APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: *Food supply, *Energy, Farm crops, Meetings, Production, Output, Manpower, Construction, Fertilizers, Operating costs, Tables(Data), Pest control, Nutrition, Pollution, Social effect, Research, California, *Environmental surveys, Energy consumption, Global.

This workshop was held to study further research methodologies for investigations of the interrelationships of energy, food, man and environment. The report from Phase I Workshop held June 18-19, 1974, was the prime focus of Phase II workshop. Workshop participants generally concluded that energy accounting aimed at energy and food production technologies is best accomplished by a form of process analysis. Crop output measured in the form of Kilocalories (Kcal) can be compared effectively by computing the energy inputs for each crop production process. Separate accounting for energy, labor, and land should be practiced, because within limits each of these factors can be substituted for the other. Increased energy used for both machinery construction and operating fuel can be substituted for labor, and energy used for increasing production per acre (fertilizer) can be substituted for land.

Indo-Pacific Fisheries Council, Bangkok (Thailand). **The Technology and Economics of Small-Scale Commercial Prawn ('Macrobrachium rosenbergii') Hatcheries: A Case Study in Thailand** Occasional paper
Cort W. Kloke, and Manu Potaros. May 75, 22p Rept no. IPFC-Occ.Pap.-1975/1
See also PB-263 670.

Keywords: Crustacea, Rivers, Economic analysis, Fisheries, *Thailand, Shellfish, Demand(Economics), Aquaculture, Equipment, Manpower, Pumps, Foreign countries, Management, Water supply, Reproduction(Biology), Maintenance, Larvae, Cost analysis, Tables(Data), Feeding stuffs, Marketing, Developing countries, *Fishes, Macrobrachium rosenbergii.

Several small-scale private commercial and family operated prawn hatcheries have been established in Thailand to fill the demand for juveniles for culture, and the objective of this paper is to describe and comment on the practical operation and economic experience of two such commercial hatcheries so as to give those interested in the industry and potential prawn culturists some practical insights into the requirements, potentials and problems of hatchery operation. The paper takes the form of a case study with commentary and suggestions for improvement. It is divided into three sections; (1) actual technical description of each hatchery's operation, (2) economic analysis and (3) discussion and concluding observations.

PB-263 670/2 PC A02/MF A01
Indo-Pacific Fisheries Council, Bangkok (Thailand). **The Technology and Economics of Catfish ('Clarias spp.') Farming in Thailand** Occasional paper
Cort W. Kloke, and Manu Potaros. Jun 75, 23p Rept no. IPFC-Occ.Pap.-1975/2
See also PB-263 669.

Keywords: Catfishes, Aquaculture, *Thailand, Developing countries, Economic development, Food supply, Demand(Economics), Prices, Exports, Market research, Fresh water, Foreign countries, *Fishes, Clarias batrachus, Clarias macrocephalus.

The catfish species *Clarias batrachus* and *Clarias macrocephalus* are very popular table fish in Thailand. The two species make up almost 30% of Thailand's fresh-water production with *C. batrachus* (Pla duk dan)

accounting for about 90% of that amount. Demand for both of these fish is very strong and growing rapidly despite their high price. *C. macrocephalus* is the preferred species for its appearance and eating qualities and commands a higher price particularly in what appears to be a lucrative export market. The report describes research on production, consumption, and economics.

Cort W. Kloke, and Manu Potaros. Jul 75, 15p Rept no. IPFC-Occ.Pap.-1975/4
See also PB-263 671.

Keywords: *Aquaculture, Agriculture, *Thailand, Developing countries, Maps, Municipalities, Farms, Boundaries, Economic development, Market research, Food supply, Foreign countries, Lagoons(Ponds), Farm crops, Statistical data, Fishes, Production, Social effect, Irrigation, Cost analysis, Income.

There is an increasing recognition and acceptance of the concept that development activities and efforts in the less developed countries of the world must be directed to the improvement of the income, security and standard of living of small low-income farmers, who constitute the vast bulk of the population of these countries. The practice of simple types of small-scale aquaculture offers excellent possibilities, particularly in Asia and the Far East, for helping to achieve the goals of diversification, increased cash incomes, improved quantity and quality of food produced for home consumption, and exploitation of un-utilized resources currently available to small farmers. Aquaculture is not new to the region, but it is not always recognized that its practice can be, and often is an integrated and natural part of the agricultural system with wide-spread involvement of small farmers. Just as most small farmers keep a few ducks and chickens to supplement their tables and their incomes, many more of them could operate a small managed fish pond.

Environmental Protection Agency, Washington, DC. Office of Water Planning and Standards. **Quality Criteria for Water** Jul 76, 537p* Rept no. EPA/440/9-76/023

Keywords: *Water pollution, *Water quality, Hazardous materials, Public health, Standards, Government policies, State government, Revisions, Pesticides, Alkalinity, Ammonia, Arsenic, Barium, Beryllium, Boron, Cadmium, Chlorine, Coliform bacteria, Color, Hardness, Iron, Dissolved gases, Chromium, Copper, Lead(Metal), Mercury(Metal), Greases, *Health, Federal Water Pollution Control Act Amendments of 1972, Water pollution standards, Heavy metals.

The Federal Water Pollution Control Act Amendments of 1972 require the Administrator of the Environmental Protection Agency to publish criteria for water quality accurately reflecting the latest scientific knowledge on the kind and extent of all identifiable effects on health and welfare which may be expected from the presence of pollutants in any body of water, including ground water. Proposed Water Quality Criteria were developed and a notice of their availability was published on Oct 26, 1973 (38 FR 29646). This present volume represents a revision of the proposed water quality criteria based upon a consideration of comments received from other Federal agencies, State agencies, special interest groups and individual scientists. Standards and their criteria are given for over 54 chemicals.

Bruce S. Dunn, John D. Mackenzie, and Eugene Tseng. Sep 76, 42p EPA/600/2-76/238
Contract EPA-R-802933

Keywords: Solid waste disposal, *Agricultural wastes, *Pyrolysis, Incinerators, Reclamation, Byproducts, Design, Carbon black, Fillers, Fertilizers, Cost analysis, Oils, Inks, Paints, Elastomers, Dehydration, Utilization, Process charting, *Animal wastes, *Waste recycling, *Manures.

The purpose of the project was to design and build a pyrolysis apparatus for cattle manure and to investigate the potential uses of the pyrolysis by-products. A pyrolysis machine of semi-continuous feed capabilities was designed and built. Various conditions of pyrolysis treatments were investigated and their influence on the amount and composition of the by-products determined. High carbon residues were found to require lower pyrolysis temperatures. The carbon content of these residues appeared to be unaffected by the geographic location of the original manure. Contact with interested parties and appropriate industries who could be prospective users of each of the products was initiated to obtain their technical expertise in evaluating these products. The pyrolysis by-products seem to have some potential industrial applications. These by-products include the solid residue, an oil fraction, and an aqueous fraction. The solid residue may serve as a carbon black substitute or as a filler material in rubber, ink, and paint. The aqueous fraction collected during pyrolysis has been evaluated for fertilizer applications.

Optimization of Office Paper Recovery Systems
Final rept.

1977, 82p* EPA/SW-135c
Contract EPA-68-01-3192

Keywords: Solid waste disposal, Refuse disposal, *Paper, Office buildings, Management planning, Separation, Collection, Containers, Feasibility, Waste processing, Economic analysis, Operating costs, *Waste recycling, Paper recycling, Source separation.

This study assesses source separation of paper as a viable resource recovery option in office buildings. Three basic approaches to office source separation are analyzed in terms of economics and performance based on their performance at 12 case study locations. The report gives an overview of source separation operations and solid waste management activities, and analyzes the major factors involved in implementing and running a source separation program. This is followed by an examination of program economics prior to and after implementation of the source separation subsystem using both the incremental and fully allocated approaches. This study concludes that source separation is practicable and economically viable, and that separation of high-grade white paper using the desk-top container approach is the most effective method.

Background Document: Bagasse Combustion in Sugar Mills

Robert Baker, and Thomas F. Lahre. Jan 77, 45p
EPA/450/3-77/007
Contract EPA-68-02-1402
See also PB-223 996.

Keywords: Bagasse, *Air pollution, Industrial plants, Scrubbers, Sugarcane, Physical properties, Process charting, Combustion products, Furnaces, Design criteria, Particle size distributions, Fuels, Cyclone separators, Concentration(Composition), Flue gases, Air pollution control equipment, Industrial wastes, Nitrogen oxides, Boilers, Sulfur dioxide, Refuse derived fuels, Wet methods, Emission factors.

This is a background document in support of the contents of Section 1.8 of AP-2, Compilation of Air Pollutant Emission Factors, Second Edition. It concerns the major criteria pollutants emitted during the combustion of bagasse (a fibrous waste product in a sugar cane mill) in steam boilers. The general aspects of mill operations, physical characteristics of the bagasse and its combustion, furnace designs, air pollution control devices and factors affecting emissions are described. Stack emission tests are reviewed and analyzed for inclusion in the data base for developing factors for particulate and NOx emission while firing bagasse or bagasse and fuel oil. The reliability of these factors is evaluated and presented.

James S. Bethel. 1976, 112p* NSF/PRA-7501069/3/7

Contract NSF-STP75-01069
See also report dated Sep 76, PB-257 357.

Keywords: *Natural resources, *Forestry, *Agriculture, Energy conservation, Cellulose resins, Forecasting, Economics, Performance evaluation, Ethylene, Vegetable oils, Flax plants, Cotton plants, Industrial plants, Biomass, Polymers, Environmental impacts, Utilization, Wood products, Structural timber, Byproducts, Leather, Farm crops, Industrial plants, Soybean plants, Production management, Assessments, Renewable resources, Fuel substitution.

The report estimates the biological productivity of industrial renewable resources in terms of current yields, existing land bases, and increments to these bases that may reasonably be forecast by 1985 and 2000. The forecast divides naturally into two parts: the silvicultural product of wood, and products for industry from agriculture consisting chiefly of vegetable fibers, oil seeds, wool, animal fats, tallow, and hides. Wood is not only by far the most important renewable resource used for industrial materials, but also one whose production can be greatly increased if needed. Agricultural products include cotton and other vegetable fibers. Furthermore, there is little reason to believe that market demand will strain biological potential by 1985 or 2000. Under these conditions, long-term estimates of productivity become a mere exercise in imagination. Consideration is made of the energy requirements and environmental impacts associated with the implementation of the recommendations on these renewable resources.

Feasibility of a Beef Processing Plant on the Blackfoot Indian Reservation
Nov 76, 103p P-192, EDA-77-054
Grant EDA-05-06-01520

Keywords: Economic development, American Indians, Regional planning, Rural areas, *Industrial plants, Meat, Processing, Economic analysis, *Food products, Technical assistance project, Blackfoot Indians, Indian reservations, Meat packing plants.

The study gives an analysis of a proposed beef packing plant with respect to markets and raw material supplies. The plant would be situated in an area of large surpluses of both livestock feed and calf supplies. It would be necessary to tie the packing plant to a feedlot. Ownership of both enterprises was to be integrated and the purpose of the feedyard was to even slaughter cattle supplies to the packing plant. Both locker-type plants and commercial plants are to be constructed. The Blackfoot Tribe in searching for development possibilities for their tribally controlled acres on the Reservation proposes to investigate the establishment of a beef packing plant.

Keywords: *Ponds, Crustacea, *Aquaculture, Mortality, Feasibility, Growth, Survival, Yield, Management, Earth fills, South Carolina, Sea Grant program, Macrobrachium rosenbergii, Mariculture.

The feasibility of growing *Macrobrachium rosenbergii* commercially in ponds is under investigation in South Carolina. Results of 1974 and 1975 pond studies indicate a favorable outlook for eventual commercial production. Excellent growth and survival rates were obtained under conditions which were considered marginal at times. Considerable production was achieved even when newly metamorphosed postlarvae were stocked into ponds. However, increased production and greater final prawn size resulted when larger juveniles were stocked. Higher yields are anticipated from more suitable ponds and as better pond management techniques are developed and applied.

