erase earlier distinctions among peasants. Although documentation is sparse for the earlier period, by ca. 1100 most peasants were either free or unfree, some richer or poorer, but all increasingly dependent on the new castle lords.

This tendency to flatten distinctions among the peasantry does not mean that peasant status necessarily declined during this period. First of all, because agricultural production was increasing, peasants could afford higher rents. Moreover, competition for experienced agricultural laborers often increased as new villages were founded in the forested pockets of rural France, as new agricultural frontiers opened up in Spain and the German east, as the new monastic orders sought lay brothers, and as the cities beckoned as havens of freedom and craft labor. Lords who were instigators of new village foundations made concessions of liberties in order to attract settlers to their new villages, and lords who held older estates were forced to make similar concessions—to grant or sell liberties, to allow peasants to buy themselves out of servitude, or to allow peasants to create new fields and additions to their holdings in the waste adjoining the older cultivated area.

By the 12th and 13th centuries, lordship was no longer a purely rural affair. Lords themselves had also felt the attraction of towns and new frontiers and deserted the countryside. *Demesnes,* often not all that profitable, were converted into peasant holdings, labor services were commuted into payments in money or kind, and serfdom became increasingly a legal category having little effect on the economic circumstances of peasants. In the 13th century, lords in some regions, apparently faced by increasing costs and creeping inflation, tried to squeeze the last drop of profit out of the legal disabilities of serfdom by selling liberties and enfranchisements to their rich peasants or peasant villages or attempting to extort payment for legal disabilities long forgotten. Generally, however, it was the disappearance of labor services that ended the great division within the peasantry between free and unfree. Although not everyone owed the same rent, all were henceforth virtually equal inasmuch as none had to spend time working on the lord's land. The rural classes of the years after 1300 were increasingly impoverished, by famine, warfare, plague, and excessive division of property among a population growing beyond the means of European lands to support it. Yet because there were fewer to share remaining wealth, the condition of those peasants who survived the Black Death of 1348 and subsequent pandemics must have improved temporarily.

By the end of the Middle Ages, most distinctions in the rural world were economic. Rich peasants took land at farm from powerful lords for large sums and proceeded to hire laborers to work it, but there were also impoverished rural families whose names were entered on the abbey rolls of those entitled to a daily dole. In between were the masses of peasants whose economic condition varied considerably from one generation to the next, depending not so much on external economic circumstances as on bad luck, too-great fecundity (necessitating an overdivision of inheritance), or the good chance of having only one surviving heir to marry and bring property to the patrimony. After the 14th century, lords abandoned the countryside to live in cities as *rentiers* and seigneurs, as they would until the French Revolution.

# RUTEBEUF

(fl. 1248–85). The Parisian Rutebeuf composed works in a greater variety of genres than any other medieval poet. Known from a dozen manuscripts, his fifty-five extant pieces illustrate the range of medieval urban poetry. Rutebeuf composed in every vernacular genre except those especially cultivated in the provincial courts of 13th-century France: chivalric epics, romances, and songs of courtly love. At a time when manuscript compilations grouped lyric, dramatic, and narrative pieces separately, Rutebeuf, like his contemporary Adam de la Halle, imposed such a vivid and coherent poetic identity on all his compositions that they were gathered as a corpus in three contemporary compilations. Unlike the vagabond Goliards or jongleurs who traveled from castle to court, Rutebeuf remained in Paris, where he wrote to please many patrons—the royal family, the university, the higher clergy, the papal legate—and to amuse a public in city streets and taverns. While the aristocratic provincial courts were attuned to the refined art of the chanson and the idealizing fantasies of Arthurian romance, Rutebeuf's heterogeneous urban public relished topical works that spoke to issues of the day, such as the Crusades and the proliferation of mendicant orders in Paris. Rutebeuf's political verse follows historical events closely and presupposes familiarity with Parisian topography, personalities, and issues. The notable variety of genres and the historical content that characterize Rutebeuf s poetry are inseparable from Paris, the city that was its essential and nurturing environment, and from the colorful figure of the poet himself.

Although no document preserves any record of Rutebeuf's life, his poems reveal much about his background, training, and relations with patrons. He may have come from the region of Champagne; his earliest polemical poem, the *Dit des Cordeliers* (1249), favors the rights of Franciscan monks in Troyes. Throughout his career, Rutebeuf composed eulogies of nobles from Champagne, although mostly in connection with his role as a Parisian propagandist of papal crusade policy, as in his *complaintes* for Count Eudes de Nevers (1266) and Count Thibaut V of Champagne (1279). Rutebeuf's *Vie de sainte Elysabel* (ca. 1271) was commissioned for Isabelle, daughter of King Louis IX and wife of Thibaut V.Rutebeuf's most prominent benefactors were members of the royal family, such as Alphonse of Poitiers, brother of Louis IX, whom he addresses in his request

poem *Complainte Rutebeuf and* in his crusade piece *Dit de Pouille* (ca. 1265) and whom he eulogizes in 1271. The poet also appeals repeatedly to King Philip III the Bold to replace generous benefactors lost on the Crusades. Like the eulogies and commissioned devotional works, Rutebeuf's political poems and appeals for largesse mark his status as a skilled professional poet and his relations with patrons in the highest ecclesiastical and aristocratic circle.

Rutebeuf composed a number of comic pieces like those described in minstrel repertoires. His *Dit de l'herberie* is one of several examples of a dramatic monologue by a quack who amuses an audience with rapid enumerations of coins, exotic places, stones, and herbal remedies. All of Rutebeuf's fabliaux are known in other medieval versions: the story of the Franciscan who enrolls a girl in his monastic order *(Frère Denise);* the tale of the wife who pretends that her midnight rendezvous with the priest is a devotional exercise *(Dame qui fist trois tours autour du moutier);* the account of the bishop who gave Christian burial to a donkey who left him twenty pounds *(Testament de l'âne).* The theme of the obscene *Pet au vilain* is reused in André de la Vigne's farce, the *Meunier de qui le diable emporte l'âme en enfer* (1496).

Rutebeuf also had sufficient clerical training to read Latin and know the student's life. His *Dit de l'université* is a sympathetic account of a peasant boy come to study in Paris who soon squanders his hard-earned funds on pretty city girls. Though not a vulgarizer of philosophical and scientific concepts like his contemporary Jean de Meun, he draws on Latin sources for his saints' lives, miracles, polemical poems, and requests for largesse. In the *Dit d'Aristote,* he translates a passage from the epic *Alexandreis* by Walter of Châtillon; in *Sainte Elysabel,* he abridges a Latin *vita;* in his miracle of the *Sacristain et la femme au chevalier,* he expands an exemplum from the early 13th-century *Sermones vulgares* of the preacher Jacques de Vitry. Rutebeuf's lives of exemplary penitents combine French and Latin sources in the narrative *Sainte Marie l'Egyptienne* and the *Miracle de Théophile,* which dramatizes versions by Gautier de Coinci and Fulbert of Chartres. He even translates and glosses lines from Ovid's *Metamorphoses* in his allegorical *Voie de paradis.*

Rutebeuf s clerical training not only led him to rich literary sources, it also determined his subjects and his style. Rutebeuf s moral poems contribute to the ecclesiastical effort, inspired by the Fourth Lateran Council (1215), to instruct laypeople in religious doctrine: his *Voie de paradis* is an allegorical catechism of confession; three works, the *Etat, Vie,* and *Plaies du monde,* adapt the conventional estates satire of Latin preachers and moralists for a lay public. In contrast with the self-reflective mode of contemporary courtly lyric and moral verse, Rutebeuf's poetry often seeks to turn its hearers toward the outer world of history painted in dramatic moral colors.

Commissioned by supporters of the crusade policies of Louis IX and the pope, Rutebeuf's eleven crusade poems incorporate estates satire and rhetorical techniques of moral persuasion from the didactic tradition to rouse public opinion in favor of increasingly unpopular crusades against Charles of Anjou's Christian rival for the Sicilian throne (1265) and against the Muslims in Tunis (1270). As a professional pamphleteer, Rutebeuf does not express personal opinions in his poems. He advocates the differing views of the two causes he served in order to sway public opinion and encourage partisans to action; he is an ardent supporter of papal policies in his crusade verse, a fiery Gallican in his defense of university autonomy.

In his fourteen poems supporting the secular university masters against their Franciscan and Dominican rivals and the pope, Rutebeuf again recasts the motifs of didactic poetry to new, polemical ends. Dream allegories, battles of vices and virtues, animal satires, complaints attributed to the church personified—all the resources of the Latin and French satirical tradition are brought to bear on partisan concerns. Knowledge of historical circumstances is essential to the understanding of Rutebeuf s topical poems: the proliferation of mendicant orders in Paris *(Ordres de Paris, Chanson des ordres, Des béguines);* the struggle between mendicants and secular clergy for parish privileges and university chairs *(Discorde de l'université et des Jacobins, Des règles, Dit de sainte Église, Bataille des vices et des vertus, Des Jacobins);* the writings of William of Saint-Amour, banished leader of the university masters (*Dit* and *Complainte de Guillaume*). Out of this factional literature rises a new allegorical figure, Hypocrisy, which comes to overshadow earlier concern with pride and avarice and dominate moral literature of the late 13th and 14th centuries. Personified in Rutebeuf's *Du Pharisien* and *Dit d'Hypocrisie,* hypocrisy is central to Jean de Meun's character False Seeming in the *Roman de la Rose* as well as in late animal satires, such as *Renart le contrefait* and the *Livres de Fauvel*.

Polemical, pious, or entertaining in topic and nonlyric in form, Rutebeuf's poems have a style and shape that owe little to prevailing courtly modes. His characteristic form is the first-person nonmusical *dit,* a rambling, open form, most often cast in octosyllabic couplets or tercets, that accommodates all the topical themes of contemporary history that found little place in courtly song, romance, or epic. In spite of their rhetorical embroidery and rich rhymes, Rutebeuf's poems give an overall impression of artless simplicity and directness. His verses are engaging and amusing: enlivened with frequent irony, animated with proverbs, touched with realistic details. Lively, colloquial direct discourse and dialogue characterize both Rutebeuf's poems and the tableaux of his *Miracle de Théophile*. Often shaped as *complaintes,* Rutebeuf's *dits* pass easily from one subject to another via apostrophes and exclamations that are united more by appeal to emotion than by rigorous logic.

The figure of the poet himself, however, is the element that unifies Rutebeuf's works. Identified by a signature pun as *Rustebeuf qui rudement œvre* ("Rutebeuf who works crudely"), the persona of the poet is protagonist in many of his moral, political, and comic pieces: "Rutebeuf' is the pilgrim in the allegorical *Voie de paradis;* he is the character who goes to Rome in a dream vision to hear news of the election of Pope Urban IV (*Dit d'Hypocrisie,* 1261). It is in his own name that Rutebeuf accuses church prelates of caring less for the Crusades than for "good wine, good meat, and that the pepper be strong" (*Complainte d'Outremer,* 11. 94–95). It is he who witnesses the chaste speech of Alphonse of Poitiers in his eulogy and who is called to judge the comic debate between Charlot and the barber.

Characterization of his poetic persona is most vividly developed in Rutebeuf's best-known works, his ten poems of personal misfortune. His poetic "I" is based on the conventional character type of the poor fool that figures in medieval request verse by Goliards and minstrels and later in the poetry of Eustache Deschamps and François Villon. Picturesquely personal rather than autobiographical in content, his poems of misfortune dramatize an exaggerated, grotesque self, deserted by friends, grimacing with cold and want, and martyred by marriage and a weakness for gambling. In the plaintive

or ironic tones of the *Dit d'Aristote,* the *Paix de Rutebeuf,* and *De Brichemer,* the poet reminds his patrons of the virtue of largesse and prompt payment. The *Repentance Rutebeuf* gives a solemn subjective resonance to the conventional poetry of remorse found in his saints' lives and miracles. Furthermore, in his *Griesche d'hiver, Griesche d'été* and *Dit des ribauds de Grève,* Rutebeuf shows the reader a social world excluded from courtly song, romance, and epic, that of a homeless urban proletariat, stung by white snowflakes in winter and by black flies in summer.

Appreciatively collected by contemporaries, Rutebeuf's poetry was forgotten after his time. But in his works we discover a poetic voice that dramatizes and particularizes the subjective lyric while it speaks with satirical wit and ethical fervor about concerns of the urban world of medieval France.

# S

# *SAINT ALEXIS, VIE DE*

. Considered a masterpiece among the early saints' lives, the *Alexis* tells the story of a young man who vows himself to God and a life of poverty. The hero flees from Rome on his wedding night, leaving his new bride behind with his father and mother. In exile, Alexis earns a reputation as a holy man but disdains the worldly attention it brings. He returns to Rome, where, unrecognized, he lives out a life of penury and degradation under a staircase of his parents' house. Not until his death do those around him realize that he was a holy man. The abnegation Alexis practices is that of an *imitator Christi,* a person who heeds Christ's injunction, as reported in the Gospels, to renounce worldly position, wealth, and family.

The Old French poem is part of a European legendary tradition of unknown origin centering upon the "Man of God." According to a near contemporary account, this nameless individual died in Edessa in Mesopotamia ca. 430. An early Greek account gave him the name Alexis and has him return to Rome to die. His feast is July 17. The story passed through Syriac, Greek, and Byzantine stages, reaching Rome in the 10th century. The French work is based on a Latin composite source and is generally thought to have been written in the mid-11th century.

*Alexis* is often praised for its spare beauty and formal perfection. Apparently a popular story, it survives in numerous manuscripts and in different versions. The redaction in manuscript *L* (Lamspringe, now Hildesheim) is generally considered the best. It contains 125 stanzas, each of five assonating decasyllabic lines (625 lines total). A second important manuscript, the Ashburnham, ends with stanza 110, omitting mention of the salvation of Alexis's family. Both manuscripts, derived from a common source, date from the 12th century.

# *SAINT LÉGER, VIE DE*

. Leodegard, or Léger in French (ca. 616–678), abbot of Saint-Maixent, then bishop of Autun, was declared a martyr, primarily on political grounds, after the death in 681 of his enemy, Ebroin. By the 10th century, when the French *Vie* was composed, his cult was widespread. The 240-line strophic poem, probably from the northeast, exists in a unique 11th-century manuscript at Clermont-Ferrand, which also contains the sole copy of the *Passion du Christ.*

# SAINT PLAYS

. About fifty extant plays in French and Occitan are based on the lives of the saints, ranging from a few hundred to many thousands of lines. Three main groups of saints are featured in these plays: the Apostles and other New Testament figures, especially Peter, Paul, and Mary Magdalene; well-known saints of the early church, most of them martyrs like Barbara, Margaret, and Lawrence; and the most original and interesting group, the saints of France, from the patronal St. Denis to the medieval St. Louis, canonized in 1297, and Jeanne d'Arc, already treated as sanctified in the mid-15th-century *Mystère du siège d'Orléans*. The most contemporary saint play of all was that of St. Catherine of Siena, performed in Metz in 1468, only seven years after her canonization. The text, however, has not survived.

The model for most hagiographic drama is the life of Christ. There is occasionally a nativity scene, as for St. Geneviève, patron saint of Paris, and almost always a death scene, violent for the martyrs like St. Barbara, peaceful for the confessors like St. Martin of Tours, and edifying for all. Although the pattern of ministry, miracles, and martyrdom is established by the Gospels, the sources for the lives and especially the deaths of the saints are largely New Testament apocrypha or, more usually, the *legenda,* Latin lectionaries used in the liturgy for the relevant saint's day. Consequently, the plays exhibit much greater freedom in the treatment of the subject matter than do the biblical plays, and there is less ready-made amplification in the form of allegory, typology, and exegesis. As a result, most saint plays are fairly short, with few surpassing 10,000 lines.

A saint may have been chosen as the subject of a play because he or she was the patron of a community or a church, a trade guild or religious confraternity, or even an individual. Some plays were linked with local relics or statues, and some were performed in thanksgiving for safe delivery from pestilence or other disaster. In a number of cases, we have no explanation for a particular performance in a particular place. In the civic plays, a comparison of performance records suggests that, whereas a small community

might produce a play about its patron on one or two occasions, the larger towns generally had regular productions that intermingled the shorter, and therefore cheaper, saint plays with the elaborate and expensive Passion plays. Although evidence exists for plays being put on in many parts of France, they are most common in the northern area and in the southeastern provinces of Savoy and Dauphiné.

Comedy provides an important contrast to the elevated mixture of sermons and suffering that make up many saint plays. *Diableries,* or devil scenes, are as common as in the Passion plays. There are also many instances of the introduction of a single character, a simpleton *(fou, sot)* or peasant (*vilain,* rusticus), who acts as a humorous, sometimes satirical, often obscene chorus to the action or who takes part in comic scenes of misunderstanding with messengers. Comic also are the jailers and torturers, who figure largely in the popular martyrdom plays and who work the complicated special effects for beheading, boiling in oil, or tearing apart by wild horses.

The more historical type of play features the saint preserving his or her native city from pagan invaders. The two surviving plays on St. Louis, king of France, provide interesting contrasts here. The anonymous 15th-century play stresses the king's conflict with the English, an obviously appealing subject in the aftermath of the Hundred Years' War; the early 16th-century play by Pierre Gringore lays greater emphasis on Louis's defense of the church against the German emperor Frederick. Plays like the *Mystère de saint Bernard,* on the founding of the famous hospice at the Great Saint-Bernard Pass, probably reflect the importance of travel and pilgrimage in the 15th century. Numerous scenes depict journeys by boat or on horseback and offer other touches of contemporary realism, even in the plays that purport to be set in biblical times. It is this element of personal, local, or national involvement that gives the saint plays their unique flavor and justifies treating them as a distinct dramatic genre.

# SAINT-AIGNAN-SUR-CHER

. From the 10th century, Saint-Aignan-sur-Cher (Loir-et-Cher) was the center of an important castellany dependent on the counts of Blois. Eudes I, count of Blois (r. 976–96), constructed a castle here in the 9th century. Conflicting sources date the church of Saint-Aignan to either the 8th or 9th century, with one source suggesting the consecration of a church by monks from Saint-Martin of Tours.

In the 12th century, the church at Saint-Aignan housed a chapter of secular canons as well as a parish and was dependent on the archbishop of Bourges. The crypt mirrors the upper church, with ambulatory and three apsidal chapels, and extends one bay in length, with side aisles. Romanesque and some Gothic wall paintings survive from the last

quarter of the 12th century on the upper walls and vaults of the axial and south chapels and in the main apse. With its white ground and lighter color scheme, the main apse contains an enthroned Christ who gives keys and a scroll to SS.Peter and James the Lesser, and cripples surround them. In contrast to the main apse, the frescoes elsewhere, in highly saturated colors, illustrate the life of St. Gilles, the Glory of the Lamb, the raising of Lazarus, and the life of Christ. With origins in the 13th century, the château consists mostly of 15th- and 16th-century construction; it is not open to the public.

# SAINT-BENOÎT-SUR-LOIRE

**.** Founded at Fleury (Loiret) in 651, the abbey of Saint-Benoît-sur-Loire followed the *Rule* of St. Benedict of Nursia. Between 690 and 707, the remains of Benedict were brought from the Italian monastery of Monte Cassino, then in ruins, to Saint-Benoît, underscoring the growing dedication to Benedict and his *Rule* in France. An elaborate account of the search for and return with Benedict's remains is given in Adrevald of Fleury's *Historia translationis sancti Benedicti*. Adrevald tells of an expedition from Saint-Benoît to Monte Cassino being joined by citizens of Le Mans seeking the remains of St. Scholastica. The monks from Saint-Benoît arrive at Monte Cassino first,

Saint-Benoît-sur-Loire (Loiret), plan of church. After Rousseau.
Saint-Benoît-sur-Loire, abbey church, west tower. *Photograph courtesy of Whitney S.Stoddard.*

while the Le Mans group stops in Rome. Led to the tomb of Benedict and Scholastica by miraculous signs, the monks rush back with the remains of both saints. The Le Mans group soon arrives at Saint-Benoît and demands Scholastica's remains, which are given to them. Adrevald's account of the *translatio* of the relics of these two widely venerated saints became a model for the literary description of many later translations, or thefts, of relics of saints in the medieval period.

Saint-Benoît was an important intellectual center with scriptorium throughout the early Middle Ages, especially under Abbot Abbo of Fleury (r. 988–1004). Successive parts of the abbey church span the Romanesque through Early Gothic periods. The western-tower porch was constructed during the abbacy of Gauzlin (r. 1004–30). The transept and choir, begun under Abbot Guillaume (r. 1067–80), were complete by 1108. The late 12th-century nave was dedicated in 1218.

The two-story porch has nine vaulted compartments. The foliate and historiated column capitals and sculpted plaques on the north wall were carved by Umbertus and his followers. The rib-vaulted nave has seven bays with single groin-vaulted aisles. The transept with two chapels on the eastern side of each arm has a square tower over the crossing. A tunnel-vaulted choir terminates in a faux-tran-sept with single chapels and an ambulatory with two radiating chapels. The choir and apse have a blind-arcaded triforium and clerestory whose carved capitals reflect later Romanesque sculpture. An Early Gothic portal dated ca. 1200 is on the north side of the nave. Above six jamb figures is a tympanum with Christ enthroned surrounded by the four Evangelists and the translation

of St. Benedict's relics on the lintel. This monument attests to the abbey's religious and intellectual importance during the central Middle Ages.

# SAINT-CHEF

. Abundant documentation reveals the long history of the monastery of Saint-Chef (Isère), well known today for its wall paintings. According to the letters of St. Adon, archbishop of Vienne (r. 860–75), a local saint, Theodore, founded in the 6th century an abbey church dedicated to the Virgin. After his death in 575, the church was rededicated to both Theodore and the Virgin. By 837, conventual buildings had been built, and in 890–91 Bishop Barnoin de Vienne restored the abbey church after Vikings had destroyed the cloister. At about the same time, the Vikings brought monks from Montier-en-Duc here to Saint-Théodore. By the end of the 9th century or the beginning of the 10th, the monks returned to Montier-en-Duc and the abbey fell into a state of neglect.

In the second half of the 10th century, archbishops Thibaud de Vienne (r. 952–1000) and Leodegar (r. 1030–70) restored the church. Sometime in the 14th or 15th century, the name of the monastery was changed from Saint-Théodore to Saint-Chef. At the beginning of the 15th century, a fire severely damaged the abbey, and in 1423 a new cloister was built. Later fires brought reconstruction in the 19th century.

Of the abbey church, the *petit appareil* (small-stone) masonry of the seven-bay nave with side aisles has Norman single-light windows and a wooden roof. Regular supports end at the transept and east end of ashlar masonry, where a larger compound pier leads to the large apse with two smaller apsidal chapels to either side. Each arm of the transept contains one of the apsidal chapels and is barrelvaulted.

The apses and conventual chapel of SS.Michael and George in the upper story of the north transept of the abbey church contain remains of a comprehensive scheme of mid-11th to mid-12th-century decoration. (Overpainting makes dating the work problematic.) Christ in Majesty and standing figures of saints occupy the apse, and the conventual chapel carries an enthroned Christ in the center of a high domical vault with four sides. Surrounded by four triangular compartments holding the Virgin, Apostles, angels, saints, and a holy city, Christ occupies the apex of the Heavenly Jerusalem.

# SAINT-DENIS

. The abbey church of Saint-Denis, just north of Paris, one of the oldest and most prestigious monastic foundations in northern France, marks the final resting place of St. Denis (Dionysius), Apostle of Gaul and first bishop of Paris, who died during the persecutions of Diocletian. A church was built here at the initiative of St. Geneviève before 500, but associations with royalty are said to have begun only with King Dagobert (r. 629–39). The legend is that Dagobert, fleeing the wrath of his father, sought refuge in the church and fell asleep on the tomb of St. Denis. His vengeful father tried several times to enter the church but each time was prevented from so doing. In gratitude, Dagobert built a new church that was miraculously consecrated by Christ, Peter, Paul, and Denis and his two companions the night before its dedication.

Dagobert's basilica was decorated with marble columns and capitals, some of which survive and most of which were reused when Fulrad rebuilt and enlarged the church, beginning ca. 750, with the patronage of the Carolingian dynasty. When Pepin III the Short died in 768, he was buried, according to his wishes, face down outside the west doors to atone for the sins of his father, Charles Martel. Charlemagne, Pepin's son, is said to have paid for a new west structure that extended the consecrated space of the church over his father's burial site. The Carolingian kings followed the example of Pepin, who had not only enriched the church with lavish donations but also employed its abbot, Fulrad, for diplomatic missions, and frequently included the abbots among their trusted advisers. Thus, it is no surprise that Fulrad's church, as revealed in Crosby's excavations, was a splendid structure composed of a nine-bay nave with aisles, a projecting tran
Saint-Denis (Seine-Saint-Denis), nave
isometric. After Violet-le-Duc.

sept, and a two-level apse with *confessio* around the burial sites of Denis and his two companions. The east end was surrounded by a crypt chapel of three parallel aisles (ca. 830) during the abbacy of Hilduin.

The 12th-century abbacy of Suger (r. 1122–51), the next great age of the abbey, is also marked by close ties with royalty, in this case the Capetians Louis VI and Louis VII. This is perhaps the best-known moment in the history of the abbey, thanks to the preservation of Suger's history of his abbacy and of his building efforts, culminating with the consecration of the enlarged church in 1144. From Suger's writings, we learn not only of the two architectural additions, the nave extension and western bays and the two-level chevet, but also of their embellishment with sculpture and bronze doors, with stained glass and bejeweled liturgical vessels intended to complement, even to surpass, such venerated treasures as the Cross of St. Éloi (7th c.), the so-called throne of Dagobert (9th c.), and the now lost altar frontal of Charles the Bald depicted by the Master of St. Gilles.

*Photography by J.Herschman.*

Saint-Denis, abbey church, nave.
*Photograph: Clarence Ward,
Collection. Courtesy of Oberlin
College.*

The architectural additions of Abbot Suger include a westwork three bays wide and two deep, as well as the four bays necessary to join the old nave and a two-level chevet. The lower level consists of ambulatory and chapels wrapped around both the old apse and Hilduin's chapel to create a level platform for the upper ambulatory and seven radiating chapels. These eastern additions mark a significant change in medieval French art and gave rise to a new style that is still (erroneously) called "Gothic." The upper level of the new chevet of Saint-Denis, dedicated with pomp and ceremony in 1144, is universally recognized as the first example of the new style. In reality, both levels of the chevet, crypt as well as upper level, mark the beginning of a new conception of the organization of architectural space that differs profoundly from the Romanesque style.

Equally important in the history of Gothic art are the three west-façade portals, mutilated in the 18th century; the Porte de Valois, a 12th-century portal now installed in the 13th-century north transept; the remaining stained-glass windows; and the lavish liturgical objects commissioned by Abbot Suger. From his writings and such later documents as survive, lost works like the bronze doors, the Great Cross, and the Tomb of the Martyrs can be at least partly reconstructed by scholars.

Although Crosby's excavations revealed that Abbot Suger ultimately intended to rebuild even the 8th-century nave, this was not accomplished until the 13th century. Beginning on the north side in 1231, the church was progressively enlarged to its present width and height. The expansion of the transept created a new space that by its lateral extension almost seemed to include Abbot Suger's chevet, rather than setting it apart. The process was completed by rebuilding the upper stories and heightening them to match the new height of the transept. In plan, this church has an eight-bay nave with the monks' choir in the first two, which is why the transept has double-aisle bays on the west side. Work on this church, one of the finest examples of the Rayonnant style, continued almost to the end of the century.

It was this 13th-century church that became the burial site of the kings of France as a result of the efforts of Louis IX. Kings had been buried at Saint-Denis since the time of Dagobert and probably long before that—the intact tomb of Queen Arnegund, mother of Chilperic, dates to the mid-6th century, and the cemetery has yielded still earlier nonroyal burials. Prior to the 13th century, none of the royal tombs was indicated by more than an engraved floor slab. At the instigation of Louis IX, all of the royal tombs were opened and the bodies transferred to new, raised sarcophagi topped by carved effigies. The new tombs were grouped by dynasties along the sides of the crossing, except for such patrons as Charles the Bald, who as lay abbot was buried in the monks' choir; Dagobert, who was buried on the south side between the two altars; Philip II Augustus, Louis VIII, and Louis IX (until his canonization), who were buried in the center of the crossing.

The importance of Saint-Denis continued into the early 14th century, when the abbey became the fountainhead in collecting, writing, and disseminating such works as the *Grandes chroniques de France* and the *Vie de saint Denis*. The privileged position of the abbey in relation to royalty produced such splendid gifts as the Virgin and Child, now in the Louvre, given by Queen Jeanne d'Évreux.

All of these works suffered enormous damage and destruction, especially in the aftermath of the Revolution and in the early, misguided attempts at preservation and restoration. Modern scholarship nonetheless continues to piece together the evidence to give an understanding of the complexities that distinguish the works of art associated

with this prestigious foundation, just as recent excavations have revealed other churches on the abbey site.

# SAINT-GELAYS, OCTAVIEN DE

(1468–1502). Writer and translator. Born into an important family in Cognac, Saint-Gelays studied law in Paris, was introduced to the royal court, and in 1494 became bishop of Angoulême. His extensive literary production was as varied as his life. During the reign of Charles VIII, he was notable as a poet of circumstance, inspired among other events by the death of the king, but he also wrote a *Débat de l'homme de cour et de l'homme des champs,* His most important work, the *Séjour d'Honneur* (1490–94) is a combination of verse (8,794 lines) and prose reflecting a remarkable array of literary

traditions, from Ovid and Jean de Meun to Boccaccio and Charles d'Orléans, including contemporary history and autobiographical elements, as the poet makes his way from the bower of Vain Hope to the House of Understanding, passing through the Séjour d'Honneur (the court). Its popularity is shown by four printed editions before 1526.

Equally successful were his translations: the *Ystoire de Eurialus et Lucresse* of Aeneas Sylvius Piccolomini in verse (1493), Terence (ca. 1500), Virgil's *Aeneid* (published in 1509), and especially Ovid's *Heroides* (1496), one of the great successes of the period. For his brief thirty-four years, his accomplishment is extraordinary.

# SAINT-GÉNÉROUX

. This small church, dating from the 9th-10th centuries, belonged to the priory of Saint-Jouinde-Marnes and was dedicated (ca. 682) to St. Généroux,

Saint-Généroux (Deux-Sèvres), east end. *Photograph courtesy of Whitney S.Stoddard.*

abbot of Saint-Jouin-de-Marnes. With the exception of its façade, Saint-Généroux offers an almost complete example of pre-Romanesque architecture. Although subjected to brutal restoration, the church has not lost all its interest. In the sanctuary, a central apse and two smaller ones precede long bays on the right and display intercalated and reticulated stonework. They are linked to one another by doubled bays and by the lateral

passages of a large room with three arcades surmounted by an unusual clerestory. Originally a rectangular room, the nave was subdivided in the 13th century into three spaces; the division consists of a double series of arcades in broken arches on rectangular pillars.

*E.Kay Harris*

Crozet, René. "La restauration de l'église de Saint-Généroux." *Bulletin de la Société Historique et Scientifique des DeuxSèvres* 40(1961).

# SAINT-GENIS-DES-FONTAINES

. The small church of Saint-Genis (Pyrénées-Orientales) is noted for its carved marble lintel above the entrance. The rectangular slab, dated

Saint-Genis-des-Fontaines (Pyrénées-Orientales), lintel of west door.
*Photograph courtesy of Whitney S.Stoddard.*

1020–21 by inscription, depicts Christ in a mandorla supported by two angels with three Apostles standing under horseshoe arches to each side. Decorative details and the apocalyptic subject suggest Spanish influence. The flat, linear carving and compressed

figural proportions reflect lack of sculptural expertise. Although the lintel was incorporated in a 12th-century remodeling of the church, it is significant as a precursor of Romanesque architectural sculpture.

# SAINT-GERMAIN-EN-LAYE

. In 1124, Louis VI built a fortress overlooking the Seine on the hillside of Saint-Germain (Yvelines), on the site of the present château. The keep, often attributed to Charles V, belongs to this first phase of construction. Between 1230 and 1238, Louis IX added to the castle and had its Sainte-Chapelle built. Burned by Edward, the Black Prince, during the Hundred Years' War, the fortress was restored by Charles V ca. 1368. In 1539, Francis I razed the entire castle with the exception of the its keep and the chapel built by St. Louis. Perhaps the work of Pierre de Montreuil, this Sainte-Chapelle recalls the style of the apsidal chapels of the cathedral of Reims. The nave, spanned by slender columns and illuminated by tall windows (without their stained glass, unfortunately), is 80 feet long and 33 feet wide. The western façade, including its rose window, was covered over by Francis I with a symmetrically angled turret. The carved keystones of the vaulting provide one of the most interesting ornamental details. In these stones, one seems to recognize the heads of St. Louis; his wife, Marguerite de Provence; his mother, Blanche of Castile; and his brothers.

# SAINT-GERMER-DE-FLY

. The abbey church of Saint-Germer-de-Fly (Oise), undertaken ca. 1150, represents an attempt to combine the ambulatory and radiating-chapel plan from Senlis or Saint-Denis with the compound-pier tradition of the Vexin. The four-story elevation here consists of aisles, groin-vaulted gallery, rectangular slots opening into the gallery roof space, and clerestory windows with a narrow, corbeled ledge below them, suggesting a regional interpretation of the Anglo-Norman clerestory wall passage. The galleries of the chevet and nave are connected by a wall passage around the transepts. The elaborate west end, of which only the east wall remains, was a western transept resembling that built slightly later at Noyon. Saint-Germer has suffered disasters over the centuries and is in poor condition, but most of the architectural decoration is intact and confirms the dating to the third and last quarters of the 12th century. The beautiful abbot's chapel added beyond the

axial radiating chapel was clearly patterned after the upper chapel of the Sainte-Chapelle in Paris.

# SAINT-GILLES

. The house of Saint-Gilles, or the "Raimondin" family, was associated with the county of Toulouse for centuries. The first member of the family to govern Toulouse was Fredelon, who received the title of *marchio* from Charles the Bald in 849. His son Odo recovered

Toulouse and the Rouergue from the count of Auvergne in 885 and established the dynasty, dividing the two counties between his sons, a division that lasted until 1065.

By 924, the family was claiming supremacy over all Septimania and, for a few decades, over the duchy of Aquitaine as well. Guilhem Taillefer (961–1037) extended the family's interests to the Rhône when he married Emma, one of the heiresses to Provence. By the middle of the 11th century, the counts had built a castle at Saint-Gilles on the Petit Rhône. The port quickly became a major trading center, and from the time of Guilhem's grandson Raymond IV the heads of the family were often called "counts of Saint-Gilles," since the Rhône Valley was their main source of wealth and the home of their most important followers.

After Raymond IV conquered the Rouergue (1065), he took the title of marquis of Provence and invented that of duke of Narbonne. One of the leaders of the First Crusade, he ended his life as count of Tripoli. His niece Philippa married Duke Guilhelm IX of Aquitaine, allowing her granddaughter Eleanor of Aquitaine and her successive husbands, Louis VII of France and Henry II of England, to lay claim to Toulouse.

Count Raymond V (r. 1148–94) contracted marriage alliances that extended his power to the Alps in the east and put pressure on the count of Barcelona in Occitania. His alliances made and broken with various powers made him for a while the most powerful lord in Occitania but eventually mired him in endless unsuccessful warfare. In the last decades of his life, the town of Toulouse became a virtually independent city-state. In 1177, hoping to find an additional ally in the church, he brought the attention of the Cistercians to the spread of heresy in his lands, inviting armed intervention that presaged the Albigensian Crusade to come.

His son, Raymond VI, reaped the consequences. In 1208, he was accused of plotting the death of Peter of Castelnau, the papal legate. Raymond adroitly directed against the Trencavel family the crusade that was sent to punish him, but in 1211 Simon de Montfort turned his army against Toulouse and gained possession of the city after his victory at Muret in 1213. The Fourth Lateran Council (1215) made Simon count of Toulouse, took Avignon and the Comtat Venaissin for the papacy, and left only a portion of Provence for the future Raymond VII. When Louis VIII took over leadership of the crusade in 1226, the family's fate was sealed. The Treaty of Meaux-Paris (1229) provided that Raymond's daughter would marry Louis's son Alphonse of Poitiers, giving all political claims in Occitania and the inheritance of Toulouse to the Capetians. Raymond VII, the last count of Saint-Gilles, died in 1249.

# SAINT-GILLES-DU-GARD

**.** The largest exterior ensemble of Romanesque sculpture is the façade of Saint-Gilles-duGard (Gard). The superstructure of the façade was destroyed during the religious wars in the 16th century. Because of the presence of many Roman monuments, Provençal Romanesque architecture and sculpture both exhibit strong Roman influences. The design of the Saint-Gilles portals resembles both Roman triumphal arches and procenia of theaters.

The three portals of Saint-Gilles depict major events in the life of Christ. Twelve larger-than-life Apostles flank the central portal. The Virgin and Child adored by the Magi occupy the left tympanum, and the Entry into Jerusalem decorates the frieze and lintel. The upper frieze to the left of the central portal contains such scenes as Christ Cleansing the Temple and the Raising of Lazarus. The central tympanum, now modern, may have depicted the Last Judgment above the damaged Last Supper on the lintel. The frieze continues to the right, with Christ being led before Pilate, undergoing the Flagellation, and Carrying the Cross. The final scenes of Christ's Passion are located on the right portal; the Crucifixion is in the tympanum, and the Holy Women buying perfume and the Angel appearing to the Holy Women after the Resurrection are on the lintel.

The iconographic programming of the façade was controlled by the clergy. The depiction of the Crucifixion, a rare subject to appear in a tympanum, reflects the strong stand taken by the clergy against a heretical sect led by Peter de Bruys, who had denied the validity of the Mass and the need for church structures. To emphasize his feelings, he and colleagues stole the wooden crosses from Saint-Gilles, and on Good Friday they roasted pork in front of the abbey over a fire made of the crosses. A few days later, Peter and his companions were burned as heretics on the same spot. This event, which took place ca. 1136, did not

Saint-Gilles-du-Gard (Gard), west façade. *Photograph courtesy of Whitney S.Stoddard.*

end this heretical movement; St. Bernard spent summers preaching against it in the 1140s.

Much evidence in the construction of the portal leadsto the conclusion that the design changed as work progressed. Blocks of limestone were inserted under the small marble columns flanking the side portals and under the monumental figures across the entire façade, resulting in the raising of all three portals. Five sculptors were responsible for most of the façade sculpture: Brunus (Matthew [signed Brunus], Bartholomew, James Major, and Paul); Thomas Master (Thomas, James the Less, Peter, and bases of central portal); Soft Master (two Apostles and left-portal Virgin and Child of tympanum, Preparation and Entry into Jerusalem); Hard Master (two Apostles, right portal, Crucifixion, and lintel); Michael Master (Angel Michael, Archangel, and parts of left and right portal). Soft Master, Hard Master, and Michael Master divided up the carving of the upper frieze of the central portal.

The four Apostles by Brunus exhibit a massiveness and an anatomical articulation of the body that result from the influence of Roman and early Christian sculpture. In spite of this classical impact, the Apostles are placed either between pilasters or under friezes so that they remain part of the wall (Romanesque), not added to the wall (Roman).

There is no agreement about the dating of the façade: dates from the late 11th century to the early 13th have been proposed. Based on historical, architectural, iconographical, and stylistic evidence, as well as relationships between Saint-Gilles and dated monuments outside Provence, the accumulated evidence seems to point to the 1140s as the most logical date.

The 16th century witnessed the destruction of the superstructure of Saint-Gilles. The large Cluniac choir with ambulatory and radiating chapels exists only as a fragment. The nave capitals, bases, and sections of the northern part of the choir have preserved their 12th-century sculpture.

The crypt of Saint-Gilles, begun in 1116, was constructed to protect the tomb of St. Gilles and to facilitate access for pilgrims to his grave. Because of the slope of the site from northeast to southwest, the crypt is three aisles wide in the two western bays and two aisles in the four eastern bays. A groin vault covers the central bay, containing the tomb. The crypt has a western extension under the central portal. On this extension and on the western wall of the crypt are burial inscriptions, dated ca. 1129. A study of the articulation of the piers and the design of the ribs reveals that the nave of the crypt was built from west to east, with the groin vault over St. Gilles's tomb constructed first. The Saint-Gilles crypt is an impressive Romanesque statement, and its powerful ribbed vaults, a Gothic structural system, are meant to crown the low, rectangular spaces and support the church above, not to light the interior.

# SAINT-GUILHEM-LE-DÉSERT

. Founded in 804 as the Benedictine abbey of Gellone by St. Guilhem d'Aquitaine, the count of Toulouse who was the hero of the Guillaume d'Orange epic cyle, the monastery was renamed later for its founder. Thanks to the relics of the saintly Guilhem, his place in epic history, and the monastery's location along the pilgrimage route to Santiago de Compostela, Saint-Guilhem prospered and reached its apogee in the 11th and 12th centuries, when the present Romanesque abbey church, the third on the site, was built. The church was built in three phases: the nave and side aisles were finished ca. 1075, in time for the church's consecration in 1076; the transept and the chevet, with its three apsidal chapels, were constructed between 1077 and the end of the century; the narthex was built in the second half of the 12th century. A bell tower was added in the 15th century. The exterior is decorated with Lombard bands. The sober four-bay nave, 59 feet high but only 20 feet wide, is covered by plain barrel vaulting supported by wide doublures that rest on pilasters extending directly to the floor, emphasizing the sense of verticality. The interior is lit by large windows above each of the bays. Some remains of the cloister, which originally had galleries on two levels, flank the south side of the church; others can be found at the Cloisters in New York City.

# SAINT-JOUIN-DE-MARNES

. Saint-Jouin-de-Marnes (Deux-Sèvres), renowned for the relics of the 4th-century hermit Jovinus, was one of the oldest abbeys of the Poitou. The transept of the present church, crowned by an octagonal dome on squinches, and the first bay of the choir date from the late 11th century. The complex Angevin vaults of the seven eastern bays of the long nave are 13th-century, as are those of the choir, ambulatory, and three radiating chapels. The south transept, facing the keep of Moncontour, retains part of the 14th-century fortifications; to the north are the remains of the Gothic cloister.

In the high gable of the west façade, Christ sits in majesty before a cross potent, flanked by angels. Thirty small figures converge in two groups toward the Virgin beneath his feet. Other sculptures frame the windows of the three bays of the twin-turreted façade. Although enigmatic in detail, the general theme of both sculpture and architecture is one of triumph.

# SAINT-LÉONARD-DE-NOBLAT

. The picturesque town of Saint-Léonard-de-Noblat (Haute Vienne), retaining some medieval houses, recalls the 6th-century hermit and savior of prisoners whose cult spread throughout the medieval West. The collegiate church presents complex problems for the architectural historian due to the many discrepancies in plan, supports, and vaulting. The walls of the nave and transept are 11th-century; the nave supports and vaulting, the domes of the crossing and transept arms, and the impressive choir were modified or rebuilt in the 12th century; the façade is Gothic. The problems of chronology have been compounded by later restorations. Nevertheless, the high and ample choir, with its elegant columns, ambulatory and seven radiating chapels, the "limousin" belfry (restored), and the 11th-century domed "Sepulcher" attest to the importance of Saint-Léonard as a pilgrimage site.

# SAINT-LEU-D'ESSERENT

. The Cluniac priory church of Saint-Leu d'Esserent (Oise) has a mid-12th-century narthex and south tower. The lower story of the narthex is an open porch in the Norman manner; the second story is a vaulted tribune gallery. Abutting the east side of the narthex are traces of the earlier church, which has been excavated. In plan, the church has a nave and aisles, no transept, and a chevet consisting of two flanking towers, an ambulatory, and five radiating chapels. The shallow plans of the chapels perhaps reflect the dramatic site of the church on the bluffs above the Oise. The ambulatory and radiating chapels were built in the later 1150s or early 1160s, with the upper parts of the chevet following a decade or so later. The three-story elevation of the nave shows influence from Paris, as do the flying buttresses added around the whole of the church at the time of the nave construction late in the 12th century. One interesting feature is the double-

Saint-Leu-d'Esserant (Oise), mid-12th-century façade. *Photograph courtesy of Whitney S.Stoddard.*

story axial radiating chapel. More may have been intended, since the interior-wall design suggests a gallery elevation, but no others were constructed.

# SAINT-LOUP-DE-NAUD

. The village of Saint-Loup-de-Naud (Seine-et-Marne) stands on a ridge not far from the fortified medieval town of Provins. Of medieval buildings, the rural village retains only a parish church with a formidable history. Some type of ecclesiastical building dedicated to St. Loup existed even before the foundation of the Benedictine monastery ca. 980.

Founded as a dependency of the abbey of Saint-Pierrele-Vif in Sens, Saint-Loup maintained a close relationship with its mother house. In 1161, Archbishop Hugues de Tourcy brought the body of the patron saint to Saint-Loup from the abbey of Sainte-Colombe, much to that abbey's dismay. The theft of the relics reinforced the strong cult of St. Loup and initiated a 200-year-long controversy over the rightful ownership of the relics. Little documentary evidence survives about the church in the 13th and 14th centuries, but the structure suffered much in the Hundred Years' War and Wars of Religion.

Open on three sides, the single-bay, rib-vaulted porch leads into the six-bay, 12th-century nave, initially barrel-vaulted but partially restored with rib vaults in the first few bays. Irregular alternating supports carry an arcade and blocked windows. The slightly projecting transept arms stand to either side of the crossing tower and barrel-vaulted east end.

Recent scholarship suggests that the portal complex is probably entirely medieval and dates to the mid- to late12th century. The sculpted portal is protected by a porch tower with round-headed windows and a simple gable. Similar to the royal portal at Chartres, the program includes a tympanum with Christ in Majesty and Evangelist symbols, the Virgin and Apostles on the lintel, a trumeau statue of St. Loup, and figures on piers and jambs. Maines suggests that the composition is a composite integration of sculpture from Sens designed for another location *(spolia)* and sculpture designed for the portal of St. Loup.

Original frescoes were damaged and overly restored in the 19th century, although Salet suggests that the figure of St. Savinien, bishop of Sens, escaped restoration and dates to the middle of the 12th century. Other medieval remains inside the church include a 14th-century stone Virgin in the right apsidal chapel and a 12th-century font.

# SAINT-MICHEL-DE-CUXA

. The present church of the Benedictine abbey of Saint-Michel-de-Cuxa (Pyrénées-Orientales), founded in 878 at the foot of Mount Canigou in Roussillon, combines the pre-Romanesque church of Abbot Garin (dedicated 974), characterized by distinctive horseshoe arches, and the "first Romanesque" additions of Abbot Oliba (r. 1009–40): rectangular ambulatory with three chapels, two magnificent Lombard bell towers (one remains), and the centralized Trinity chapel (demolished 16th c.) above the unusual crypt of the Virgin of the Manger (circular chapel with a vault of rough stone supported by a massive central column).

Two major sculptural programs (elements of both later dispersed) were undertaken in the 12th century: a large cloister (ca. 1130–40), with vigorously carved capitals, and a richly ornamented marble tribune (ca. 1140–45). Two galleries of the cloister have been recreated at Cuxa; reliefs from the tribune have been mounted around the north portal. Other cloister capitals, as well as elements from the tribune, form the nucleus of the Cloisters collection of the Metropolitan Museum of Art in New York City. Contemporaneous with the tribune is the recently recovered commemorative relief of Abbot Gregory (d. 1146), founder of the Cuxa cloister. Both Cuxa ateliers were influential throughout the Roussillon (Serrabone ensemble, cloister of Espira de l'Agli, portals of Villefranche-de-Conflent and Brouilla) and beyond the Pyrénées as well.

# SAINT-NECTAIRE

. Built of local volcanic stone that harmonizes with the rugged landscape, Saint-Nectaire (Puyde-Dôme) belongs to a distinctive group of Auvergnat Romanesque churches. Contributing to its special character are the picturesque setting, the retention of the original westwork, the substitution of columns for the characteristic nave piers, and the richness of its sculptural ensemble. Striking are the sense of monumentality, despite its relatively modest dimensions, and the purity of the interior volumes (no additions or restorations). The towers of the heavily weathered façade are modern, as is the octagonal

crossing tower (copied from Saint-Saturnin). The celebrated historiated capitals are the most important in the Auvergne. Treasures include the 12th-century Notre-Dame du Mont-Cornadore and the bust of St. Baudime, a masterpiece of Limoges workmanship.

# SAINT-OMER

. Saint-Omer (Pas-de-Calais) has its origins in the Merovingian villa of Sithiu, a rural domain conferred upon St. Omer, the missionary bishop of Thérouanne, by one of his converts ca. 650. There, on the River Aa surrounded by marshland, St. Omer and his followers, monks from Luxeuil, built a monastery dedicated to St. Peter, later known as Saint-Bertin, destined to become the largest and most powerful in the region. In 663, St. Omer built the church of Sainte-Marie, later Notre-Dame, at the highest point of Sithiu and gave it to the monastery, requesting that he be buried there.

The surprising transformation of the rural, monastic Sithiu of the Carolingian period into the bustling Flemish market town known as Saint-Omer *(villa Sancti Audomari)* has played a major role in the debate over the origins of medieval towns. By 1042, the church of Sainte-Marie, which had been fortified against the last Viking attack in 891, was flanked on the one side by the *castellum* of the counts of Flanders, seigneurs of the region from 892, and on the other by a marketplace and a parish church. The early communal charter, granted by Count William Clito in 1127, is believed to confirm privileges that the burghers already enjoyed.

With Saint-Omer linked to the channel port of Grave-lines by the canalization of the Aa, local merchants dominated the Anglo-Flemish wool trade in the 12th century, and the town became a major center for the production of cloth, as well as an important market for grain, wine, and fish. Urban prosperity continued under the Capetians, as Prince Louis (later Louis VIII) inherited Saint-Omer, along with the Artois, from his mother, Isabella of Hainaut, in 1190. Reclaimed by Flanders in 1200, Saint-Omer became part of the French crown lands in 1212, ruled by the counts of Artois from 1237.

The town came to be governed by an increasingly repressive merchant elite, which led to workers' revolts in 1280 and 1306. In the 14th century, Saint-Omer was devastated by the plague and war. At the boundary of Flanders and Artois, Saint-Omer remained loyal to the king of France during the Franco-Flemish War (1297–1305) and the Hundred Years' War. In 1384, Philip the Bold, duke of Burgundy, became count of Flanders and

Artois through marriage, and Saint-Omer enjoyed another period of prosperity, in spite of the decline in the cloth industry, as part of the Burgundian state.

The church of Sainte-Marie, founded by St. Omer in 663, belonged to the monks of Saint-Bertin until Abbot Fridugisus (r. 820–34) replaced the monks with canons. Later known as Notre-Dame, this church became a cathedral in 1559, after the destruction of Thérouanne. It is now a parish church. The present Gothic building replaces a Romanesque church, under construction in 1052, of similar dimensions. The new Gothic east end was begun between 1191 and 1207. By ca. 1225, the choir, ambulatory, radiating chapels, and detached octagonal tower were complete. The original transept was completed by 1263, but it was extended by two bays on the south in 1375–89 and two bays on the north in 1449–72. The nave and aisles date from ca. 1400–44. The chapels flanking the north aisle were undertaken ca. 1379–1403; those on the south, from 1378 to the beginning of the 16th century.

The 13th-century east end is an important Flemish example of the Gothic style also found at Saint-Yved at Braine and typified by a three-story elevation with relatively short clerestory, diagonal chapels placed at the intersection of choir and transept, and an exterior clerestory passage or loggia. At Saint-Omer, these features appear along with a tall triforium typical of Flanders and triplet clerestory windows known from the cathedrals of Arras and Cambrai.

Also dating from the 13th century is the poorly preserved sculptural decoration of the main south-transept portal. Reassembled in the 14th century, this decoration (ca. 1250–75) includes a Last Judgment tympanum and socle reliefs of the life of St. Omer. The cenotaph of St. Omer (ca. 1250), now in the nave, was originally in the ambulatory. Other significant works of sculpture preserved in the interior of Notre-Dame are the monumental Last Judgment group (ca. 1230) from the south-transept gable of the cathedral of Thérouanne and an early 13th-century Sedes Sapientiae from the chapel of Notre-Dame-desMiracles, Saint-Omer.

The entire east end of Notre-Dame, including the transept, was covered with an elaborate incised stone pavement encrusted with colored cement, completed in 1263, depicting religious, secular, and decorative subjects of which only fragments remain.

The monastery of Saint-Bertin, the major landholder in the region during the Merovingian and Carolingian periods, fell under the domination of the counts of Flanders in 892. Under the counts, who frequently served as lay abbots, Saint-Bertin became the center of Flemish historiography and one of the necropolises of the house of Flanders. The monastery was reformed by Gérard de Brogne in 944, by a pupil of Richard of Saint-Vanne in 1021, and by Cluny in 1099.

Excavations undertaken in 1831 and 1845 revealed the foundations of two earlier churches beneath the present ruins of the Gothic building. These are the 8th- and 9th-century church of Saint-Martin, in which St. Bertin was buried (ca. 700), which replaced St. Peter's as the main abbey church by the 10th century, and the Romanesque church begun ca. 1045, dedicated in 1105, and repaired after a fire in 1152.

The Gothic abbey church was begun between 1311 and 1326. Almost finished in 1350, the choir was rebuilt from 1396 to 1429. The transept and nave date from ca. 1420 to ca. 1473. The single-tower west façade, typical for the region and serving as a model for Notre-Dame, was built between 1431 and ca. 1500. The church was elegant but conservative in style, with only the west façade and tower expressing the Flamboyant

Gothic of the 15th century. It was sold to speculators in 1799, and all that remains are the ruins of the west façade and tower, the north transept, and aisles of the nave.

# SAINT-QUENTIN

. As the Roman city Augusta Veromanduorum, Saint-Quentin (Aisne), was an important crossroads and commercial center. Its present name is derived from the missionary St. Caius Quintinus, beheaded here in 287. His remains are preserved in the 11th-century crypt beneath the choir of the collegial church of Saint-Quentin. This complex Gothic structure (13th-15th c.) is built on an unusual double-transept plan; one was rebuilt in 1350, the other in the 15th century. The church features a spacious nave with three-story elevation, a choir with double ambulatory, and a labyrinth set in the floor (1495). The south portal (Porche Lamoureux) is Flamboyant. The Late Gothic town hall (14th-15th c.) is constructed in the Flemish civic style.

# SAINT-RIQUIER

. A Merovingian abbey dedicated to St. Riquier, a hermit-saint converted in the reign of Dagobert, was founded ca. 645 at Centula (Somme). Among several medieval churches built here, the Carolingian and Gothic structures are especially important.

The Carolingian abbey church was built ca. 790 under Abbot Angilbert, a pupil of Alcuin and member of the inner circle of Charlemagne's court. Engravings made after a drawing of the church in an 11th-century manuscript show a six-bay nave with single aisles, transepts at east and west, and a projecting semicircular apse. Its multiple towers and massive westwork, which incorporated atrium, narthex, and western transept with vaulted chapel, formed significant precedents for Carolingian and Romanesque architecture.

The present Gothic church was begun in the second half of the 13th century but completed and rebuilt in the

Saint-Riquier at Centula (Somme).
Bottom to top: present church,
excavations tracing Carolingian

church, restored long section of
Carolingian church. After Durand,
Bernard, Heitz, and Effman.

late 15th and 16th. The spacious plan of a nave with six bays, single aisles, slightly projecting transept, choir, and ambulatory with nine chapels, as well as parts of the transept, date from the 13th century. The two-story elevation and multipartite rib vaults reflect the late Flamboyant Gothic style, as does the west façade, with central tower and screenlike sculptural decoration.

# SAINT-SARDOS

. Saint-Sardos (Lot-et-Garonne) in the Agenais was a priory of the abbey of Sarlat. In December 1322, the Parlement de Paris authorized the conversion of this priory into a fortified *bastide* to be held jointly by the abbey and the French crown. The plan was opposed by the Gascon lord of Montpézat, who destroyed the place on October 16, 1323, and hanged a royal officer. The action precipitated a brief Anglo-French war because Charles IV, already impatient over Edward II's delay in rendering homage for Guyenne, believed that the incident at Saint-Sardos had the tacit support of Ralph Basset, the English seneschal of Gascony. The "war of Saint-Sardos" was halted by a truce late in 1324 and ended by a treaty the following summer.

# SAINT-SAVIN-SUR-GARTEMPE

. From its position on the River Gartempe, the abbey church of Saint-Savin dominates the skyline with its well-preserved Romanesque exterior. Founded ca. 800 by Abbot Badilon of Marmoutier, the abbey was named for the 5th-century martyr St. Savinus, interred nearby. Enlarged by Louis the Pious, who placed it under the care of Benedict of Aniane, Saint-Savin became a center of monastic reform from the 9th to the 11th century, as it reestablished observance of the Benedictine *Rule* there and in other houses. The community of Saint-Savin suffered repeated sackings during the Hundred Years' War and Wars of Religion. Today, the 11th-century abbey church is a parish church, and monastic buildings house municipal offices.

No medieval documentary evidence on the building survives, but scholarship places most construction in the late 11th century, with painting following from ca. 1095 to 1115. The abbey church has a barrel-vaulted nave with groin-vaulted side aisles and columnar supports with carved capitals. A gallery in the west tower opens toward the nave, and below the choir with apsidal chapels is a barrel-vaulted crypt.

Although wall painting in the transepts and choir is fragmentary, extensive paintings survive in the west gallery, the nave, the crypt, and the porch. The subject of the murals in the west gallery is Christ's Passion and Resurrection, with the Entombment occupying a central position over the west window. The wall and the roof carry figures of saints, and elaborate ornamentation resides in the borders and dado. In the nave, despite much restoration, columnar piers painted to resemble marble illustrate the practice of applying paint to architectural members to

Saint-Savin-sur-Gartempe, abbey church. *Photograph courtesy of Whitney S.Stoddard.*

heighten the decorative effect and to project the idea of wealth. Above, the vaulting carries thirty-six scenes representing an Old Testament cycle. From the Creation of Adam and Eve to the stories of Noah, Abraham, Joseph, and Moses, the scenes are arranged in four tiers that extend longitudinally along the nave ceiling, and the spandrels contain fragments of prophet figures. The narrative meanders, possibly due to artists working

around incomplete sections in the east end. In addition to figural work, medallions and ornament cover one of the western transverse vaults. In the crypt, the entire wall surface sports longitudinal tiers of scenes from the legends of SS.Savinus and Cyprian. On the east wall, symbols of the Evangelists surround an enthroned Christ. The porch contains apocalyptic scenes: Christ in Majesty above the door, with angels bearing instruments of the Passion below. Divided into

Saint-Savin-sur-Gartempe, nave.

three sections, the barrel vaults carry six scenes from Revelation.

# SAINT-SULPICE-DE-FAVIÈRES

. saint-sulpice (Essonne) is a pilgrimage church located in a small village south of Paris. Large in relation to the community around it, the church was built to honor the relics of St. Sulpice, bishop of Bourges (d. ca. 647), who resuscitated a young child of the region. His feast is celebrated the first Sunday in September. When the chapel commemorating the saint became too small, a new sanctuary was constructed beginning ca. 1180. Parts of this structure, which survive as the "Chapelle des Miracles" off the north side of the present church, preserve an ancient well, perhaps of pre-Christian origins, the *sinopia* for wall paintings of the 14th century, and niches that may originally have contained relics.

A new church was begun at the site ca. 1245–50. Consisting of six bays and a polygonal apse, the new building was designed in the fashionable Rayonnant style that prevailed in Paris under Louis IX. The elevation has three stories, with passageways at the triforium level and on the exterior of the clerestory. Characterized by superimposed screens of wall penetrated by the wall passages, the tracery is cut in thin elements, thus giving the chevet the brittle grace and delicacy typical of Rayonnant style. Certain elements recall the Rayonnant parts of Meaux cathedral, as well as the Sainte-Chapelle in Paris and Saint-Denis.

The church retains some of its medieval decoration. Most striking are the 13th-century windows in the chapel at the east end of the south aisle and a battered but handsome Gothic portal with St. Sulpice on the trumeau.

# SAINT-THIBAULT-EN-AUXOIS

. Site of an ancient priory, the little town of Saint-Thibault (Côte-d'Or) boasts one of the most graceful examples of Burgundian Gothic architecture. Built through the generosity of Duke Robert II and his wife, Agnès de France, daughter of Louis IX, to house the relics of St. Thibault, who died here in 1247, the church was begun in 1297. The nave crumbled in the 17th century, but the surviving choir, apsidal chapel, and sculpted portal are of rare beauty. The tympanum is dedicated to the Virgin, surrounded in the arches by the Wise and Foolish Virgins. Five full-sized statues in the portal, remarkable for their expression, represent St. Thibault, Duke Robert II, his son Hugues V, the duchess Agnès,

and Bishop Hugues d'Arcy of Autun. A 14th-century altarpiece within is dedicated to the life of St. Thibault.

# SAINT-VICTOR, ABBEY AND SCHOOL OF

. Established in 1108 by William of Champeaux when he resigned as archdeacon of Paris and retired from teaching in the cathedral school, this community of regular canons who adopted the *Rule* of St. Augustine became one of the preeminent religious communities of Paris in the 12th century. Generously supported as a royal abbey by the king, associated with ecclesiastical reform, in the forefront of theological developments, and home to a distinguished series of can ons who contributed to religious and intellectual life, Saint-Victor left an indelible mark on the medieval church.

Although Abélard suggested that William had left the schools of Paris because Abélard bested him in debate, a more accurate interpretation associates William's move with other instances of the decision by a cleric, or group of clerics, to reform a cathedral chapter or to found a community of regular canons. When William withdrew from the life of the cathedral chapter and schools, he moved to a chapel dedicated to St. Victor located just outside the walls of Paris on the left bank of the Seine. He gathered there a small group of students and others. In 1113, William went to Châlons as bishop. In the same year, Louis VI made a significant gift of property and income to William's nascent community and school, now described by the king as the community of regular canons that he intended to install in the church of Saint-Victor at Paris. In the same year, the community elected its first abbot, Gilduin, who led the community astutely and guided it to a leading place in French ecclesiastical life.

Construction of adequate buildings for the abbey began in the second decade of the 12th century. The necrology of the abbey indicates that one Hugh, canon of Halberstadt and uncle of Hugh of Saint-Victor, joined the community at Paris and contributed to the building of the church. Royal documents also show that Louis VI made major gifts toward the erection of the church and cloister. The 12th-century buildings were pulled down in the 16th century, and Francis I built a new church for the canons. That church lasted until the 19th century, when, following the breakup of the Victorine order in the French Revolution, the buildings were destroyed to make way for a modern metro station. Unfortunately, no detailed descriptions of the church and other buildings exist; the layout of the altars and some other details have been determined, however. Before its destruction in the 19th century, the church was praised as having one of the grandest collections of medieval stained glass in Paris.

In the 12th century, the abbey school attracted students from all of Europe and was for several decades open to students from outside the abbey. The intellectual traditions of the abbey school took shape under the leadership of Hugh of Saint-Victor, one of the major exegetes, theologians, and mystics of the 12th century. Andrew of Saint-Victor pursued Hugh's emphasis on the literal sense of Scripture, and Richard of Saint-Victor developed the Victorine mystical tradition. Adam of Saint-Victor was the greatest of the 12th-century sequence writers, and the Victorine sequence repertory became in the late 12th century a magnificent theological and liturgical construction. Godefroi and Achard of Saint-Victor continued the earlier combination of theological, philosophical, and contemplative emphases; Walter of Saint-Victor represented a different spirit with his attack on Peter Lombard and other scholastic theologians. In the 13th century, the Victorine school showed little of the vigor and creativeness that marked it in the 12th, but the abbey continued to be a center for dedicated religious life, while the canons functioned especially as confessors for the students of the schools, later the University, of Paris. The medieval library of the abbey survives fairly intact today in the Bibliothèque Nationale, Paris.

# SAINT-WANDRILLE.

One of a number of medieval foundations located on the right bank of the Seine, theBenedictine abbey of Saint-Wandrille remains distinct fromthe group as an active, surviving monastery. Founded bySt. Wandrille (d. 688) in 649, and sacked by the Vikingsin the mid-9th century, Saint-Wandrille, also known asFontenelle, was rebuilt and restored after 966 by AbbotMaynard. A prosperous monastery in the Middle Ages,Saint-Wandrille was suppressed at the Revolution and fellinto disrepair, only to be revived after 1931.

Ruins of the medieval abbey church reveal several building campaigns. Most of the building, including the two-bay transepts aligned with the side aisles of the nave, and radiating chapels (alternating with polygonal and rectangular chapels), was built between 1255 and 1288. The seven-bay nave with side aisles and regular compound piers was not completed until the 14th century.

Unlike the church, many of the conventual buildings survive. The 11th- and 12th-century refectory has large round-headed windows and blind arcading, and the 14th-century cloister has intriguing bits of architectural sculpture: the eastern wall holds a

standing Virgin and Child (14th c.), the vault boss depicts a king with what may be Wisdom and Folly, and over the cloister entrance the badly damaged tympanum features the Coronation of the Virgin, with bishops and abbots in the voussoirs.

North of the abbey, the chapel of Saint-Saturnin retains its early 11th-century pre-Romanesque plan, rectangular with a trefoil-shaped east end. At the crossing, fantastic carved creatures inhabit the impost capitals.

# SAINTE EULALIE, SÉQUENCE DE

. A composition in twenty-nine lines commemorating the passion of Eulalia of Mérida, in Spain, a 4th-century martyr. The heroine, refusing to abjure Christianity, is decapitated by the Romans. Her soul ascends to Heaven in the form of a dove. Composed ca. 878–82 in northeast France, *Eulalie* is the earliest surviving saint's life in the vernacular.

*Thelma S.Fenster*

# SAINTE FOY, CHANSON DE

. A melody for this Occitan saint's life, composed ca. 1060 in the Cerdagne/ Roussillon region (between Narbonne and the Pyrénées), is preserved with the text in a single manuscript (University of Leiden, Cod. Vossianus Lat., in Octavo, No. 60, ca. 1100). With 593 octosyllabic lines in fifty-five rhymed laisses, the *Chanson* has great linguistic and literary importance as one of the earliest surviving narratives in the Langue d'oc, and the first rhymed poem in the vernacular in France.

The opening lines name oral and written sources: first, "a Latin book" read "under a pine-tree"; second, a song with a melody "fine for dancing," a "Spanish story," and a "French style"; and third, a written "Passion." The narrator's references to himself singing and to the audience listening give immediacy to the song.

He recounts Fides's comfortable early life at Agen, her choice of poverty and piety, then her eloquent refusal to worship Roman gods. Broiled alive and decapitated, with angels attending, her remains give eyesight to the blind and speech to the mute. Her pagan persecutors end by destroying themselves.

# SAINTES

. An important center in Roman times and capital of the Gaulish Santones, Saintes (Charente-Maritime) was a bishopric from the 3rd century. It flourished under the dukes of Aquitaine and passed, with that duchy, to England. Louis IX won a victory over England here in 1242, and in the Treaty of Saintes (1259) Henry III rescinded his claim to Normandy. The town passed to English hands again under the Treaty of Brétigny (1360) but in 1371 was reclaimed by Bertrand du Guesclin.

Little remains of the original late 12th-century cathedral of Saint-Pierre. Under the direction of three successive bishops (1426–1503), this church was reconstructed in the Flamboyant Gothic style. Owing to the devastations during the Wars of Religion, it underwent further (and unfortunate) restorations in the 17th and 18th centuries. The building has a polygonal apse and a long choir with an ambulatory and radiating chapels. The transept follows the original Romanesque foundations; the nave is short, and additional chapels line the south side of the building. At the western entrance to Saint-Pierre is an unusually large bell-tower porch. The arched molding around the great portal contains figures of angels, musicians, doctors of the church, saints, and prophets.

The Cluniac priory church of Saint-Eutrope (dedicated 1096), built over the remains of an early Christian church, was a recommended stopping place for travelers en route to the pilgrimage church of Santiago de Compostela. The building, divided into upper and lower sections, was designed to accommodate visitors to the tomb of the city's first bishop, housed in the lower church or crypt. The crypt retains its original form. The wide and squat proportions of the aisles, apse, ambulatory, and radiating chapels convey a sense of weight and massiveness. In the upper church, part of the ambulatory and apse were reconstructed in the 15th century in Flamboyant Gothic style; however, the Romanesque character can still be found in the choir and transept. The columns in the upper church are surmounted by lions, griffins, tritons, acrobatic figures, and biblical subjects. In the last years of the 15th century, Louis XI funded the construction of a great bell tower on the north arm of the transept. The nave was demolished in 1803, and the original choir now serves this purpose.

Additional medieval buildings in Saintes include the Benedictine Abbaye aux Dames (11th c. with 15th-c. additions); the remains of a 14th-century Gothic cloister; the church of Saint-Pallais, which combines Romanesque and Gothic elements; and the Chapelle des Jacobins (1446), distinguished by an immense Flamboyant Gothic window.

# SAINTES-MARIES-DE-LA-MER

. Originally a small pilgrimage church housing the relics of St. Hippolytus (first mentioned mid-6th c.), Saintes-Maries-de-la-Mer (Bouchesdu-Rhône), under its original name, Notre-Dame-de-Radeau, became a priory of the Benedictine abbey at Montmajour (1078). The high altar is dedicated to Mary Cleophas, the sister of the Virgin, and Mary Salome, the mother of five Apostles. Tradition holds that these two Marys, along with their maid Sarah, Mary Magdalene, St. Martha, and St. Lazarus landed at this spot ca. A.D. 40, having fled from persecution in the Holy Land. A new

Saintes-Mairies-de-la-Mer (Bouches-du-Rhône), 12th-century nave.
*Photograph courtesy of Whitney S.Stoddard.*

church was built in the latter half of the 12th century. Its official name, Notre-Dame-de-la-Mer, was soon transformed by pilgrims to "Saintes-Maries" or "Trois-Maries."

The church is simple in plan. It has no transept, and its aisleless nave is covered by a slightly pointed barrel vault. The choir has a semicircular apse and columns ornamented with decorative capitals. A scarcity of windows keeps the interior in perpetual shadow. From the exterior, the church resembles a fortress. A polygonal tower, situated over the apse, is topped by a gabled belfry. A room inside the tower once housed arms for the defense of the church. In the 15th century, it became a high chapel dedicated to St. Michael.

In 1448, King René d'Anjou sponsored excavations that led to the "discovery" of what he claimed were the relics of Mary Cleophas, Mary Salome, and Sarah. In addition, he sponsored the construction of a new crypt and extended the church by two bays (constructed in the same style as the rest of the church). In this period, and still today, Saintes-Maries was an important pilgrimage church for gypsies.

# SAINTS, CULT OF

**.** The veneration of those people deemed to be saints lay at the heart of the practice of lateantique and medieval Christianity. Saints were "holy people" *(sancti, -ae)* who had lived a life of heroic virtue and had posthumously been judged by God to be worthy of entrance to the Kingdom of Heaven. In theory, all who resided in the divine court were saints, but in practice Christian churches accorded a relatively small number of people the title of saint and public veneration. The first Christians to be so honored were martyrs, who had died for giving witness to the faith during the Roman persecutions. With the official acceptance of Christianity, ascetics—and, still later, bishops, teachers, and others—came to be considered saints under the rubrics of "confessor" and "doctor," that is, those who preached or were learned in the faith.

A person could not become a saint in isolation: he or she had first to be accepted as an embodiment of holiness by a community of Christians and then recognized by ecclesiastical authority. During the Middle Ages, there was no single canon of saints universally observed in western Christendom. Indeed, the canon differed widely from region to region and even from period to period, although many feasts (such as that of the Apostle Peter or of the first martyr, Stephen) were standard. Following traditions established in Roman North Africa, bishops were charged with control of the canon of saints to be venerated and liturgically celebrated in their diocese, but from the 12th century on the papacy exerted ever more control over the processes of canonization.

The public honor, or *cultus,* accorded saints took many forms. One pervasive mode was liturgical. The memory of those admitted to the canon of saints was celebrated on a

feast that commemorated the day of that saint's death, that is, the day on which he or she had been born into eternal life. Such commemoration could be as simple as the inclusion of the saint's name in the recital of the martyrology—the list of martyrs and other saints whose feasts fell on a given day, as part of the Mass or monastic office. A variety of martyrologies circulated during the Middle Ages, the most influential of which was the *Martyrologium Hieron-ymianum,* falsely attributed to Jerome. Saints of significant stature, either universally or locally, were provided more elaborate commemoration on their feasts, ranging from readings taken from the saint's life to processions bearing their relics. Monastic communities celebrated a round of feasts on which they not only commemorated the saints but prayed for their intercession. Liturgical calendars specific to dioceses, monasteries, or religious orders abound in medieval manuscripts, most particularly in Sacramentaries and in those collections of hagiographic readings known as "legendaries."

