albanian

introduction

Albanian (*gjuha shqipe* *dyoo-ha shtyee-pe*) is one of the oldest Indo-European languages, generally considered the only descendant of Illyrian, the language of the ancient inhabitants of the Balkans. With no close relatives and constituting a branch of its own, it's a proud survivor of the Roman, Slavic and Ottoman influxes and a European linguistic oddity on a par with Basque.

Albanian's position on the edge of the turbulent and multilingual Balkans means that it's been influenced by many languages. Some similarities with Romanian, for example, suggest that the two languages were closely related and that their speakers interacted even in pre-Roman times. The Romans, who established control over the present-day Albania by 167 BC and ruled for the next five centuries, left their mark on the vocabulary and structure of the language. After the division of the Roman Empire in AD 395, Albanians fell within the realm of Byzantium and Greek Orthodox culture. The interaction with Bulgarian and Serbian began after the arrival of the Slavs to the Balkans in the 6th century. With the Ottoman conquest in 1479 Turkish and Arabic influences were added to the mix.

There are two main dialects of Albanian – Tosk (with about 3 million speakers in southern Albania, Greece, Italy and Turkey) and Gheg (spoken by about 2.8 million people in northern Albania, Kosovo and the surrounding areas of Serbia, Montenegro and Macedonia). Tosk is the official language of Albania and is also the variety used in this phrasebook.

Not surprisingly, Albanian has been written in various alphabets since the earliest written records from the 15th century. A single-sentence baptismal formula dating from 1462 and a Catholic prayer book from 1555 were both written in the Roman alphabet, which was mainly used for the Gheg dialect during the 17th and 18th centuries. The Tosk dialect, on the other hand, was originally written in the Greek alphabet. However, during the Ottoman rule, texts in both varieties were often in Arabic script (also used for Turkish). Even Cyrillic script was occasionally in use. This orthographic confusion was finally settled by the Manastir Congress in 1908, which adopted a modified Roman alphabet as the standard written form of Albanian.

Even though many Albanians speak English, you'll find attempts to communicate in Albanian are welcomed. Discovering some of the mysteries of this intriguing language will be rewarding – try learning a few of the 27 words Albanian has for 'moustache' or the other 27 used for 'eyebrows'!

pronunciation

vowel sounds

The Albanian vowel system is relatively easy to master, as the sounds mostly have equivalents in English.

symbol	english equivalent	albanian example	transliteration
a	father	<i>pak</i>	pak
ai	aisle	<i>çaj</i>	chai
e	bet	<i>pse</i>	pse
ee	see	<i>klima</i>	<i>klee-ma</i>
ew	ee pronounced with rounded lips	<i>dy</i>	dew
ia	tiara	<i>djali</i>	<i>dia-lee</i>
o	pot	<i>masha</i>	<i>mo-sha</i>
oo	zoo	<i>jug</i>	yoog
uh	ago	<i>vëlla</i>	vuh-lla

word stress

For the vast majority of words in Albanian, the main stress falls on the last syllable of a word (or the last stem of a compound word). In a sentence, the main stress generally falls on the last word of a phrase. In our coloured pronunciation guides, the stressed syllable is always in italics.

consonant sounds

The Albanian consonant sounds shouldn't present many problems for English speakers. Note that 'rr' and 'll' are pronounced stronger than when they're written as single letters.