A Study of Runoff from Small Rural Watersheds in Response to Completed and Proposed Land Use Changes
Master's thesis
Michael Joseph Smith. 1972, 115p OWRT-3-005-OHIO(13)

Keywords: *Hydrology, *Land use, Runoff, Watersheds, Strip mining, Agriculture, Water quality management, Industrial waste treatment, Theses, Upgrading, Sewage treatment, Tables(Data), Ohio, *Water quality, Agricultural watersheds, Cumberland Plateau, Allegheny Plateau.

The thesis pertains to the effect of land use and management upon the hydrology and water quality of two experimental watersheds; one, an agricultural area containing remnants of strip mining operations, and the other, a mixed cover agricultural watershed about to be subjected to a sharp upgrading of treatment. The analysis techniques used illustrate some procedures for determining changes in watershed hydrology. A longer period of study is recommended to make positive statements regarding changes in hydrologic response.

Keywords: *Agriculture, Solar heating, Solar drying, Solar space heating, Irrigation, Farm crops, Farm buildings, Greenhouses, Natural gas, Liquefied petroleum gas, Electricity, Fuel oils, Kerosene, Coal, Prices, Economic analysis, Recommendations, *Solar energy.

Objectives pursued in this study are: (1) assessment of present agricultural operations to determine those with potential for use with solar energy; (2) development of recommendations for an overall experimental research program to establish the technical and economic feasibility of using solar energy in agricultural operations; and (3) formulation of recommendations for strategies to achieve adoption of solar energy components and systems in agriculture. Applications of solar energy to the following aspects of agriculture are examined: grain drying, tobacco curing, peanut drying, broiler housing, swine production, farm housing, greenhouses, and irrigation. Current fuel prices for each of the agricultural regions (determined by crop production) are also reviewed.

Making Aquatic Weeds Useful: Some Perspectives for Developing Countries
Survey rept.
1976, 184p*
Contract AID/csd-2584

Keywords: *Aquatic weeds, Weed control, Developing countries, Wildlife, Utilization, Food supply, Management, Feeding stuffs, Sewage treatment, Livestock, Fishes, Cutting, Dewatering, Ruminants, Food consumption, Aquatic animals, Inland waterways, Fertilizers, Grasses, Tropical regions, Mammals, Trichechus, Herbivores.

This report examines methods for controlling aquatic weeds and using them to best advantage, especially those methods that show promise for less-developed countries. It emphasizes techniques for converting weeds for feed, food, fertilizer, and energy production. It examines, for example, biological control techniques in which herbivorous tropical animals (fish, waterfowl, rodents, and other mammals) convert the troublesome plants directly to meat. Though the techniques described in this report have been selected for their applicability in less-developed countries, many are relevant to industrialized countries. Both types of country face a future in which food production will need to depend more and more on the effective management of natural systems, such as waterways.

Water Reuse in a Paper Reprocessing Plant
Final rept.
Leale E. Streebin, George W. Reid, Paul Law, and Charles Hogan. Oct 76, 95p EPA/600/2-76/232
Grant EPA-S-801206
Prepared in cooperation with Oklahoma Univ., Norman. School of Civil Engineering and Environmental Science.

Keywords: *Paper industry, Materials recovery, *Water pollution, By-products, Industrial wastes, Cost estimates, Circulation, Performance evaluation, Process charting, Manufacturing, Microorganism control(Water), Corrosion, Economic analysis, Slime, Foams, *Water use, Solid waste disposal, Liquid waste disposal, Waste recycling, *Waste water reuse.

This project was undertaken to determine the feasibility of water reuse in a paper reprocessing plant with the goal being to 'close the loop' or to demonstrate zero discharge technology. Before the project began, Big Chief Roofing Company at Ardmore, OK, was discharging 7.89 l/sec (125 gpm). Normal operation is now zero discharge with approximately 0.76 l/sec (12 gpm) fresh water make-up replacing evaporative

losses. However, weekly clean-ups still result in an effluent of approximately 15.14 cu m (4000 gal) a week. Additional clear water storage capacity could eliminate this weekly discharge. Project scope included identifying and solving problems resulting from increased recycle of process water, and determining costs, benefits, and effect on product quality. The favorable cost/benefit ratio experienced at the plant demonstrated an economic advantage of in-plant control over end-of-pipe treatment. Attaining zero discharge operation has the further benefit of eliminating the problems, cost, and liabilities associated with operation under a discharge permit. Economic benefits observed during zero discharge operation included reduced water supply costs, reduced wastewater treatment costs, improved yield, improved drainage and greater dryer section production. The benefits were partially offset by shorter felt lives, increased corrosion control cost, and process modification cost. No degradation of product quality was observed.

Keywords: Lathes, Manuals, Woodworking machinery, Veneers, Peeling, Plywood, Rollers, Bars, Setting(Adjusting), Canada, *Machine tools, Pressure bars.

The development, design and operation of various types of pressure bars for veneer lathes is discussed in detail. The importance is stressed of a high level of maintenance and of accurate adjustment of the various lathe settings. The techniques for setting a veneer lathe are given together with a description of the special instrumentation that has been developed for this purpose.

Fruit Cannery Waste Activated Sludge as a Cattle Feed Ingredient
Larry A. Esvelt. Sep 76, 66p EPA/600/2-76/253
Grant EPA-S-803307
Prepared by Bovay Engineers, Inc., Spokane, Wash.

Keywords: Materials recovery, *Food processing, Feeding stuffs, Activated sludge process, Canneries, Feasibility, Animal nutrition, Byproducts, Fruits, Industrial waste treatment, Dewatering, Beef cattle, Centrifuging, Water pollution control, Nutrients, Process charting, Performance evaluation, *Waste recycling, Solid waste disposal.

The feasibility of sludge disposal, from a fruit processing waste activated sludge treatment system, by dewatering and using the dewatered biological sludge solids as cattle feed was evaluated by Snokist Growers at Yakima, Washington. Dewatering of the biological sludge utilizing pilot-scale and prototype-scale basket centrifuges resulted in consistently dewatering to 7-1/2% to 9% dry solids. Digestibility and metabolizability of rations containing 2.3% and 4.5% biological solids appeared equal to a control ration, but a ration containing 9.2% biological solids appeared lower. Twenty-four uniform yearling steers were divided into four lots of six each and finish fed a control ration and rations containing 2.3%, 4.6%, and 8.9% sludge solids on a dry matter basis for 165 days. They did not show any adverse effects of the sludge incorporation into their rations. It appeared that a low quantity of sludge (2.3% dry solids) actually enhanced the weight gain performance and carcass quality of these animals. The cost of a dewatering installation will require that the canney receive remuneration for use of the waste activated sludge as cattle feed in order to make a full-scale dewatering project feasible. The calculated value of the biological solids incorporated into the rations was in the range of \$0.092 to \$0.148 per kg dry solids.

APPROPRIATE TECHNOLOGY ABSTRACTS

The Economic Feasibility of Establishing Oil Sunflower Processing Plants in North Dakota
 Delmer L. Helgeson, David W. Cobia, Randal C. Coon, Wallace C. Hardie, and LeRoy W. Schaffner.
 Apr 77, 110p Bull-503, EDA-77-080
 Grant EDA-05-06-01485
 Errata sheet inserted.

Keywords: Economic development, Oilseed crops, Food processing, Flax plants, Manufacturing, Economic impact, Feasibility, Marketing, Objectives, Technical assistance, Variable costs, Prices, North Dakota, *Vegetable oils, *Sunflower.

The purpose of this report was to explore the economic feasibility of establishing processing facilities for oil-type sunflowers in North Dakota. A broad set of topics was covered because production, processing and marketing of sunflowers and sunflower products in the U.S. are relatively recent. Historical sunflower production patterns were presented, together with two estimates of future production. One estimate was based on an attitudinal survey of farmers and a second on a maximum long-run projection for North Dakota. The supply of whole seed sunflowers from current and the two projections was related to processing requirements for each of the four plant sizes. The economic impact of each of the model sunflower processing plants on multicounty regions in which they might locate was estimated for the construction and operational phases.

Culture of the Mangrove Oyster, 'Crassostrea rhizophorae' Guilding, in Puerto Rico
 Kenneth W. Watters, and Thomas E. Prinslow. Jan 77, 17p NOAA-77031510
 Publ. in Proceedings of Annual Workshop World Marine Society (6th), at Seattle, Washington, on January 27-31, 1975.

Keywords: Oysters, *Aquaculture, *Puerto Rico, Feasibility, Estuaries, Swamps, Salinity, Temperature, Lagoons(Ponds), Harvesting, Growth, Crassostrea rhizophorae, Reprints, Oyster clutch.

Experiments to determine commercial feasibility of mangrove oyster culture in Puerto Rico have been underway since early 1973. Most of the work has been carried out in Rincon Lagoon, a rich mangrove-lined estuary subject to periodic salinity fluctuations. The bulk of commercial oyster harvesting on the island is presently carried out in this lagoon. A revised method of hitching, consisting of 46 x 71 cm frames suspended from rafts, was used. The frames, utilizing several materials such as concrete-coated plywood and plastic sheeting showed sustained mean growth rates of 0.7 mm per day, with maximum individual rates of 1.4 mm per day. A program monitoring spatfall, salinity, and temperature was carried out in an effort to determine the timing of natural spatfall in the lagoon. It appeared that spatfall closely followed drops in salinity.

Kiln Drying of Western Canadian Lumber
 Information rept.
 G. Bramhall, and R. W. Wellwood. Nov 76, 119p*
 Rept no. W7-X-159
 Prepared in cooperation with British Columbia Univ., Vancouver. Faculty of Forestry.

Keywords: Lumber, Kilns, Drying, Manuals, Softwoods, Hardwoods, Moisture content, Defects, Maintenance, Humidity, Standards, Measurement, Specifications, Dictionaries, Tables(Data), Describing, *Canada, *Industrial plants, *Wood, *Drying.

This manual provides information to kiln operators in the drying of softwoods with some reference to hardwoods native to western Canada. Chapters deal with wood structure, wood moisture relations, factors affecting drying, drying defects, kiln operation and maintenance, quality control, transit and storage problems and economic aspects of drying. More than 40 schedules for various species and grades are provided. Also included are a relative humidity-equilibrium moisture content chart in Celsius, tables to assist in calculation of schedules, a graph to indicate average moisture content necessary to meet drying standards, metric-English conversions, a glossary of lumber-drying

terms, properties of steam, and a short description of special drying techniques.

Keywords: Residential buildings, *Wind pressure, Design criteria, Disasters, Construction materials, Construction management, Socioeconomic status, Technology transfer, Bangladesh, Philippines, Jamaica, Developing countries, *Buildings, Low rise buildings, Wind resistant structures.

This document presents the background, goals, procedures and results of a project to develop improved design criteria that would make low-rise buildings in developing countries better able to withstand the effects of extreme winds. The project stemmed from the belief that additional research on wind was needed to reduce loss of life and property, human suffering, disruption of productive capacity and costs of disaster relief. The 3 1/2 year project began in early 1973 and produced these results: the development of improved design criteria; a methodology for the estimation of extreme wind speeds; the development of wind tunnel modeling techniques; a heightened awareness of the wind problem and the need to guard against it; the emergence of useful working relationships between

NBS/AID and public and private decision makers in developing countries subject to extreme winds, especially the Philippines, Jamaica and Bangladesh; and the documentation of important information in the areas of wind design speeds and pressure coefficients, economic forecasting, socio-economic and architectural concerns, and construction detailing practices. Also during the project, a program began in the training of professionals and technicians in developing countries to carry out wind measurements and analyses. In addition, methods to ensure transfer of information to user groups were employed.

Keywords: Residential buildings, *Wind pressure, Design criteria, Disasters, Construction materials, Construction management, Socioeconomic status, Technology transfer, Bangladesh, Philippines, Jamaica, Developing countries, *Buildings, Low rise buildings, Wind resistant structures.

This paper briefly describes some of the more common flow mechanisms which create wind pressures on low-rise buildings and the effects of building geometry on these pressures. It is assumed that the basic wind speeds are known and a procedure is outlined for calculating design wind speeds which incorporates the expected life of the structure, the mean recurrence interval, and the wind speed averaging time. Pressure coefficients are tabulated for various height-to-width ratios and roof slopes. The steps required to calculate pressures and total drag and uplift forces are summarized and an illustrative example is presented.