The other most important form that the veneration of saints assumed was the cult of relics. These were physical objects associated with the saints. The most important relics were the saints' corpses, or fragmentary parts of their bodies. They were literally, in Latin, that which the saint had left behind *(reliquiae)* or pledges of the saints' sacred power *(pignora).* Tokens, such as bits of cloth *(brandea)* or vials of water that had touched the body or its shrine, also assumed the status of relics, while objects that a saint had possessed, such as a crozier, might likewise become important memorials. Relics were not a representation of the saint but his or her physical presence. This was most true of corporal relics, for the saint's body was the part of a saintly person that remained in this world awaiting resurrection at the time of the Last Judgment. Relics thus provided a physical link between the Kingdom of Heaven, where the soul of the saint resided, and this world, where the shrine guarded the saint's bodily remains.

The purpose of the cult of saints was to aid Christians of lesser stature in their search for salvation. As members of the divine court, the saints possessed God's favor and could mediate on behalf of the souls of the deceased, helping them to procure entrance into Heaven. This idea is graphically depicted on the tympanum of the church of Conques: Christ sits in majesty overseeing the final Judgment, while the figure of St. Foy, whose relics were enshrined within the church, kneels next to his ear, pleading the case of those who have sought her powers of intercession. The powers of the saints were not confined to the afterlife. Since disease and other afflictions were seen in part as punishment for sin, pilgrims came to the shrines of the saints in search of miraculous cures. The saints served as patrons who provided benefits to their clients, although the manner in which they dispensed patronage varied according to changing social norms.

The origins of the cult of relics in the western Roman Empire are to be found in the care lavished by Christian families on the tombs of their ancestors in the cemeteries located outside urban centers. Particular attention was given to the tombs of martyrs and other people considered holy. In time, churches were erected over these spots, attracting pilgrims who sought miraculous cures and families who wished to have members of their clans interred in or near these same churches *(ad sanctos)* in the hope that they would share in the bodily resurrection of the saints on the Day of Judgment. Communities of monks came to serve these churches, their patron saints, and their clientele. Such suburban monastic shrines became an important characteristic of the topography of the cities of the late empire.

Little is known about the veneration of saints' relics in Gaul prior to the last decade of the 4th century, when it underwent a significant revival, at least partially in response to the Germanic migrations. Although there was no direct connection between the Greco-Roman cult of heroes and the Christian cult of saints, the shrines of Christian saints may well have filled an important gap when pagan shrines devoted to curing deities, such as Asclepius, were closed. Some of Gaul's relics were imported from distant provinces, such as those of varied Roman martyrs whose reception at Rouen in 396 was recorded by Bishop Victricius in a panegyric. But many of the province's most prominent saints were its martyred bishops, such as Julian of Brioude, Trophimus of Arles, and, most important of all, Martin of Tours. As Martin's reputation grew over the course of the 5th century, pilgrims flocked in increasing numbers to his tomb outside of Tours, where an important new church was built over the shrine in the 460s.

The Gallo-Romans regarded their saints as one of their chief bulwarks against the invading Germans. As they converted to Christianity, however, the Franks themselves enthusiastically adopted the cult of relics. Clovis, for example, allegedly endowed the church that housed the relics of Martin. The greatest chronicler of the cult of saints in the early Frankish kingdom was Gregory of Tours (d. 594). In addition to the anecdotes provided in his monumental *Liber historiae Francorum,* Gregory composed eight linked collections of hagiographic tales *(Life of the Fathers),* in which he provided the miraculous history of the holy men of his native Gaul. Gregory's work confirms that the veneration of relics had become central to the practice of Christianity, and one of his goals was to endow the cults of local saints with trustworthy histories. The shrines of the saints were special places: their walls were adorned with ornate hangings and murals depicting scenes from the lives of the saints; candles and incense burned ceaselessly before the shrine; pilgrims jostled one another for physical contact with the holy tomb. One common practice was incubation, that is, sleeping on the grating that covered the tomb. People came not only to be cured; they also swore oaths in an attempt to end feuds or begged the saint's aid at the Last Judgment. Gregory himself hoped that on that day the angels would say of him, "This is a man on whose behalf St. Martin petitions."

By the Carolingian period, as communities of monks and canons gained control of most important shrines, these became central to the identity and to the economy of the monastic houses. Legal documents specified Fleury, for example, as "the place where St. Benedict rests." When noble families donated lands to a monastery, the charters claimed that the gift was made not to the monks, but to their patron saint. This was not a legal fiction, for the patron saint of a monastery was the owner of its lands. The number of pilgrims who came to monastic shrines could be large, particularly on the feast day of the saint. Monks had to provide hospices and even elaborate, if meatless, feasts for their guests. Most monastic churches, however, remained closed to women, and special arrangements, such as the construction of wooden tribunes outside the cloister, had to be made in order to allow female pilgrims access to reliquaries. Saints not only provided cures and mediation to their friends, they also were thought capable of wreaking miracles of chastisement on those who stole their property. Adrevald of Fleury, for example, recorded how his fellow monks had brought the relics of St. Benedict to Count Odo of Orléans in a vain attempt to stop him from plundering their lands. When Odo died in battle, his demise was interpreted as the judgment of God.

The reforms instituted by Carolingian rulers and bishops at synods like those held at Frankfurt (994) and Mainz (813) did much to transform the cult of saints. First, attempts to regulate liturgical practice resulted in the composition of many new martyrologies by such figures as Florus of Lyon, Ado of Vienne, Rabanus Maurus, and Notker the Stammerer. The most influential of these was the work of Usuard, which eventually formed the basis of the Roman martyrology compiled in the 16th century by Caesar Baronius. Second, attempts made to regulate the veneration of relics provided each bishop control over the cult of saints in his diocese and led indirectly to the composition of numerous hagiographic works concerning traditionally venerated saints, such as Denis of Saint-Denis and Remi of Reims. Third, a number of canons required that every consecrated altar in a Christian church must contain relics and suggested that oaths be sworn over reliquaries. These decrees increased the demand for fragmentary relics. Indeed, relics came to be encased not only in altars but in such objects as the throne of Charlemagne and the hilt of Durendal, the legendary sword of Roland.

The social and political order of France was radically reshaped in the decades ca. 1000. During the following two centuries, many ancient monastic houses were reformed, and in the process the cults of their traditional patron saints were renewed. Frequently, as part of this process, the churches that housed the relics of the saints were rebuilt. Raoul Glaber (d. ca. 1046), describing a profusion of church building in Italy and France during the first decade of the new millennium, commented that it was as if "the world itself, shaking off the old, had covered itself with a shining robe of churches." In the 1130s, Abbot Suger of Saint-Denis argued that it was necessary to rebuild his abbey's church because of crowding caused by the throng of pilgrims who "spilled out of every door."

During this revival of the cult of saints, the concept of saintly patronage was based on the evolving social practices of vassalage, feud, and gift exchange. Devout Chris-tians gained the protection and intercession of the holy dead by bringing them gifts or providing them with services. A detailed picture of this process can be found in the stories gathered in numerous miracle collections composed by monks at this time. The "family" of a patron saint included many people: the monks or canons of the community, the serfs who worked the lands of that community, the nobles who donated land to the saint, the pilgrims who brought offerings or simply their prayers to the shrine. In exchange for their services and gifts, the saint provided his or her friends with intercession in the divine court and protection against disease and enemies in this world. The power of the saints was also portrayed by monastic authors as an effective deterrent to the saint's enemies. A story from Anjou told how a son of a knight had injured himself while riding illegally on the property of the monastery of Saint-Albinus. The boy began to curse the saint and was struck dumb. His friends, attracted by his tears, led him back to his father. On the advice of the monks, the boy came to their church, where he lay prostrate in supplication before the relics of Albinus. Eventually, he rose and told how the saint had appeared to him and loosed his tongue on the condition that he warn others not to treat the saints irreverently.

The relationships between saint and servants were reciprocal, for the saints became obligated to their servants, as can be seen in a story told by the monks of Conques about a man who had been punished by his master for having attended the feast of their patron, St. Foy, by having his eyes gouged out; the saint then appeared to the man and promised him a cure. In times of trouble, when they thought that their patron had deserted them,

monastic communities sometimes performed a ritual humiliation of that saint's relics, in which the relics were taken out of their shrine, scattered on the floor of the church or in some cases buried, and cursed as a means of forcing the saint to reverse the sagging fortunes of the community.

While the relics served as a focus for the charismatic power of the saints, the miracles were thought to be performed not by the relics but by the saints themselves or, as the hagiographers themselves insisted, by God working through the saints. The relics themselves could be put to good use. One group of monks dunked a casket containing relics of their patron into a vat of wine from Sancerre and then drank its contents in an attempt to combat an outbreak of disease. When a nobleman tried to steal some vineyards that belonged to the monastery of Glanfeuil, its abbot threatened the malefactor with a reliquary of the monastery's patron, saying, "Omnipotent God through the merits of Blessed Maurus and other saints, whose relics are venerated and preserved in this small box, will claim punishment and vengeance from those who are scornful of his own and their servants, and most especially he will extract it from you, who, devoted to the evil of pillage, causes such robbery to occur." Reliquaries were also brought forth from their shrines for other important occasions: processions to mark a feast day, journeys undertaken by representatives of a monastic community in search of donations, episcopal councils held as part of the movement known as the Peace of God, and even battles fought to protect monastic property. The unscrupulous sometimes used falsified relics for the sake of religious sensationalism or profit. Raoul Glaber recorded how a "swindler" sold "the bones of some anonymous man from the lowest of places" as the relics of a martyr named Just.

Over the course of the later Middle Ages, traditional monastic shrines declined in importance. Such reformed orders as the Cistercians and Grandmontines were founded on an ideal of greater separation from society; their members specifically prayed to Bernard of Clairvaux and Stephen of Muret that those saints refrain from performing miracles at their tombs that would attract unwanted pilgrims. The mendicant orders, on the other hand, were dedicated to pastoral care. Although they made use of relics and prayers to the saints in this task, in France (unlike in Italy) they did not become the custodians of significant shrines.

This period was marked by the recognition of contemporary figures as saints shortly after their deaths. The tombs of some new saints, such as Bernard of Tiron (d. 1117) and Louis of Anjou (d. 1297), enjoyed brief vogues in attracting pilgrims, but more common were such figures as Louis IX (d. 1270) and Jeanne-Marie de Maillé (d. 1414), whose importance was linked to their holy example and powers of intercession rather than to shrines. This does not mean that the physical remains of these holy men and women were not prized. The Dominican confessor of Margaret of Ypres (d. 1237) asked the saint's mother to provide him with some of her possessions, such as head-dresses and shoelaces, after the young girl's death.

Relics came to be displayed more prominently in the churches of the later Middle Ages than they had been in earlier periods. New fragments of saintly bodies were eagerly sought and placed in ornate reliquaries. Many relics were brought back to France as spoils both from Jerusalem during the Crusades and from Constantinople after the sack of 1204. In 1248, that vigorous crusader Louis IX had the Sainte-Chapelle dedicated as a form of relic treasury: the building even imitated a reliquary in its shape. Other forms of

church ornamentation also celebrated the cult of saints, as hagiographic legends were prominently displayed in stained-glass windows and painted triptychs. Moreover, the old relic shrines never completely lost their allure: the head of St. Martial, for example, was displayed in Limoges both in 1364, on the occasion of the visit of the English prince Edward, and again in 1388, as part of an attempt both to end the Great Schism and to alleviate local famine.

Traditional shrines of local importance were to some degree replaced in the later Middle Ages by shrines of international significance, such as that of St. James in Compostela, those of the martyrs in Rome, that of Thomas Becket in Canterbury, and, most important, the holy places around Jerusalem. No shrine of comparable importance was located in France, although the abbey of Mont-Saint-Michel did attract long-distance pilgrimage. French pilgrims flocked to distant lands in search of the miracles and intercession many had once found closer at hand.

This period also witnessed a steady growth in the importance of shrines dedicated to the Virgin Mary and to Christ himself. Both figures had been of great devotional importance throughout the history of Christianity, but from the 12th century onward the faithful came to approach them more directly. Because of the doctrines of the Assumption of Mary and the Ascension of Christ, corporal relics of the usual sort were lacking. The cathedral of Chartres claimed to possess the Virgin's tunic, which made it one of the earliest and most prominent Marian sanctuaries in France. More common were statues of the Virgin that acquired miraculous reputations. One of the earliest was fashioned from gold in Clermont at the end of the 10th century. By the end of the next century, others could be found at Coutances, Bayeux, and elsewhere. Still later, Marian statues came to be painted black: the first mention of the Black Virgin of Rocamadour was in 1235, and Louis IX brought a similar statue from Palestine to Le Puy in 1254. Since devotion to the relics of Christ centered on bits of the Savior's body discarded before his death and resurrection, it took on a sometimes bizarre quality. The monks of Saint-Médard displayed one of the Savior's milkteeth; the abbeys of Charroux and Coulombs both claimed to possess his foreskin. The eucharist, the real presence of the body and blood of Christ, came to be treated like a relic in many forms of devotion.

Even as its forms changed, the cult of saints continued to be important to the lay practice of Christianity in the later Middle Ages. Preachers used exemplary stories gleaned from the lives of the saints to spice up their sermons. Prominently displayed works of art, works of vernacular hagiography, and translations of such works as the *Legenda aurea* brought the stories of the saints to a wider audience. Glass-fronted reliquaries made bits of holy bodies visible to the faithful. Confraternities adopted appropriate saints as their patrons and celebrated their feasts in elaborate fashion. Books of hours promoted the observance of many feasts, as well as the cult of the Virgin Mary, in the home. Individuals and communities sought the aid of "specialist" saints with particular problems, such as St. Roch for the plague and St. Margaret for difficult childbirths. During the Hundred Years' War, St. Martial developed a reputation among both armies for the ability to liberate prisoners. Saintly intercession came to be institutionalized in the granting of indulgences.

The 16th-century Reformation brought with it a radical reaction against such practices. Reform theologians and preachers in particular rejected the idea of saintly intercession, which was thought in Lutheran terminology to constitute a reliance on works rather than

on faith. John Calvin composed a systematic critique of the cult of relics in the vernacular (*Traité des reliques,* 1547), in which he rejected the veneration of relics on theological grounds and delighted in such absurdities as the multiple heads of John the Baptist enshrined in churches throughout Europe. Theological opposition often turned to violent iconoclasm on the part of Huguenots during the Wars of Religion. Relic collections were destroyed and the statues of the saints in many French churches still bear the scars of attack. The Council of Trent took steps to reorganize the practice of the cult of saints and the means by which saints were canonized within early-modern Catholicism.

# SAINTS' LIVES

. Hagiographic literature in Old and Middle French—stories about Christ, the Virgin, biblical figures, authentic or apocryphal, and above all the lives of the saints—is rich and varied. Unlike most other writing in the vernacular, to which the church was either indifferent or hostile, hagiographic literature was encouraged by ecclesiastical authorities, especially after the Fourth Lateran Council (1215), which insisted on the necessity of preaching in the vernacular tongues. Hagiography is one of the most fecund of Old French genres, as well as the most ancient. There exist in verse more than 240 versions of the Lives of over a hundred saints and an even higher number in prose. Most of this literature is unedited. The first extant French literary composition, the *Sequence de sainte*

*Eulalie,* dates to 878–82. Another early work, the *Vie de saint Léger,* is from the 10th century.

The main source for the French saints' lives is the "official" Latin hagiographic literature, often going back to latinized Byzantine and other eastern Christian writings. Though most of the Lives date from the early centuries of Christianity, many told the stories of more recent saints. Thus, the popular cult of St. Thomas Becket (1118–1170) found its French expression in at least three *vies* in verse, contemporary with his martyrdom. The same can be said of the Lives of SS.Dominic, Francis of Assisi, and Elizabeth of Hungary. But hagiography was also capable of finding its inspiration in history, folklore, romances, and even in truly adventitious sources. *Barlaam et Josaphat* is apparently a Christian recasting of the legend of Buddha. Conversely, saints' lives profoundly influenced other genres of medieval French literature, particularly the very concept of the hero. Not only Roland, Oliver, and Guillaume d'Orange but also Perceval, Lancelot, and Galahad became, so to speak, "canonized." Countless pilgrims visited the purported graves of these epic and romance heroes, who grew increasingly idealized and saintly with the development of Arthurian romance.

The Lives do not exhibit a specific literary form but adopt the formal properties of other popular genres. The oldest extant version of the *Vie de saint Alexis* (ca. 1050), a masterpiece of verse hagiography, is in five-line decasyllabic monoassonanced stanzas closely resembling the basic form of the chanson de geste. In the 13th century, when most of the verse saints' lives were composed, not only the prevailing meter (rhymed octosyllabic couplets) but also the prevailing novelistic tone were shared by hagiographic and romance narratives.

The distinction between the verse and prose Lives is not merely formal. Those in verse are generally older and of greater literary value, taking more liberty with their sources and tending to stress the marvelous character of the narration. Many hagiographic verse narratives exist in more than one version. The *Alexis,* as well as the Lives of SS. Bon, Brendan, Eustace, George, Laurent, Agatha, Catherine of Alexandria, Elizabeth of Hungary, Mary the Egyp-tian, Margaret, and Thaïs—to name but a few—were recast in verse several times. Some of them were later prosified, transformed into dramatic forms in the miracle and saint plays, or both.

Most of the earlier verse Lives were composed as isolated works, but some were later gathered in collections called "legendaries" *(légendiers);* the majority of prose Lives in the legendaries appeared in the first half of the 13th century. Some of the prose Lives are simply recastings of earlier poems, but most are new translations from more authentic Latin texts or reworkings of those translations. With the prose translations came a marked concern for the "truth," with less "romantic" and fabulous versions of the stories, more closely resembling the Latin texts.

Parallel to their Latin counterparts, the legendaries were organized either in the traditional generic "hierarchical" groupings (Apostles, doctors, martyrs, virgins, widows, etc.) or were arranged in the order of the liturgical year, with a prescribed legend (i.e., reading) for a specific calendar day of the commemoration of the given saint. The most famous of such collections is the *Legenda aurea,* compiled ca. 1261–67 by Jacobus of Voragine and translated into French by Jean Beleth sometime in the 14th century and by Jean de Vignay in 1348. Beleth's version became the basic text of the incunabula; Jean's was a veritable bestseller, with a large number of manuscripts extant.

The spiritual or ideological content, clearly visible in the formal aspects of the French saints' lives, is shared with all Christian hagiography, which narrates a personal road to salvation and thus presents narrative patterns basic to all the genres. Despite their heterogeneity and their differing aesthetic values, all hagiographic stories present strikingly similar narrative patterns: unusual birth, followed by a precocious childhood in the presence of pious parents and/or teachers, separation from the family, life of temptation and/or sin, conversion, repentance and/or good works, martyrdom and/or pious death. With the death, often followed by the visible signs of sainthood (miracles), begins the liturgical (i.e., literary) existence of a saint, a life having become The Life. These patterns are spiritually and historically explainable. All saints are *imitatores Christi,* and those patterns are clearly discernible in the biblical accounts of Christ's life.

**Peter F.Dembowski**

The heyday of French hagiography was the 13th century, but approximately twenty-five verse texts presenting the Lives of saints were composed as late as the 15th century. Among the saints whose Lives were written in this period are Anthony (of the desert), Anthony of Padua, Barbara, Catherine, Christine, Denis, the 10,000 crucified, Eustace, Fiacre, John the Baptist, Josse, Margaret, Mathurin, Onuphre, Opportune, Quentin, Reine, René, Roch, Sauveur, and Winifrid. We find the same blend as in previous centuries: there are saints from the early years of Christianity (Eustace, Catherine, Onuphre), for whom the paucity of documentation has been made up for by invention; some from more recent times, for whom there is credible source material (Anthony of Padua); and still others who were near-contemporaries (Roch). There is also the usual blending of pan-Christian saints with saints more closely associated with France, such as Denis (bishop of Paris), Fiacre (connected to the abbey of Breuil, near Meaux) Josse (Toulouse), Mathurin (Sens), Opportune (Normandy), Reine (Autun), René (Angers), and Roch (Montpellier). Saints not immediately identified as French are found to have some connection with the country, like Christine, transported miraculously to the neighborhood of Béthune, or Anthony of Padua, who lived briefly in France.

One-third of these works are in the long-popular narrative form of the octosyllabic couplet (Christine, Josse, Margaret, Mathurin, Onuphre, Opportune, Quentin, René). The rest show variety in their verse forms, harmonizing with those popular for the transmission of secular texts. A good number of these Lives are stanzaic: those of Barbara, Catherine, Denis, Eustace, and Sauveur, for example, have quatrains of Alexandrines, a common form in the 14th century. Other Lives use various stanzaic forms, ranging from octosyllabic *sizains* (Denis), *septains* (Catherine), and *huitains* (Christine, Fiacre) to eleven-lined stanzas of decasyllables (Reine). When the spirit of the age calls for feats of rhyming virtuosity, as at the time of the Grands Rhétoriqueurs, these texts, like the Life of Reine, provide examples of unusually rich rhyme configurations. The poems range from the fairly short (Christine's 278 lines) to the more extended (Mathurin's 1,294 lines). Incunabula texts tend to be in the middle range, approximately 400–600 lines in length.

These works carry on a rich French hagiographic tradition (over 240 hagiographic verse texts). The genre's popularity is explainable partly by its appeal to a broad audience, rich and poor, male and female, young and old, active and contemplative, with portrayals of individuals bright, independent, and virtuous, who all show the way to

eternal felicity. Furthermore, the saints were believed to perform valuable aid in times of danger or distress, such as childbirth (Margaret) or plague (Roch).

# SALIC LAW

. The body of laws promulgated by Merovingian and Carolingian kings for the Salian Franks and those living within their territory of Neustria. The first version of the *Lex Salica,* the *Pactus legis Salicae* was probably issued by Clovis I between 507 and 511. Although it and all later versions were written in Latin, the law was based on Frankish customary practices, which makes it an invaluable source for early Frankish legal and social life. Major modifications and additions were made from the mid-6th century to the mid-9th. The extant manuscripts are confusing and difficult to understand, as they represent many redactions and were subjected to innumerable revisions and efforts at correction. To the Carolingians, Salic Law was probably primarily of antiquarian interest. It continued to be studied long after the Carolingian period and was influential in the development of law in northern France up to the French Revolution.

The provisions of Salic Law do not constitute a comprehensive or even orderly collection of Frankish law. They do not form a true code of law. Rather, they concern matters that needed to be repeated, reinforced, clarified, or amended. Moreover, a king might issue laws merely so as to be seen as a lawgiver. The *Pactus legis Salicae* is the oldest written version of laws concerning a West Germanic people, and it is the most

Germanic of such written law on the Continent, displaying virtually no evidence of a Christian or a Roman influence.

The society seen in Salic Law, overwhelmingly rural and agricultural, is based on the strong ties of an extended family and the cohesion of tightly knit communities. Salic Law deals chiefly with private law and is concerned primarily with property and inheritance and the peaceful resolution of disputes that arise over everyday crimes—theft, property damage, personal injuries, sexual offenses, and homicide. Wergelds, monetary compensations for injuries, ties of kinship, and the feud dominate its provisions.

One of the most famous "provisions" is the so-called Salic Law of Succession. In the 14th and 15th centuries, it was alleged that Salic Law forbade women to inherit property or to succeed to the throne or even to transmit such a claim to succession to their descendants. However, there is no factual basis to these claims.

# *SALUT D'AMOR*

. Verse love letter. Also called *domnejaire,* the Occitan *salut d'amor* incorporates standard courtly themes in the five-part structure prescribed in medieval Latin letter books. Arnaut de Mareuil composed five of the twenty surviving *saluts*. Whereas the Occitan *salut* is typically nonstrophic, the genre developed in northern France into a stanzaic piece with refrain, sometimes called *complainte d'amour.*

# SARLAT

. A picturesque city with numerous Renaissance façades, Sarlat (Dordogne) grew up around the Benedictine abbey of Saint-Sacerdos. The Romanesque church was demolished in 1504 in favor of the present cathedral, which was completed in the 17th century. The sole remains are the western bell tower (upper stage is 17th-c.), a Romanesque window and wall fragments in the chevet, and the restored chapel of St. Benoît, south of the cathedral. The sacristy with ogive vaulting was a 14th-century

chapter house. Most remarkable is the Lanterne des morts, a two-storied cylindrical tower capped by an elaborate tiered cone, at the head of the terraced Jardin des enfeus (ancient cemetery of the monks). According to legend, it commemorates the miracles worked by St. Bernard during his visit to Sarlat in 1147.

# SAULIEU

. The church of Saulieu (Côte-d'Or), dedicated to St. Androche, who was martyred in A.D. 177 by order of Emperor Marcus Aurelius, is best known for its Romanesque capitals, both historiated and ornamental. However, in spite of the loss of the east end by fire set by the English in 1359 and its subsequent rebuilding in 1704, probably over the remains of Carolingian structures, and the destruction of the façade portal during the French Revolution, the church is a fine example of Cluniac architecture based on the elevation and vaulting of Cluny III—pointed nave arcade, arcaded triforium, clerestory, pointed barrel vaults strengthened by transverse arches, and groin-vaulted aisles. In Saulieu, the nave piers and arcade of the triforium are not animated by fluted pilasters (influence of Roman architecture), like Cluny III, Paray-le-Monial, and Autun. Rather, the Saulieu master builder employed the pier system of Vézelay with a rounded outer respond over a rectangular one. The design of Vézelay thus seems to have influenced that of Saulieu.

The nave capitals of Saulieu, which include the Flight into Egypt, the Hanging of Judas, the Appearance of Christ to Mary Magdalene, and other figured capitals as well as numerous ornamental ones, based on Romanesque variants of the Roman Corinthian capital, are of high quality and relate most closely in iconography, design, and treatment of drapery to the sculpture of Autun. Some of the ornamental capitals appear to be by the same sculptor involved in decorating the outer narthex of Autun. This stylistic relationship to Autun seems to negate the significance of the 1119 dedication, which did not specify what was being dedicated. The sculpture, like the nave, appears to date from the 1130s.

# SAUMUR

. Until the Revolution, Notre-Dame-de-Nantilly was the only parish in Saumur (Maine-et-Loire). Its name appears for the first time in 849. Its Romanesque nave is composed of five bays with barrel vaulting on rectangular beams (12th c.). Lateral walls are reinforced by arcades. The windows display semicircular Romanesque arches. The transept, with a narrow crossing, and the south aisle are in Flamboyant Gothic style (15th c.). The choir of two bays with cylindrical vaulting is followed by an apse in cul-defour. A simple façade, with a single door and window, is surmounted by a slightly raised tower.

The principal church in Saumur today is Saint-Pierre, begun in 1162. The choir, the oldest part of the building, comprises one apse and two bays with ribbed vaulting. Large niches punctuate the lower part of the walls; two-story windows illuminate the church. Twin pillars support beams. The transept is covered by a ribbed cupola, and the arms display ribbed vaulting. An apse, vaulted in cul-de-four, opens on each arm. The 13th-century façade has a door ornamented with statues.

A castle, founded probably in the 10th century, is oneof the most impressive medieval monuments in Saumur. A massive rectangular fortress with corner towers, it displays the transition from military to domestic architecture. Despite its early foundation, no part of the castle is older than the 13th century. An illustration painted by the Limbourg brothers is found in the *Très Riches Heures* of John, duke of Berry, for the month of September.

# *SAUVEGARDE*

. The French crown issued *lettres de sauvegarde* in order to place some person, group, corporate body, or land under its protection. The concept of royal protection had distant roots in the king's proprietary rights of the Frankish period. The late-medieval royal safeguard, however, was an adaptation of a concept appearing in 13th-century canon law—the *conservator,* who protected someone against injuries. Acceptance of royal safeguard amounted to a recognition of royal sovereignty; violation came to be regarded as a serious crime, a *cas royal* that would come directly under the king's jurisdiction. To signify that a place, such as a church, had come under the crown's protection, royal officers would affix batons embellished with the fleur-de-lis. Known as *panonceaux,* these became the recognized symbols of royal safeguard. By the 14th century, the crown extended safeguard to those who were appealing to the royal court. Because of its implications for royal power and jurisdiction, expanding use of royal safeguard came under fire, and Philip VI had to promise to restrict it to those who were weak and defenseless.

# SAVOY

**.** The county, then duchy (1416) of Savoy formed part of the kingdom of Burgundy during the Middle Ages and was never a part of the French kingdom, but the inhabitants were French in language and culture. Members of the ruling family, originally known as the counts of Maurienne, were often allies, vassals, and spouses of French princes. Adelaide of Savoy was the wife of Louis VI and mother of Louis VII; Louis IX's wife, Marguerite de Provence, was the granddaughter of Count Thomas of Savoy, as was the wife of Charles of Anjou, king of Sicily (r. 1266–85). In the later Middle Ages, Savoyard princes intermarried with the princely houses of Bourbon, Berry, and Burgundy, and both the wife of Louis XI and the mother of Francis I were Savoyard princesses.

Geographically, Savoy comprised the region of the French Alps centering on the basin of Lake Le Bourget and the Isère Valley from Montmélian to the confluence with the Arc; but politically, from an early date, it included the upper Isère watershed and the Valle d'Aosta, the Arc Valley (Maurienne) and the Val di Susa, and the Swiss Valais, to which were later added the Pays de Vaud (1263), Bresse (1285), Nice (1388), the Genevois (1401), and the Italian Piedmont (1418), which had long been ruled by a cadet branch of the house of Savoy. Savoy was the principal gateway to Italy for medieval French rulers, merchants, and pilgrims. Under Duke Amadeus VIII (1391–1451), who became the antipope Felix V (r. 1440–49), the court of Savoy was a center of patronage for French artists, writers, and musicians. According to the *Chanson de Roland,* it was in the "vales of Moriane" (Maurienne) that Charlemagne gave Roland his famous sword Durendal.

# SCHISM, GREAT

. Between 1378 and 1417, western Christendom experienced almost four decades in which there were two, and then three, simultaneous claimants to the papal throne, each of whom could rightfully claim to have been elected by a legitimate authority. Earlier, there had been periods in which there were two claimants, but never before had the same electoral body (the College of Cardinals) repudiated one election and then proceeded to elect another pope while the first claimant still exercised power. Moreover, with the assertion of the right of a council to elect the pope (Council of Pisa, 1409–10) and the continuation of the other claimants in office, there were suddenly three, not two, popes claiming to be the legitimate leader of the one true church. The crisis was institutional, sacramental, and moral. The struggle to resolve the crisis summoned the best efforts of kings, emperors, ecclesiastics of all ranks, and university masters. Roman politics, national rivalries, ecclesiastical and secular conflicts, and entrenched positions of power within and without the church all contributed to the divisiveness of the crisis and the difficulty of resolving it.

The schism arose in the aftermath of the return in 1377 of Gregory XI to Rome from Avignon (thus ending the long [1309–77] residence of the bishop of Rome in another city, with the exception of 1367–70, when Urban V returned briefly to Rome), his death in the next year, and the election of Urban VI by the sixteen cardinals who were then in Rome. The cardinals were actively threatened should they fail to elect an Italian, rather than a French, pope; they elected Bartolomeo Prignano, archbishop of Bari. An experienced member of the papal court, Prignano, as Urban VI (r. 1378–89), immediately attacked the privileges, wealth, and moral failings of the cardinals. The French cardinals especially took offense and left Rome. Others followed and in August, four months after electing Urban, the College of Cardinals (less the three Italian cardinals) declared Urban's election invalid because it was carried out under threat of violence and elected Robert of Geneva, who was related to the French king, as Pope Clement VII (r. 1378–94).

While Clement, supported by the French king, the Spanish realms, Scotland, Sicily, and some parts of the empire, sought to enter Rome with the support of French troops, Urban began to consolidate power in Rome and Italy while the emperor, England, Ireland, Poland, Hungary, Scandinavia, and most of Italy declared their loyalty to the "Roman" as opposed to the "Avignon" pope. Clement, having failed to enter Rome by force, took up residence in the papal palace in Avignon. Each pope claimed to have a legitimate College of Cardinals (three Italian cardinals went with Urban, the rest with Clement) and established parallel papal curias. With Europe divided into two distinct "obediences," attempts to end the schism began to materialize. Calling a council was briefly entertained as a possibility, especially by the theologians and canon lawyers of the University of Paris, particularly Henry of Langenstein and Conrad of Gelnhausen, but early on in the schism the way of a council, which was finally to be the path to an ultimate solution, proved unattractive.

After more than a decade with a divided church, a new "way" was proposed by French leaders: the *via cessionis,* which called for both claimants to resign their positions, followed by the election of a successor. King Charles VI, with his advisers the dukes of

Berry and Burgundy, the University of Paris (led by Jean Gerson and Pierre d'Ailly), and the French clergy (influenced by Simon de Cramaud), actively promoted this strategy. Benedict XIII (r. 1394–1417), a French cardinal elected to succeed Clement, and Boniface IX (r. 1389–1404), Urban's successor in Rome, both rejected the idea of abdication, for each thought his line to be legitimate. In order to force compliance with the *via cessionis,* the French introduced the idea of "subtraction of obedience," which sought to limit papal authority and revenues in order to force the two claimants to resign. "Subtraction of obedience" to Benedict XIII was declared by the French clergy on July 27, 1398, with Simon de Cramaud as the chief architect of the policy, which he articulated in *De subtraccione obediencie.* Both popes and their successors remained obdurate, however, even in light of pressures that included a provision in the elections that the successors of Boniface IX would abdicate if Benedict XIII or one of his successors should abdicate.

The idea of calling a general council of the church (*via consilii,* or "conciliarism") began to gain prominence again in the 1390s, but the general councils of the church in the 11th, 12th, and 13th centuries (Clermont, the third and fourth Lateran councils, and the councils of Vienne, for example) had all been called by the pope. The University of Paris, led by Gerson and d'Ailly, urged that a general council of the church be called, if need be by the civil power, because the earliest councils had been summoned by Constantine and other emperors. The two colleges of cardinals were finally persuaded to unite and to call a council, which met in Pisa in 1409. Bishops and others from both "obediences" attended, and the two claimants were deposed and a new pope was chosen, Alexander V (r. 1409–10). The supposed solution served only to complicate matters, for the popes in the Avignon and Roman lines refused to accept the judgment of the council. Benedict XIII and Gregory XII (r. 1406–15) continued to claim legitimacy, although in reality most leaders in Europe gave allegiance to the new "Pisan" pope, Alexander. Finally, a new council, supported by the emperor Sigismund and called by the cardinals and Alexander's successor, John XXIII (r. 1410–15)—not recognized in the accepted line of popes, so a name/number reused in the 20th century—assembled at Constance in 1414. This major gathering of European leaders, ecclesiastical and secular, determined to end the schism and to reform the church "head and members." The "way of the council" *(via concilii)* succeeded in restoring the unity of the headship of the church by deposing two claimants (Benedict XIII and John XXIII), accepting the abdication of the Roman one (Gregory XII) and electing Odo Colonna as Martin V (r. 1417–31). The council also addressed the question of heresy (it executed Jan Hus), established the idea of the reform of the church through regularly scheduled councils (the decree Frequens), and declared the superiority of a council over the pope (the decree *Haec sancta synodus* [or *Sacrosanctal*]). Martin V immediately established concordats with the major European leaders that effectively limited papal power in significant ways within the various European kingdoms, thus establishing in France certain of the sought-for Gallican liberties. Martin's successors succeeded in overcoming the impetus for full-blown "conciliarism" in the church, and the papal monarchy gradually reasserted itself over the claims of conciliarists.

# SCHOLASTICISM

. Name commonly given to the system of thought and teaching used in the early universities (or "schools"), especially those of Paris and Oxford. Scholasticism begins in the belief that God's truth can and ought to be known by rational understanding as well as by revelation. It draws a distinction between an understanding of God based on "simple" belief based on revelation, and an understanding drawn from questioning and argument, resolved by means of logic (the "scholastic method"). The Schoolmen's method of proceeding can be characterized as argumentative, authoritative, and additive.

(1) *Argumentative:* Truth can be found by argument, which is to say by the asking and answering of questions. Although these questions *(quaestiones)* originally arose from issues in a biblical text that were separable from and wider than the general run of commentary, they expanded to encompass the great philosophical-theological issues of Christianity, such as the nature and number of God, the number and purpose of sacraments, or the typology of sin. A"classic" scholastic question runs according to a set form. First the question is posed, with a formulaic *Quaeritur utrum…, An…*, or *Videtur quod…* ("It is asked whether…," "Whether…," or "It seems that…"). Then the arguments for the proposition are given ("And it seems that it is, because…"), followed by the arguments against, *sed contra* ("on the other hand") or *objectio* ("it is objected…"). The writer then makes his judgment *for* the proposition (almost never against: that is simply the way the questions are posed) in a *Solutio* ("solution") or *Respondeo quod* ("I answer that…") and completes the question by answering each of the objections in turn *Ad quod…* ("to that which was objected…"). The meat of the arguments pro and con is culled from acknowledged "authorities," the second characteristic of the method.

(2) *Authoritative:* Truth should be sought in the opinions of the authorities of the past. Preeminent among these is the Bible, but since Scripture can be self-contradictory it cannot be relied upon to provide the solution itself. The next "level" of authority is the writings of the Latin and Greek fathers, in particular Augustine and Jerome: these are regarded as almost as authoritative as the Bible itself. Finally, more "modern" writers, closer to contemporaneous, may be adduced as secondary evidence, but their opinions are frequently given anonymously.

(3) *Additive:* Truth is additive: one system is not to be replaced by another, but rather each single truth can be added to all others to give a fuller picture. The classic epigrammatic statement of this belief is found in Bernard of Chartres, repeating what was

even then a truism, that the scholars of his day were like dwarfs standing on the shoulders of giants: they saw farther than the giants, not through their own efforts but from their higher vantage point. Thus, reading a succession of medieval authors addressing the same question we find identical points used in argument for and against the issue. The difference between them will almost always be a difference in weighting of the same evidence rather than something new or different. This approach arises not from a lack of imagination or originality but from a worldview that thought that most "truth" had already been discovered by the authorities of the past.

This method is a means of exposition, not of deliberation. The method is not used in order to arrive at the truth—that is done by a prior and inner appeal to traditional doctrine, experience, and common sense with reason. The method is simply the means of stating, in convincing fashion, what the solutions are and what the arguments might be.

# SCHOOLS, CATHEDRAL

. Although precedents for cathedral schools can be found from the early Middle Ages, they did not acquire a firm institutional base until 8th-and 9th-century Carolingian legislation required that arrangements be made for the proper education of clergy. Most cathedral schools aspired to little more, essentially dedicating themselves to ensuring that parish clergy and cathedral canons had sufficient education to perform their assigned tasks; what little we know about the education they provided suggests that they concentrated on the basics of Latin grammar and Christian doctrine. But cathedral schools occasionally did furnish an institutional fo-rum to masters whose ambitions were higher and who drew students from outside the immediate region, although this role scarcely ever outlived the master whose eminence it reflected. In the 11th century especially, it was generally cathedral schools that employed the masters who were

responsible for redefining the objectives of higher education to include the extension as well as the transmission of knowledge. Indeed, the 12th-century *studium* of Paris originally grew up under the auspices and legal protection provided by the cathedral of Paris.

In the 9th century, cathedral schools were generally less prominent in the movement known as the "Carolingian renaissance" than their counterparts in the monasteries. Toward the end of the century, however, the cathedral at Laon under the patronage of Charles the Bald became a center for Irish scholars active in France; the schoolmaster appears to have been a certain Martin Hiberniensis (819–875), and Johannes Scottus Eriugena was also affiliated with the school. Much of the actual education provided, however, must have been at a fairly elementary level; its character is suggested by the contents of Laon manuscript 468. This manuscript, which is too large (12.4 inches by 8.4 inches) to be a student's notebook and which was apparently corrected by Martin himself, consists of a life of Virgil, some glosses on Virgil's poetry, several pages of comments on the Liberal Arts, and Alcuin's Latin grammar. The material on the Liberal Arts, especially, is rudimentary; the longest discussions address ethics and logic, with the invention of ethics being attributed to Socrates and that of logic to Plato, with the author noting the divisions of the different arts and the names of the principal textbooks. In short, it is a compilation whose material is intended to be memorized as an end in itself rather than to serve as an initiation into more advanced studies.

The eminence of the school of Laon did not survive into the 10th century. Indeed, the only French cathedral school of note in this century was that of Reims, whose archdeacon Gerranus's reputation in logic drew both Abbo of Fleury and Gerbert of Aurillac. Gerbert (later Pope Sylvester II) stayed on to become master at Reims from 972 to 982, returning to his post in 983 after a brief failed abbacy at Bobbio; he remained master until 989.

Gerbert himself enjoyed a reputation for logic and astronomy, and we are fortunate in having an account by his student Richer of the course of studies that he taught in logic. According to Richer, Gerbert began with the *Isagoge* of Porphyry, which he taught with Boethius's commentary; he then taught Aristotle's *Categories* and *On Interpretation,* proceeding afterward to Aristotle's *Topics* in Cicero's translation, which he also taught with Boethius's commentary. This account of Gerbert's curriculum has often been regarded as showing a revival of logical studies before the year 1000, but there are reasons for being more cautious. In the first place, Richer's statement that Cicero's *Topics* was a translation of Aristotle is incorrect—a fact that is explicit in both the *Topics* itself and in Boethius's commentary; Richer's acquaintance with those works must therefore have been far less thorough than he wished to imply. Richer's account also bears a family resemblance to the synopsis of logic contained in Laon manuscript 468, a coincidence suggesting that Richer may have been borrowing traditional definitions of dialectic instead of describing his own experience. Finally, citations of Aristotle do not become at all frequent in works of French scholars until after 1050; Gerbert's own learning in the subject, which is attested by his short treatise *De rationali et ratione* uti, does not appear to have been systematically conveyed to any of his students.

No teacher of comparable importance took Gerbert's place after his departure from Reims. Basic instruction doubtless continued to be available, but it was now of only regional significance. The same pattern was to be repeated at other schools throughout the 11th and early 12th centuries, because a cathedral school rarely had two consecutive

masters of more than regional importance. Chartres, Anjou, Liège, Laon, and Paris all had their moments of importance at different times in the 11th century, but none established an institutional tradition of scholastic excellence, and the importance of the school did not outlast the death or departure of its famous master.

In the early 11th century, the center for French education was the cathedral school of Chartres under Fulbert. Fulbert's prestige is attested by the fact that, although many of his students were evidently drawn from regions near Chartres, others came from as far away as the Rhineland to study with him. The pattern of students traveling great distances to study with a distinguished master was not new; but it is harder to state with certainty where Fulbert's academic expertise lay. It does not seem to have been in the Trivium; the mnemonic poems that he left in this area are elementary, and this impression is confirmed by the fact that Fulbert's students, most notably Berengar of Tours, neither reveal any extensive knowledge of Aristotle nor do they often invoke arguments from the Liberal Arts. But Fulbert's works and those of his students do reveal a measured and analytical approach to questions of Christian doctrine, as well as an ability to recognize and anticipate multiple points of view on contested issues. It was probably, therefore, a broadly based learning rather than any advanced technical expertise in the Liberal Arts that drew students to Fulbert's school at Chartres.

Most of Fulbert's students returned to their home cathedrals or monasteries after finishing their studies with him, often themselves becoming masters. But at least two of Fulbert's students, Berengar of Tours and Adelman of Liège, followed more complex careers, serving as schoolmasters at more than one cathedral, and this shift in career pattern marks a quickening of the intellectual pace of cathedral schools. Not every cathedral schoolmaster was swept up in the movement; most remained essentially grammar masters, introducing students to the basics of Latin grammar and literature, often with an ethical or Christian overlay. But a handful of later 11 1th-century masters began the exploration of more speculative issues in the Trivium and in Christian doctrine, and although this movement did not leave monastic schools untouched it was generally in cathedral schools that these masters found an institutional home. The increasingly advanced character of the instruction is revealed not just by the sophistication of some of the theoretical analyses but also by the fact that masters now began to discuss the views of their contemporaries as well as the ancients. The basic texts (Priscian on grammar; Cicero on rhetoric; Porphyry, Aristotle, and Boethius on logic) continued to be expounded, but the glosses and commentaries increasingly took up "questions" where doctrine was unsettled. Masters could make reputations—and, apparently, fortunes—by their skill at expounding the standard texts.

During the decades ca. 1100, the two preeminent masters of cathedral schools in France were William of Champeaux in Paris and Anselm in Laon. William was better known for his work in the Liberal Arts, Anselm for his commentaries on the Bible; but neither was as specialized as later masters would be, and both appear to have taught a wide range of subjects. Students in this period, moreover, frequently traveled themselves, spending considerable amounts of time with a series of masters. Thus, for example, Peter Abélard spent time as a student of both William and Anselm before he launched his own career as a master.

After the 1120s, the cathedral schools gradually lost their role as centers of scholarship and teaching to the concentration of masters at Paris; students who went to Paris could

study with several masters at once instead of being limited to the resources of a cathedral school. Although both Thierry of Chartres and Gilbert of Poitiers had ties to Chartres, both did most of their teaching in Paris. Despite the competition, cathedral schools continued to play a significant though reduced role in French education until the end of the century. Peter the Chanter studied at Reims, while Orléans was apparently a center of composition *(ars dictaminis).* Yet comparatively little is known about either center, and after 1200 any person intending to pursue a scholarly career would have sought his training in Paris or one of the other universities rather than in any local school.

# SCHOOLS, MONASTIC

. The education of Greek and Roman society was highly developed, but Christianity, having become the state religion in A.D. 380, faced a dilemma—how to marry the two strands of its tradition: that of the illiterate fishermen-Apostles with the bookish, classical training of its apologists. The tradition of learning was strong, and a number of patristic writers, especially Jerome, were associated with education, although we still see Augustine, for example, questioning the legitimacy of his use of his pagan, classical education for Christian ends. The first Christian, nonclassical religious schools date from the 4th century and were associated with monasteries.

The fate of these schools varied with the political situation of their times and places, so that in mainland Europe around the 5th-8th centuries few schools taught anything but the absolute basics of reading and writing. In the insular and insulated territories of Ireland and Britain, however, a brighter light burned, and monastic schools taught grammar and singing to their oblates and perhaps to secular children as well. Bede tells

us of his education at Wearmouth-Jarrow, and famous schools existed at York, Canterbury, and Irish centers.

The Carolingian revival of education under Charle-magne drew heavily on insular scholars and included the importation of Alcuin from York. In 797, Theodulf of Orléans introduced parish schools into his diocese and laid down their mandate for teaching. From this time onward, schools spread throughout the Frankish empire and beyond, and from the beginning of the 9th century all the more famous monasteries had two distinct schools—one for its oblates, one for outsiders. The Council of Aix (817) decreed a separation of monastic and secular pupils at monastic schools. Although their histories vary at different periods, there were famous schools at most of the important Benedictine monasteries of the 9th-12th centuries, such as Bec, Fulda, and Reichenau.

Although the history of this period remains misty, at some time during the 11th century "secular" religious schools, based around cathedrals with nonmonastic foundations, grew fashionable. In particular, Notre-Dame in Paris, Reims, Laon, and Chartres had famous masters and pupils. They were perceived as offering a less traditional and accepting, more argumentative style of learning, with debate as well as lecturing as a teaching practice. Leclercq has characterized seven major differences between monastic and secular learning: the intended audience of the teaching, the subjects dealt with, the pastoral tendency of the writers, an interest in the reform of the church, the sources employed, the intellectual methods of the writers, and finally their modes of expression. This is perhaps too generalizing to be wholly convincing; however, it is true that some subjects, such as commentaries on the Song of Songs, are largely the province of "monastic" rather than secular authors, as is a preference for the Gospel of John over the Synoptics as a source of authority. And it is true that until the advent of the university *any* school of this period was only as famous as the master heading it at the time.

In 1108, William of Champeaux, former master of the cathedral school in Paris, opened a school at the abbey of Saint-Victor. A house of Augustinian canons (clergy who lived under a rule in a community), Saint-Victor occupied a point midway between secular clergy and cenobites. It has been suggested that Saint-Victor tried to hold just such a position in the spectrum of learning, blending monastic exegesis with scholastic as the latter became more occupied with theological questioning. But the picture is complicated, and we must not think that books of *Sententiae,* or theological questions, were not also produced and read in monasteries. Nor must we forget that the famous books produced *from* monastic learning, such as the works of Bernard of Clairvaux, Anselm, or Rupert of Deutz, were works produced *for* monastic learning. The day-to-day teaching in monastic schools was the usual round of basic literacy, followed by the Trivium and Quadrivium, with textbooks by Priscian, Donatus, Boethius, Aristotle, and Euclid. Indeed, the learned monks of the 12th century were influential despite the decline in influence of monastic schools and learning.

Although monastic schools continued into the 13th century and later, they were used only as sources of primary education: any ambitious pupil went to a secular school or university.

# SCIENCE

. We begin with a distinction between what the medievals called "science" *(scientia)* and what, if anything, corresponds to our modern understanding of the term. *Scientia,* following Aristotle $(\dot{\epsilon}\pi\iota\sigma\tau\acute{\eta}\mu\eta),$ meant systematic knowledge, organized through principles, so that philosophy and theology were "sciences" along with physics and mathematics. Prior to the 12th century, "science" meant the Quadrivium (arithmetic, geometry, music, and astronomy) and the Trivium (grammar, rhetoric, and logic), which together comprised the notion of Liberal Arts. In the 12th and 13th centuries, translations into Latin from the Arabic (by Gerard of Cremona [d. 1187]) and from the Greek (by William of Moerbeke [d. ca. 1286]) brought an explosion of "new" knowledge, information, and disciplines into the mainstream of medieval intellectual life: Aristotle, Euclid, Alkindi, Avicenna, Averroes, Al Farabi, Galen, Alexander of Aphrodisias, and Proclus, among others. These texts provided both authoritative sources and the impetus for extension and expansion of the "sciences of nature" (called "natural philosophy" [*philosophia naturalis* or *physica*]), While the whole is called "philosophy" (from the Greek, $\phi\iota\lambda\acute{\iota}\alpha$[love]] and $\sigma\circ\phi\acute{\iota}\alpha$[wisdom]), classification of the parts differed. Hugh of Saint-Victor (d. 1141) divided philosophy into theoretical, practical, mechanical, and logical. He listed medicine among the mechanical arts and declared it a suitable occupation for manually adept members of the lower classes. Being concerned with a product, health, which it borrows from nature, disqualifies medical knowledge from inclusion among the higher, more speculative branches of knowledge. Dominicus Gundissalinus (fl. 1140) divided philosophy into two parts: theoretical and practical. The first is further divided into physical science, mathematics, and the highest speculative science, known variously as theology, first philosophy, or metaphysics. The second is divided into political science, family ordering, and ethical or moral science. Gundisalvo includes medicine among the physical sciences.

When we look for areas of knowledge cognate with our modern understanding of science, we find mathematics, physics (including theory of weight, motion, kinetics, dynamics, magnetism, optics), astronomy and astrology, chemistry and alchemy, geography, oceanography, zoology and botany, and medicine (including anatomy, physiology, and pharmacology; medical diagnosis, treatment, and surgery). (The inclusion of astrology and alchemy in the list suggests the affinity that medieval science had to "magic.") There is also great concern to provide a theoretical account of the structure and dynamics of the universe (cosmology) as well as some attempts to reflect upon methods.

The generally accepted cosmology rested on the assumption of an immobile earth at the center of the universe, with the stars and planets revolving about the earth within concentric spheres—as proposed by Ptolemy (fl. A.D. 127–51) and systematized in

Aristotle's physical treatises. Arguments on behalf of a rotating earth were known to the Medievals (e.g., Ptolemy himself, Jean Buridan [b. ca. 1300] and Nicole Oresme [b. ca. 1320/25]) but were not accepted as conclusive. Even in rejecting those arguments, however, both Buridan and Oresme recognized that, on the assumption of a moving earth, the heavenly phenomena would appear to us just as they do on the assumption of a stationary earth.

This cosmology provided the theoretical basis for astrology. Actually, "astronomy" and "astrology" were often used interchangeably; for example, Albert the Great (ca. 1200–1280) says there are two parts to astronomy, the second of which we would be inclined to call "astrology." In general, "astronomy 1" is the science of the stars, the reasons for their relations to one another and to the earth; "astronomy 2" (astrology) is the science of describing the position of the stars for obtaining "a knowledge of the times." The basis for the latter is the causal influences exercised by the former throughout the concentric spheres of the universe down to the region under the moon. Astrological judgments may seem to contradict human free will inasmuch as they seem to place in the hands of the astrologer (astronomer) who understands the causal connection of the movements of heavenly bodies to the events in the sublunar world, a knowledge of necessity and determinism that appears to be at odds with human freedom. But the apparent contradiction, Albert maintains, is not real. Astrological knowledge concerns not human actions directly but dispositions to actions that are always subject to whether the act will or will not actually be done. Persons remain masters of their fate by using their intellect. A person can avert much evil from the effects of the operations of the stars if he knows the influence to be exerted and can prepare to receive it. Choosing the favorable hour expresses both the astrological influence and human freedom. On the other hand, casting horoscopes, although not condemned by Albert, is recognized as emphasizing the potential conflict between astrological horoscopes (as, e.g., when the length of a life is predicted from the constellations) and free will.

As far as methods were concerned, Robert Grosseteste (b. ca. 1168) may serve as a good example. Grosseteste based his approach to scientific knowledge on Aristotle's *Posterior Analytics:* a two-stage process. Beginning with an observed fact, the scientist "resolves" the fact into the principles or elements that constitute it; the second stage consists of "composing," that is, reconstructing the fact on the basis of its "reasons" or "causes." This approach assumed both a uniformity in nature and a principle of economy that chose between competing explanations on grounds of needing the fewer number of suppositions. Because of these "extra-demonstrative" assumptions, Grosseteste's approach yielded probable rather than strictly scientific knowledge of the natural world, since the observed facts would be deduced from more than one explanatory theory without contradiction. In providing scientific knowledge of the heavens or of the behavior of light in optics, Grosseteste recognized that he was providing the formal cause (from the four-cause explanatory structure of explanation provided by Aristotle: formal, material, efficient, and final causes), but he could not provide the material or efficient causes—nor, within natural science—the final cause either. The formal cause could be deduced mathematically (say, geometric epicycles and eccentrics in astronomy); but the material and efficient causes required knowledge of natures—the subject matter of other, higher sciences. Because of his metaphysical theory that light was the basic nature of physical reality, Grosseteste regarded optics as the foundation of physical science; but

optics required the mathematics of lines, figures, and angles. Grosseteste was, thus, one of the first to link mathematics directly to the study of natural phenomena beyond the movements of the heavenly bodies.

Grosseteste wrote *Commentaries* on the *Physics* and the *Posterior Analytics* of Aristotle and produced some original treaties on optics. Perhaps no one, however, better expresses the impact of the full corpus of Aristotle's works (and their Arabic commentaries) made available by the 12th- and 13th-century translations than Albert the Great. His voluminous writings include detailed commentaries on Aristotle's physical and biological treatises, to which he added extensive examples of his own observations of flora and fauna gained on his travels on foot in Germany, France, and Italy. What characterized Albert's approach to science and set him apart from many of his contemporaries was his continuous insistence on his own observations and on the need to return to what in Latin is *experimentum*. The term "experiment" cannot be understood in the modern sense. More often than not, the term indicates a careful, scrutinizing process of observing, describing, and classifying. At the same time, natural magic was considered a branch of science: the science that dealt with "occult virtues" (or hidden powers) within nature. God acts through natural causes in the case of natural phenomena, says Albert; and while we would not presume to investigate the causes of the divine will, we are free to investigate—in detail and specifically—the natural causes that are instruments of the divine will. It is in the spirit of what Albert reads in Aristotle (and in pseudo-Aristotelian texts) that he seeks concrete, specific, detailed, accurate knowledge of everything in nature. There are many powers of stones and plants that are learned by experience, and magicians, as well as natural philosophers, investigating these powers, work wonders with them.

Albert's reputation for magic was probably based on two things: 1) there are many references to magic scattered throughout Albert's writings, many of them expressing approval, and some include explicit treatments of the special case of magic, astrology; and 2) the prodigious accumulation of factual (and reportedly factual) knowledge of the natural world, including the medicinal powers of herbs, the folklore about the powers of stones and minerals together with theories of the structure of natural substances and the organization of the universe: all contributed to a Faustian characterization of this one man of the 13th century to be called "Great."

The association of science and the magical arts is evidenced in several ways. The *Libellus de alchimia,* for example, lists several ("scientific"?) precepts for the alchemist to follow:

> 1) the alchemist/scientist should work silently and secretly; if many know what he is doing, the secret will not be kept and when it is divulged, it will be repeated with error; 2) the scientist should have a laboratory—a special house away from the sight of others in which to carry out his procedures; 3) the scientist must observe the time and the seasons; 4) the scientist must be sedulous, persevering, untiring—a constant worker; if he begins and does not persevere, he will lose both materials and time; 5) in all procedures, the scientist must have and follow a protocol; 6) all vessels should be made of glass; 7) the scientist should stay away from administrators; if you are committed to your work, they will bother you

with questions about how you are coming and when will you be finished, and if you take too long they will regard your work as trifling and you will experience great dissatisfaction. Of course, if you do not succeed, you will be humiliated; if you do succeed, they will give you something else to do; 8) finally, the scientist should have plenty of money.

Medieval science, then, was comprehensive and holistic, both in the sense of embracing all areas of human knowledge and in the sense of a hierarchy of interrelated knowledges. It was profoundly aware of and deferential to the great minds and intellectual traditions of preceding ages, pagan as well as religious, without mistaking authority for reasons. "Science" only slowly differentiated itself from "magic," since both concerned natural phenomena. Mathematics provided a deductive discipline, a source of theoretical explanation of bodies in motion, and the beginnings of what would become an essential constituent of later science.

# SCROFULA

. Glandular tuberculosis in general *(scrofule),* a systemic infection of the skin and various organs, was apparently widespread in medieval France as a result of dietary deficiencies, contagion, and bovine tuberculosis, to which it is related. One form that drew particular attention is an inflammation of the lymph glands in the neck *(écrouelles).* Medical encyclopedists, such as Bernard de Gordon and Gui de Chauliac, described scrofulous abscesses in detail among the apostemes caused by phlegmatic humor, and they noted correctly that the young were the most common victims. Physicians prescribed an

improved diet as the first phase of therapy. Next, softening salves or plasters were applied; a "French remedy" was cited by the 12th-century Syrian traveler Usamah. Surgery was to be used only if medicaments failed, as stipulated in a contract by which a Toulouse barber in 1400 promised a cure for the price of eight écus payable after doctors certified success. A last resort was the noisome application of caustics. Patients who found no help in medical treatment might make a pilgrimage to St. Marcoul, whose specialized cult spread after 1300. They could also seek the ceremonial royal touch for the "King's Evil." Remissions, often spontaneous, were celebrated as miracles. Claims to healing power were made by French kings from the Capetians to the Bourbons and contested by English dynasties. Ironically, scrofula may have claimed the lives of several members of the house of Valois.

# SEALS AND SIGILLOGRAPHY

**.** From the 13th through the 15th century, the use of seals in France was a generalized phenomenon that involved the society as a whole and crossed boundaries of gender, age, religion, and social and professional status. All persons and corporations could, and most did, legally commit themselves by affixing their seals to charters recording their transactions and decisions. The seal's function as a means of documentary validation should not obscure its broader implications as a cultural phenomenon.

The seal presents a dualistic aspect. The seal matrix, made of metal, such as brass, bronze, latten, or gold and silver for the ruling elites, was carved in the negative and designed to impress repeatedly a raised image, the seal impression, upon a secondary surface, most often of wax or lead. Seals thus evoked notions both of being (matrix) and of becoming (impression) and projected a creative capacity analogous to life itself, which may account for the intense psychosocial identification of medieval individuals with their seals. For the seal was a personal object incorporating both a text—the legend—and an image. The legend identified the sealer by name and by rank, and the importance of identity, repeatedly declared under a wide variety of circumstances, rendered the choice of title significant. The image, however, dwelt less on individuality than on status and sociopolitical function, less on subjective than on group consciousness. Persons appeared on their seals within such categories as kings, queens, knights, abbesses, artisans, even peasants and Jews. Moreover, when displaying coats of arms individuals defined their locus within their family, since heraldic emblems expressed the identity of a kindred in relation to its subbranches and other groups. Underlying conventions therefore dictated that sealers be represented by conceptual images and not as individuals and that seal

iconography foster a symbology of power, articulating and probably authenticating the organizing principles of French medieval society.

Seals drew their power as effective agents of authentication from a dual legacy. The first results from a specific pattern of diffusion. From ca. 450 to ca. 1050, documentary sealing had remained an exclusively royal prerogative, an as yet unchallenged expression of public authority, which thereafter spread to magnates, male and female, ecclesiastical and lay. From ca. 1050 to ca. 1200, nonroyal seals were used solely by such elites in emulating, claiming, and exercising ruling status, arrogating to themselves regalian rights, among them that of seal usage. The second legacy involves the tradition, unbroken since the early Middle Ages, of exchanging symbolic objects, such as knives, whips, and handles, as evidence of agreement or transaction. As legal titles came to depend increasingly on written records by the early 13th century, the seal provided both an authoritative guarantee derived from its previously royal character and the tangibility of a

symbolic object that had regulated the oral and ritual system of property transfers and judicial settlements. The medieval seal, thus standing at the junction of literate and oral tradition, encouraged trust in the written word by incorporating participatory, tactile, and iconic practices associated with an orality that remained throughout the Middle Ages the framework in which literacy and documentation functioned.

# SÉES

(Séez). The present cathedral of Notre-Dame at Sées (Orne) replaces one burned in 1174 by Henry II Plantagenêt. Among the finest examples of Norman Gothic architecture, it was begun from the west side in the early 13th century. The well-proportioned nave with three stories—arcades, triforium, and high pointed arches—reflects English influence. The transept and choir with clerestory and ambulatory, begun ca. 1280 under Bishop Jean de Bernières (r. 1278–94), were inspired by Paris. They are lit by 13th-century square-framed rose windows, remarkable for their finely carved tracery. The façade with porch and bell towers dates from the 14th century; its main portal has an impressive tympanum of the Virgin.

# SEIGNEUR/SEIGNEURIE

. By the end of the Middle Ages, various kinds of people were called "lord" (Lat. *dominus,* Fr. *seigneur,* sire), including members of the old military aristocracy and people of humble origins who had acquired a privileged occupation or title. Most commonly,

however, the term continued to refer to those who possessed a seigneurie, or lordship, generally but by no means always rural in character. Those who possessed a seigneurie might be the lord of different kinds of people: (1) those who were their tenants; (2) those who were subject to their jurisdiction or *ban;* and (3) those who owed them homage for a fief. To the first group, the seigneur was landlord; to the second, he was judge and political ruler; to the third, he was the superior in a feudal relationship but often the social equal. The feminine form, "lady" (Lat. *domina*), often referred to the wife or widow of a lord but could also refer to a woman who exercised lordship over one or more of these groups in her own right, usually as a result of inheritance. A corporate body, such as a monastery or cathedral chapter, could also be a seigneur.

Although the term seigneurie could mean "lordship" in an abstract sense, most commonly it referred to the persons and territory subject to one or both of the first two types of lordship indicated above. In the first, and much older of these, the seigneur was the proprietor of an agricultural operation, deriving his income, in cash or kind, from the rents paid by his peasant farmers, who also often had to perform obligatory labor services *(corvées)* on the lord's own farmland, the produce of which was an important part of his revenue. The seigneurie in this sense had ancient roots, and with it went a certain amount of petty jurisdiction that came to be called "low justice." This kind of seigneurie was able, for a time, to support the lord as a mounted warrior, but in the 12th century its economic value began to decline relative to the revenues obtainable from the second type of lordship, sometimes called the *seigneurie banale*.

The *seigneur banal* was the political and judicial ruler of those who were his dependents. With respect to some of these, he might also exercise the traditional role of land-lord, but he might wield banal powers also over people who were the tenants of a lesser landlord. The seigneur of this type possessed "high justice," a far more lucrative jurisdiction that covered most serious felonies. He could demand exactions that came to be associated with serfdom. He could require his subjects to use his mill, winepress, or oven and pay him a fee. He might hold extensive rights over the forests and waterways, from which he could exact fees or tolls. Lordships of this sort provided the basic financial support for the higher nobility of France. When they encountered economic difficulties in the 14th century, the nobility suffered a serious crisis.

The seigneurie has sometimes been described as the exercise of formerly public powers by private individuals, since the *ban* was the symbol of public authority. The Frankish kings had adopted the practice of granting charters of "immunities" to ecclesiastical lords, promising that royal officers would not enter their lands to exercise their military or judicial functions. The holder of such a charter had the right and duty to take over these functions in lieu of the royal officials. When they were incompatible with clerical status, the church would have an important local layman act as *vidame* or "advocate" and perform the functions associated with the *ban*.

In time, immunities were extended to important lay lords who could exercise the *ban* on their own behalf. Finally, ca. 1000, the growing importance of the castle brought further changes, as castellans used their positions to usurp banal powers from the counts and impose their *ban* on lesser landlords and their tenants. By the 11th and 12th centuries, the seigneurie was the principal unit of government and political power at the local level, but in later centuries, as territorial princes and kings reasserted their own public powers, it became primarily an economic unit again.

# SÉLÉSTAT

(Schlettstadt). An early residence of the Frankish monarchs, Séléstat (Bas-Rhin) is situated on the left bank of the River 111. In the 13th century, it was granted its charter as a free imperial city. It preserves its late-medieval town center and two towers of its fortifications, the Tour des Sorcières and the Tour de l'Horloge (14th c.). The magnificent triple-naved priory church of Sainte-Foy (12th c.), in red sandstone and Vosges granite, is one of the finest Romanesque buildings in Alsace. Its decoration abandons the Rhenish style and Lombard arcading of other Alsatian churches (Murbach, Guebwiller, Neuwiller) in favor of French foliated capitals. The massive west end consists of a porch between two square towers decorated with arcades on colonnettes. The octagonal lantern tower over the transept with arcatures and a stone spire rising to 142 feet is also original. The central nave has early rib vaulting supported on alternating strong and weak Romanesque columns; the flanking aisles have groin vaulting.

The Gothic church of Saint-George was built from the 13th to the 15th century. An unusual 13th-century narthex runs the entire length of the façade and opens to the south with an elegant portal and rose window representing the Ten Commandments. The four

windows in the façade are 13th-century; the vaulting of the nave is 14th-century; and important 15th-century stained glass represents the lives of SS.Catherine and Agnès.

# SÉNANQUE

. With Le Thoronet and Silvacane, Sénanque (Vaucluse) is one of the "three Cistercian sisters of Provence." Founded in 1148, it was attacked by the Waldensians in 1544 but remained active until the Revolution,

Sénanque (Vaucluse), mid-12th-century Cistercian abbey. *Photograph courtesy of Whitney S.Stoddard.*

then was reoccupied and restored by the order between 1854 and 1969 (with a hiatus from 1900 to 1927). Its 12th-century conventual buildings—church, cloister, chapter house, dormitory, and warming room—are typically simple and austere, according to the dictates of the order's founder, St. Bernard of Clairvaux. Due to its site in a narrow glen, the church is oriented north-south. Its nave is spanned by an impressive continuous barrel vault without cross-arches.

# SENESCHAL

. The seneschal (Lat. *dapifer*) originated as an officer of the royal household concerned with keeping the king's itinerant entourage properly supplied with the produce and revenues of scattered royal estates. When, after a period of obscurity, the seneschal emerged in the 11th century as one of the "great officers of the crown," he quickly became the senior royal official. In this sense, his role can be traced back to the Merovingian mayor of the palace and forward to the grand master of the household in the later Middle Ages.

The king's household was still the principal organ of the central government in the 11th and 12th centuries, and the seneschal enjoyed great importance. He was the leading military commander and the one to whom the *prévôts,* the principal domainal officers in the field, were supposed to report. Three important men held the position of seneschal for much of the 12th century, Anseau de Garlande, Raoul de Vermandois, and Thibaut de Blois, each from a more prestigious family than his predecessor. Thibaut, as count of Blois, was a major territorial lord. When he died in 1191, Philip II Augustus allowed the position to remain vacant.

Meanwhile, important territorial lords had their own staffs of major household officers, with the seneschal holding senior rank. In many great fiefs, he acted as lieutenant in the lord's absence, being in charge of military, judicial, and financial matters. When the French kings began to absorb great fiefs into the royal domain, they preferred to retain existing institutions that had proven workable. The seneschals, now royal appointees, continued to be the chief administrative officers of such territories, and the lands under their control became known as *sénéchaussées*. By the second half of the 13th century, these officers, found mostly in southwestern France, were roughly comparable with the bailiffs *(baillis)* who served as the king's chief regional officers in the northern part of the kingdom. In the late Middle Ages, the realm con.tained between thirty and forty districts governed by a bailiff or a seneschal. By that time, both types of officer had largely military responsibilities, as their former judicial and financial duties were performed by specialized subordinates.

# SENLIS

. Senlis (Oise) is best remembered for an event that took place relatively late in its history, the election of Hugh Capet as king of France in 987. A favorite royal city of both the Merovingians and Carolingians, Senlis takes its name from its first Gallic inhabitants, the Sulbanectes (later the Sylvanectes), and not from its Roman name, Augustomagus. The thriving Gallo-Roman town was destroyed in the 3rd century, an event that led to the first city walls, the only ones of their date still preserved in France. Christianity reached Senlis probably in the late 3rd century, although the first bishop we know by name, St. Rieul, was probably active in the mid-4th century. Early references to the cathedral give two names, Notre-Dame and Saints-Gervais-et-Protais, suggesting an episcopal group of two or three (including the baptistery of Saint-Jean). The double vocable is still preserved; the cathedral is Notre-Dame and the two-storied octagonal chapel (later 10th or early 11th century) is Saints-Gervais-et-Protais.

Senlis, Notre-Dame, ambulatory and chapels. *Photograph: Clarence Ward Collection. Courtesy of Oberlin College.*

The present cathedral, underway by 1153, owes its inspiration to the chevet of Saint-Denis. Comparison of the details of capitals and other architectural elements indicates that the west façade, also based on Saint-Denis, was begun at the same time as the east end, which was completed by 1167. The whole building was dedicated in 1195. A transept was inserted in the 13th century, as were Senlis (Oise), Notre-Dame, nave elevations, 12th century and present. After Aubert and Vermand. lateral chapels. A major fire in 1504 resulted in a dramatic increase in the height of the clerestory and the addition of new vaults.

The original plan called for a deep chevet of five bays under two sexpartite vaults; the last straight bay is vaulted with the hemicycle. The main vessel is flanked by aisles and ambulatory with five radiating chapels. The plan of the east end of Senlis is irregular, the result of the builder having to insert the chevet in the space close to the Gallo-Roman city walls, which included a chapel used by the canons.

The 12th-century design of Senlis cathedral is one of the first to include vaulted galleries in the Gothic style, a feature also found at nearby Noyon. The third story of the elevation was a single low window, the height of which can be reconstructed from the level of the 12th-century vault between the west towers. Because the original plan was based on compound piers, the plan of the rebuilt vaults repeated the original, although at a higher level. The smallest of the major 12th-century Gothic buildings, Senlis is marked by an elegance in execution that befits its importance in a major royal city.

Senlis, west portal, Coronation of the Virgin. *Photograph courtesy of Whitney S.Stoddard.*

The west façade was planned to have three portals, but only the center one was decorated with figure sculp-ture. The design and composition of this portal are among the major innovations of the period, as is the choice of subject matter. Here, for perhaps the first time, the theme of the tympanum is given over to the Coronation of Mary as Queen of Heaven. Already enthroned, Mary turns toward Christ, who was shown reaching out to crown her—his hands and the crown are missing. The lintel below, which has been dropped into the zone of the jambs, is divided into two scenes in parallel compositions. On the left, the mourning Apostles surround Mary's deathbed while angels convey her soul to Heaven; on the right, an ecstatic group of angels raise the body of Mary so that it might join her soul. The four ranks of archivolts show her earthly genealogy, the Tree of Jesse, together with those sibyls and Prophets who predicted the Virgin Birth. The eight statue columns are the Christophores, those Old Testament prefigurations of salvation, arranged in pairs of historical sequences. On the right, the sequence runs from the outside to the door: David, Isaiah, Jeremiah, and Simeon; on the left, it runs out from the door: Abraham, Moses, Aaron, and John the Baptist. The cycle of time is completed by the Labors of the Months flanked by mythical beasts.