Keywords: Residential buildings, *Wind pressure, Design criteria, Disasters, Construction materials, Construction management, Socioeconomic status, Technology transfer, Bangladesh, Philippines, Jamaica, Developing countries, *Buildings, Low rise buildings, Wind resistant structures.

This report investigates the use of connectors for masonry and timber elements in low-rise buildings. Connector characteristics and construction details that improve a building's response to extreme wind effects are given primary emphasis. Recommendations include improvements through better utilization of connector technology showing good feasibility of introduction in developing countries. The building systems considered in this study fall within the low to moderate cost category.

Building to Resist the Effect of Wind. Volume IV. Forecasting the Economics of Housing Needs: A Methodological Guide
 Building science series (Final) 1976
 Joseph G. Kowalski. May 77, 40p Rept no. NBS-BSS-100-4

APPROPRIATE TECHNOLOGY ABSTRACTS

Grant PASA-TA(CE)-04-73
Library of Congress catalog card no. 77-600013. See also Volume 3, PB-266 334.
Also available in set of 5 reports PC E08, PB-266 331-SET.

Keywords: Residential buildings, *Wind pressure, Design criteria, Disasters, Construction materials, Construction management, Socioeconomic status, Technology transfer, Bangladesh, Philippines, Jamaica, Developing countries, *Buildings, Low rise buildings, Wind resistant structures.

The Agency for International Development sponsored with the NCS, a 3 1/2 year research project to develop improved design criteria for low-rise buildings to better resist the effects of extreme winds. Housing is probably the single most important consumer good in most economies. Measuring the size of a region's unmet housing need is a first step to planning and implementing improvements in housing conditions. This report analyzes the concept of housing needs in an economic framework. A methodology for estimating and projecting housing needs at the regional level is developed. The methodology attempts to make explicit the income redistribution intent which is the core meaning behind the concept of housing needs. Project results are presented in five volumes. Volume 1 gives an overview of the research activities, accomplishments, results and recommendations. Volume 2 presents a methodology to estimate design wind speeds and a guide to determine wind forces. Volume 3 discusses a guide for improved use of masonry fasteners and timber connectors. Volume 4 furnishes a methodology to estimate and forecast housing needs at a regional level. Socio-economic and architectural considerations of the Philippines, Jamaica and Bangladesh are presented in Volume 5.

Building to Resist the Effect of Wind. Volume V. Housing in Extreme Winds: Socio-economic and Architectural Considerations
Building science series (Final) 1976
Stephen A. Kliment. May 77, 41p Rept no. NBS-BSS-100-5
Grant PASA-TA(CE)-04-73
Prepared by Kliment (Stephen A.), New York. Library of Congress catalog card no. 77-600013. See also Volume 4, PB-266 335.

Keywords: Residential buildings, *Wind pressure, Design criteria, Disasters, Construction materials, Construction management, Socioeconomic status, Technology transfer, Bangladesh, Philippines, Jamaica, Developing countries, *Buildings, Low rise buildings, Wind resistant structures.

Typical socio-economic conditions in the Philippines, Jamaica, and Bangladesh are identified. These conditions include strong respect for traditional materials and methods of house construction, and suspicion of innovative forms and approaches; a rising proportion of urban poor who live in squatter settlements; and a rising ratio of inhabitants whose incomes are at a level where they cannot afford housing of any kind. The importance of land from a social standpoint is stressed. The report reviews the sites and services concept whereby low income persons are provided a site equipped with basic utilities but must erect and maintain a house upon it. Recommendations include: placement of buildings to exploit terrain; adherence to good practices in the configurations of the main elements of a house (these are shown by means of simple drawings); and use of cheap, strong and locally available materials.

Protein Production by Russian Thistle: Effects of Water and Nitrogen on Protein Yields
Technical completion rept.
James H. Hageman, and James L. Fowler. Mar 77, 20p WRR1-085, OW/RT-A-049-NMEX(2)
Contract DI-14-34-00, 1-6032
Prepared by New Mexico State Univ., University Park. Dept. of Chemistry.

Keywords: Feeding stuffs, Proteins, Forage crops, Water consumption, Droughts, Arid land, Yield, Toxic tolerances, Inorganic salts, Irrigation, Efficiency, Nutri-

ents, Vegetation, Acclimatization, New Mexico, *Fertilizers, Salsola, *Water use.

The purpose was to determine whether Russian thistle (*Salsola* spp.) might have potential as either a protein source or a forage under conditions of restricted water. *Salsola* was chosen because it was reported to be a C4 plant which is efficient in water use, drought resistant, salt tolerant and because it had been used as a feed previously. These results compare favorably with alfalfa, which is the most widely grown forage in New Mexico.

Rapid Excavation of Rock with Small Charges of High Explosives
Final rept.
George B. Clark, and Ronald R. Rollins. Nov 76, 121p BuMines-OFR-98-77
Contract H0252052

Keywords: *Tunneling, Underground mining, Blasting, Explosive charges, Blast loads, Detonators, Earth movement, Fragmentation, Rapid excavation, Air blast.

The purpose of this investigation was to determine the feasibility of designing and testing the elements of a small-charge blasting system that will eliminate, or reduce to acceptable levels, most of the undesirable features of current underground drill and blast systems, that is, (1) air blast, (2) ground vibrations, (3) flying fragments, (4) overbreak and fracture of surrounding rock, and (5) the cyclic nature of drill and blast operations. The experimentation was conducted in tunnels in granite, and the results indicated that the basic technical concepts of the project were achieved.

The next step is to design, construct, and test a prototype machine.

Industrial Prospects for Chitin and Protein from Shellfish Wastes
Dale Mattis, and Albert E. Murray. 1977, 107p* MITSG-77-3, CPA-76-7, NOAA-77041808
Grant NOAA-04-5-158-1
Index No. 77-703-Zle.

Keywords: *Chitins, *Proteins, Shellfish, Food supply, Industrial wastes, Shrimps, Crabs, Supply(Economics), Food analysis, Byproducts, Marketing, Ion exchange resins, Paper industry, Coagulants, Production, Demand(Economics), Cost analysis, Polysaccharides, Fibers, Tables(Data), *Fishes. Sea Grant program, Chitosan.

Although chitin and derivatives of chitin have been studied for many years and their intriguing chemical properties have been known, commercial utilization has been almost nonexistent. This study was designed to address the industrial prospects for utilization of chitin. A business strategy involving both chitin and protein from shellfish has been developed and evaluated. The strategy appears to offer a rational and profitable way to resolve the dilemma by treating chitin as a by-product of a protein recovery process that, in some cases, may be profitable even in the complete absence of any markets for the chitin. This strategy should assure availability of dried shell waste in sufficient quantities to make possible production of chitin in amounts needed to supply initial markets. Likely markets are proposed based on an extensive analysis of the literature of chitin applications and markets for similar chemicals.

Machine Milking and Its Effects on Cows
I. G. Velitok. 1967, 150p Rept no. TT-75-52056
Trans. of mono. Maschinnoe Doenie i Razdoi Korov, Kiev, 1967, by R. S. Chakravarthy. Sponsored in part by National Science Foundation, Washington, D.C. Special Foreign Currency Science Information Program. Errata sheet inserted.

Keywords: *Agricultural machinery, *Milk, Dairy cattle, Animal physiology, Theory, Evaluation, Yield, Books, Translations, *USSR, *Dairies, *Animal husbandry, Milking machines.

APPROPRIATE TECHNOLOGY ABSTRACTS

This monograph presents experimental findings by the author as well as the results of other research here and abroad on the physiology of machine milking of cows. The problems of the physiology of milk letdown in cows with the use of milking machines of different types have been studied with due allowance for the peculiarities of the functioning of the milk glands. Specifically, a method is proposed for the physiological evaluation of the effects of using a milking machine. Some tips are offered, such as how to organize machine milking in such a way that the reflex milk letdown is not disturbed. The book discusses the theoretical and practical aspects of the physiology of milking and increasing milk yield with milking machines. This monograph is intended for livestock experts, animal breeders, veterinarians, physiologists, engineers and research workers engaged in the study of the problems of machine milking of cows.

Spain's Leather Industry: Prospects for Blue Chrome (Wet-Blue) Processing
Final rept.
Antonio Del Valle Pintos, and Harold H. Taylor. May 77, 41p Rept no. AGERS-30
Grant NSF-AG-482
Prepared in cooperation with Instituto Nacional de Investigaciones Agrarias, Zaragoza (Spain). Dept. of Economics and Sociology.

Keywords: *Spain Tanning materials, Industrial wastes, Water pollution control, Manufacturing, Substitution, Employment, Hides, Cattle, *Water pollution, *Leather, Wet blue leather, Leather industry.

Rapid expansion of the Spanish leather-goods industry has created a serious problem of pollution from tannery effluents. The use of chrome (wet-blue) leather in Spanish tanneries would reduce the pollution caused by cleaning and dehairing of conventional salt-cured hides. It would also reduce the number of workers required in tannery beamhouses, where cleaning occurs. Responding to a 1976 survey, tanners who produced about 80 percent of Spain's finished leather output said they would increase imports of blue chrome leather provided uniform grades and standards could be established to reduce the variability of quality. Tanners estimated that elimination of the beam-house operation might reduce hide finishing costs by 15 percent, and thus most would not be willing to pay more than 15-percent price premium for wet-blue hides. The tanners also indicated that if pollution laws were enforced, they would be more willing to substitute blue chrome for salt-cured hides since this substitution would reduce the beamhouse operation. Any change in demand for blue chrome hides would affect the United States, which supplies about one-fifth of Spain's hide imports.

Grant NSF-ERS76-21350

Keywords: *Regional planning, Directories, Ecology, Ecological succession, Technology, Resources, Utilization, Conservation, Waste management, Recommendations, Environmental surveys, Data acquisition, Problem solving, Constraints, District of Columbia, Research projects, Research, Waste recycling.

This is a directory of United States activities in appropriate technology--technology that incorporates a concern for maintenance of the ecological balance by increasing the use of renewable resources, extending recycling and diminishing waste, and fostering the resource independence of local areas. The authors survey the field to learn from individuals and groups about the scope of their activities, the legal and technical problems they are facing in moving from idea to application, and their recommendations for federal activity in support of appropriate technology. This directory is, in part, a compilation of the descriptions of activities of the survey respondents. The descriptions of activities are extracted from a survey sent to individuals and groups as part of this project. Opinions on major obstacles to the further development of appropriate technology are noted.

Manual of Treatment Techniques for Meeting the Interim Primary Drinking Water Regulations
Thomas J. Sorg, O. Thomas Love, Jr, and Gary S. Logsdon. May 77, 80p* Rept no. EPA/600/8-77/005

Keywords: Manuals, *Water treatment, Potable water, Regulations, Radioactive contaminants, Chemical removal(Water treatment), Inorganic compounds, Water pollution control, Arsenic, Borium, Cadmium, Chromium, Fluorides, Lead(Metal), Mercury(Metal), Organic compounds, Inorganic nitrates, Selenium, Cost analysis, Turbidity, Disinfection, Chlorination, Ozone, Chlorine oxides, Byproducts, Pesticides, Trace elements, Lime, ion exchanging, Reverse osmosis, Endrin, Chlorine organic compounds, Coliform bacteria, Microorganism control(Water), *Water quality, Methoxychlor, Lindane, D 2-4 herbicide, Silvex, Safe Drinking Water Act of 1974.

Following the passage on December 16, 1974, of Public Law 93-523, The Safe Drinking Water Act, the Interim Primary Drinking Water Regulations were promulgated on December 24, 1975, to take effect June 24, 1977. These regulations set Maximum Contaminant Levels (MCL) for ten inorganic constituents, turbidity, coliform organisms, six pesticides and radionuclides. PL-93-523 stated that the Primary Drinking Water Regulations should consist of MCLs as well as a statement of treatment technology that could be used to achieve these levels. This document provides that information. It contains five sections as related to the five groups of Interim Primary Drinking Water Regulations noted above. This document, based on the literature and the research being conducted by the Water Supply Research Division, is not meant to stifle innovative treatment technology. It attempts to be a statement of technology known at the time of the effective date of the Interim Primary Drinking Water Regulations that will allow utilities, with assistance from their consulting engineers, to apply whatever treatment might be necessary to improve their drinking water quality such that it meets the Interim Primary Drinking Water Regulations.

Leucaena: New Forage and Tree Crop for the Tropics
Final rept.
Jul 77, 126p* Rept no. CIR/BOSTID-77/24
Contract AID/csd-2584
Prepared in cooperation with Philippine Council for Agriculture and Resources Research, College. Text in English, Resume in French and Spanish.

Keywords: Leguminous plants, Tropical regions, Developing countries, Forage crops, Wood products, Structural timber, Wood pulp, Feeding stuffs, Trees(Plants), Erosion control, Vegetation, Esthetics, *Crops, *Wood, *Pulp, *Plants (Botany), Leucaena leucocephala.

The report describes Leucaena leucocephala, a little-known Mexican plant with bushy and tree-type varieties that produce nutritious forage, firewood, timber, paper pulp, and organic fertilizer. Its diverse uses also include revegetating hillslopes and providing fire-breaks, shade, and city beautification.

IRRI Small Agricultural Machinery Project: US Technology Transfer to Resource-Poor Developing Countries
Final rept.
Ann Becker, and Carol A. Ulinski. Dec 75, 103p
NSF/PRA-19893/3/7
Contract NSF-STP74-19893
Continuation of Grant NSF-ST-44205. See also PB-268 001 and PB-268 002.

Keywords: *Agricultural machinery, Developing countries, Technology transfer, Projects, Research, Development, Fabrication, Utilization, Farms, Government policies, Philippines, Performance evaluation, Foreign aid.

This study focuses on the results of the IRRI Small-Scale Agricultural Machinery Project in the Philippines, supported initially by the US Agency for International Development (AID). It examines three main stages of activity: research and development, manufacturing, and adoption of machinery by the farmers. It also studies Philippine Government policies in the light of the Project's objectives and mechanisms to facilitate linkages between each of the stages. The study assesses the success of the Project in terms of the amount of indigenization of problem-solving capabilities which has been achieved to date.

Employment, Efficiency and Income in the Rice Processing Industry of Sierra Leone
African rural economy paper
Dunstan S. C. Spencer, Ibi I. May-Parker, and Frank S. Rose. 1976, 92p Rept no. AREP-15
Prepared in cooperation with Njala Univ. Coll. (Sierra Leone). Dept. of Agricultural Economics and Extension.

Keywords: *Rice, Food processing, Economic development, Developing countries, *Sierra Leone, Policies, Flour mills, Manpower utilization, Capitalized costs, *Employment, Income, Prices, Input, Output, Operating costs, Transportation, Mathematical models, Tables(Data), North Africa.

In West Africa the rice processing technologies range from traditional hand pounding to large mechanical mills. Because these technologies have varying factor intensities and output efficiencies the choice of technology in any country will have important effects on factor utilization, particularly employment, and on output. In Sierra Leone the government is currently

APPROPRIATE TECHNOLOGY ABSTRACTS

considering whether investment should be directed to rehabilitation of three existing rice mills, purchase of new large mills or encouragement of private investment in small mills including the location of these mills. The specific objectives of this study are: To describe and analyze the traditional and modern techniques of processing rice in Sierra Leone; and to develop a methodology to analyze the employment and income effects of policies.

The Economics of Rural and Urban Small-Scale Industries in Sierra Leone
African rural economy paper
Carl Liedholm, and Emyrina Chuts. 1976, 142p Rept no. AREP-14
Prepared in cooperation with Njala Univ. Coll. (Sierra Leone). Dept. of Agricultural Economics and Extension.

Keywords: Economic development, Developing countries, Industries, *Sierra Leone, Economic surveys, Rural areas, Urban areas, Policies, Factor analysis, Output, Employment, Data acquisition, Economic analysis, *Small businesses, *Industrial development.

This report summarizes and describes the major findings and conclusions of our research on small industry in Sierra Leone. The primary objectives of the research were to provide a descriptive profile of small-scale industry in Sierra Leone, to analyze the key determinants of the demand for and supply of output and employment generated by these industries, and to examine the efficacy of the major policies influencing small-scale industries. The problem setting discussed, followed by an examination of the most important empirical and analytical issues relating to small-scale industries. One section examines the major policy implications of the research.

Enzyme Technology in the Utilization of Agricultural Wastes
Final rept.
Peter J. Reilly. Mar 77, 90p ISU-ERI-AMES-77312, NSF/RA-770079
Grant NSF-APR74-20111

Keywords: *Agricultural wastes, *Plants (Botany), Hemicellulose, *Enzymes, Foods, Industrial plants, Nutritive value, Cellulose, Lignin, Xylose, Sugars, Extraction, Hydrolysis, Substrates, Ion exchanging, Purification, pH, Stability, Separation, Enzyme technology, Xylans, Xylitol, Xylosidases.

Hemicellulose is a major fraction of cellulosic material. In hardwoods and cereals, one of its major components, xylan, can take up to 30% of the total dry weight. Xylan can be hydrolyzed either enzymatically or by acid to form xylose, which can be fermented to form single cell protein or other products or hydrogenated to the potent sweetener xylitol. In this report the separation of the enzymes that hydrolyze larchwood and corn cob xylans is detailed. The system is surprisingly complex, with more than ten enzymes taking part in the breakdown. Beta-Xylosidase, the enzyme that catalyzes the last step, the production of xylose from short xylocosaccharides, has been extensively purified and characterized. It is quite stable at temperatures up to 70°C at pH 4.

Segregation and Reclamation of Household Wastewater at an Individual Residence
Master's thesis
Craig Carroll Withee. 1975, 309p OWPT-A-021-COL. (4)
Contract DI-14-31-0001-5006, Grant EPA-T-900116

Keywords: Sewage disposal, *Sewage treatment, *Waste water reuse, Rural areas, Mountains, Residential buildings, Activated carbon treatment, Decomposition, Anaerobic processes, Aerobic processes, Water pollution abatement, Filtration, Biochemical oxygen demand, Separation, Disinfectants, Toilet facilities, Efficiency, Field tests, Theses, Colorado, Household wastes.

Disposal of wastewater from isolated homes in mountainous and rural locations in Colorado presents unique and difficult problems. The purpose of the study was to evaluate the flow and pollution patterns from individual homes and to evaluate existing and potential treatment methods. Field evaluation of home wastewater flow and pollution characteristics was accomplished. The average per capita water use in the home was 44.4 gallons per day and the waste strength was 0.11 pounds per capita per day of BOD. Data for individual fixtures and appliances were obtained with measurement of many pollutional parameters. A brief evaluation of the home treatment methods was accomplished. Laboratory bench scale studies were made to evaluate methods for treatment of the soap related wastes in the home for reuse as toilet flushing water.

Soil and Rock Strata to Trap, Filter, and Store Water for Rural Domestic Use
Technical completion rept.
Arthur T. Corey, and George L. Smith. Dec 76, 46p OWRT-C-6176(5219)(1)
Contract DI-14-31-0001-5219

Keywords: Ground water recharge, *Water supply, *Arid land, Aquifers, Rainfall, Runoff, Construction, Water storage, Potable water, Earth dams, Soils, Gravel, Dikes, Filtration, Terrain, American Indians, New Mexico, South Dakota, *Ground water, Artificial recharge.

Experimental rock and soil strata for collection, filtration and storage of rainfall and runoff water were constructed on three separate Indian Reservations: Ramah Navajo, Santa Clara Pueblo in New Mexico, and the Pine Ridge (Oglala Sioux) in South Dakota. The artificial spring strata were constructed to determine their potential in the development and use of Indian and other lands located in the arid and semi-arid sections of the country where the availability of adequate water supplies for domestic use, for watering livestock in otherwise suitable grazing areas, and for the production of food crops is either severely limited as surface water, or the groundwater is non-existent, excessively saline, or at very great depths. The principle objective was to provide a reliable source of potable water at a relatively low cost. The most important factors in the construction of the experimental strata were site location, techniques of construction of the facility, selection of strata material and method of placement of impermeable layer.

APPROPRIATE TECHNOLOGY ABSTRACTS

93-523, Particulates, Appendices, Water pollution effects(Humans).

The Safe Drinking Water Act of 1974 (PL93-523) required the Administrator of the Environmental Protection Agency to arrange for a study that would serve as a scientific basis for revising the primary drinking water regulations that were promulgated under the Act. The Study was conducted by the Safe Drinking Water Committee of the National Research Council. A thorough study of the scientific literature was undertaken in order to assess the implications for human health of the constituents of drinking water in the United States. Assessment of the health benefits and the economic or technological feasibility of achieving a given level of contaminant control is outside the scope of the study, although the beneficial effects of some constituents of drinking water were considered. The risk to man of contaminants ingested in drinking water was evaluated on the basis of both epidemiological studies and studies of toxicity in laboratory animals.

Grant SRS-19-58139

Keywords: *Rehabilitation, Leprosy, Attitudes, Urban areas, Surgery, Social psychology, *Vocational guidance, *India, Developing countries.

A comprehensive research and demonstration project was undertaken in Bombay, India, to study the problems of the rehabilitation of lepers from the social, psychological, medical, and economic points of view. Psycho-social studies were conducted with the aim of reducing the stigma of leprosy. Medical studies developed and evaluated new techniques of dealing with the physical problems of lepers' hands and feet. Lepers were directly prepared for job training, and industrialists came to better understand the problems of the handicapped in conferences with rehabilitation and medical professionals.

Methanol as an Automotive Fuel with Special Emphasis on Methanol-Gasoline Blends
Final rept. Jun-Oct 74
A. Landman. Apr 77, 89p* Rept nos. DOT-TSC-OST-74-38, DOT-TSC-OST-77-31

Keywords: *Methanol, *Automotive fuels, Blends, Gasoline, Physical properties, Chemical properties, Forecasting, Comparisons, Automobile engines, Manufacturing, Air pollution, Exhaust emissions, Toxicity, Materials handling, Storage, Utilization, *Fuels, *Energy conservation, Fuel economy.

This report reviews the available information on methanol as related to its potential use as an automotive fuel. Information gaps critical to assessment and future decisions are delineated and suggestions made for necessary R&D efforts. In this context, methanol is characterized and the results of various studies on methanol and methanol-gasoline blends, throughout the United States and elsewhere, are presented and compared. These studies encompass fuels and their use and effects in engines and vehicles. Cost information, although limited, is given as available. The report also describes and summarizes methanol production processes; their promise and expansion possibilities in relation to potential requirements. Various raw material sources are considered in the light of future production potential needs.

Physiology of Milk Secretion in Machine Milking
I. G. Velitok. 1977, 109p Rept no. TT-75-52055
Trans. of mono. Fiziologiya Molokotdachi pri Mashinnom Doenii, Kiev, 1974, by R. S. Chakravarthy. Sponsored in part by National Science Foundation, Washington, D.C. Special Foreign Currency Science Information Program.

Keywords: Dairy cattle, Animal physiology, *Animal husbandry, *Milk, Mammary gland, Yield, Animal diseases, Animal nutrition, Books, Translations, *USSR, Secretion, *Dairies, *Agricultural machinery, Milking, Milking machines, Lactation.

This book briefly records new data on machine milking gathered by the author and his associates over the last 15 years. It discusses the results of research in the Soviet Union and abroad on the physiology of milk secretion in machine milking of cows. Questions pertaining to the physiology of milk secretion are examined in relation to the technological requirements of mechanized dairy farms. The physiological basis of rational exploitation of cows and problems of the technology and organization of machine milking are treated in the light of recent studies in the physiology of lactation. The book is recommended for zootechnicians, veterinarians, physiologists and other specialists in animal husbandry.

Report of the Workshop on Experimental Designs for Predicting Crop Productivity with Environmental and Economic Inputs Held at Honolulu, Hawaii on May 20-24, 1974
J. A. Silva, and F. H. Benfroth. May 74, 58p
Sponsored in part by Agency for International Development, Washington, D.C. Prepared in cooperation with Puerto Rico Univ., Mayaguez.