The parish church of Saint-Pierre, converted to a covered market in the 19th century, has recently been excavated and restored with a semblance of its Flamboyant elegance intact. Saint-Aignan, until recently a movie theater, is also under excavation and restoration. The colle gial church of Saint-Frambourg was closed after the Revolution and converted to other use. Begun in 1177 and completed by the end of the century, this remarkably homogeneous single-nave building has also been carefully restored and now serves as a concert hall. Excavations in the course of the restorations of all three churches have revealed the plans of earlier structures.

Senlis preserves three other significant buildings associated with its medieval past: the bishop's palace with its chapel; the Hotel Vermandois, a 12th-century seigneurial residence built by Raoul de Vermandois, first cousin and seneschal to Louis VI; and the royal palace at Senlis, a favorite residence of Louis VI and Louis VII, both of whom made additions to it. The ruins of the palace complex include a two-storied great hall and royal chapel; the Hotel Vermandois has vestiges of its great hall intact (and under restoration). In addition, Senlis has a number of 15th- and 16th-century residences of nobility and wealthy citizens.

# SENS

. Sens (Yonne) takes its name from the Senones, the Celtic tribe who first settled on the island in the Yonne River, rather than from its Roman name, Agendicum. After the Roman conquest, the town became an important center of trade owing to its location at the junction of two important roads, east-west from Troyes to Orléans and north-south from Lyon to Paris. Sens was a major center by the 4th century, with extensive city walls. Nothing of the early city remains above ground—the last Roman gate was demolished in the 1840s—although extensive archaeological finds of sculpture and architecture, today in the municipal museum, attest to its importance.

Christianity probably reached Sens in the 3rd century. The 7th-century *vita* of St. Loup repeats the legend that the first cathedral was built by St. Savinien on the site of a pagan temple. Of the many parish churches and abbeys, only the cathedral and the 13th-century church of Saint-Jean, now on the grounds of the hospital, survive.

The early episcopal group at Sens consisted of Saint-Jean (the baptistery), Saint-Étienne, and Notre-Dame. The three portals of the Gothic cathedral commemorate these three early churches. In the 9th century, Archbishop Wénilon

Sens (Yonne), Saint-Étienne, plans of 12th-century and present church. After Clark/Bouy and Bégule.

rebuilt Saint-Étienne, which again was destroyed by fire in 968. The third church, built 968–82, survived until it was torn down to give way to the present Gothic cathedral.

This building was undertaken by Archbishop Henri Sanglier (r. 1122–42) ca. 1140. The south chapel was in use by 1151, and Pope Alexander II dedicated the altar of Peter and Paul in the completed chevet on April 19, 1164. The burning of the city in 1184 must have damaged the new façade, although most of the work postdates the fire.

The building history is complicated by the collapse of the south tower of the façade in 1268, which necessitated rebuilding it, the vault between the towers, and the first bay of the nave and several aisle vaults. This occurred after the construction of a new axial chapel and the enlargement of the clerestory windows in the east end of the building, 1230–40. Chapels were added between the buttresses of the nave in the late 13th and early 14th centuries, but the most profound changes occurred after 1490, when Martin Chambiges began construction of the south-transept arm. The new arm was vaulted in 1498 and the north-transept arm constructed in 1500–17.

The original plan of Sens belonged to that small series of medieval buildings without transepts, which in part accounts for the axial regularity and for the commanding sense of continuous space. The chevet had an ambulatory with a single rectangular chapel. Two side chapels beyond resulting space is on a grand scale. That sense of scale is the ambulatory complete the chevet plan. The main vessel is extremely wide (49 feet) and tall (nearly 80 feet). The reinforced by the huge domical six-part main vaults erected over double nave bays.

The elevation consisted of three stories, two of which, arcades and triforium, remain. The second story consisted of double units of subdivided arcading opening into the roof space. In the 19th century, a back wall was erected in each bay, although there is no communication between bays. The clerestory was enlarged in the 13th century.

Construction of the present building started with the erection of the chapel of Saint-Jean on the north side, followed by the outer wall of the ambulatory. Construction proceeded at a regular pace up to the level of the windows, where there are several visible changes in the design, largely a matter of an increase in first the width and then the height of the windows. The north ambulatory wall preserves evidence of two, probably three, such enlargements. The lower tails of groin vaults can still be seen in several bays. This lowest course, on the same block as the transverse-arch capital, had already been prepared when the decision to incorporate rib vaults was made. The late addition of rib vaults explains the little corbels stuck in to take the ribs. The masks and grotesques on the corbels, together with the capitals, confirm the presence of workers brought to Sens from the abbey of Saint-Denis, which also explains the changes in window sizes and the decision to use rib vaults. The accompanying change in attitude toward the architectural space makes Sens the first Gothic cathedral.

The abbey of Saint-Jean, of which only the chevet of the church remains, was founded in 500. The chevet was nearing completion when Abbot Simon Galtier died in 1245. The church was heavily damaged in the Hundred Years' War and again by the Calvinists in 1567. The ruined chevet was restored and completed by the Maurists between 1672 and 1684 in a manner harmonious with the surviving ambulatory. The 13th-century church, inspired both by Sens cathedral and by Auxerre cathedral, is a fine example of Burgundian Gothic.

# SENTENCE COLLECTIONS

**.** Originally, *sententia* was the term for a scriptural text under consideration, but it came to mean the interpretation of that text. *Sententiae* is a Latin word meaning "opinions," and sentence collections, sometimes called *florilegia* ("bunches of flowers"), are gatherings of the opinions of the church fathers, arranged around topics. Sentence collections could be more popular than the original works, and patristic authorities might well be quoted from these collections rather than from the complete work. Sometimes, sentence collections feature the opinions of only one author: Gregory the Great was popular in this respect. Early sentence collections were compiled by Prosper of Aquitaine and Isidore of Seville.

Biblical exegesis was most commonly done book by book, following the text of any one book straight through. But certain questions that arose out of the text could be detached from it and continue life as separate topics, with the opinions of their patristic authorities in attendance. Grouped together, these formed collections of sentences and are the progenitors of the great *summae,* or summaries, of theology that are the characteristic product of the scholasticism of the high Middle Ages.

Some of the famous collections of the Middle Ages are associated with Anselm of Laon, especially the *Sententiae divinae paginae* and the *Sententiae Anselmi,* both collected together after his death. The anonymous *Summa sententiarum,* probably by Otto of Lucca, was used by Peter Lombard for his own *Sententiae;* but most collections are both anonymous and more ordinary than these, for they represent the "commonplace books" of readers and preachers, rather in the manner of books of *distinctiones.* Other famous collections are the *Liber Pancrisis,* the *Sententiae Atrebatensis,* and the *Sententiae* of Robert Pullen and of Rolando Bandinelli. It has been argued that sentences are a particular production of the "School of Laon," under Anselm, and that they form a bridge between the output of the monasteries and the more combative work of the schools. However, as so often in the Middle Ages, our understanding is hampered by a confusion of terms, both modern and medieval. We may attempt to deal with centuries of

tradition in different contexts with the same word; they recognized the changes in meaning of the same term used in a different situation. Named collections of sentences are extant from monastic sources as diverse as that of Defensor of Ligugé in the 7th century to Hélinant de Froidmont at the beginning of the 13th, and sentence collections are found in large numbers in south German monastic libraries. The apogee of the sentence collection was reached ca. 1155, when Peter Lombard, master of the schools at Paris and later bishop of Paris, published his *Quattuor libri sententiarum.* This work of largely patristic opinions, with heavy prevalence given to Augustine, is arranged under headings and questions, with the minimum of linking commentary by Peter himself. The four books cover God in Trinity, the Creation and Sin, the Incarnation and Virtue, and Sacraments and the Eschaton. The extracts, chosen with skill, produce a wide range of question and opinion in the minimum of space. When in the 1220s Peter's sentences became the textbook for the theology faculty of the University of Paris, each doctoral student had to write a commentary on the work as part of his training. No additional important sentence collections *per se* were then produced, merely more commentaries on Lombard.

# SEPTIMANIA

**.** The Mediterranean coastal region between the Rhône and the Pyrénées, stretching from Avignon to Perpignan and comprising the modern French departments of the Gard, Hérault, Aude, and Pyrénées-Orientales, was known as "Septimania" in the early Middle Ages. The name (first attested in the 5th c.) is derived from the 7th Roman legion, which was settled in the area of Béziers (Colonia Iulia Septimanorum Baeterrae) in the 1st century A.D. Septimania, part of the Roman province of Transalpine Gaul (later Gallia Narbonensis), was thoroughly romanized. In the 4th century, it was separated from the region east of the Rhône and formed into the province of Narbonensis Prima. The Visigoths gained control of it in the late 5th century but did not colonize it intensively. Under Visigothic rule to the mid-8th century, Septimania was not part of Merovingian Gaul; it was, rather, a barrier to direct Merovingian access to the Mediterranean and was the object of repeated unsuccessful Frankish efforts to conquer it in the 6th century, by Childebert I, Theuderic I, and Guntram.

After the victory of Clovis I over Alaric II in 507, Septimania remained in the Visigothic kingdom of Spain as the province of Septimania (sometimes also called Gallia or Gallia Narbonensis) and often exhibited strong separatist feelings. The Muslims did not conquer Septimania when they took the rest of the Visigothic kingdom in 713, but it was exposed to frequent attacks until it was taken over by Pepin the Short in the 750s. Its nobility and population continued to see itself as Gothic and Gothic law was enforced there. Under the Carolingians, the name "Gothia" came to be used for the region, although for over a century "Septimania" continued to be used as well.

# SEQUENCE (EARLY)

. Sequences, also known as "proses," were long chants sung at Mass on high feast days after the singing of the Alleluia and before the intoning of the Gospel. They were apparently first conceived as verses to be set to long melismas (textless vocalizations upon a single vowel sound, called *melodiae* or *sequentiae* in the sources) sung at the end of the Alleluia. Although sequences quickly became an independent genre, whose melodies were sometimes related to a "parent" Alleluia and sometimes not, early-medieval sequences always looked as if they were texted *melodiae.* Manuscripts both east and west of the Rhine consistently preserved sequences in two forms, with and without texts; the untexted form probably aided in reading the notation of the texted form, which required that the neumes be broken down into simple virgae and puncta to accommodate individual syllables. The music of early sequences, except in beginning and closing lines, is often made up of repeating couplets, which cause the text to unfold in paired versicles: a, bb, cc, dd, ee, ff, g.

Although the origins of the early-medieval sequence are still in dispute, most scholars believe that the genre began in West Frankish lands, especially in what is now northern France, probably during the first half of the 9th century, with models later inspiring poets and musicians in other regions; the East Frankish repertory was established in the second half of the 9th century, with Notker of Saint-Gall (ca. 840–912) a major creative force. Sequence repertoires in southern France and in England, both of which developed in the 10th century, were dependent primarily upon the northern French tradition, whereas Italian sequences, also developing in the 10th century, drew upon both East and West Frankish traditions. Manuscripts are extant in each tradition from one or two generations after the repertoires were first created: the earliest complete, liturgically ordered

collections of sequences, for example, date from the second half of the 10th century and were copied in southern France.

Although each geographical region had its own style of sequence, these differences have been little studied. The texts are written in art prose, carefully constructed and commonly using such poetic devices as assonance and rhyme, yet following no presently understood rules. The melodies of early-medieval sequences—simple, forceful, and strongly reliant upon the modes—are different in style from the Alleluias themselves, and from other Gregorian chants as well. Some early sequence melodies were frequently reset or readapted for new texts. The late 10th and early 11th centuries in southern France witnessed a second flourishing of early sequences, and here one can find an increasing dependence upon rhyme.

# SEQUENCE (LATE)

**.** The late 11th and early 12th centuries were witness to a minor revolution in poetic taste in northern Europe. Study of medieval treatises *de rithmis* reveals that rules for writing rhythmic poetry were standardized during this period, just as great quantities of liturgical poetry began to be written in this style: sequences, versus, conductus, rhymed offices, some ordinary tropes, and liturgical plays. As Dag Norberg has argued, the patterns predominating in rhythmic poetry are based on those found in quantitative verse but depend on word accent rather than duration. Lines are governed by the number of syllables they contain, and rhyme is used to underscore caesurae and ends of lines and strophes.

Medieval France was an early fountainhead of liturgical rhythmic poetry, and this is manifested particularly in the rise of the late sequence. Sequences with rhyming, accentual texts, called "late sequences" or "second-epoch sequences," were written only in small numbers in the late 11th century but in ever greater numbers as the 12th century progressed. By the second quarter of the 13th century, significant numbers of late sequences were sung in cathedrals and monasteries throughout France, with only the strictest monastic orders (Carthusians, Cistercians, and most Franciscans) not adopting them. The late sequences were first championed by the Augustinian canons regular,

particularly by those at the abbey of Saint-Victor in Paris, where late in life the poet Adam made his home. The sixty or so late sequences that survive from 12th-century Paris were the first substantial group of late sequences and the first sequence poems west of the Rhine to be consistently unified by historical narratives depending upon Old Testament typology. Although it is impossible to state categorically how many of these works are by Adam, a significant number are calls to the common life as advocated by the *Rule of St. Augustine* and develop themes that seem to relate to the struggles in which Adam and other reformers from the first half of the 12th century were engaged. There are far greater numbers of late-sequence texts than of melodies, and many individual pieces are *contrafacta*.

# SERFDOM/SERVITUDE/SLAVERY

. Roman Gaul knew chattel slavery, and chattel slavery of the classical type persisted in the households and on the estates of the Gallo-Roman and Merovingian aristocracy long after the fall of imperial administration. Under the Carolingians, classical slavery rapidly declined, and one of the common Latin words for slave, *servus* (Fr. *serf*), was detached in the process from its original meaning. It came to represent a still debased but more elevated status than slave, although slaves properly so called continued to exist. Historians debate whether serfs, in the new meaning of the word, were primarily the ameliorated descendants of slaves or whether they constituted a new group of people and their descendants, who entered or commended themselves voluntarily into debasing but not slavish dependency, ostensibly for protection in the unsettled political and social conditions under the later Carolingians.

The period roughly from the death of Charles the Bald (877) to the 11th century sees weakness in central institutions and a confusion in terminology, so that it is difficult to determine at times the precise distinctions among slaves, serfs, and free rustics. They were all usually under heavy obligations to local lords. The question is whether these obligations debased personal status and in effect isolated individuals from the fiscal

demands and judicial protections of royal authority. And that question, though never unimportant, became crucial only later, when the monarchy and other central institutions regained strength. Precise legal definitions of serfdom derive primarily from 12th-and 13th-century records, long after the varied social configurations we call "serfdom" came into existence.

The legal precision in the French sources ca. 1200 owes much to the concern of jurists for determining litigants' access to royal or princely courts reserved for "free people." Certain obligations owed to lords or restrictions on personal power were said by the jurists to debase personal status and thus to block access to courts of free people, especially for the defense of property. These included subjection to an arbitrary capitation, or head tax, often called *chevage;* the requirement to pay the token of lordship known as the *taille;* the incapacity to inherit, termed *mainmorte;* the prohibition of marriage outside the lordship, or *formariage;* restrictions on residence and free movement; liability to forced labor, or *corvée.* Because serfdom differed from region to region, it was not unknown for one or more of these obligations to be absent in practice. Moreover, liability to any one of them did not necessarily make an individual a serf. Burghers in a seigneurial town could be under the restriction of *for-mariage* or subject to the *taille,* for example. But one effect of the sharpening of legal categories in the late 12th and 13th centuries was the tendency of "free" people to buy themselves out of obligations whose vocabulary or content raised any presumption of servile status.

It is still an open question whether most French rustics at any time in the Middle Ages should be considered serfs, given the welter of names applied to varying forms of dependence and changes in the nature of dependence even when the words remained the same; *homme de corps* is a case in point. Some regions, like Normandy, never knew serfdom, however we define it, as an important social or economic institution. Finally, it is difficult to assess the economic and social impact of serfdom even in regions where there is no doubt that the majority of rustics lived under theoretically debasing obligations. The authority of lords, although expressed in the powerful language of obligations owed to them, was never absolute and always contested. This helps explain why so many of the obligations, theoretically arbitrary or at the pleasure of the lord, were in fact rigorously regulated by custom.

In the most general sense, manorial courts—courts that adjudicated property and other disputes involving servile tenants—were as bound by customary restraints on arbitrary lordship as the courts of free people. More specifically, debasing obligations were usually mitigated in practice. Negotiation led to *chevage* and even the *taille* (though less systematically) becoming levies collectible only at regular intervals and, indeed, at fixed sums whose burden was gradually eroded by inflation. *Mainmorte* might be resolved into a system that permitted the serf to inherit as long as the lord received the "best beast" in the legacy. Marriages between serfs of different lords or between a serf and a free person could be accomplished by the payment of a fine or fines to the appropriate lord or lords, and the relationship of the children of these marriages to the lord could frequently be worked out by negotiation. Serfs could purchase permission to take up residence in other lord-ships. And lords sometimes commuted *corvées* to fixed monetary sums, sometimes required very limited amounts of labor as the *corvée,* or sometimes even "paid" for the labor by giving workers a superabundance of food and drink during the period of the *corvée.*

Where political factors had led to a situation in which the obligations of serfs were radically mitigated, where they became mere licensing fees, it made little economic sense on the part of lords to perpetuate the system. Since the language of servile obligations remained pejorative ("vile and unnatural" is what the records call serfdom), serfs sought to be manumitted and lords frequently responded favorably for a price. The 13th and early 14th centuries were the most active periods for manumission. King Louis X in 1315 freed all royal serfs. The demographic catastrophe of the middle decades of the 14th century went farther to undermine traditional serfdom, as peasants whose labor was in demand were able to escape the strictures of the system. On the other hand, the conservatism of lords in several regions and the attempt to enforce servile obligations as a hedge against the labor unrest of the 14th and 15th centuries ensured that in some areas of France serfdom would persist until the end of the *ancien régime*.

It should be added, finally, that even where manumission was widely practiced or the demographic crisis undermined traditional forms of dependence, serfdom vanished, not lordship. Many obligations therefore remained in being that were not considered debasing of status at all. The most important of these were the so-called banalities, the requirement that rustics living in a seigneurie bake their bread for a fee in the lord's oven, grind their grain at his mill, press their grapes at his winepress, and perhaps concede a privileged place in the market to the lord's produce. Although often contested, these obligations remained largely intact until well into the modern period.

# SERGEANT

. The word "sergeant" (Lat. *serviens*/OFr. *sergent*) described people of various types and duties. In the military context, sergeants were lightly armed fighting men who served and supported knights. In other contexts, sergeants acted as guards, ushers, policemen, messengers, process servers, jailkeepers, all-purpose functionaries of administrators in provincial districts like *bailliages* or *sénéchaussées,* and simply as servants within noble households. Mounted sergeants charged with executing judgments, levying fines, confiscating property, or apprehending malefactors were perhaps the governmental officials most frequently encountered by ordinary citizens. Understandably, they were unpopular, and sometimes the king responded to demands that their number be reduced.

*John Bell Henneman, Jr.*

# SERMONS IN VERSE

. A number of 12th- and 13th-century poems were called "sermons" by their authors, but the term seems to have referred as much to their oral mode of presentation as to their religious content. The eight extant 12th-century "sermons," including the Norman *Grant mal fist Adam,* are mostly in stanzaic form and urge contempt for the world. In contrast to the others, Thibaut de Marly's *Vers* (ca. 1182–85) was addressed to court circles, recalling its audience to chivalric as well as Christian virtues. At the end of the century, the *Poème moral,* a systematic moral treatise in the form of a sermon that dealt in turn with penitence, salvation, and vigilance, was addressed to a popular audience.

In the 13th century, Gautier de Coinci addressed two sermons to a convent of nuns. Hélinant de Froidmont's *Vers de la Mort,* a meditation on death as the culmination of the Christian life, was the earliest of a series of such sermons. Other cycles of sermons were written by Robert de Gretham and Nicole Bozon.

*Maureen B.M.Boulton*

# *SERMONS JOYEUX*

. Among the dramatic monologues or one-character plays of the late Middle Ages are parodies of wills, mandates, prognostications, and especially of sermons. About thirty of these *sermons joyeux* have survived from the 15th and early 16th centuries. Short, comic pieces (150–400 octosyllabic lines), carnivalesque in their bacchic and alimentary themes and obscenity, they were usually performed in festive contexts, such as weddings, tradeguild banquets, or monastic holidays.

Some of the *sermons joyeux* are parodies of saints' lives. Instead of the saint whose feast it is, they tell of carnivalesque saints, using the same rhetorical eloquence prescribed by the *artes praedicandi*. The actor who "preaches" the sermon relates the saint's life, describes the martyrdom, and reveals the miracles worked by the saint. Typical subjects are St. Oignon, who makes people cry; St. Hareng, who was martyred on the grill; and the priapic St. Billouard, who repopulated the earth after the Flood. Other sermons, based on nuptial folklore, give rudimentary (and comic) instruction in sexual behavior to newlyweds. Still others, from monastic and school milieux, have a goliardic character. One treats the great deeds of Nemo (Nobody), who, taken as a person, is all-powerful. Another is the polemical sermon of La Chopinerie, in which the students of Paris defend their privileges and vaunt their drinking prowess.

The *sermon joyeux* depends for its basic meaning and comic effect on the opposition between its serious form, derived from the sermon tradition, and its comic content, based on carnival themes. Often, however, the imagery of the piece suggests another level of meaning. The *Sermon de saint Jambon et sainte Andouille,* for example, may be read as

an erotic allegory. Moreover, the actor may inject a topical meaning derived from historical circumstances. In this way, St. Jambon came to denote a certain Joannes Bonus (or Jean le Bon), who was incarcerated in Paris for having recited on All Soul's Day a *sermon joyeux* inviting the audience to indulge in public drunkenness.

Most of the texts are anonymous, though the *Sermon de saint Billouard* was written by Jean Molinet and the *Sermon pour une nopce* by Roger de Collerye. Much of the humor of these short pieces is accessible to readers today, despite the fact that many allusions remain unexplained. Products of an era when preaching flourished, the *sermons joyeux* cast light on the festive spirit in France on the threshold of modern times.

# SESTINA

. Invented by the troubadour Arnaut Daniel, the sestina is composed of six six-line stanzas and a three-line *tornada*. The first stanza establishes six rhyme words which are repeated according to a fixed structure: stanza *a* rhymes 1 2 3 4 5 6; the next stanza rhymes 6 1 5 2 4 3; subsequent stanzas repeat the permutation. Were there to be a seventh stanza, it would repeat the rhyme-word order of the first. All six rhyme words are repeated in the *tornada*. Though a creation of Occitania, the genre found its greatest audience in Italy, where Dante and Petrarch were master practitioners.

# SEVEN SAGES OF ROME

. The Seven Sages of Rome is an antifeminist frame tale that generated many variations and continuations in France and became enormously popular throughout medieval Europe. It derives from an unknown version of an eastern romance, the *Book of Sindbād,* which probably originated in India in the 5th century B.C. Like the oriental archetypes of two other ostensibly didactic frame narratives that won favor in Old French adaptations, *Barlaam et Josaphat* and the *Chastoiement d'un pere a son fils,* the *Sindbād* moved westward; it was translated into Persian, Arabic, Greek, and Hebrew and reached Europe by the mid-12th century, with significant changes to both the frame and the intercalated

stories having occurred along the way. The oldest text in the western Seven Sages tradition is the Old French verse romance *Sept Sages de Rome,* composed in octosyllabic couplets by a Norman poet between 1155 and 1190. A compelling example of the jongleresque romance style, this poem survives in two redactions, each preserved by a single 13th-century manuscript, B.N. fr. 1553 (*K:* 5,068 lines) and Chartres, Bibl. Mun. 620 (*C*: 2,078 lines; the second half only of the poem).

In the romance, a learned masculine community of clerics and their pupil just barely outwits an unscrupulous woman who threatens to disrupt the legitimate lineage of the empire. The widowed emperor Vespasian of Constantinople charges the Seven Sages of Rome to educate his son, aged seven. After he remarries, he summons the prince, now fourteen, home to meet his stepmother. The youth remains silent on returning to court because he has read in the stars that he will die if he speaks before the eighth day; each of his tutors pledges to defend him for one day. But his father, expecting a well-spoken heir apparent, is distressed by his son's muteness. The queen then offers to make the prince talk. In her bedchamber, she tries to seduce him and proposes poisoning Vespasian. When the prince rebuffs her advances, she accuses him of attempted rape and treason and persuades the emperor to condemn his own son to death. For the next seven days, the sages win a stay of execution by telling stories that often emphasize the wickedness of women, while the queen rekindles the emperor's anger with tales featuring untrustworthy counselors or sons. On the eighth day, the prince tells a story proving his innocence. Father and son are reconciled, and the queen is burned at the stake. Although virtue triumphs through the prince's speech, the narrator emphasizes that the sages, despite their learning, are consistently checkmated by the queen. They subsequently join Samson, Constantine, and Aristotle as often-cited examples of great men humiliated by women.

Based on the verse *Sept Sages* are two derhymed versions. The A redaction in Old French prose is affiliated with the *K* verse text; composed in the first quarter of the 13th century, it appears in twenty-nine manuscripts of the 13th, 14th, and 15th centuries with a complex and contaminated filiation. The Middle French *D* redaction, affiliated with *C,* was prosified probably in the 15th century; it exists in one manuscript. The widely known A prose redaction was the source of Seven Sages texts in Italian, Middle English, Swedish, Dutch, and Welsh, as well as of a much imitated *Historia Septem Sapientum Romae* in Latin prose of the 14th century. A also generated two Old French prose reworkings later in the 13th century: the L redaction, which offers a thirteen-tale duel, with some different stories, and ends with a judiciary combat; and the *Ystoire de la male marastre,* which expands the frame narrative and adds six new stories to nine traditional ones. Seven manuscripts contain L; *Marastre* survives in four manuscripts.

In addition to these derhymings, translations, and reworkings, the A prose redaction inspired six anonymous continuations in Old French prose. The first, *Marques de Rome,* was composed ca. 1250–60; the romances of Laurin, *Cassidorus, Helcanus, Pelyarmenus,* and *Kanor,* all apparently by different authors, followed by the end of the century. Over twenty manuscripts for *Marques* survive, most containing at least one other Seven Sages romance; eight for *Laurin;* six for *Cassidorus* and *Helcanus;* and five for *Pelyarmenus* and *Kanor* (both still unpublished). Four manuscripts compile the entire cycle. Besides renewing themes and plot devices from the *Sept Sages,* the continuations incorporate material from Arthurian, oriental, and adventure romances of the period. The Seven Sages reappear as virtuous secondary characters in *Marques,* but in *Laurin* they

become evil and die dishonored. In the sequels, the chief male protagonists are Marques, son of the sage Cato, and his descendants, who inherit the throne of Constantinople through their mother. After *Marques,* overt antifeminism fades from the cycle, but the themes of wisdom, kingship, lineage, and the role of women remain central.

The "Dolopathos" tradition, which constitutes a second family of medieval Seven Sages texts, comprises two texts: a Latin prose romance composed in the last quarter of the 12th century by Johannes, a Cistercian monk at the abbey of Alta Silva, who dedicated his work to Bertrand, bishop of Metz; and an Old French verse romance of nearly 13,000 lines in octosyllabic couplets written in the first quarter of the 13th century by a clerk named Herbert, who freely translated and amplified Johannes's composition. Both Johannes and Herbert seem to have known the rhymed version of the *Sept Sages;* they include four of its stories and a similar frame narrative. One of the Dolopathos tales not borrowed from the *Sept Sages* offers an early version of the Swan Knight legend. In *Dolopathos,* the prince accused of rape is the son of Dolopathos, king of Sicily; his tutor in Rome is Virgil. The tale sequence defending him comprises only eight stories, seven told by seven nameless sages and a final one told by Virgil. After his youthful adventures, the prince converts to Christianity and devotes himself to pious works.

In both families, the Seven Sages romances illustrate the power of narrative to instruct, persuade, and captivate. Like the king who is the pivotal figure in the tale sequences, medieval audiences evidently enjoyed the intercalated stories as much as they relished the downfall of the crafty woman who foiled the sages. This fascination with storytelling, together with the adaptability of the frame and the possibility of substituting new tales for those that were lost or ceased to entertain, helped ensure an active and varied life for the French Seven Sages tradition over more than four centuries.

# SHIPS AND SHIPPING

**.** In the Middle Ages, boats allowed the movement of relatively large amounts of goods and troops less expensively than did land transport, which

Ships being loaded for transport, from a 14th-century manuscript. BN fr. 4274, fol. 6. *Courtesy of the Bibliothèque Nationale, Paris.*

was unwieldy and costly. Although the crown lacked access to them in the early Capetian period, France had vast coastlines with many ports. Royal fleets, notably under the Carolingians and later Capetians, played an important role in military engagements, such as the hostilities before Bouvines or in the crusades of St. Louis.

For North Sea and Atlantic travel, medieval sailors used the cog, a clinker-built ship with single mast and square sail. In the Mediterranean, galleys and carvel-built round ships *(nefs)* having two masts with lateen sails were common, though there was some technology transfer between north and south in the high and late Middle Ages. The cog with a lateen sail came to be used in both areas. Shipping via the Atlantic between the Mediterranean and North Sea ports was recorded in the late 13th century. Ship technology underwent considerable evolution in the 15th century, with the addition of masts on a vessel called a carrack, which carried upward of 1,500 tons. River transport involved smaller river barges, which plied the Seine, Loire, Somme, Rhône, Garonne, Oise, Saône, and lesser arteries. While more convenient than overland transport, rivers, like roads, were plagued by toll stations.

# SICILIAN VESPERS

. On Easter 1282, when the French sergeant Drouet molested a young Sicilian woman in Palermo just before Vespers, her husband stabbed him. The incident provoked a bloody rebellion throughout the island against the monarchy of Charles I of Anjou, in which Sicilians slaughtered some 4,000 Frenchmen and went so far as to rip the fetuses believed to have been fathered by Frenchmen from the wombs of women who had consorted with the hated foreigners.

The result of this uprising was to remove the island of Sicily from the control of the house of Anjou and to precipitate many years of war, during which the French monarchy and the Angevin king at Naples were unable to dislodge from Sicily the royal house of Aragon, whose king, Peter III, the Sicilians invited to rule them.

Historians have attributed the uprising to various foreign conspiracies: one involving John of Procida, a Sicilian exile, and Peter of Aragon, whose wife had a claim to Sicily; or one involving Michael Paleologus, the Byzantine emperor whose lands Charles of Anjou had hoped to invade. Whatever the truth of these theories, such conspiracies alone could not have produced so spontaneous a mass uprising. The real cause was desperation over extraordinarily high taxation, which produced revenues greater than those of England, France, and the papacy combined. In the end, the Sicilian Vespers permanently dismembered the most precocious medieval monarchy and undermined the crusading movement in western Christendom. After twenty years of war, during which the last foothold of the crusaders in the Holy Land was lost, the old Sicilian kingdom remained in two much weakened parts, and the leadership of the pope, an Angevin supporter, was badly compromised.

# SIDRAC, ROMAN DE

. The work of an anonymous compiler of the 13th century, *Sidrac* is a wisdom book in French prose, probably the imitation of an oriental model, in the form of alternating questions and answers. Although its prologue gives the date 1243, it was more likely composed late in the century, perhaps at Lyon, by an author who had probably visited the Latin kingdoms in the Middle East. Numerous manuscripts and three principal redactions

survive, with the number of questions ranging from about 600 to over 1,200. The work touches on theology, astronomy, obstetrics, geography, zoology, medicine, precious stones, and history.

# SIGEBERT DE GEMBLOUX

(ca. 1030–ca. 1112). Sigebert was both raised and educated in the Benedictine monastery of Gembloux. After completing his education there, he became a schoolmaster at Saint-Vincent in Metz, where he remained for twenty years. Sigebert was one of the most prolific and versatile writers of the 11th century. His interests included hagiography, history, and relations between ecclesiastical and secular authorities. In the Investiture conflict, for example, he argued persuasively for imperial authority despite the claims made for the papacy by Gregory VII. Although Sigebert's literary career began at Metz, his major works were completed at Gembloux after he returned there in 1070. Access to Gembloux's excellent library enabled him to write two important histories. In the *Chronica,* a work colored by his views on investiture, Sigebert sought to establish a precise chronology of historical events from 381 to 1111. The *Chronica* was widely disseminated and was subsequently continued by others. Sigebert's *Gesta abbatum Gemblaciensium* supplies many important details regarding the Investiture conflict of the 11th century. The *De viris illustribus,* a catalogue of 172 important ecclesiastical writers beginning with Marcellus, a disciple of St. Peter, and ending with himself, is an important compendium listing many Christian writers of the Middle Ages who would have otherwise been unknown. Among Sigebert's others works are the *Passion of St. Lucia* and the *Passion of the Theban Martyr Legion.*

# SIGER DE BRABANT

(ca. 1240–ca. 1284). A member of the Picard "nation" at Paris, Siger was by 1266 a teaching master of arts in Paris and canon of Saint-Paul, Liège. He was a leading exponent of Aristotle, known largely through the works of Averroes. He and scholars of

similar mind are known as "Latin Averroists." As is usual for the 12th and 13th centuries, they knew Aristotle mostly through the interpretations of Averroes, Proclus, and particularly Avicenna. This tendency made Siger suspect, and in 1270 he was involved in bishop Étienne Tempier's condemnation of thirteen theological errors at Paris. In the same year, Thomas Aquinas wrote *De unitate intellectus contra Averroistas,* directed chiefly against Siger and his followers.

The controversy continued until 1276, when Siger and two others were indicted for heresy by the French inquisitor Simon du Val, but Siger had already fled the country, apparently to make an appeal to the papal court. According to John Peckham, Siger was killed at Orvieto ca. 1284.

Siger was an Aristotelian in believing that Aristotle's meaning should not be concealed, even if it conflicted with revealed truth. The two Aristotelian doctrines that caused constant consternation for philosopher-theologians at this time were the eternity of the world, which Aristotelians held to be true but theology knew to be false, and the unity of the intellect, which denied the possibility of the resurrection of the individual, since every mind was subsumed into one unified intellect after death. This did not endear Siger to many, although he himself believed that truth was always on the side of faith and that in cases of apparent conflict between faith and reason one should always decide for revelation rather than reason. Critics accused him of holding to "double truth," that is, that some things were true in philosophy but false in theology. He himself may have felt as confusion and uncertainty that which outsiders took for lack of belief.

His main works are commentaries and questions on Aristotle, especially on the *De anima,* the *Physics,* and the *Metaphysics,* and shorter treatises on, for example, the eternity of the world.

# SILVACANE

. One of the "three sisters of Provence," with Le Thoronet and Sénanque, the Cistercian abbey of Silvacane (Bouches-du-Rhône) was founded in 1144 when the land was deeded to St. Bernard, one of the order's founders. It prospered until a devastating fire in 1357. The Romanesque church, begun in 1175, is simple and austere in Cistercian fashion, with a wide nave and transepts spanned by pointed barrel vaulting, and typically flat chevet. The chapter house, *armarium* (book locker), and rectangular cloister were all constructed in the Gothic style (13th c.). The large 15th-century refectory is ornate and well lighted by a row of upper windows and a fine rose.

# *SIRVENTES*

. An Occitan lyric genre including personal invective, political satire, and moralizing verse, contrasted with the dominant *canso,* or love song. Etymologically, *sirventes* means "servantlike." This meaning may have been applied literally to satirical songs because they were sung by servants (Rieger), but historical evidence is weak. We have firmer grounds for a figurative interpretation: the *sirventes* was considered the "servant" of the *canso* because the poet composing one would adopt a preexisting canso's metrical form. The *sirventes* could then be sung to the melody of the *canso,* facilitating its diffusion. The *sirventes* is thus an example of contrafacture, or melodic appropriation, a special kind of intertextuality.

Such imitation developed gradually. The first great satirist among the troubadours, Marcabru, never used the term *sirventes* but called his own songs vers; in only one poem is it certain that he imitated a form by another poet, and he did so in an answer to his model. The word *sirventes* was first applied to the text that contained it ca. 1150 by the minor Gascon troubadour Marcoat, who seems to refer to contrafacture. Bertran de Born, ca. 1180–1200, practiced demonstrable imitation in about one-third of his *sirventes* (calling them by this name, though he used no generic term for his love songs), and extended imitation to include the choice of rhyme sounds as well as stanzaic shape. In the 13th century, Peire Cardenal composed at least 80 percent of his *sirventes* in imitative forms. All in all, about two-thirds of the 500-odd extant *sirventes* are demonstrable imitations. In troubadour practice, imitation was never obligatory; a *sirventes* could have a new melody or could imitate a song that was of a genre other than the *canso,* even another *sirventes*. Imitation became the rule for composition of *sirventes* in treatises written in the late 13th and 14th centuries *(Doctrina de compondre dictats, Leys d'Amors)*.

Subgenres include the *sirventes-joglaresc,* or *sirventes* addressed to a *joglar,* which is mentioned several times among the *vidas;* the *sirventes-ensenhamen,* in which a troubadour lists the repertory that a *joglar* should know; and the *canso-sirventes,* in which themes of satire and love are commingled and which is named once in a song by Folquet de Romans. None of these narrower types achieved the well-established generic status of the *sirventes*.

# SLUTER, CLAUS

(ca. 1345–1405/06). Artist who also achieved prominence as one of Philip the Bold of Burgundy's *valets de chambre,* a position he acquired after the death of his master, Jehan de Marville. Sluter was born in Haarlem in Holland; after working in Brussels from 1379 to 1385, he became an assistant to Marville, then *valet de chambre* to Philip, in Dijon. The Chartreuse de Champmol in Dijon, a project begun by Marville and his workshop, features one of Sluter's and the workshop's finest accomplishments, the *Well of Moses* (ca. 1395–1406). Sluter also finished the tomb of Philip the Bold, now in the Musée des Beaux-Arts in Dijon, which had been begun by his predecessor. His primary achievement in his art was to free sculpture from its purely structural function, enabling the figures to dominate the architectural setting. Sluter infused his work with energy and an emotive quality unsurpassed by his contemporaries.

# SOISSONS

. An important center during the Merovingian period, Soissons (Aisne) was the site of a key battle in which Clovis I defeated the Romans under Syagrius in 486. Clovis's son Clotar I made it his capital, as did Chilperic, the king of Neustria and husband of the notorious Fredegunde. And it was in Soissons that Pepin III the Short was proclaimed the first Carolingian king in 751.

Soissons was a bishopric in the archdiocese of Reims by the 5th century, but the history of its early cathedrals is unknown. A cathedral was built in the 12th century, beginning with a Romanesque nave in the 1130s or 1140s, and an Early Gothic choir in

the 1150s. Between ca. 1170 and ca. 1190, a new transept was built, of which only the four-story, rounded-plan south arm now survives. The 12th-century north arm was replaced in the mid-13th century and has an elegant Court Style terminal.

The cathedral of Saint-Gervais-et-Saint-Protais at Soissons is one of five French High Gothic cathedrals begun

Soissons (Aisne), Saint-Gervais-et-Saint-Protais, nave. *Photograph courtesy of Whitney S.Stoddard.*

during the period ca. 1190–ca. 1220. The choir and nave of Soissons feature an interior elevation of three stories consisting of main arcade, triforium, and clerestory that matches the height of the main arcade. The four-part vaults (100 feet tall) are sustained by an early example of the two-tiered flying-buttress system. The nave of Soissons was completed by ca. 1220/25, and the west façade was built in several stages and completed ca. 1300. The traditional view is that the High Gothic choir of Soissons was begun slightly later than and was influenced by the cathedral of Chartres, begun in 1194. However, the Soissons chapter began to use the new choir on May 13, 1212, so Soissons may in fact have been begun slightly earlier than Chartres.

Soissons cathedral suffered extensive damage to its stained glass during the religious wars of the 16th century, and the west façade portals were stripped of their sculpture in the 18th century. The nave was extensively damaged by German artillery fire during World War I and was conscientiously rebuilt in the 1920s and 1930s.

The former abbey of Saint-Jean-des-Vignes in Soissons, founded in 1076, was one of the largest and most prestigious in medieval France. The magnificent abbey church of the 13th through 15th centuries was destroyed in the early 19th century, except for its façade,

which features two graceful Flamboyant towers. Other reminders of the abbey include the 13th-century double-naved refectory, two galleries of the 14th-century cloister, and the ribvaulted cellar beneath the refectory.

# SOLIGNAC

**.** The first act of consecration of the abbey church of Saint-Pierre in Solignac (Haute-Vienne) was signed by St. Éloi (631/32). It was taken by the Muslims in 793 and by the Vikings in 860. Almost completely ruined in 922, the present structure, consecrated in 1143, utilized the foundation of the 10th-century bell tower. This fine example of Romanesque Périgordine architecture has a nave with two square bays, a transept with chapels on the east wall of each arm, and a semicircular apse with three radiating chapels. The porch dates from the early 13th century. Twelve steps descend into the nave. The church is roofed by four cupolas (initially five; the south transept has been revaulted).

Throughout the church are granite capitals carved with palmettes, personages in mandorlas held by angels, interlace designs, and heads of monsters. Two rows of oak choirstalls (1479) and misericords are playfully ornamented with Gothic motifs. On the eastern side of the north crossing, a damaged limestone frieze shows Christ in Majesty. The church houses a gilt copper reliquary of St. Théau (14th c.). Among surviving fragments of apse windows is the Miracle of St. Valerie presenting her head to St. Martial.

The conventual buildings, long occupied by a porcelain factory, were the first workshop for the production of Limoges enamels, founded by St. Éloi in 631.

# *SONE DE NAUSAY*

. A long verse romance (over 21,300 lines) of the late 13th century, *Sone de Nausay* (or *Nansai*) is the story of a young man who, rebuffed by the woman he loves, seeks adventures throughout the world. Eventually, Sone repudiates the woman and becomes king of Norway by marrying Odee, the daughter of the deceased king. Though not essentially an Arthurian romance, the poem includes several Arthurian episodes and motifs, notably the Grail and Bleeding Lance. Only one manuscript is known (Turin 1626).

# *SONGE DU VERGIER*

. An important political tract of the 14th century, the *Songe du vergier* may be seen as a statement of the views prevailing at the court of Charles V in the late 1370s, particularly among those royal advisers who became known as the "Marmousets."

In the spring of 1374, Charles V commissioned a member of his household with legal training to prepare a document setting forth the position of the French crown on such subjects as the relationship of ecclesiastical and secular power, the position of the monarch *vis à vis* the emperor and the pope, and the nature of royal sovereignty over the kingdom. The tract first appeared on May 16, 1376, under the Latin title *Somnium viridarii.* The author then revised the work before translating it into French as *Songe du vergier* in 1378.

Scholars have long debated the authorship of the *Songe,* but there is now considerable evidence that the person responsible was Évrart de Trémaugon, a cleric from the region of Saint-Brieuc in Brittany who had studied with the distinguished Italian legist John of Legnano and was a member of the royal household in the 1370s before becoming bishop of Dole. The *Songe* takes the form of a lengthy debate between a priest and a knight (a literary device then popular in France). The views expressed by the knight include a powerful statement of royal sovereignty, possibly ahead of its time, and are a valuable guide to the policies and programs of the Marmousets during their period of greatest influence at the French court (1374–92).

# *SONGE VÉRITABLE*

. Written in 1406, the *Songe veritable* is a political pamphlet in verse. The 19th-century editor of the poem concluded that the author was not Laurent de Premierfait, as some had thought, but was definitely a resident of Paris in royal service.

The poem (3,174 lines) describes a dream that begins with a glimpse of the king of France living in an impoverished state. Allegorical personifications take over as Poverty leads the common people toward Patience. The narrator is replaced by Everyman, who seeks counsel because his eldest daughter Money has been raped and his other daughter is threatened.

The central theme is the corruption of princes and royal officials. Apology says that royal servants of lower rank serve the king well, but they are mistreated by the powerful and do not receive benefices. The poem features the allegorical figures Fortune and Reason. Reason addresses long letters, quoted in full, to the most vilified personages discussed: Queen Isabeau, the dukes of Berry and Orléans, Jean de Montaigu (grand master of the *hôtel du roi*), and Clignet de Brébant (admiral of France). The poem levels accusations against more than 120 institutions and individuals, most of them identified by Moranvillé.

# SORDEL

(Sordello; ca. 1200–ca. 1270). Immortalized by Dante (*Purgatorio,* Cantos 6–8), the troubadour Sordel was born in Mantua. After seducing Cunizza, whom he had abducted at the request of her brother, Ezzelino da Romano, Sordel fled in the late 1220s to Provence, where he was supported by Blacatz, Raymond-Berenguer IV, and Charles of Anjou, among others. Although he composed *cansos,* he was more interested in other

forms, especially *sirventes* and *partimens;* he is best known for his *planh* on the death of Blacatz.

# *SOTTE CHANSON*

. Popular in northern France from the 13th through the 15th century, the *sotte chanson* is a systematic parody of the troubadour *canso,* in which *fin'amor* is reduced to animal lust; the courtly lady, to a depraved shrew; the ethereal joy of love, to postprandial or postorgasmic contentment. Two manuscripts preserve twentysix *sottes chansons* from the 13th and early 14th centuries. The genre had gained respectability by the 15th century, as evidenced by its inclusion in several treatises on poetry. Froissart, Deschamps, and, most notably, Villon, with his *Ballade de la Grosse Margot,* experimented with the genre.

# SOTTIE

. Short comic plays in verse whose characters, usually five in number, are *sots* ("fools") or the equivalent. Approximately twenty-five comic plays from late-medieval France have in their title the terms *sots* or *sottie* (or *sotie*), In addition, a number of plays called *farces* by their earliest text are similar enough to be grouped with these *sotties* by modern scholars. Although there is still disagreement on the number of *sotties* remaining, or even on a definition of the genre, scholars generally accept about sixty plays as *sotties*. These plays, whose average length is about 400 lines, date from ca. 1450–1550 and show a great variety of dramatic techniques.

The *sot* (roughly translated "fool" or "jester") was one of a large family of foolish characters that fascinated the late Middle Ages and Renaissance: "Aujourd'uy Toult le Monde est fol," remarks a fool in *Tout le Monde;* the *cry* of Gringore's *Jeu du Prince des Sots et Mère Sotte* summons fifty-seven kinds of *sots* and *sottes* to the play. Fools appeared in both serious and comic literature, at noble courts and the great fairs, in the church holiday called the *fête des fous,* in art and music, and in the theater. By the end of the 15th century, *compagnies joyeuses,* or societies of fools, had formed in the major towns of France, made up of respectable citizens who assembled regularly to perform

*sotties* and other dramatic amusements. The most important of these societies were those of Paris (whose "fools" made up the Enfants-sans-souci), Rouen, Dijon, and Lyon.

In the past, scholars have disagreed about whether the term *sottie* referred to the internal characteristics of a dramatic genre or the external properties of the *sot*, such as costume. That is, was the *sottie* simply any play performed by a company of fools? Most scholars now propose a definition of the *sottie* based on the plays rather than the players, but no definition has been universally accepted. Part of the problem is caused by the apparently inconsistent use of generic terms by the texts, which sometimes label *farce* or *moralité* plays that appear to be *sotties*. *Farce* seems to have been a general term that included a variety of comic plays. Furthermore, the *sottie* is similar to the morality play in its use of allegorical characters.

The problem is made more difficult by the complex nature of the fool in the Middle Ages and Renaissance, a paradoxical creature who had three principal facets: he was a clown, an entertainer often using absurd or obscene forms of humor; he was a foolish person, unable to refrain from wrongdoing; and he was a speaker of the truth, who could strip away appearances to reveal the underlying reality, showing himself wiser than the reputedly wise. The fools of the *sottie* combine these characteristics in varied ways. The plays themselves can be grouped according to their relation to these three facets of the fool, for the *sotties* are either primarily comic plays in which the *sots* are clowns, or they have a social and political significance, through the relation of the *sots* to evil—either doing evil (the *sot* as malicious fool) or revealing it (the *sot* as speaker of truth).

Only a few *sotties* fall into the category of simple, humorous sketches with no political overtones. The *Sottie de Trotte-Menu et Mire-Loret* involves little more than a scatalogical joke; the *Sottie des coppieurs et lardeurs* is a lively exchange between two groups of *sots* who attempt to make fools of each other. In a number of *sotties* (the *sotties de bande*), the fools make fun of themselves as a group or type of character. In the *Vigilles Triboullet,* for example, a band of fools holds a mock funeral to bury one of their heros, whose eulogy recalls above all how well he could drink. Even the simplest *sotties,* however, usually have some satiric significance, just as the satiric fools are still clowns.

Many *sotties* put on stage a group of fools (usually three) who criticize the way the world is going; they speak about hidden evildoers, though prudence (the fear of censorship or punishment) usually forces them to do so in veiled terms. The *Menus propos* simply has three sots speak one after another, mixing absurd, outrageous statements with allusions to social reality: *Se m'aist Dieu, tout ce qu'on promet/Maintenant n'est pas verité* ("May God help me, everything they promise these days isn't true"). Other plays, such as the *Croniqueurs* of Gringore, are more open in their political commentaries. The structure of a court case or investigation is sometimes used to allow the fools to reveal wrongdoing by professions or social classes, as in *La mère de ville*. When the *sots* are faced with the agents or the victims of wrongdoing, they may act out the situations that fools like the "Chroniclers" only describe. In Gringore's *sottie* of the *Prince des Sots et Mère Sotte,* a play that combines both truth-speaking and evildoing fools, we watch the evil pope as he attempts to corrupt the king's loyal supporters but is unmasked by the wise fools.

In the third group of *sotties,* most or all of the characters act out satirical portraits of foolish wrongdoers, such as those who attempt to step outside their social roles or status. The plot of these *sotties* is often an enactment of a general idea, such as the use of a card

game in the *Sots ecclésiastiques* to show the insatiable avarice and duplicity of certain prelates. In some plays, such as the *Gens nouveaux,* only wicked fools appear; the voice of morality is either expressed by their victim (Le Monde) or is silent. (Alan Knight [1983] has suggested grouping this kind of play in a separate category, the *farce moralisée,* to distinguish it from the *sottie,* in which the fools speak for a moral point of view.)

Through this variety of dramatic structures and characters, the *sotties* express humorous dismay at society's increasing immorality. This satiric view, which is often conservative, makes of the *sotties* a powerful and intriguing expression of late-medieval popular thought.

# SOUILLAC

. Reclaimed from marshland in what is now the department of the Lot by Benedictine monks, Souillac (from *souille,* a wallowing place of wild boars) boasts one of the purest examples of the domed churches of southwest France and important fragments of Romanesque portal sculpture. Only the 12th-century abbey church of Sainte-Marie, remarkable for its harmonious proportions and unity of style, escaped the destruction of the wars of religion. The plan—single nave with domes on pendentives over two bays and a third over the crossing, projecting transepts with a polygonal chapel off each arm, and an ambu-

Souillac (Lot), church of Sainte-Marie.
Isaiah. *Photograph courtesy of
Whitney S.Stoddard.*

latory with three radiating chapels—is a smaller, more refined version of the plan of the cathedral of Cahors.

The sculpture now mounted on the interior west wall of the nave is one of the highlights of Romanesque carving. Above the entrance, and flanked by seated figures of SS. Benedict and Peter, is one of the oldest representations of the legend of Theophilus. To the left of the present door is Joseph or Hosea and to the right, the masterpiece of the Souillac sculptors, the expressive "dancing" figure of Isaiah. The former trumeau is carved on three faces. On the right lateral face, three pairs of figures either struggle or embrace; on the central face, a medley of gripping, devouring beasts culminates in a tortured human; on the left lateral face is the redemptive scene of Abraham and Isaac. On a second pilaster, a lion and lioness, suggestive of the crossed pairs of the Moissac trumeau, devour a ram. Both the original disposition of the sculpture and its iconography have been the subject of controversy.

# SOUVIGNY

. Control of the church of Saint-Pierre at Souvigny (Allier) passed to Cluny in 915, making it one of the oldest and most important possessions of the Burgundian abbey. The growth and prosperity of Souvigny are the result of, first, the death and burial there of Abbot Maiolus of Cluny in 994 and, later, the burial there in 1049 of his successor at Cluny, Abbot Odilo. The tomb of the canonized abbots became a pilgrimage site in the region. The church of Saint-Pierre has a complicated history, with important building periods in the 11th and 12th centuries and significant rebuilding (the Flamboyant façade) in 1433–45. The new façade destroyed the early Galilee porch; the Revolution saw the destruction of the church of Notre-Dame des Avents, which was probably the Infirmary chapel. The 12th-century sculptures, in the past called the 'Tomb of Maiolus," are actually from the jubé. The 12th-century church of Saint-Marc, built north of the abbey church to serve the parish, has recently been restored. Initially receptive to Burgundian influences, the abbey of Souvigny soon became a regional center, as Cahn puts it, "a regional Cluny on a small scale."

# SPANISH MARCH

. In order to secure the Carolingian realm against invasions from Spain, Charlemagne (742–814) created a march, or defensive zone organized on a military basis, along the Spanish border. Frankish conquests in the 790s and early 9th century enabled the establishment of such a region between the Pyrénées and the Ebro, with Barcelona its capital. The march belonged to the kingdom of Aquitaine, ruled during Charlemagne's

lifetime by his son, the future emperor Louis the Pious (778–840), and was the origin of the area later known as Catalonia.

After the crisis of 830 at Louis's court, the emperor allocated the march to his son Charles the Bald (823–877). Its last count commissioned by a Frankish king was Guifred le Velu (d. 897), whose descendants ruled Catalonia for more than half a millennium. When the Umayyad caliphate in Spain fell in the early 11th century, the area became part of the group of Christian states that gravitated around the count of Barcelona.

# *SPONSUS*

. An 11th-century Latin music drama based on the parable of the Wise and Foolish Virgins. Forty of its eighty-seven verses are in Occitan, making it the earliest dramatic work with vernacular passages. The text, found in a unique manuscript from Saint-Martial of Limoges (B.N. lat. 1139), also includes stage directions. The play is set to a small number of non-liturgical melodies in heighted Aquitanian neumes.

# STAGING OF PLAYS

. A large amount of material on medieval staging in France has survived in the form of stage directions in play manuscripts, lists of stage properties in municipal records and account books, and eyewitness descriptions in memoirs and letters. Most of it, however,

relates to the staging of mystery plays, with little information existing on the staging of farces and *sotties*.

The commonest method of staging described is that usually known as "*mansion* and *platea*": that is, a series of identifiable locations (or *lieux*), sometimes raised on scaffolds, combined with an anonymous central playing area. This arrangement, found already in the 12th-century *Jeu d'Adam* and *Seinte Resureccion,* is specified in the prologues and stage directions of several 15th-century plays. Performances might take place in a town square, the courtyard of a religious house, an amphitheater, or any open space where scaffolding could be erected. There are few references to indoor stages, notably for the Confrérie de la Passion in Paris. Many contracts survive for the construction of stages, some of which include audience stands and private, lockable spectator boxes. Depending on the type of theater, the audience might face the playing area or surround it. The illustration of the stage for the Valenciennes Passion play and the Fouquet miniature depicting the martyrdom of St. Apollonia show both types of theater, but their exact interpretation is a matter of debate. Performances on pageant wagons drawn by horses or oxen, recorded from northern France and the Burgundian Netherlands, normally involved only small-scale plays.

Most plays were organized by trade guilds, religious confraternities, or municipalities, with a few known instances of small groups of individuals binding themselves by contract to stage plays. Records of the staging of guild and confraternity plays are scarce, and most of the detailed information relates to the large-scale municipal and civic dramas, notably the play texts, expense accounts, and production records from Mons (1501) and Romans (1509). Since the big Passion plays and saint plays were expensive to produce, cities often tried to recoup some of their costs by charging admission to the enclosed playing area. Prices varied for standing room, regular seats, or seats in a box. At Romans, the church contributed half the costs and took half the income; at Valenciennes, the actors, who signed contracts guaranteeing their good behavior and attendance, could choose to contribute to the costs in exchange for a share in the possible profits.

A specialist might be brought in from outside the town and paid a fee to prepare and oversee the "secrets" or special effects, which might include trapdoors, lifting machinery, false bodies, and fireworks. The list of such *feintes* for the *Actes des Apôtres* played at Bourges in 1536 is many pages long. A recently discovered manuscript from Provence gives not only a list of devices required but precise instructions on how to create, for example, a fire-breathing devil.

Although the *lieux* that lined the turf-covered stage at Mons were merely labeled to indicate their changing identity from day to day, two locations were always fixed and elaborate: Heaven and Hell. The former was normally elevated and decorated with clouds, curtains, and revolving wheels or artificial angels. It had contrivances for the fire at Pentecost and the dove of Noah and sometimes included a concealed lift for the Ascension as well. Hell was at ground level, with its entrance through the animal jaws of Hellmouth. One could see instruments of torture and mechanical devils or weird tree roots on the exterior and smoke issuing from every orifice. At Mons, it took seventeen men, with their own special cue sheet, to work the infernal thunder machines, cannon, and fireworks. Music, which reflected the harmony of Heaven, was an important part of the plays, though the instruments, as well as the furniture, curtains, and plate for the court scenes, might be borrowed rather than purchased.

In contrast to the stage and decor, we know little about the costumes used in the plays. Because they were normally provided by the actors, they do not figure in the expense accounts. In 1535, Jean Bouchet warned the citizens of Issoudun, who were rehearsing a Passion play, against having characters like the Pharisees dressed as richly as Pilate, which suggests that elaborate rather than appropriate costumes were worn. This is supported by the ac-count of the *montre,* or preperformance parade, from Bourges, which describes rich costumes adorned with gold and jewels.

The actors in the civic plays were drawn from all walks of life—nobility, clergy, bourgeois, and artisans. Virtually all of them were men, playing both male and female roles. There are a few recorded instances, however, when women took part in plays. The first such occasion was in Metz in 1468, when a young girl of eighteen played the title role in a play of St. Catherine of Siena.

Preparations and rehearsals usually took several months, and the performances were mostly in the summer. Though not usually linked with any special feast day, plays might be staged on several successive days, during which the shops and workplaces were closed. They might also be played on Sundays and feast days only, over a period of some weeks. Notices of productions and invitations were sent to many neighboring communities. During the performance, guards were increased at the town gates and in the playing area, and other precautions were taken against civil disorder. Children under twelve, pregnant women, and the infirm were barred from the theater at Mons, but the theater at Romans had a special railing on the boxes to prevent children from falling.

The amount of money taken at the entrances suggests that audiences of several thousand attended each performance of the big plays. Money was also made from the sale of materials and properties after the event. Despite this, Mons, Romans, and Bourges all lost money on their plays, though Issoudun and Valenciennes both made a profit. There were other advantages, however, for the plays brought trade, fame, and visitors to the towns and provided employment for the local craftsmen. Above all, there were many spiritual benefits for the organizers, artisans, actors, and spectators who "with divine help and all being done devoutly and for the instruction of the people" took part in the "play of God."

# STAINED GLASS

. Suger, the mid-12th-century abbot of Saint-Denis, described the new ambulatory of his church as shining "with the wonderful and uninterrupted light of most luminous windows, pervading [its] interior beauty" (*De consecratione* 4). Filled with richly colored and painted glass, the round-headed windows of the Saint-Denis ambulatory chapels transformed natural sunlight into a re

splendent gloom interpreted to reveal the Divine Presence. This association of God with light, critical to the understanding of medieval stained glass, was grounded in the Gospels (e.g., John 1:4–9; 8:12) and was further elaborated in the writings of the early church fathers. While Bernard of Clairvaux (1090/91–1153), the founder of the Cistercian order, similarly embraced early Christian analogues of God as light, Cistercian glazings eschewed color, using instead uncolored glass arranged in symmetric interlace patterns. Whether colored or not, these hovering windows of light altered the very nature of a church interior from substance to the immaterial, mirroring the transmutation of the corporeal to the spiritual, thereby creating a vision for the worshiper and a paradise in which to encounter the Divine. Just as Suger recalled "dwelling" in meditation within "some strange region of the universe that neither exists entirely in the slime of the earth nor entirely in the purity of Heaven" (*De administratione* 33), stained-glass windows were construed as a mystical conduit for the illumination of the soul. Stained glass, the preeminent form of monumental painting of the Gothic period, was inexorably tied to its ecclesiastical and architectural context, the juncture intended to reveal Heaven on earth. Within this medieval construct of the Heavenly Jerusalem, glass and stone could not be separated but were conceived of as mutually dependent components of a whole: just as architectural masonry articulated the shape of a Gothic church, so light transmitted through its glazing defined and unified its sacred space.

Modern knowledge of medieval stained-glass production is indebted to the step-by-step instructions provided by a German monk writing under the pseudonym of Theophilus (ca. 1100). Current use of the term "stained glass" technically refers to pot-metal glass, that is, molten glass colored by the addition of metallic oxides. Glass itself is a fluid material composed of sand with additions of potash as a flux. In his manual, *De diversis artibus,* Theophilus recommends that scaled designs for windows be drawn on a flat whitewashed board, which could serve both as a surface for cutting and a workbench for assembly. The molten glass was blown either into an open cylinder shape (called "muff") or crown, a process in which the glass was transferred from the blowpipe to a pontil iron and spun into a circle. Once a flat surface was obtained, individual pieces of glass were cut by tracing the desired shape with a hot iron, followed by tracing the pattern with cold water, thus causing the glass to crack. The piece was subsequently shaped by edging bits of glass off the rim with the aid of a grozing iron (a handle with a small hook at the end) and pincers. The pieces of colored glass were in turn painted with a vitreous paint composed of iron filings and ground glass, bound by either wine or urine. Painting was used to indicate facial features, drapery folds, or intricate design patterns. Depending on the amount used, the liquid binder could make a thick black paint used for detailing or it could create a light grey wash for modeling. The pieces were then fired, affixing the paint to the glass surface. Theophilus suggests that the painter work in a three-layered process, beginning by laying down a wash and working up to the details.

With the introduction of silver stain at the beginning of the 14th century, this process changed dramatically. Composed of silver-oxide, silver stain is a paint that turns a range of hue from pale yellow to fiery orange depending on the length of time it is fired. The advantage of this painting technique was the ability to obtain a varied palette without having to cut and join different colors together with lead strips. Flashed glass (clear glass laminated with color) also gained popularity in the later Middle Ages, although this process had always been used for red, as the color is too opaque for light to penetrate

when made of pot-metal glass. Once the painting was fired, pieces of glass were joined to one another by flexible lead cames, H-shaped strips grooved with channels to accommodate the edges. The panel was assembled by sequentially pinning each piece of glass to the board. Lead joints were soldered and an encircling frame of iron provided to give the panel stability. The completed panel was puttied for weatherproofing and fixed within the armatures, the iron skeletal frame set within the masonry of the window.

Glazing windows with patterns of colored glass was an ancient Roman tradition that continued into the early Middle Ages. Prior to the 9th century, numerous documents speak of decorative compositions in windows installed as far afield as Constantinople, Rome, Syria, and Northumberland. As early as the 5th century, the French bishop Sidonius Apollinaris described such a decorative glazing in the church of the Maccabees at Lyon. Yet the art of painting on glass, a distinctly medieval invention, survives in only a handful of fragments dated prior to the cycle of prophets at Augsburg cathedral (ca. 1130). The extensive ambulatory glazing (1144) at Saint-Denis is the earliest surviving stained-glass program in France. With this masterly ensemble and the nearly contemporaneous windows of the west façade of Chartres cathedral (ca. 1150), painted

Chartres, Notre-Dame, north transept windows. *Photograph courtesy of Whitney S.Stoddard.*

stained glass was firmly entrenched as a defining component of French Gothic art. The placement of windows was carefully considered within the architectural complex. For example, the axial choir bay glazed with the Crucifixion (ca. 1180) from the abbey church of Saint-Remi in Reims and the Crucifixion-Ascension window (ca. 1165–70) in the axial bay of the chevet at Poitiers are both painted in monumental scale commanding the longitudinal vista from the nave. Placement could also be governed by the precious regard for certain stained-glass windows, as witnessed by the retention and reinstallation of early compositions into renovated or new architectural contexts. The "Notre-Dame de la Belle Verrière" (ca. 1180) from Chartres was recovered after the fire of 1194 and reset into the new 13th-century cathedral. Portions of the original nave glazing of Rouen, the so-called "Belles Verrières" (ca. 1200), were salvaged in the late 13th century and reinstalled into newly constructed nave-chapel windows. The admiration for stained glass also prompted concern for its upkeep. Suger mentions that a master glazier was appointed to maintain the windows at Saint-Denis (*De administratione* 34 A).

Stained-glass imagery was often conditioned by window placement. Historiated subjects, predominantly located in nave-aisle windows, contrasted with large standing or seated figures generally depicted in the upper reaches of the clerestory or with eschatological and cosmological subjects portrayed in rose windows. Early historiated windows in France generally focused on christological narrative, similar to those in the

west façade windows at Chartres, or on emblematic discourse, such as the Allegories of St. Paul window at Saint-Denis and the typological Crucifixion from the abbey church of Orbais (1190?). The pictorialization of Isaiah's prophecy of Christ's lineage, known as the Tree of Jesse, had also been well established by 1200. Hagiographical narrative appeared in the 12th century, as in the St. Nicholas panels from Troyes (ca. 1170–80) or the legend of St. Catherine from Angers (ca. 1180). In the 13th century, historiated windows were increasingly devoted to the depiction of saints' lives, Marian narrative, and Old Testament cycles. While 13th-century legendary windows could be expansively discursive (at the Sainte-Chapelle, the story of Esther and Ahasuerus is recounted in 129 scenes), by the early 14th century narrative was reduced to only the most crucial scenes.

Clerestory windows were most often glazed with single figures to facilitate being read at a distance. The range of subject matter was wide, including the genealogy of Christ, as at the abbey church of Saint-Yved at Braine (ca. 1200); prophets, Apostles, and bishops, like those at Bourges cathedral (ca. 1220–30); or saints, as at Beauvais (1340s). Occasionally, these large standing figures would be cast in narrative tableaux, as in the choir at Chartres (1210–25), while historiated scenes, as at Tours (ca. 1255–60), were adopted by the second half of the 13th century.

Marking the interior termini of ecclesiastical space, rose windows were glazed with eschatological or cosmological themes, such as the Last Judgment at Mantes (ca. 1220), the Apocalypse at Chartres south (1221–30) and at the Sainte-Chapelle (ca. 1485), or the west rose (ca. 1220) at Notre-Dame in Paris, with its portrayal of the zodiac, Virtues, and Vices surrounding the Virgin and Apostles. In keeping with the widespread Marian dedication of Gothic cathedrals, the Glorification of the Virgin, as at Laon (1210–15), was also a popular theme. The 15th century witnessed the introduction of new themes as well, such as the Apostles' Creed at Riom (ca. 1460) and Signs of the End of the World in the north rose at Angers cathedral (1451).

What do we know about the artists of these windows? Not only are signatures virtually unknown, but written documentation is sparse until the end of the 13th century. The only portrait of a glass painter from this time comes from the German abbey of Arnstein (ca. 1160; now in Münster), showing the painter Gerlachus holding his brush and paint pot, praying for the gift of light. A signature of a certain Clement of Chartres survives on a banderole in the Joseph window (ca. 1235) from the cathedral of Rouen. Stylistic evidence tells us that several painters sometimes worked on the same window, while other windows indicate a single, coherent style. Though a window was often the product of more than one individual, not enough is known about how artists prior to the 15th century collaborated or about how the labor was divided. While archival records list artists, such as a certain Étienne who lived in Bourges ca. 1220, it is impossible to link these names with extant windows. Late-medieval tax rolls provide additional demographic information, including the names of women, such as Jehanne la Verrière and Ysabellot la Verrière. Guild records offer lists of members, as well as

transcribe regulations governing the practice of glass painting. In the 15th century, the names of glass painters, like other artists, survive with increasing frequency in conjunction with their windows, such as the court painter André Robin, who worked at Angers.

Throughout the Middle Ages, the status of the patron eclipsed that of the artist. Seeking to elucidate sacred or theological precepts associated with a site or to express personal devotion, remembrance, political prestige, or a combination of these qualities, patrons of stained-glass windows encompassed a broad spectrum of French society. Donor portraits testify to this diversity, whether monastic, episcopal, noble, or lay. They are shown in supplication, as in the depiction of Suger at the feet of the Virgin, or holding a model of their window, like the portrait of Canon Raoul de Ferrières in Évreux (ca. 1325). The beguiling representations of artisans at the base of windows, such as the shoemakers, wine carriers, furriers, and bakers at Chartres, attest to the influence wielded by laypeople as well. Heraldry, too, was a major means for importing the patron's identity. The fleurs-de-lis and castles of Castile filling the interstices of the north rose at Chartres (ca. 1235) signify the royal sponsorship of Blanche of Castile and her son Louis IX, while the arms below the cathedral's south rose indicate the prestige of the noble Dreux-Bretagne family.

The style and appearance of medieval French windows were directly related to the window design. The

round-headed lancet openings of the later 12th century demanded an orthogonal arrangement for armatures, with the panels frequently arranged in sequential rows of circles or in alternating patterns of circles and squares, as in the west-façade windows at Chartres. Blue and red contrasting backgrounds predominated, as in the expansive setting of the Ascension (ca. 1140–45) from the cathedral of Le Mans, where brilliantly alternating blocks of diaphanous blue and ruby-red backgrounds accent the upward motion of the composition. The preciousness associated with color was emphasized by Suger, who extolled the resonant blue used at Saint-Denis as "sapphire glass" (*De administratione* 34), a reference to its inestimable luminous quality. Typically, a vivid palette of greens, pinks, yellows, and blues complemented this emphasis. Wide jewellike borders, evoking contemporary metalwork, customarily framed these 12th-century compositions. The painting style of later 12th-century windows varied, depending on its regional origin. It can generally be characterized as bearing a stylized, graphic approach to the delineation of elongated figures and drapery folds and the rendering of often highly expressive facial features.

With the introduction of double-lancet windows in the early 1200s, the organization of window designs, particularly historiated windows in the nave aisles, was increasingly defined by armatures molded into highly complex, centrifugal patterns of alternating squares and circles. Epitomized by the windows of Chartres and Bourges, these molded armatures played an integral role not only in window design but also in directing the eye in reading the composition. Dispensing with single grounds of color, historiated scenes were surrounded by mosaic grounds linked by ornamental bosses. The Saint-Chéron

window (1220–25) in the ambulatory of Chartres departed from this model by returning to an orthogonal arrangement of its armatures with its scenes arranged in horizontal registers. By the mid-13th century, window designs varied. Molded armatures were still employed at the Sainte-Chapelle (1244–48), while the orthogonal arrangement was contemporaneously used for the Lady Chapel glazing at the abbey of Saint-Germain-des-Prés (ca. 1247). The Sainte-Chapelle, built by Louis IX to house the sacred relic of the Crown of Thorns, represents the culminating effect of deeply saturated light created by 13th-century windows. Virtually a reliquary "turned outside in," the Sainte-Chapelle interior is lit by walls of glass windows whose narrative both glorifies the relics acquired by Louis and chronicles the course of human history recounted in the Bible. In the second half of the 13th century, orthogonal armatures and simplified compositions were favored, as windows became increasingly elongated and subdivided. Similarly, the painting style became open and summary, with a few salient lines sufficing to delineate gesture, drapery folds, and fa-cial expressions. Bold color backgrounds again distinguished these compositions, replacing mosaic grounds popular in the earlier part of the century. Ornamentation was also simplified, with thinner borders composed of abstracted foliate motifs. Blue and red continued to dominate the color palette, with light pinks, purples, blues, and yellows used for contrast.

*Grisaille* windows, compositions of cut glass in its natural green, pink, or white state arranged into intricate patterns and painted, were also integral components of glazings at this time. Distinct from ornamental windows created with colored glass, *grisaille* windows are characterized by interlocking floral or geometric designs often set against dense cross-hatching. Favored by Cistercian foundations, such as Obazine (ca. 1150), *grisaille* windows were also adopted by other ecclesiastical foundations, as at Saint-Jean-aux-Bois (ca. 1230s). Colored bosses and borders were incorporated into *grisaille* windows toward the middle of the 13th century. Ensembles of *grisaille* and saturated glass were also combined at this time, as at Saint-Germain-des-Prés, where the colored hemicycle windows of the Lady Chapel contrasted with *grisaille* in the straight bays of the nave. By the third quarter of the 13th century, a new attitude was evident. In tandem with increasing ornamentation of interior church surfaces and window tracery, glazings contained greater amounts of *grisaille* glass, juxtaposing uncolored and colored figural panels in the same window. At the abbey church of Saint-Père at Chartres (second half of the 13th c.), *grisaille* and colored lights were installed vertically side by side, while at Tours (ca. 1260) figural panels were placed as a horizontal register between the *grisaille* (called band windows). The great masterpiece of this style is the collegiate church of Saint-Urbain (ca. 1270) in Troyes. Built by Pope Urban IV on the site of his birthplace, the church and its glazing are a resplendent ensemble of luminosity, pattern, and color—far different from the mysterious ambience that so moved Abbot Suger.

As so many of France's 14th- and 15th-century windows have been destroyed, it is difficult to study them in any kind of comprehensive fashion. In general, stained glass of the later Middle Ages in France became increasingly pictorial and painterly in style. To a large degree, this approach was facilitated by the advent of silver stain around the beginning of the 14th century. With the thin window lancets of the Late Gothic period, mixed glazings of *grisaille* and colored glass became the norm. Historiated scenes were simplified to only one episode or figure per lancet. Architectural canopies became increasingly important as an organizing compositional device. The mixed glazing of the

abbey church of Saint-Ouen (1318–39) in Rouen is among the most arresting programs of the period. Its historiated panels, framed by elaborate arcades and backed by damascene grounds, are elegantly delineated with mannered line and light, vibrant colors. The bordering *grisaille* panels are composed of clear, white glass enlivened with botanically accurate plant renderings, including periwinkle, strawberry, columbine, and buttercup. The technical mastery of glass painters in the subsequent century, as well as the pervasive influence of Netherlandish painters like Jan van Eyck, is evident in the Annunciation window (1448–50) presented by Jacques Cœur to Bourges cathedral.

Our knowledge of medieval French stained glass relies on only a tiny fraction of the number of windows actually produced. Victims to changes in taste as well as iconoclasm and political revolt, stained-glass windows were destroyed in vast quantities during the 18th century and in the aftermath of the Revolution. Modern warfare reduced their number even more. Today, pollution continues to threaten these irreplaceable monuments of French patrimony.

# STATIONS OF THE CROSS

**.** An exercise of Christian devotion known also as the Way of the Cross, in which the faithful move around the interior of a church, stopping to pray and meditate at representations of events from the Passion of Christ. The practice had its origins in the visits of Christian pilgrims to the places in Jerusalem traditionally associated with the sufferings and death of Jesus Christ. These pilgrimages are attested to as early as the 4th century, and a series of five stational shrines was erected in the church of San Stefano in 5th-century Bologna. The idea was given considerable impetus in the 12th and 13th centuries by the increase in devotion to the Passion of Christ that was encouraged by veterans of the Crusades returning from the Holy Land. The Franciscans in particular took it up and saw to the installation of stations in the churches under their care. Still, the practice did not become universal in Catholic churches, nor was the number of stations standardized at fourteen until the 18th century.

# STEPHEN HARDING

(d. 1134). Born in England, Stephen entered the Benedictine abbey of Molesme and was one of the monks who accompanied Robert of Molesme when he left to found the new

monastery of Cîteaux and thus set in motion the reform movement that produced the Cistercian order. Harding was subprior and prior before being elected the third abbot of Cîteaux in 1109. He was abbot when Bernard of Clairvaux and a group of his followers joined the community. He was the author of the early text of the *Carta caritatis* (ca. 1119), which formed the basic constitution of the order and established the General Chapter and the pattern of yearly visitations of daughter houses by the abbot of the mother house. The *Exordium parvum,* a brief history of the founding of Cîteaux, is probably by Stephen. He produced, with the assistance of a converted Jew whom he consulted, a revision of the Vulgate translation of the Bible that sought to be more faithful to the Hebrew text.

# STEPHEN LANGTON

(ca. 1155–1228). Stephen Langton and his brother Simon were two of the most influential figures of their age. Stephen was born in Langton-by-Wragby, near Lincoln. His early education was probably at the Lincoln cathedral school, but ca. 1170 he moved to Paris and studied and then taught, for about twenty years, around the Petit Pont, probably at the school of Peter the Chanter. Like the Chanter and Peter Comestor, Stephen was interested in practical moral questions and in biblical studies. He was at his best when discussing, in a common-sense way, the prob-lems of everyday life. He sided most definitely with the active rather than the contemplative life.

Stephen's fame came not from his theology but from his preaching and biblical commentaries. He was known as *Linguatonans*—thundering tongue. About 500 of his sermons survive. He is credited with the division of the Bible into more or less its present chapters; he was well known for his corrections to the text; and he commented on most of the Bible according to both the literal and spiritual senses. His commentaries circulated in a number of forms, some with only one sense, some with both. He also wrote commentaries on Peter Comestor's *Historia scholastica*.

While in Paris, he was a close friend of Lothar of Segni, who as Pope Innocent III made him a cardinal in 1206. In December 1206, Stephen was elected archbishop of Canterbury; but owing to disputes over his election between King John Lackland and the Canterbury chapter (backed by Innocent III), he was not allowed to take his seat until 1213. Until then, he lived in exile at the abbey of Pontigny.

Stephen was closely involved with Magna Carta and may have been its author. He worked hard to maintain the role of mediator during the events that led to 1215 and saw the charter not as innovation but as restatements of the rights and duties of kingship. Innocent read Langton's mediation with the barons as an indirect challenge to himself

and suspended him as archbishop for two years. The dispute was eventually settled by the deaths of John and Innocent, and Stephen returned to England in 1218.

He attended the Fourth Lateran Council in 1215 and was very much in sympathy with its reforming principles. Back in England, he avidly pursued church reform, holding the first provincial council to legislate in England in 1222 in Oxford. He himself was active in administration of his see. He presided over the translation of the relics of Thomas Becket at Canterbury in 1220. He played a major role in the coronation of the boy-king Henry III (1220) and became his adviser. He died in Sussex in 1228.

# STEPHEN OF BLOIS

(ca. 1100–1154). King of England. Stephen of Blois, the third son of Adèle, daughter of William the Conqueror, and Étienne de Blois, rose to prominence through the patronage of his uncle Henry I of England. Stephen acquired his French lands by grants from Henry: the county of Mortain (by 1113), and the county of Boulogne through marriage to the heiress Matilda in 1125. Despite significant holdings in France, Stephen played a limited role in French politics. As an active member of Henry's court, Stephen had little time for independent action in France, though he did lead an unsuccessful Flemish campaign in 1127 against Henry's rival to the throne, William Clito, who was supported by Louis VI. His assumption of the English throne in December 1135 led to a civil war that was waged primarily in England.

Stephen fought to establish his control in Normandy from March to November of 1137. After formal recognition as duke of Normandy by Louis VI in May, Stephen put down several rebellions but failed to regain control of territories seized by Geoffroi

d'Anjou. He returned to England to quell a baronial rebellion, leaving the situation in Normandy unsettled.

Stephen continued to play an indirect role in French politics through a marriage alliance in 1140 between his son, Eustache, and Louis VII's sister, Constance. This alliance fell into abeyance when Geoffroi d'Anjou, who had married Henry I's daughter Matilda, brought Normandy under his control in 1144 and won Louis's support through the cession of Gisors and the Norman Vexin. When he returned from crusading in 1149, Louis, alarmed by Geoffroi's power, revived the alliance with Stephen. Louis and Eustache, with limited success, campaigned against the Angevins in the summer of 1151 and again in 1152 after the marriage of Geoffroi and Matilda's son Henry, count of Anjou and duke of Normandy, to Eleanor of Aquitaine. Stephen's indirect role in French politics ended with the failure of these campaigns, Eustache's death in August 1153, and the negotiated settlement with Henry, who would succeed Stephen as Henry II.

# STRASBOURG

**.** Because of its location on the Rhine River at the border between French and German lands, Strasbourg (Bas-Rhin) has since Roman times been a crossroads; its very name means "city of roads." While the resulting multicultural influences enriched its artistic heritage, the ravages of numerous wars have damaged many of Strasbourg's medieval monuments.

The best-preserved and best-restored medieval edifice is the cathedral of Notre-Dame. This church illustrates a progressive stylistic shift from Ottonian Romanesque to French Gothic. Its plan and proportions follow those of a Romanesque church begun on this site in 1015. Rebuilding in the choir and transept ca. 1200 continues Romanesque features, such as the apse opening directly to the transept, an elongated crypt, and an octagonal tower over the crossing. Some of the Romanesque stained-glass windows are reemployed in the glazing program of the transept.

French Gothic architecture and sculpture began to predominate at Strasbourg ca. 1200. A new atelier, possibly from Chartres, vaulted the south transept and was responsible for sculpture of the Last Judgment pillar inside and portal sculpture, including tympana of the Death and Coronation of the Virgin and pillar statues representing Church, Synagogue, and Solomon outside the south transept. These sculptures are masterpieces of the damp-fold, expressive style developed in the transepts of Chartres cathedral.

From ca. 1240–75, the nave was rebuilt in the Rayonnant style of Parisian Gothic architecture. The nave of seven bays with single aisles has a three-story elevation with glazed triforium. The stained glass from the mid-13th to mid-14th century features standing saints in the clerestory, Christ's genealogy in the triforium, seated emperors in

the north aisle, and scenes from the lives of the Virgin and Christ in the south aisle. The main addition to the nave was the mid-14th-century chapel of Sainte-Catherine.

The final phase of construction was the west façade, begun ca. 1275, purportedly under Erwin de Steinbach, and completed in the 15th century. It is famous for its "harp string" effect of vertical lines and pointed gables in a Rhenish Gothic style. The lower story with three sculpted portals, whose tympana represent Christ's infancy, Passion, and the Last Judgment in a French Gothic style, was completed before a fire in 1296. On the gable of the central portal is the throne of Solomon, surrounded by a dozen lions representing the Twelve Tribes of Israel; the whole is surmounted by a statue of the Virgin and Child. The sculptures show an expressive combination of French Gothic and Germanic mannerist styles. Surviving drawings for the façade show that two towers of equal height were planned; however, only the north tower, completed in the 15th century, was built.

Four other medieval churches attesting to the economic prosperity of Strasbourg merit notice. Of Sainte-Aurélie, founded in the 8th century, there remains only the 12th-century tower of the west façade. The collegial church of Saint-Thomas, constructed in the 13th and 14th centuries, betrays the influence of the cathedral in its capitals and façade. The church of Saint-Étienne was largely destroyed during World War II; the medieval transept and choir have been restored, but the nave is modern. The Protestant church Saint-Pierre-le-Jeune was founded in the

Strasbourg (Bas-Rhin), Notre-Dame,
plan. After Walter.

11th century as an abbey church in Romanesque style. Rebuilt in Gothic style in the late 13th and early 14th centuries, it retains its Romanesque tower (lower three levels), cloister, and conventual buildings.

# STRASBOURG, OATHS OF

. The earliest written evidence of French or of any Romance language, as recorded by the chronicler Nithard, the Oaths were sworn at Strasbourg in 842 by Charles II the Bald and Louis the German in alliance against their brother Lothair, who sought sole control of their grandfather Charlemagne's empire. Each swore in his brother's language, Louis in *romana lingua,* Charles in *teudisca lingua.*

The linguistic interest of the Oaths is considerable, although it has been difficult to localize their dialect. Old French elements include the new future tense, diphthongs formed from palatalization, the monophthongization of the Latin diphthong AU, as well as evidence for the so-called mute -e. Nevertheless, certain uncharacteristic features have suggested either that the Oaths may have been written in a southwestern dialect or that they were composed in a chancery Latin, then translated into French. The Oaths have cultural and literary interest as well. Of particular note is the pair of words *podir* 'might' and *savir* 'wisdom,' which figures importantly in later descriptions of the knightly ideal.

The texts exist today in a single manuscript (B.N. lat. 9768) of the second half of the 10th century.

# SUBTRACTION OF OBEDIENCE

. The Great Schism of the papacy entered a new phase in 1394 with the election of Benedict XIII, the second pope of the Avignon obedience. The French government adopted a policy that it would follow, with minor interruptions, for fifteen years—advocating the *via cessionis* as the means to end the Schism. Under this policy, France would no longer support the use of force to impose the Avignon pope on Rome or any judicial proceeding to determine which contender was the sole true pope. Instead, both popes were to abdicate and a single successor elected in their place.

Neither pope was willing to consider this approach to union, and the French developed sanctions aimed at forcing compliance on Benedict XIII. The principal sanction was called "subtraction of obedience," a term that meant cutting off the revenues of a pope recognized in France as the legitimate one. One could subtract obedience without casting any aspersion on the papacy as an institution or on the legitimacy of the pope in question. In French ecclesiastical politics, however, subtraction could have at least two meanings. Partial subtraction, which denied the papal government certain powers over the French church, was the policy favored by proponents of "Gallican liberties," whose stronghold was the University of Paris. They sought to make the policy permanent, thus presumably returning to an earlier time, before the popes had supposedly appropriated powers that

properly belonged to the bishops. The cardinals, and others who found the existing system beneficial, naturally opposed the Gallican solution of permanent partial subtraction, but many of them were prepared to take more drastic short-term action to force compliance with the *via cessionis*. Thus was born the concept of *total* subtraction of obedience from a particular pope who, by refusing to abdicate, was perpetuating the Schism, thereby falling into heresy and losing the capacity to perform any papal function. Total subtraction would in no way diminish the powers of the papacy but, by removing them from a particular pope, could be invoked to hasten the end of the Schism.

The driving force in France behind total subtraction of obedience was Simon de Cramaud, patriarch of Alexandria, a protégé of the duke of Berry, the French prince most dedicated to ending the Schism. At a first council in Paris, early in 1395, the French prelates, under prodding from the government, finally endorsed the *via cessionis*. A second council, meeting in Paris in the summer of 1396, debated ways of enforcing this policy, and the university made a determined bid to have the government adopt its Gallican program, which included partial subtraction. The effort failed, but in the process papal supporters launched a counterattack against the *via cessionis* itself.

Neither Cramaud nor Berry was present for the second council of Paris, and in the months that followed Cramaud, who was no Gallican, produced his treatise *De subtraccione obediencie,* a powerful argument for total subtraction that was destined for wide circulation. His purpose was to head off a papalist reaction without alienating the Gallican supporters of partial subtraction. A third Paris council, in 1398, voted for subtraction of obedience, and for three years the Avignon papacy was denied much of its authority in France and Castile.

Because of international political factors, however, Cramaud and the French cessionists were not able to get wide European backing at this time, and in 1401 the government abandoned the policy of subtraction. Five years later, the climate was more auspicious. At a fourth Paris council, in 1406–07, even the University of Paris favored full subtraction. In the end, unilateral subtraction of obedience by France failed to coerce Benedict XIII, but the French debate and the wide circulation of Cramaud's treatise produced many conversions to the *via cessionis*. As it happened, only a general council of the church could bring to bear enough pressure to end the Schism. At Pisa, in 1409–10, Cramaud had the satisfaction of presiding at a gathering that declared both popes deposed on the basis of doctrines he had been espousing.

# SUGER

(1081–1151). Abbot of Saint-Denis from 1122 to 1151, Suger is one of the most interesting representatives of French monastic culture in the 12th century, combining an extraordinary devotion to his monastery with an understanding of the weaknesses and potential strengths of the kings of France. He was an ardent administrator and builder, and, if he is best remembered for his desire to adorn his church, he also reformed the liturgy and improved the life of the community, earning the praise of Bernard, abbot of Clairvaux.

Suger's eagle vase, Saint-Denis.
*Courtesy of the Louvre, Paris, Rèunion des Musées Nationaux.*

Suger also stands out from most of his contemporaries because of the much clearer picture we have of his personality and achievements. He himself wrote a Latin *vita* of Louis VI, in which he gives a vivid picture of the king's attempts to subdue the turbulent

aristocracy in the Paris region, his own role in this process, and the king's special devotion to St. Denis. He also wrote two works concerning his administration of the monastery's lands and the building and consecration of the new church. A small number of his charters and letters survive, and his image and his words are preserved in several places in the church of his abbey.

Suger was born of a modest knightly family probably not too far from Saint-Denis and was given as an oblate to the abbey. During his early years, he seems to have realized how the abbey had lost prestige, power, and wealth since the time of Charlemagne and Charles the Bald; how the reciprocal devotion of saint and king had been a strength to both; and how the church's small size and decayed furnishings no longer served the needs of the monks or the crowds of pilgrims coming there. Throughout his long life and particularly during his abbacy, it was his purpose to remedy these three lacks.

Suger tells us how as a youth he used to look at the abbey's muniments and how he was aware not only of its lost domains, but also how through mismanagement it was receiving much less revenue than it should. The first portion of his book on the administration of the abbey, *De rebus in administratione sua gestis,* described how he carefully and painstakingly tried to recover what was owed to the abbey and to increase its revenues. For example, increases came from getting more revenues from the town of Saint-Denis or acquiring a wealthy priory like Argenteuil,

Suger's chalice, Saint-Denis. *Courtesy of the National Gallery of Art, Washington, D.C.*

but they also came from clearing forests, planting new crops and vines, settling new inhabitants on the land, enforcing ancient rights against the encroachments of local lords,

building houses, granges, and courts, establishing new churches, and converting cash rents into payments in kind.

Suger also learned from the monastery's history that it had been a frequent beneficiary of royal munificence. Lands, money, and precious objects had been given to Saint-Denis by kings of France from Dagobert on. He knew, too, that it was in times of peace and harmony that Saint-Denis had prospered most. An opportunity to recreate that special harmony between king and abbot arose from the fact that Louis VI, once a pupil at the abbey, had a particular devotion to the martyrs and confidence in Suger. Although Suger was to become regent while Louis VII was on crusade, and it was then that he acted as a royal "minister" of the king, it was really during the reign of Louis VI (d. 1137) that troublesome enemies of both king and abbey, like the lords of Le Puiset, were brought to heel. The ancient relationship between *regnum* and *monasterium* was not only enhanced but refashioned when Louis VI returned the crown of his father, Philip I, to Saint-Denis; took the royal standard from the abbey's altar as he left for war in 1124, declaring that if he were not king he would do homage to the abbey; granted the fair of the Lendit what amounted to an immunity from royal justice; and declared that the kings of France should be buried at Saint-Denis.

The more rigorous administration of the monastic lands and the creation of symbols that emphasized Saint Denis's special importance for the French were antecedent to Suger's intention to tear down the old church and replace it with a larger one with more splendid hangings, stained glass, altars, crosses, and other objects. Though this must have long been planned for, Suger tells in his *De consecratione ecclesie sancti Dionisii* that once construction started the work proceeded quickly, the western narthex and towers being consecrated in 1140, and the translation of the saints to their new reliquaries and the construction of the eastern end with the new ambulatory and stained-glass windows completed in 1144. If stylistically the chevet anticipates many features of the Gothic churches of the Île-de-France, the church also incorporates many of Suger's major concerns: the preservation of the past, a harmonious adaptation of the old to the new, an emphasis on the liturgy, and most of all the exaltation of the saints.

Suger was inventive and eclectic. He reshaped and adorned objects that had been in the church; if he was not given the precious stones he needed, he bought them. So, too, he found the sources for his conception of the church in writings as diverse as saints' lives, liturgical texts, biblical commentaries, chronicles, and the writings of Pseudo-Dionysius the Areopagite, as well as in buildings he had seen.

Suger was a small man and an assertive one, and on behalf of his church he considered any means legitimate. In his last years, as regent, he had had to spend much of his time away from Saint-Denis, and money that had been intended for the rebuilding of the nave he used for the king's needs. He died at Saint-Denis in 1151.

# SUMPTUARY LAWS

. As in other countries, towns in France in the late Middle Ages enacted sumptuary legislation—laws forbidding the wearing of excessively elegant clothing—largely in the hopes of discouraging the blurring of social distinctions through elegant dressing by the humbler classes (e.g., prostitutes), but also sometimes for moral and/or economic reasons. As there is no synthesis to date dealing with this problem, the scholar must consult the legislation of each town.

*Leah L.Otis-Cour*

[**See also:** CLOTHING, COSTUME, AND FASHION]

# T

# TABELLIONS

. Officials, found especially in northern France, who recorded and preserved the acts of judicial bodies. For a long time, *tabellion* was almost a synonym for notary, as those who recorded judicial acts were called scribes, notaries, or *tabellions* without much distinction. Toward the end of the Middle Ages, however, a distinction finally began to appear. Henceforth, notaries were the ones who transcribed the record of official actions, while *tabellions* filled the archival function—preserving the record and delivering documents when called upon.

*John Bell Henneman, Jr.*

[**See also:** NOTARIES]

# *TAILLE*

. The word *taille* ("tallage" in English) referred originally to exactions that seigneurs demanded from people under their power, but it also came to describe a method of assessment—apportionment among households on the basis of their presumed ability to pay. The seigneurial *taille,* from the 11th century on, was arbitrary in nature and thus the most onerous obligation imposed on peasants. By the 13th century, many began to win enfranchisement, which eliminated the *taille* or converted it to a fixed annual payment.

When whole communities, such as towns, became enfranchised, they owed a fixed *taille* that they funded by levying taxes of their own choosing on their inhabitants. For the taxpayers, the *taille was* now territorial rather than personal. Town governments needed money for other purposes, such as fortifications, and in the late Middle Ages it was common to call most municipal taxes *tailles.* Technically, however, the term applied only to direct taxes assessed by *répartition,* that is, apportioned on the basis of ability to pay ("the strong carrying the weak").

The word *taille* began to appear in royal taxation only toward the end of the 14th century, when it grew out of the *fouages,* taxes on "hearths" (households), levied in the years 1364–80. In Languedoc, the towns of a district paid royal taxes as lump sums apportioned among them mostly on the basis of households and raised through municipal

*tailles* of their own choosing. In the 15th century, this system of *fouages* began to be called the *taille,* and lawyers called it the *taille réel* because the "hearth" in the Midi had come to refer to a certain type of property holding that was roturier (i.e., neither noble nor clerical) rather than to actual households.

In northern France, the *fouage* was directly linked to households and, while it was reckoned at three francs, actual payments per household varied from one to nine francs according to wealth. Charles V canceled it in 1380, but in a few years the government began resorting to occasional special taxes. These were apportioned direct taxes not unlike the old *fouage,* but they were called *tailles*. After fifty years of intermittent *tailles,* the Estates General of 1439 authorized a *taille* that the crown continued to collect year after year, adjusting the amount as it saw fit. Under Louis XI (r. 1461–83), the proceeds of the *taille* soared from 1.2 to 3.9 million pounds. It was reduced sharply in 1484 but remained thereafter the basic tax of the French monarchy.

# TAILLEVENT, MICHAULT (LE CARON)

(ca 1390– ca. 1458). Born in Saint-Omer, the prolific and versatile poet Michault le Caron dit Taillevent served some twenty-five years at the Burgundian court as an actor in farces, as the duke's valet, and as court poet. His work includes occasional poems; numerous short lyrics (some arranged into longer pieces) and satirical, political, and reflective poems; and a morality play. The *Psautier des vilains* (1440), the *Passe temps de Michault Taillevent* (ca. 1440), and the *Débat du cœur et de l'œil* (ca. 1444) are his best-known works. Of these, the *Passe temps* is the most appreciated for its vivid evocation of his personal history and anxieties as well as its announcement of Renaissance preoccupations with the quick passage of time and the *carpe diem* "solution." Taillevent's technical mastery of verse, the adaptable registers of his poetic voice, and his blend of didacticism and personal reflections place him in the tradition of Charles d'Orléans and Alain Chartier.

# TALBOT, JOHN

(ca. 1388–1453). John Talbot, first earl of Shrewsbury, was the chief Lancastrian commander in the late Hundred Years' War. He derived wealth and power from his high birth and fortunate marriage. Though summoned to Parliament in 1409 and made Lord Lieutenant in Ireland in 1414, he was to gain fame as a soldier rather than as a statesman. Talbot fought in the Welsh and Irish wars from 1404 and on the Continent after 1420. He received the Order of the Garter after distinguishing himself at Verneuil in 1424. He shared command of the failed English siege of Orléans in 1429 and was captured at the subsequent Battle of Patay.

The years following his release in 1433 he devoted to defending Henry VI's continental possessions. Despite his recapture of Harfleur in 1440 and defense of Pontoise in 1441, he could not prevent the eventual loss of Normandy and Guyenne after 1449. Talbot's heroic death in a superbly ill-conceived assault against French artillery at Castillon in 1453 confirmed the final defeat of English pretensions to French holdings outside of Calais. Brave but harsh and intemperate, Talbot was a better warrior than a general. Feared and respected by his contemporaries, he is remembered as England's last chivalric hero.

# TAPESTRY

. The word "textile" stems from Latin *texere* "to weave," and the weaving process remains central to production of medieval tapestries. Throughout the Middle Ages, political, technological, and economic changes continued to shape the textile industry. From their origins in China and Coptic Egypt, fabrics made of such fibers as silk, linen, hemp, cotton, and wool changed in quality, character, and design as the weaving process

changed along with trade routes and the rise of mercantilism in Europe. Technological innovations took weavers out of the domestic and monastic environment and into the professional urban workshop. In the later Middle Ages, tapestry production became a separate industry, and major tapestry centers tended to be located near centers of political and economic power. Tapestries and other wall hangings served architectural, social, and practical purposes, as they colored space with images or scenes that were objects of conversation, and provided insulation. Textiles used as banners, ecclesiastical and liturgical materials, clothing, furniture accessories, napkins and towels, and even horse trappings survive.

In the early Middle Ages, weavers worked with the vertical warp-weighted loom, which rested against a wall. Warp threads tied to an upper crossbar were secured to the ground by weights. The wefts were attached to rods and woven through warps in a variety of ways that resulted in differently patterned weaves. In the mid-11th century, the invention of the horizontal treadle-operated loom sped up the process immensely and initiated the change in workers and working environment. Before the horizontal loom, workers were predominantly women who operated within the domestic sphere. After this invention, professional, mostly male, workshops were established, and the industry became more export-oriented. In the mid-13th century, the invention of the broadloom, a loom twice as broad as the horizontal treadle loom, allowed two people to work at one loom and so heightened productivity.

Apart from wool, other fibers, such as linen, silk, and satin, were either produced or imported. Linen production apparently was widespread but poorly documented, with such varieties as *dowlas* and *poldavy* from Brittany, sieve cloth from Rennes, and fuller linens, such as bysse and cambric, originally from Cambrai. Silk from Byzantium, Islamic Spain and other Islamic countries, Italy, and even central Asia was brought to western Europe and woven into damask, lampas, and satin, often in elaborate patterns. Ecclesiastical embroideries of silver-gilt thread on colored silk or linen could be used for copes, altar frontals, and orphreys. In the domestic realm, embroidered napkins, towels, tablecloths, and pillow covers were popular.

While the textile industry flourished in medieval France, the 14th century brought the establishment of tapestry workshops to urban centers. The specialized trade of tapestry introduced new steps to production. Artists produced small drawings called *petit patrons,* designers transformed the compositions into cartoons *(patrons)* for the tapestry, and weavers translated the cartoons into tapestry. The weaving method involved weft threads that cover short spaces with different colors as specified by the design and hide the warp threads in the finished fabric. Only

wool warp threads could be used, but wool wefts could be used in combination with different fibers, such as gold and silk threads.

The *Livre des métiers* (ca. 1263), initiated by the provost of Paris Étienne Boileau, contains the earliest references to tapestries. In medieval Paris, three groups of textile workers—*tapissiers notrez, tapissiers sarazinois,* and *tapissiers de la haute lisse* (high-warp weavers)—were documented, the *tapissiers sarazinois* being most closely associated with Islamic techniques. An agreement from 1303 allowed high-warp weavers to practice their technique, and by the end of the 14th century Paris workshops were firmly established. Later in the 14th century, references to tapestries and carpets became interchangeable.

To a great extent, patrons controlled the rise and fall of tapestry production. In the late 13th century, Arras was the principal center of production, but soon Paris, then Tournai in the 14th century, became leading centers due to changes in patronage. From 1350 on, King John 11 the Good acquired 237 *tapis,* intended for his own quarters and his sons, probably supplied by Parisians. In the 15th century and the beginning of the 16th, workshops in the Loire region benefited from its proximity to the court.

Initially, high-warp tapestries had simple designs, such as geometric patterns and heraldic devices, followed later by depictions of birds and small animals. Around 1370, subject matter included religious and secular scenes, figure compositions, landscapes, and genre scenes. Over the course of the 15th and 16th centuries, the number of secular themes grew, and portrayal of the narrative became more complex and subtle. Tapestries depicted the Nine Heroes and Heroines, scenes from the Trojan War, and the Labors of Hercules. Manuscripts often served as the basis for complicated projects. For the design of the Apocalypse Tapestry, the duke of Anjou provided one of his illuminated manuscripts as a model.

A category of tapestries known as *millefleurs* was produced in the Loire region ca. 1500. With their delicately depicted flowers and foliage on blue or pink grounds, *millefleurs* tapestries helped transform the interior into a world of sensual pleasure and provided the patron, who could name the vast array of plants, with conversation pieces.

Long after the Middle Ages, the tapestry industry continued to flourish. Many late-medieval tapestries survive along with a fair amount of documentary information about artistic activity, patronage, and tapestry merchants.

# TAPISSIER, JOHANNES

(Jean de Noyers); (ca. 1370-ca. 1410). Burgundian court composer in the early 1390s and teacher of choirboys in Paris in the early 15th century. Tapissier, along with Carmen and Cesaris, was mentioned as one of the composers who "astonished all of Paris" in Martin Le Franc's *Champion des dames* (ca. 1440). Surviving compositions include an isorhythmic motet and two Mass compositions.

# TEMPLARS

. Founded in 1120 in the Holy Land to defend Jerusalem and protect Christian pilgrims, the Knights Templar was a crusading order whose members took vows of poverty, chastity, and obedience. Their name is derived from the fact that Baudouin II, the crusader king of Jerusalem (r. 1118–31), turned over to them a portion of his palace on the site of the Temple of Solomon. Within nine years of their founding, they had received significant grants in France from such distinguished nobles as Thibaut de Blois, Thierry d'Alsace, and William Clito of Flanders. From humble beginnings, the order developed by ca. 1300 a network of some 870 castles, preceptories, and subsidiary houses. In the 13th century, the Templars may have had as many as 7,000 knights, sergeants, brothers, and priests, with perhaps 2,500 serving in the Holy Land. The order developed a powerful Mediterranean fleet to transport men, food, and clothing to the Holy Land, and its international structure and extensive resources made the Templars ideal bankers and financial agents.

The regulations of the order, largely inspired and perhaps actually written by Bernard of Clairvaux, were drawn up at the Council of Troyes (1129). They provided for an ascetic, celibate, and antimaterialistic order closely modeled on the Cistercians. Like the Hospitalers, who had been founded in the Holy Land ca. 1080, the Templars were organized into provinces reflecting geopolitical realities. There were three categories of members: knights, sergeants, and chaplains. The knights, who wore white garments with a red cross, were originally free to leave at will but eventually could leave only to join a stricter order. The sergeants were bourgeois associates and/or servants; the chaplains were priests who served for life, administering to the spiritual needs of the knights.

By 1150, the order had a strong presence in northern France, Provence, England, Aragon, Portugal, and Italy, but its recognized center was France, and nearly all of the twenty-two grand masters between the founding of the order and its dissolution in 1312 were Frenchmen. The Templars were recognized as a distinct order in three papal bulls

between 1139 and 1145, by Innocent II, Celestine II, and Eugenius III, exempting them from paying tithes and even from the effects of ordinary papal decrees. In spite of papal recognition and a strong defense by Bernard of Clairvaux in his *De laude novae militae* (ca. 1136), the privileges granted the Templars and their increasing wealth and influence aroused the virulent opposition of such contemporary moralists as John of Salisbury, William of Tyre, Walter Map, and Isaac of Stella.

As long as the crusading spirit was strong, attacks on the Templars were unsuccessful. However, the fall of Jerusalem to the Muslims in 1187 signaled the beginning of the decline of the order. As repeated crusades failed to recapture the city, crusading fervor began to wane and support for the Templars and other military orders, whose primary *raison d'être* was defense of the Holy Land, declined. After the fall of Acre in 1291, many Templars hired themselves out as mercenaries to the highest bidders. The order maintained a strong presence in France, centering their activities in Paris, where their Temple became the depository of the royal treasury. Relations with King Philip IV the Fair (r. 1285–1314) remained normal for some twenty years, although the king was constantly debt-ridden and no doubt jealous of the Temple's wealth. Sometime ca. 1306, for reasons that have continued to evoke debate among historians, Philip determined to bring them down. He blamed the Templars for the loss of the Holy Land, accused them of heretical practices and obscene acts, notably in their highly secret initiation rites, and persuaded Pope Clement V (r. 1305–14), who owed his election to Philip, to investigate the entire order. Without waiting for papal adjudication, Philip ordered all the Templars in France, about 2,000 of them, arrested on the same day, October 13, 1307, and their property confiscated. After stirring up public opinion against them, Philip's royal ministers, nominally under the leadership of the inquisitor for France but actually acting on royal orders, brought the Templars to trial. Using torture, they extracted confessions from the leading Templars, including the grand master, the Burgundian Jacques de Molay. Although Templars in all other countries were judged innocent of all charges and the Council of Vienne (1311) voted overwhelmingly against suppression of the order, in France and in all areas under French domination (Provence, Naples, and even the papal states), they were found guilty as charged, and a vacillating and weak Clement V dissolved the order by papal decree in 1312. Still not satisfied, Philip had Jacques de Molay and other leading Templars burned at the stake on March 18, 1314. It was popularly believed that Jacques repudiated his confession and summoned Philip and Pope Clement to meet him within the year before the judgment seat of God. The Temple's vast holdings, being church property, were turned over to the Hospitalers, who in 1318 settled Philip's claims for compensation and expenses. The Templars' archival records were lost in their entirety, perhaps when the Ottoman Turks overran Cyprus in 1571. A disaster for histo-rians, this has been a boon for students of the occult and conspiracy theorists.

# *TENSO/DÉBAT*

. Debate poetry in the medieval vernaculars of France begins with the Provençal *tenso,* a symmetrical exchange of stanzas between friendly rivals. At best, the *tenso* resembles a *sirventes* in dialogue and at worst an exchange of personal invectives, as its name (meaning "dispute") indicates. The earliest example is the *tenso* between Cercamon and Guilhalmi, datable to 1137. In the later *partimen* (or *joc partit,* Fr. *jeu-parti*), a troubadour presents an antithetical topic for debate and allows his interlocutor to choose a position, leaving the first poet to defend the alternative. Unlike the Latin *conflictus* and the French *débat,* the *tenso* and *joc partit* generally put poets, not abstractions, on stage. These poets may represent differing social groups or political stances, but often their debates treat issues of crude seduction or more subtle love casuistry. The poet may also debate with himself in a variation on the mind-body separation, or he may present anthropomorphized animals as in some *débats*. The metrical structure and music are sometimes borrowed from an existing song.

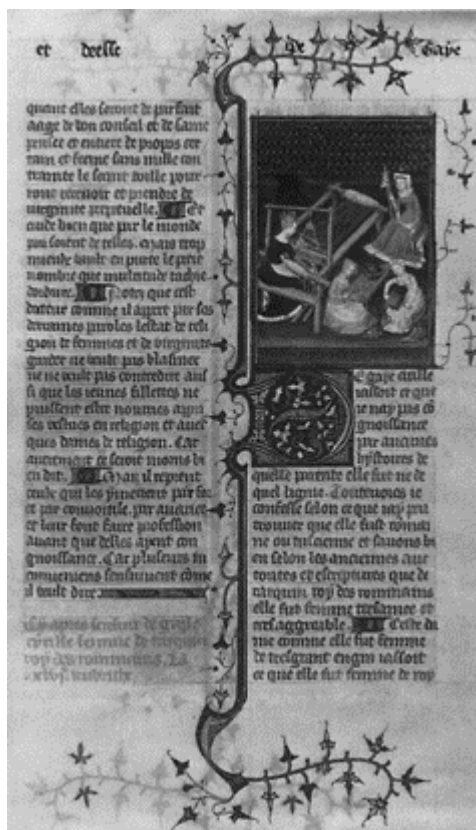
# TEXTILES

. The most important industrial commodities in medieval regional and international trade were textiles, whose leading producers during most of this era were found in France, especially the northern provinces. During the high Middle Ages, the majority of French textiles, manufactured in a wide variety, were cheap to medium-priced: fairly coarse, generally light worsted, woolens, linens, and mixed fabrics, particularly worsted-woolen says and linen-cotton or linen-woolen *fustians* and *tiretaines,* sold chiefly in

Mediterranean markets. The upper price ranges comprised more finely textured, heavier, pure linens and woolens; and the most luxurious woolens were densely woven from the finest English wools. The most expensive French textile was the woolen *escarlate* (*écarlat, scarlet;* first documented ca. 1030–50), whose distinctive red color was produced by *kermes* (or *grain*), a dyestuff composed of rare Mediterranean oak-infesting insects *(Coccus ilicis)*. Rivaling the finer Italian silks, a late-medieval French *escarlate* (about 80 by 5 ft.) could cost as much as three years' pay for a master mason or carpenter in Paris or Rouen.

Of all these textiles, the most important were woolbased. From the first evidence for commercial production in the later Carolingian era until perhaps the 12th century, worsted-type fabrics seem to have predominated. They were distinguishable by their lozenge or diamond-twill weaves, composed of strong, long-fibered wool yarns, woven on the vertical warp-weighted loom of great antiquity. A fashion and industrial revolution took place with the emergence and subsequent victory of the long, heavy, felted woolen broadcloth, composed of short-stapled, finer wools whose yarns were woven on the new horizontal foot-operated treadle loom. First so described by Rashi of Troyes (ca. 1040–1105), it was subsequently much enlarged and improved by the 13th century as the famous broadloom. If that loom was the most crucial innovation for the new long broadcloths, their cohesion and durability also depended upon extensive fulling (unlike worsteds), with water, chemicals, pressure, and heat: to force the fine, curly, but weak wool fibers to interlock and be felted into a highly compressed and thus heavy fabric, whose fiber-ends were then repeatedly raised or "napped" with teasels (a thistle plant) and shorn with razor-sharp, foot-long shears, until all visible trace of weave was obliterated and the texture had become as smooth as silk.

Three other labor-saving innovations of the late 12th and 13th centuries were also particularly well suited to producing woolens: carding the wool fibers with two wired brushes, which also facilitated subsequent felting; spinning carded wools or cotton with a hand- or foot-operated wheel that rotated the spindle; and mechanical fulling, with water-powered wooden hammers to pound, scour, and felt the woven cloth. While the rival and younger Italian and English cloth-making establishments, called "draperies," soon adopted these innovations, the more prominent Franco-Flemish draperies long resisted them, for fear of impairing the quality of their woolens. Many required the traditional techniques of hand-combing the wool fibers and then spinning them with the drop-spindle and distaff to produce both the warps (the strong yarns stretched on the loom) and the wefts (the weaker yarns passed


Women carding, spinning, and weaving wool, from a 14th-century manuscript. B.N. fr. 12420, fol. 71. *Courtesy of the Bibliothèque Nationale,Paris.*

through the warps), although some grudgingly permitted carding and wheel-spinning for the wefts alone. Above all, they insisted upon the laborious, traditional method of foot-fulling, which took three or four days for each cloth.

Some of these changes involved in the evolution of the medieval felted woolen broadcloth also involved changes in the sexual division of labor, which, however, were more related to the commercialization and urbanization of the French woolens industry. A growing dependence on competitive export markets required greater specialization of labor to provide both lower-cost efficiency and better quality. Insofar as early-medieval and Carolingian cloth production was much more oriented to local consumption, it had been a largely rural domestic or household craft with little formal division of labor, except in the large workshops of manorial estates and religious orders, called *gynaecia*. As that term indicates, the cloth-manufacturing processes of this era were performed

there and almost everywhere by women. Even in the fully developed export-oriented woolen draperies of the high and later Middle Ages, female workers still outnumbered males; but throughout western Europe, men had succeeded in decisively dominating this industry.

In the commercially oriented Franco-Flemish draperies, production became organized by a "putting-out" system under the supervision of entrepreneurs known as *drapiers,* almost always men, the exception typically being their widows. Some *drapiers might* also be wool merchants; but most purchased wools from such merchants, who often delivered them already sorted by staple length, beaten, cleansed, greased, and sometimes partially dyed in the wool, usually woad-blue as the foundation for other colors. Under the *drapier's* supervision, these wools were "put out" to combers and carders, almost exclusively female, who prepared them for spinning in their own homes—often rural cottages, for piecework wages. Thus prepared, such wools were then similarly "put out" to spinners, again females, whether using the distaff or the wheel, also working in their own homes or cottages. The warp and weft yarns so spun were then delivered to the weavers, who were almost exclusively male by the high or late Middle Ages—all the more so since the master weaver was frequently also the *drapier.*

The broadloom required two weavers, one on each side, to operate the treadles for separating the warps and to pass the weft-bearing shuttle back and forth through the warps; their assistants, who wound and fitted the warps and wefts, were usually females. The woven cloth was then delivered to the fullers, who were again almost exclusively male, as were the other artisans in the finishing processes. After the cloth had been thoroughly scoured, degreased, felted, and subjected to a preliminary napping (teaseling) and "wet-shearing," it was hung by tenterers on large frames, to be dried and stretched so that no wrinkles remained, and then returned to the *drapier.* He might choose to sell this broadcloth, whose manufacture had taken over two weeks, to cloth finishers or merchants, who might then commission shearers and dyers to finish the cloth; or the *drapier* himself might send the cloth to the shearers and dyers; or the woolens might be exported to Italian towns, Florence especially, for such finishing.

In the leading Franco-Flemish draperies, formal guild organization by the later Middle Ages was confined largely to the four major urban-based and male-dominated crafts: the master weavers, who as *drapiers* depended on profits for their incomes, while their journeymen weavers received wages; the master fullers, dependent piecework employees of the *drapiers;* and the master shearers and dyers, most of whom were independent fee-earning craftsmen.

The ultimate, late-medieval commercial preeminence of the luxury-quality woolens was due not just to changes in fashion or technology but more particularly to adverse economic changes that sharply raised transportation and marketing costs in international trade to a prohibitive level for the cheaper textiles. Most of these rising costs resulted from the widespread, prolonged warfare—and associated fiscal, monetary, and commercial policies pursued by the combatants—that afflicted so much of western Europe and the entire Mediterranean basin, Christian and Muslim, from the later 13th to the mid-15th centuries. Europe was also seriously afflicted, during the last hundred years of this era, by plagues and famines; but in France the industrial and commercial transformations were readily apparent well before these later calamities.

The most graphic evidence can be found in the rapid decline of the Champagne fairs during the late 13th and early 14th centuries. Most of the textile industries scattered across central and northern France, the Low Countries, and the adjacent Rhineland had been vitally dependent upon these fairs, which had long served as the hub of western European and especially Mediterranean-oriented commerce. During the mid-13th-century apogee of these fairs, and in the famous Hanse of the Seventeen Towns, producers of the cheaper, lighter textiles well outnumbered those of luxury woolens. The great majority of the draperies were then francophone; and even in Flanders, a French county, francophone draperies then predominated over the *draperies flamigantes*. But by the mid-14th century, the big urban *draperies flamigantes* of Ypres, Ghent, and Bruges had gained a decisive ascendancy by specializing more and more in those luxury woolens whose commerce could better withstand rising marketing costs; in stark contrast, dozens of the smaller, cheaper-line French draperies in French Flanders (annexed to the royal domain), Tournai, Artois, Ponthieu, Vermandois, Champagne, and the Île-de-France had either disappeared or were relegated to a much more modest existence in supplying purely local or regional markets. Of the linen industries in this region, only the luxury producers, chiefly at Reims, survived and prospered. The supremacy of those urban Flemish draperies was short-lived, however, as they encountered increasingly severe competition in luxury woolens from quasirural *nouvelles draperies* within Flanders itself and from draperies in neighboring imperial Brabant, Holland, Florence and other north Italian towns, and England. Within France, by the late 14th and early 15th centuries, several new Norman draperies also provided some competition in the luxury field, while in the south new draperies in Languedoc and Catalonia sold cheap to medium-priced woolens in Mediterranean markets that the northern draperies could no longer effectively service. Finally, in 1470, with the dawning of the early-modern era, France gained a new textile industry, when Louis XI successfully established an Italian-style silk-making craft at Tours.

# THEATER

. Medieval theater originated in the 10th century in the Latin liturgical drama that was associated with the Easter rites of the church. New forms of dramatic expression were developed over the next 200 years, one example of which is *Sponsus,* a play based on the parable of the Wise and Foolish Virgins. By the late 12th century, plays were being written in French, though a few nonliturgical Latin plays were also performed. The earliest play whose dialogue is entirely in French is the *Jeu d'Adam.* Another biblical play from this period is the *Seinte Resureccion.* Around this time also, there appeared the narrative *Passion des jongleurs,* which later served as a principal source for the *Passion du Palatinus,*

The 13th century saw a significant development of theatrical activities in the wealthy commercial centers of northern France, particularly in Arras, where Jehan Bodel wrote his *Jeu de saint Nicolas*, Adam de la Halle his *Jeu de la feuillée,* and an anonymous author his *Courtois d'Arras,* a play based on the parable of the Prodigal Son. The record of dramatic activity in the 14th century is sparse, though an important collection of miracle plays, written for the Guild of Parisian Goldsmiths, has survived.

The vernacular plays surviving from this early period are not numerous, but their quality is high. The pattern of survival suggests that dramatic activity was limited to certain urban centers, not only in France but in other countries as well. In the 15th century, however, the theater burst into prominence everywhere as a significant feature of European life. The cycle plays of England, the Passion plays of France, the *Fasnachtspiele* of Germany, and the *sacre rapresentatione* of Italy were all part of a general theatricalization of European culture. Plays were usually performed on feast days and general holidays; were written by clerics, law clerks of the Basoche, rhetoricians, and students; and were acted by amateurs belonging to trade guilds, rhetorical societies, schools, and municipal organizations. Techniques for the staging of plays ranged from simple to spectacular, with performances taking place in halls, courtyards, or town squares. Plays were acted on small trestle stages or in large open-air theaters built specially for the occasion. The presentation of plays on pageant wagons was the custom in northern France, where processional theater was a frequent component of public ceremony.

The theater of the late Middle Ages played a central role in the life of the community. Biblical plays, history plays, and saint plays reinforced people's identity as children of God by teaching the history of the world and the community's place in that history. At the same time, morality plays taught Christian ethics by showing the consequences of

good and bad behavior. Farces and fools plays, called *sotties,* provided collective release by making satirical thrusts at social abuses. Perhaps the simplest of the comic pieces were the dramatic monologues, which required only a single actor. Among these, one finds the *sermons joyeux,* festive parodies of the sermons heard in church on Sundays.

The serious plays treating historical subjects were often called mystery plays. The most important type of mystery play in French was that which dramatized the Passion of Jesus. In Paris, the staging of these plays was the exclusive right of the Confrérie de la Passion. Elsewhere, it was usually the municipalities that subsidized these lengthy and costly plays. Though most of the surviving medieval plays are anonymous, the authors of several of the Passion plays are known. Eustache Marcadé is the presumed author of a *Mystère de la Passion* from the first part of the 15th century. Arnoul Greban wrote the best known of the Passion plays ca. 1452, then collaborated with his brother, Simon Greban, in writing the *Mystère des Actes des Apôtres.* Toward the end of the century, Jean Michel wrote another important Passion play. André de La Vigne wrote a *Vie de saint Martin* and two other plays that were staged in the Burgundian town of Seurre in 1496. Guillaume Coquillart, a writer of comic debates and dramatic monologues, was also active around this time. The masterful *Farce de Maistre Pathelin,* however, despite the sleuthing of many scholars, remains resolutely anonymous.

One of the well-known dramatic writers of the early 16th century was Pierre Gringore, who attacked Pope Julius II in his *sottie* of 1512 and who later wrote a lengthy *Vie monseigneur saint Louis* for the stage. The Renaissance seems to have had little impact on the continued writing and performance of late-medieval dramatic genres. All of them flourished until about mid-century. In 1548, however, the playing of biblical plays was forbidden in Paris, and the subsequent religious wars effectively stopped all such productions in most parts of France. Morality plays, which were not affected by the ban, continued to be played, showing some signs of development toward the newly introduced genre of tragedy. Even at the beginning of the century, the delightful morality play *Condamnation de Banquet,* pointed toward a new secularism. Farces also continued to be played, changing little throughout the period. Because of their stability as a genre, the farces of the early 17th century were able to transmit the medieval comic tradition to the young Molière.

# THEATER, LATIN

. Secular Latin plays were produced in the 12th century alongside religious and liturgical drama. Their appearance seems to depend on two factors, the high standard of learning in the period and the change in conception of the value of the human being, epitomized in Anselm of Bec's *Cur Deus homo* and exemplified in the autobiographies of Guibert de Nogent and Peter Abélard. Latin being a learned language, these plays were associated almost entirely with the schools, particularly those of the Loire Valley. Only comedies are extant, the earliest of which (ca. 1130) would appear to be the anonymous *Panphilus,* based loosely on an Ovidian theme and written in Ovidian style. As if to assert the real origins of comedy, Vitalis of Blois wrote two plays: *Geta* (ca. 1150), an update of Plautus's *Amphytrion,* and *Aulularia* (ca. 1155), based on the pseudo-Plautine comedy of the same name. *Geta,* with its satire of the rival Parisian schools and Abélard's philosophy, was an enormous success and immediately became a set-text studied in all the schools of Europe; almost a hundred manuscripts are extant. Vitalis's success inspired others to follow his example. While in Sicily in 1168, William of Blois wrote the *Alda,* an updated version of a play by Menander with a Norman setting. Other teachers from the Loire region tried different sources. Matthieu de Vendôme's *Milo* is based on an eastern motif; the plays of his archenemy Arnulf of Orléans, the *Lydia* and the *Miles gloriosus* (despite its Plautine title), are more closely linked to fabliau material. Among the remaining "comedies" whose links with the theater are not so obvious, but which might be more accurately termed "dramatic monologues," one deserves mention: *Panphilus, Glycerium et Birria,* associated with an episcopal or royal court in Normandy, combines a vernacular interlude structure with the characters of Roman comedy, thus firmly stating its theatrical nature.

Although limited in time (ca. 1130–80), probably because of changes in the French educational system, these comedies continued to have an influence elsewhere in Europe, first in England, where the *Babio* (ca. 1175) stands out as a supreme example of Latin *récupération* of the vernacular, and then in Italy in the 13th century with texts like the *Uxor Cerdonis* and *De Paulino et Polla*. The *Panphilus* was also to influence the vernacular, especially the English *Dame Siriz* and the Spanish *La Celestina*. Even religious drama was not immune. The Beauvais *Ludus Danielis* (ca. 1175) acquired the synopsis and prologue of comedy that are absent from the earlier *Historia Danielis* (ca. 1140) of Hilarius.

# THEODULF OF ORLÉANS

(ca. 760–821). Born in Spain of Visigothic parents, Theodulf became a member of the Carolingian court in the latter part of the 8th century. He was abbot of Saint-Benoît-sur-Loire and then Saint-Aignan before becoming bishop of Orléans. Removed from episcopal office for plotting against Louis the Pious, he was exiled to Angers in 817. Among his theological writings is a defense of the *filioque* (the procession of the Holy Spirit from both Father and Son) in the Creed, a work on baptism, and possibly expositions of the Creed and the Mass. Theodulf concerned himself with producing a corrected text of the Vulgate Bible, even consulting (or inspiring his disciples to consult) a Hebrew text. However, his corrected text had little influence; Alcuin's Bible would be the accepted Vulgate text of the Carolingian period. Theodulf was a poet of note, composing verses for various occasions and purposes: an introduction to his Bible text; a description of a plaque portraying the seven Liberal Arts, virtues, etc.; vivid descriptions of personalities at Charlemagne's court; and religious poetry, including hymns. While bishop of Orléans, Theodulf ordered priests to establish schools for the instruction of children, gave attention to the liturgy, and showed a deep appreciation of art and its essential role in the church. As author of the *Libri Carolini,* Theodulf responded to Byzantine icon veneration as sanctioned by the Second Council of Nicaea (787).

# THEOLOGY

. Term from the Greek, Θεολογία, ("theologia"), "the knowledge of God." For Christians, theology proceeds from "evidence" provided by God via forms of revelation—biblical, experiential, creational. The classic medieval statement of the nature of theology is Anselm of Bec's "faith seeking understanding" *(fides quaerens intellectum),* which illustrates both the medieval given starting point of religious belief and simultaneously the trust in reason, "understanding," as a way to God. Theological orthodoxy is decided by the consensus of the community of the faithful. In the Christian case, this was settled at general councils of the church, which considered and formulated statements about the nature of God and God's relationship with Creation and pronounced on their validity.

Sources of theology are various and debated among theologians. The Bible stands in a unique place as the authoritative word of God and holds primacy among means of revelation. However, God is believed not to be limited to revelation to those intelligent or learned enough to be able to read Scripture and interpret it, using the tools of reason. Hence, there has always been a special place in Christian theology for direct revelation—

God speaking directly to the faithful believer. For Christians, direct revelation is the life, death, and resurrection of Jesus Christ, and after his ascension the communication of tradition has been carried on by the Holy Spirit. A third method of revelation of God to humankind is by observation of the created order. We can infer the nature of God from the world around us and from our relationships with other human beings.

Theology as a subject in itself did not exist until the establishment and flourishing of the universities. Until then, theological speculation had taken place in a wide variety of settings and writings: biblical commentary, sermons, treatises, liturgy, hymns, works of spiritual revelation. Indeed, any attempts to make generalizations about the nature of God and Creation, drawn from the various forms of revelation, are the stuff of "theology." Theology exists even in the Gospels, notably in the Gospel of John, where the writer makes inferences about God and Creation from the experience of the life of Christ, against the background of the Hebrew Scriptures. The basic theological doctrines of Christianity were framed at general (or ecumenical) councils of the church: Nicaea I (325, on the divinity of Christ), Constantinople I (381, on the dual nature of Christ), Ephesus (431, on the singularity of the person of Christ), Chalcedon (451, on the dual nature of Christ), Constantinople 11 (553, on the persons of God), Constantinople III (680–81, on the existence of both divine and human wills in Christ), and Nicaea II (787, on the iconoclastic controversy). These doctrines, formulated from the writings of the church fathers, were made orthodox by the agreement of the general councils, representing the consensus of the whole church. The underlying theological theme was the nature of Christ as one person with two natures and wills, divine and human, and the relations of the three persons of the Trinity.

During the revival of interest in theology in the Carolingian schools, the main topics of debate were pre-destination and the nature of the eucharist. Neither of these subjects was new, but they were given fresh impetus by such scholars as Johannes Scottus Eriugena, Gottschalk, and Paschasius Radbertus. "Predestination" concerned the belief that some people were divinely and infallibly led to salvation. Gottschalk's extreme view of the matter, "double predestination," held that others were similarly led to damnation. This opinion was condemned, since it limited the actions of God. The nature of the eucharist had provoked surprisingly little disagreement among the early fathers. But Paschasius Radbertus questioned the identity of the Eucharistic Body of Christ with his True Body in Heaven. His opinion was not influential in the 9th century, but it resurfaced in the thought of Berengar of Tours (11th c.) whose opposition to the doctrine of the Real Presence provoked a finely wrought defense by Lanfranc of Bec.

The heyday of theology as an academic subject was in the late 12th and 13th centuries in Paris. The University of Paris was famed as the leading center for the study of theology in the West, and its scholars were listened to by the highest members of the church. Indeed, they often took those positions themselves: from the 13th century, a university education became a well-established route to ecclesiastical and political preferment. It was in the mid-13th century, too, that we first encounter questions as to whether theology is a science, which is to say, a suitable topic for reasoned investigation. The corollary to this was to ask who could make theological statements. The Christian principle that the means of salvation must be available to every believer implied that any faithful person, no matter how simple or uneducated, must be able to understand enough of the nature of God—theology—to follow a path to eternal life. This meant that direct

revelation had to be admitted as a means of knowledge about God. But it was understood to be partial. Opinion among the theological doctors leaned toward professional specialization: their methods were the only foolproof way to higher knowledge about the nature of God and the principles of religion.

The precise definition of certain theological issues was heightened by the "question" form of scholasticism, and it was at this time that a number of topics were honed to sharpness. For example, the number and definition of the sacraments were settled at this period. It is perhaps no coincidence that this was also the era of persecution of heretics and Jews—those who put themselves outside defined orthodoxy. Theology was influenced by the new availability of translations of the metaphysical works of Aristotle. Although the impact of Aristotle on the Latin West has been much discussed, it is not clear that any issues of orthodoxy were affected by the use of his philosophy by Christian scholars. They rebutted his ideas on the eternity of the world (as against Creation) and the unity of the Intellect (which denied the bodily resurrection of the individual). What they did take to, coming as it did in the right place at the right time, was Aristotle's method. His division of substance and accident, for instance, enabled a precise formulation of the changes wrought by the eucharist as transubstantiation.

No less interesting than the issues faced by speculative theologians in the 12th and 13th centuries were those developments in moral and practical theology, particularly associated with Peter the Chanter and his circle in the 12th century and some of the mendicant theologians in the 13th century. The Franciscans were especially plagued by the debate over apostolic poverty and theological questions about the ownership of property.

How, if at all, did any of this "high theology" discussed in the universities make its way down to ordinary people, or even the less educated clergy? The obvious medium is in sermons, and the theological content of preaching is the subject of much new research, difficult as it is to study a phenomenon that is essentially oral, context-specific, and transitory. Nevertheless, the high percentage of mendicants among Paris theologians from almost their foundations is striking; the orders recognized the importance of theological training and research to their preaching aims.

The question of who might make theological statements was heightened by vernacular translations of the Bible. "Heretical" groups of laypeople, such as Lollards, or groups living in community and following an abbreviated rule, like béguines, made their own interpretations of orthodox theology. Often condemned by the official church, they represented a desire by ordinary devout believers to formulate a deeper understanding of God that yet took into account the everyday experiences of the majority of the faithful.

It is only with hindsight that we make "theology" into a medieval concern, as though it were somehow in opposition or juxtaposition to the study of sacred scriptures. *Theologia* is not a term much used by medieval writers. They prefer to concentrate on the texts they used for basic knowledge and call themselves not "masters of theology" but "masters of the sacred page" or "masters of sacred scripture." These terms illustrate how, as so often, our attempts to formalize and distinguish reflect our own views of order and fitness, not those of medieval scholars themselves.

# THIBAUT

. Name of five counts of Champagne and several counts of Blois. The Thibaudian counts of Blois-Champagne ranked among the leading princely families of northern France from the 10th through the 13th century. Thibaut le Vieux, viscount of Tours, founded the dynasty, and his son Thibaut le Tricheur, count of Blois, Chartres, and Tours (r. 940-ca. 977) gave it a territorial base. The proximity of their lands to the Capetian domain, however, often strained relations with the royal house, especially after Eudes II (r. 996–1037) acquired lands in Champagne and Berry that threatened to encircle the royal domain. Although Blois-Chartres remained the Thibaudian heartland until 1152, the counts were drawn eastward after the loss of Tours (1044) and the acquisition of additional counties in Champagne by Thibaut III (I of Champagne; r. 1037–89).

Thibaut IV (II of Champagne, r. 1102–52) shifted the center of the dynasty to Champagne, which passed to his eldest son, Henri I (r. 1152–81); younger sons held Blois-Chartres and Sancerre as fiefs from the count of Champagne. In the second half of the 12th century, the Thibaudians became intimately tied to the royal family. Henri and his brother Thibaut (V of Blois; r. 1152–91) married Louis VII's daughters by Eleanor of Aquitaine, while the king married their sister Adèle (of Champagne; queen 1160–79). Thibaut also served as royal seneschal (1154–91). The youngest brother, Guillaume, rose quickly in the church as bishop of Chartres (1165–68), then archbishop of Sens (1168–75) and Reims (1175–1202). Another sister married the count of Bar-le-Duc and introduced the name Thibaut into that lineage.

The Thibaudians almost redrew the political map of France under Eudes II; they nearly established a royal dynasty in England when Stephen of Blois became king (1135–54) with the aid of his brother Henry, bishop of Winchester (r. 1129–71); and they might have dominated the Capetians into the 13th century had it not been for Philip II's resistance. Thibaudian influence waned in the 13th century. Although Champagne remained an important and prosperous county under Thibaut III, Thibaut IV, and Thibaut V, it came under direct royal control with the marriage of its last heiress, Jeanne, to the future Philip IV (1284). Since the counts of Blois had already ended in their male line in 1218, only Sancerre survived as a minor lordship until the 15th century. The name Thibaut was never adopted by the royal family, and it failed to survive in the comital lineages of Sancerre and Bar-le-Duc.

# THIBAUT DE CHAMPAGNE

(1201–1253). The most illustrious of the trouvères and one of the most prolific, Thibaut IV, count of Champagne and king of Navarre, grandson of the great patroness of poets Marie de Champagne, was also an important political figure. After several years' education at the royal court of Philip II Augustus, young Thibaut began his life as a ruler under the regency of his mother, Blanche of Navarre. He later took part in the war of the newly crowned Louis VIII against the English, appearing at the siege of La Rochelle in 1224, and continued to serve the king, his overlord, thereafter. In 1226, however, he withdrew his support during the royal siege of Avignon and returned home in secret. Upon the king's death a few months later, Thibaut was accused of having poisoned him, but nothing came of this apparently groundless charge. The following year, he allied himself with other feudal powers in an attempt to dethrone Blanche of Castile, widow of Louis VIII and regent for their son Louis IX, but the queen succeeded in detaching him from the rebellious group and making him her defender. Attacked by his erst-while allies, Thibaut was saved by the royal army.

Thibaut's relations with the crown, however, were unsteady, particularly after 1234, when he succeeded his uncle Sancho the Strong as king of Navarre, and it was not until 1236 that a final peace was achieved, based on the vassal's submission. Three years later, he left for the Holy Land as head of the crusade of 1239; the undertaking was marked from the start by discord among the Christian leaders and by Muslim military superiority, the result of which was Thibaut's decision in 1240 to withdraw from his charge and return to France. There, armed struggles engaged his attention through the following years, and in 1248 he made a penitent's pilgrimage to Rome. He died in Pamplona. He had been betrothed twice, married three times, divorced once, widowed once, and had fathered several children. The rumor has persisted since his day that the great love of his life was none other than Blanche of Castile, but apart from offering a tempting key to his political shifts, it seems to have no merit.

As a trouvère, Thibaut was immediately successful, seen as equaled only by his great predecessor Gace Brulé. Dante was to consider him one of the "illustrious" poets in the vernacular, and the medieval songbooks that group their contents by composer place his works before all others. The over sixty pieces ascribed to him with reasonable certainty, almost all preserved with music, show a majority of courtly chansons, none anticonventional in theme or form but most marked by an unusual development of imagery, especially allegorical, use of refrains, or self-confident lightness of tone. The other works, revealing a style similarly characteristic of Thibaut, are *jeux-partis* (among the earliest known), debates, devotional songs (including one in the form of a *lai*), crusade songs, *pastourelles,* and a *serventois*.

# THIERRY D'ALSACE

(d. 1168). Grandson of the Flemish Count Robert I the Frisian, and himself count of Flanders from 1128, Thierry became the candidate of the Flemish cities for the countship in 1128 after they renounced their allegiance to William Clito, son of Robert Curthose of Normandy, who was preferred by most Flemish nobles in the succession quarrel after the assassination of Count Charles the Good in 1127. Thierry was recognized throughout Flanders after William died on June 28, 1128. After repairing his relations with the nobles, Thierry in 1134 married Sybilla, daughter of Foulques V, count of Anjou and king of Jerusalem. Evidently in the hope of conquering a principality, Thierry went on crusade four times. Despite his frequent absences, the Flemish administration functioned well. Thierry also fostered economic growth by founding settlements, promoting land clearance, and avoiding foreign conflicts except for his continued effort to extend Flemish influence in the Cambrésis. When he returned to Palestine in 1157, he left Flanders in the care of his fourteen-year-old son and heir, Philippe, whom he installed formally as count, and apparently thought seriously of remaining in the East. He returned in 1159, went again to Palestine in 1164, and died in 1168, shortly after his return. The prestige of Thierry d'Alsace, owing to his conspicuous piety and international diplomacy, seems to have exceeded his achievement.

# THIERRY OF CHARTRES

(d. after 1151). A Breton by birth, Thierry was probably not the younger brother of Bernard of Chartres, as is sometimes asserted. He studied arts at Chartres and was master

of the schools there in 1121. He went ca. 1124 to teach in Paris, where John of Salisbury was one of his pupils. He continued in a conventional ecclesiastical career, becoming archdeacon of Dreux in 1136 and archdeacon and chancellor of Chartres in 1141. In 1148, he was a member of the synod of Reims that condemned Gilbert of Poitiers and in 1149 was present at the Diet of Frankfurt. Sometime between 1151 and 1156, however, he retired into a monastery, and we know nothing more of his life.

Thierry lays claim to be the most interesting Neoplatonist of Chartres. His interpretation of Genesis 1, a commentary on Plato's *Timaeus* called *De sex dierum operibus,* contains his statement of divine formalism: that God is the form of all created things. Thierry also displays the influence of Aristotelian logic. In the *De sex dierum* and in his three commentaries on Boethius's *De Trinitate,* he attempted to develop a rational justification for the Trinity, describing it in terms of Aristotle's four causes: Father as efficient cause, Son as formal cause, Holy Spirit as final cause, and divinely created matter as material cause. His other works include a commentary on Cicero's *De inventione* and a textbook for the Trivium and Quadrivium, the *Heptateuchon.*

# THIRTY, COMBAT OF THE

. In 1351, the English garrison at Ploermel in Brittany was attacked by a French force under Jean de Beaumanoir. To forestall a siege, Richard Bamborough, the garrison commander, suggested a tournament-style combat on the open field in front of the castle of Ploermel between thirty men-at-arms from each side. The fight was to be to the death. Bamborough's knights, who included Breton and German mercenaries as well as English soldiers, were determined to fight so well that the legacy of such a chivalric battle would be mentioned often among nobles. All fought on foot with swords, daggers, axes, and war hammers. The battle was long and exhausting. A recess was taken, but battle soon recommenced. In the end, after a diligent fight by the English, they were defeated when one of the French knights unchivalrously mounted his horse and rode into them. Nine English were killed, including Bamborough, and the rest were taken prisoner; six French knights were slain.

# THOMAS D'ANGLETERRE

(fl. 2nd half of the 12th c.). Eight fragments totaling 3,146 octosyllabic lines, distributed among five manuscripts, are all that remain of Thomas's *Tristan,* composed ca. 1175 for the nobility of Norman England. The author may have been a clerk at the court of Henry II Plantagenêt in London. The fragments of Thomas's *Tristan* preserve essentially the last part of the story, from Tristan's exile in Brittany to the lovers' deaths. Line 3,134 of the epilogue, the adaptations by Brother Robert (Old Norse) and Gottfried von Strassburg (Middle High German), and the Oxford *Folie,* however, all indicate that Thomas had composed a complete version, one that followed the biographical structure and general movement of the original legend, though Thomas made numerous modifications to it.

Placing Arthur in the mythic past and situating the story in an England ruled over by King Marc, Thomas's reworking is dominated by rationality; the poet tones down the fantastic elements and shows a certain logic in the ordering of events and in the behavior and motivation of the characters. It is possible to suppose that Thomas would have described the *amur fine e veraie* experienced by the protagonists when Tristan first came to Ireland (see l. 2,491), with the love potion only confirming that love. In keeping with the milieu for which he wrote, Thomas eliminated or reworked overly "realistic" episodes (harp and lyre, Iseut and the lepers, life in the forest of Morois), bringing the story into line with the new courtly ideals. A master hunter, Tristan (like his "pupil" Iseut) is also a musician and poet as well as an artist capable of creating the marvelous statues of the Hall of Images.

The principal contribution of Thomas, as scholar and moralist, is in his minute analysis of of love and the other mysteries of human nature. Characters reveal themselves through monologues, debates, and lyric laments; and their self-examination is analyzed through the narrator's long interventions. The action is motivated less by exterior agents than by *inner* adventure, the wanderings of the protagonists' consciences, which alone seems to interest Thomas. The paradox in Thomas's version is thus the narration, within the story of a love seen as absolute and perfect, of an analysis of love that shows Tristan's desire for change *(novelerie)* and his fundamental dissatisfaction. This analysis is coupled with reflections on jealousy and on Tristan's obsession with taking the place of the Other (Iseut or Marc) and feeling himself the pleasure experienced (or not) by the Other. Iseut's role is to express, in actions and lyric laments, her passion, tenderness, and pity for her lover's plight. Thomas uses the technique of "gainsaying": the quarrel between Iseut and Brangain allows the queen to reveal the positive side of *fin'amor,* which had been depicted by Brangain as folly and lechery. Characters like Cariado, Iseut of the White Hands, Tristan the Dwarf, and, undoubtedly, the faithful Kaherdin in the lost episodes, are there to fill out this "mirror" of the multiple faces of love.

The language available to Thomas was not yet as subtle and supple as his analyses. Words like desir, *voleir, poeir,* even *raisun,* whose meanings seem still too imprecise or

overcharged, are significant less in themselves than through the systems of oppositions into which they fit. Repetitions bordering on redundancy, anaphora, antitheses, and rhetorical questions occur almost too frequently. Thomas, however, is capable of realistic depiction, as in the description of London, the doctors who treat Tristan, or the storm. The death scene is characterized by a rhythm wedded to the circularity of desire that conveys, in the echoing of certain rhyme pairs *(confort/mort, amur/dulur, anguissus/desirus),* the very essence of love.

Thomas makes good the ambitious program articulated in the epilogue: to complete a narrative (l'escrit) in which all lovers, whatever their manner of loving, can find pleasure, recall their own passion through the exemplary destiny of Tristan and Iseut, and perhaps escape—for that seems to be the moralist's ultimate goal—the torments and deceits of passion.

# THOMAS GALLUS

(d. 1246). A regular canon of the abbey of Saint-Victor, Paris, Thomas went to Italy in 1218 or 1219 to assist in the creation of a community of regular canons at Saint-André at Vercelli. He was elected prior of Saint-André in 1224 and abbot in 1226. In 1243, he was forced to leave Saint-André due to the Guelf-Ghibelline conflict. He took refuge at Ivré, where he died in 1246.

Gallus was above all else a commentator on biblical texts and on the works of Pseudo-Dionysius the Areopagite, thus following in the path laid down by two illustrious predecessors at Saint-Victor, Hugh and Richard. He wrote three commentaries on the Song of Songs and over the course of two decades produced glosses, commentaries, and translations concerned with the works of Pseudo-Dionysius. He glossed the *Celestial Hierarchy and Mystical Theology,* made an *Extractio* of the entire corpus, and then wrote *Explanationes* for the whole corpus as well. His work on the Pseudo-Dionysian writings continued the earlier work of Hugh of Saint-Victor and made the works and thought of Pseudo-Dionysius accessible to western thinkers at the high tide of scholasticism in the 13th century.

# THORONET, LE

. Founded in 1136 in the diocese of Fréjus, the Cistercian abbey of Le Thoronet (Var) is with Sénanque and Silvacane one of the "three sisters of Provence." Its austere Romanesque church of Saint-Laurent (1160–90), similar to that at Sénanque, features four apses at the east end. To the north, the trapezoidal cloister with its barrel-vaulted galleries is constructed on three levels. Particularly noteworthy is the six-sided lavabo (washing room). The Gothic chapter house surmounted by the monks' dortoir, the tithe barn, the cellar, the warming room, the *armarium* (book locker), and a house for postulants *(convers),* complete the foundation. The refectory has been destroyed.