Keywords: Farm crops, Tropical regions, Developing countries, Production, Yield, Soil properties, Fertilizers, Irrigation, Experimental design, Research projects, Universities, Research management, *Environmental impacts, *Crops.

The Universities of Hawaii and Puerto Rico have formulated two projects with the assistance of United States, Agency for International Development (USAID) to undertake some of the necessary research and to design an extension delivery and communications system that will hasten the application of tropical agricultural research. The purposes of the projects are to correlate food crop yields on a network of benchmark soils, and to determine scientifically the transferability of agro-production technology among tropical countries. The workshop, which is the basis of the report, was held to discuss and hopefully to agree upon the experimental designs and research methodology that would be used in the crop production research in these two projects.

Control of Algae in Lakes, Lagoons and Small Reservoirs with Biogrowth Partitions
Completion rept. Jul 74-Jun 76
Bobby G. Wixson, Donald E. Modesitt, Paul Han Cheng, and Walter H. Zachritz. Jun 77, 60p OWRT-A-077-MO(2)
Contract DI-14-31-0001-5025, DI-14-31-0001-6026

Keywords: *Algae, Pest control, *Lakes, Reservoirs, *Sewage treatment, Lagoons(Ponds), Growth, Waste water, Oxygen, Dissolved gases, Carbon dioxide, Tanks(Containers), Effectiveness, Design, Biochemical oxygen demand, Field tests, Biogrowth partitions, Eutrophication.

Research was carried out on the control of algae from small lagoons through laboratory and field studies of manmade biogrowth surfaces for removing or controlling algae. Three lab-scale stabilization lagoons were modified with the addition of biogrowth sheets and operated with 30-day and 15-day detention period. Principal parameters measured were COD, suspended solids, dissolved oxygen, pH, carbon dioxide, and microbial populations. Experimental laboratory results indicated that the application of biogrowth sheets was effective for lagoon stabilization. The practicability and design characteristics of the lagoon modification were then evaluated in field investigations.

Survey of Uses of Waste Materials in Construction in the United States
James R. Clifton, Paul W. Brown, and Geoffrey Frohndorff. Jul 77, 64p Rept no. NBSIR-77-1244
Contribution to the RILEM Symposium by Correspondence on the Use of Waste Materials in the Construction Industry.

Keywords: Construction materials, *Industrial wastes, Reclamation, Solid waste disposal, Fly ash, Slags, Refuse disposal, Rocks, Spoil, Phosphate deposits, Aluminum industry, Cements, Calcium sulfates, Sludge disposal, Combustion products, By-products, Slimes, Demolition, *Building materials, *Waste recycling, Mine wastes, Dredge spoil, Cement industry, Phosphate industry, Limestone scrubbing, Red mud.

This survey covers the sources, amounts and disposal of major mining, industrial and municipal wastes available in the 48 conterminous states of the United States along with their present and potential uses as construction materials. In this report wastes from mining, industrial and municipal sources are treated separately and in that order. This is the order of decreasing amount of usable wastes available from each major

APPROPRIATE TECHNOLOGY ABSTRACTS

classification. Wastes from mineral, metallic ore and coal mining operations are covered in Section 2. Industrial wastes are treated in Sections 3 to 5, with Section 3 describing a variety of important wastes which have found few markets; by-products from coal combustion, which are examples of wastes for which there are growing markets, are discussed in Section 4; and Section 5 covers slugs, by-products which are already extensively used as aggregates in construction but for which there may be higher value uses. Municipal wastes, including municipal refuse, incinerator residue, glass, demolition waste and sewage sludge, are the subject of Section 6. Then Section 7 is directed towards some potential wastes which may be generated in substantial amounts by emerging technologies related to energy production and environmental protection. Obstacles to and incentives for the increased use of waste materials in construction are discussed in Section 8.

The Agricultural Development of Nicaragua: An Analysis of the Production Sector
Special rept.
Philip F. Warnken. Jul 75, 172p Rept nos. SR-166, International Ser-1

Keywords: *Agricultural economics, Developing countries, *Nicaragua, Farms, Production, Trends, Land use, Manpower, Cost analysis, Farm crops, Income, Livestock, Market value, Fertilizers, Agricultural machinery, Statistical data.

This study presents a benchmark descriptive analysis of agricultural production in Nicaragua. The purpose was to provide an analytical basis whereby priorities for general and specific agricultural policies could be established to further Nicaraguan developmental objectives in the agricultural sector. The study was limited to an analysis of principal agricultural products in Nicaragua and included nine crops and two livestock activities. These activities were grouped into three classes of products: (1) basic grains including corn, beans, rice and grain sorghum; (2) export products including cotton, coffee, sugarcane, tobacco and sesame; and (3) livestock activities which included the beef and dairy enterprises. Together, these activities accounted for over 90 percent of the total value of production from the agricultural sector in 1971. The analysis was further limited to production from the six major regions which lie in the western half of the country. The two eastern regions bordering the Caribbean were excluded from the study since both are economically unimportant in terms of national agricultural output.

Pyrolytic Conversion of Agricultural and Forestry Wastes in Ghana - A Feasibility Study
Jul 76, 47p
Contract AID/ta-C-1290
Prepared in cooperation with Council for Scientific and Industrial Research, Kumasi (Ghana). Building and Road Research Inst., and Technology Consultancy Center, Kumasi (Ghana).

Keywords: *Agricultural wastes, *Wood wastes, *Pyrolysis, *Fuels, *Ghana, Reclamation, Solid waste disposal, Charcoal, Manufactured gas, Fuel oil, Design,

Combustion chambers, Cost estimates, *Waste recycling, Appropriate technology.

This report describes the results of a field study to determine the quantities and characteristics of waste in Ghana and the feasibility of using pyrolytic conversion of these wastes. The study shows that Ghana is generating 2,735,100 tons of agricultural and forestry waste materials each year that are suitable for pyrolytic conversion. Using pyrolytic conversion of all these waste materials, approximately 342,000 tons of charcoal and perhaps 273,000 tons of oil could be produced. The market value of the end products would be about \$48,396,000 each year. A preliminary description of an appropriate technology version of a continuous/batch pyrolytic conversion system is also presented in this report.

Mass Culture of Freshwater Prawns for Commercial Evaluation
Completion rept. 1 Jul 75-31 Dec 76
Scott A. Willis. Jul 77, 13p NOAA-77072535

Keywords: Shellfish, Aquaculture, Animal nutrition, Feeding stuffs, Weight(Mass), Cost analysis, Fresh water fishes, Survival, Florida, *Fishes, Macrobrachium rosenbergii.

Post larval Macrobrachium rosenbergii were fed various amounts of Purina trout chow to determine optimal feeding requirements during nursery development. During the four week study, best results were found in treatments fed amounts of food which decreased weekly as the food demand of the prawns decreased. The two treatment replicates fed 10, 7 1/2, 5, and 2 1/2% body weight daily during each week had increases from 0.03 g to 0.35 g and 0.26 g mean prawn weight, 100 and 98.7% survival, and food conversion ratios of 1.2 and 1.8:1. This refinement in determination of prawn food needs would allow 10,000 post larvae to be reared for four weeks in a nursery situation for a food cost of \$1.80.

Growout of the Giant Malaysian Prawn, Macrobrachium rosenbergii, in Earthen Ponds in Central Florida
Completion rept. May-Nov 76
Scott A. Willis, and Mark E. Gerrigan. 1977, 54p NOAA-77-072536

Keywords: Shellfish, Aquaculture, Growth, Weight(Mass), Feeding stuffs, Survival, Fresh water fishes, Harvesting, Management, Ponds, Florida, *Fishes, Macrobrachium rosenbergii, Predators.

Postlarval and juvenile Macrobrachium rosenbergii were stocked in twelve 0.025 ha earthen ponds to study the effects of stocking size and density on growth and survival. Following each four week sampling interval, feeding rates were adjusted based on mean body weight and an estimated 5% mortality. Management practices employed to enhance production levels included complete analysis of water quality parameters, use of fertilizer to sustain planktonic blooms, mechanical and chemical water weed control, and identification of predators. All prawns were sexed at harvest and length-weight relationships were determined for both male and female prawns.

Food Waste: An Opportunity to Improve Resource Use: Department of Agriculture
Report to the Congress.
15 Sep 77, 84p* Rept no. CED-77-118

Keywords: Food, Wastes, Resources, Food consumption, *Food supply, Production capacity, Food industry, Management, Consumer affairs, Food wasting, Department of Agriculture.

The report discusses the Department of Agriculture's past and current activities concerning food loss in the United States, as well as a broader assessment of loss. Study results indicate that about one-fifth of all food produced for human consumption is lost annually in the United States. In the world context of rising population, uncertain weather, and concern with the availability of resources, every opportunity should be taken to improve food system management in this country. More attention should be directed at the causes of food waste, new management technology for reducing loss, and improvement of consumer understanding.

Analysis of Alternatives to Refuse Disposal
Final rept.
Jim Baker, Mike Bowlin, Carol Hansberger, and Phil Hanson. May 77, 104p UO-LCCM-BOI-77-009, HUD/RES-1140
Prepared in cooperation with League of Cities-Conference of Mayors, Inc., Washington, D.C., Contract HUD-H-2196R.

Keywords: Solid waste disposal, Management planning, Garbage, Sanitary landfills, Reclamation, Materials recovery, *Land use, Refuse disposal, Marketing, Separation, Site surveys, Paper, Metals, Iron, Aluminum, Wood wastes, Plastics, Leather, Incinerators, Biodeterioration, Fuels, Water pollution control, Government policies, Regulations, Geology, Demography, Cost analysis, Financing, Idaho, *Waste disposal, Ada County(Idaho), Waste recycling, Pyrolysis incineration, Refuse derived fuels, Source separation.

APPROPRIATE TECHNOLOGY ABSTRACTS

The researchers reviewed six alternative solid waste methods. The six alternatives considered were: continued landfill; household or source separation; pyrolysis; biodegradation; waste-based solid fuel production; incineration. The use of a sanitary landfill is virtually unavoidable now and in the near future. Whatever plan or alternative is adopted for Ada County, a certain percentage of waste or amount of residue will ultimately end up in a landfill. It is at the present, the most practical, least-cost method of disposing of garbage. However, the sanitary landfill is not without problems. For instance, the Hidden Hollow Sanitary Landfill, Ada County's primary landfill site, opened in 1971 and was expected to last up to 1986. However, due to an increasing volume of garbage, the life expectancy has been shortened and the closing date is now estimated to be about 1980. As citizens become familiar with more sanitary and productive methods of disposing and/or utilizing solid waste, traditional landfill techniques will become less acceptable. Also, as the cost of energy escalates, landfill will not be cost effective compared to processes that recover materials or energy from solid waste. (Portions of this document are not fully legible)

Impact of Hail Suppression on Nebraska Crop Production: A Simulation Study
 Final rept. for 1971
 Larry M. Boone. Sep 77, 46p Rept no. AGERS-39
 Grant NSF-AG-275

Keywords: *Hail, Weather modification, Farm crops, Nebraska. Production, Cost analysis, Marketing, Prices, Demand(Economics), Tables(Data), Linear programming, Computerized simulation, *Crops.

A linear programming analysis was used to simulate effects of hail suppression on Nebraska crop production. Production costs and crop patterns in ten major land resource areas (LRAs) were estimated for 10%, 25%, and 50% levels of hail suppression effectiveness, and compared to costs and production distribution patterns without hail suppression. With hail suppression effectiveness of 50%, total production costs in the state would have increased less than 1/2%. Corn production would have been 2% higher; wheat production, 3.7% higher. With hail suppression, production shifts of the same crop between LRAs were less than 2%. Hail suppression would not have caused substantial shifts of land use from one crop to another within an LRA. If hail suppression technology were widely used it could influence production of some crops enough to change price.

Evaluation of Investment Opportunities: Tools for Decisionmaking in Farming and Other Businesses
 Final rept.
 Arthur J. Walrath. Jun 77, 108p* Rept no. AH-349
 Sponsored in part by Economic Research Service, Washington, D.C. Economic Development Div.

Keywords: Farm management, Investments, Decision making, Return on investment, Costs, Fixed investment, Discounted cash flow, Savings, Profits, Computation, Tables(Data), *Agriculture, *Management techniques.

This report offers decision managers, including farmers, easy-to-use guides for analyzing investment opportunities. Examples show how to classify and compare various costs and returns. Formulas are given which can be applied to business decisions. They emphasize the time-value concept of money by using compounding and discounting methods. Tables are presented for determining the future value of a present sum, present value of a present sum, and present and future values of annuities. Although aimed at the businessman, the handbook can also be used to make household decisions: one example shows how much has to be saved each month to reach a savings goal in five years.

Proceedings of National Symposium on Food Processing Wastes (8th) held on March 30 - April 1, 1977 in Seattle, Washington
 Aug 77, 463p* Rept no. EPA/600/2-77/184

Keywords: *Food processing, Meetings, Water pollution control, Filtration, Brines, Revisions, Byproducts, Materials recovery, Industrial waste treatment, Guidelines, Canneries, Sludges, Anaerobic process, Standards, Odor control, Lagoons(Ponds), Assessments, Residues, Seafood, Tomatoes, *Fruits, *Vegetables, Feedstuffs, Proteins, Dairy, *Poultry, Preservatives, *Dairies, *Waste water reuse, *Water pollution, *Waste recycling, Water reuse, Meat packing industry, Biological industrial waste treatment.

The Proceedings contains copies of 29 of the 31 papers presented at the Eighth National Symposium on Food Processing Wastes. Subjects included: processing modifications, product and by-product recovery, wastewater treatment, water recycle and water reuse for several segments of the food processing industry. These segments included: red meat and poultry, seafood, dairy, fruit, and vegetable. Attendance at the two and one-half day Symposium was approximately 200 with good representation by industry, universities, consulting firms, as well as state and Federal agencies.

Environmental Effects of Septic Tank Systems
 Rept. for 1976-77
 Marion R. Scalf, William J. Dunlap, and James F. Kreissl. Aug 77, 43p* Rept no. EPA/600/3-77/096

Keywords: *Septic tanks, *Sewage disposal, Water pollution abatement, Environmental impacts, Adsorption, Rural areas, Mountains, Ground water, Surface waters, Design, Regulations, Water pollution control, Sludge disposal, Leaching, Trends, Water wells, Oklahoma, Remote areas.

Septic tank-soil absorption systems are the most widely-used method of on-site domestic waste disposal. Almost one-third of the United States population depends on such systems. Although the percentage of newly constructed homes utilizing septic tanks is decreasing, the total number continues to increase. Properly designed, constructed, and operated septic tank systems have demonstrated an efficient and economical alternative to public sewer systems, particularly in rural and sparsely developed suburban areas. However, because of their widespread use in unsuitable situations, they have also demonstrated the potential for contamination of ground and surface waters.

Ferrocement in Bending, Part II: Fatigue Analysis
 Final rept. 1974-77
 P. Balaguru, A. E. Naaman, and S. P. Shah. Oct 77, 167 Rept no. 77-1
 Grant NSF-ENG74-20829
 See also report dated Aug 76, PB-262 155.

Keywords: *Concrete, Fatigue(Materials), Loads(Forces), Reinforcing materials, Rigidity, Cracks, Fatigue life, Creep properties, *Ferrocement.

This report follows Part I PB-262 155 which dealt with monotonic loading. In this report analytical and experimental investigations of ferrocement beam subjected to fatigue flexural loading are described. Based on experimental results, empirical formulae are suggested to predict fatigue life, and deflections and crack widths for a given number of cycles and loading. These formulae also seem to be applicable to conventionally reinforced concrete beams. In addition, based on the fatigue properties of the constituent materials: steel and concrete, a theoretical model was developed to predict behavior of ferrocement composited subjected to fatigue loading.

Proceedings of the National Ground Water Quality Symposium (3rd) Held in Las Vegas, Nevada on September 15-17, 1976
 Final rept. 31 Mar 76-31 Jan 77.
 Jun 77, 240p* EPA/600/9-77/014

Contract EPA-68-03-2396

Keywords: *Ground water, *Water pollution, Meetings, Land use, Potable water, *Waste disposal, Subsurface drainage, Ground water recharge, Las Vegas Valley, Sewage disposal, Industrial wastes, Soil water, Ponds, Linings, Permeability, Seepage, Water table, Design criteria, Arid land, Nitrogen, Earth fills, Ground water movement, Artificial recharge, Sewage irrigation, Val-dose zone.

The Third National Ground Water Quality Symposium was held in Las Vegas, September 15-17, 1976, in conjunction with the annual convention of the National Water Well Association. There were eight main sessions encompassing twenty-four technical papers. These were concerned with the disposal of waste on the land, the movement of pollutants in the subsurface, and artificial recharge. A special session was dedicated to ground water in the Las Vegas Valley.

Biological Control of Aquatic Nuisances - A Review
 Final rept.
 Gerald S. Schuytema. Jul 77, 101p* Rept no. EPA/600/3-77/084

Keywords: Aquatic weeds, *Weed control, Reviews, Cyanophyta, Viruses, Fungi, Bacteria, Fishes, Snails, Phytoplankton, Zooplankton, Competition, Damage, Ecology, Algae, *Aquatic plant control, Biomanipulation, Biological insect control, Eutrophication, Water hyacinths, Alligator weeds, Agasicles, Neochetina, Predation, Tilapia.

A total of 532 references on the biological control of aquatic nuisances were reviewed. Three major control approaches exist. Grazing and predation have been the most frequently utilized techniques, with emphasis on macrophyte control by fish and insects. The use of pathogens is potentially effective, with most promise in macrophyte control. Biomanipulation, the exploitation of the interrelationships among plants and their environment is a most promising technique for eutrophic systems. This approach includes increasing algal grazers while controlling zooplanktivores and exploiting the competitive and growth limiting reactions among various species. The importance of using host-specific organisms to prevent damage to desirable components of the ecosystem is emphasized.

Automobile Scrapage and Recycling Industry Study - Overview Report
Final rept. Jun-Dec 75
R. Kaiser, R. P. Wasson, and A. C. W. Daniels. Sep 77, 409p* DOT-TSC-OST-77-11
Contract DOT-TSC-1028

Keywords: *Automobiles, Solid waste disposal, Materials recovery, Economic analysis, Motor vehicles, Metal scrap, Plastics, Iron alloys, Government policies, Regulations, Waste processing, Legislation, Trends, Steels, Rubber industry, Tires, *Waste recycling, Junk car disposal, Metal recycling, Scrap recycling, Plastics recycling, Secondary materials industry, Tire recycling.

The principal factors which influence the recovery of materials from junked automobiles are reviewed and evaluated. These include the number and materials composition of the automobiles that are retired annually in the U.S.; the flow of junk automobiles into the commercial recovery cycle and problems associated with abandoned automobiles; operations of the auto wrecking industry where serviceable parts are salvaged; and the structure, operations and technology of the scrap industry which transforms automobile hulks into commercial grades of metal scrap. Since Federal laws and policies impact on the reclamation of materials from junked automobiles, a legal review of key legislation and policies is also included. Because of a strong demand for auto hulks by scrap processors, created by an increased market for ferrous scrap, the problem of an ever increasing accumulation of unprocessed deregistered automobiles has been stabilized. In 1974, the fractional recovery of metallic materials from the approximately ten million automobiles deregistered that year was higher than from other forms of obsolete scrap. The estimated value of the recovered materials was in excess of one billion dollars.

The Application of Technology in Developing Countries
Rept. for Aug-Dec 76
Robert L. Bulfin, Jr. and J. Richard Greenwell. 1977, 172p
Contract AID/ta-6-1111
Papers presented during an Interdisciplinary Programs Seminar Series, August-December 1976.

Keywords: *Technology transfer, Developing countries, Meetings, *Technology assessment, Food industry, *Water resources, *Agriculture, Engineering, Appropriate technology.

The chapters in this volume are based on papers delivered during a weekly seminar series at the University of Arizona between September and December, 1976. These seminar series were originally held under the auspices of the University's Natural Resources Program, an interdepartmental activity made possible by a 211(d) institutional grant to the University from the U.S. Agency for International Development; the seminars are now sponsored by the University's Office of Interdisciplinary Programs. The volume, like the original seminar series, represents the varying, and sometimes differing, views of specialists in such fields as industrial, civil, nuclear, agricultural, and systems engineering, physical geography, and cultural anthropology; these views also represent both the University of Arizona and other nationally-known institutions.

Coffee: Production and Marketing Systems
Report to the Congress.
26 Oct 77, 98p* Rept no. ID-77-54

Keywords: *Coffee, Production, *Marketing, Agreements, Foreign countries, Prices, Stabilization, Developing countries, Exports, Supply(Economics), Demand(Economics), Department of State, Market shares.

Coffee is produced in 53 countries and territories and is vital to the economies of many underdeveloped countries that produce it. In 1976 its export value was more than \$8 billion, second in value only to petroleum in international commodity trade. The United States has joined the 1962, 1968, and 1976 International Coffee Agreements primarily to help stabilize prices and export income of the developing producing countries. Fluctuations in the price of exported coffee appear to be in response to anticipated future availability. However, the policies and procedures of exporting countries can influence availability and create pressure on prices.

Cost-Effective Electric Power Generation from the Wind
C. J. Todd, R. L. Eddy, R. C. James, and W. E. Howell. Aug 77, 34p*
An Extended Version of a paper presented to the International Solar Energy Society, Orlando, Florida, on June 8-10, 1977.

Keywords: Wind power generation, Cost effectiveness, Wind power plants, Hydroelectric power generation, Pumped storage, Windpower utilization, Electric power transmission, *Wind energy, *Electric power, Wind energy conversion systems.

The idea of generating windpower at the windiest available sites (wind farms) is examined for its effect on feasibility of large-scale windpower input to the nationwide electric power network. Windpower is considered in association with pumped-storage hydroelectric plants for load leveling and existing types of transmission lines for interconnecting the wind farms and energy-storage sites with load centers up to 2000 km away. Potential energy harvest from wind farm sites in the 17 Western States is estimated at well over 100 GW, and many times this much in arctic North America. At the 100-GW level of development, bus bar cost at the wind farm would be about 3 mills/MJ (10 mills/kWh). Energy storage required for load leveling would add about 1.8 mills/MJ and transmission costs another 2.1 mills/MJ, for a total cost at the load center of 6 mills/MJ (21 mills/kWh), all in 1976 dollars. This would be competitive with energy generated near load centers by new nuclear or fossil-fuel powerplants. Windpower appears environmentally acceptable and avoids many of the environmental liabilities of conventional sources. Large-scale windpower implementation will require major advance commitment of capital, about \$1 billion, to lower bus bar costs to 4.4 mills/MJ (16 mills/kWh). The timetable will therefore likely depend on Federal incentives.

Water and Energy Conservation Through Efficient Irrigation Management
Project completion rept. 1 Jan 75-Dec 76
Lloyd R. Stone. Aug 77, 25 CONTRIB-190, OWRT-A-069-KAN(3)
Contract DI-14-31-0001-5016

Keywords: Water consumption, Corn plants, Grain sorghum plants, *Irrigation, Plant growth, Rainfall, Yield, Seasonal variations, Efficiency, Soil profiles, Kansas, *Water management, *Energy conservation, Water management(Applied), Zea mays, Sorghum bicolor, Tribune(Kansas), Manhattan(Kansas).

In a 3-year study, an evaluation was made of corn (Zea mays) and grain sorghum (Sorghum bicolor) yield and water use efficiency as influenced by irrigation timing. The study was located at Tribune (mean annual rainfall of 17 inches) and Manhattan, (mean annual rainfall of 33.5 inches) Kansas. Treatments consisted of no in-season irrigation, a single in-season irrigation at one of the three different growth stages, and irrigating at each of the three selected growth stages. Selected growth stages in corn were pre-tassel, silk emergence, and blister; in grain sorghum they were boot, half-bloom, and soft-dough. Each irrigation was 4 inches at Manhattan and 6 inches at Tribune. All Tribune plots received a pre-plant irrigation in April of each year. Water was applied to basin plots using gated pipe. With no in-season irrigation the 3-year mean grain sorghum yields were greater than corn yields at both Manhattan and Tribune.