# TINCTORIS, JOHANNES

(ca.1435–1511). Composer, musician, and music theorist, Tinctoris was born in the village of Braine-l'Alleud, near Nivelles in present-day Belgium. In 1460, he was briefly in Cambrai, where he served as a *petit vicaire* under Guillaume Dufay. By 1463, and probably earlier, he was a succentor at the cathedral of Orléans. In the later 1460s, Tinctoris was apparently in Chartres, serving as instructor of the cathedral choirboys. He spent much of his later career, from ca. 1472 onward, in the service of the Aragonese court in Naples, as a singer and eventually first chaplain and adviser to Ferdinand I. It was while in Aragonese service that he took a hand in editing and compiling the "Mellon" chansonnier (Yale University, Beinecke Rare Book and Manuscript Library 91), a central source of late 15th-century Burgundian chansons. The details of the last twenty years of his life are largely unknown, although his death in 1511 is documented by the transferral of Tinctoris's prebend at the church of Sainte-Gertrude in Nivelles to another man.

Nearly twenty of Tinctoris's musical works survive, along with several additional works that he composed as musical examples for his treatises. His Masses and motets feature complicated counterpoint and occasional experimentation with very low voice ranges; most of his secular pieces are chanson reworkings based on tenors from

Burgundian chansons by Binchois, Morton, and others. The most prominent French music theorist of his generation, Tinctoris was the author of at least a dozen treatises, covering virtually every aspect of late 15th-century music: notation (*Proportionale musices* and others), compositional procedure *(Liber de arte contrapuncti),* practical matters of solmization and performance (*Expositio manus* and *De inventione et usu musicae*), and the aesthetics and uses of music *(Complexus effectuum musices).* His *Terminorum musicae diffinitorium,* one of two treatises published during Tinctoris's lifetime, is the earliest printed dictionary of musical terms. Respected by his contemporaries as a humanist and as an authority on music, Tinctoris is also recognized by modern scholars as the single most important witness to later 15th-century musical thought.

# TONGRES

**.** Founded by members of Julius Caesar's army in 57 B.C. as Atuatuca-Tungrorum, Tongres (Limburg) is with Tournai one of the oldest settlements in modern-day Belgium. An important fortified city at the crossing of the Roman roads from Bavay to Cologne and from Arlon to Nijmegen, it was largely overrun by the Franks and Vi-kings between the late 3rd and 6th centuries and declined under the Merovingians. Gradually, under the protection of Liège, it regained some momentum between the 9th and 13th centuries, when it built new city walls.

The Gothic collegial church of Notre-Dame, on a cultic site that goes back at least to the 4th century A.D., was begun in 1240 and completed 300 years later. On a basilical plan, Notre-Dame has three naves of six bays, crossed by a transept, but without an ambulatory. The choir, transept, and eastern parts of the nave, all with three levels, date from the 13th century; the apse was added in the 14th, side aisles and chapels in the 15th, and the massive western tower between 1442 and 1541.

The treasury is the richest in Belgium, remarkable for the age, variety, number, and splendor of its objects. Notable are a Merovingian enamelwork buckle; a 9th-century ivory book cover; a triptych of the Holy Virgin (ca. 1380); important reliquaries; fourteen silver statuettes from the 14th-16th centuries; and a fine collection of ecclesiastical vestments.

# TONNERRE

. The Gallo-Roman city of Tornodorum was situated among the pleasant farmland and vineyards on the left bank of the Armaçon. Today, Tonnerre (Yonne) is dominated by the towers of the churches of Notre-Dame and Saint-Pierre. The choir of the former dates from the 13th century, that of the latter from the early 14th. Except for its choir and 15th-century square tower, Saint-Pierre was rebuilt in 1556 after the town burned.

The real interest of Tonnerre is in its hospital, founded in 1293 by Marguerite of Burgundy (d. 1308), the widow of Louis IX's brother Charles of Anjou, and virtually unchanged to our day. It consists of a large oak-vaulted ward *(salle des malades)* terminating in a polygonal apse. Its forty beds were arranged in wooden alcoves along the side walls, as at the more famous hospital of Beaune, which is 150 years later. In the hospital's chapel is a moving sculp-tural group (15th c.) representing Christ being placed in his tomb. Similar groupings can be found at Semur-enAuxois and Dijon.

# TOUL

. Capital of the Gallo-Roman Civitas Leucorum, Toul (Meurthe-et-Moselle) was with Verdun, Metz, and Trier one of the principal cities of Belgica Prima. For most of the Middle Ages, Toul was ruled by its bishop, who had the right to appoint the count; the county of Toul depended directly on the Holy Roman Empire. From the mid-13th until the mid-15th century, there were frequent and bloody conflicts between the bishop's forces and the townspeople, punctuated in 1366 by the grant of a charter of freedoms to the town by the emperor Charles IV, counter to the bishop's claims.

A church dedicated to the Virgin and St. Stephen was founded in the 5th century on the site of the present cathedral, and several successive structures occupied the site. Construction of the Gothic cathedral of Saint-Étienne began with the chevet in 1221; the west façade by Master Jacquemin was completed between 1460 and 1496. This façade, one of the most distinctive of its period, features three portals in Flamboyant style with flanking towers 214 feet high; the original matching towers for the chevet have been lowered due to structural weaknesses, and the statues that originally stood in the portals were destroyed in the Revolution. Gables over each portal, over the western rose, and on each tower give a strong vertical thrust to the whole. This effect is echoed by a multiplicity of pinnacles and spires.

The church is composed of an eight-bayed nave flanked by side aisles with chapels between the buttresses, an unusually wide transept, a choir with two square flanking chapels, and a seven-sided apse. The beauty of the nave, which rises to 100 feet, derives from the simplicity of its two-story elevation—clerestory windows above wide arcades—and the soaring vertical lines joining arcades to vaulting. Details of the elevation, the interior decoration, and the sculpture on the capital of the northeast pillar of the crossing all show the influence of Reims cathedral.

A graceful cloister flanks the south side of the cathedral. It is formed of three long galleries of square rib-vaulted bays; the fourth gallery, against the church, is interrupted by a chapel and the chapter house.

The collegial church of Saint-Gengoult, in Champenois Gothic style, was begun in the mid-13th century. Like the cathedral, construction began with the chevet and concluded in the 15th century with the elevation of the west façade. A remarkable Gothic cloister was added in the 16th century. The influence of the cathedral of Saint-Étienne is manifest in the gabled façade, exterior towers, two-story elevation, projecting transept, and interior decoration.

# TOULOUSE

. The principal metropolis of Languedoc, whose counts came to dominate much of the region between the Rhône and Garonne, Toulouse (Haute-Garonne) owed its greatness to a strategic position on the routes of trade and to the political and economic energy of its citizens. Founded, according to legend, before Rome itself, the ancient city of Tolosa was capital of the Roman province of Narbonensia and later of the Visigothic kingdom. It fell to the Franks in 507, and in the 8th century the Frankish dukes of Aquitaine ruled as virtual sovereigns from Toulouse. The great dynasty of the counts of Toulouse began with Fredelon in 849 and despite the rivalry of the houses of Barcelona and Aquitaine continued paramount in Languedoc until the death of Count Raymond VII in 1249.

The power of the counts over their wide domains was matched, however, by that of the burghers over Toulouse itself. More than any other great city of Languedoc, Toulouse saw its citizens take and hold real authority from its overlords. The burghers' rise was facilitated by the counts' external struggles, which both distracted them and forced from them concessions favorable to the townsmen, whose loyalty they needed. In 1119, Count Alphonse-Jourdain owed his survival to the aid of the Toulousans after his defeat by Guilhem IX of Aquitaine; in 1141 and 1147, Alphonse-Jourdain issued the charters that founded the liberties of the burghers of Toulouse. By 1175, the consuls *(capitouls)* of Toulouse exercised wide authority and by 1189 achieved practical autonomy from the count. For the next half-century, their power reached out not only over the *cité* and *bourg* of Toulouse but over the towns and countryside of the Toulousain. The counts of

Toulouse were implicated in the Cathar heresy, and the city was the scene of much fighting during the Albigensian Crusade (1208–29).

Toulouse (Haute-Garonne), Saint-Sernin, plan. After Radding, Clark.

Toulouse, Saint-Sernin, aerial view. *Courtesy of the French Government Tourist Office.*

The unrestricted dominance of the citizens over their city and its region was reduced finally by the successive seneschals who served Count Alphonse of Poitiers (r. 1249–71) and governed on behalf of the king after 1271. The Toulousain suffered from the devastation of the Hundred Years' War, and Toulouse was implicated in the peasant revolt of the Tuchins in 1384. In 1420, however, its support was essential for rallying the Midi to the dauphin Charles; in 1444, Charles VII established permanently the Parlement of Languedoc at Toulouse.

*Alan Friedlander*

Toulouse has two of the finest religious structures in the south of France, the Romanesque basilica of Saint-Sernin, and the church of the Jacobins, a masterpiece of southern Gothic style. Saint-Sernin was founded by the late 4th century as the burial site of St. Sernin (Saturninus), the apostle of the Languedoc and first bishop of Toulouse, who was martyred in 257 by being dragged behind a wild bull. Enriched by Charlemagne, it became a key pilgrimage center on the route to Santiago de Compostela.

Its treasure includes the relics of 128 saints, among them six Apostles, a piece of the True Cross, and a thorn from the Crown of Thorns. The present building, the largest and one of the finest Romanesque buildings in France, was begun ca. 1060 in response to the masses of pilgrims. It measures 380 feet long by 211 feet at the transept, and its vaulting rises to nearly 70 feet. Saint-Sernin is built in a mixture of stone and brick, with stone predominating in the 11th-century choir (dedicated in 1096 by Pope Urban II) and deambulatory, and brick in the later nave. The chevet encompasses five radiating chapels, and each wing of the transept has two. The nave is flanked by double aisles, the first surmounted by a gallery. Saint-Sernin's deambulatory and multiple semicircular apses, huge transept with aisles, and double aisles flanking the nave are all concessions to the needs of the crowds of pilgrims. A splendid octagonal lantern tower rises for five tiers of arcades above the crossing. The three lower levels have rounded Romanesque arcades (early 13th c.); the upper levels were built in Gothic style (late 13th c.). Its steeple is 14th-cen

Toulouse, Saint-Sernin. *Photograph by V.Jansen.*

tury. The tower exercised a profound influence on the architecture of the surrounding region. Saint-Sernin was also a center for the revival of sculpture in the late 11th century. Its south portal (Porte Miègeville; ca. 1120) has a celebrated tympanum representing the Ascension. Other important Romanesque sculptures at Saint-Sernin are the main altar (1096) and the numerous carvings in the deambulatory.

The fortified brick monastery church of the Jacobins was begun in 1230 in response to the Albigensian Crusade. St. Dominic founded the Dominican order (also known as Jacobins because of the location of their Parisian house on the Rue Saint-Jacques) in 1215 to combat the Cathars, and by 1216 Dominicans were present in Toulouse, where they founded the university in 1229 as part of their campaign against the Cathars. The exterior of the church of the Jacobins is strongly buttressed, with large blind arcades between them supporting a *chemin de ronde*. Its graceful octagonal tower was the original bell tower of the university. The church was completed in the second half of the 14th century, in time to receive the relics of St. Thomas Aquinas (d. 1274). Its interior features a double nave, divided by a row of seven slender cylindrical columns rising 72½ feet, and beautiful fan vaulting in the east end. Each nave ends in a rose window, which still has its 14th-century stained glass. The monastery buildings have for the most part

been destroyed, except for the capitulary, the chapel of St. Antonin, with important murals in italianate style, and two wings of the cloister.

Other medieval churches in Toulouse include the cathedral of Saint-Étienne and Notre-Dame-du-Taur. The former was rebuilt in 1211, with a wide aisleless nave; its late 13th-century choir shows the influence of northern Gothic. Saint-Étienne is particularly noteworthy for its lack of symmetry: the choir does not align with the nave, nor does the western rose align with the portal below. The church of Notre-Dame-du-Taur was constructed in the 14th and 15th centuries to replace the church erected on the spot where St. Sernin was dragged to death by the bull (OFr. *taur*).

# TOURNAI

. The oldest city in present-day Belgium, Tournai (Hainaut) was founded by the Romans as Turris Nerviorum and became the cradle of the Merovingian dynasty. It was evangelized by St. Piat in the 3rd century and, because of its key position controlling the lower Scheldt River, it became the first capital of the Salian Franks (ca. 431–40). French kings looked to Tournai as the cradle of their monarchy, for it was the birthplace of Clovis in 465, and Childeric died there in 481. However, it lost some prestige when Clovis transferred his capital to Soissons in 486. Philip II Augustus visited Tournai in 1187, when it was at the height of its wealth and prestige, thanks to its tapestry and stonecarving industries, to gain the support of the local bishop. He granted the city charters in 1188 and 1211, ensuring its independence under the protection of the French monarchy. It was the only city in Belgium that remained loyal to France throughout the Hundred Years' War, even sending gold to aid Jeanne d'Arc during her captivity.

In Merovingian times, then again in the 13th century, Tournai was an important metalworking center. In the Carolingian period, its abbey of Elnone was one of the most famous centers of Carolingian manuscript illumination and production. From the 12th century, the fine-grained local grey stone was widely exported, both in its natural state and sculpted. In the late-medieval period, Tournai was the birthplace of the important painters Robert Campin (d. 1444) and Rogier van der Weyden (1399/ 1400–1464).

The 12th and 13th centuries marked Tournai's apogee and saw the construction of its cathedral, as well as the churches of Saint-Piat, Saint-Brice, Saint-Jacques, Saint-Quentin, Sainte-Marie-Madeleine, Saint-Nicolas-du-Bruille, and Saint-Jean-des-Chauffours, as well as the abbey of Saint-Médard or Saint-Nicolas des Prés. The cathedral of Saint-Étienne-et-Notre-Dame was founded during the Merovingian period by St. Éleuthère (d. 531), destroyed by the Vikings, reconsecrated after 1070, then completely rebuilt in the 12th and 13th centuries. It is one of the largest and most innovative churches in Belgium. The nave was built ca. 1110–41 in Romanesque style and the transept between ca. 1150 and 1171; the four transept towers and the lantern at the crossing were constructed in the late 12th century; rib vaulting was installed in the transept and lantern in the early 13th century; and the choir was completely rebuilt in Gothic style between 1243 and 1255.

The nine-bay nave with side aisles is one of the most imposing in Romanesque architecture. It measures 165 feet in length and 30 in width and rises to a height of 86 feet in four distinct levels, which, for the harmony of its superposed arcades, has been compared to a Roman aqueduct. The exterior, with its three levels of windows, is equally remarkable. The enormous transept measures 33 by 221 feet, culminating in magnificent semicircular ends with ambulatories that continue the play of arcades and galleries of the nave, but now more open to the light under Gothic influence. The later choir contrasts sharply with the western portions of the cathedral. At 221 by nearly 40 feet, it is longer and wider than the nave; its vaults rise some 30 feet higher than those of the nave. Much influenced by the International Gothic style found in the roughly contemporary cathedrals of Beauvais or Soissons or the Saint-Chapelle in Paris, it appears to be all stained glass. Built of seven bays, it ends in a broad ambulatory with five apsidal chapels.

The cathedral and its treasury are a tribute to local artists. Of the original three sculpted Romanesque portals of the western façade, two remain, although largely restored. The capitals throughout the cathedral are notable for their variety and skill. In the treasury, the reliquary of St. Éleuthère is one of the richest examples of the 13th-century goldsmith's art, and numerous other reliquaries, chalices, and ecclesiastical vessels testify to the importance of Tournai as an artistic center.

# TOURNAMENT

. In the early 12th century, as military conflict in France became less common than it had been earlier, much martial energy was turned toward tournaments, which functioned both as training grounds for and as substitutes for war. Young nobles and knights could make

a career of tournaments, where the victors won the weapons and armor of those they defeated.

The original tournaments were fought as *mêlées,* open battle among many mounted knights. Although the weapons were supposed to be blunted, participants were sometimes killed. In 1183, Prince Henry, son of Henry II of England, died in a French tournament after his father had forbidden tournaments in England. One could be excom-municated for participating in a tournament, but this did not reduce their popularity.

By the end of the Middle Ages, tournaments had become much more elaborate and ritualized encounters. Paired in two-man jousts, knights tried to unhorse each other with their lances. Late-medieval jousters had to provide "proofs" of their nobility before they could be admitted to a tournament. The heavy plate armor they now wore meant they were rarely killed. Tournaments remained popular long after the 14th-century invention of gunpowder, but as occasions for display, not mock battles.

# TOURNAMENT ROMANCES

**.** The *Roman du Hem* (1278) by Sarrasin and the *Tournoi de Chauvency* (1285) by Jacques Bretel (or Bretex) recount contemporary tournaments featuring historical personages in a singular mixture of literary invention and documentary concerns. *Hem,* a text of 4,624 octosyllabic lines, survives in one mutilated manuscript (B.N. fr. 1588) written shortly after 1278. The polemical-allegorical framework has Prowess, Largesse, and Valor lament Philip III's interdiction of tournaments, which is detrimental to both honor and the economy. Two young noblemen nevertheless plan a tournament that has the principals disguised as characters from Chrétien de Troyes's romances and reenacts scenes from Arthurian romance. *Chauvency* (4,563 lines) survives in three manuscripts (Oxford, Bodl., Douce 308; Mons, Bibliothèque de la Ville 330–215; Florence, Bib. Laurenziana, Pal. CXVIII). It opens with an encounter between the minstrel Jacques and the German Conrad Warnier (with a linguistically interesting accent), who informs him of the great tournament about to take place at Chauvency. Jacques wants to cover this event and, once at the castle, identifies the participants with the help of a herald (a profession he denigrates). The bulk of the romance is taken up by countless jousts and musical soirées that feature songs with refrains from contemporary poets, games, and storytelling.

Tournaments become literary events in these romances, which intriguingly blur the line between history and fiction.

# TOURNUS

**.** A Celtic city that became a Roman *castrum,* Tournus (Saône-et-Loire) has preserved remains of its Roman fortifications. One of France's earliest monastic sites, the city was evangelized by St. Valérien, who gave his name to a Merovingian foundation. In the late 9th century, monks from Noirmoutier, fleeing the Vikings, arrived with relics of St. Philibert, the founder of the abbey of Jumièges. After destruction by Hungarian raiders in 937, the abbey was rebuilt after 949.

The Benedictine church of Saint-Philibert in Tournus is a complex structure approximately 265 feet in length. A twin-towered façade stands on the western bay of the 10th-century narthex, itself a museum of Romanesque vaulting techniques. Downstairs, the central vessel is covered with groin vaults and its flanking aisles with transverse barrel vaults. Upstairs, the central vessel has a longitudinal barrel vault and the aisles quadrant vaults. Adjacent to the narthex is an aisled nave, with walls carried on massive cylindrical piers and originally a wooden roof. This nave

Tournus (Saône-et-Loire), Saint-Philibert, narthex. *Photograph courtesy of Whitney S.Stoddard.*

Tournus, Saint-Philibert, aisle and nave vaults. *Photograph courtesy of Whitney S.Stoddard.*

was modified in the 12th century, when the present transverse barrel vaults were added. All of the 11th-century parts of the church, vast in scale, are of small-stone construction.

The nave abuts a transept that was originally designed to support a wooden roof. The transept arms were barrel-vaulted in the 12th century, and at the crossing is a cupola carried on squinches. The choir, with ambulatory and radiating chapels, rests on a crypt of the same plan.

The church was consecrated in 1120, but documents recording places of burials indicate that the south wall of the nave was probably complete in 1056 and the south transept by ca. 1105. The crossing has Brionnaise capitals, a type not found in Burgundy after ca. 1120.

Saint-Philibert brought to Burgundy many of the distinctive elements of the northern Early Romanesque style found in the great Loire Valley churches of the 11th century, such as the cathedral of Orléans or Saint-Martin at Tours: vast wood-roofed basilicas constructed in ashlar masonry, whose choirs had ambulatories with radiating chapels. The architects of Tournus adopted the type but used the small-stone construction technique characteristic of the more compact churches of southern Early Romanesque.

# TOURS/TOURAINE

. Tours (Indre-et-Loire) was the chief town of the Turones, the Roman Caesarodonum, capital of Lugdunensis Tertia. It had a flourishing Christian community by the time of St. Martin (bishop 372–97), founder of Marmoutier, whose tomb became a major pilgrimage site. It fell under Visigothic, then Frankish rule. Its bishop Gregory (r. 573–94) chronicled Merovingian Gaul, and its treasures attracted the Muslim razzia turned back by Charles Martel in 732.

An intellectual center whose scriptorium helped develop Carolingian minuscule under Alcuin (d. 804), Tours was subject to numerous Viking raids (853–911), leading to the fortification of the suburbs and abbey of Saint-Martin as the *châteauneuf.* The region furnishes some of the earliest examples of feudal usage, of the use of radial chapels, and of stone architecture, both secular and ecclesiastical.

The countship and the lay abbacy of Saint-Martin fell to the ancestors of Hugh Capet, and the countship then passed to the house of Blois (940/41) and to that of Anjou (1044), although the king retained the right of episcopal appointment. Site of a stone bridge and a flourishing *bourg,* including a Jewish community, Tours experienced renewed intellectual life. Berengar of Tours (d. 1088) initiated a eucharistic controversy that led to the definition of Transubstantiation.

After 1154, Tours became a crossroads of the Plantagenêt empire, where the *livre tournois* (set at four to the English pound) became ubiquitous. Prosperity continued after the French conquest of 1204–05, when a *bailli* at Tours and *prévôts* at other key points integrated Touraine into the royal domain. By 1300, serfdom had virtually vanished.

Under the Valois kings (1328–1498), Touraine became an apanage and suffered from financial exploitation, the Black Death (post-1351), and the Hundred Years' War (1337–1453). The enforced residence of Charles VII (r. 1422–61) on the Loire led to the location of the Chambre des Comptes and a royal mint at Tours, where the Estates often met and which was a bastion of the monarchy during the worst days of the war. Touraine was a preferred royal residence in the late Middle Ages and a center of political and artistic life that transformed its châteaux-forts into the châteaux for which the region remains renowned.

*R.Thomas McDonald*

In Tours, the stone bridge across the Loire meets the bridge across the River Cher at the Rue Nationale, a street that today neatly divides the city in half. The two areas retain much of the fabric of the medieval city, as well as fragmentary monuments of the thriving early Christian communites. The east quarter holds the cathedral of Saint-Gatien, the abbey church of Saint-Julien, the remains of the castle of Henry II Plantagenêt, the archbishops' palace, 15th-century gabled houses, and remains of a late-medieval castle. The area west of the Rue Nationale grew around the tomb of St. Martin and now contains the remains of a medieval cemetery, 12th-18th-century houses, and the 15th-century church of Notre-Dame-la-Riche.

Partial collapse and a fire in the Romanesque church of Saint-Gatien necessitated rebuilding after 1239, which continued until the Flamboyant façade was completed in 1484. The north and south towers were finished in 1507 and 1550, respectively. Stained-glass windows in the transepts and east end, which illustrate the Passion of Christ and legends of the saints, have been dated to ca. 1260. The abbey of Saint-Julien consisted of a Romanesque tower and 13th-century chapter house and cellars, but only a 16th-century dormitory still stands.

Although early-medieval Tours flourished as a pilgrimage site and had a well-known scriptorium, comparatively little architecture survives, especially as regards the once massive basilica of Saint-Martin. Vikings destroyed the original sanctuary, and a new basilica was built over the course of the 11th-13th centuries. During the Revolution, the church fell into disrepair and was pulled down in 1802. Two of the Romanesque towers, the Tour Charlemagne and the north-transept Tour de l'Horloge, remain, as well as the crypt, now located below the modern basilica. In the Tour Charlemagne, a restored wall painting of St. Florentius survives from the mid-12th century.

Some 12th-century remains in the largely 17th- and 18th-century archbishops' palace include the Ecclesiastical Tribunal, which now houses the Musée des Beaux Arts. Of the old city gates and castle built by Henry II, only two towers, including the Tour de Guise, survive. In Place Foirele-Roi, 15th-century gabled houses surround the square where medieval food fairs and mystery plays took place. A wing of brick and stone remains from Louis XI's nearby château of Plessis-les-Tours from 1463. Recent excavations have revealed a medieval cemetery in the tiny square of Saint-Pierre-le-Puelier.

# TOWNS

. As the Roman Empire declined after A.D. 165, all cities, stricken by high taxes and plague, decayed, but unevenly. As interprovincial trade diminished, Marseille shrank, but Lyon, a capital as well as emporium, was but-tressed by increasing bureaucratization. After 406, Germanic invasions threatened urban life, but under the Merovingians eastern merchants continued to function until the Muslims seized the Mediterranean, after which gold coinage and papyrus virtually disappeared. Although shrunken walls protected cathedrals and their adjuncts, trading towns and secular administrative centers virtually disappeared. Muslim occupation diminished Bordeaux, Toulouse, and Narbonne on the Garonne route. With about 20,000 inhabitants, only Paris, which held off the Norsemen in 885, and Orléans, another river port as well as a monastic center, escaped significant disruption. Near Tours, downstream from Orléans, the Franks stopped the Muslims in 732, but Norsemen sacked the place in 853 and 903.

In the short-lived Carolingian revival, Duurstede and Quentovic developed along the Scheldt and Rhine estuaries, formerly *limes but* now imperial arteries. Their trading with England and Scandinavia sparked a revival that better coinage and a "renaissance" attest, but the fragmentation of the empire and the Viking raids destroyed them and all other important ports, while Muslims wrecked southern commerce. Feudalization of coinage in the 10th century also impeded trade. Peddlers conveyed salt, metals, and a few luxury items that seeped from Venice. Territorial principalities developed around Rouen in Normandy and Bordeaux in Aquitaine, but no town surpassed 10,000 inhabitants between the 8th century and the year 1000.

Cessation of invasions, greater political stability, warmer climate, and an agricultural revolution thereafter fostered trade and urban growth. Old Roman sites revived, as itinerant merchants wintered under their protective walls or those of propitiously located castles. They gradually established settled mercantile communities that outstripped the adjacent fortified area. The merchants profited from oriental goods, available after Christian shipping reopened the Mediterranean, and northerners brought Baltic products to Flanders to trade for eastern luxuries at the fairs of Champagne. Though Flemish weavers surpassed other craftsmen and Lombard bankers excelled Jewish pawn-brokers, French towns also developed guilds. Unlike their Italian counterparts, French communes, backed by guilds, rarely included nobility. Before the disasters of the 14th century, the general population trebled but many towns multiplied tenfold, although three-quarters of them still had fewer than 2,000 inhabitants. Among them were thirty-nine bastides founded by Alphonse of Poitiers and the more significant centers of Aigues-Mortes and

Carcassonne established by his brother Louis IX. By the 14th century, Paris attained a population of perhaps 200,000; Bordeaux, Marseille, Montpellier, and Lyon, 30,000; and Béziers, Bourges, Dijon, Narbonne, Reims, Rouen, Toulouse, and Troyes, about 10,000.

Plagues in the 14th century carried off half the towns-people, but rural immigrants quickly replaced many of them. Although recurrent plagues prevented urban populations from rising, the townspeople became a larger percentage of the population. Shortage of rural labor encouraged emancipation and rising wages, so more peasants could afford manufactured goods and richer ones a few luxuries. Yet some merchants evaded the high costs of guild labor by "putting out" wool to be spun and woven by peasants in their homes.

Although only churches, castles, and municipal buildings used masonry before 1150, when Gothic architecture supplanted Romanesque, after 1300 guildhalls and patrician *palazzos* did, more in the south than in the north, thereby reducing fire hazards and blocking rats, which had spread disease after gnawing through wood. Laws regulated leprosaries, hospitals, tanneries, and slaughter-houses, along with cemeteries outside the walls. Better planning, paving, water supplies, and waste disposal also ameliorated conditions in richer quarters, as *faubourgs,* or suburbs, proliferated. Universities arose, first at Paris and then at Toulouse, Montpellier, Avignon, Orléans, and Grenoble. Forging enduring alliances with towns, although he taxed them heavily, Louis XI (r. 1461–83) fostered silk production at Lyon and also a fair that diverted much business from Geneva as well as the commerce through Marseille and other ports, Aigues-Mortes having declined since its harbor had silted up.

# TRADE ROUTES

. Medieval France was crisscrossed by little roads of mud foundation that linked towns of secondary importance, creating a dense network in contrast to the older Roman road system, still partially functional, which favored straight, paved thoroughfares between major urban sites. The main river systems—the Seine, Loire, Garonne, and Rhône (the boundary between southern French territory and the empire)—and lesser rivers like the Saône served as important arteries of trade in an era when water transport was substantially less expensive than overland carting. Cross-Channel and Atlantic trade connections linked Normandy and Brittany to the British Isles. North Sea ports, such as Montreuil-sur-Mer, Boulogne, and Calais, were jumping-off points for trade via Frisia and Denmark to Hanseatic centers farther east. Access to central and southern France by land from the east was a matter of Vosges and Jura crossings and Alpine passes. With the Spanish peninsula, commercial links with southern France might be overland across the Pyrénées or, more frequently, by sea. Mediterranean ports, such as Collioure, Agde,

Aigues-Mortes, and Marseille, facilitated trade with the western and eastern basins of the Mediterranean.

The Champagne fairs were a significant international commercial destination in the era of caravan trade, functioning as a crossroads of interaction between merchants of northern and southern Europe. Italians traveled by boat to southern France and then north by two main arteries, the Rhône Valley route involving travel partly on land, partly on water; and the Regordane, stretching within medieval France from Montpellier or Nîmes to Alès and north across the Cévennes to Le Puy, Brioude, Issoire, Clermont, and beyond to Paris or east into Champagne. There was also another, more westerly, passage to Paris from Montpellier, north through Lodève, Millau, Rodez, Figeac, Aurillac, La Force, and Clermont. Italians could opt for an overland route to Champagne using the Mont-Cenis and Saint-Bernard passes in the Alps. The Saint-Gothard pass, opened in 1237, made possible overland travel between northern Italy and Flanders via the Rhine, eliminating passage through Champagne. The Atlantic sea route, inaugurated in 1277, provided an alternative route from the Mediterranean to England and Flanders, further encouraging the decline of Champagne as a European commercial hub.

# TRANSHUMANCE

. Nomadic animal husbandry involving seasonal migration of flocks and herds. Transhumance maximized pastoral resources by moving animals to where the grass was most abundant. In the Middle Ages, it was used especially in the Midi, where changes in elevation and season of grass growth occur over short distances, to support larger flocks and herds. Animals were pastured during the winter in lowlands having their rainy season then, as along the Languedoc coast; in spring and early summer, they were moved to the high mountain pastures (estives, *montagnes,* or *alpes*) of the Pyrénées, the Massif Central, and the Alps and were brought down again to the lowlands in the fall. Because of the many passage, feeding, and watering concessions involved, medieval transhumance was practiced most extensively on a large scale by the great monastic houses; those of Bonneval and Bonnecombe in Rouergue, for instance, were well known for bringing sheep and cattle from Quercy up into the high elevations of Rouergue; the animals,

numbering in the thousands, included not only those belonging to the monks but many others tended under contract. The transhumance practiced by the great religious corporations is well documented in the many surviving charters recording controversy and agreement about dates of coming and going to the estives; amounts of time to rest, feed, and water animals en route; numbers of animals; the building of shepherds' huts; and the division of pasture and water in the *estives*. There is evidence from coastal Provence of transhumance practiced by peasant villages since Roman times; only by such seasonal migration could these villagers survive in that hostile environment. Most transhumance in France was conducted by specialized shepherds and cowherds who migrated from the lowlands up into the high summer pas-tures to tend their animals and make butter and cheese from their milk during the summer. Standard routes, dates, and ceremonies for the movements of cattle and sheep developed; walled sheep roads called *drailles* (or *drayas*) can still be seen in the higher elevations of the Massif Central, like the Aubrac plateau, still famous for its transhumance. Although friction always existed between stock raisers and cereal cultivators, there is little indication for medieval France of the widespread disruption that accompanied transhumance in medieval Spain and Italy.

# TRANSLATION

. Translations into Old French from classical and late Latin texts can be divided, for the sake of descriptive taxonomy, into three large categories: translations and imitations of major classical literary models, translations of historical and political texts, translations of sentential and educational texts.

Of all literary translations from Latin sources, Boethius's *De consolatione Philosophiae* and the works of Ovid have the longest and most complex histories. This is not surprising, since Boethius and Ovid were major authors of the arts curriculum and their work exerted great influence on vernacular literary culture. Though Virgil's *Aeneid* was also a central curricular text, its influence was felt through the particularly medieval Romances of Antiquity rather than through direct formal imitation and translation. Boethius's *Consolatio,* however, proved congenial to vernacular literary interests in poetic form; and Ovidian materials could be assimilated directly into vernacular interests in mythology and into conventions of erotic literature.

The Occitan *Boeci* (ca. 1000–30) is the oldest literary text preserved in the language. The earliest French version of the *Consolatio* is an incomplete Anglo-Norman paraphrase

composed in verse by Simon de Freine ca. 1180. From the early 13th century to the late 15th, at least thirteen versions of the *Consolatio* were produced in French. Some of these were simply revisions of earlier versions. The five earliest of these translations are in prose, suggesting that translators were initially more interested in the philosophical content than in the literary character of Boethius's prosimetrum text. These five prose translations, which seem to have been produced independently of each other, are by an anonymous Burgundian (early 13th c.; one manuscript), an anonymous Wallonian (late 13th c.; one manuscript), Bonaventure da Demena (late 13th or early 14th c.; one manuscript), Pierre de Paris (1305–09; one manuscript), and Jean de Meun (probably after 1285; eighteen manuscripts). Except for the Wallonian version, these prose translations can be associated with academic interests through their incorporation of medieval commentaries and glosses on the *Consolatio*. Jean de Meun's version achieved considerable currency for a number of reasons: Jean's literary reputation, which was founded not only on the *Roman de la Rose* but on other translations he had made (as well as on works attributed to him), including translations of Abélard's *Historia calamitatum* and Vegetius's *De re militari;* the clarity and rigor of his translation of the *Consolatio,* which also incorporated glosses by the philosopher William of Conches; and Jean's preface to his translation, in which he dedicates the work to Philip IV, thus identifying his vernacular text with a cosmopolitan court culture and the very center of political power. Chaucer consulted Jean de Meun's version for his own Middle English translation of the *Consolatio.*

Jean's prologue became better known than his translation: his dedicatory preface was affixed to another translation of the *Consolatio,* made in the mid-14th century, a prosimetrum version that, though less rigorous than Jean's prose, achieved enormous success, surviving in at least sixty-four manuscripts, mainly of the 15th century. This version, composed probably 1350–60, is actually a revision of a prosimetrum translation that had been composed ca. 1330, known in only four manuscripts. The revised prosimetrum exists in two forms, glossed and unglossed: the glossed version incorporates commentary, translated into French, from a redaction of William of Conches's commentary. The success of the revised prosimetrum translation is probably the result of two factors: its attribution to Jean de Meun because Jean's prologue was affixed to it in most manuscripts, and its attention to the formal properties of Boethius's text, which identifies the translation as much with vernacular literary interests as with learned academic concerns.

The middle and late 14th century produced four verse translations of the *Consolatio.* One of these, by an anonymous author from Meun (date uncertain), exists complete in only one manuscript; this translation, consisting of over 12,000 lines of verse, is interesting for its encyclopedic and mythographic interests. In 1336 or 1337, the Dominican friar Renaut de Louens composed a verse translation that incorporated glosses from the commentary on the *Consolatio* by a 14th-century English Dominican, Nicholas Trevet. Renaut's version, surviving in over thirty manuscripts, was twice revised in the late 14th century; one of these revisions, by an anonymous Benedictine, achieved great popularity on its own, also extant in over thirty manuscripts. Two further prosimetrum translations were composed in the 15th century: one of these was a partial revision of the Benedictine's version of Renaut's verse translation, and the other was printed by Colard Mansion in 1477 and again by Antoine Vérard in 1494.

The history of Ovid translations is also complicated, because the Ovidian tradition was deeply enmeshed in vernacular literature. The *Ars amatoria* was readily assimilated into courtly convention, where it had a contemporary analogue in Andreas Capellanus's *De amore.* From the early 13th to the late 14th century, there were no less than five independent translations or adaptations of the *Ars amatoria,* four in verse and one in prose. Chrétien de Troyes claimed (*Cligés,* ll. 1–3) to have translated the *Ars amatoria,* as well as a work called the *Commandemenz Ovide,* perhaps the *Remedia amoris.* Chrétien's translations are not extant. Four of the surviving translations, which are in verse, date from the 13th century. The earliest, the "Maistre Elie" version, was composed probably early in the 13th century; its unique 14th-century manuscript covers only the first two books of the *Ars amatoria,* and its method is both to amplify and to abbreviate its source. It also substitutes contemporary French cultural and geographical references for Ovid's Roman culture and locales, medievalizing the text in a way that was conventional in vernacular literary imitations of ancient sources, especially the Romances of Antiquity. The *Art d'amors* of Jakes d'Amiens, also of the early 13th century, extant in five manuscripts and an incunabulum, uses Andreas Capellanus's *De amore* as a literary model for the translation of Ovid's text. The other two verse translations, the *Clef d'amors* (written possibly 1280; one manuscript) and the version by Guiart (one manuscript), similarly medievalize Ovid's text: the *Clef d'amors* presents a framework of a dream narrative in which the God of Love appears to the poet; and the adaptation by Guiart combines Ovid's *Ars amatoria* with elements from the *Remedia amoris* and medieval religious motifs.

A prose translation of the *Ars amatoria* from the late 14th century (conserved in four 15th-c. manuscripts) offers a fairly literal translation of Ovid's text, with extensive glosses and a prologue to the text based on Latin academic models *(accessus ad auctores).* Some of the glosses contain proverbs and quotations from French lyrics. In three of the manuscripts, the translation covers only Books 1 and 2 of the *Ars amatoria;* Book 3 appears only in one manuscript and seems to have been a later addition to the French text. This translation is interesting for its synthesis of vernacular literary materials and academic exegetical conventions.

There are also French translations of the *Remedia amoris, Metamorphoses,* and *Heroides.* Three translations of the *Remedia amoris* are extant: one from the 13th century, attributed to Jakes d'Amiens in two manuscripts that also contain his version of the *Ars amatoria,* and two from the 14th century. The tradition of the *Metamorphoses* is best considered with reference to the *Ovide moralisé,* which translates the entire *Metamorphoses,* incorporating earlier translations of individual tales and which also formed the basis of at least two 15th-century prose redactions (1466 and the Colard Mansion edition of 1484). Finally, a number of versions of the *Heroides* have come down to us. Two of these date from the 15th century: one is by Octavien de Saint-Gelays (1496), extant in fifteen manuscripts and an incunabulum; the other, anonymous, is extant in only one manuscript. But there is also a prose adaptation of the *Heroides,* probably from the 13th century, of which only parts are now extant: some parts of this translation survive embedded in the second redaction of the *Histoire ancienne jusqu'à César* (1364–80), and other parts survive separately under the title *Epistles que les dames de Grece envoierent a leur maris qui estoient devant Troies et les responses d'icelles.*

Although Virgil and Terence were standard curricular authors, their works were not translated into French until the 15th century. Terence's comedies were translated twice: a prose translation of 1466 by Guillaume Rippe (two manuscripts) and a verse translation by Gilles Cybille, which survives only in an incunabulum (ca. 1500). For the tradition of Virgil's *Aeneid,* we must preserve a distinction betwen the popular courtly imitation of Virgil's epic, the *Roman d' Énéas* (ca. 1160), and actual translation of the work. Of the latter, we have only one version, a translation by Octavien de Saint-Gelays, composed ca. 1500 (three manuscripts and two early printed editions).

Some translations of historical and political texts had wide circulation, and some ancient works were of sufficient interest to undergo more than one translation. One influential text, found in over sixty manuscripts, was a compilation known as the *Fet des Romains* (1213–14), which combined materials from Sallust's *De coniuratione Catilinae,* Suetonius's *De vita Caesarum,* Lucan's *Pharsalia,* and Caesar's *Bellum Gallicum.* But these historical sources were also translated individually in the later Middle Ages. Of the two 15th-century translations of Caesar's *Bellum Gallicum,* one is by Jean Duchesne (ca. 1473; nine manuscripts) and the other by Robert Gaguin (late 15th c.; four manuscripts and three incunabula). Sallust's *De coniuratione Catilinae* and *Bellum Iugurthinum* were translated in 1417 by Jean le Bègue (extracts in a unique manuscript). Part of Suetonius's *De vita Caesarum* was also translated separately. Lucan's *Pharsalia* (properly called *Bellum* civile) was translated in the late 14th century by Nicolas de Vérone (2 manuscripts).

To judge from manuscript circulation or multiple translations, the historical and political works that commanded greatest interest were Livy's history of Rome, *Ab urbe condita,* and Vegetius's *De re militari,* a manual of Roman military institutions composed in the late 4th century A.D. *Ab urbe condita* was translated by the Benedictine monk Pierre Bersuire between 1352 and 1356; this translation survives, either complete or in part, in at least eighty manuscripts and an incunabulum. It was received as a preeminent example of the transformation of French into a learned language: Bersuire equipped it with a prefatory dictionary of all the French terms he had coined out of Latin in order to render Livy's text, and he also made use of a commentary on Livy by Nicholas Trevet. Bersuire undertook the translation at the request of King John II the Good, and indeed this text became a kind of "mirror of princes," a treatise on politics, warfare, and morality. Many aristocratic libraries possessed copies, notably those of Charles V, John of Berry, and the dukes of Burgundy. It circulated widely through the 15th century, and later in printed editions. Part of Livy's history, the third decade, was retranslated by Robert Gaguin ca. 1493 (one printed edition, 1508). Vegetius's De *re militari was* translated six times in the 13th and 14th centuries. Jean de Meun's version, made for Jean de Brienne, count of Eu, in 1284, is extant in over twenty manuscripts and was revised twice: once in verse by Jean Priorat between 1284 and 1290 for Jean de Châlon-Harlay, an influential noble, and again in the 15th century, with some substantive changes to preserve its relevance for later audiences. Jean de Vignay, a prolific translator, produced a version of Vegetius ca. 1320 for Philip VI (nine manuscripts). An anonymous translation was made in 1380 (two manuscripts), and an Anglo-French translation ca. 1272, attributed in one of the four extant manuscripts to a "Maistre Richard"; this translation seems to have been directed to the future Edward I of England.

Translations of several minor historical and tactical writings may be mentioned here. Vasque de Lucène translated in 1468 Quintus Curtius Rufus's *De rebus gestis Alexandri,* written in the 1st century A.D.; his version survives in at least thirty-six manuscripts and an incunabu-lum. The *Breviarium ab urbe condita* by Eutropius, a 4th-century historian, was translated twice in the 13th century, once by an unknown author (one manuscript), and once by Jofroi de Watreford and Servais Copale (one manuscript). The *Strategemata* of Frontinus (1st c. A.D.), a manual of historical examples of Greek and Roman military strategy composed for officers, was translated for Charles VII by Jean de Rouroy ca. 1439 (nine manuscripts).

Translations of sentential and theoretical or educational texts, though representing the smallest category in terms of the authors translated, circulated widely. These translations, like those of historical and military sources, are often associated with royal patronage. This is the case with the translation of the *Facta et dicta memorabilia* of Valerius Maximus (1st c. A.D.), a collection of rhetorical exempla grouped under moral and philosophical topics, which Simon de Hesdin undertook ca. 1375 for Charles V, the great royal patron of learned culture and vernacular translation. Simon de Hesdin died in 1384, leaving the translation unfinished; it was completed in 1404 by Nicolas de Gonesse at the request of John of Berry, the brother of Charles V. This translation greatly amplifies the source with commentary, new divisions and subdivisions, and borrowings from a host of other sources, classical and medieval, pagan and Christian. In partial or complete form, the translation survives in at least seventy-five manuscripts and five incunabula.

Two of Cicero's works, *De senectute* and *De amicitia,* were translated in 1405 and 1416, respectively, by Laurent de Premierfait, a *clerc* from Champagne associated with the intellectual circles of the papal court of Avignon. Laurent's literary activity was extensive: among other works, he translated Boccaccio's *Decameron* and *De casibus illustrium virorum.* He undertook the translation of *De senectute* (extant in twenty-five manuscripts) at the request of Duke Louis of Bourbon; the *De amicitia* (fifteen manuscripts) was presented to John of Berry. A number of other translations of Cicero's works also survive, among them an anonymous translation of the *Pro Marcello* (uncertain date; one manuscript), a translation of the *Epistola ad Quintum* by Jean Miélot (1468; two manuscripts); and three 15th-century translations of the *De officiis* (two manuscripts and one incunabulum, one incunabulum, and one manuscript, respectively). There is also a translation of the Ciceronian *rhetorica* (Cicero's *De inventione* and the pseudo-Ciceronian *Ad Herennium*), completed in 1282 by Jean d'Antioche (known also as Jean de Hareng), which survives in one manuscript. The translation of the Ciceronian rhetorics is interesting for a number of reasons: its stylistic aim at technical precision; its prologue, which offers a classification of the sciences; and two appendices, which offer a theoretical discussion of logic, translation, and linguistic difference. The translation is directed to Guillaume de Saint-Étienne, who in 1296 was in charge of the order of St. John of Jerusalem on Cyprus; Jean d'Antioche's work seems to have emerged from an Italian rather than a French literary milieu (cf. Brunetto Latini's *Rettorica,* an Italian version of the *De inventione,* written ca. 1260).

The moral works associated with Seneca the Younger received some attention, although their circulation never compared with that of the translation of Valerius Maximus. Seneca's *Epistolae ad Lucilium* were translated by an unknown author ca. 1310 (extant in six manuscripts). The pseudo-Senecan *De remediis fortuitorum* was

translated in the 13th century by an anonymous author (two manuscripts) and again in the late 14th century by Jacques de Bauchant, who, like Simon de Hesdin, worked under the patronage of Charles V. The Jacques de Bauchant translation survives in five manuscripts. Translations of the *Epistolae ad Lucilium,* the *De remediis fortuitorum,* and Seneca's *De brevitate vitae* are found, along with other pseudo-Senecan texts, in an incunabulum from ca. 1500, the colophon of which attributes the translations to Laurent de Premierfait. Though this attribution has not been verified, it is evidence that the value of a translation could depend as much on the celebrity of the translator as on the prestige of the author of the original work; we compare the enormous popularity of Jean de Meun's translation of Boethius's *Consolatio* and of the later translation associated with his name.

We may also note two other works of the sentential tradition. There is an anonymous translation (uncertain date) of the *Sententiae* of Publilius Syrus, a text from the 1st century B.C. that was one of Seneca's sources for the *Epistolae ad Lucilium.* The *Distichs of Cato* (3rd or 4th c. A.D.) was a popular sentential text in the medieval schools. At least seven versions exist in French: in Anglo-Norman, by Everard of Kirkham and Elie of Winchester (12th c.); by Jean de Paris (ca. 1280); by Adam de Suel (mid-13th c.); by Jean Lefèvre (14th c.); and two anonymous versions from the 15th century.

Many aspects of the history of translation in medieval French lie beyond the scope of this survey: translations of patristic sources, the Bible, Greek authors (from Latin versions), legal documents, and medieval Latin sources. We can, however, draw some general conclusions. No correlation necessarily exists between the importance of a curricular author and translation of that author. Horace, for example, was widely read in the medieval schools as part of the basic curriculum in *grammatica;* yet there is no extant French translation of the *Ars poetica,* the best known of Horace's texts. The reason is not difficult to see: the *Ars poetica* was important for instruction in reading Latin poetry, especially classical texts, but offered little that was directly relevant to vernacular poetic traditions, which generated their own arts of poetry. Similarly, it might be surprising that the *Aeneid* received so little attention from translators; but this suggests that vernacular writers were more interested in developing themes and narratives from the *Aeneid* than in imitating it as a formal entity. The same may be said of the *Thebaid* of Statius, the primary narrative source of the *Roman de Thèbes,* which was not directly translated into French. Boethius's *Consolatio,* on the other hand, inspired considerable formal interest as a literary model; in fact, the most successful translations of Boethius are those that emphasize its poetic features over its difficult philosophical content. But if translation of poetry is shaped largely by the tastes of vernacular literary milieux, translation of historical and political texts seems determined by the interests of royal patrons, whose ideological purposes might be served by possession of texts that had relatively little currency in academic and literary circles. The translation of classical texts is conditioned less by the norms of classical study in the medieval schools than by the concerns of vernacular literary production and of contemporary politics.

# TRAVEL

. The Roman Empire required ease of communication for its governance. Travelers benefited from an immense network of surfaced roads, a high level of security, and the existence of a variety of vehicles developed especially for passengers and available for hire in Rome. The medieval period, however, saw many changes in the conditions of travel. Some of these began to become apparent in the 5th century, as the imperial government lost control of Gaul. The roads became unsafe, and there was less trade. Meanwhile, early-medieval government itself became itinerant because of the small number of officials, the paucity of royal resources, and the personal nature of loyalty. The period also had its own particular reasons for travel that were inherent in certain aspects of medieval Christianity, such as the requirements of church administration and the popularity of pilgrimage.

Where the Romans had been famous for their roads, people in medieval France considered bridges of primary importance. Beginning in the 11th century, bridge building

became a pious work on the grounds that it saved lives in times of flood, and the enthusiasm for construction meant that by the early 14th century France had been provided with an impressive network of bridges. Some of them were built on difficult sites, but construction and maintenance were hampered by a shortage of money and of workers, and travelers were glad to be informed whether such and such a bridge were passable at any given time.

During the Middle Ages, the orientation of the network of roads changed. In Roman times, it had centered on Lyon, but as the Capetians gradually expanded their power all the roads in France came to lead to Paris. Only one system of rivers led to the capital, and the direction of the routes may have had something to do with the concentration of travelers on land routes. Evidence shows that only if the entire journey were between points on the same river, as on the Loire or downstream on the Rhône between Lyon and Avignon, were travelers tempted to take a boat. It was not quicker, and if one had already hired one's horses it was also more expensive to pay for river travel.

Methods of travel likewise shifted between ancient and medieval times. In late antiquity, the favorite and most prestigious conveyance was the carriage. Beginning in the 5th century, however, more and more people rode on horseback, and by 700 mentions of carriages are rare. By the 9th century, passenger vehicles as such had disappeared, and for a king or warrior to ride in any type of vehicle was considered a disgrace. Only illness or old age excused his failure to mount his steed. For nobles and warriors, this situation continued at least into the late 15th century, when the king made ceremonial entries riding in a carriage. On the other hand, by 1200 it was not only permitted but required that queens and duchesses should each own two gorgeously decorated chariots, one for their own and one for their ladies' use on ceremonial occasions, such as entries into their towns. Though passenger vehicles disappeared in the Carolingian period, carts and wagons continued in use over long distances by the tenants of the great abbeys to carry produce, like wine and lumber, either to the convent or to fairs.

The Middle Ages saw technological improvements in travel and transportation. The shaft cart, little used in antiquity, became common. The stirrup was introduced from the East early in the medieval period, and later we find nailed-on horseshoes, the harnessing of horses in tandem, and an improved horse collar. Suspended carriages reached France in the 14th century, when artists at last take sufficient interest in depicting the undercarriage of chariots so that it is possible to prove that the pivoted front axle was in common use. (It was known in Hallstatt times and during the Roman Empire, but how widely it was employed is difficult to determine before the 14th century.)

Despite these advances in traction, riding on horseback remained popular and seems to have been preferred to riding in vehicles. Improvements were made in horse breeding. Varieties of horses were bred for specialized purposes, like the *destrier,* strong enough to carry a knight in full plate armor, and the palfrey, a saddle horse with a comfortable, ambling gait. Both types were luxuries, and many all-purpose horses continued in use as mounts and as plow and draft horses. Throughout the Middle Ages, it was common for pilgrims to walk, for they were believed to acquire additional merit if they performed their pious journeys on foot and especially barefoot. Poor folk and servants were frequently pedestrians. In southern France, in the 14th and 15th centuries, if an official hired a horse to make a journey to transact town business, he was accompanied by a groom on foot to care for the animal. There were foot messengers but more mounted

couriers, particularly in northern France. Even in the case of mixed companies of horsemen and pedestrians, travelers could maintain a speed of at least 30 miles a day over a period of several days.

Hospitality was an important obligation, and the church had a particular duty to furnish it. Abbeys built visitors' quarters and housed their guests according to rank, the great nobly and pilgrims and wayfarers simply. By the 13th century, a favorite charity was the foundation of hospices for the ill and the aged and for pilgrims, wanderers, and indigent travelers. The kings of France were entertained by their officials, by churchmen, and by various towns. (Evidently, the municipalities felt that it was a productive investment, but officials and some churchmen attempted to procure documents exempting them from this honor.) Most of the French kings' travels seem to have been from one of their châteaux to another. Royalty offered foreign dignitaries hospitality in castles with or without furnishings and food. French kings and nobles employed a household official, the harbinger, to travel ahead and arrange for quarters, food, and fodder; they ensured the provision of sufficient bedsteads, collecting from the neighborhood an adequate supply of mattresses, straw, featherbeds, sheets, and cushions, and saw that the tapestries were hung before royalty's arrival.

All classes stayed at inns. Even royalty found the accommodations at some inns adequate, doubtless after the king's harbinger had seen to it that the furnishings and provisions were what they should be. Those in modest circumstances ate at the landlord's table, but travelers with a servant frequently bought food and firewood from the innkeeper and the servant cooked the meal. This custom enabled persons seeking favors from government officials to entertain them in a suitable style. The provisions so purchased sometimes lasted several meals. At inns, a noble would sleep in a bed in a private room, less important people on pallets in the main room, and grooms frequently on straw in the stable with their charges.

In the course of the 15th century, some of the peculiarly medieval values that had given prestige to travel in France began to decline. There were no longer the same reasons for travel to the Roman curia, because many of the appointments to offices and much of the litigation formerly decided there were now determined in France. Pilgrims had been objects of charity, because they were engaged in a pious mission, and students studying at French universities had been a cause of pride. Now, pilgrims began to be classed with vagabonds, and English students, because of the Hundred Years' War, were no longer welcome in France. German students preferred the newly founded universities in their own region. Despite this contraction, however, in the 15th century we find for the first time explicit expressions of pleasure in travel.

# TREASON

. The political concept of treason developed in France during the 13th and 14th centuries and was closely interrelated with the increasingly defined notions of sovereignty,

obedience, and just war. Before the 13th century, loyalty to the king was often conditional and formal defiance possible; customary law assigned treason the meaning of "treachery." By the second half of the century, however, Roman ideas of treason and *lèse-majesté* (literally, to "injure majesty") had been resurrected. Unlike the English, who in 1352 received their Statute of Treason, there was no such single enactment for the French. Legislation was constructed as circumstances required, often against the pretensions of seigneurs, towns, and church, all of which claimed degrees of legal autonomy. Though the principal features of treason law were in place by the early 14th century, it was not until the outbreak of the Hundred Years' War that earnest prosecution began. By the reign of Louis XI (r. 1461–83), the charge of treason could be a serious political weapon.

Treason law itself, as a means to punish and deter, embodied a wide definition. Virtually all treason came under the heading of *lèse-majesté:* crimes against the king, the crown, or the kingdom. Among the offenses were regicide, attempted assassination, war against the king, consorting with the enemy, breaches of loyalty, crimes disregarding the king's sovereignty, and treason by word.

Treasonable offenses could be tried in a number of ways, most commonly by the king and his council, or, by the late 14th century, the Parlement de Paris. The 15th century saw the creation of the Grands Jours and provincial parlements, courts that were also competent to try treason.

The penalties for treason included fines, the confiscation of all movable and immovable property by the crown, and the capital punishments of decapitation, hanging, and drawing and/or quartering. It was possible to receive a royal pardon for treasonable offenses, though it could be challenged and did not necessarily provide for a full restitution.

Through the middle of the 17th century, French treason law remained heavily based on late-medieval precedents, and was an important part in the consolidation of royal authority.

# TRÉMOILLE, LA

. The lordship of La Trémoille (Vienne) in Poitou produced one of the longest-lived noble houses in France. A lord of La Trémoille is first attested in the mid-11th century, but the family passed through twelve generations before achieving national prominence with Gui VI and his brother Guillaume, both of whom were important 14th-century royal commanders and chamberlains of Philip the Bold, duke of Burgundy. They both died on

the crusade to Nicopolis. Gui VI made his family's fortune by marrying Marie de Sully, heiress not only to the lordship of Sully but to the important lordship of Craon in Anjou. Their son, Georges de La Trémoille (1385–1446), did not follow his father's Burgundian allegiance but became grand chamberlain of Charles VII and was the most influential figure at court until his ouster in 1433. His hostility to Jeanne d'Arc and Arthur de Richemont, the principal French heroes of their day, and his participation in the Praguerie of 1440 have left him with a bad reputation among historians. His sons, Louis de La Tremoille and Georges, lord of Craon, although hereditary chamberlains of Burgundy, generally served Louis XI, of whom Georges II was a particular favorite, holding important military commands and serving as bailiff of Touraine. The son of Louis de La Trémoille, Louis II (1460–1525), was an illustrious French commander, serving Anne de Beaujeu in Brittany in the 1480s and, with younger members of the family, playing an important role in the Italian wars of the early 16th century.

# TRENCAVEL

**.** Possession of five great fiefs—Albi, Nîmes, Béziers, Agde, and Carcassonne—established the power of the family of Trencavel in the 12th century. The origins of the family may be traced to the viscounts of Albi, who appear in the 10th century. Bernard-Aton II (r. 956–74) added through marriage the viscounty of Nîmes. In 1066, the marriage of Raymond-Bernard, surnamed Trencavel, viscount of Albi and Nîmes, with Ermengarde, heiress of the counties of Béziers and Agde, assembled the vast domains that constituted the patrimony of the Trencavels. After her husband's death in 1074, she seized control also of the county of Carcassonne. The reign of Bernard-Aton IV (1074–1129), under the strong hand of his mother, Ermengarde, saw the height of the Trencavels' power.

The viscounts' indulgence of the Cathar heresy precipitated their downfall in the 13th century. In 1179, Roger II suffered excommunication, and in 1209 the full weight of the Albigensian Crusade fell on his son Raymond-Roger. In 1240, the last viscount, Raymond Trencavel II, attempted to recover his lands by invasion. His forces were stopped at the siege of Carcassonne, and in 1247 he ceded his rights to the king. Granted several small fiefs within his old domains, Raymond Trencavel was still alive in 1263. His son, Roger de Béziers, died on crusade at Tunis. The last of the Trencavels, Béatrix de Béziers, died sometime after 1322, possessing the small towns of Cesseras and Belvèze.

# TRÉSOR DES CHARTES

. According to legend, Philip II Augustus established the Trésor des Chartes as a repository for crown papers following the loss of important documents during his flight from Fréteval in 1194. The Trésor's documented history dates from 1231, when it was already housed near the Sainte-Chapelle. The archive was under the control of the chancellor and the chancellery was its primary source of documents. Philip IV created an office of *garde des chartes* in 1307. Between 1371 and 1391, Gérard de Montaigu completed the first inventory, which divided the collection into *layettes* of charters and chronological *régistres*. Not only were state papers, such as treaties and *ordonnances,* preserved, but lesser materials like pardons and ennoblements were synopsized (for a fee) in the registers as well. Supplanted by court and agency archives in the 16th century, the Trésor virtually ceased acquisitions by 1600. In 1808, it entered the Archives Nationales as series J and JJ.

Throughout its history, the archive proved an invaluable source of documentation for royal spokesmen and legists. Gallican theorists drew on it in producing the *Somnium viridarii* (a tract known in its French translation as the *Songe du vergier*) in the 14th century, and Dupuy and Godefroy used it in extending the doctrine of inalienability to justify Bourbon conquests in their *Traité des droits du roy* in the 17th. The riches of the archive inspired a vital tradition of medieval scholarship highlighted by Dom Mabillon's *De re diplomatica* of 1681. This French archival tradition climaxed with the establishment of the Archives Nationales after 1789 and the École des Chartes in 1821.

# *TRISTAN DE NANTEUIL*

. The last chanson de geste in the Nanteuil Cycle. Dating to the mid-14th century, *Tristan de Nanteuil* is found in one manuscript of the 15th century (B.N. fr. 1478) and comprises 23,361 rhymed Alexandrines.

The poem begins with Gui de Nanteuil and Aiglentine leaving Nanteuil to rescue Aye d'Avignon and her husband, Ganor. Aiglentine is captured and sold to the Sultan of Babylon. Her son, Tristan, is separated from her but is saved by a siren, who feeds him her miraculous milk. A hind also absorbs some of that milk and reaches a monstrous size. It carries away Tristan and rears him in the wilds. While living in savage state, Tristan captures Blanchandine, daughter of the king of Armenia, and has a son, Raimon, by her. Blanchandine is eventually baptized and marries Tristan, but later, while disguised as a knight, she is forced to marry Clarinde. Thinking Tristan has died, Blanchandine, before the wedding night, allows herself to be changed into a man by an angel. Clarinde and Blanchandin(e) have a son, Gilles. Gui and Aiglentine, on their way to reclaim their fief of Nanteuil, are killed by the traitors Persant and Macaire. Aye d'Avignon dies of grief. Charlemagne agrees to return the fiefs of Avignon and Nanteuil to the rightful heir, Raimon. Tristan is killed by Garcion, his illegitimate son.

The author knew the previous poems of the cycle, since several of the well-known members of the Nanteuil family participate in the poem's multifarious adventures. Although cast in the traditional epic mold, *Tristan de Nanteuil* is a complex poem that includes many supernatural and fantastic elements and many important romance themes, such as the Change of Sex, the Handless Maiden, and the Hermit Saint. In addition to the poems of the Nanteuil Cycle, the author of *Tristan* must have known the *Vie de saint Gilles* by Guillaume de Berneville, *Guillaume de Palerne, Huon de Bordeaux,* Chrétien's Erec, the *Roman de la Violette,* the *Vie de saint Jean Bouche d'or,* the *Estoire de Merlin,* and *Lion de Bourges.*

# TRISTAN ROMANCES

. In the obscure origins of the Tristan legend, which forms an important branch of the Matter of Britain, one can distinguish several strata. The hero is possibly of Pictish origin: Drust, son of Talorc, who in Celtic became Drystan or Trystan. His story, linked

to that of Arthur and his earliest companions (see, e.g., the Welsh *Triads,* where Tristan is also the lover of Essylt, King Marc's wife), may have been elaborated by Celtic storytellers on the model of a famous Irish elopement tale, the story of Diarmaid and Grainne; set and developed in Cornwall, at Tintagel, it might have become associated there with traditions about King Marc. But the subsequent influence of Brittany was significant, providing, among other motifs, the story of the hero's parents and the episode of Tristan and Iseut's marriage. Other motifs, such as the dragon fight, the search for the golden-haired princess, and the man torn between two women, can be traced more generally to popular tales, classical mythology, and other sources.

It was in the Plantagenêt domains, both insular and continental, that Breton and other Celtic storytellers transmitted the legend to their French counterparts. It was profoundly remodeled, owing to the demands of a different society—feudalism gave new meaning to the conflict between love and moral, societal, and religious principles—and a new cultural and literary context, marked by the ethos of *fin'amor* and the first manifestations of troubadour poetry and the courtly romance. From allusions in troubadour lyrics (ca. 1130–50), iconographic testimony, and references to sources, it is possible to deduce a sort of standard, or "vulgate," version of the lovers' story, organized along biographical lines and relating the hero's youthful adventures, from his birth to the scene of the love potion; love's trials, from the potion to the return from the Forest of Morois; and the hero's exile, marriage, return trips to Cornwall, and Liebestod. More satisfactory than Bédier's rigid archetypal reconstitution, the notion of a "vulgate" version (Béroul's estoire?) explains both the relative stability of the main story and the important variations from poet to poet. It is important to recall that the famous pun on Tristan/triste 'sad' cannot go back beyond the "French" stage of the legend.

The only complete 12th-century version based on the "vulgate" is that in Middle High German by Eilhart von Oberg (ca. 1170–80). Béroul's fragment (ca. 1180), the first part of which is closely parallel to Eilhart, is also faithful to the "vulgate," unlike that of Thomas d'Angleterre (ca. 1175), which moves consciously away from it. Thomas's version, summarized in the Norwegian prose of Brother Robert (ca. 1130), was freely adapted ca. 1210 in Gottfried von Strassburg's unfinished poem. The motif of Tristan returning to see Iseut was used again in the two anonymous *Folies* and in Marie de France's *Chievrefoil*. Some elements of the legend reappeared in the *Donnei des amanz* (ca. 1200) and in Gerbert de Montreuil's continuation of Chrétien de Troyes's *Perceval*. The 13th-century *Prose Tristan* is the only complete version of the legend preserved in French.

But the influence of the Tristan story goes well beyond the group of texts that narrate it and the adaptations that it inspired in nearly every western language. Accepted, attacked (notably by Chrétien), reformulated to accord with the courtly ethic (in the *Prose Tristan*), this legend of a fatal passion became one of the primary representations of love, influencing western thought up to our own time. The lovers were frequently represented in medieval art, especially in ivories and manuscript miniatures. Thirty-five scenes from the Tristan legend are illustrated on the Chertsey Abbey tiles (ca. 1270).

# TRIVIUM/QUADRIVIUM

**.** *See* **LIBERAL ARTS**

# TROBAIRITZ

**.** Although the term has been found only once in Old Occitan (in *Flamenca,* a 13th-c. romance), in English "trobairitz" answers the need for a feminine alternative to "troubadour," which has been naturalized in En glish since the 18th century. The root is *trobar* 'to compose,' and the suffix expresses the agent, either female (*-airitz*) or male *(-ador).* Thus, "trobairitz" means "woman who composes" (Occitan lyric poetry).

We know about twenty trobairitz by name, and their corpus includes some thirty-two songs. (These figures are vague because of the difficulty in distinguishing real trobairitz from fictional characters, either named or anonymous, who speak in dialogue poems.) Only two trobairitz left more than one song apiece: the Comtessa de Dia, who sings of passionate love, happy or unhappy, in four *cansos,* or love songs, and Castelloza, who adopts a melancholy, even masochistic, tone in three *cansos* of certain attribution and a fourth that is anonymous in the manuscript. In another *canso,* Beatritz de Romans addresses Lady Maria in language that seems warmly affectionate to some readers, while others consider it lesbian. In a *sirventes,* or satire, Gormonda de Montpellier responds vigorously to a diatribe against the Roman church by Guilhem Figueira, matching his stanzaic form, his rhyme scheme, and many of his rhyming words while reversing his polemical intention. In the genres in dialogue, the trobairitz debate questions of amorous casuistry, usually with men, and often show greater willingness than the troubadours to depart from courtly conventions in order to gain satisfaction in love or demonstrate their independence. In one strikingly realistic exchange of *coblas,* or couplets, the sisters Alais and Iselda ask Carenza whether they should marry, and she advises them to become brides of Christ.

The trobairitz are fewer in number than troubadours (about 5 percent as many), and their extant compositions are fewer still (about 1 percent as many as we have by the

men), although far more important than such a comparison would suggest for our understanding of medieval poetry and life. Most of the trobairitz about whom we have information were active during the period from ca. 1180 to 1260, that is, they began later and stopped earlier than the troubadours, whose recorded activity begins with Guilhem IX ca. 1100 and continues to 1300 or later. This disparity may reflect the evolution of the status of women, who briefly regained during this period some of the rights they had earlier enjoyed, before their situation continued its long decline toward a legal status comparable with that of minors.

Stylistically, the trobairitz address the beloved directly more often than do troubadours; they prefer more negative language, in order to express frustration, deprivation, or strong feelings in general; and they tend to use more verbs in the subjunctive mood, expressing uncertainty or desire, or in the past tense, referring to real relationships that have a past, whereas the troubadours tend more toward factual statements about the present. The trobairitz provide a dramatic corrective to the image of the lady in many male songs of *fin'amors,* since they are neither distant, unapproachable, nor speechless. Their songs provide a key to understanding *fin'amors,* both male and female, more adequately than it has traditionally been understood.

The male lyrics of courtly love that echoed across Europe were rarely interrupted by a female voice. Marie de France was a contemporary author of narrative poetry, but among the trouvères, or lyric poets of the *Langue d'oïl,* we find scarcely any women, although the trouvères left as many songs as did the troubadours. Nor do we find women writers of medieval lyric in Galician, Castilian, German, or English. It is probable that one Italian woman, the "Compiuta Donzella," wrote during the period of the *dolce stil nuovo,* but she left us only three sonnets. The fictional women's songs, or *chansons de femme,* in French, Galician, and German seem to have been written by men. Most medieval women who wrote did so in Latin (Héloïse, Hildegard of Bingen) or, if in the vernacular, on religious subjects (Catherine of Siena, Marguerite Porete); women began to write on secular subjects in other languages only in the 15th century (Florencia Pinar, Christine de Pizan). The trobairitz provide a rare avenue of approach to secular female experience in the 12th and 13th centuries.

# TROPES, ORDINARY

. Texted compositions written to supplement Ordinary chants for the Mass (Kyrie, Gloria, Sanctus, Agnus Dei). Although the Credo was rarely troped, a small repertoire of tropes for the Benedicamus Domino, the piece sung at the close of the hours of the Office and at the close of Mass during Lent, exists as well. Because chants for the Ordinary were being composed during the 9th and 10th centuries, the same period in which Ordinary tropes were first written, there has been argument over the extent to which Ordinary chants were originally conceived with their tropes.

True Kyrie tropes, to be distinguished from the syllabically texted Latin Kyrie, are rare and originated early, with French sources containing even fewer of them than manuscripts from east of the Rhine and from Italy. The music of these chants is distinguished in style from that of Kyrie chants in general; the tropes are added to Kyries with greater flexibility than is found with many Proper chants. Gloria tropes comprise a larger and more varied repertory of texts and music. Some of the verses of Gloria tropes, the "wandering verses," are used in a variety of positions and combinations and may have been derived from Gallican chants, especially the litanies. Sanctus and Agnus Dei tropes were often of two types: those that introduce the chant and help establish the feast (making an Ordinary chant Proper) were of special importance in southern French sources; other trope elements were interpolated within the petitions of the chant, and, within the Agnus Dei, created a piece resembling a litany. Iversen has found that Sanctus and Agnus Dei tropes dating from the 11th century and written in northwestern France and England often develop trinitarian themes. In the following example of a Sanctus trope, from a 12th-century source from the Norman abbey of Saint-Évroult, the trope transforms the chant, causing each statement to be addressed to a particular member of the Trinity:

> SANCTUS,
> Pater, ex quo omnia, deus.
> SANCTUS,
> Filius, per quem omnia, deus.
> SANCTUS
> Spiritus, in quo omnia, colendus,
> DEUS SABAOTH.
> PLENI SUNT CAELI ET TERRA GLORIA TUA, etc.

# TROPES, PROPER

. Beginning in the 9th century, several Proper chants for the Mass (Introits, Alleluias, Offertories, Communions) were commonly ornamented with supplemental texted compositions in centers both east and west of the Rhine; great responsories for Matins also were provided with tropes, only much more rarely. These later additions to Proper Gregorian chants, both the texts and the music, are known today as Proper tropes, and in medieval manuscripts as *tropi*. Proper tropes served several functions: they expanded the chants to which they were attached, thus allowing more time for ceremonial action and communal reflection; they commented upon both the original chants and the particular parts of the liturgy to which they belonged; they helped establish the significance of individual feasts and seasons of the church year; and they further defined the offices of the clergy. Like the first sequences, tropes were created by the Franks, on both sides of the Rhine, and early examples may preserve elements of the varied Gallican liturgical traditions that were suppressed throughout the second half of the 8th century. Tropes and sequences were never standardized, and each source reflects the liturgical taste and religious ideals not only of the geographical region in which it originated but of an individual monastic community or church. The repertoire of each source is somehow unique, even though it may resemble those of other sources from the same region, containing many of the same pieces.

Each genre of Proper tropes is distinctive, having been created to ornament a particular kind of chant and to explain its liturgical function. The most extensive repertoire of Proper tropes comprises those for the Introit, the first Proper chant of the liturgy. Introit tropes consist of either individual lines, which often comprise sets or groups of lines interpolated into a particular chant. Thus, the Introits of highly ranked feasts would characteristically be sung with an introductory trope, perhaps the longest of all individual lines; the Introit antiphons were subdivided in conventional ways as well, and yet other trope lines would preface each of the divisions. Both the psalm verses for this chant as well as the doxology might also have an introductory trope. Further, each time the Introit antiphon was repeated, a new set of tropes might well be sung. In the example below, taken from a 13th-century Gradual from Chartres cathedral, the text of the Introit, taken from Isaiah 9:6, is written in capitals and the trope texts in lower case.