Aquaculture in Southeast Asia. A Historical Overview
Shao-Wen Ling. 1977. 122p* CONTRIB-465, ISBN-0-295-95560-0, NOAA-77101207
Library of Congress Catalog Card No. 77-3828.

Keywords: Ponds, *Aquaculture, *Southeast Asia, Shellfish, Fisheries, Indonesia, Philippines, Malaysia, South Vietnam, North Vietnam, Cambodia, Harvesting, Developing countries, Economic development, Reproduction(Biology), Thailand, Burma, China, Coasts, Taiwan, Singapore, Sea Grant Program.

Aquaculture had its cradle in Asia. It developed there some four thousand years ago in harmony with a traditional rural-agrarian economy, and it is now heading towards some fascinating developments. Aquaculture in the Southeast Asian region, including Indonesia, the Philippines, Malaysia, Singapore, Vietnam, Cambodia, Thailand, Burma, and the southern China coast to Taiwan is examined. The species cultured in the area are identified and the collection and production of stocking material is explained. Culturing facilities are described and information is given on aquaculture practices and techniques.

Bivalve Mollusc Culture in a Waste Recycling Aquaculture System
Technical rept.
John H. Ryther, and Roger Mann. Sep 77, 119p
WHOI-77-59, NOAA-77-110301
Grant NOAA-04-6-158-44106

Keywords: Mollusca, *Aquaculture, Circulation, Shellfish, Mixtures, *Waste water, Oysters, Clams, Shellfish, Substrates, Food chains, Algae, Sea water, Sewage treatment, Phytoplankton, Feeding stuffs, Ponds, Nutrients, Monitoring, Sea Grant program, Crassostrea gigas, Ostrea edulis, Mytilus edulis, Argoppectin irradians, Tapes japonica, Secondary sewage treatment.

During the Sea Grant fiscal year 1976-77, research continued on the development of a waste recycling aquaculture system at Woods Hole Oceanographic Institution. In the present system mixtures of secondary treated sewage effluent and seawater are used to mass culture marine phytoplankton on a continuous basis in large outdoor ponds. These phytoplankton are then fed to filter feeding bivalve molluscs (oysters, clams, mussels). The effluent from the mollusc culture tanks is passed through cultures of macroscopic red algae to effect final removal of excess and excreted nutrients from the earlier stages of the controlled food chain. Work has centered on the effects of physical

parameters on optimizing shellfish growth. Also monitoring of phytoplankton species predominance in mass algal cultures continued in an attempt to gain further understanding of this important phenomenon. Separate studies are reported on and included in this report.

Technological and Economic Assessment of the Utilization of Rice Straw Residue from the California Sacramento Valley for On-Farm Power Generation
Final rept.
Brian Horsfield, and R. O. Williams. Aug 76, 95p
ERDA/USDA-19464/76/FR-1
Contract USDA-12-14-1001-603
See also report dated 20 Oct 76, PB-275 082.

Keywords: *Electric power, Electric power generation, Biological energy conversion, *Agricultural wastes, Plant residues(Organic), Rice plants, Farm crops, Straw, Grain crops, Agricultural engineering, Gasification, Harvesting, Storage, Technology, Feasibility, Benefit cost analysis, Return on investment, California.

The report examines alternative energy uses for California Sacramento Valley rice straw residue. This area of California can produce approximately 2 million tons of straw which has enough energy to provide 30% of the fuel requirements for a 1,000 megawatt plant. The report deals with methods of harvest, collection and storage, and provides an economic assessment of several methods, including total harvest. On-farm utilization of the energy content of rice straw is discussed with regard to rice drying and irrigation pumping. Off-farm use is also considered. (Color illustrations reproduced in black and white)

Report on Tropical Animal Aquaculture-Prawn Production and Management Systems Development.

Keywords: Fresh water, Aquaculture, Crustacea, Hawaii, Economic development, Industries, Ponds, Reproduction(Biology), Design, Improvement, Savings, Cost analysis, Systems engineering, *Fishes, Macrobrachium rosenbergii, Sea Grant program.

Freshwater prawn farming is a new and dynamic growth industry in Hawaii. Considerable progress has been made in hatching and rearing techniques since they were first introduced in 1965, yet there is still considerable room for improvement, especially for the

APPROPRIATE TECHNOLOGY ABSTRACTS

grow-out system. The current 'Anuenue' strategy is broken down to functional components and examined in detail through use of engineering economy methods. Areas with short-term potential for improvement are identified and an alternative approach utilizing a narrow canal pond design is recommended. There are various advantages of this alternative which result in a cost savings of 14.8%. The basic short-term improvement recommended is a pond design that permits mechanization of certain operations such as feeding, harvesting, and pond maintenance and the development of sophisticated management strategies aimed at increasing yields.

Pollination of Agricultural Crops by Bees (Opylenie Pchelami Sel'sk Khozyaistvennykh Kul'tur)

A. N. Mel'Nichenko. 1977, 712p Rept no. TT-74-52054

Trans. of Vsesoyuznaya Akademiya Sel'sk Khozyaistvennykh Nauk. Doklady (USSR) v3 1960, by B. R. Sharma. Sponsored in part by National Science Foundation, Washington, D.C. Special Foreign Currency Science Foundation.

Keywords: Pollen, *Bees, Farm crops, Yield, Agriculture, Plants(Botany), Fruit crops, Conveyors, Production, Mortality, Vegetable crops, Economic factors, Color, Aromatic compounds, Translations, Books, Wheat plants, USSR, *Crops, *Vegetables, *Fruits, *Pollination, Angiosperms, Heterosis.

The relationships between the biology of flowering, the fertilization of plants, and the biology of bees have intrigued investigators for many years. The results of new studies and experiments, have confirmed that the cross-pollination of entomophilous plants by bees is of paramount importance not only for increasing yield and improving seed and fruit quality, but also for the production and exploitation of heterosis in a number of bee-pollinated crops. The proceedings published in the present volume illustrate this point with new material. The book provides interesting material for agronomists, apiculturists, plant breeders and professional bee-keepers.

International Ferrocement Information Center, Bangkok (Thailand).

The Potentials of Ferrocement and Related Materials for Rural Indonesia; a Feasibility Study

Ricardo P. Pama, and Opas Phromratanapongse.

Oct 77, 28p

Sponsored in part by Agency for International Development, Djakarta (Indonesia). Prepared in cooperation with Siam Cement Co. Ltd., Bangkok (Thailand).

Keywords: Construction materials, *Indonesia, Developing countries, Pontoons, Water tanks, Storage tanks, Grains(Food), Well casings, Toilet facilities, Boats, *Ferrocement, Appropriate technology.

This report summarizes the results of a short feasibility study conducted in Indonesia by a ferrocement team from the Asian Institute of Technology. Ferrocement has been identified as an appropriate technology material with many potential applications in developing countries especially in the rural areas. Field visits were made during the period October 4-18, 1977 in West Java, South Sulawesi and North Sumatra to obtain first hand information about the conditions of the rural people. The primary result of the survey is the identification of seven (7) potential applications of ferrocement and related materials; these are: pontoons, dug-out canoes, water jars, toilet bowls, well casings, grain storage bins and building boards. The report recommends that extensive testing, field demonstration and evaluation be conducted to determine especially their social acceptability by the villagers before full-scale implementation is undertaken.

Optimizing Crop Production through Control of Water and Salinity Levels in the Soil

J. I. Stewart, R. M. Hagan, R. J. Hanks, W. T. Franklin, and W. O. Pruitt. Sep 77, 200p PRWG-151-1, OWRT-B-121-UTAH(2)

Contract DI-14-31-0001-5120

See also PB-258 051. Prepared in cooperation with Consortium for International Development, Logan,

Utah, California Univ., Davis, Colorado State Univ., Fort Collins and Arizona Univ., Tucson.

Keywords: *Irrigation, Farm crops, Corn plants, Water consumption, Salinity, Water supply, Plant growth, Yield, Evapotranspiration, Lysimeters, Soil water, Sprinkler irrigation, Utah, *Water management, Model studies.

The research was carried out by four universities belonging to the Consortium for International Development (CID) in cooperation with the four Water Research Centers. Similar field experiments with corn were carried out in 1974 and 1975 at the University of Arizona (Yuma Field Station), the University of California (Davis), Colorado State University (Fort Collins), and Utah State University (Logan). The objectives were to develop production functions for estimating how crop yield is influenced by different levels of salinity and water supply at different stages of crop growth; and to formulate and test models for predicting yields as a function of water and salinity stress across a broad spectrum of climate and soil types. A unique and significant feature of the study was the establishment of a sufficient data base to test the transferability of the results, and to accomplish this feature, the research was conducted on a regional basis with data collection at the four different locations. All irrigation was applied with a line source sprinkler system, developed in Utah, which gave a continuously variable amount of irrigation water on each side of the line. The maximum evapotranspiration (ET) was estimated at all locations and measured with lysimeters at California. Evapotranspiration (ET) was calculated at all plots as the sum of precipitation, irrigation, and soil water depletion minus drainage (estimated). Yields of dry matter and grain were measured at the end of each growing season. This study has provided an extensive data base on how corn yields respond to moisture deficiency and salinity stress under different soil and climatic conditions.

Pyrolytic Conversion of Agricultural and Forestry Wastes to Alternate Energy Sources in Indonesia; a Feasibility Study

John W. Tatom, Filino Haranap, Tze I. Chiang, P. Muchidin Apandi, and Harsono Wirjosumarto. Feb 77, 54p

Contract AID/ASIA-C-1203

Prepared in cooperation with Institute of Technology Bandung (Indonesia). Development Technology Center, and Padjadjaran Univ., Bandung (Indonesia).

Keywords: *Agricultural wastes, *Wood wastes, *Pyrolysis, *Indonesia, Reclamation, Solid waste disposal, *Fuels, Charcoal, Oils, Manufactured gas, Economic analysis, Design, Feasibility, *Waste recycling.

The study was conducted in Indonesia in a joint effort by personnel from the Engineering Experiment Station at the Georgia Institute of Technology and the Development Technology Center at the Institute of Technology Bandung. The principal circumstance that led to the study is the severe firewood cutting of the forests, especially in Java, which has resulted in damage to soil, water, and mangrove resources, with the resulting need for an alternate source of fuel for cooking. The study involved (1) an investigation of the production of agricultural and forestry wastes in Indonesia; (2) an evaluation of the market for the char, oil, and gas which are products of the pyrolytic conversion process; (3) the development of a preliminary pyrolytic conversion system design; and (4) an approximate economic evaluation of the system. The primary results of the waste survey indicate that at least 17 million tons of wastes are produced in Indonesia each year, with rice hulls comprising a third of the total and sawmill, coconut, logging, rubber, oil palm wastes and bagasse comprising the remainder. From the available wastes it is estimated that about 1.5 million tons of charcoal and .9 million tons of pyrolytic oils could be produced.

Urban Stormwater Management and Technology: Update and Users' Guide

Final rept. Jul 75-Jan 77

John A. Lager, William G. Smith, William G. Lynard, Robert M. Finn, and E. John Finmore. Sep 77,

333p* EPA/600/8-77/014

Contract EPA-68-03-2228

Supplement to report dated Dec 74, PB-240 687.

Keywords: Storm sewers, Combined sewers, Overflows, Urban areas, Reviews, Surface water runoff, Wastewater, Hydrology, Water quality, Sources, Monitoring, Cost effectiveness, Improvement, Storage tanks, Mathematical models, Control equipment, *Wastewater reuse, Storm water runoff, Urban hydrology, Best management practices.