Gaudeamus hodie quia deus descendit de celis et
propter nos in terris
[PUER NATUS EST NOBIS]
Quem prophete diu vaticinati sunt
[ET FILIUS DATUS EST NOBIS]
Hunc a patre iam novimus esse missum in mundum

[CUIUS IMPERIUM SUPER HUMERUM EIUS ET
VOCABITUR NOMEN EIUS]
Admirabilis consiliarius deus fortis princeps pacis
[MAGNI CONSILII ANGELUS.]
   Let us rejoice today because God descended from
heaven to earth for our sakes
[A boy is born to us]
Whom long the prophets predicted
[and a son is given to us]
Now we know that this child was sent into the world
by the father
[upon whose shoulder dominion rests and his name
will be called]
wonderful counselor, mighty God, prince of peace
[angel of great counsel].

   The interrelationships among the many trope manuscripts continue to pose difficulties: texts and music were transmitted throughout the late 9th and early 10th centuries both orally and in early, no longer extant written records. Consistent patterns of variants capable of sustaining theories of transmission have not been uncovered as yet. Most repertoires of Proper tropes died out during the 12th century in France and England, but a few pieces survived this watershed in regions east of the Rhine.

# TROUBADOUR POETRY

. The lyric poets who wrote in Occitan (also called Provençal), the language of southern France, during the 12th and 13th centuries left an extensive corpus of songs remarkable for their diversity, quality, and influence. The troubadours made *fin'amors,* or "true love," known now also as "courtly love," their subject of choice, and by singing of it with passionate intensity inspired imitation across Europe: in northern France among the trouvères (the word is the French form corresponding to "troubadour"); twice in Italy, first in the Sicilian School of Frederick II Hohenstaufen early in the 13th century, then

again in the *dolce stil nuovo* of Dante and his friends; in Germany among the Minnesinger; in Portugal and England. The troubadours were not the first poets who wrote in a medieval vernacular: Mozarabic poets in Spain had composed *kharjas* (vernacular strophes in Romance dialect concluding songs in Arabic) for more than a century; there survives an extensive body of poetry in Old English and Old High German; and love poetry had long been written in Latin and continued to be. Indeed, it has been argued that courtly love is a universal tendency of the human heart that has appeared independently in widely scattered cultures from ancient Egypt to medieval Georgia. But the poetic tradition launched by the troubadours represents a high point of medieval secular culture and provided impetus for the transition into the Renaissance.

The Occitan word *trobador* is a compound of the root *trobar* 'to compose' with the suffix expressing agent, and thus means "one who composes," presumably a man. The feminine suffix produces *trobairitz* 'a woman who composes.' The origin of the verb *trobar* has been sought in classical Latin, medieval Latin, and Arabic, but no consensus has emerged, just as agreement on the origin of *fin'amor* has not been reached. There were contacts with the Mozarabic culture of Spain, but no literary influence has been established; closer yet were the Latin clerical poets of the "Loire school," such as Baudri of Bourgueil and Marbode of Rennes. It is not certain whether the earliest preserved troubadour texts followed a large body of songs that have been lost, or whether the first troubadour we know was one of the first poets to use the vernacular in the Midi. In any case, we know that Eble, viscount of Ventadorn, wrote songs contemporary with the earliest ones preserved, although none of his work has survived.

The earliest troubadour whose works we have is Guilhem IX, duke of Aquitaine and count of Poitiers (1071–1126), who left a small number of love songs, some courtly, others bawdy, and a song of departure from the world. In the following generation, Marcabru, *a joglar,* or performer, of Gascon origin, excoriated the decadence of courtly society in satirical songs but also created the prototypical *pastorela,* in which a witty and sensible shepherdess fends off the advances of the narrator. Around the middle of the 12th century, Peire d'Alvernhe and Raimbaut d'Aurenga developed the concept of *trobar clus,* or "closed composition," in contrast to *trobar leu,* the "easy style." Trouba-dour love song reached a peak in the poetry of Bernart de Ventadorn, who continued the "school" of Eble de Ventadorn with intensely personal lyrics depicting the joy and torment of the lover buffeted by desire and frustration. Toward the end of the century, Bertran de Born sang of his delight in combat, developed the satirical tradition stemming from Marcabru, and took a skeptical or mocking attitude toward *fin'amor.*

The 13th century witnessed the crusade against the Albigensians (1209–29, with sporadic continuations to 1244), carried out by a French army at the instigation of Pope Innocent III in an effort to extirpate heretical tendencies that had taken root in Languedoc. Peire Cardenal wrote songs critical of unworthy clergy and defended the interests of Count Raymond of Toulouse, whose lands were invaded and eventually subjected to the king of France; but Peire professed an orthodox Catholic faith himself and did not defend the Albigensian creed. Scholars have explained the decline of troubadour poetry as the effect of destruction of courtly society during the crusade, but the explanation is unsatisfactory: the crusade ravaged Langue-doc but not Provence to the east or the Limousin to the north, and troubadours continued to compose until the end of the century. Among those who did were some of the most prolific, including Peire

Cardenal, Guiraut Riquier, and the Catalan Cerverí de Girona. Poetry continued to be composed in Occitan, though with little distinction, through the 14th and 15th centuries. Those who wrote it are referred to as "poets," not as "troubadours"; they composed written verse, not songs, for academic competitions organized by the *Consistòri de la Subregaya Companhia del Gai Saber,* or "Academy of the Most Joyful Company of the Joyful Wisdom," at Toulouse. The rules for this competition were formulated as the *Leys d'Amors,* or "Laws of Love" (where love is understood as referring to love poetry), a massive codification of approved usage compiled by Guilhem Molinier in 1341.

The medium of troubadour expression seems to have evolved from an original one that emphasized live performance with musical accompaniment and permitted a significant oral component in performance, transmission, and possibly composition, toward written composition with or without musical accompaniment or live performance, and with a correspondingly reduced role for orality. Evidence for such an evolution, necessarily indirect, includes the fluidity, or *mouvance,* of both text and music, especially in early compositions, and the decreasing frequency of reference to the *joglar,* or performer of the troubadour's work.

By the end of the 12th century, Occitan poetry had attained sufficient prestige to produce a treatise by the Catalan Raimon Vidal called the *Règles de trobar,* or "Rules of Composition," and the tradition was continued, perhaps ca. 1240, by Uc Faidit in his *Donatz proensals,* or "Provençal Donatus," named after the author of a standard Latin grammar. In the early 13th century, the songs began to inspire prose commentaries called *razos,* or "reasons" for their composition, and biographical sketches of the troubadours called *vidas,* or "lives." The ninety-five extant manuscripts of troubadour composition represent a late stage in this evolution, beginning with the earliest manuscript, dated 1254 in the colophon, and continuing into the 14th century. The transmission of earlier troubadour compositions into these manuscripts must have involved written forms that are not preserved, perhaps parchment rolls, and may have involved oral transmission. The notation of melodies, which is found in only four of the manuscripts, is nonmensural, taking no account of rhythm or duration of the individual note. The choice of such notation rather than the mensural notation employed at the same time for other kinds of music seems to imply that troubadour musical performance was declamatory, that is, that the rhythm was determined in performance by the singer on the basis of linguistic or poetic considerations. It follows that performance was probably not accompanied, since the rhythmic structure was not standardized.

The genres of lyric composition took shape during this evolution of the medium. The earliest troubadours, such as Guilhem IX and Marcabru, made no generic distinctions but called their work collectively *cansos* or vers, simply "songs." Toward the end of the 12th century, the term *canso,* under the influence of the increasing prestige of the theme of *fin'amor,* became specialized in the sense "love song," in contrast with *sirventes,* or "satire," which could be personal, political, or moralizing. Less frequent genres include the *pastorela,* the *alba* (dawn song), the *planh* (funeral lament), the crusade song, and the *tenso* (debate). These terms were integrated into an elaborate taxonomy in the poetic treatises. The preserved corpus of troubadour songs includes about 2,500 compositions by about 450 known poets, of whom perhaps twenty rank as major figures. Some twenty others are women *(trobairitz),* About 1,000 songs are *cansos;* about 500 are *sirventes;* about 500 more are *coblas,* a genre first attested ca. 1190 comprising independent

stanzas; and the remaining 500 are *pastorelas, albas, planhs,* crusade songs, *tensos,* and minor genres. The music is preserved for about 250 songs.

# TROUVÈRE POETRY

. Well over 2,000 strophic songs for single voice have survived from the rich production of the 12th- and 13th-century trouvères of northern France, preserved in about two dozen chansonniers and other manuscript sources dating from the 13th and 14th centuries. Almost half of the texts are unique, while the rest occur in up to ten or more versions; about two-thirds survive with their music. The trouvères, like their Provençal counterparts, the troubadours, were poet-composers who singlehandedly created both poem and melody as a unified whole. However, the vagaries of oral and written transmission, producing intended or unintended changes by performers (jongleurs) or scribes, have left us numerous instances of significant variation among redactions. For the same reasons, but also and more strikingly as a result of deliberate imitation or borrowing among trouvères, we have many a poem with two or more musical settings and many a melody accompanying two or more poems; in particular, many devotional songs, contrafacta of secular compositions, fall into this last category. Opening with the

earliest known French lyrics, the 150-year span of the trouvère repertory closes with the abandonment of its principal genres, the emergence of "fixed" forms, and the advent of a verbal lyricism not tied to music.

About half the corpus shows some kind of authorial ascription, but many of the roughly 250 trouvères identified are otherwise unknown; many of the attributions are uncertain; and the distribution is extremely uneven, running from over 130 trouvères credited with one or two pieces each to only a dozen with more than twenty, but four of these—Gace Brulé, Thibaut de Champagne, Jehan Bretel, and Adam de la Halle—with upward of sixty. Socially, the trouvères were quite diverse, including men better remembered for other literary achievements, such as Chrétien de Troyes (the earliest known composer of lyric in French), Guiot de Provins, Richard de Fournival, and Adam de la Halle; powerful feudal lords, such as Thibaut de Champagne; and even artists who doubled as itinerant jongleurs, such as Colin Muset and Rutebeuf. But most of them seem to have belonged to some rank of the nobility, especially in the early, "classical," decades that produced illustrious figures like Blondel de Nesle, Gace Brulé, and the Châtelain de Coucy; or, particularly in the 13th century, to the bourgeoisie of the commercial north, a group including, among others, Guillaume le Vinier, Jehan Bretel, and Perrin d'Angicourt, as well as Adam de la Halle. Though the activity of the first group was centered in aristocratic courts, the artistic arena of the trouvères of Artois and Picardy tended to be poetic guilds (*puys* or confréries), notably the Puy d'Arras. Communication among the court-centered trouvères appears to have been just as intense as among the bourgeois, and to a great extent the two milieux were in contact with each other, elaborated the same lyric themes, and cultivated the same genres.

With few exceptions, their subject was love, and in the first-person *chanson d'amour,* or *grand chant courtois,* which celebrated—but less ecstatically—much the same courtly idea of true love that the troubadours had developed as *fin'amors,* they brought to the subject a high seriousness that made the genre, like the troubadours' *canso,* the ultimate expression of their artistic abilities. They sang of amorous longing and of the interplay between desire and creativity in terms that, for all their depersonalizing abstractness and conventional vocabulary, could yet reveal individual inventiveness, even virtuosity, and communicate an intense human experience. Different from the *canso*—never venturing into the hermeticism of *trobar clus,* for example, and veering away from the southern emphasis on *joy,* youth, and the power of love and the beloved to refine the sensibilities of the lover—the *grand chant* is nevertheless of the same genre and clearly a product of Provençal inspiration.

The prosody of the *grand chant,* as of the other genres, with the notable exception of the *lai-descort,* allows great freedom within the fundamental constraint of isostrophic form: that all stanzas be set to the same melody and therefore show not only the same number of lines but also an unvarying succession of (syllabically measured) line lengths. Most poems are five or six stanzas long, with stanzas normally comprising eight to ten lines and lines tending to be hepta-, octo-, or decasyllabic. Isometric stanzas are more usual than heterometric, which, though frequent, are more restrained in shape than the heterometric stanzas of lighter genres, such as the *pastourelle*. As for homophony, it is rhyme rather than assonance. Rhyme scheme reveals much the same stanza-to-stanza invariability as line-length succession, though the array of rhyme words in a given text rarely shows any repetition. The rhymes themselves, that is, the sounds that rhyme, may

be repeated through all stanzas *(coblas unissonans),* change after every pair of stanzas *(coblas doblas),* or, much less commonly, change with each stanza *(coblas singulars);* other arrangements occur, too, as well as smaller rhyme-based devices serving to structure the text. The modern principle of alternating masculine (oxytonic) and feminine (paroxytonic) rhymes is unknown. A further structuring is sometimes achieved, though only rarely among the classical trouvères, through the adjunction of a refrain, normally invariable, at the end of each stanza. The initial stanza of a *grand chant* is always marked as introductory, whether by an evocation of nature or the desire to sing or by other exordial material. The conclusion is usually marked as well, whether in the last stanza or in a following partial stanza (the *envoi*), by a statement that "sends" the song to the beloved or some other auditor. The intervening stanzas tend toward an inherently lyrical semantic discreteness, a result of which is that it is not uncommon for the several manuscript redactions of a given poem to present them in different sequences. The usual internal structure of the *grand chant* stanza is bipartite, the first section *(frons)* being divided into two subsections (*pedes,* sing. *pes*) that are identical in meter and rhyme, and the second section *(cauda)* showing a freer sequence, as in: 8a 8b/8a 8b//8b 8a 8a 8b or 10a 10'b/10a 10'b//10a 10a 4'b 7c 7c.

   This structure is widely paralleled by the overall melodic form AAB, in which musical *pes* and prosodic *pes* coincide, but in which the line-by-line development of B may readily diverge from the pattern suggested by the corresponding rhymes. The melodic construction of the *grand chant,* as of the other genres, is modal. Compared with other such music, the trouvère corpus is unusually rich in accidentals, including not only B-flat and B-natural but also E-flat, F-sharp, and C-sharp; extensive in range, with most melodies developed within the range of a seventh to a tenth, but others within considerably narrower or broader intervals; and ample in both its choice of finals and its ways of relating the final to the melodic ambitus. The *grand chant* is variable in its overall density of melismatic ornamentation, but it is infrequent for a given ornament to include more than four notes. In all these respects, there is broad variation from songbook to songbook, each of which, or each family of which, tends to show stylistic individuality; a consequence is the often marked diversity within multiple redactions of the same melody. But the most striking feature of the trouvères' melodies, and the one that has not ceased to generate heated controversy, is that, with only few exceptions, the manuscripts transmit them in nonmensural neumatic notation, that is, with no indication of rhythm. Theories have been proposed to fill the void—an undertaking essential to any performance of the music. Their spectrum moves from a strict application of the principles of modal rhythm, which would apparently deny the text, to the advocacy of a free declamatory rhythm that would reduce the importance of the music; propositions between these poles argue for a modal usage somehow responsive to poetic rhythm or a sort of isosyllabism effectively eliminating the ebb and flow of rhythm altogether. Cutting across all these theories are such questions as whether all lyric genres, including dance songs, are to be treated in the same fashion and, if not, how to differentiate among them, or whether certain melodic features point to particular rhythmic interpretations.

   From the deep source of Provençal lyric, the trouvères derived not only the *grand chant* but also, in combination with local materials, the related crusade song and the heterostrophic *lai-descort,* both of which are well represented in the French corpus. The political or religious *serventois,* however, is of only passing importance compared with

the southern *sirventes,* and the troubadours' *planh* is barely reflected in the few, heterogeneous death laments of the trouvères; much the same may be said of the *alba/aube*. The Provençal debate songs, on the other hand, proved a popular model, with the *jeu-parti* in particular showing a much greater development among the trouvères, especially in the bourgeois circle of Arras; similarly, the *pastourelle,* documented first in Provençal, came to be cultivated above all by the trouvères.

In addition to the lyric types deriving wholly or in part from the troubadours, the trouvère repertory includes genres indigenous to northern France. Though the Provençal-inspired tend toward a certain aristocratic tone, the natively French types incline, relatively speaking, toward a popular, even folkloric, character; while the former, moreover, are almost exclusively masculine in poetic voice, the latter give prominence to the feminine voice. Indeed, women's songs, embracing the *chanson de toile* and other types, form a significant segment of the trouvère corpus. Other purely French genres, certain of which came to be represented in Provençal as well, include some defined chiefly by their content, such as the *chanson pieuse* (devotional), *sotte chanson* (parodic), *reverdie* (springtime reverie), satirical songs, and songs of jongleur life, and others defined by their prosodic/musical form, sometimes reflecting a dance function, like ballette, *rondet* (or rondeau), *rotrouenge, estampie,* motet. Frequently occurring throughout this repertory—and in some genres, such as the ballette and rondeau, constituting a structural *sine qua non*—is the refrain, an apparently independent one- or two-line utterance that, like its modern counterpart, is invariable, cited recurrently at fixed intervals through the song *(chanson a refrain),* or else is variable, one of a succession of such utterances strung through the song at fixed intervals *(chanson avec des refrains).*

# TROYES

. One of the major commercial cities of Capetian France, Troyes (Aube) developed from the Roman *castrum* of Augustobona. Sited on a loop of the Seine in northeastern France, it was located near the intersection of major roads that linked it with Flanders to the north, Lyon and Italy to the south. Evangelized during the 3rd century, the city was saved from devastation by the Huns in the 5th century by the heroism of its bishop, St. Loup. Despite the rebuilding of the city's walls, Troyes and its cathedral were ruined during the period of Viking raids in the later 9th century. The city was long ruled by its bishops and as

sumed importance only after the 10th century, when its counts (of Vermandois, then Blois) began assembling important territories to form the province of Champagne.

The city entered its heyday under Thibaut II le Grand (r. 1125–52) and Henri le Libéral (r. 1152–81). Thibaut shifted the center of the dynasty from Blois-Chartres to Troyes-Champagne, which at his death passed to his son Henri. Younger sons held Blois-Chartres as a fief from the count of Champagne. Under comital protection, the great fairs of Troyes flourished in the 12th century and stimulated the development of an extensive suburb west of the older *cité*. With the wealth derived from tolls on fair business, the counts, rather than the bishops, became the major sponsors of ecclesiastical and charitable institutions. Henry I, for example, established the collegiate church of Saint-Étienne adjacent to his palace, founded the Hôtel-Dieu, and supported the Benedictine convent of Notre-Dameaux-Nonnains.

Because of its prominence as a commercial and financial center, Troyes was home to a sizable Jewish populace, concentrated at the western edge of the suburb, as indicated by such modern street names as the Rue de la Juiverie and Rue de la Synagogue. While the counts governed Troyes, the Jewish community seems to have prospered in a relatively tolerant atmosphere, engaging in active moneylending and entering other occupations as well. A Talmudic school established by Rashi (ca. 1039–1104) flourished in Troyes from the late 11th to the 13th century. With the advent of Capetian rule after 1284, their situa-

tion deteriorated. In 1288, thirteen Jews were framed and executed for the murder of a Christian, and in 1306 the entire community was banished as a result of Philip IV's general expulsion of the Jews from the royal domains.

The 13th century was a period of energetic church construction in Troyes, and the variety of architectural styles visible in the major edifices reflects the city's diverse horizons. The nave and transept of La Madeleine (ca. 1200) adopt a Burgundian idiom, while the contemporaneous choir of the catheral of Saint-Pierre-Saint-Paul seems to have been begun by a Champenois master. By ca. 1230, the cathedral workshop was under the direction of an Îlede-France mason, often identified as the Master of Saint-Denis, who introduced the glazed triforium and elaborate tracery effects into the upper levels of the choir. Saint-Urbain (1262 and ca. 1280), erected as a shrine at the birthplace of Pope Urban IV (r. 1261–64), achieved an opulent complexity through a play of gables and tracery that drew upon the latest Parisian and northern French developments.

With the waning importance of the fairs at the end of the 13th century and the opening years of the 14th, the Black Death, and the Hundred Years' War, Troyes endured a century and a half of economic stagnation and political instability. As a result of the Treaty of Troyes (1420), Henry V of England, recognized as heir to the French throne, married Catherine of France, daughter of King Charles VI, at Saint-Jean-au-Marché.

Anglo-Burgundian forces finally were expelled in 1429, when the city opened its gates to Jeanne d'Arc and the dauphin, the future Charles VII. The city recovered its fortunes and population during the later 15th and early 16th centuries, a period marked by another burst of building. Sustained work on the cathedral's nave, which had suffered a disastrous collapse in 1389, was pursued from 1450, and the monumental west façade, designed by the Parisian mason Martin Chambiges, was raised beginning in 1502. A host of parish churches were built and decorated, including the choirs of La Madeleine (ca. 1490–1550), Saint-Remi (ca. 1500), and Saint-Jean-au-Marché (1508–55), Saint-Nizier (ca. 1500–75), Saint-Pantaléon (1517–52), and Saint-Nicolas (begun 1526). In conjunction with this Late Gothic architectural activity, renowned schools of glass painting and sculpture flourished in Troyes.

# TRUCE OF GOD

. The movement known as the Peace of God spawned a new movement, in which councils shifted emphasis from protecting classes of people at all times to banning all military activity at certain times of the year (Lent) or week (Thursday sunset to Mondays sunrise). The Truce of God placed less emphasis on popular enthusiasm and more on the attempts of committed elements of the warrior and clerical orders to restore peace: enforcement tended to fall into the hands of the counts, the dukes, and their allies. Although juridically distinguishable, the Truce and the Peace were considered virtually synonomous by contemporaries. Beginning in the late 1020s in the south, the movement found favor among the rulers of western Europe from Spain to Germany during the later 11th century and throughout the 12th.

Had it ever been fully effective, the Truce of God would have severely limited feudal warfare, since any sustained campaign could only operate half the week, and the warriors' traditional Fields of March would be transformed into the pilgrims' Lenten road. Even when frequently transgressed, the Truce maintained an important place in public opinion and discourse, and many a ruler could clothe his rivalry with the aristocracy in the rhetoric of enforcing the peace. In fact, by permitting the use of designated armies (comital, ducal, royal) to enforce the Truce, the movement directly contributed to a distinction between public and private rights to the use of violence that, *mutatis mutandis,* would lead to the formation of that institution with a monopoly on violence: the modern state.

## *UNAM SANCTAM*

. Issued in 1302, while Pope Boniface VIII was engaged in his second unsuccessful struggle with Philip IV the Fair of France, the constitution *Unam sanctam* contained some of the medieval papacy's strongest statements about its supremacy in temporal, as well as spiritual, affairs. The text was based on previous papalist writings, including those of Bernard of Clairvaux, and on the papalist reading of the Pseudo-Dionysian doctrine of hierarchy. Much of its wording was figurative, making the exact nature of its assertion of papal temporary supremacy ambiguous; but the French monarch saw through the wording to the essential demand for obedience. The heart of the argument was the close identification of Christendom with the church, outside of which there was no salvation. Submission to the papacy as the visible head of the church also was necessary for salvation. The pope was described as holding the spiritual sword but having the temporal sword exercised for the church by kings and knights. Failure to wield it as the spiritual power directed, however, could lead to condemnation of the king by the pope. Even after Boniface's death in 1303, Philip remained eager to have *Unam sanctam* revoked. In 1306, Clement V replied in the bull *Meruit* with an ambiguous declaration that *Unam sanctam* made the French king, realm, and people no more subject to the papacy than it had been before. *Unam sanctam* never found a place in the official collections of canon law, but it was cited frequently by papal apologists in later centuries.

## UNICORN TAPESTRIES

. Both sets of unicorn tapestries, those at the Cloisters in New York and at the Musée Cluny in Paris, were woven ca. 1500. The unicorn had been an object of fascination for

encyclopedists and poets since antiquity, and in the Middle Ages it acquired more symbolic meanings as it took on christological qualities. Included in innumerable writings about fantastic creatures, such as the *Physiologus,* the unicorn also gained fame in romances and lyric poetry, such as the famous *Auxi con l'unicorn sui* by Thibaut, count of Champagne (1201–1253).

The seven Cloisters tapestries (all about 12 feet 1 inch by anywhere from 8 feet to 14 feet) feature seven scenes depicting the narrative of the hunt for the unicorn. The first tapestry shows a scout in the distance calling to huntsmen equipped with such accessories as plumed hats, spears, and dogs on leashes. The next tapestry depicts the discovery of the unicorn in a forest clearing between a fountain and a stream. The unicorn is in the process of purifying the water for the thirsty animals who wait nearby, and the huntsmen stand unabashedly around the unicorn. In the third scene, the unleashed dogs run and huntsmen thrust spears, but the unicorn leaps over the stream away from the hunters. The fourth scene features the unicorn kicking huntsmen and goring a dog. The two fragments of the fifth scene show the second and more successful method of unicorn hunting, entrapment by a maiden. In the sixth tapestry, huntsmen bring the dead unicorn in triumph back to the lord and lady of the castle. The last piece in the series shows the unicorn resurrected and peacefully captive, tied to a pomegranate tree and surrounded by a fence and a dazzling array of flowers and foliage. Despite the dense quality of the compositions, the unicorn occupies the central position in most of the scenes, and all subsidiary elements point to it.

At the Museé Cluny, the five "Lady with the Unicorn" tapestries represent five allegories of the senses. In each scene, the heraldic devices of lion and unicorn support banners of the Le Viste family and interact with the lady who stands in the center of the composition. In *Sight,* the lady shows the unicorn on her left its reflection in a hand-held mirror. The lady plays a portable organ decorated with lion and unicorn in *Hearing,* and in *Taste* the unicorn wears a flying cape with the Le Viste coats of arms while a maidservant offers sweetmeats to her lady. In *Smell,* the lady makes a bouquet of carnations, and in *Touch* she holds a banner in her right arm and with her left hand touches the horn of the unicorn. The last tapestry in the series, *A Mon Seul Desir* (a phrase that appears on the edge of the tent), consists of a lady inspecting her jewels and framed by the opening into the tent.

Both sets of tapestries have been assigned to a variety of workshops and patrons, but recent scholarship suggests that the Cloisters tapestries were made in Brussels, while the Musée Cluny tapestries were commissioned by Jean le Viste between 1484 and 1500. Reasons behind the commissioning of the tapestries remain matters for speculation, but the Musée Cluny set may have been produced in honor of a marriage or, as Erlande-Brandenburg suggests, to glorify the family name.

# UNIVERSITIES

. In the Middle Ages, the term for a university was *studium* or *studium generale,* with the word *universitas* referring to the institutional or corporate shell enclosing and regulating the communities of masters and students. The most important university in medieval France was that of Paris, whose origins can be found in the 12th century; also of 12th-century origin was the medical school of Montpellier. By the end of the 15th century, however, the model of these early universities had inspired the foundation of many universities throughout France.

In the late 11th century, the school of William of Champeaux had been located in Paris. After William left the city for the nearby community of Saint-Victor, his absence permitted his former student Peter Abélard to establish his own school outside the city on Mont-Sainte-Geneviève; later, in the 1130s, when Abélard again resumed teaching after the interruption prompted by his castration and entry into monastic life, it was again to Mont-Sainte-Geneviève that he returned. The attractions of Paris were several: it was well provided with food and wine; it was the capital of the king of France; there were numerous regional schools that could provide students; and the bishop and cathedral chapter generally failed to exercise much control over teaching in the city.

By the time Abélard left Paris for the last time, in 1141, the city was the center of a considerable community of masters and students: sources regarding the schools of Paris in the early 1140s mention not only Abélard but Albéric de Monte, Robert of Melun, Peter Helias, Adam du Petit-Pont, Gilbert of Poitiers, Thierry of Chartres, and Peter Lombard. Other towns may have boasted masters who were worthy of this company, but none could match the concentration of talent that Paris offered an aspiring student. Students naturally came in large numbers and often from considerable distances; how many there were is impossible to say with any certainty, but the rapid settlement of the Left Bank—the area between the cathedral and Mont-Sainte-Geneviéve where scholars settled in large numbers—suggests that the academic community may have numbered 3,000 or 4,000 by the end of the 12th century. Whatever the precise number, by 1200 Paris was the leading center in Europe for the study of the Liberal Arts and theology.

The texture of the intellectual community, however, was also changing by the 1140s, John of Salisbury recalled having come to Paris as a young man in the 1130s and hearing Abélard lecture, but students in the 1140s were studying with John, a student himself who used the money he earned to finance his own studies. The growing size of the academic community perhaps contributes to the fact that we know the names of comparatively few masters for the second half of the 12th century; it must have been harder to stand out from the crowd. But it was also in this period that one sees the first steps toward defining the legal context in which the masters and students operated.

The first issue to arise was the *licentia docendi,* or license to teach. Pope Alexander III, in 1166–67 and later in conjunction with the Third Lateran Council (1179), barred the chancellor of Paris from exacting a fee for the right to teach at Paris. The prohibition apparently was not entirely effective, for it had to be repeated in the early 13th century. At that time, Pope Innocent III and then his legate (and Paris master) Robert de Courçon assigned the right to assess the qualifications of candidates for the license to teach to the masters themselves. This provision of Courçon's statutes, moreover, confirmed the

formation of the masters into a corporation that could act jointly on issues of university governance. The masters may in fact have been acting collectively as early as the mid-12th century, but a corporation, or *universitas,* of masters was not specifically mentioned until 1208. By the early 13th century, therefore, the University of Paris had both achieved corporate status and won independence from local supervision by the chancellor of Paris.

In practice, the University of Paris consisted of several institutions that managed different aspects of university life. The *universitas* to which Innocent III addressed his letter in 1208 comprised all the masters of theology, canon law, and the arts. Already they were exercising authority over their members in such matters as dress and the order of lectures, as well as more internal issues, such as the duty of masters to attend the funerals of dead colleagues. Courçon's statutes of 1215, moreover, also assigned the masters jurisdiction over crimes involving one of their members, as well as control over such issues as the prices to be charged for lodging. The independence of the university of scholars from local (but not papal) supervision was made still more explicit by Gregory IX in 1231, when the bull *Parens scientiarum* commanded the chancellor of

Paris to swear to respect the rights of the university, that is, the corporation of masters.

The superior faculties of theology, medicine, and law were headed by "regent" masters. The faculty in these faculties were quite few—e.g., eight for theology—and the great bulk of the masters taught in the arts. In the 13th century, there are also references to the university of artists and its rector, an official whose role would grow in the later Middle Ages. The membership of the medieval faculty of arts was also subdivided according to each member's country of origin into several groupings known as "nations": French, for those from the Île-de-France and the Mediterranean, Norman for those from Normandy and Brittany, Picard for those from Picardy and the Low Countries, and English for those from England, Germany, and Scandinavia. Each nation possessed its own seal and oper-ated as an independent organization, meeting regularly and being responsible for the examinations for the license to teach the arts. The importance of the nations declined at the end of the Middle Ages, as Paris itself became less international in its composition as a result of competition from other newly founded universities.

Also operating within the ambit of the university were colleges. These were foundations intended to support the studies of poorer scholars. The most famous of them was that founded by St. Louis's chaplain Robert de Sorbon ca. 1257.

Although the course of studies at Paris before 1150 appears to have been fluid, with masters and students both able to move from one discipline to another, by the 13th century it had become traditional that the youngest scholars would study arts, only later advancing to the superior faculties of law, medicine, or theology. This sequence is already enshrined in the statutes of Robert de Courçon, who specifies twenty-one as the minimum age for lecturing in the arts (by which time a scholar should have heard lectures himself for six years), while the minimum age for theologians was to be thirty-five.

Lecturing took the form of expositions of standard texts; the master would explain each passage, noting as well the issues surrounding the passage that were currently being discussed. The list of texts remained remarkably stable for centuries: for example, students read Priscian for grammar, Aristotle for logic, Peter Lombard's *Sententiae* for theology. The fixed place in the curriculum held by some of these texts does not, however, mean that the education received at the university was unchanging. In the first place, even while lecturing on traditional texts, masters generally discussed whatever issues were more *professionally* important at the time; these issues changed constantly, as some questions were settled and scholars' attention turned to new ground. The curriculum also evolved, especially in the 13th century, by the introduction of lectures on newly translated works, such as Aristotle's *Metaphysics* and *Ethics,* that brought with them a variety of concepts apparently in conflict with Christian doctrine. Several times in the course of the century, popes attempted to ban the teaching of certain doctrines or books, but these prohibitions were only sporadically effective, at least until a doctrine had actually been formally proclaimed to be heretical.

Medieval universities did not grant formal degrees, but there were events that marked a student's progress through his studies. Mid-13th-century statutes of the English nation use the term "bachelors" to describe students who had been licensed to take the exam known as "determination." To take this exam, they had to be at least twenty years old and to have listened to lectures for five years; the exam itself consisted of a series of disputations, after which a student would be expected to participate in disputations for another year. A student who had "determined" could continue his studies and receive a license to teach, a further step known as "inception," which like determination involved

disputations and public ceremonies; inception functioned as the examination for master in the faculty of arts.

A student who qualified to teach in the faculties of law, medicine, or theology at Paris was known as a "doctor." In law and medicine, candidates typically would have been about twenty-five years old; the age for incepting in theology was thirty-five. Although master and doctor designate a person who has demonstrated a level of competency worthy of a license to teach, in practice few graduates of the university taught for long. The world outside the university also acknowledged the value of the learning certified by these titles, and graduates continued to claim their status as masters and doctors long after leaving academic life.

As part of its control of the academic environment, the University of Paris claimed the right to regulate the book trade as well as the price of classroom rentals and tuition. The university's objective was both to control prices and to certify the accuracy of texts. University stationers had official copies of works, whose sections, however, had not been bound into a codex; copyists then worked from these sections, known as pecia, to produce multiple copies.Using this method, several copyists could work together to reproduce a book quickly; indeed, one reason for the ascendancy of Gothic script was the fact that Gothic tended to be more uniform from one scribe to another. Students could also borrow *pecia* rather than an entire book. Both the wages of the copyists and the fees charged by the stationers were regulated by the university, although the stationers did not always comply completely or happily.

Also having roots in the 12th century, the University of Montpellier originally centered on medicine, which may have been taught there before 1150.In 1220, a papal legate confirmed university statutes for the *universitas medicorum*. Law had also been taught at Montpellier in the 12th century, most notably by the great Italian jurist Placentinus, and legal teaching was firmly established by the second third of the 13th century. A collection of statutes for the faculty of arts dates from 1242. Formal acknowledgment that the schools at Montpellier constituted a *studium generale* came from Pope Nicholas IV in 1289.

By the 13th century, there was a concept of *studium,* or university, that was sufficiently well defined to permit the founding of new universities as deliberate acts. The University of Toulouse was founded in 1229, by treaty between the king of France and the count of Toulouse, as part of the settlement of the Albigensian heresy. The count promised to pay the salaries of fourteen professors—four in theology, two in canon law, six in the arts, and two in grammar. The idea clearly was to promote the teaching of orthodox learning as a way to counter heretical doctrines. An effort was made to attract doctors from Paris to staff the new university, but when the count reneged on the salaries he had promised the *studium* quickly foundered. At this point, however, the pope intervened with a bull guaranteeing the privileges of the masters, and the university seems to have been functioning successfully by the 1240s.

Other, smaller *studia* can also be documented for the 13th century, and there was a continuous string of foundations in the 14th and 15th centuries, often under the sponsorship of the local bishop. Having a university could be a matter of local pride, and successions of masters from existing universities could provide recruits out of which faculties could be formed. Most of these universities were small compared with Paris, however, and many offered training only or mainly in law. This was a field that saw a

steady demand for university graduates, and after the mid-14th century an increasing percentage of French lawyers were laymen with university degrees.

# URBAN IV

(r. 1261–64). Pope. After the death of Alexander IV in 1261, the eight surviving cardinals were unable to elect one of themselves pope. At last, they selected Jacques Pantaléon, titular patriarch of Jerusalem, who was on a mission to the Holy Land. Jacques, of low birth but a protegé of Innocent IV, had wide experience but no ties to Italian politics. As Pope Urban IV, he gained control of the papal states and rebuilt the Guelf alliance against

the Hohen-staufen. Urban created a substantial French bloc in the College of Cardinals and renewed his ties with Louis IX of France. Although the king refused to campaign against Manfred, the illegitimate son of Frederick II, he permitted Urban to approach a younger brother, Charles of Anjou. This was the first step toward Angevin domination of the papacy. Urban's successor, Clement IV, would support Charles's wars against the Hohenstaufen with all of the papacy's resources. Urban neglected the affairs of the Holy Roman Empire; but he negotiated with Emperor Michael VIII Paleologus, who had recaptured Constantinople from the Latins, for recognition of the Roman primacy. Urban, who had been exposed to the feast of Corpus Christi in the north, attempted to extend the feast to the entire western church, thus reaffirming the doctrine of transubstantiation; and the name of Thomas Aquinas is associated with the office for that feast, which only later became universally popular, and only later would the story of a miracle at Bolsena be used to explain Urban's effort.

# URBAN V

(r. 1362–70). Pope. When Pope Innocent VI died in 1362, the dominant Limousin party in the College of Cardinals became divided and could not elect a pope from within its own ranks. At last, Guillaume de Grimoard, abbot of Saint-Victor, Marseille, was chosen, although he was absent on a mission in Italy. Upon his return to Avignon, the new Roman pontiff, who chose to reign as Urban V, adopted an austere life within the papal palace. Urban was especially concerned with the welfare of the universities, founding two colleges at the University of Montpellier. Praised for combining love of learning and zeal for reform with generosity, he was, however, imprudent about money and inclined to appeasement, even of the Milanese tyrant Bernabò Visconti and of the mercenaries who terrorized France. In 1367, having concluded that the work of Cardinal Albornoz to pacify the papal states could be consummated only by returning the papacy to Rome, Urban left part of the curia in Avignon and departed for Rome with the rest. Although the pope regretted leaving the peace and quiet of Avignon for the perils of Rome, he completed his journey. In the Eternal City, he crowned Charles IV of Luxembourg Holy Roman Emperor; and he received the Byzantine Emperor John V Paleologus, who sought aid against the Turkish threat. In 1370, Urban returned to Avignon, where he died in an odor of sanctity. He was beatified by Pius IX in 1870.

# USURY

. Medieval jurists and moralists defined usury as any predetermined charge for a loan of money or goods. The taking of usury was a canonical offense punishable by excommunication. In France, usurers were subject to banishment and their property to confiscation by the crown. The ban on usury did not apply to ordinary business profits or to penalties for overdue loans.

The usury prohibition originated in the early church but was not applied to the laity until Charlemagne forbade lending at interest to all subjects of the empire at the Council of Aix-la-Chapelle (789). The increase in moneylending generated by the growth of trade after 1100 provoked a series of papal and conciliar decrees between 1179 (Third Lateran Council) and 1311 (Council of Vienne) that reiterated the traditional ban and strengthened the canonical penalties for usurers. Local councils in most regions of France followed suit and adopted antiusury canons in the course of the 13th century.

Although lending at interest was strictly forbidden by Louis IX in decrees of 1230 and 1254, political and fiscal considerations generally dictated French royal policy on usury. Philip IV effectively legalized usury in 1311, when he abolished penalties for lenders who charged annual rates of less than 20 percent. The crown frequently granted *ad hoc* exemptions from the usury ban. Exemptions conceded to Châteauneuf (1181) and Poitiers (1222) favored towns in the royal domain; similar concessions to the fairs of Champagne and Brie (1349) and to Lyon (1419) were designed to encourage international trade. As early as the last quarter of the 12th century, the crown and local authorities permitted Jewish and foreign, usually Italian, moneylenders to lend at annual rates as high as 43 percent a year (two *deniers* per *livre* per week) on payment of an annual fine. Nevertheless, the position of such public usurers was precarious. Jewish moneylenders were subjected to frequent expulsions and expropriations throughout the 13th and 14th centuries. Italian moneylenders and financiers, many of whom were creditors of the crown, were banished and their assets seized in 1277, 1291, 1311, and 1331.

From the reign of Charles V, the economic effects of the Hundred Years' War dictated a less erratic policy on usury, and moneylenders were authorized by letters patent to lend in most French cities at an annual rate of 16 percent. Licensed usury became a virtual monopoly of Italian moneylenders after 1394, when Charles VI revoked privileges previously granted to Jewish lenders. The later Middle Ages also saw a moderation of the ecclesiastical position on usury as a result of the development of titles to compensatory interest by canonists and theologians.

# V

## VALENCIENNES

. The church of Notre-Dame-la-Grande at Valenciennes (Nord) was another of the large buildings of northern France destroyed in the years following the French Revolution. We know the building only from documents, as the site has not been excavated and no fragments are known to have survived. It was an interesting variation on the trefoil plan, in which the chevet and each transept arm were polygonal in plan and surrounded by an ambulatory and gallery. The axial chapel of the ambulatory was two-storied, and both transept arms had two-story polygonal chapels on the east side. Above the gallery was a wall passage and clerestory windows. If the visual evidence and descriptions are trustworthy, Notre-Dame-la-Grande, which was built in the last quarter of the 12th century, was richly decorated on the interior with dark Tournai stone. It may have been known to William of Sens before he went to Canterbury.

## VALENTINOIS

. Until its annexation to the French kingdom in the 15th century, this region, bounded by the Rhône, the Isère, the Drome, and the Diois, constituted a virtually independent principality centering on the city of Valence. Imperial charters gave the bishops, who ruled the city, secular authority over the diocese as well, but their claims were challenged repeatedly by the counts of Valentinois. In 1189, Raymond V of Toulouse ceded his rights in the Diois to Aymar II de Poitiers, count of Valentinois, who thereafter intensified his efforts to create a unified state at the expense of the bishops in both regions. During the Albigensian Crusade, Simon de Montfort attacked Aymar's citadel at Crest because of Aymar's alli ance with Raymond VI of Toulouse. In 1396, Valence was

placed under the protection of the king of France, and in 1452 a university was founded there. In 1404, the king of France purchased the county of Valentinois, and in 1499 Louis XII erected it into a duchy-peerage for Cesare Borgia.

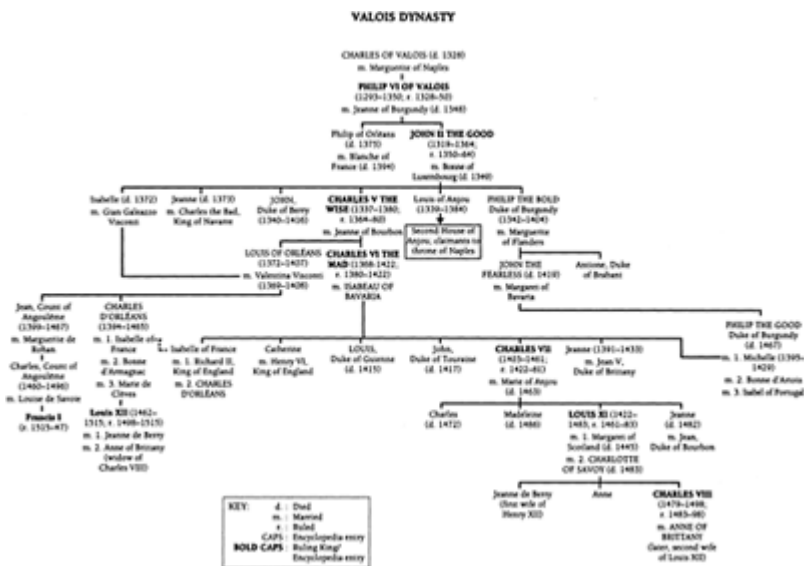
# VALET/VARLET

. *See* **ESQUIRE/ESCUIER**

# VALOIS DYNASTY

. Family that ruled France from 1328 to 1589. At the death of the last great Capetian monarch, Philip IV the Fair (r. 1285–1314), the throne passed rapidly among his sons, who all died young. When the post-humous son of Louis X (r. 1314–16), John I, died shortly after his birth in 1316, Louis's brother Philip V (r. 1316–22) seized the crown and the magnates agreed to exclude female heirs from the royal succession. Therefore, when Philip V died leaving only daughters, his brother Charles IV (r. 1322–28) succeeded him. He too left only daughters and his closest male heir was his sister's son, Edward III of England. The magnates preferred that the throne pass to the late king's cousin, Philip, count of Valois, and they ruled that a valid claim to the throne could not be inherited through a woman. The reign of Philip VI (r. 1328–50) thus inaugurated the Valois line of kings, descended from Charles, the second son of Philip III. The throne passed through seven generations of Valois until the death of Charles VIII (r. 1483–98) and thence to a younger branch of the family that ended with the murder of Henry III in 1589.

During its first 170 years, which encompassed all the catastrophes accompanying the waning of medieval civilization, the Valois dynasty overcame the greatest series of challenges to confront the monarchy before 1789. The most direct challenge was military: Plantagenêt claims to the

VALOIS DYNASTY


throne produced military disasters et Crécy (1346) and Poitiers (1356). Desperate expedients, such as the grant of Burgundy in apanage to John II the Good's son, Philip the Bold, and reliance on mercenary companies led to military chaos and aristocratic defiance. Though Charles V (r. 1364–80) revitalized the monarchy, the unfortunate Charles VI (r. 1380–1422) almost destroyed it. Charles VII (r. 1422–61) required a lifetime to discipline his forces and expel the English, but by the time of Louis XI (r. 1461–83) and Charles VIII (r. 1483–98) the dynasty was able to acquire Burgundy and Brittany and even forcefully press its claims south of the Pyrénées and the Alps.

Nonetheless, the most profound Valois challenge was to preserve the Capetian constitutional legacy. Philip VI and his immediate heirs, dependent on their magnate allies, did little. Only after a century of chaos would France allow Charles VII and Louis XI to consolidate their bureaucratic governance of France through such devices as the imposition of the Pragmatic Sanction of Bourges, the establishment of the *ordonnance* companies, the regularization of the *taille,* and the expansion of the parlements. As a result, Charles VIII was able to pass a clearly acknowledged sovereignty and political ascendency on to the "Renaissance Monarchs" of the later Valois era. Despite setbacks, the early Valois not only preserved but ultimately expanded their Capetian inheritance by defeating military adversaries, consolidating political power, expanding crown domain, and extending French frontiers beyond those of the medieval monarchy.

# VAN DER WEYDEN, ROGIER

(1399/1400–1464). "Flemish painter, a student of Robert Campin, known in his day as second only to Jan van Eyck, Rogier van der Weyden was born in Tournai in French-speaking Hainaut, but the economic life of the area depended heavily on Flanders rather than France. In the 1430s, rather than seek employment at the Burgundian court, he moved to Brussels as the head of a large workshop. As a guild member, he catered heavily to Germanic circles of patronage, which did not, however, prevent his appreciation of the achievements of the court painter van Eyck. The influence of his predecessor can be detected in early works such as the *Annunciation* of ca. 1435, now in the Louvre, from his attention to detail in the patterning of the floor and fabrics to the symbolic objects filling the panel with meaning. Simultaneously, van der Weyden began to move beyond van Eyck's stylistic accomplishments to create a style of his own, as exemplified by his *Lamentation* (ca. 1435–38) in the Prado. In a shallow, undefined space, van der Weyden focuses the viewer's attention upon the monumental figures actively demonstrating their grief. He rejects the disguised symbolism so favored by van Eyck in order to explore more fully the emotive capabilities of composition. Van der Weyden, although not employed directly by the Burgundian court, did produce some works for its most prominent members. An example is his *Altarpiece of the Seven Sacraments* (ca. 1453–55) in the Musée Royal des Beaux-Arts of Antwerp, executed for Jean Chevrot, bishop of Tournai, in which he expanded the Gothic cathedral interior as depicted in van Eyck's earlier *Madonna in the Church.* He and van Eyck shared a client in the person of Nicolas Rolin, chancellor of Flanders. Van der Weyden also painted a nativity altarpiece (1452–55), now in Berlin, for Pieter Bladelin, who was the chief tax collector in Flanders for Philip the Good.

# VAN EYCK, JAN

(ca. 1380–1441). As one of the most famous painters of his day, van Eyck had the special privilege of being a *valet* to Philip the Good, duke of Burgundy. His role as court painter

extended into the realm of diplomacy, as van Eyck was one of Philip's emissaries to Spain between 1424 and 1430. Van Eyck began his career in the Burgundian court after the death of his former patron, John of Bavaria. Although he served Philip directly, his production of panel painting for him went unrecorded. However, accounts of patronage do exist for members of Philip's circle. Van Eyck's reputation as a great master emerged from his superrealistic and sensual treatment of the panel, his rich and precise handling of clothing and jewels. Van Eyck fully exploited oil paint as his medium, evidenced by his exquisite details and nearly invisible brushwork. As was practiced by the majority of northern painters, van Eyck infused the objects in his world with secondary, allegorical, and christological meanings. The most obvious expression of his disguised symbolism can be found in his treatment of the Virgin and Child, a subject van Eyck repeatedly explored. His *Madonna in the Church* (ca. 1437–38), now hanging in the Gemäldegalerie-Staatliche Museen in Berlin, represents a beautifully ex-ecuted example of his style and iconographic approach: the large size of the Virgin in comparison with her surroundings emphasizes her status. The *Ghent Altarpiece* (1432), which has sparked many a debate concerning attribution and assemblage, was done in collaboration with his brother Hubert and represents the only painting known by van Eyck prior to 1433.

Van Eyck produced his most renowned work for the members of the Burgundian court or people closely linked to it, particularly the two-thirds of his paintings that contain portraits. The *Arnolfini Wedding Portrait,* which rivals the altarpiece in reputation, was painted for Giovanni Arnolfini in 1434. Arnolfini settled in Flanders with his half-French wife after Philip the Good appointed him to a position at court. Baudouin de Lannoy, lord of Molembaix, commissioned a work in honor of his membership in the order of the Golden Fleece, founded by Philip in 1430. The inclusion of the order's collar in his portrait of 1435 advertises his newly acquired status. Van Eyck served Philip and the court of Burgundy for a sixteen-year stint that ended with his death in 1441. It was during his tenure as artist of the court that van Eyck developed the detailed, naturalistic style that had such a great impact on all who followed him.

# VASSAL

**.** In modern usage, anyone who performed homage, swore fealty, and received a fief. Such a generic sense of "vassal," however, was unknown in medieval France, although the lack of a systematic history of the term precludes a definitive summary of its evolution.

*Vassus* and *vassalus* are latinized forms of Celtic terms for "servant." In Salic Law, a vassal was a slave, but by the 8th century he could be a legally free man who had

commended himself to a landlord. Carolingian kings extended the term to middle-level landlords who received royal benefices in return for administrative services; these royal vassals *(vass[all]i dominici)* swore fealty to the king in the hands of the royal *missi*. Thus, two distinct levels of vassals were linked hierarchically to the king and subsequently, after the collapse of royal authority, to the counts.

In the 10th century, "vassal" was applied to the retainers of counts and barons and often was synonymous with "knight," but thereafter it rarely appeared in Latin texts. Although *vavassor* later denoted low-level feudal tenants, perhaps the descendants of 10th-century vassals, contemporaries generally referred to anyone who had performed homage *(hominium)* to a lord as the latter's "man" *(homo)*. Fulbert of Chartres (1020) and Galbert de Bruges (1127) spoke not about vassals but rather about men who had done homage and sworn fealty. Administrative bureaus later compiled lists of knights, homages, military service, and fiefs, rather than of vassals.

It was in the vernacular, principally in the chansons de geste, that "vassal" survived in the sense of warrior and was associated with the qualities of courage and loyalty, although the earliest vernacular historians, such as Villehardouin, who can be assumed to reflect current usage, did not employ the term.

# VAUX-DE-CERNAY

. The abbey of Vaux-de-Cernay was founded 2 miles from Cernay-la-Ville (Yvelines) by monks from Savigny in 1118 and, like the other houses of the Savigniac order, passed under Cistercian control in 1147. Partly destroyed after the Revolution, the property was bought by the Rothschilds in 1873 and recently has become an exclusive resort hotel. The site is dominated by the ruins of an imposing 12th-century church some 205 feet long. The plan was determined and the lower walls of the chevet, transept, and nave aisles partly built before the abbey came under the Cistercians. In plan, it consisted of a large square chevet, a projecting transept with pairs of eastern chapels, and a lengthy nave with aisles. Although the nave was completed in the second half of the century, the church was groin-vaulted throughout. The west wall of the façade has a large rose window, some 22 feet in diameter, flanked by two smaller oculi. Taken under royal protection in 1142, the abbey of Vaux-de-Cernay had a long and distinguished history in the 12th and 13th centuries, with a number of its abbots serving in royal administrations. The most famous

was Thibaut de Marly (r. 1235–47), a descendant of the Montmorency family later canonized as St. Thibaut.

# VENDÔME

**.** The *pagus Vindocinensis* was located around the Gallo-Roman *oppidum* of Vinocium. In the 10th century, Vendôme (Loir-et-Cher) fell into the hands of the Robertian family, and Hugh Capet granted it, along with Paris, Melun, and Corbeil, to Count Bouchard le Venerable (d. 1007), who retired to the abbey of Saint-Maur-des-Fossés. Eudes, one of his fellow monks, wrote his *vita* ca. 1050. By the end of the 11th century, Vendôme was endowed with a castle on the plateau above the Loir, which was substantially altered in the 14th century and again in the 17th. Within its walls are the foundations of the 11th-century church of Saint-Georges, which was destroyed in the Revolution. The most important vestige of the 14th-century fortifications is the Porte Saint-Georges, a gateway flanked by two semicircular towers with battlements and machicolations. Vendôme's abbey of La Trinité, founded possibly in the 9th century by Geoffroi Martel, became the focus of a major pilgrimage to venerate a tear that Christ shed at the tomb of Lazarus.

The counts of Vendôme by the mid-11th century had become vassals of the counts of Anjou and thus, a century later, of the kings of England. They took part in the cru

Vendôme (Loir-et-Cher), La Trinité, façade. *Photograph courtesy of Whitney S.Stoddard.*

sade of 1101 and in the first expedition of Louis IX. In 1212, the town was the center of the children's movement to save the Holy Land, led by Étienne de Cloyes. On the death of Count Bouchard VII in 1374, Vendôme was carried to the house of Bourbon by the marriage of the count's sister, Catherine, to Jean I, count of La Marche (r. 1361–93). The counts remained loyal to the crown during the dark years of the Hundred Years' War, with Louis of La Marche/Vendôme (1393–1446) serving as a principal royal commander. The town with its castle was an important frontier site between French and English territories during the conflict. The county returned to the crown with the accession of the Bourbon king Henry IV in 1589.

The history of Vendôme illustrates several steps in early feudal development, with its records furnishing some of the earliest examples of primogeniture and liege homage, with a clear assignment of castle guard appearing by the early 11th century. Its counts also led the way in rural development with the founding of a *villeneuve,* a market, and a church in the forest in the 10th century; the introduction of vines from Saintonge in 1055–60; and the foundation of rural *bourgs* in the 12th century.

The former abbey church of La Trinité preserves transept walls from the original 11th-century Romanesque structure, and the stained-glass window of the Virgin in one of the chapels off the ambulatory is 12th-century. However, the vaulting is 13th-century, the windows of the clerestory are 14th-century, and the façade is Flamboyant Gothic. Near the church is a detached belfry with a 12th-century stone spire that rises 260 feet and is considered the prototype of the Romanesque south tower at Chartres. Of the conventual buildings, there remain the sacristy (14th c.), chapter house (14th c.), a wing of the cloister (14th-15th c.), and the abbot's lodgings (15th-16th c.).

# VERDUN

**.** The Gallo-Roman fortress Virodunum Castrum occupied a strategic location along the Meuse River. Verdun (Meuse) was elevated to the rank of bishopric in the 3rd century and was an active port and commercial outpost from the 8th century. The city gave its name to the treaty of 843, which divided Charlemagne's empire among his three grandsons. From the 12th century on, the French kings battled with the Holy Roman emperor for jurisdictional rights over the city. It later became one of the "Three Bishoprics" (with Toul and Metz) that were united to France in 1552.

Outside of the city walls, Saintin, an early Christian apostle, erected the first sanctuary dedicated to St. Peter (ca. 350). In the 10th century, the Benedictine abbey of Saint-Vanne was founded upon this site. By the early 11th cen-tury, it was one of the most celebrated in the West. Only a 12th-century tower, incorporated into Vauban's 17th-century citadel, remains. In the 13th century, Verdun hosted communities of Dominicans, Franciscans, and Victorines.

Upon an original 6th-century foundation, the cathedral of Notre-Dame was rebuilt and expanded under the Teutonic bishop Thierry the Great (r. 1047–89) after fire destroyed the previous building in 1048. The church was further developed under Bishop Albéron de Chiny (r. 1132–52). In the style of the great Carolingian churches of Saxony, the basilica structure has transepts and apses at both its east and its west ends. Each transept is capped by two towers. (Today, the eastern towers are razed at roof level.) In the 13th and 14th centuries, ribbed vaults were constructed over the aisles, transepts, choirs, and nave. The monumental northern portal and porch date from the 14th century, and the Gothic chapels along the aisles from the 15th.

The Rhenish tendencies of the overall structure are complemented by elements typical of the Burgundian Romanesque. The polygonal structure of the eastern apse is similar to that at Autun, and the sculpture of the eastern portal, showing Christ in Majesty, recalls the style of the tympanum at Vézelay.

# VERMANDOIS

. By the Carolingian period, the Roman *civitas Vermanduorum* had been split into two parts, of which the one centered on the towns of Saint-Quentin and Péronne was alone called the *pagus Vermanduensis*. Situated on the plateau that served as a source to the Scheldt, the Oise, and the Somme, and crossed by Roman roads, it became of great economic and strategic value. It was one of the earliest areas to develop a feudal vocabulary (*vassi* and *fideles* used in 948 and *fevum* as the equivalent of *beneficium* by 1036/43) and to collect a money *cens* (pre1018–40). Saint-Quentin, named for a 3rd-century martyr, received one of the oldest communal charters in 1080 from count Hugues le Grand (ca. 1068–1102). Along with Lower Lorraine, it was the region of the chansons celebrating Raoul de Cambrai and Ibert de Ribemont.

In the late 9th and early 10th centuries, Vermandois was ruled by descendants of Charlemagne in the male line, of whom the most prominent was Count Herbert II (900–943). He attempted to expand his holdings by conquest and by making his five-year-old son, Hugues, archbishop of Reims. Though he was the captor of King Charles III the Simple (r. 893–922) from 923 to 929, first at Château-Thierry and then at Péronne, Herbert's influence had deteriorated by the time of his death, when his sons divided his remaining lands. Vermandois was eventually united to Valois and the two countships passed to a collateral Capetian line by the marriage of their heiress, Adèle, to Hugues, a younger son of King Henry I (r. 1031–60) and a brother of Philip I (r. 1060–1108). Hugues participated in the First Crusade and died in 1102 at Tarsus on his second expedition to the Levant.

On the death of Count Raoul le Lépreux (r. 1162–67), Vermandois/Valois passed to the elder of his two sisters, Elizabeth (d. 1183), wife of Philippe d'Alsace, count of Flanders. Philippe disputed her inheritance with King Philip II Augustus. The Treaty of Boves (1185) gave the king Amiens and sixty-five castles in western Vermandois. After Philippe's death, the king acquired the rest by the Treaty of Arras (1192), except for Saint-Quentin proper and Valois, which both went to Eleanor, Elizabeth's younger sister, reverting to the crown on her death in 1213.

*R.Thomas McDonald*

# VERSIFICATION

. The rhythm of poetry in medieval French is based on a fixed number of syllables in a line. Longer lines are frequently divided by a pause, called a caesura, into parts called hemistiches. Although examples exist of lines from one to fifteen syllables, the commonest lines in medieval French poetry are of eight, ten, and twelve syllables. The octosyllabic line, the oldest meter in French verse, appeared in the 10th century in the *Passion du Christ* and in the 11th-century *Vie de saint Léger* and was the meter of the epic poem *Gormont et Isembart*. The octosyllabic line, arranged in rhyming couplets (*rimes plates* or *suivies*) became the meter of narrative poetry and drama in the 12th century. The decasyllabic line was first used in the 11th-century *Vie de saint Alexis* and was the meter of most of the older chansons de geste, such as the *Chanson de Roland* and *Chanson de Guillaume*. It predominated in the poetry of the 14th and 15th centuries. The dodecasyllabic line began to displace the decasyllabic in 13th-century epic (e.g., *Voyage de Charlemagne*); used in the *Roman d'Alexandre* (ca. 1179), it became known as the Alexandrine.

The first vernacular poems, beginning with the *Sequence de sainte Eulalie* (9th c.), were assonanced. Assonance consists of the identity of sound of the final accented vowel of successive verses; this identity need not extend to preceding or following sounds. The chansons de geste were typically composed of laisses, groups of lines constructed on a single assonance.

The first rhymed poem in the vernacular was the Occitan *Chanson de sainte Foy* (11th c.). Other early rhymed poems were the *Voyage de saint Brendan* (ca. 1112) and the *Bestiaire* of Philippe de Thaün (ca. 1125). Beginning with the 12th-century Romances of Antiquity *(Thèbes, Énéas, Troie),* poems were regularly rhymed in French. By 1200, assonance had given way to rhyme almost completely. Rhyme consists of the identity of the final tonic vowel of two or more verses and any following articulations. If the words end in a tonic vowel

> *aimé: chanté*
> *favori: ami*

then rhyme and assonance are identical, and the rhyme is called *rime pauvre*.

If the tonic vowel is followed by one or more consonants

> *mort: sort*
> *passanz: granz*

then the rhyme is both *suffisante* and *pauvre*.

When the identity of sound extends to articulations preceding the tonic vowel

> *vers: divers*
> *main: demain*

then the rhyme is *riche*.

If the identity of sound extends to the vowel that precedes the tonic vowel and includes all the following sounds

> *ressentir: repentir*
> *acier: glacier*

then the rhyme is called *léonine* (also *double* or *superflue*).

If the identity of sound extends farther back to include the consonant

> *félicité: férocité*
> *utilité: tranquillité*

then the rhyme is *riche léonine*.

Rhyme is divided into *rimes masculines and féminines.* Words that end in a mute e are feminine and the rest are masculine. Masculine and feminine rhymes did not have to alternate in medieval French poetry. A word could rhyme with itself and did not have to have different meanings or derivations as in modern French poetry.

Rhymes that included homonyms

> *partira: part ira*
> *à mordre: amordre*

are called *rimes équivoques*.

Sequences of rhymes involving variations on the same word

> *avez: savez, savons: avons*

are called *rimes grammaticales* and were frequent in Old French poetry.

In the 15th century and later, with the Grands Rhétoriqueurs, other rhyme forms were much favored, such as *rime batelée* (the last word of a line rhymes with the word at the caesura in the following line); *rime renforcée* (the caesura of a line rhymes with the end of the line); *rime brisée* (words rhyme at the caesura); *rime couronnée* (the last syllable of a line is repeated twice); *rime emperière* (a sound is repeated three times at the end of a line); *rime fratrisée* or *enchaînée* (the last word of a line is repeated at the beginning of the next line); *rime entrelacée* (part of the last word of a line is repeated in the next line); *rime annexée* (the word at the end of a line has the same root as the word at the beginning of the next line); *rime retrograde* (a series of words could be inverted word for word or syllable for syllable); *rime senée* (all the words of each line begin with the same letter); and *rime en écho* (the last word of a line is used alone as the following line).

The lyric strophe, or stanza, is formed by a fixed number of lines, rarely more than fourteen. The more common strophes comprise two lines (the *couplet* or *distiche*); four lines (the quatrain); six lines (the *sixain*); eight lines (the *huitain*); and ten lines (the *dixain*). Some poems with fixed strophe forms, the *formes fixes,* that were popular in the

later Middle Ages were the rondeau, ballade, *chant royal,* chanson, *sirventes,* virelai, *lai lyrique,* and *pastourelle.*

The earliest treatise to distinguish between quantitative and syllabic accentual verse was by the Englishman Bede, *De arte metrica* (ca. 725). Other medieval treatises in Latin were collected by Faral, especially those by Matthieu de Vendôme, Geoffroi de Vinsauf, Gervais de Melkley, Evrard TAllemand, and Jean de Garlande). The first vernacular work on versification was by the Catalan troubadour Raimon Vidal, the *Razos de trobar* (ca. 1200). The most important collection of Provençal *arts poétiques* was the *Leys d'Amors,* or *Flors del gay saber* (1341). The first treatise in French was the *Art de* dictier (1392) of Eustache Deschamps. Important 15th-century treatises on versification were collected by Langlois (Jacques Legrand, Baudet Herenc, Jean Molinet, and four anonymous treatises). Also important in the development of verse forms are the *Prologue* (1370) of Machaut's *Dit du vergier* (ca. 1330) and the *Intermedes lyriques* of his *Remede de Fortune* (ca. 1340). The theorist of the Grands Rhétoriqueurs was Jean Molinet, author of the *Art de rhétorique vulgaire* (1493).

# VERSUS

. Monophonic and polyphonic songs with both sacred and secular texts, written in significant numbers from the late 11th through the early 13th century, especially in southern France. The versus belonged to the late-medieval flourishing of rhythmic, accentual Latin poetry that affected several genres of liturgical song, and they undoubtedly influenced the development of troubadour song as well. When sacred versus became important in the north, most notably in Paris in the late 12th and early 13th centuries, they were called "conductus" and were frequently set polyphonically.

The major sources of the Aquitanian repertory are nine versaria—collections of versus—contained in four manuscripts, which embody a chronological history of the genre. Texts for the versus, although sharply marked and sometimes strophic, were set to both simple melodies with clear phrase structures and to melodies with lengthy melismas, especially toward the ends of lines.

# VESTMENTS, ECCLESIASTICAL

. Ecclesiastical vestments and insignia originated for the most part as the customary secular garb of Greco-Roman antiquity but were retained when standards of dress changed during the centuries of barbarian ascendancy and took on symbolic significance in the early Middle Ages.

The most important vestments are the six worn by the priest at Mass: the amice, alb, cincture, maniple, stole, and chasuble. The amice is a white rectangular cloth draped over the upper back and shoulders and secured in place by tapes around the waist; it is thought by most to have originated as a sort of scarf, although some maintain it was a kerchief protecting the head. The alb is a white floor-length garment with long sleeves; it appears to be descended from the Roman undergarment called the *tunica*. The alb is belted in at the waist by the cincture, a long white cord with tassels at each end. The maniple, perhaps a handkerchief originally, is a narrow band of material draped over the left forearm. The stole, of uncertain origin, is a similarly narrow, but much longer, band of cloth draped about the neck of the priest with its ends hanging down his front to about knee length. Worn also by the deacon, but over his left shoulder like a sash and secured under his right arm, it came to be looked upon as the distinctive vestment of the deacon. The chasuble, worn over the other vestments, owes its origins to a cloak called the *planeta,* like a small tent with a hole in the middle for the head. Symbolic meaning was attached to priestly vestments during the Carolingian period: for example, the cincture standing as a bond of chastity and the alb as a sign of innocence. The alb was worn also

by the newly baptized on Holy Saturday and throughout Easter Week until the following Sunday, the *Dominica in albis depositis.*

Other important vestments are the dalmatic, tunicle, pallium, cope, and surplice. The dalmatic and tunicle are outer garments of varying design worn, respectively, by the deacon and subdeacon at Mass. They, as well as the maniple, stole, and chasuble were originally made from white wool but came in the later Middle Ages to be of silk decorated with bands of ophrey (cloth woven with gold thread). They came also to assume the colors associated with the different liturgical occasions. White (also gold) was the color of most important festivals; red was associated with Apostles, martyrs, and the Holy Ghost; black (later purple) was the color of penitential occasions and green that of ordinary Sundays. The pallium is a narrow woolen band marked with six purple crosses; derived from imperial insignia, it was worn by the pope and shared by him with bishops of special importance. The cope, or *pluviale,* is an outer garment similar to the chasuble but open in the front; it was worn by priests and bishops at functions other than the Mass and by cantors in choir. In the late Middle Ages, it was often richly decorated. The medieval surplice was a knee-length white linen shirt with wide sleeves worn by clerics in choir and also on many nonofficial occasions; its Latin name, *superpelliceum* ("over a fur garment"), betrays its origins as something worn over fur coats in northern European countries as a replacement for the tighter-fitting alb.

# VEXIN

**.** The Gallo-Roman *pagus Veliocassinus,* located strategically on the north bank of the Seine between the Oise and the Andelle, incorporated the towns of Mantesla-Jolie, Meulan, and Pontoise along with the fortress of Gisors. The countship, established by the reign of Hugh Capet (r. 987–96), may have grown out of the advocacy of the lands of the royal abbey of Saint-Denis, which dominated the region. Its banner, the *oriflamme,* supposedly that of Charlemagne, became the standard of the French kings in the 12th century in their capacity as counts and vassals of the abbey. At some time, however (traditionally in 911), the *pagus* was divided at the Epte into eastern and western parts (French and Norman Vexin, respectively), and it became a vital strategic march for both the dukes of Normandy and the kings of France.

The original line of counts was drawn into close ties with England as early as the 1030s, when Count Dreux married a sister of Edward the Confessor (r. 1042–66), and Henry I of France (r. 1031–60) was to cede the French Vexin to Duke Robert of Normandy in return for aid in securing his throne. Philip I (r. 1060–1108) wrested it back

from Count Simon between 1076 and 1077 to bestow it upon his son the future Louis VI (r. 1108–37), who even occupied the Norman Vexin until his defeat at Brémule (1119).

Henry II of England (r. 1154–89) did homage for the Norman Vexin, and the French Vexin was made the dowry of two daughters of Louis VII (r. 1137–80), married and betrothed successively to two of Henry's sons. The latter marriage, to Richard I the Lionhearted (r. 1189–99) never having taken place, Philip II Augustus (r. 1180–1223) waged war against him from 1195 to 1199, losing most of the French Vexin in the process. But after Richard's death, the annexation of Normandy in 1204, confirmed by the Battle of Bouvines in 1214, rendered moot the question of the frontier. Philip II was to grant communal charters to several towns in the Vexin, which quickly became integrated into the royal domain.

# VÉZELAY

. The stormy history of Vézelay (Yonne) and its monastery spans most of the Middle Ages. Founded in Carolingian times, the first monastery, not on the hill, was destroyed in 886–87 by Vikings whom Charles III The Fat had allowed to pillage in Burgundy. It was soon rebuilt on the hill above, which was fortified. Belief in the presence of remains of the body of Mary Magdalene grew, and in 1058 Pope Stephen IX confirmed the relics and pilgrimages began.

Vézelay (Yonne), La Madeleine, plan and elevation of narthex and nave. After Salet and Losowska.

Given the vast numbers of pilgrims, Abbot Artaud decided in 1096 to replace the Carolingian church with a larger structure, whose choir and transept were consecrated on April 21,1104. Two years later, the townspeople, over-whelmed by taxes to finance the construction, assassinated Artaud. His successor, Renaud de Semur, rebuilt the

Carolingian nave, which had been destroyed by a fire on the feast of Mary Magdalene (July 21, 1120) in which over 1,000 worshipers perished. The new church was dedicated by Pope Calixtus II in 1132. It was at Vézelay on Easter Sunday of 1146, on the north slope of the monastery, that Bernard of Clairvaux preached the Second Crusade and here that Thomas Becket excommunicated King Henry II in 1166; from here, Richard I the Lionhearted and Philip II Augustus set off in 1190 for the Third Crusade. Just a few years earlier, ca. 1185, Abbot Girard d'Arcy had rebuilt the choir in Gothic style.

The Romanesque nave presents spatial shapes and systems of construction different from those of pilgrimage churches like Conques and Toulouse. Interior volumes are much squatter and are crowned with domical groined vaults. This allows clerestory windows to penetrate into the vaults. The transverse arches of alternating stones and the domical vaults give each bay greater independence.

The elevation of nave arcade, blank wall, and clerestory seems to have derived from the priory of Anzyle-Duc, although the nave of Vézelay is more decorative and coloristic. Anzy-le-Duc, with no flying buttresses, helps one visualize the exterior of Vézelay in its original appearance.

The continuity of the masonry along the north flank of Vézelay may indicate that the first campaign from 1096–1104 included the outer walls of the nave and narthex up to the sills under the nave and narthex windows. By 1004, more of the Romanesque east end was probably finished. The burning of the small, wooden-roofed Carolingian church in 1120 could not have damaged the Romanesque choir, narthex, and nave walls. Thus, the sculptural programs of nave façade or narthex portals and outer façade could have begun before 1120.

The three portals inside the narthex of Vézelay comprise one of the most impressive sculptural ensembles in Romanesque art. The large central portal depicts the Ascension of Christ combined with the Mission of the Apostles. The tympanum shows Christ flanked by the Apostles. His power to save humankind (left side with quiet clouds and open books) and condemn (right side with stormy clouds and closed books) is clearly revealed; the lintel, showing Lydians, Greeks, Africans, and others, manifests Christ's goal to preach and convert. Archivolts, containing the signs of the zodiac and occupations of the months, frame Christ as the supreme ruler of space and time. Side portals include the Adoration of the Magi, Annunciation, Visitation, and Nativity (south portal) and Ascension and Christ meeting Apostles on the road to Emmaus (north portal). The freeing of the Holy Land as a result of the First Crusade of 1095 and the necessity of the Second Crusade, 1146–47, are both reflected and prophesied in the central portal.

Vézelay, La Madeleine, narthex portal.
*Photograph courtesy of Whitney S.Stoddard.*

Vézelay, La Madeleine, nave.
*Photograph courtesy of Whitney S. Stoddard.*

Originally, the tympanum and lintel were planned to rest on the short columns and the trumeau (John the Baptist). The portal, however, was raised by adding the two pairs of Apostles and a new base under John.

A northern dynamic intensity permeates the narthex sculpture. Christ is pushed into the block with frontal chest, transfixed head, and thin legs suspended diagonally. A hierarchy of sizes, keyed to the hierarchy of importance, is accompanied by an increase in the amount of relief to make the sculpture more readable and more meaningful.

According to Armi, the three portals were carved by two sculptors: the Avenas Master carved the altar in Avenas, worked at Mâcon and at Perrecy-les-Forges, and created two of the jamb capitals of the side portals and tympanum of the north portal at Vézelay. The second sculptor, named the Perrecy Master, collaborated with the Avenas Master at Perrecy-les-Forges and was responsible for two jamb capitals, the lintel and tympanum of the south portal, and all of the Vézelay central portal. These two sculptors also carved the Cluny choir capitals. Gislebertus, who signed his name on the lintel of the portal of Autun, was involved in two sculptural projects at Vézelay: the outer-façade portal and the mausoleum of Mary Magdalene.

In 1793, figures of most of the sculpture of the outer façade were hacked off. In 1840, Viollet-le-Duc, at the age of twenty-six, was placed in charge of restorations. Because the condition of vaults, roofs, and buttresses was so precarious, the restoration of the west façade was postponed until the 1850s. The tympanum and lintel of the central portal were removed to the south of the church, and damaged capitals were replaced by new ones. The distinctive drapery style of the preserved details of the tympanum, with narrow, flat planes, shifting inward at the bottom and separated by rounded ridge folds and windblown terminations, can be seen also in the fragments of the mausoleum of Mary Magdalene, now housed in the museum in the monastic dormitory. These fragments are identical in style to the capitals and tympanum at Autun by Gislebertus. Since his hand can be seen in the portal of Cluny, he has a career as sculptor at Cluny, Vézelay, Autun, and perhaps beyond.

In its encyclopedic scope, the Vézelay portal (narthex and façade), together with the capitals of nave and narthex, has a powerful effect on the modern visitor. For groups of pilgrims gathered at Vézelay to start toward Spain or Jerusalem, the impact must have been even more vital and moving.

The choir of Vézelay is Early Gothic, begun ca. 1185. It has a three-storied elevation like Sens cathedral. Indeed, by studying Vézelay, which has not been altered by enlarging the clerestory windows and raising the vaults as at Sens, one can imagine the original appearance of Sens. The plan consists of crossing, short transept arms, single ambulatory with five radiating apsidioles, and four square chapels in the forechoir. These nine chapels are separated at the bottom level only, so that space is continuous around the periphery of the choir. The treatment of the ribs and vaults exhibits fascinating Early Gothic inconsistencies. The happy juxta-position of Early Gothic choir and Romanesque nave imparts a visual vibrancy to Vézelay.

# VICQ

. Located within the diocese of Bourges, the parish of Vicq (Indre) was one of many highly desirable sites in the 11th and 12th centuries. Although little specific documentation survives about the Benedictine abbey church of Saint-Martin at Nohant-Vicq, the parish of Vicq is often mentioned as a possession of Déols, in relation to surrounding areas and possessions. By the later 12th century, a dispute arose over parish rights between the priory of Aureil, which had acquired many possessions in the parish, and Déols. In the end, Déols kept the abbey.

Sometime between the last quarter of the 11th century and the early 12th, the church of Saint-Martin at Vicq was constructed and later painted. (It was transformed into a barn in 1700.) No architectural sculpture but much wall painting survives. Inside, each of the three successive spaces grows increasingly small. Within the rectangular nave, the transverse wall contains a small entrance into the choir and an enthroned Christ in mandorla, Apostles, and scenes from the life of Christ and the Virgin. Small windows illuminate the wall paintings of the life of Christ and scenes from the Old and New Testaments in the cubic choir and half-round apse. Around the apsidal arch are paintings of biblical and saintly figures and within the apse a Christ in Majesty.

# VIDAME

. Term (Lat. *vice-dominus*) that originally referred to the lieutenant or stand-in of the lord of a great seigneurie. Rather early, it acquired a more specialized meaning: the man responsible for the temporal possessions of a religious house or bishopric. His tasks involved administering justice and defense, as well as leading the troops whom the bishop or monastery had to send if the king summoned them to military service. A

*vidame* thus resembled the *avoué* of a monastery. The position soon became a hereditary fief, with a bishop's *vidame* being one of the important nobles of the diocese.

*John Bell Henneman, Jr.*

[**See also:** *ADVOCATUS/AVOUÉ*]

### *VIDAS* AND *RAZOS*

. Commonly referred to jointly as the "biographies of the troubadours," the Provençal *vidas* and razos are brief accounts in prose. The *vidas* were rarely more than a few sentences long, reporting who the troubadour was, whence he came, whom he loved, what kind of songs he composed, and where he died; the *razos* ("reasons"), usually several paragraphs long, attempted to explain how a given troubadour happened to write a certain song. Vidas survive for about a hundred troubadours; razos, for about twenty-five.

The *vidas* and *razos* are preserved in some twenty chansonniers, most of which were compiled in northern Italy. Four of these collections date from the 13th century; virtually all the rest, from the 14th. In the 13th-century manuscripts, the *vidas* and *razos* are placed immediately before (or, in the case of the nineteen Bertran de Born razos, immediately after) the poem or poems to which they pertain; in the 14th-century codices, the biographical texts stand detached from the poems, in a section unto themselves.

Two of the biographies are signed: the *vida* for Peire Cardenal, by a certain Miquel de la Tor, and one of the *razos* for Savaric de Mauleon, by the troubadour Uc de Saint-Circ, who identifies himself as having written *estas razos*. The common errors, cross-references, and stylistic similarities among the texts make it apparent that there was one primary biographer, undoubtedly Uc. Even if Uc "wrote" the biographies, he did not necessarily invent them. The abundance of accurate geographical detail in the *vidas* suggests that they were composed originally by jongleurs, who, as traveling performers, knew the southern French countryside well and who would have invented these narratives on the spot as a means of enlivening their recital of troubadour songs.

The *vidas* and *razos* follow a variety of narrative patterns: some resemble miniature saints' lives; others are like fabliaux; still others are reminiscent of the Latin *accessus ad auctores;* most of them are simply humorous expansions on metaphors drawn from troubadour poems.

Both the virtual absence of *razos* (with the exception of those pertaining to Bertran de Born) from the earliest chansonniers and the relative narrative simplicity of the typical *vida* compared with the *razo* made scholars for a long time assume that the *vidas* predated the *razos*. The opposite, however, is true. None of the information reported in the *razos* postdates the year 1219, whereas some of what is contained in the *vidas* does. Uc did not produce the *razos* as a single block. He wrote the *razos* for Bertran de Born first. These texts remained detached from the others. Uc referred to them once in a *razo* about Folquet de Marseille as *l'autr'escrit,* thus acknowledging that he wrote them at an earlier time.

The distinction between *vida* and *razo* is not always clear-cut. There are at least a dozen mixed texts spread throughout the chansonniers. Within the biographies themselves, the term *razo* is applied indiscriminately and the word *vida* never occurs as a

generic designation. *Vida* first appears in the rubrics of certain 14th-century chansonniers.

# VIENNE

. Under the name of Vienna Senatoria, Vienne (Isère) became a Roman colony and the capital of the province of Gaul shortly after Julius Caesar's death. Later, it was capital of the kingdom of Burgundy (413–534) and from 879 to 1032 was the capital of the so-called kingdom of Arles. Its archbishops, who from 1119 bore the title of primate of Gaul, divided its territory with the dauphins of the Viennois until the accession of Louis IX, when it was absorbed by the province of Dauphiné. In 1311, the city hosted the fifteenth ecumenical council, at which Clement V pronounced the suppression of the Templars.

The former cathedral of Saint-Maurice was begun in the early 11th century and completed in the 15th. In the 13th century, the choir, apse, and aisles were reconstructed around the original Romanesque nave. In the 14th century, chapels were built along the length of the church. In the 15th century, the church was extended to twelve bays, and the vaulting, western façade, and two flanking towers were completed. The absence of a transept and the uninterrupted garland of the triforium exaggerate the low (82 feet at its highest point) and long (297 feet) proportions of the structure. The Flamboyant western front (14th and 15th c.) is preceded by a broad flight of steps descending toward the Rhône River. The three gabled portals of the

Vienne (Isère), Saint-Pierre, restored plan. After Reynaud.

façade are surrounded by richly sculpted moldings. On the upper story is a grand rose window, as large as the central doorway it surmounts. The arms of the antipope Clement VII (r. 1378–94) appear sculpted in the portal to the right of the façade.

The church of the abbey of Saint-Pierre-de-Vienne, founded in the first half of the 6th century, was built upon the foundation of a 4th-century Christian basilica. Until the 12th century, it was the burial place of the archbishops of Vienne. Rebuilt in the 10th and 12th centuries, it has a nave with aisles and an apse. At the front of the church stands a square Romanesque bell tower (12th c.), and on the south portal is a sculpted tympanum (12th c.).

The church of Saint-André-le-Bas was founded in 542. Ravaged by Muslims and Franks, it was restored in the 9th century. Originally belonging to an order of nuns, it was given to the Benedictines in the 10th century. Reconstructed ca. 1152, the building has no aisles and is only 45 feet long. The extensive decorative program of the interior includes an ornamental frieze and columns capped by historiated capitals. Bulging cross-ribbed vaults are supported by flying buttresses, perhaps the first instance of this structure more typical of the 13th and 14th centuries. On the exterior is a three-story bell tower like that at Saint-Pierre.

## VIES DES ANCIENS PÈRES

**.** In the 6th century, a collection of Lives of monks and saints who lived in the desert of Egypt was translated into Latin from Greek and formed, in ten books and an appendix, what was collectively known as the *Vitae patrum*. This collection was frequently translated into medieval French, the most interesting version being that by Wauchier de Denain for Philippe, marshal of Namur (d. 1212). However, the title *Vies des anciens pères* refers more specifically to a 13th-century collection of pious tales, totaling over 30,000 octosyllabic lines and found, in one of its several forms, in more than fifty manuscripts and fragments. The first forty-two tales, from the early 13th century, are largely oriental in inspiration. Well written, each has a prologue and focuses on humanity's role in its own salvation. The later tales, from mid-century, are more closely related to the Miracles of the Virgin, lack prologues, and are generally set in contemporary France. The straightforward narratives of the early group are replaced by convoluted rhetoric, word play, and metrical intricacies in the manner of Gautier de Coinci.

# VIGNAY, JEAN DE

(ca. 1282/85–1350). Translator. Born near Bayeux, Vignay was a monk of the order of Saint-Jacques-du-Haut-Pas in Paris. Eleven of his twelve translations from the Latin (one is lost) are preserved in magnificent illuminated manuscripts made for King Philip VI (r. 1328–50); his widow, Jeanne of Burgundy; and their eldest son, the future John II the Good. His most important translations are of Vegetius's *De re militari (De la chose de la chevalerie),* Vincent de Beauvais's *Speculum historiale (Miroir historial),* Hugues de Saint-Cher's *Speculum Ecclesiae (Miroir de l'Église),* Jacobus of Voragine's *Legenda aurea (Légende dorée),* and Jacques de Cessoles's *Liber super ludo scaccorum (Livre des eschez).* The latter two were translated into English and printed by William Caxton. The *Livre des eschez* was the second book to be printed in the English language (1475). Jean de Vignay's Latin was rudimentary and his French style halting; moreover, his extreme faithfulness to the vocabulary and syntax of his originals frequently makes his translations difficult to follow.

# VIGNEULLES, PHILIPPE DE

(1471–1528). All the works of this rich bourgeois deal with Lorraine and, more specifically, with his beloved city of Metz. Vigneulles left us a *Journal,* a long *Chronique de Metz, de Lorraine et de* France, the epic *Garin le Lorrain* (translated *de ancienne rime en* prouse), and a collection of *contes a rire:* the *Cent nouvelles nouvelles.* His *Journal* gives a vivid picture of Metz and describes his education, Italian voyage, capture by brigands and payment of a ransom, the ravages of the plague, and so on. The *Chronique* begins with Adam and ends in 1525. The *Nouvelles* and the prose *Garin* (unedited) were completed in 1515.

The *Nouvelles* are preserved in a unique manuscript, now in Bowdoin College. The lascivious character of the stories accounts for the severe mutilation of the manuscript, probably by Philippe's heirs. Of the 110 stories (Phillipe added ten stories to the original hundred, without bothering to change the title), about forty are incomplete and fourteen are missing altogether.

Several models influenced Philippe's compilation. He was inspired by its more famous 15th-century namesake, the anonymous *Cent nouvelles nouvelles*. He also drew on, sparingly, the *Decameron,* Poggio's *Liber facetiarum,* and other Italian storytellers. But his chief sources were the ubiquitous fabliau tradition, with its insistence on the salacious, and oral stories heard by him in his native Lorraine or on his voyages. The stories, placed in a concrete milieu, constitute a priceless document preserving the daily life of the bourgeoisie of Metz at the waning of the Middle Ages.

# VIGNORY

**.** Founded ca. 1000, the church of Saint-Étienne of Vignory (Haute-Marne) is one of the earliest Romanesque structures in France. Built largely between 1032 and 1057, it consists of a nine-bay nave under an open-timber roof, separated from the side aisles by a two-story arcade: wide arcades, a false tribune of twin bays with sculpted capitals, and high windows. A high triumphal arch separates the nave from the vaulted choir with ambulatory, Gothic radiating chapels, and twin flanking towers, which are 12th-century. The church contains some beautiful 14th- and 15th-century statuary in Champenois style. The most remarkable are an altar frontal showing the Crowning of Mary between SS.Peter and Paul and an altar frontal of the Passion flanked by donors presented by John the Baptist and St. Catherine.

# *VIGUIER*

. In the government of the Frankish kings and the Carolingian empire, the title *vicarius* (Fr. *viguier*) designated widely the principal local deputy of the counts or dukes. After the breakdown of royal authority in the 10th century, these *viguiers* continued to function, particularly in the south, as officials under the regime of their hereditary overlords. The status and power of the *viguiers* increased with the advent of royal government in Languedoc in the 13th century. Although many of their judicial functions were assumed by judges, they were endowed with broad executive powers in the administration of districts *(vicariae)* under the royal seneschals. They received salaries that, for the greater *viguiers,* afforded a handsome revenue. Until it was broken up in 1352, the *viguerie* of Béziers remained the largest in the Midi, encompassing four episcopal cities, Béziers, Narbonne, Agde, and Lodève. Few *viguiers,* nonetheless, advanced to the rank of seneschal; most appear to have been recruited from the lesser nobility or in some cases from among the nonnoble inhabitants of the region.

# VIKINGS

. The raids of the Vikings struck terror into those living near the Atlantic coast or on the rivers leading to the Atlantic in the 9th and early 10th centuries. The Norsemen were Scandinavians who for the most part lived on coastal farms. In the late 8th century, they developed sails for their longships, and many a Viking lord, frequently an unsuccessful claimant to the throne of one of the numerous Scandinavian principalities, began leading raids south-ward. Their first attack took place in England in 793, and raiding intensified over the 9th century. The Carolingian trading center of Duurstede, sacked repeatedly, lost all real importance. Vikings found monasteries, with their treasure and wine cellars, an especially appealing target; some monks, such as those of Saint-Philibert, had to flee repeatedly as each place they settled turned out to be subject to Viking attack.

The inability of the Carolingians to deal with the Viking raids was one of the signs of governmental weakness in the second half of the 9th century. Lords who could resist them were able to use this success in their efforts to establish strong principalities. In 885–86, the Vikings besieged Paris; Count Eudes, son of Robert le Fort, led the defense and was elected king (r. 888–98) shortly afterward.

But the Vikings were more than raiders. They established centers for trading fur, honey, and pitch; the "Rus" branch of the Vikings established long trade networks across what later became Russia, reaching eventually to Constantinople. Vikings made permanent settlements in Ireland and in the eastern part of Great Britain. In 911, the French king Charles 111 the Simple granted Normandy (named for the Normans, or Northmen) to their leader Rollo on the condition that he be baptized a Christian.

# VILLANDRANDO, RODRIGO DE

(ca. 1380-ca. 1455). Born in Castile, Rodrigo de Villandrando traveled to France to pursue a career in arms. He began in Burgundian service but joined the dauphin Charles after establishing his own company in 1420. Able but unreliable, he won fame after 1435 for his command of a formidable band of *écorcheurs*. His undisciplined troops ravaged France by living off the land and extorting money from the cities and estates of Languedoc. As the greatest mercenary of his era, Villandrando incarnated the need for military reform. He returned to Castile once reform began in 1439 and died there in retirement.

# VILLARD DE HONNECOURT

(Wilars dehonecort; Vilars dehoncort; fl. 1220–30). Picard artist now known only through a portfolio of thirty-three parchment leaves of drawings in Paris (B.N. fr. 19093). Some leaves have been lost from the portfolio; the maximum number that can be proven to be lost is thirteen, with the possible loss of two additional leaves.

Villard addressed his drawings to an unspecified audience, saying that his "book" contained "sound advice on the techniques of msonry and on the devices of carpentry… and the techniques of representation, its features as the discipline of geometry commands and instructs it." The subjects of Villard's drawings are animals, architecture, carpentry, church furnishings, geometry, humans, masonry, mechanical devices, recipes or formulae, and surveying.

Villard traveled extensively, and most of the identifiable monuments that he drew date to the first quarter of the 13th century. He drew, and perhaps visited, the cathedrals of Cambrai, Chartres, Laon, Meaux, Reims, and the abbey of Vaucelles in France; the cathedral of Lausanne in Switzerland; and the abbey of Pilis in Hungary.

There is no documentary evidence that Villard designed or built any church anywhere or that he was in fact an architect. It has been proposed that he may have been "a lodge clerk with a flair for drawing" or that his training may have been in metalworking rather than masonry. It may be that Villard was not a professional craftsman but rather an inquisitive layman who had an opportunity to travel widely.

# VILLEHARDOUIN, GEOFFROI DE

(ca. 1150-before 1218). Author of the *Conquête de Constantinople,* one of the earliest historical works written in French prose, and one of two eyewitness accounts of the Fourth Crusade. Villehardouin was born into a noble Champenois family. He served the count of Champagne, Thibaut III, as marshal after 1185. In this capacity, Villehardouin developed the mediating abilities that would serve him so well. We know of three disputes he mediated, one involving the count himself.

Count Thibaut III of Champagne (d. 1202) was one of the organizers of the Fourth Crusade, so Villehardouin was at the heart of the planning. He was one of the six ambassadors sent to Venice in 1201 to negotiate passage in Venetian ships. In 1203, he was sent to Isaac II, whom the crusaders had restored to the throne of Constantinople, to see that the Latins would be paid as agreed. He carried out negotiations between the emperor Baudouin and Boniface of Montferrat, the new leader of the crusade, when the two fell out. Because of his outstanding services, Villehardouin was made marshal of Romania in 1205. The rest of his life is obscure. He last appears in the records in 1212 and was certainly dead by 1218, when his son arranged a memorial for him.

The *Conquête,* which begins with the preaching of the crusade by Foulques de Neuilly and ends suddenly in 1207, was composed after the events it relates, although Villehardouin probably made notes and certainly used documentary sources. The prose is straightforward and unrhetorical. The story is told in excellent chronological order.

Villehardouin seems to have intended his work as a defense of the crusade against critics who pointed out that the crusaders attacked only the Christian cities of Zara and Constantinople and never got to Jerusalem at all. Villehardouin lays chief blame for these unfortunate facts on those who failed to join the crusade at Venice and help pay for passage, forcing the crusaders to repay Venice by attacking Zara, and those who deserted later, leaving too small a fighting force for a real holy war. He does not, however, hold blameless those who participated or remained; their sins, particularly their greed, caused further disasters and offended God.

Villehardouin's narrative was more widely read than Robert de Clari's, the other eyewitness account of the Fourth Crusade. Six manuscripts of the *Conquête* are extant, and two more were used in early editions before they disappeared. In addition, two

manuscripts of an abbreviation exist. Villehardouin's work was also incorporated in the *Chronique de Baudouin d'Avesnes,* a 13th-century compilation that circulated widely.

# *VILLENEUVE*

. Newly founded village on reclaimed land. Although there had been earlier waves of depopulation and resettlement in France, from ca.1000 to 1250 a great surge of village foundation coincided with the great movements of clearance and reclamation. These new villages in areas that had previously been forest or waste were called by such names as *villeneuves, neuvilles, neufbourgs,* or *sauvetés*. Except for rare instances when squatters successfully cooperated to found such villages, the *villeneuves* were founded by the economic and political efforts of the lay and religious lords who were owners of wide tracts of forest and waste. These lords founded such villages in order to increase their rents and dues, or to extend their power into march and border areas, or to settle previously bandit-invested stretches along pilgrimage routes. Some *villeneuves* were set out along either side of a long street with holdings stretching far out behind each farmstead (the herringbone plan); others were compact villages of farmsteads set out on a grid with fields surrounding them. In Aquitaine, such new villages, called *sauvetés,* were sited near chapels or priories protected by the Peace and Truce of God and whose safeguard extended to crosses that enclosed and protected the new inhabitants. Frequently, the *villeneuves* were founded cooperatively by lay and ecclesiastical lords, one providing legal rights over the land, the other the laborers or the capital for startup costs. The tendency of such lords to invest capital in such new villages, providing mills, churches, and ovens, demonstrates not only the effort to increase political power but the increase in rural production of this era, in which such lords wished to share. Settlers for such *villeneuves* came from older, generally extremely overpopulated villages, often not far from the new settlements. Expansion of village foundations generally improved the condition of peasants throughout a region; since favorable terms were offered in the new villages, lords of older settlements had to improve conditions and grant charters of liberties in order to maintain their labor force. Such settlements on previously unoccupied land should not be confused with later transformation of granges into bastides by the Cistercians and others.

# VILLENEUVE-SUR-YONNE

. A "new town" founded in 1163 by Louis VII, Villefranche-le-Roy (now Villeneuvesur-Yonne in the department of Yonne) preserves at either end of its main street the massive Gothic town gates (Porte de Sens; Porte de Joigny). Portions of the original ramparts are also standing, as well as the 12th-century cylindrical keep (Tour Louis-le-Gros) and 12th-century bridge. The church of Notre-Dame, begun in 1240, shows both Burgundian and Champenois influence. The choir and ambulatory were constructed first, followed by the wide nave and side aisles. The façade is pure Renaissance.

# VILLON, FRANÇOIS

(1431–1463). Of all the lyricists of late-medieval France, Villon is the most celebrated among both scholars and general readers. Students of premodern literature inside and outside the francophone world have encountered him in his original Middle French; and thousands of people who have little or no French have read versions of his poems in the major European languages.

It was not always thus. The circle of contemporaries who knew of Villon's literary abilities was a modest one. He tells us in his *Testament* that an earlier work, the Lais, is already in circulation and being referred to by a title not of his choosing. On the other hand, the number of early sources preserving his poems is small; and his readers were in general not found among the rich and powerful. Although some such personages come in for mention in his verses, it is usually in the context of appeals for money, or of distant, uneasy, or downright irreverent allusion; Villon was not a success with well-off patrons of literature. The fame he sought eluded him. He seemingly hoped for a career as a court

poet and exerted himself to catch the eye of such highly placed connoisseurs as Charles d'Orléans; but for unknown reasons, he did not achieve more than a small gift of money here and there. Greater success in his lifetime, however, might well have spelled later obscurity; his *poésies de circonstance,* composed, we must assume, to curry favor, competent though they are, are by and large forgettable. Rather than spend much of his career in turning out pleasing official verse, he was driven by circumstance, and perhaps also by a jarring personality, to live by expedients, know misery, reflect on it, and write amateur poetry of a unique stamp.

The body of Villon's works is of moderate dimensions: some 3,300 lines. It comprises independent pieces in fixed form (ballades and rondeaux) and two unified compositions, the *Lais* and the *Testament*. The Lais, dated 1456, is a series of burlesque legacies occasioned by being, as Villon asserts, crossed in love, and consequently deciding to quit Paris, perhaps never to return. The *Testament* (1461) takes up again the legacy pattern but refines it into the articles of a last will and testament, complete with legal clauses and phraseology, the fiction now being that the author is near death and bethinking himself of soul and body as well as of worldly goods. This, Villon's major work, written in octaves (eight-line strophes of octosyllabic verse), contains fixed-form pieces as well, some of which may antedate or even postdate 1461. The whole amounts to a personal literary anthology as well as the poet's artistic testament and monument. The rest of his *œuvre* is made up of a fulsome *Louange* of Princess Marie d'Orléans, with attached double ballade and much Latin adornment; a *Ballade franco-latine,* even more latinate; a number of difficult poems in the jargon of the medieval French underworld; and some ballades made up of the rhetorical devices dear to the schoolroom and fashionable court. Jumbled in with them are some pieces so intensely felt, so personal, so perfectly marrying form and content, that they belong by right to the greatest world literature. Among these are the *Épître a ses amis,* Villon's *De profundis;* the yes-and-no meditation on fate and individual responsibility best called *Débat de Villon et de son* cœur, and the *Ballade des pendus,* with its unbearable yet inescapable vision of legally executed bodies (including the poet's?) and its reiterated solicitation of prayer for their souls. Villon's last poems appear to fit into the interval between his last imprisonment and appeal, the commutation of his death sentence to a ten-year exile, and his departure in 1463 to an unknown end.

Villon was born into a poor family (*Testament,* ll. 273–75) in 1431, the year marked by the death of Jeanne d'Arc, celebrated in the *Testament* (ll. 351–52) as…*Jehanne la bonne Lorraine/Qu'Engloys brulerent a Rouen* ("Joan, the brave girl from Lorraine/Burned by the English at Rouen"). The Hundred Years' War was dragging on; disease, food-shortages, and protracted spells of cold, wet weather afflicted everyone, the poor especially. It was out of harsh necessity, no doubt, that the future poet's mother entrusted her child to a presumed relative, Guillaume de Villon, the kindly chaplain of the Parisian church of Saint-Benoît-le-Bétourné not far from the Sorbonne, who would be the boy's *plus que père* (*Testament,* l. 849).

Young François, originally called de Montcorbier or des Loges, took the surname of his adoptive father, and much else besides: security, relative comfort, clerical status, and the opportunity for the best formal education then available. In 1449, he obtained the baccalaureate degree and three years later the License and the degree of Maître ès Arts. This and his connections ought to have smoothed Villon's path into the learned professions; but these were overpopulated in the mid-15th century. To enter the secular or

regular clergy was apparently not for him a viable choice; nor, in the absence of an independent income or a patron, was it possible for him to become a professional writer. He turned to living by his wits, in the company of other unemployed *clercs* and even more lowly individuals; and this led him into repeated brushes with the law, mainly for theft but once for manslaughter. As an *écolier,* he was entitled to the church's protection from the full rigor of secular justice; but it looks as if he lost the benefit of clergy, as well as many months of freedom, when he was condemned to prison at Meung-sur-Loire in 1461 by the bishop of Orléans.

It was his long police record, rather than one final and spectacular crime, that drove the exasperated secular authorities in late 1462 to pass a capital sentence; the Parlement, on appeal, commuted this to a ten-year banishment from Paris and its environs. Sadly, it is owing to his activities as part-time criminal that much of the information about Villon has come to us, for the abundant records have been preserved in the Paris archives. They supplement the hints, half-truths, special pleading, and down-right lies that bestrew the poet's own writings.

Such a biographical excursus is particularly indicated in Villon's case, for much of his work is highly personal without always being informative or even candid. His feelings take precedence over the exact cause for them, his hatred for his enemies overshadows the ways whereby the latter have earned his resentment, and the possibility that the poet himself might somehow have provoked or deserved rough handling is pushed far into the background. Yet the interweaving of concrete if unreliable allusions to persons and events on the one hand, of passionate response on the other, makes of Villon an autobiographical lyricist to an unusual degree.

His themes, though, are universal ones, colored by his cultural milieu and his own subjectivity. Adversity, suffering, insecurity, the hunger for love, the transitoriness of youth and of all good things, the approach of death, the faith that sees beyond it—these are the timbers of which his work is built. Through the 2,000 lines of the *Testament,* he turns these notions over and over, in a composition structured by association of ideas and shifting moods rather than logical or formal progression. This begins as early as the first stanzas, which move with great rapidity from the testator's age and mental condition to his state of health and thence to his recent hardships and the person responsible for them; and with the name of Bishop Thibaut d'Aussigny, the memory of the preceding summer's incarceration, and probable degradation from clerical status, comes flooding back, making him sacrifice syntax to sarcasm: yes, he will pray for his enemy—with a cursing psalm. For good measure, he adds a prayer for Louis, *le bon roy de France*. On he goes, intermingling complaint, piety, and half-admissions of unsatisfactory behavior. Yet a sinner in his situation is pardonable: *Neccessité fait gens mesprendre/Et fain saillir le loup du boys* ("It's need drives folks to go astray,/And hunger, the wolf to leave the woods"; ll. 167–68). He has abundant grounds for lamentation. His youth has flown; he is prematurely old, poor, rejected by his kin, disappointed in love, regretting his old friends (where are they now?), knowing that death will come for him as it has for the lovely ladies and great potentates of the past. These are themes to which he returns, obsessively but not uninterruptedly; for a great number of bequests remain to be formulated and the whole apparatus of the fictitious testament to be worked in.

There is a good deal of humor in all this, of a rough, pun-filled, scabrous character; and the poet takes advantage of the safety afforded by the last-will-and-testament schema

to take verbal revenge on the individuals and classes who have earned his disapproval; after all, the document, according to the poetic fiction, will not be read until after his decease. We are led once again to the theme that underlies the *Testament* as a whole. It sometimes is expressed with gentle gravity, as in the *Ballade des dames du temps jadis;* in grimmer moments, the poet's thought turns to scenes commonly beheld in Paris: the piled-up and anonymous bones in the Cemetery of the Innocents, the cadav-ers of executed criminals dangling from the Montfaucon gibbet, the last agony awaiting each man and woman. In the Europe of the 15th century, the body's death was but a stage in the soul's journey; prayers and allusions to Heaven and Hell throng the octaves and fixed-form pieces. In the intervals of anxiety about death and what is in store for himself and all humankind, Villon repeatedly turns to common experience, particularly its darker side. Happiness is rare and fleeting; sorrow, fear, physical discomfort, and decrepitude— these are the lot of the human race. Why had Villon, why had so many men and women known suffering? Why does a just God permit malevolent Fortune to afflict the innocent? The poet's own stance, at least as early as the independent *Épître a ses amis* (presumably composed during the 1461 incarceration at Meung-sur-Loire) is that of a blameless victim, and he cries out with the words of the archetypical righteous sufferer, Job (11. 1– 2): *Ayez pictié, ayez pictié de moy/A tout le moins, s'i vous plaist, mes amis!* ("Have pity, do have pity upon me,/You at least, if you please, who are my friends"). This explicit kinship with Job is affirmed repeatedly through the *Testament;* it has become the poet's characteristic way of making sense of what has befallen him, of understanding, as well, the human condition.

Villon's themes are by no means original, nor is his use of archetypes in working them out. As an educated man, he was steeped in the Latin classics and in the Bible, those storehouses of human experience and its literary expression; to allude to traditional topoi, stories, and personages was second nature for him, as it was for other writers of the day. His preoccupation with death and decay, his frequent melancholy, his startling coarseness, his mingling of jest and seriousness, are also features common in late-medieval writing, and in the visual arts as well. What sets him apart is the immediacy of his communication with the reader. His verse revivifies the notion of lyric: not poems to be sung, but poems expressive of feeling. Unlike the conventional and impersonal *je* of much contemporary writing, Villon's *je* most frequently is his unique and unruly self, temporarily brought to order by the discipline of his octaves and his fixed-form pieces. Much 15th-century poetry treats of love, again in courtly and stereotyped ways, for the stylized worship of the lady was still very much alive. Villon writes of love, too, but mostly from his own limited experience: it is a snare and a delusion, at best a fleeting joy. By and large, women are sensual and venal (but not to be condemned, for it is *nature femeninne* [*Testament,* l. 611] that moves them), and in any case their attractiveness soon withers. Indeed, woman's charms, such a staple among mainstream masculine writers of the period, do not feature much here except in the context of bitter reminiscence and of regret for the transitoriness of all things desirable. It would in fact not be easy to find another major poet so indifferent to beauty; but then visual description of any sort does not stand out in Villon's verses. He inclines to naming persons and places, to evoking action and speech and gesture, rather than to painting word pictures. Even his self-description is limited to a few qualifiers: *sec et noir; plus maigre que chimere* ("skinny and dark"; "thinner than a wraith"). What he does give us is his reactions to his

experience, and a sketch of late-medieval France as he knew it. This is a world of people living by their wits and not hampered by scruples: entertainers, prostitutes, counterfeiters, tavern keepers and tavern haunters, jailers and moat cleaners, peddlers, beggars, dissolute monks—Villon's poetry opens the door upon a teeming world, lacking in grace or nobility but intensely alive. Most vital of all are the poet's own self and experience, given expression that transcends his own time and milieu so as to be at once personal and universal.

Villon's works have been preserved in a number of manuscripts and fragments, and in a printed edition of 1489. These early sources vary in completeness, from the Lais, the *Testament,* and numerous independent pieces, down to two or three ballades; they differ also in degree of reliability. The manuscript copies, the incunabulum, and also the many 16th-century printings of his works attest to a moderate readership over the course of about a century. Villon then, like most medieval writers, underwent an eclipse, with one edition at the end of the 1600s and three in the 1700s. The years from 1832 onward have seen an increasing flow of editions, translations, historical notes, and interpretive essays; and the stream shows no sign of drying up. Villon continues to be subject to much critical scrutiny, some of it closer to creative writing than to explication of the texts, but much of it responsible and serious. We can now read Villon's often difficult and allusive verses with a fair approximation to his own meaning.

# VINCENNES

. The castle of Vincennes, just northeast of Paris, was a favorite residence of the Capetian and Valois kings. Philip II Augustus built a hunting lodge here, and Louis IX is reported to have dispensed justice beneath the giant oaks of the nearby forest. The castle, constructed on a rectangular plan with square towers, was begun by Philip VI, continued under John II the Good, and completed by Charles V in 1369. Only one tower and the impressive 185-foot-tall keep remain. Flanked at the corners by turrets, the keep remains an outstanding example of 14th-century military architecture, although its battlements and machicolations have been destroyed. Within the walls of the later classical fortress (17th c.), the Flamboyant Chapelle Royale, an elegant Gothic single-nave structure begun in the late 14th century under Charles V in imitation of the Sainte-Chapelle in Paris, was completed by Philibert de l'Orme in the 16th.

# VINCENT DE BEAUVAIS

(ca. 1190–ca. 1264). The author of a most spectacular encyclopedia of medieval culture and thought, Vincent de Beauvais joined the Dominican house at Paris ca. 1220, shortly after its founding, and probably moved to the new Dominican house in his native region of Beauvais toward the end of the same decade. Vincent served as lecturer to the monks of the nearby Cistercian abbey of Royaumont, founded by King Louis IX in 1228 and through this association, mediated by Abbot Ralph, won the favor of the king and ultimately the support of the royal purse for his scholarly projects.

The first half of the 13th century was a time of intellectual "consolidation," when several scholars, Vincent among them, felt the need to integrate the results of the intellectual explosion of the 12th century with the traditional learning of western civilization. Vincent entitled his work *Speculum maius,* a mirror to the world and its truths, which he compares implicitly with earlier attempts, perhaps the *Imago mundi* of the 12th century, sometimes attributed to Honorius of Autun. The *Speculum* originally comprised two parts: the *Naturale* and the *Historiale*. The *Naturale* beings with a treatise on theology (the triune God, archetype and creator of the universe; angels; demons; account of Creation and the exitus of all reality from God), proceeds to a consideration of the Fall, Redemption, and the sacraments of the church, and concludes with a summation of natural philosophy, including a description of the physical universe and the nature of human being. The *Historiale* gives an account of history from the Creation story of Genesis to 1244 in his earliest edition, and extended to 1254 in his later version. Its

popularity is attested by several translations into the vernacular, including French, Catalan, and Dutch verse. After revising and reorganizing his work, Vincent produced a third volume, the *Doctrinale,* that contained a treatise on knowledge and the arts, including all the fields of science, from grammar and mechanics to politics, law, and medicine: in short, all that is useful to know to live a fruitful and productive life, both public and private. Although Vincent had intended to publish a fourth part, the *Morale,* he never accomplished his goal. The tract entitled *Morale* that began to circulate in the 14th century with the first three parts is in fact an anonymous compilation drawn from the *Summa theologica* of Thomas Aquinas.

In the last years of his life, Vincent composed treaties for the royal court. On the death of the dauphin Louis in January 1260, he wrote his *Epistola consolatoria super morte filii*. Within the next year or so, he published at the request of Queen Marguerite a tract on the education of princes, *De eruditione filiorum nobilium,* for the tutors of Prince Philip. Finishing this work, Vincent returned to his treatise concerning royal government requested by Louis IX. Sometime before Pentecost 1263, he presented the first part, *De morali principis institutione,* to his patron. But as with his *Speculum,* Vincent never finished this work: the second part was only supplied at a later date by a fellow Dominican, William Peraldus.

# VINCENT OF LÉRINS

(d. before 450). A monk of the monastery of Lérins, Vincent contributed to theological argumentation in his day. A vigorous opponent of Augustine's ideas on grace and predestination (which he saw as a deviation from true tradition), he may be identified as a Semi-Pelagian. His *Commonitorium* offers the famous rule for determining what is to be believed as Catholic truth: *quod ubique, quod semper, quod ab om-nibus creditum est* ("what has been believed everywhere, always, by all"). The three characteristics of universality, antiquity, and unanimity represented a line of defense against heretical, or at least deviant, developments in matters of belief.

# VIRELAI

. While in the 14th century the virelai has a recognizable *forme fixe,* its origins and development are obscure and controversial. The first references to the *vireli* or *virenli* occur in the mid-13th century in the context of dance-song, but at this date it is difficult to distinguish it from the ballette: in effect, both are expansions of the *rondet.* There are resemblances between the *vireli* and the Occitan *dansa,* the Spanish *villancico,* and the Italian *lauda*.

By the 14th century, the term "virelai" becomes more common, although it is then redefined by Guillaume de Machaut as *chanson baladee*. The first known poems of the type, composed by Jehannot de Lescurel (d. 1303), feature an opening refrain; strophes in two sections, the second corresponding to the meter and rhyme of the refrain lines; and the repetition of the refrain after each strophe. The number of refrain lines varies from one to eight, and the first strophic section can have a distinct rhyming and metrical scheme. The music has the pattern: I II II I etc. Of Machaut's thirty-three virelais set to music, twenty-five are monodic (like Lescurel's). Never common, virelais are increasingly rare by the 15th century.

# VIRGIL, INFLUENCE OF

. Among all the Latin poets, Virgil (ca. 70–19 B.C.) was the most "classical"—in the literal sense. Students read and relished his writings, copied and interpreted the Latin, and memorized and canonized his ideas from the earliest period. Those who followed the master imitated his style unashamedly: Ovid, Lucan, and Claudian, for example, allude to his works constantly. Medieval authors found in his works inspirational and exemplary inducements to pursue virtue. Both Virgil's own person and his work became magical touch-stones of prophecy.

Virgil left to the Latin West three influential texts, each providing a unique allegorical matrix and unique perspective on life's stages: the *Eclogues,* the *Georgics,* the *Aeneid.* The youthful, nostalgic, and pastoral mood of the *Eclogues* gives way to an adult husbandsman's deep concern for nature in the *Georgics.*

In his mature years, Virgil composed a national epic in imitation of Homer, among other sources. The work was in many ways a perfect vehicle to be taken up by the medieval mind. Half allegory, half history and legend, Virgil tells of Aeneas's flight from the burning citadel of Troy, wanderings in the Mediterranean, and struggles in Italy to found a new home. From the horrendous storm in Book 1 to the plangent melancholy of the Dido episode; from the marvelous underworld visit in Book 6 to the martyrdom of the young prince Pallas in Book 11—the poem became in the hands of interpreters a kind of three-part invention that fused the mythic past and mythic present to an imagined future. Bitter political irony often intrudes as well, because Caesar Augustus's poet at once ambiguously reifies and decries the unspeakably violent and unscrupulous power games necessary to create and control a world empire.

Once the magic and prestige of this material was absorbed by visionary rulers like Charlemagne or William the Conqueror, there was no end to attempts to link up one's royal dynasty with the lineage of the Trojans. With Julius Caesar and other grand emperors as your ancestors (and King Priam of the fifty sons behind them), any upstart baron could convince his liege or perhaps even the papacy of his imperial pretensions.

Studying Virgil's Latin, like reading the Bible and savoring Ovid's rhetorical trivialities, is what educated people have done for nearly 2,000 years. Throughout the Middle Ages, for church fathers like Jerome and Augustine, or for Christian poets like Prudentius, grammar study meant reading the *Aeneid.* Geoffrey of Monmouth used Virgil extensively.

Of the 1,500 or so surviving Virgil manuscripts—of which perhaps two-thirds were copied in France—many date from the crucial *aetas Virgiliana,* the 9th-11th centuries. Of those, some 170 carry ancient commentary from Servius, Fulgentius, and others, which were absorbed *en passant* by the mid-12th-century anonymous *Énéas* poet, who freely adapted Virgil's *Aeneid* into the vernacular Norman French for a noble audience. This fascinating early romance combines many diverse elements that were used by subsequent French authors, such as Benoît de Sainte-Maure, Chrétien de Troyes, Guillaume de Machaut, and Jean Froissart. The *Énéas* features rich descriptions of scientific marvels as well as a strong Ovidian intertextuality. The protracted love story of Lavine and Énéas provides interlaced counterpoint for the violent feudal battles. Little Virgilian texture remains, but much adventure and romance charmed both medieval listeners and future imitators.

Another thinker residing in France at this time, Bernard Silvestris, composed a keen allegorical interpretation of the first six books of the *Aeneid.* His commentary, a kind of *Virgile moralisé* replaced the older treatise by Fulgentius and remained a standard reference work throughout the Middle Ages.

Stylistically and axiologically, the works of Virgil exerted a profound influence upon much of the new vernacular literature of medieval France as well as in the intellectual and latinate culture of monastic scriptoria and cathedral schools.

# VISCONTI

. The Visconti family, which ruled Milan between the mid-13th and mid-15th centuries, concluded two important marriage alliances with the French monarchy in the 14th century. In 1360, when the Milanese state was divided between two Visconti brothers, Bernabo and Galeazzo, the latter arranged for his son, Gian Galeazzo, to marry Isabelle, the daughter of John II, furnishing the French king with a large sum of money needed for his ransom from captivity in England. In 1387, Gian Galeazzo's daughter Valentina (1371–1408) married Louis, duke of Orléans, the younger brother of Charles VI. She became involved in the political intrigues of the French court, particularly her husband's Italian ambitions. After his assassination in 1407, she demanded justice from the French government but died without obtaining satisfaction. Her son, Charles d'Orléans, then only fourteen years old, eventually became the father of the future Louis XII, who, as Valentina's grandson, claimed the duchy of Milan and conquered it in 1499.

*John Bell Henneman, Jr.*

# VISCOUNT/VISCOUNTY

. The English word "viscount" and its Old French cognate, *visconte,* are derived from the Latin word *vicecomes* 'vice-count,' coined ca. 790 specifically as the title of a new type of officer appointed in a growing number of counties to serve as the deputy of the count. By ca. 850, virtually every county in the new West Frankish kingdom seems to have been provided with a viscount, who, in addition to performing certain administrative functions peculiar to his office, assumed all of the normal duties of the count during his frequent absences from the county. By 1000, the office was hereditary in virtually every province except Normandy, where it always remained appointive. From ca. 1020, "viscountess"

(Lat. *vicecomitissa,* OFr. *viscontesse*) was sometimes empioyed by the wives, widows, and heiresses of hereditary viscounts, but it seems to have been rare before 1150.

The collapse of the traditional administration in most counties between ca. 980 and 1050 deprived the viscount of most of his original duties, but the dignity and title were at first retained by the heirs of most of the viscounts, and in the 11th century they were gradually attached to the principal dominion or dominions that each vicecomital lineage (or in some counties each branch of that lineage) succeeded in creating. Thus, for example, the viscount of (the county of) Poitou at Thouars became the viscount of Thouars, and his barony came to be known as the "viscounty" (Lat. *vicecomitarus,* OFr. *visconté*) of Thouars. In northern France, the new viscounties were generally minor, castellanial baronies, so small that when the last remaining functions of the vicecomital office disappeared in the 12th century their lords often abandoned the title "viscount." In the lands south of the Loire, by contrast, and especially in Gascony and Gothia, many of the new viscounties were relatively large principalities, representing either entire counties whose government had been taken over by the viscount (like Narbonne), or major partitions of such counties (like Turenne). The vicecomital dignity was thus more honorable as well as more common in the south (where the corresponding titles were written *vescomte, vescomtesa,* and *vescomtat*).

In 1200, about ninety viscounties were left in the kingdom, and a similar number of viscounts, and between that date and 1500 the number of both viscounties and viscounts seems to have declined slowly as a result of consolidation and annexation to the royal domain.

# VISIGOTHS

. A group of Germanic peoples, composed primarily of Goths and known as the Visigoths ("Noble Goths"), entered Gaul after their sack of Rome in 410 and settled in Aquitaine. With the decline of the Roman Empire in the second half of the 5th century, the Visigoths expanded their control over all Gaul south of the Loire and across the Pyrénées over most of Spain. The rise of the Franks challenged Visigothic power, however, and the victory of Clovis I in 507 was followed by the Frankish conquest of most of the Visigothic territories in Gaul, establishing the dominance of Gaul by the Merovingians and Carolingians. In Gaul, the Visigoths retained Septimania, which preserved a distinct Gothic character even after its incorporation into the kingdom of the Franks by the Carolingians, when it became known as Gothia. Thus, a Visigothic legacy was preserved in Gaul into the 10th and 11th centuries.

After their initial entry into Gaul in 412, the Visigoths were defeated by the Roman general Constantius, who settled them in the province of Aquitania Secunda, between the

Garonne and the Loire, as self-governing fed-erates (treaty partners) of the empire on the basis of hospitality, either land sharing with the Roman senatorial class or receiving Roman tax revenues. Toulouse was the center of the Visigothic settlement. Roman officials like Aetius were able to keep the Visigoths under imperial control, and they were prominent in the defeat of Attila in 451. After the murder of Emperor Valentinian III in 455, the Visigoths, along with Gallo-Roman aristocrats, began to control the affairs of Gaul and were even able to place their own candidate, Avitus, on the imperial throne (r. 455–56).

The weakness of the Roman government led to a period of Visigothic expansion under King Euric (r. 466–84), who came to hold Gaul south of the Loire and west of the Rhône, and all of Spain except for the Suevic territories in the northwest. Euric held the largest state of any Germanic king, and it appeared as if the Visigoths were the destined masters of the West. But the accession of the Frankish King Clovis I in 482 and Euric's death in 484 changed the future of Gaul and of the West. In alliance with Catholics of southern Gaul, Clovis won a great victory over the Arian Visigoths at Vouillé, near Poitiers, in 507 and conquered the Gallic portions of the Visigothic kingdom, except for Septimania. The Visigoths left Gaul for Spain, and their kingdom was thenceforward predominantly an Iberian state. Septimania, however, remained part of their kingdom until the Muslims conquered southern and central Spain (711–13). It was then incorporated into the rest of Gaul by Pepin the Short. The remnant of the Visigothic kingdom of Spain was the origin of the later kingdom of Asturias.

# VITICULTURE

. The production of wine in France has its origins in the 6th century B.C., with the founding of the Greek colony at Marseille. For the next several centuries, viticulture flourished in the warm, dry Mediterranean regions of France. The northern expansion of this industry occurred largely as a result of two distinct dynamic forces—one political, the other religious. For the Romans, the vine was a sacred plant (*sacra* vitis), and as they extended their empire beyond the Mediterranean, great vineyards were introduced as far north as the Seine, the Moselle, and the Rhine. What seems to have allowed for the successful introduction of vines in the colder and moist regions of the north was the

earlier experience of Mediterranean vintners along the slopes of the Alps. Likewise, the spread of Christianity had an equally important effect on the northern expansion of the vine, since wine was central for the celebration of the Mass. As a result, the founding of each new church and monastery saw vineyards appearing soon afterward.

The most important period for medieval French viticulture occurred during the economic revival of the 11th-13th centuries. The resulting growth in population, commerce, and urban life encouraged landowners to increase productivity, and no area of agriculture was more affected than was viticulture. It was during these centuries that the regions of Anjou, Arbois, Beaune, Bordeaux, Épernay, and Hautvilliers established their reputations for producing fine wines.

The documents of this period are filled with references to the *métayage* and *medium vestum* agreements. By the terms of *métayage,* a cultivator would give the land-owner a fixed percentage of his harvest in return for the use of the land. Under *medium vestum,* the cultivator agreed to clear lands and make them productive. Once this was accomplished, usually after five to seven years, the land would then be evenly divided, with the cultivator now becoming a small landowner.

If those involved in viticulture made significant investments in labor and materials, they could feel confident that the demand for their product would more than justify their expenses. Throughout the Middle Ages, wine was not simply the preferred beverage of rich and poor alike. In a period when water was often hazardous, wine offered the consumer the dual benefits of pleasure and security.

# VOTIVE MASS

. Mass offered for a special intention (a *votum*), such as for peace *(pro pace)* or for the dead *(pro defunctis),* as opposed to a Mass called for by the liturgical calendar. Votive Masses are already mentioned during the patristic period, and the early-medieval Sacramentaries make ample provision for them. They grew in popularity throughout the Middle Ages, even though the increasingly full liturgical calendar left few days without their appointed Mass and Office. The situation was circumvented by having the prescribed Mass celebrated once each day on the high altar, while individual priests offered their private Masses as votive Masses. In some localities, it was customary to say a weekly series of votive Masses: Sunday, of the Trinity; Monday, for charity; Tuesday,

for wisdom; Wednesday, of the Holy Ghost; Thursday, of the angels; Friday, of the Cross; and Saturday, of the Blessed Virgin.

# VOW CYCLE

. A cluster of verse romances that center on the concept of making and fulfilling elaborate vows—representing a tradition that stretches back to the boastings and verbal warfare of Germanic warriors—appeared in the early 14th century. The *Vœux du paon* (ca. 1310) with its two continuations, *Restor du paon* and *Parfait du paon,* form a late entry into the Alexander romance cycle; the Vœux *de l'épervier* and the Vœux *du héron* derive their substance from historical events. The *Vœux du faisan* by Philip the Good, duke of Burgundy, is based on the festivities at Lille, February 17, 1454, when vows were made to reconquer Constantinople from the Turks.

The *Vœux du paon,* by Jacques de Longuyon, was by far the most popular. An independent poem (despite its insertion into the Alexander canon) of some 8,500 rhymed Alexandrine lines, it has survived in thirty-four manuscripts and five fragments, along with two modern transcriptions and a 15th-century prose adaptation. The poem can be divided into two parts: the prelude to the vows, the vows and their accomplishment. In the first part, Clarus besieges the castle of Epheson in order to force Gadifer's sister Fesonas to marry him. Gadifer's ally Casamus has obtained the succor of Alexander in the conflict. After several clashes, the lords and ladies end by amusing themselves in the castle at games. The second part begins with a résumé of the preceding events, as if there were a new start, a second poem. At this point, Porrus kills Fesonas's peacock, causing her some consternation, but the venerable Casamus calms emotions by proposing that the peacock be the centerpiece of vows, so that all can show their prowess. After a series of a dozen or so vows directed against the enemy besieging them, the knights accomplish them. Ladies, too, make vows, to seek a husband of Alexander's choice. After the battle is won, Alexander distributes husbands according to the ladies' wishes, the dead are buried, and so ends the poem.

The *Restor du paon* is a continuation of some 2,800 Alexandrines written by Jean le Court de Brisebarre shortly after the completion of the *Vœux du paon*—at least before 1338, the date of the earliest manuscript. Jean composed several pious works: *Escole de foy,* a *serventois,* chansons, and the *Dit de l'esvesque et de droit,* the latter strongly influenced by the *Roman de la Rose*. The *Restor du paon* exists only in manuscripts that also contain the *Vœux*. The *Parfait du paon* has been preserved in two manuscripts, one of which lacks some 100 lines at the end. Its author, Jean de le Mote, who leaves his name in an acrostic near the end, claims in his explicit to have completed this sequel to the *Vœux* in 1340.

Far more important than these appendages to the *Vœux du paon,* however, are the *Vœux de l'épervier* and the *Vœux du héron.* Though derivative, they exploit the qualities that the Vow Cycle seems to represent. Both are short and feature as their centerpiece a vowing session. Of the Vœux *de l'épervier's* 562 Alexandrines, 425 are devoted to the pronouncement of vows. This obscure and slender piece, composed to commemorate Henry of Luxembourg's 1310 expedition to Rome, recounts his assassination. Wolfram, who edited the poem, suggested that Simon de Marville, treasurer of the cathedral chapel at Metz, was the author. Since he died before 1326, we can conjecture that it was created 1310–26, probably nearer the later date. The poem survived in a single 15th-century manuscript (Metz Mun. Libr. 831; destroyed in 1944).

The *Vœux du héron* (ca. 1340) purports to dramatize in 422 rhymed Alexandrines an event in 1338 that led to the Hundred Years' War. Robert d'Artois has been banished from France by Philippe de Valois, who also imprisoned his family. Robert publicly labels Edward III of England a coward for failing to maintain control over France and instigates a vowing session in which the English king promises to invade France and renounce the treaty he had concluded in his naive youth. The bird chosen to be honored is the heron, the symbol of cowardice, captured by Robert to antagonize Edward. The text has been preserved in five manuscripts, two 19th-century transcriptions, and four critical editions. Nothing is known about the author, but he was obviously familiar with the events he related and in fact might have been present if the vows were actually pronounced. A comment by Froissart on Gautier de Magny (Walter of Manny) hints that something of the sort occurred.

# *VOYAGE DE CHARLEMAGNE À JÉRUSALEM ET À CONSTANTINOPLE*

. A chanson de geste belonging to the King Cycle. Few of the many critics who have studied the *Voyage* (also known as the *Pèlerinage de Charlemagne*) agree on its date of composition, although most would place it in the 12th century. The unique manuscript disappeared from the British Museum in 1879 or 1880. Since then, critical editions have been based on E.Koschwitz's editions, particularly on his diplomatic transcription. First edited and published by Francisque Michel in 1836, the *Voyage* comprises 870 twelve-syllable lines.

Charlemagne, with his twelve peers and many knights, leaves Paris for Jerusalem and Constantinople, after the queen has publicly stated that Hugo the Strong, emperor of Constantinople, has more presence when wearing his crown than does her royal husband. Full of anger, Charles decides to prove her wrong and to avenge himself. Riding mules and carrying staffs, the Franks first stop at Jerusalem, where the patriarch gives them many relics. Charles and his retinue finally reach Constantinople, where they are bedazzled by Hugo's wealth and power. At a banquet, Oliver is struck by the beauty of Hugo's daughter. In their chambers at night, the Franks boast drunkenly of being able to carry out incredible feats of strength and skill. A spy hidden in the chamber reports to Hugo. Enraged, the emperor decides to force the Franks to carry out their boasts or be executed. The Franks pray to God, who sends an angel to reprimand them but also to assure them they will be successful. Oliver, who has said he will make love a hundred times during the same night to Hugo's daughter, is the first to be asked to comply. He succeeds thanks to a false statement made by Hugo's daughter. Two more boasts are fulfilled before Hugo agrees to become Charlemagne's liegeman. As both kings proceed side by side, it becomes apparent that Charles wears his crown a little higher than Hugo. Returning to Saint-Denis with many relics, Charles forgives the queen.

Though literary critics have divergent interpretations of this chanson, many agree that it is a comical work exploiting the heroic tradition. The poet, it seems, wants to entertain his audience, using humor and a bantering tone. Several critics consider the *Voyage* to be a caricature and a parody of other chansons de geste. The poet may have been familiar with a chronicle, the *Descriptio qualiter Karolus Magnus clavum et coronam Domini a Constantinopoli Aquisgrani detulerit qualiterque Karolus Clavus hec ad Sanctum Dionysium retulerit,* that describes the relics of the Passion and tells how they reached the treasury of Saint-Denis.

# VULGATE CYCLE

. Known by many titles, the Arthurian Vulgate Cycle (ca. 1215–35) derives its most common name from the first, and only complete, edition of the cycle, undertaken by H.Oskar Sommer between 1908 and 1916. Using British Museum Additional manuscripts 10292–10294, Sommer provides a text of the *Estoire del saint Graal* (Vol. 1), *Estoire de Merlin* (Vol. 2), *Estoire de Lancelot del Lac* (known commonly as the *Prose Lancelot,* Vols. 3–5), *Queste del saint Graal* (Vol. 6), and *Mort le roi Artu* (Vol. 7). More rigorous editions have been undertaken subsequently for all volumes except the *Estoire del saint Graal.* French scholars of the Vulgate romances refer typically to their material as the Lancelot-Grail Cycle, although this appelation generally includes only the last three works of the series, omitting the *Merlin* and sometimes also the *Estoire del saint Graal* Attribution of the *Queste* and *Mort Artu* to Walter Map has fostered occasional reference to the whole corpus as the Pseudo-Map Cycle. The diverse titles all reflect 13th-century French prose composition through their common use of the term "cycle," depicting thereby an expansive narrative structure that chronicles the deeds of whole generations of knights across numerous volumes of text.

Taking as their subject the entire history of the Grail from its origin in the Passion of Christ to the successful accomplishment of the quest by the chosen hero, the Arthurian prose texts adopt the comprehensive scale of literary and theological *summae* of the 13th century, such as Jean de Meun's *Roman de la* Rose, Vincent de Beauvais's *Speculum naturale,* and Thomas Aquinas's *Summa theologica.* One of the earliest literary examples of this *effet totalisant* is found in the *Roman du Graal* (ca. 1210), a prose trilogy attributed to Robert de Boron, which recounts the history of the Grail vessel *(Joseph d'Arimathie),* its arrival in Great Britain along with the discovery of the future King Arthur *(Merlin),* and the quest for the Holy Grail and subsequent demise of Arthur's world *(Perceval).*

The Vulgate Cycle offers a more elaborate version of this narrative scenario, expanding the prose *Perceval* into two separate tales, the *Queste del saint Graal* and the *Mort le roi Artu,* and adding a lengthy rendition of the Lancelot story to make a total of five roughly sequential narratives. The *Lancelot propre* (or *Lancelot en prose*), the Queste, and the *Mort Artu* were written first, then supplemented by the *Estoire del saint Graal* and the *Estoire de Merlin* (or the Vulgate *Merlin*), although the latter two are designed to head the sequence in terms of narrative chronology.

As we move from the classic Arthurian verse romances of the 12th century, which tend to focus on the chivalric exploits of a single knight, to protracted prose accounts of the Grail quester's complex heritage and inheritors, the scope of the Arthurian adventure story becomes simultaneously more historical and more religious. Appeal is made to two

distinct traditions of authority: historical chronicle and the Divine Book. The *Queste* and *Mort* are attributed to Walter Map, a scribe at the court of the English king Henry II (r. 1154–89). Throughout the Vulgate Cycle, fictive genealogies claim that the tale we read descends from eyewitness testimony of events in the Arthurian past. As knights-errant completed feats of heroism in the Arthurian forest, we are told, they returned to Arthur's court, where royal scribes recorded in writing their tales of adventure. The story we read is presented as an accurate transcription or historical documentation of events that actually occurred. But while posing as historiography, the adventure story also claims descent from an authoritative tradition of scriptural writings. The *Merlin* results ostensibly from Merlin's dictation to his scribe, Blaise, who combines accounts of the Arthurian past with those of Christ's miracles. The *Estoire* claims to issue directly from the mouth of God and from a book that Christ, the divine author, gave the vernacular "author" to copy.

An elaborate matrix of cross-references involving prophecy and family lineage thematizes the conjunction of spiritual and chivalric modes cultivated throughout the cycle. The *Lancelot* announces at its beginning that Lancelot was given the baptismal name of Galahad, thus forging a crucial link between the archetypical knight-lover and the chosen hero of the *Queste del saint Graal*. At the end of the *Lancelot,* we learn that Lancelot is in fact Galahad's father, having engendered the Grail hero during a visit with King Pelles's daughter at Corbenic, although the son far surpasses the more courtly Lancelot in spiritual achievement. Galahad represents the ideal conjunction of religious and chivalric modes and of past and future epochs. Descending from King David on his father's side and from Joseph of Arimathea and the Grail kings on his mother's, he is the embodiment of biblical history destined to cure the ills of the Arthurian world.

The belated prologue to the Vulgate Cycle supplied by the *Estoire del saint Graal* recasts this father-son scenario in a yet more religious vein. A highly christianized version of Robert de Boron's *Joseph,* this tale adds to the story of the Grail keeper, Joseph of Arimathea, the narrative of his son, Josephe, whose purity and chastity qualify him to become the first bishop. Joseph catches Christ's blood in the holy vessel after the Crucifixion, but it is Josephe who has a privileged vision of Christ while con templating the Grail and later becomes the spiritual leader of the Christians. The evangelization of East and West ensues through a series of miraculous conversions and a final voyage to Great Britain. When Josephe dies, he confers the Grail on Alain, the first Fisher King, who places it in Corbenic castle to await the arrival of the *bon chevalier.*

In the *Estoire de Merlin,* the most chroniclelike of the Vulgate stories, Merlin as prophet and enchanter becomes the nexus where chivalric and sacred threads of the narrative cross. With a knowledge of the past inherited from his incubus father and a divine gift of foresight, Merlin confounds onlookers with his ability to explain mysterious events and predict the future. He uses his magic to engineer the conception of the future King Arthur, to ensure Arthur's success at pulling the sword from the stone, and to devise military strategies that ensure the king's power. Arthur's military exploits are detailed in a narrative *suite* (the *Suite-Vulgate, Suite du Merlin,* or historical *suite*) that links the *Merlin* proper to the *Lancelot.*

The *Lancelot,* which alone accounts for half of the Vulgate Cycle, narrates the adventures of its most popular, if flawed, chivalric hero. Different from the Lancelot story provided by Chrétien de Troyes's *Chevalier de la charrette,* the quintessential

Arthurian hero's chivalric prowess is here marred significantly by his adulterous liaison with Guenevere. The cemetery scene, which in Chrétien's version proclaimed Lancelot as the future liberator of Gorre, now contains two tombstones that the hero must lift. Lancelot's failure to remove the second stone predicts his subsequent exclusion from the Grail quest. His cousin Bohort joins Perceval and Galahad on the final quest of the Grail.

The *Queste* begins with a description of Galahad's uncanny powers as chosen hero and ends with his privileged viewing of the mysterious Grail vessel. But the bulk of the tale is concerned with attempts of less successful knights: Lionel, Hector, and Gawain, who form the elite of earthly questers, and Perceval and Bohort, who are chosen but less accomplished than Galahad. The adventures of these knights along with their visions and dreams are routinely interpreted by hermits who offer to tell the *senefiance* and *verité* of what we read.

Providing a *suite* for the *Queste* and a conclusion for the entire cycle, the *Mort le roi Artu* recounts the final holocaust on Salisbury Plain in which Arthur and his bastard son, Mordred, kill each other. This violent finale, marking the end of the cycle of tales by signaling the end of the whole Arthurian world, results from an inexorable chain of cause and consequence set in motion by the renewed love affair between Lancelot and Guenevere. Despite its emphasis on chronological sequence, this chronicle of Arthur's last days does not come to a definitive close. Arthur, though dead and buried, is also conveyed out to sea by fairies from the isle of Avalon, thus leaving open the possibility of his return and the return of the adventure story that bears his name.

# W

# WACE

(ca. 1100-after 1174). Born on the island of Jersey, Wace received his training first at Caen, then at Paris or, less likely, at Chartres; the influence of Hugh of Saint-Victor on his work is evident. Early in the 1130s, *maistre* Wace returned to Caen, where he occupied the position of *clerc lisant* (this term, used by Wace himself, most likely meant "reader of the lessons in the church service"); between 1165 and 1169, King Henry II of England rewarded him for his literary work with the prebend of a canon at Bayeux. He must have sojourned in England, since he knew the English language and gives precise geographical details of that country, especially of the Dorset area. Charters at Bayeux that bear his signature are not helpful in more precisely dating his life, which is known exclusively from personal remarks in his *Roman de Rou.*

Wace began his literary career with a series of hagio-graphical poems, of which three, signed by him, are preserved. From his stay in England, the center of St. Margaret's cult, he probably brought back a *Vie de sainte Marguerite* (742 lines), the first and stylistically by far the best of thirteen verse adaptations of this legend into French. His *Conception Nostre Dame* (1,810 lines) was designated as propaganda in favor of the establishment of the feast of the Immaculate Conception, as furthered by Abbot Anselm of Bury-Saint-Edmunds (r. 1121–46) against formidable opposition, especially from St. Bernard of Clairvaux. As a Norman, Wace would have had great interest in the life of the Virgin, for the Normans were among the first in France to establish the feast of the Immaculate Conception, which was often called the *fête aux Normands.* In the *Conception Nostre Dame,* Wace introduces the technique of grouping different episodes in one poem, in this case five that lead from the establishment of the feast to the Assumption of the Virgin. The same technique is found in his *Vie de saint Nicolas* (1,563 lines), written probably for a citizen of Caen, Robert, son of Tiout; containing twenty-three independent episodes, without any advancement in time, it testifies to the popularity of the saint in Normandy in the first half of the 12th century. The three poems, all in rhymed octosyllabic lines, can be dated ca. 1135–50.

Wace's reputation as an adapter of Latin works on popular topics might have brought him the commission by Eleanor of Aquitaine, newly wed to Henry II, to "translate" Geoffrey of Monmouth's *Historia regum Britanniae* (ca. 1136). Wace could not immediately locate a copy of this text and consequently based most of his adaptation on the *Britannici sermonis liber vetustissimus* (possibly by the archdeacon Walter of Oxford, a close friend of Geoffrey of Monmouth who is mentioned by Geffrei Gaimar), written in

the early 1130s with the intent of ingratiating the Celtic part of the population with the new Norman rulers by stressing the Britons' claim to Britain, tracing its history back to the Trojans, in particular to Aeneas, with the help of early Welsh chronicles and Nennius. According to these sources, Brutus (folk etymology of *Brytt* 'Briton'), Aeneas's great-grandson, led the Trojans out of Greek captivity to Britain; the *Liber vetustissimus* then depicted the legendary history of Brutus's descendants on this island through the 8th century, when the Celts had to abandon all hope of reconquering the country from the Anglo-Saxons. It was this text that Geoffrey reedited and brought to renown thanks to the interest of the Norman dynasty in the predecessors of the Anglo-Saxons, renown that also had its repercussions on Wace's *Roman de Brut,* or *Geste des Bretons* (1155), since scribes of later manuscripts constantly altered the text by increasingly modeling it on Geoffrey's work. In the critical edition, the *Roman de Brut* is narrated in 14,866 octosyllabic verses; the manuscript Durham Cathedral C. iv. I (Anglo-Norman; 13th c.) inserts 670 decasyllabic verses containing the prophecies of Merlin related by a certain Elias; Lincoln Cathedral 104 (Anglo-Norman; 13th c.) adds 640 Alexandrines of the same prophecies by a certain William; and B.L. Add. 45103 (Anglo-Norman; 13th c.) contains yet another version of the prophecies, also in Alexandrines, and anonymous. B.N. fr. 1450 (Picard; 13th c.) goes even further and inserts between lines 9,798 and 9,799 Chrétien de Troyes's romances Erec, *Perceval, Cligés, Yvain,* and *Lancelot,* in that order.

Wace is remarkably critical of his source, frequently stressing that he is not certain of a fact; conversely, he romanticizes the dry events of history in order to make them palatable to an audience of noble laypersons. In particular, his work contains several episodes that presage the spirit of courtly love, such as King Aganippus's love "from afar" for Cordeïlle, King Leïr's youngest daughter, or Uther Pendragon's love from reputation only for Ygerne; but he also stresses the catastrophic consequences of passion, illustrated, for example, by the episodes of Locrin's and Mordred's adulterous relationships. Though he eliminates the most fantastic elements in his source, such as Merlin's prophecies, he adds many picturesque details, among them a mention of the institution of the Round Table, a detail that to date has not been satisfactorily explained. Wace's work was enormously popular (twenty-six manuscripts have preserved it in complete or fragmented form), and ca. 1200 the priest Layamon of Raston in Worcestershire adapted it into Middle English, swelling it to nearly 30,000 lines; it is Layamon who reports that Wace had dedicated his work to Eleanor, which is possible though not mentioned in the text.

While in the *Roman de Brut* Wace was highly successful in converting pseudohistory into narrative fiction, he was less so in the *Roman de Rou* (i.e., Rollo), or *Geste des Normands* (11,440 octosyllabic lines; plus a prologue of 315 lines and the first 4,425 lines of the work, in Alexandrines; in addition, there exists the first draft of a prologue in 750 octosyllabic lines). The work was commissioned by Henry II, who wanted a poem similar to the *Brut* with respect to the history of Normandy. Wace especially had recourse to Dudo de Saint-Quentin's unreliable *De moribus et actis primorum Normanniae ducum,* from the first years of the 11th century, Guillaume de Jumièges's *Gesta Normannorum ducum* of 1071, Guillaume de Poitiers's *Gesta Guillelmi* (ca. 1078), and William of Malmesbury's *Gesta regum Anglorum* of the first half of the 12th. Wace began the project in 1160. He was uncomfortable with real history and its sources, excelling only

when he narrated legendary material, such as stories about Duke Richard I, the Richard of Normandy in the *Chanson de Roland,* and events during the reigns of kings William II Rufus and Henry I (r. 1100–35), where he was a historian in his own right, drawing from personal information. Occasionally, he also gives firsthand information concerning the reign of the Conqueror, such as details about William's fleet in 1066, having as a small child heard his father comment on it. The commission did not excite Wace: for a while, he even attempted another meter, the Alexandrine (one of the first authors, if not the first, to do so); the work thus advanced so slowly that Henry II grew impatient and commissioned the much younger Benoît de Sainte-Maure, whose *Roman de Troie* (ca. 1165) had superseded the *Brut* as a literary success, with the same task. Wace, bitterly disappointed, interrupted his work after having narrated the Battle of Tinchebrai, in which Henry I defeated his older brother Robert Curthose and annexed Normandy (1106). Since he mentions Henry II's siege of Rouen in 1174, it is assumed that he died soon after that date.

Wace is undoubtedly the most brilliant author of the first period of Norman literature; the modern reader is also struck by his conscientiousness, honesty, and—for the period—highly critical, even scholarly approach to literature.

# WALAFRID STRABO

(ca. 808–849). A Carolingian scholar and poet, Walafrid (Strabo means "the squinter") was born in Swabia and educated at Reichenau and later at Fulda under Rabanus Maurus. He served from 829 to 838 as tutor to Louis the Pious's youngest son, Charles the Bald. After 838, he was the abbot of Reichenau; for political reasons, he was expelled by Louis the German in 840 but; reinstated in 842. Walafrid died on August 18, 849, crossing the Loire to visit his former student, Charles the Bald.

To modern readers, Walafrid's most famous works are his poems, including the *Visio Wettini,* a hexameter treatment of visions of Hell, Purgatory, and Paradise written at the age of eighteen and dedicated to his former teacher, Wettin of Reichenau; and *De cultura hortorum* (or *hortulus*), a medicinal description and allegorical interpretation of twenty-

three herbs and flowers. Other poems include hagiography and praises of important people (including Louis the Pious and the empress Judith, mother of Charles the Bald). In the Middle Ages, he was also famous for his exegesis, much of it based on the longer works of Rabanus Maurus, including commentaries on the Pentateuch, the Psalms, and the canonical epistles. This exegesis remains in need of further critical study. The *Glossa ordinaria,* published as a work of Walafrid in Migne's *Patrologia Latina,* Vols. 113–14, is now known to have been written in the 12th century and erroneously ascribed to Walafrid in the 15th.

# WALDO/WALDENSES

. The Waldenses, or "Poor of Lyon," were members of a lay spiritual movement founded on three principal points: the adoption of voluntary poverty, access to the Scriptures through a vernacular translation, and public preaching. In many ways, the form that this movement took is a product of the developing "profit economy" of the 12th century. The founder was a certain Waldo, a rich merchant of Lyon, who, upon hearing a jongleur sing the *Vie de saint Alexis,* had a conversion experience ca. 1173. He then had two priests translate the Bible into French and decided upon the apostolic life: giving away his wealth and placing his wife and daughters in convents, he memorized his translated Bible and began to preach. He quickly gained a following of laymen who called themselves "the poor" and traveled in pairs, begging and preaching repentance.

Doctrinally orthodox, Waldo and his followers preached against Cathar heretics, but their ostentatious poverty and public preaching soon roused clerical opposition. Waldo sought the pope's approval of his mission and his vernacular Bible (1179), but the clergy proved both contemptuous of these unlettered laymen and unalterably opposed to their preaching, despite their usefulness in combating the church's primary concern—Catharism. Waldo disobeyed rather than forsake the Lord's command to preach the gospel, and by 1184 the group was condemned as heretical. In response, some Waldensians (especially the Lombards) claimed that the church had become the "Whore of

Babylon." Rejecting clerical sacraments, prayers for the dead, and relic cults, they established their own church of *perfecti,* who administered sacraments and confession. Waldo himself never gave up hope of a reconciliation, and some followers, such as Durand of Huesca and the "Catholic Poor," returned to the church. Radical Waldensianism spread rapidly throughout Europe from the Pyrénées to central Europe, developing a parallel ecclesiastical structure while maintaining a commitment to evangelical Christianity. Despite inquisitorial persecution, they survived into the modern period, providing fertile ground for Protestantism in the 16th century. A Waldensian church survives in Italy to this day.

# WALTER OF SAINT-VICTOR

(d. after 1180). Prior of the abbey of Saint-Victor at Paris, Walter is known chiefly for his harsh attack on the dialectical method in *Contra quatuor labyrinthos Franciae,* which singled out Peter Abélard, Peter Lombard, Peter of Poitiers (canon of NotreDame), and Gilbert of Poitiers for sharp criticism. Walter is also the author of some twenty sermons,

which exhibit a rather ordinary piety and none of the spirituality of his predecessors Hugh and Richard of Saint-Victor.

# WARFARE

. Warfare was a dominant feature of medieval French history. After the late 4th century, Germanic tribes penetrated the western Roman Empire in force, bringing important changes to the military system. Roman discipline and organization gave way to badly organized forces with poor training, few arms, and almost no discipline. Military recruitment and payment for services were based on the amount of booty a leader could provide his soldiers, and loyalty to this leader was dependent on the continued success of his conquests. Soldiers generally were equipped with only a rudimentary shield and helmet, and their arms consisted of a sword, ax, or spear. These militaristic barbarians had an almost Homeric sense of heroism and revered martial skills. Their names, both male and female, reflected the omnipresence of war, and warriors were the elite of Germanic society, placed at the top of the wergeld system of compensation and given elaborate burials with their equipment and booty.

By the 6th and 7th centuries, the Merovingian Franks, who required military service of all free men, had an effective army based on infantry. Their special weapon was the *francisca,* a throwing ax. They adopted body armor only gradually. Their fortifications, other than those inherited from Rome, were simple earth and wood ramparts.

When the Carolingians came to power in the 8th century, the requirements of a large empire led to new military institutions that presaged the feudalism of a later time. Rulers granted income-producing estates to followers who promised to render full-time military service at their own expense. The expanding role of the stirrup gradually encouraged the development of heavy cavalry and the archetypical medieval knight.

This system of land grants and oaths of loyalty enabled Charlemagne to muster an effective cavalry force almost annually. His armies were not large, but they were powerful and dominated their opponents. He generally led them himself, and although there were few "formal" military tactics, they were successful in most engagements.

The Capetian monarchy in France gradually emerged from the fragmentation of the Carolingian empire. The survival of the early Capetians depended on their military capabilities, and some of them suffered serious reversals. Recruitment of soldiers increasingly depended on feudal institutions in the 11th and 12th centuries, and the kings sometimes could not muster sufficient troops. As they began to acquire more resources, they began to supplement feudal troops with paid professionals. The king himself or a designated noble lieutenant generally commanded these armies.

Mounted knights were still the core of the army. With improved weapons and armor and mounted upon expen-sive warhorses, they usually decided the course of each battle, fighting with couched lance in a tournament-like fashion. Most knights by the 13th century were nobles supported by fiefs. Large battles were infrequent and those that were fought often included only rudimentary tactical combinations.

While knights were the core of the army, the most numerous forces were still the infantry. Levied from among the free men of the kingdom, these troops were armed much less well than their mounted counterparts. While some were protected by a helmet, a small shield, and a leather hauberk, infantry soldiers frequently served without armor. Offensive infantry weapons included the spear, sword, lance, and pike, with little standardization among these weapons. Archers also served in infantry contingents, initially being equipped with short bows. In the course of the 12th century, these began to be replaced with the more powerful crossbow.

In the Capetian period, the siege replaced the battle as the primary form of military engagement. Though Charlemagne had effectively altered the standard of battlefield fighting, he and his successors tended to neglect fortifications, leaving the empire vulnerable to the raids of Vikings and Hungarians. In the 11th century, local rulers led in the construction of fortifications, at first small earth and wood motte-and-bailey castles, but soon larger and stronger structures of masonry. These more intricate and costly fortifications provided valuable defenses. Although mining, sapping, and stone-throwing engines were used against them, a castle or town with strong stone walls could generally be reduced only by starvation.

In the late Middle Ages, five significant developments altered warfare. First, armies fighting on foot began again to predominate. The stunning defeat of French knights by Flemish infantry at Courtrai in 1302 showed that a strong unified infantry line could halt the charge of cavalry. The Scots similarly defeated English knights at Bannockburn in 1314, and Swiss infantry defeated Austrian cavalry at Mortgarten in 1316. French cavalry suffered serious defeats over the next century at the hands of English armies dominated by footsoldiers and longbowmen. The second development was the continual fighting that beset France between 1337 and 1453, the period misnamed the "Hundred Years' War." The long struggle exhausted the French military and required a stricter and often less noble military bureaucracy. The emergence of *routiers* and *condot-tieri,* paid mercenaries without feudal ties, weakened traditional military institutions. The third factor was the Black Death of 1348–49, which significantly reduced the numbers available to fight on the battlefield and defend French towns and castles. The fourth was the advent of frequent and often violent popular rebellions by French peasants and townspeople, the suppression of which required changes in military tactics.

Finally, warfare was changed by the advent and proliferation of missile weapons employing gunpowder. Appearing initially in the early 14th century, they began

influencing warfare by the 1380s, when they were used effectively against fortifications and also on the battlefield. By 1400, no siege was free of their use, as they reduced substantially the time needed to destroy walls. No longer was it necessary to rely on starvation to force the capitulation of castles or towns. By the 1430s, hand-held gunpowder weapons began to take their place among infantry contingents, changing the face of battlefield engagements. By the Swiss and Burgundian wars of 1475–77, one third of the infantry on each side was outfitted with handguns. These late-medieval changes brought an end to feudal methods of warfare and encouraged the development of states capable of financing mod-ern armies.

# WARHORSE

. The warhorse (OFr. *destrier*) was the most important military equipment owned by a medieval knight. The ownership of a horse not only indicated the knight's military status, but the expense of ownership and upkeep also established the knight's status within medieval feudal society. So important and expensive was the warhorse that often the French king provided some compensation or reimbursement for one that was killed or injured on the battlefield or in a tournament.

Although many barbarian tribes used the warhorse in the early Middle Ages, it was not until the more frequent use of the stirrup, nailed horseshoe, and saddle with cantle (ca. 1100) and the establishment of heavy cavalry units that the horse became a dominant force in medieval armies. From then until 1300, victory in nearly every French military engagement was tied to the heavy cavalry and its tactical use of mounted shock combat. Even after the infantry victories against the French cavalry at Courtrai, Crécy, Poitiers, and Agincourt, the mounted knight remained the dominant part of the French army.

Off the battlefield, among the noble (or chivalric) class of Europe, the warhorse also played an important role. A knight was expected to own not only his horses for military

engagement but also large, expensive horses on which he rode during jousts and tournaments.

# WAUQUELIN (DE MONS), JEAN

(fl. 1441–52). Translator, scribe, and editor of manuscripts for the library of Philip the Good, duke of Burgundy. Notable among his accomplishments is the *Chroniques de Hainaut* (Brussels, Bibl. Roy. 9242), a translation of the Latin *Annales Hanno-niae,* whose dedication miniature is a landmark in Bur-gundian illumination. Other masterpieces from his workshop are a *Chronique d'Alexandre* (B.N. fr. 9342), *Girart de Roussillon* (Vienna, Nationalbibliothek 2549), a *Gouvernement des princes* (Brussels Bibl. Roy. 9043), as well as a number of lesser-known manuscripts. He is also responsible for prosifications of the *Belle Helaine de Constantinople* (1448) and of Philippe de Beaumanoir's *La Manekine.*

# WAVRIN, JEAN DE

(1395–1475). Natural son of a Burgundian nobleman, officially legitimatized in 1437, Wavrin eventually became an official at the Burgundian court. A veteran of the Battle of Agincourt (1415), he nevertheless remained pro-English in his political orientation, writing the *Chroniques et anciennes istoires de la Grande Bretaigne, a présent nommé Engleterre* about events in France, Normandy, and Burgundy up to 1469. A notable bibliophile, he sponsored a workshop in Lille where manuscript copies were illustrated by a highly original artist known as the Wavrin Master.

# WEIGHTS AND MEASURES

. Medieval France had a multitude of weights and measures typical of premetric Europe. This condition was due primarily to the fierce provincialism of duchies, counties, royal and aristocratic estates, cities, and manors. By the 16th century, France had more than 1,000 units of measurement accepted as standards in Paris and the provincial capitals, with approximately 250,000 local variations. Unit names were often superfluous and confusing, and physical standards bore little relationship to one another. Hundreds of ambiguous and misleading decrees and laws had been issued, beginning with the modest reforms of Charlemagne in the late 8th century. Control over weights and measures belonged to feudal lords, churchmen, guildsmen, judges, city officials, and others as part of their administrative rights, and, since taxes were based on units of measure, it was to their best interests to establish their own systems and standards.

Medieval French weights and measures varied depending on whether they were used in retail or wholesale trade. There were special units employed at warehouses, harbors, ports, foundries, mines, and workshops. They differed on the highways, the seas and waterways, inside and outside town walls, and in the forests. Product variations abounded especially for grains, liquors, and textiles. Units based upon a complex array of numbers, multiples, submultiples, accounts, coinages, wages, prices, land functions, time allotments, production spans, and labor needs were commonplace. Many other types flourished, but certain weights and measures could be considered national standards by the later Middle Ages.

Among linear measures, for example, the *aune, lieue, perche, pied,* and *toise* were of paramount importance. The aune, a textile measure, was 3 *pieds, 7* pouces, 10⅑*lignes,* or 526⅑*lignes* (1.188 meters) in all. For road and sea measurements, the *lieue* had six official standards ranging from 2,000 to 3,000 *toises* (3,898.08 to 5,847.12 meters). The *perche* employed in agriculture was either 18, 20, or 22 *pieds* (5.847, 6.497, or 7.146 meters). The *pied* was 12 *pouces* (0.325 meters) or 144 lignes, while the *toise* was 6 *pieds* (1.949 meters).

For area measurement, the *arpent de Paris* was 32,400 square *pieds* (34.189 ares); the *arpent de commun,* 40,000 square *pieds* (42.208 ares); and the *arpent des eaux et forêts,* 48,400 square *pieds* (51.072 *ares*). All were 100 square perches, but the length of the *perche* was different in each standard.

In capacity measurement, the *boisseau, mine, muid,* and *setier* dominated. The *boisseau* contained 655.78 cubic *pouces* (13.008 liters), but had different subdivisions for wheat, oats, charcoal, and plaster. The *mine* totaled 3,934.68 cubic *pouces* (78.05 liters) for all dry products except salt, oats, and coal. The *muid* had six recognized standards for liquids and dry products. The *setier* was 4 *quartes* (7.45 liters) for most liquids and two *mines* (156.10 liters) for most dry products.

The *livre* was the principal unit of weight. During the late 8th century under Charlemagne, the *livre esterlin* was fixed at 5,760 grains (367.1 grams) and consisted of 20 sous, 12 *onces,* 240 deniers, 480 *oboles*. This *livre* was the first national standard; it was retained until the middle of the 14th century, when the government of King John II the Good authorized the employment of a new, heavier, *livre* called the *livre poids de marc*. Totaling 9,216 grains (489.506 grams), it was subdivided for valuable goods, such as gold and silver, into 2 marks or 16 *onces* and for cheaper goods into 2 *demi-livres* or 16 *onces*. There were other official *livres* for pharmacists, physicians, and merchants.

Further diversification and proliferation of these weights and measures continued after 1500, especially in the wake of increasing industrialization. Prior to the late 18th century, significant progress in French metrology took place only in the manufacture of physical standards. The French Revolution and its radically new metric system replaced these weights and measures by the early 19th century.

# WERCHIN, JEAN DE

(ca. 1375–1415). Seneschal of Hainaut. Werchin is cited in the *Livre des faits de Jacques de Lalaing* as an especially valiant knight of the region. He was also sufficiently versed in poetry to be a minister of the *cour amoureuse* founded in Paris in 1401. He was the author of a long allegorical poem, the *Songe de la barge* (1404; ca. 3,500 lines), and a series of ballades exchanged with his squire, Guillebert de Lannoy. His exploits were celebrated in a ballade by Christine de Pizan, who also dedicated to him her *Livre des trois jugemens*. After his death at the Battle of Agincourt, he was nostalgically remembered by Achille Caulier in the *Hôpital d'amour* in the company of Tristan and Lancelot.

# WERGELD

. Germanic law codes required a sum known as "wergeld" (literally, "man money") to be paid to the relatives (or in the case of a slave, the master) of one who was killed. The amount of the wergeld varied with the legal status, ethnic background, occupation, sex, and age of the victims, thus representing their social standing.

The taking of life was not technically a violation of Germanic laws and the victim's relatives could seek an eye-for-an-eye vengeance, which often led to a bloody cycle of retaliatory deaths. Payment of the wergeld to the kinsfolk of the victim provided an honorable compensation for the death, and a vendetta could thus be avoided. However, a killer could refuse to pay the wergeld or the victim's kin could refuse to accept it, and either refusal would initiate the blood feud.

Exact values varied among the law codes. In the Salic Law, the wergeld of the typical freeman *(leudis)* normally was 200 *solidi,* that of a member of the king's entourage was 600, but a slave's was only thirty-five. In the Burgun-dian Code, nobles had a wergeld of 300 *solidi,* lower classes 150, and slaves thirty. (By comparison, the Ripuarian Code equated the value of a stallion with seven *solidi,* a cow with one, and a sword with three.)

The payment of one's wergeld or a portion of it could sometimes be imposed as a penalty for certain crimes.

# WIDOWS AND WIDOWHOOD

. When a medieval woman was widowed, she was able to act independently for one of the few times in her life, rather than being under the tutelage of a father, brother, or husband. Since women normally married men much older than themselves, widows were more common than widowers.

A widow could live singly, remarry, or enter a nun-nery. A dowry that she had brought to the marriage was usually hers for her lifetime, and she could also support herself from any dower her husband had fixed on her at the time of their marriage. A woman with young children, it was assumed, would take over her husband's property at least until her sons had grown up. In practice, especially in the early Middle Ages, this meant that the widow of a powerful lord was treated almost like an heiress, and a man might marry her seeking her late husband's property.

A well-placed woman could marry and be widowed several times during her life. Older widows and those who had already had several husbands usually retired eventually to the cloister; medieval French nunneries recruited at least as many widows as young girls.

*Constance B.Bouchard*

# WILLAME DE WADINGTON

(fl. mid-13th c.) The *Manuel des péchés,* written in Anglo-Norman verse ca. 1250–70, is commonly ascribed to Willame de Wadding-ton, though he may have been simply its scribe. The work is a confession manual addressed to the laity and deals first with the most common breaches of the Ten Commandments, then with the Seven Deadly Sins; there follow a series of exempla on the sin of sacrilege, a discussion of the sacraments, and instructions for making a good confession. The whole work is interlarded with saints' legends, accounts of visions, and exempla, which constitute nearly half its bulk. The *Manuel* was translated into En-glish verse ca. 1300 with the title *Handlying Synne,* then

later into English prose. Its popularity is attested by fifteen complete manuscripts, averaging 1,200 lines.

# WILLIAM

**.** *See also* **GUILHEM; GUILLAUME**

# WILLIAM I THE CONQUEROR

(1028–1087). Prior to his conquest of England in 1066, William I had been duke of Normandy. Prime factors behind the success of the Conquest had been the stability he had established in Normandy and the freedom from attack that the duchy had enjoyed since the deaths of Geoffroi Martel of Anjou and the Capetian king Henry I. Such stability and safety could not have been predicted in 1035, when William, then called "the Bastard" because of his illegitimate birth, inherited the duchy at age seven from his father, Robert I the Magnificent. The young duke survived several internal challenges and through successful military campaigns and judicious alliances was able to assert his authority in the duchy and in relation to the other powers of northern France. He conquered Maine and established Norman hegemony over eastern Brittany. One of his earliest and most important triumphs outside the duchy was not a military one at all, but marriage to Matilda (d. 1083), daughter of Count Baudouin I of Flanders. The 1050/51 marriage, though initially forbidden by the papacy on grounds of consanguinity, allied William with the richest princi-pality in northern France and related him through marriage to both the German emperors and the kings of France. Matilda bore him three sons and four daughters before 1066 and seems to have been a supportive and valuable companion. She founded La Trinité, a convent for nuns, near William's Saint-Étienne in Caen, and it is in these abbey churches that the two are buried.

William I's conquest of England established a cross-Channel dominion that altered the balance of power in northern France. William's rivals were quick to exploit his difficulties in ruling the far-flung, multifrontier Anglo-Norman empire, and he would spend the rest of his life fighting off a powerful alliance of French princes. Maine rebelled in 1069, and rebels there invited Foulques le Rechin of Anjou to be their count. William and King Philip 1 of France supported rival claimants in the succession crisis in

Flanders in 1070–71, and an anti-Norman pact between Philip, Foulques, and Count Robert of Flanders resulted. Security in William's empire was further compromised by vassals who held land both on the Continent and in England. Raoul de Gael rebelled against William in 1075 and continued his struggle from his Breton lands. Philip came to relieve the besieged Raoul at Dol in 1076 and formed a Breton-Angevin-Capetian alliance. William's rivals were also able to exploit tensions within his own family. In 1078, his eldest son, Robert Curthose, demanding independent control of Normandy and Maine, rebelled and fled Normandy. He retained considerable support within the duchy and found immediate allies in Flanders and France. Robert defeated his father at Gerberoi in 1079, but a Scottish invasion of England that same year forced a speedy reconciliation. Robert rebelled again in 1083 and again became the tool of all those who opposed William.

In 1087, William took ill on campaign in the Vexin, a region of particular contention between Normandy and France. He died outside Rouen that same year, leaving Normandy and Maine to Robert but England to his second son, William II Rufus (himself succeeded by his younger brother, Henry I). Both William II and Robert spent the rest of their lives trying to attain full possession of the empire their father had created.

# WILLIAM II RUFUS

(d. 1100). The second son of William I the Conqueror, William II acquired England in 1087 when his father left the duchy of Normandy and the county of Maine to his eldest surviving son, Robert Curthose, and England to William (called "Rufus" for his ruddy complexion). William II faced some opposition in the kingdom but devoted much of his English resources to trying to win the continental lands from his brother. Most often these attempts were in the form of bribes to Robert's vassals. William II finally did gain possession of the continental dominions, though not the title of duke or count, in return for financing Robert's participation in the First Crusade in 1096. Robert had been a weak duke, so William II took possession of territories near to the point of anarchy. Through quick military action and judicious bribery, William II was able to quell the baronial wars that had become commonplace in Normandy and to restore Norman power in Maine. Determined to hold all that his father had held, he launched unsuccessful campaigns to retake the French Vexin from Philip I in 1097–98 and 1098–99. William II died in a hunting accident in England, but during his brief reign he had managed to maintain royal

power in England, restore ducal authority in Normandy, and reunite his father's empire, which fell to his younger brother, Henry I.

# WILLIAM OF AUVERGNE

(William of Paris; 1180/90–1249). Born in Aurillac in the Auvergne, William was canon of Notre-Dame in Paris by 1223, regent master at Paris in 1225, and bishop of Paris in 1228. A secular master himself, William was, however, an early champion of the mendicant orders, allowing Roland of Cremona to hold the first Dominican chair in theology (1229). Known for his fairness and good sense, he was confessor to Blanche of Castile and friend and adviser to Louis IX.

William left a vast corpus of works in encyclopedic style, including a series of tracts sometimes called his *Magisterium divinale* (1123–40), which included *De universo, Cur Deus homo, De fide et legibus,* and *De Trinitate*. His De *vitiis et virtutibus* rivaled that of William Peraldus (the two men were often confused) in popularity. One of the first theorists of Purgatory, he was also among the first theological users of Aristotle in Paris, and he sought out texts of Avicenna, Maimonides's *Guide,* Avicebrol, and others in the service of orthodox belief.

# WILLIAM OF AUXERRE

(ca. 1150–1231). Little is known of the career and works of this influential secular master of Paris, although he was teaching in Paris by 1189. A useful administrator as well as theologian, William was made archdeacon of Beauvais by Pope Honorius III sometime between 1216 and 1227; he was a member of the commission appointed by Gregory IX in 1231 to examine and amend the physical treatises of Aristotle, whose use had been forbidden at Paris in 1210. He was himself among the first users of these Aristotelian treatises.

William's chief work, called the *Summa aurea* (1215–20) by admiring contemporaries, takes the form of a loose commentary on the *Sententiae* of Peter Lombard but shows much of William's originality of thought and reformist tendencies. He often introduces specific, contemporary examples and is concerned for the moral reform of the church.

*Lesley J.Smith*

# WILLIAM OF CHAMPEAUX

(ca. 1070–1121). Much of our information about William comes from Abélard and so cannot be judged uncritically; little of his writing is extant. It seems that William studied philosophy and theology with Anselm of Laon, probably with Roscelin at Compiègne, and possibly with Manegold of Lautenbach at Paris. He became archdeacon of Paris and head of the cathedral school (ca. 1100), where Abélard was one of his pupils; but he left the schools, probably because of Abélard's hostility, in 1108.

William established a religious community at a site dedicated to St. Victor just outside the walls of Paris, organized it according to the new rule of Augustinian regular canons, and laid the foundations of the school there. The abbey flourished under his direction, and it attempted to bridge the widening gulf between monks and schoolmen. In 1113, William became bishop of Châlons-sur-Marne, remaining as a reforming bishop until his death in 1121.

William's thought has been characterized (through Abélard's depiction) as "exaggerated realism" (a Neopla-tonic view that held that concepts as much as individuals have existence), so that William regarded the individuals in the same species as having an identical reality.

# WILLIAM OF CONCHES

(ca. 1085–ca. 1154). Named by John of Salisbury as one of his teachers, William is most often associated with the so-called School of Chartres, as a student of Bernard of Chartres and a master there, although Richard W.Southern has called into question whether William actually taught at Chartres, as opposed to Paris. John of Salisbury calls William a grammarian, and much of William's extant work is in the form of glosses on authoritative texts widely used in the schools. He glossed Boethius's *De consolatione Philosophiae,* Macrobius's *In somnium Scipionis,* Plato's *Timaeus,* Priscian's *Institutiones grammaticae,* and Juvenal. He may be the author of *Moralium dogma philosophorum*. His gloss on *De conso-latione* identified the World Soul with the Holy Spirit, although the gloss on the *Timaeus* presents the World Soul as a concept with many hidden meanings. William's glosses on Macrobius and the *Timaeus* analyze the nature of *fabula* and *integumentum* as these apply to the "cloak-ing" of philosophical and theological truth in words and images in literary texts and imaginative narratives. William's interest in physics and cosmology is revealed in his *Philosophia mundi* (entitled *Dragmaticon* in a later revision), a systematic treatment of physical, cosmological, geographical, and meteorological phenomena and questions, summing up scientific knowledge in the era before the translation of Aristotle's scientific works. He sought to discern the true workings of nature and shunned "miraculous" explanations, even for biblical events, when a more straightforward explanation might be found. William made use of translations-adaptations of medical works from the Arabic, such as Constantine the African's *Pantegni*.

# WILLIAM OF SAINT-AMOUR

(ca. 1200–1272). William is now chiefly remembered for his ferocious campaign against the mendicant orders. We know nothing of his life until he became master of arts in Paris (by 1228). By No-vember 1238, he had received the doctorate in canon law and was also canon of Beauvais and rector of Guerville. He went on to study theology in Paris and ca. 1250 was a regent master.

From about this time, William began his attacks on the mendicant way of life, and it was through his influence that the Dominicans were suspended from teaching in 1254 for having in effect broken the closed shop of masters by ignoring the suspension of classes in the previous year and continuing to teach.

William never substantially amended his views on the mendicants, and his subsequent fate depended on who was pope at the time. Innocent IV (r. 1243–54) was sympathetic, and he flourished. Alexander IV (r. 1254–61) was cardinal protector of the Franciscans, and William was deprived of his privileges and expelled from France. Clement IV, although disagreeing, allowed him to return to Saint-Amour, where he died. His most famous polemical work is *De periculis novissimorum temporum* (1256).

# WILLIAM OF SAINT-THIERRY

(1070/90–1148). Born in Liège, William of Saint-Thierry studied at the schools of Reims and perhaps at Laon under Anselm of Laon, where he may have met Peter Abélard. For unknown reasons, he renounced his studies and in 1113 became a monk in the Benedictine monastery of Saint-Nicasius in Reims. In 1118, he became abbot of Saint-Thierry, near Reims. As a close friend and admirer of Bernard of Clairvaux, he wished to change orders and become a Cistercian. However, Bernard dissuaded him until 1135, when William became a monk in the newly founded Cistercian monastery of Signy, where he died in 1148.

On several occasions, William encouraged Bernard's literary activities. Bernard's early work, the *Apologia,* a fierce attack on the traditional Benedictine monastic lifestyle, was written at William's request and dedicated to him. About 1138, William, shocked by the theological audacity of Abélard, persuaded Bernard to oppose him, adding to his request a list of Abélard's errors, published as the *Disputatio adversus Abaelardum.* Bernard's intervention resulted in Abélard's condemnation at the Council of Sens in 1141. William was also instrumental in bringing about Bernard's famous series of sermons on the Song of Songs. When both were ill, they spent some time together in the infirmary of Clairvaux, talking about the *Canticle.* William also intended to write a life of Bernard but completed only the first book, the so-called *Sancti Bernardi vita prima.*

William published many works on devotional and exegetical themes, among which are the *Expositio in epistolam ad Romanos* (in reaction to Abélard's commentary on Paul's Epistle to the Romans), the *Expositio super Cantica canticorum* (a commentary on the Song of Songs), as well as two compilations on the Song of Songs from the works of Ambrose and Gregory the Great and a treatise on the relation between body and soul *(De natura corporis et animae).* Author of *De natura et dignitate amoris* and *De contemplando Deo,* William is also considered to be the author of the famous *Epistola ad fratres de Monte Dei,* about the solitary and contemplative life.

For William, the act of faith is part of and subsumed under mystical knowledge and contemplation. Faith is a pretaste of the vision of the divine. Reason helps faith in the process of understanding itself, raising it to the level of full mystical knowledge characterized by love. William supports his reflections on mystical knowledge with quotations from many sources, mainly patristic, while also frequently referring to profane, classical authors. He, like the "monastic theology" he helped to create, can thus be seen as part of the so-called 12th-century renaissance.

# WILLIAM OF SENS

(late 12th c.). French builder hired to rebuild the east end of Canterbury cathedral after the fire of 1174. According to the chronicle of the Canterbury monk Gervais, which is the only surviving year-by-year description of a medieval architectural project, William spent five years working at Canterbury and would have continued had he not been injured in a fall from the scaffolding in the crossing. Using an intermediary, he was able to direct the works until the end of the building season in 1179 but then had to give up the project to someone who could be on hand at every phase of the building, an En-glishman named William. Although his name indicates he was born in Sens, there is no evidence that William ever worked there. His style and the details of his design suggest that he came to Canterbury from somewhere in northern France, probably the Arras-Valenciennes region.

# WILLIAM OF VOLPIANO

(William of Saint-Bénigne of Dijon; 962–1031). Born into the high aristocracy in Lombardy, William of Volpiano preferred the monastic life to the ecclesiastical career prepared for him and went north to Cluny (987). Abbot Maiolus soon sent him to Saint-Bénigne in Dijon to reform that venerable but undisciplined house (989). He quickly established his talents as an effective if severe reformer, attracting the interest of dukes and kings. He reformed Fécamp (1006) and Jumièges (1015) for Richard of Normandy and Saint-Germain-des-Prés for Robert II the Pious, and founded Fruttuaria (1003) on family property. His monasteries had schools attached that accepted anyone, no matter how poor. After Odilo of Cluny (whom he allegedly "discovered" and sent on to Maiolus as a successor), he founded and reformed more monasteries and priories than anyone of his generation.

He brought Lombard masons and sculptors to Dijon to rebuild the monastic basilica with a huge crypt for relics and a large rotunda modeled on the Holy Sepulcher and an oculus at the top, placed at the east end (1001–18). Although not subsequently copied, the building prefigures Romanesque art in its drive for size, its use of sculpture, and its stone vaults. William traveled a great deal, and sometime in the mid-1010s he added the monk Raoul Glaber to his suite, commanding him to write his history of the "events and prodigies" of the year 1000. In it, Raoul featured William as one of the great geniuses responsible for the renewal of Christian society and for the "white mantle of churches" with which Europe robed itself shortly after the millennium. Attempting to retire to his family monastery in his old age, William was called away to Fécamp, where he died in 1031 in his seventieth year. After his death, his monastic empire vanished; there was apparently little to hold it together beyond his formidable personality. His only important disciple was John of Fécamp.

# WINE TRADE

. Much more important in the medieval world than they are today, wines were a part of the everyday life of both rich and poor. In addition, Christianity demanded wine for ritual purposes. The wines were put into barrels within hours (or, at most, days) of being pressed, when they had not yet completed the fermentation process, and were consumed young, generally within a year after production. Since the wines retained unfermented sugars and yeast, they were more nutritional than today's table wines.

The Middle Ages had a variety of solutions to the problem of distributing wines to areas that did not favor their production. One solution was to plant vines over a much greater area than is done today, for example, around Laon, an important medieval center. The wines produced in such areas, however, were barely drinkable. Some monastic institutions not located in regions that favored the production of wines acquired properties in wine-producing regions or maintained friendly relations with lords in those regions, who supplied wine to satisfy their needs. The earliest stages of commerce in wines are obscure, but by the 12th century a clear correlation exists between regions that were famed for their wines, such as Cahors and Pourçain in the Bourbonnais, and centers of early capital accumulation.

Certain geographic regions achieved fame for the quality of their wines at an early date. In the 6th century, Gregory of Tours commented on the wines produced in the area around Dijon in Burgundy, comparing them to the celebrated Falernian wines of ancient Rome. These "wines of Beaune," as they were known in the Middle Ages, were greatly prized, making their way overland to the markets of the north and by river south to the papal court in Avignon. In the 14th century, during the Great Schism, Petrarch declared that one of the causes for the perpetuation of the "Babylonian captivity" was the fondness of the papal court for the wines of Beaune.

The "wines of Burgundy" were those produced in a vast area of central France, of which only a modest portion remains today around Chablis. In the 12th century, the vines stretched as far as Vézelay, the hills of which the crusader Gui de Bazoches described as being covered with vineyards. In the 13th century, the Franciscan Salimbene commented on the quality of these wines, "which gladden the heart." He noted that they were an important item of commerce, being transported by river to the markets of the north, including Paris. Among the most reputed of the medieval "wines of Burgundy" mentioned by Salimbene were those of Auxerre, which were shipped as far as Normandy, Picardy, Flanders, and Hainaut.

The wines produced in the area around Bordeaux were probably the most important commercially from the 12th century on. Sent by boat down the Garonne River to the sea, then across to England, the wines of this region were not known for their quality, being weak and pale, and were sometimes fortified by the heavy, deep wines of Cahors. Nevertheless, the wine trade with England flourished, encouraged by the political connection between Aquitaine and England and the inferiority of English wines. This trade reached its peak in the early 14th century, when more than 100,000 barrels of wine, each containing approximately 250 gallons, were sent to English shores in a single year.

In the later Middle Ages, the procurers for great lay and ecclesiastical lords and the merchants from industrial areas that did not favor the production of wines traveled long distances to the major wine-producing areas, where they found a host of local officials to assist them. Wine brokers guided them to the cellars of local growers and advised them on quality. Measures varied considerably from one community to the next, but local officials inspected the barrels to be sure that the standards of the community were maintained. Finally, official binders saw to it that the barrels were tied in the manner appropriate to that community, a mark that contributed to the diffusion of a locality's reputation. Those who used false measures or mislabeled their wines were fined or suffered confiscation of their wines.

The wines of a previous harvest, called "old wines," were sold at a discount or sometimes discarded when the new harvest was in, and the barrels were reused. Wines could not be stored for any length of time, since the huge wooden barrels, containing around 250 gallons each, were porous, admitting air and bacteria. Only the better-quality wines would be transported any distance. The poorer wines, still unstable when marketed, could not withstand the hazards of the trip. Glass bottles used for the storage of wines were not common in the Middle Ages; they had to await the availability of corks and the invention of the corkscrew in the early-modern period before becoming commercially viable.

The poorer grades of wines were sold in the local taverns "by the pot and by the pint." Almost anyone who had a supply of wine could open a tavern. All one had to do was

hang out a green branch to signify that small quantities of wines could be bought there. The taverns' reputation as centers of crime and violence, if court records can be believed, was well deserved. Communities also regulated the retail trade in wines, supervising measures, requiring proper labeling, and, in some of the larger communities, regulating the prices. In Paris, for example, a herald proclaimed pub-licly the prices charged in the taverns and received a few pennies from each taverner for his pains.

With the availability of commercial supplies of wine, areas that produced substandard grades could transform the land to more suitable crops. In the late Middle Ages, with the decline of the population associated with the Black Death and other social catastrophes, even some of the better vineyards were abandoned for lack of labor.

In the late 14th century, a new varietal type of grape, the Gamay, made its appearance in the back hills of Bur-gundy. At first, the duke of Burgundy sought to outlaw its use, but since it produced twice the quantity of wine in the same area as the Pinot grape it spread rapidly. With the introduction of the Gamay grape into the hills of the Beaujolais, one is on the threshold of the modern era of wine production in France, marked by the commercial development of table-quality wines in large quantities for the mass markets in Paris and other urban centers.

# WITASSE LE MOINE

. Only one extant manuscript (B.N. fr. 1553) tells the story of this 13th-century French Robin Hood. The anonymous author recounts, in some 2,300 octosyllabic lines, the comic pranks and adventures of Witasse, who confounds his enemy, the Count of Boulogne, notably by his use of disguises. It presents a mixture of folk motifs, internal history of the Boulonnais, and the relations among England, France, and the county of Boulogne in the period 1200–17.

*Wendy E.Pfeffer*

# WITCHCRAFT

. The term "witchcraft" (Fr. *sorcellerie*) can be used for maleficent magic or sorcery, but in France from the 1430s onward this and related terms were applied to an alleged "sect" of conspiratorial Devil worshipers bent on overturning the order of Christendom.

This notion of conspiratorial witchcraft arose in southeastern France and southwestern Switzerland and quickly spread. From ca. 1428 and through the 1430s, large-scale trials occurred from the Dauphiné across to the Valais. The trial records indicate growing concern with a new type of conspiratorial witchcraft, and the concept of this offense was developed especially in writings of the 1430s: the anonymous *Errores Gazariorum,* the chronicler Johann Fründ's report about witches in the Valais, the secular judge Claude Tholosan's treatise regarding the witches he encountered in southeastern France, and (slightly later) Martin Le Franc's more skeptical report of recent witch beliefs in the *Champion des dames.* Also produced in the 1430s was the Dominican friar Johannes Nider's highly influential *Formicarius,* which told of witch trials in Switzerland around the turn of the century. This literature was followed in the 15th century by other important writings on witchcraft; especially important works written in France were Nicolaus Jacquerius's *Flagellum haereticorum fascinariorum* (1458) and Johannes Tinctoris's *Sermo de secta Vaudensium* (1460). These writings told how the witches met at "synagogues" or "sabbaths," where they paid homage and rendered an obscene kiss to the Devil (who often appeared as a black cat), made a pact with the Devil in their own blood, ate their own offspring, had indiscriminate sex with others in attendance. At these assemblies, they received powders and unguents to be used for destroying people and crops. The witches of the Valais were said to claim that they had recruited about 700 members for their "sect" and boasted that within a year they would be so powerful that they could rule Christendom and sit in judgment over it.

The association of witchcraft with the heresy of the Waldensians is reflected in the term *Waudenses* or *Vaudenses* (*Vaudois* in French), used for witches as early as 1437 in Pope Eugenius IV's *Ad nostrum,* alerting inquisitors to them. The term was used regularly in the 1450s, particularly in connection with the affair at Arras beginning in 1459, when thirty-four people were arrested and twelve burned for *Vauderie*. In this case, the ritual elements of witchcraft were accentuated and the role of sorcery (or maleficent magic) was negligible. Yet it is difficult to determine whether the witches spoken of as *Vaudois* had a genuine link to the Waldensian heresy or whether the term was being applied loosely; some of the accused in the 1430s may have been Waldensians, but certainly the *Vaudois* of the 1450s show little sign of having belonged to this sect.

Although witches are occasionally recorded as having confessed without torture, the use or threat of torture was often a major factor in obtaining confessions. It was important in coercing alleged witches to give the names of other people they had seen at the sabbath. The dynamics of prosecution can be seen clearly in the trial of Pierre Vallin at La-Tour-du-Pin in 1438. Vallin was convicted by an episcopal official and an inquisitorial vicar of invoking demons and serving "Belzebut" more than sixty-three

years. He had renounced God, defiled the Cross, dedicated his infant daughter to the Devil (who then killed her), aroused storms, ridden to the "synagogue" on a stick, eaten the flesh of infants, and had sexual intercourse with Belzebut (who appeared for the purpose in the form of a twentyyear-old woman). His ecclesiastical judges then released him to the secular court, which demanded to know the names of his associates in the sect; when he claimed to know no names, the judge said it was impossible for him to have belonged to the sect so long and not know names. Instruments of torture were shown him, and he named eight persons; after lunch, the judge had the instruments of torture readied, but Vallin said he could not give further names, no matter what was done to him. The next day, the judge tried to induce him to name priests, nobles, or wealthy men from the area, but he could not oblige.

Prosecution for witchcraft was often encouraged by developing regional governments; when Claude Tholosan tried witches in southeastern France, he did so as agent of the rising regional state of Savoy. The central authority of the royal government, however, sometimes served as a braking influence in the witch trials. It was the Parlement de Paris, for example, that eventually overturned the convictions at Arras. The cautious stance of the national government is perhaps best reflected in a case at Marmande in 1453. In the midst of an epidemic, eleven or twelve women at Marmande were seized by a local mob. Three of them confessed under torture that they had killed children by their sorcery, whereupon the local authorities had them burned. Two others confessed but then recanted, and when the authorities refused to execute them the outraged popu-lace seized and burned them. The rest of the women refused to confess under torture; two of them died from their torture, but the others were eventually released. In the end, the royal government disciplined the consuls of Marmande for having failed to maintain public order during this crisis.

In places like Arras and the diocese of Lausanne, where the ritual and heretical elements of witchcraft remained prominent and the element of sorcery was proportionally less developed, witches were predominantly male. Indeed, one man in the Val de Travers who confessed having attended the sabbath told of several men who had been in attendance, and his judges had to ask him whether there were not women as well. Elsewhere, however, women outnumbered men—by about two to one in the Dauphiné and elsewhere still more strongly.

Occasionally, there is evidence that the women tried as witches were local healers. The vulnerability of such women can be seen in the trial of Catherine de Chynal in the Aosta Valley in 1449. Her personal history was tumultuous: born in Basel, she had moved to the Valais when young, married, left her husband and moved about, and had children by two men. She was accused in part of practicing medicine without having the requisite education; she told of a charm that she had used successfully to keep wounds from becoming inflamed, yet she was accused of harming people with her magic. One of the people she was supposed to have bewitched was a priest who came to her hoping she could relieve a tumor of his, but the medicine she gave him seemed to aggravate his condition and he died soon afterward. She was charged not only with harming people but with causing a cow to stop giving milk, and when the cow's owner beat a pail to restore the flow of milk Catherine was later discovered to have borne the effects of this magical beating. Worst of all, she was accused by one Pierre Proveschy (himself a "heretic" or witch) of having attended a "synagogue," denied God, kissed the Devil on the posterior in

the form of a black cat, and spat and trampled on a cross. She denied all these charges, even under repeated torture, and at the demand of her son a local canon undertook her defense, yet the court found her guilty and sentenced her to penance (including a pilgrimage to Rome) and to banishment.

A woman at Villars-Chabod named Antonia, tried in 1477, denied at first that she was a witch, but after being tortured and left in prison over a month she confessed to attending the "synagogue" and paying homage to a demon named Robinet. She had been induced to join the "heresy" because of financial problems; at the synagogue, the demon had given her a purse filled with gold and silver, but when she returned home she discovered that the purse was empty. Amid all the details of the synagogue and of sorcery, there is reference to her having cured people's illnesses with the aid of her demon and with a charm, suggesting that she, too, was established as a kind of local healer.

Women more than men were liable to accusation if they became known as troublesome, and especially if in quarrels with those about them they uttered curses that could be interpreted as having had the intended effect. A woman in the hospital at Provins in 1452 was bitten by a dog kept there, and in her fury she hit the woman in attendance and uttered a curse that she might die in three days, which in fact happened. Imprisoned, the woman attempted to hang herself in her cell, but the jailer resuscitated her. The charges pressed against her soon went well beyond mere sorcery: she was accused of belonging to the sect of *Vaudois,* of standing in circles and invoking demons, of consorting with the Devil in the form of a large black cat, of killing children, and so forth. Eventually, the case was transferred from the provost's court to that of the archbishop of Sens, and then appealed to the Parlement de Paris, as was the case a few years later at Arras. Another person accused of joining the *Vaudois* was the Carmelite theologian William Adeline, who in 1453 confessed that he had done so to curry favor with a knight whose displeasure he had incurred; when the presiding demon saw him at the assembly, he said, "The best one has come," and Adeline allegedly enjoyed great esteem among the *Vaudois*.

Often, a witch's reputation for sorcery and other misconduct was built up over several years before she was finally brought to trial. When a fifty-six-year-old widow named Andrée Garaude was executed for witchcraft at Bressuire in 1475, it became clear that she had long been at odds with the community. About eighteen years earlier, someone had killed all her goslings, and in her rage she called on the Devil for revenge, whereupon he appeared to her as a black dog named Sathanas and agreed to satisfy her desires if she would serve him and attend the sabbath. After some reluctance, she consented. Apart from the usual details of the sabbath, she confessed that she had used a wax image against more than one of her neighbors, she had killed another neighbor's goat by afflicting it with a reddish powder, and she had desecrated the local church, urinating in the holy water fount and defecating in the nave at the Devil's command.

Vulnerability to prosecution was increased if a woman had relatives who had been convicted of witchcraft or if she herself was known for general immorality. When sickness broke out among both the infants and the animals at Boucoiran in 1491, a woman named Martiale Espaze realized that she had been accused of sorcery by other women detained for the same offense, and thus she fled. Her husband asked her if she was in fact a sorcerer, and she told him she was not, yet she was fleeing to Gabriac to

stay with her cousins. Her husband later told the authorities he had no reason to think her a sorceress. Others, however, were not so sure. Witnesses told how she and her mother had fled to Boucoiran some years ago when a relative was executed elsewhere for witchcraft and her mother was suspected. Martiale herself was pregnant at the time and claimed to be a widow. In Boucoiran, she had a reputation for sexual promiscuity. Eventually, she was captured at Gabriac and brought back to Boucoiran, where she confessed that she had attended the sabbath. She had killed and witnessed the killing of children; she once did so in the course of a quarrel in which she had been accused of theft. But she had also killed pigs, not out of vengeance but simply in compliance with the Devil's command.

Especially poignant as an example of a woman's vulnerability is the case of Jehanneta Lasne of Vacheresse, who confessed under torture at Fribourg in 1493 that she had attended assemblies of the witches' sect, presided over by a figure who called himself Sathanas. She had been induced into this sect because her husband would beat her, and one night she went into the woods and cried out asking God or the Devil to come to her aid. Sathanas then appeared and told her that if she denied God and took him as her master he would comfort her and her husband would cease beating her.

# WOMEN, RELIGIOUS EXPERIENCE OF

. In assessing the scope of medieval women's religious experience, it is necessary to consider that the concept "experience" comprises both internal and external factors, only one of which is gender. Other components include theoretical knowledge, access to situational frameworks (e.g., to the opportunity to exercise publicly recognized authority), social and economic status, age, and linguistic skills to express and reflect upon experiential data. All of these variables differ greatly not just between men and

women, due to sociological causes, but also among members of one sex. It is difficult to defend an essentialist claim that distinctly female or male core experiences exist; yet the unwillingness of the male medieval-church hierarchy to share its power with women forced religious women on paths that favored certain types of experience and their communication over others. It has been argued, for example, that women's exclusion from the priesthood fostered a uniquely feminine eucharistic piety that stressed an intimate psychophysical union with the human Christ. Furthermore, women's ability to become pregnant, to lactate, and to nurse is said to have caused a specifically feminine "mother-mysticism," in which women visualized these activities visà-vis the Christ child in the late Middle Ages. Yet all these "feminine" activities have also been reported for male mystics, albeit with less frequency. And the reverse is also true: women visionaries and mystics, such as Jeanne d'Arc (ca. 1412–1431), appropriated "masculine" patterns of spirituality that stressed activism, or, as in the case of Aldegund (d. ca. 684), the woman's *virilitas,* or manliness. It is more helpful, therefore, to pay attention to the localization of women's spiritual experiences in their specific cultural and economic contexts; as this survey will show, their spirituality changed greatly through the ages. It represents more women's sociologically determined commentaries on pressing issues of their day than an ahistorical, archetypal feminine "essence."

We need to assess our sources critically, since only a small minority of women left written testimonies to their thoughts and lives. Most of our information is filtered through devout or even hostile texts (as in the transcripts of trials conducted by the Inquisition) written by men who either knew the women or merely heard about them. Therefore, we are often confronted with reflections about what women's religious experiences were thought to be rather than with an accurate account of these experiences as authenticated by the women themselves. Finally, the question of what constitutes women's and men's distinctly gendered experiences is not a medieval but a thoroughly modern issue. Medieval women writers who talked about their spiritual lives understood their experiences to be paradigmatic and open to all Christians, no matter what their gender. It is almost impossible *not* to distort their own accounts by attempting to isolate gendered units of meaning.

Medieval France (however difficult to define geographically) produced some of the highest intellectual and artistic religious achievements of its era. Nonetheless, we have the names of only a handful of extraordinary French religious female leaders and authors; not all of them were mystics or used traditional literary genres to channel their interest in religious questions. For example, Héloïse (d. 1163/64), Christine de Pizan (d. ca. 1430), and Marie de France (fl. 12th c.) achieved lasting fame as writers, but little attention has been paid to their religious beliefs. Na Prous Boneta (d. 1325), Jeanne d'Arc, and Marguerite Porete (d. 1310), fascinating innovators and mystics in their own right, were condemned and killed as heretics. Little is known about 14th-century visionaries like Constance de Rabastens or Marie Robine. In comparison with the lasting impact of French male mystics, such as St. Bernard of Clairvaux (1090/91–1153) and the Victorines (fl. 12th and 13th c.), the contributions of women mystics have been largely neglected due to a lack of institutional support and access to a public forum in the medieval period and indifference in the following centuries. Furthermore, women's monasteries, the ideal locus for intensely practiced religiosity, tended on the whole to be poorer than men's houses; nuns were more tightly cloistered than monks; and, with the

rise of the universities, all women's access to learning, to publishing, and to participation in culturally relevant discussions drastically declined. By necessity, religious women's creative outlets aligned them more closely to popular culture, the vernacular and heretical movements. In sum, women's religious achievements became generally possible only under favorable conditions that included access to theological knowledge, freedom from traditional roles related to child rearing and work in a home-based economy (Jeanne-Marie de Maillé [1331–1414] began her career as a visionary recluse after the death of her spouse), institutional support, and a relatively stable, economically thriving, and culturally diverse environment (e.g., the women saints of the Merovingian era tended to live in well-endowed and well-connected monasteries). Therefore, we can locate most medieval French women mystics in regions characterized by the existence of royal houses or important medieval cities, with vibrant trading centers and their potential for cultural exchanges.

Medieval France witnessed three phases of distinguished female religious creativity. In the 6th and 7th centuries, when the Merovingians shaped the three kingdoms of Burgundy, Austrasia, and Neustria, a remarkable number of noble women saints emerged whose biographies testify to their influence on local spiritual culture. In many cases, their cults were promoted by fellow nuns who survived the saint (often the founder of the community) and struggled to keep the monastery financially secure and spiritually alive. Religious experiences cultivated in these monastic environments centered on a mixture of active charity to the community (the saints functioned as "living sermons," to use the felicitous term coined by Jo Ann McNamara) and mediatory roles that highlighted the saints as "mothers" and peacemakers in the community. In the cases of Radegund (ca. 525–587), Aldegund, and Balthild (d. ca. 680), their lives have either been recorded by themselves or other women, thus representing a more accurate view of women's spirituality.

- In these accounts, virginity and ascetical feats appear to be less important than compassionate leadership, the performance of miracles, and love of God and community. Radegund was a Thuringian princess captured by the Franks and married to Clotar I (r. 511–67). With the help of two bishops, Radegund managed to leave Clotar and established a monastery at Poitiers, for which she secured a relic of the Holy Cross. Her male biographer Venantius Fortunatus stressed Radegund's extravagant penitential piety and acts of status reversal, both features more typical of male saints. In contrast, her female biographer Baudonivia, a fellow nun, focused more on miracles that consolidated Radegund's community and her visionary teachings, which Radegund revealed only to a small group of trusted nuns.

Aldegund, also a member of the nobility, was educated at the monastery of Nivelles and later founded her own monastery at Maubeuge. The description in her *vita* of her visions was dictated by Aldegund herself and used as inspirational readings in her own institution, thus establishing a kind of "female lineage" of teachings. Although Aldegund's visionary imagery is traditional (including Christ, the Virgin, angels, the Devil in the form of a wolf and a lion), its message of love is innovative. Balthild was a Saxon slave who eventually became a queen and regent. She founded a monastery for men at Corbie and one for women at Chelles, where she lived from 664/65 until her death. Renowned for her generosity, Balthild, like Radegund, encouraged peacemaking efforts and durable relations between the court and the monastery and promoted her

monastery as the location for a royal cult, Feminine spirituality as promoted by early-medieval women saints and their followers is marked by an affirmation of community ties and the continuity of secular and religious identity rather than status reversal and conversion.

From the following centuries, hardly any female voices survived. This is in part due to the fact that women's monastic communities sharply dropped in numbers, a development that did not reverse itself until the 11th century. We have, however, an exceptional testimony from the 10th century, the *vita* of the serf Flothilda of Avenay (d. 942), who died shortly after she received her revelations. The first set of her visions describe Flothilda's persecution by demons and men on horses and her escape to safety, an almost timeless topos reflecting women's fear of sexual violence. The second cycle deals with church-political questions of her community at Reims and the decline of moral standards among the clergy. From the 12th century, the era of Marie de France and Héloïse, we possess a fascinating document depicting the lively cult and rich visionary talents of Blessed Alpais of Cudot (b. ca. 1156 in northern France), a simple peasant woman. At the age of twelve, Alpais became gravely ill and was unable to leave her bed for the rest of her life. Her body was so disfigured with open sores that her brothers decided to let her starve. At this point, Alpais began to receive regular apparitions and visions, proved to be capable of telepathy and vision at a distance, and abstained completely from food, a sign of holiness that reached back to the desert fathers and eventually became a hallmark for later women mystics. The Cistercians supported her cult and, against her strong resistance, the local archbishop built a church adjacent to Alpais's house during her lifetime, since she was recognized as a living saint. Spirituality in the 12th century is marked by a rise in Marian piety and in eucharistic devotion; both trends are well represented in Alpais's visionary accounts. Most remarkable, however, is her vision of the Cistercian abbot Gilduin, who is seen as feeding his monks with milk from his breast—a highly suggestive image preceding that of the younger Italian St. Clare of Assisi (ca. 1193–1253) receiving milk from St. Francis (1181/82–1226) and reminiscent of St. Bernard of Clairvaux, who received milk from the Virgin Mary. Alpais's contribution to eucharistic piety is her account of the heavenly events that parallel each earthly celebration. As the priest conducts the eucharistic rite, she sees a beautiful child being offered by angels to God and then returned to the altar of the church. Visionary participation in the eucharist, often expressed in observing the transformation of the host into the human Christ, miraculous revelations about the worthiness of priests, and revelations surrounding the host became in time characteristic of women's religious experience of the high Middle Ages, the second distinctive phase of medieval women's spirituality.

The other great spiritual theme of the 12th century and late 13th is voluntary poverty, that is, a desire for the apostolic lifestyle of early Christianity and a thorough moral reform of the church. Within the church, this impulse found expression in the new orders of the Franciscans, Dominicans, and Cistercians, which almost immediately had to confront the uncomfortable question of the *cura monialium,* the pastoral care of women attached to the order either as nuns or as tertiaries.

In distinction to the social landscape of early-medieval women's religiosity, we note the inclusion of women of the middle and lower classes, as in the case of Alpais of Cudot. New centers of religious activity and creativity appeared in northern and southern

France in the wake of the rise of wealthy cities. Not just women in the reform orders of the Cistercians, Dominicans, or Franciscans but also those women who joined Waldensians or Cathars gained prominence as leaders. Béguines like Marguerite Porete straddled the difficult demarcation between heretical and orthodox groupings, since they had to endure a tumultuous fluctuation in ecclesiastical and civic support.

Inquisitional records provide ample evidence of women's activities among the Cathars and the Waldensians. A survey of such documents from the region of Quercy in the 13th century estimates that 30 percent of active Cathars and 52 percent of active Waldensians were women; in the diocese of Toulouse, which hosted very few Waldensians, 40 percent of the Cathar leaders seem to have been female. In their early phase, Waldensians permitted women to preach, baptize, forgive sins, and celebrate the eucharist. The Cathars, or, as they called themselves, the "good Christians," had a dual message for women. On one hand, they rejected the female body as the representation of the evil material world; nonetheless, women as well as men could reach the status of the "perfect," the highest rank among the Cathars. The "good Christians" also offered monastic institutions for women, the so-called *hospicie*.

In terms of social respectability and visibility, medieval women's mysticism had reached its peak by the end of the 13th century—within rather than outside the church. The following women reached fame for their religious contributions: as representatives of eucharistic piety, Marie d'Oignies (1177–1213) from Nijvel, who is also regarded as one of the founding mothers of the béguines; Juliana of Mont-Cornillon (1193–1258), who initiated the feast of Corpus Christi, first celebrated at Liège in 1247; Ida of Louvain (d. 1260), who received special papal permission to receive the eucharist on a daily basis; and Marguerite d'Ypres (d. 1237), who already showed intense devotion to the eucharist by the age of five. As mystical writers in their own right, the Carthusian prioress Marguerite d'Oingt (ca. 1240–1310) and the Cistercian prioress Beatrijs of Nazareth (1200–1268) deserve mention. St. Douceline de Digne (ca. 1214–1274), who founded two or three béguinages in southern France and whose life was recorded in Occitan by her pupil Philippine de Porcellet, became the subject of a popular local cult. Despite significant differences, all of the religious women of this period share the following features.

*Mystical phenomena.* These include both charismatic gifts, such as levitation, inedia, visions, locutions, revelations, the reading of hearts, ecstasies, and intellectual transformations like increasing intuitive knowledge of divine reality, interior absorption in God, and contemplative and meditative skills. All of these phenomena are more deeply developed than in the early-medieval period.

*Greater dependency upon male sponsors, teachers, and ecclesiastical authorities for spiritual guidance and interpretation of experience.* Due to the fluid boundaries between heretical and orthodox reform movements, the unpredictable formation of a new relationship between clergy and laity caused by the shift from agrarian to urban social structures and the concomitant rise of the burgher class, and the growing importance of vernacular languages, women's religious roles needed to be redefined. It has been pointed out that male biographers of religious women's lives, such as Thomas de Cantimpré (1201–1263/72), stressed female innocence and lack of theological training as signs of holiness, thus creating a myth of female spiritual superiority that successfully barred women from demanding equal access to positions of power. Since women of the early

Middle Ages tended to belong to royal houses, their religious experiences were not shaped by the attempt to create sharply gendered divisions of power.

*Increased sophistication regarding emotional and sensual aspects of devotion to the human Christ and asceticism.* Women followed here a larger cultural trend that manifested itself in the secular tradition of courtly love and the bridal mysticism propagated by St. Bernard of Clairvaux in his *Commentaries on the Song of Songs.* Unlike St. Bernard's more cautious teachings, however, women's exploration of psychological dynamics became more concrete and radical, frequently culminating in highly sexualized experiences of spiritual union or intensely celebrated psychosomatic pregnancies.

The final stage of medieval women's religious life is defined by increased repression, decline of institutional support, and marginalization. As Caroline Bynum and other scholars have pointed out, by the 15th century the image of the woman mystic is almost identical with that of the witch. The dramatic biographies of women mystics of the 14th and early 15th centuries illustrate this turn of events. All of the women who were eventually executed as heretics overstepped the limits that kept earlier women mystics in their gendered niche. They claimed for themselves the exclusively male prerogatives— sanctioned as divinely instituted—to pronounce theological teachings (Marguerite Porete, burned 1310), to become publicly active in a male role (Jeanne d'Arc, burned 1431), or to usurp religious authority that rivaled or even canceled out ecclesiastical authority (Na Prous Boneta, burned 1325; Jeanne Daubenton, burned 1372). Those of their contemporaries who were spared the stake followed the pattern of obedience and integration in existing institutions chosen by the women of the 12th and 13th centuries. After the death of her husband, Jeanne-Marie de Maillé (1331–1414) cared for the sick and poor, was eventually forced to retreat to Planche-de-Vaux to live as a recluse, and finally joined the Franciscans in 1386. From within the safe walls of the monastery, she became a revered counselor and visionary, who was even summoned to King Charles VI on several occasions. Coletta Boylet of Corbie (1381–1447) received revelations regarding the Franciscans at the age of nine; as an adult, she first chose the lifestyle of a tertiary, then that of a recluse at Corbie. Motivated by revelations, Coletta asked for papal permission to reform Franciscan monasteries and proceeded to found the remarkable number of seventeen female and at least seven male institutions. Her authority was guarded by an unwavering commitment to church-approved channels for religious activity and intensely mystical phenomena that were identified with femininity rather than masculinity—long-lasting ecstatic states, levitations, revelations from souls in Purgatory, and the like.

In contrast, Jeanne d'Arc's mysticism appears minimalistic. The young woman followed the supernatural voices of SS.Michael, Catherine, and Margaret; there are no other charismatic gifts reported. Like Marguerite Porete, Jeanne d'Arc had no spiritual director, did not live in a community, and moved about freely. Marguerite Porete, Na Prous Boneta, Heilwic Bloemard (d. 1335), and Marie of Valenciennes (fl. end of the 14th c.) all claimed the possibility of transcending the limits of human sinfulness, either by having been elected mother *(donatrix)* of the Holy Spirit and receiving a glorified body (Na Prous Boneta), or by having achieved the perfection of the *âme anéantie,* the annihilated and therefore liberated soul. These teachings catapulted the women mystics outside of quantifiable and therefore controllable parameters of social norms and

experiential criteria that had been developed in a slow and complex historical process. Women's religious experience in the 14th and 15th centuries reached the limits of what seemed patriarchally tolerable; it was mirrored in the all-consuming annihilation of the stake, a far cry from the community-affirming miracles of a St. Radegund and the peacemaking efforts of a Balthild 900 years earlier.

# WOMEN IN TRADE

. Case studies have shown that women throughout medieval France were deeply involved in trade, despite limitations placed upon their participation. Their activities, though concentrated in the textile and food trades—the stereotypical spinsters and brewsters— could, depending on the region, be as varied as moneychanger or moneylender (a status noted for Jewish women in northern France), manuscript illuminator, or precious-metal worker. Wives and daughters of craftsmen frequently worked with the male family

members in their occupation and continued in the trade as widows. Single women *(femmes soles)* were also often involved in artisanal activities. Some twenty of the forty-one cloth-industry employees of the exploitative Jehan Boinbroke of Douai were women. Numerous wetnurses and midwives and occasional female surgeons have been recorded. Women served as petty merchants but rarely in long-distance commerce, where if they were involved at all it was as sedentary investors. Generally, women in business could appear in court, independent of their husbands, in matters of their trade.

Women were denied access to guild membership in many trades; in others, widows achieved guild membership in their husbands' stead. Some guilds were exclusively female. According to the *Livre des métiers* of Étienne Boileau (1292), drawn up for tax purposes in Paris, six guilds were female only, but women were working in eighty others, out of over 120 in all. In Toulouse, women were admitted to the guilds of weaver, cloth finisher, candlemaker, wax merchant, and *avoir-du-poids* merchant. In Montpellier, there was female guild membership only for the *caritat des fourniers* (bakers), whose regulations were recorded in 1365. In Arras, widows who had not remarried could enjoy membership in the same food trades as their late husbands. Guilds with predominantly female membership usually had male governance.

Wages for women were lower than those for men in comparable employment, a fact that led to the preferential hiring of some women and the disgruntlement of unemployed men. Piecework was usually financially more advantageous for women. In late-medieval France, commercial possibilities for women tended to narrow in the increasingly negative economic climate.

# WOMEN'S SONGS

. The women's songs, or *chansons de femme,* accounting for a significant part of the Old French lyric corpus, constitute not a genre but a conceptual set identified by female voice and exclusive preoccupation with love. Though limited thematically, their poetic elaboration, like their music, is highly diversified and ranges from products of a precourtly, even pre-Christian, European tradition, as is reflected also in Portuguese or Germanic songs, to compositions variously influenced by the forms and ideology of the troubadour-derived *grand chant* style. From the most archaic, folkloric type to the most aristocratized, it is likely that most pieces extant, transmitted largely by the same chansonniers that preserve the courtly trouvère compositions of the 12th and 13th centuries, were written or rewritten by men; almost all are anonymous. Though

noncourtly women's texts were sung in Provençal as well as in French, the Provençal songs are barely represented in the manuscript sources.

Love here tends to be forthright, sensual, shadowed by pain, and unencumbered with the artifices of *fin'amors*; its basic vehicle is the monologue. These characteristics are all subject, however, to considerable modification.

The genres accommodating the *chansons de femme* include only one, the *chanson de toile,* in which formal definition and feminine interest are coterminous. Elsewhere, form is not necessarily identified with a specifically feminine experience of love, and particular experience does not necessarily dictate a given form. A *chanson d'ami,* for example, voicing the amorous longing, joy, or heartbreak of an unmarried girl (rarely, an unwilling young nun), may take the form of a dance piece such as a ballette, or a *rondet*/rondeau, or a more freely defined sequence of refrain-capped stanzas. As a confrontation with an adversary of love, often the girl's mother, it may merge with a debate song or suggest the incipient drama of a *chanson à personnages;* as a farewell to a lover, it overlaps other songs of separation, the crusade songs, for example.

If the unmarried girl stands, as often claimed, at the heart of all women's lyric, the unhappy wife is, in the Old French corpus, even more prominent. These *chansons de malmariée,* too, show many forms and variations, including, in particular, a male poet serving as narrator and occasional interlocutor. An encounter with the poet, for example, may introduce the woman's lament; she may be presented arguing with her husband, debating with another woman, or conversing with her lover.

The *aube,* or dawn song, though not inherently feminine, tends in Old French as in Provençal to be the separation lament of a woman, married or unmarried. It is the only traditional *chanson de femme* better represented in southern manuscripts than northern (eighteen to five, not all of which are in a female voice). The French poems show less formal homogeneity than the others; music is almost wholly wanting in both sets.

Whatever the form of women's songs, they show a widespread incorporation of *refrains,* one- or two-line exclamations that may themselves have originated in women's dances. Songs in the high style of *fin'amors* are extremely rare in Old French, which did not develop a counterpart of the trobairitz.

# WOOL TRADE

. During the Middle Ages, a major commodity of French commerce was wool. The cloth-manufacturing industry that had developed in Flanders, Artois, and Picardy had by the 12th century outstripped domestic supplies to meet its needs, and purchasing of English wool had begun. The principal merchants in the 12th century and much of the 13th were the Flemings, who bought the output of monastic houses and that of the laity. It was at times a simple transaction of money for wool. Frequently, wool was purchased by contract, money being advanced for future delivery. Some of the merchants were independent traders; others were agents of major wool towns commissioned to buy wools to meet the towns' needs.

A conflict begun in 1270 between the kings of England, Henry III and Edward I, and Marguerite, countess of Flanders, contributed to the undermining of Flemish dominance in the traffic of English wool. Hostilities lasted for five years, but even peace in 1275 did not end strained relations between the rulers. Reparations sought by aggrieved merchants of both sides for goods seized during the conflict occasioned coolness between Edward I and Gui, Marguerite's successor, and brought intermittent in-

English wool arrived regularly by ship to supply the textile industry of northern France. B.N. fr. 2810, fol. 86v. *Courtesy of the Bibliothèque Nationale, Paris.*

terruptions of trade by the English king to pressure the count to make promised payments. A serious break between England and Flanders occurred in 1304, when Edward I agreed to help Philip IV in his war against Flanders. The response of the Flemings was to give aid to Scotland, then at war with England. This resulted in the devising of a method to prevent the Flemish merchants from direct access to English wool. A compulsory staple (exclusive market for English wool) came into being in 1313. A cross-Channel town was designated in which all wool shipped from England to the Low Countries had to be marketed. The staple was variously at Saint-Omer in Artois and Antwerp in Brabant, being located in Flanders at Bruges only in 1325. The sharp decline in the role of Flemish merchants in its wool trade with England did not result from the staple. Edward II was generous in his exceptions, even giving a license to all merchants of Ypres to buy wool in England. The decline that began with the conflict that occurred from 1270 to 1275 grew sharper when the Flemings lost their contacts with English monastic houses and conditions in England became unsettled. Into their places stepped the Italians, the English, and members of the Hanseatic League. Despite their declining role, Flemings still traded in England, but in far fewer numbers. It was also true that for much of the 14th century Flemish ship owners still carried the bulk of the wool exported from England. Though Flanders had the dominant role, it was not the only French region from which merchants came. Picardy sent frequent buyers to England. The merchants of the southern city of Cahors had a particularly large share in shipping wool from the major eastern ports of England and importing wool for the clothiers of Toulouse. In addition, the source of wool for France changed by the 15th century. Far fewer sacks of raw wool came from England as the English developed their own cloth for export; Germany and, most importantly for Flanders, Spain, replaced England as suppliers.

# Y

## YPRES

. The smallest, after Bruges and Ghent, of the "three cities" that dominated Flanders in the Middle Ages, Ypres is first mentioned in written sources of the 11th century, the only "new" or founded town of Flanders that became a major metropolis. Its area was still heavily forested in 1000 but was being cleared rapidly. It was the site of a castle of the Flemish counts and the church of Saint-Martin, on the Yperlee canal at the point where it became navigable to merchants traveling inland from the coast. Ypres was thus at a strategic point linking the hydrographic systems that concentrated on Bruges and Ghent. One of the "five fairs" of Flanders was held at Ypres, and it grew rapidly, playing an important role in the revolutionary events of 1127–28. Ypres received a charter based on that of Arras, probably in 1174, and an annually chosen *échevinage,* or city council, in 1209. By then, it was one of the most important textile centers of Flanders, indeed the most purely industrial of the Flemish cities, with an active overseas trade. With Ghent and Bruges, and before 1305 Lille and Douai, Ypres participated as a "good town" of Flanders in regular consultations with the counts.

Ypres kept this position to the end of the *ancien régime,* despite a severe economic decline after ca. 1315. The famine of that year and a subsequent plague cost Ypres nearly one-sixth of its population, which is thought to have been about 22,000 in 1315, 14,000 in 1360, and 9,390 in 1437. Ypres was also the only one of the "three cities" that faced substantial competition from neighboring smaller towns, particularly Poperinge, in textile manufacture. Although' the manufacture of certain types of luxury cloth was forbidden within three comital miles of Ypres, the town was unable to enforce its right, and the result was that the Ypres vicinity and the nearby Lys Valley became known for the production of medium-grade cloth by the late 14th century. The cloth production of Ypres dropped 60 percent between 1312 and 1360, and decline became even more rapid after 1370. The events of 1302 did not involve replacing the French-speaking aristocracy at Ypres, which continued to function except between 1325 and 1329. The walls of Ypres, which still left most of the textile workers in the suburbs, were less extensive than those of the other Flemish towns, for the ruling merchants, fearing rebellion, did not want to have the artisans enclosed within the same set of walls as themselves. The workers of Ypres thus suffered terribly during the wars of the 1380s, and most seem to have emigrated. Despite its continued political importance, Ypres was a secondary center economically thereafter.

# *YSENGRIMUS*

**.** A Latin poem of some 6,500 dactylic hexameters in seven books, composed ca. 1150 and attributed to the Flemish monk Nivard of Ghent. This first great beast epic, centered on the figure of the wolf, is a coherently constructed work in twelve episodes. Both a fable and an oratorical and satirical text, *Ysengrimus* reflects contemporary life and the problems of the Second Crusade. This somber and pessimistic poem is largely unsympathetic to St. Bernard, Pope Eugenius III, and the monks of Cîteaux and Cluny. It is an excellent reflection of the culture of a 12th-century cleric: well acquainted with Virgil, Ovid, Lucan, Juvenal, and other classical authors; steeped in biblical and liturgical culture; and generally indifferent to popular culture.

# INDEX

Page references to encyclopedia entries appear in boldface; page numbers for maps and tabular material are set in italic.

This index is intended to guide the user to treatments of persons, places, events, rituals, musical works, texts, towns and cities, and other concepts discussed in the Encyclopedia, but not included as main entries. Main entries are also listed, with further references as required to other places in the volume where they are discussed. Major monuments (e.g., churches and public buildings) are not usually listed individually since they are treated in the article for the city or area where they are located; they are also often discussed in comprehensive topical articles for time periods and/or geographical regions. Treatises, musical works, plays, and other texts are listed by title and/or author. Minor works (individual lyrics, hymns, fabliaux, etc.) are generally not listed.

In alphabetizing the index, particles (of, de, des, le, etc.) in names of individuals have been ignored. Thus, Bernard of Clairvaux will appear before Bernard Délicieux and Bernard de Soissons.

Used in conjunction with the "See also" listings at the end of each article, the index allows the reader to explore in detail the many facets of life and thought in medieval France.