A continuation and reexamination of the state-of-the-art of storm and combined sewer overflow technology is presented. Essential areas of progress of the storm-water research and development program are keyed to the approach methodology and user assistance tools available, stormwater characterization, and evaluation of control measures. Results of the program are visible through current and ongoing master planning efforts. Assessment of urban runoff pollution is referenced to the developing national data base, localized through selective monitoring and analysis, and quantified as to potential source and magnitude using techniques ranging from simplified desktop procedures to complex simulation models. Stormwater pollutants are characterized by (1) source potential, (2) discharge characteristics, (3) residual products, and (4) receiving water impacts. Control and corrective measures are separated into nonstructural, termed Best Management Practices (BMPs), and structural alternatives. Best Management Practices focus on source abatement, whereas structural alternates roughly parallel conventional wastewater treatment practices of end-of-the-pipe correction. For combined sewer overflow abatement, increasing degrees of structural control is necessary. Successful program implementation is illustrated for several selected case histories.

Windmill Power for City People

Final rept.

Mary Christianson. May 77, 73p* OEO-LN-2137

Grant CSA-20156

Keywords: Windmills, Windpower utilization, Wind power generation, Urban areas, Wind turbines, Windpowered generators, Power transmission towers, Design, Drawings, Systems engineering, New York, *Wind energy, New York City(New York).

This report discusses the first urban windmill used as an alternative energy source. The windmill was designed and installed at 519 East 11th Street, a tenement building in New York City. Findings show that the energy produced from the windmill is an important renewable energy resource which can be used in most urban areas and which reduces dependency on utility companies. A brief history of the windmill's origin, design and installation procedures are outlined. Also included are comparisons of energy savings of the windmill energy versus the utility companies. An appendix consists of literature, resources, a wind speed and direction map of the USA, structural engineering calculations and an explanation of windforces on windmills.

Rural Community Action: Status and Recommendations

Final rept.

Stanley Zimmerman. Oct 77, 137p* OEO-LN-2147

Grant OEO-30141G-77-01

Keywords: *Community development, Rural areas, Projects, Services, Low income groups, Policies, Management, Housing studies, Medical services, Unemployment, *Socioeconomic status, Community Action Programs, Poverty groups, Antipoverty programs.

The report is an evaluation of the Community Action Program in rural America. The report describes the conditions and problems of the poor in rural areas: limited resources and mobility, lack of necessary job skills, poor housing stock and inadequate health care. In addition, the poor lack visibility and local officials are unwilling to rely on formal antipoverty programs. Successful rural community action programs are described and recommendations for future directions are given.

The Application of Wind Energy Systems to Desalination
Edgar A. Cadwallader, John E. Westberg, and William R. Williamson. 22 Apr 77, 68p OWRT/S-78/1
Contract DI-14-34-0001-7523

Keywords: Desalting, Wind power generation, Water treatment, Economics, Electric power generation, Brackish water, Electrodialysis, Reverse osmosis, Technology, Potable water, Water pollution, *Wind energy, *Desalination, Wind turbines.

The impact of rapidly increasing fuel costs has all but made saline water conversion uneconomical. However, the application of wind energy systems to membrane processes for brackish water conversion offers an economical solution. Commercially available wind turbines and those under development appear promising for producing electrical energy at costs ranging from five cents down to 1.8 cents per kilowatt hour. It is still possible to reach costs for desalting brackish water at less than \$1.00 per thousand gallons with large wind energy/desalination systems. The coupling of wind energy turbines to electrodialysis and reverse osmosis also offers technological advantages, such as variable energy outputs from wind turbines, to optimize variable fluid flows in the desalination processes for maximum, economic production of potable water. Research and development efforts in this direction are indicated.

Further Research on Road Accident Rates in Developing Countries
G. D. Jacobs, and P. R. Fouracre. 1977, 29p Rept no. TRRL-SUPPLEMENTARY-270
Also pub. as ISSN-305-1315.

Keywords: Motor vehicle accidents, Developing countries, Statistical analysis, Casualties, *Transportation

management, *Roads, Injuries, Kenya, Zambia, Nigeria, Malawi, Great Britain.

Using published data, a study was made of changes in road accident rates over the ten year period 1961-71 in a number of developing countries. It was found that in the majority of countries there was a continuing downward trend in fatality and injury rates per licensed vehicle. Kenya, Jamaica, Zambia, Malawi and Nigeria are notable exceptions and detailed road accident data were used to try to determine underlying factors associated with the increases in fatality and injury rates per licensed vehicle in these countries. In 28 developing countries for which data were available in 1968 and 1971, fatalities per licensed vehicle were found to be related to vehicle ownership levels, the higher the vehicle ownership level, the lower the fatality rate.

Transport and Road Research Lab., Crowthorne (England).
Road Accidents as a Cause of Death in Developing Countries
G. D. Jacobs, and Marquerite N. Bardsley. 1977, 23p Rept no. TRRL-SUPPLEMENTARY-277
Also pub. as ISSN-0305-1315.

Keywords: Motor vehicle accidents, Casualties, Developing countries, Statistical analysis, *Transportation management, *Roads, Comparison, Diseases, Kenya, Hospitals, Great Britain.

Using published data, a comparison was made in fifteen developing countries of the number of deaths from road accidents and the deaths from specific diseases normally associated with the Third World. It was found that road accidents accounted for almost 17 per cent of the total number of deaths studied, a value exceeded only by deaths from enteritis (and other diarrheal diseases). The trends in the number of deaths per head of population in four countries over the period 1960-72 were calculated. It was found that while the rates for infectious, intestinal and respiratory diseases decreased, the death rate for road accidents increased over this period. An analysis of the medical records of the three major hospitals in Nairobi showed that there were more in-patients receiving treatment for road accidents in 1974 than for all but one of the groups of diseases thought to be of concern in developing countries. In two of the hospitals studied, the treatment of road accident cases accounted for over 13,000 in-patient days, over 5 per cent of the total available. (Copyright (c) Crown Copyright 1977.)

Source Bibliography Employee Stock Ownership Plans (ESOP)
Oct 77, 37p* Rept no. EDA-78-032

Keywords: Employees, Investments, Capital, Bibliographies, Corporations, Industries, Incentives, Motivation, Savings, Benefits, Legislation, *Employee participation, Employee stock ownership

The bibliography was compiled with the assistance of three useful research tools: the SCORPIO data bank maintained by the Library of Congress; the New York Times data bank; and an ESOP bibliography prepared by the Congressional Research Service. Employee Ownership Plans have been viewed as a means of improving employee motivation and productivity, diversifying the ownership of capital, providing alternatives to conventional compensation and benefit plans, and saving jobs. An Employee Stock Ownership is an employee benefit program through which employees can acquire part or all of the stock in the corporation for which they work. Since the ESOP Act of 1973, four additional pieces of legislation have been adopted relating to the use of the employee stock ownership concept.

The Impact of Groundwater Development in Arid Lands: A Literature Review and Annotated Bibliography
Information paper
Susan Jo Keith. 1977, 153p* ARID LANDS RESOURCE-IP-10, OWRT-W-197(5254)(2)
Contract DI-14-31-0001-5254

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: *Ground water, *Water pollution, *Arid land, *Water supply, Bibliographies, Environmental impacts, Social effect, Economic impact, Economic development, Subsidence, Developing countries, Stream flow, Agriculture, Irrigation, Reviews, Aquifers, American Indians, Arizona, Pakistan, *Water management.

As groundwater comes increasingly under development, it is imperative, for economic, ecological, and political reasons, to anticipate the impact of its development. The literature is reviewed on this impact in arid lands in terms of two general categories: physical environment impacts and socioeconomic impacts. Two case studies are presented: One focuses on the impact of groundwater development on the Papago Indians; the second, through a discussion of groundwater development in Pakistan, demonstrates the role groundwater development can play in the economic development process in developing arid countries.

Employee Ownership. Employee Stock Ownership Plan (ESOP), Survey Research Center, Institute for Social Research, University of Michigan
1978, 70p* EDA-78-029
Grant EDA-99-6-09433

Keywords: Economic development, Technical assistance, Capital, Assets, Purchasing, Employees, Benefits, Profits, Investments, Economic evaluation, Industries, Corporations, Statistical analysis, *Employee participation.

The study is about one of the most recent variations to emerge in the Employee Stock Ownership Plan, or ESOP, which permits employees to acquire up to 100 percent of the equity of the firm for which they work. This plan not only affords a real increase in property ownership for the workers as individuals, but also serves as an instrument for new corporate capital formation. Data have been collected on 98 firms, including such information as industry type, number of employees, magnitude of sales volume, the percent of employees who participate in the ownership plan. In thirty of the companies we were able to obtain actual data about profit and we therefore analyzed for this sub set of companies the relationship between profit and some of the aspects of ownership.

Guidelines for Use of Fabrics in Construction and Maintenance of Low-Volume Roads
Interim rept.
John E. Steward, Ron Williamson, and John Mohney.
Jun 77, 174p*

Keywords: Fabrics, Pavements, *Roads, Nonwoven fabrics, Woven fabrics, Pavement bases, Fluid filters, Drainage, Separators, Reinforcing materials, Soil stabilization, Waterproofing, Barrier coatings, *Soil erosion, Erosion control, Earthwork, Permeability, Cost analysis, Soil mechanics, Road materials.

Porous woven and non-woven fabrics have been used in road construction in Region 6 since 1974. The fabrics have been used: (1) as filters for subsurface drainage; (2) separation layers to prevent subgrade soil contamination of base layers; (3) subgrade restraining layers for weak subgrades; (4) earth reinforcement to build retaining walls; (5) erosion control, and (6) water proofing membranes. A reference notebook titled "Fabrics in Construction" is due for release to Region 6 Forests in June 1977. This notebook contains a description of current practices and the state-of-the-art in the use of fabrics in road construction and maintenance. The notebook defines terminology and lists the key factors involved in each usage, and relates the fabric physical and chemical properties to the intended usage. The notebook also contains appropriate technical literature, manufacturers' literature and cost data on the known available fabrics. This report highlights the contents of the reference book and discusses the current knowledge for the use of fabrics in low-volume road construction and maintenance.

Development of Crustacean Aquaculture
R. A. Shleser, 1975, 18p NOAA-78011702
Grant NOAA-04-5-158-20
Pub. in European Symposium on Marine Biology (10th), Ostend, Belgium 17-23 Sep 75, v1 p455-471 1975.

Keywords: *Aquaculture, Food chains, Algae, Crustacea, Lobsters, Crabs, Feeding stuffs, Diets, Water quality, Tanks(Containers), Design, Growth, Systems engineering, Cost engineering, Reprints, Homarus americanus, Cancer magister, Macrobrachium rosenbergii.

The Aquaculture Program of Bodega Marine Laboratory is an interdisciplinary effort directed toward the development of aquaculture technology. The primary area of emphasis is the culture of the American lobster *Homarus americanus*. Research in the areas of water quality, nutrition, genetics, physiology, pathology, microbiology, algology, engineering and economics, have been integrated to emphasize the understanding of the economics of culture. The presentation describes how work in each of these areas has general application to the culture of other species. The culture of Dungeness crabs, freshwater prawns and other crustaceans are currently being investigated. Recent regulations requiring strict control of levels of metabolites in mariculture effluents have led to investigations of the potential of various species of algae to take up ammonia, nitrate, and nitrite. These algae may then serve as food for shellfish such as oysters, clams, scallops, and mussels. The economics of these food chains are discussed.

Forecasting Rural Road Travel in Developing Countries from Studies of Land Use
J. D. G. F. Howe, and B. S. Tennant, 1977, 38p Rept no. TRRL-SUPPLEMENTARY-754

Keywords: Developing countries, Rural areas, Travel, Forecasting, Roads, Surveys, *Land use, Interviews, Kenya, Vehicular traffic, Planning, Great Britain, *Road transportation, Vehicle ownership.

In many developing countries, the difficulty of standardizing trip measurements, the flexibility with which vehicles are used and the absence of a conventional sampling frame for interviewing road users are the main obstacles to forecasting travel from land use. A study in Kenya has shown the difficulties of using roadside interviews for establishing trip relationships, but has indicated that a suitable sampling frame could be constructed by a direct survey of vehicle owners. The vehicle owner in the broadest sense would then become the fundamental unit for trip studies. The Report suggests that home and workplace questionnaire surveys, focussing on the vehicle owner, may be suitable for the extensive sampling necessary to evolve standards for studies of rural trip characteristics. Definitions of employment suitable for land-use/transport studies in developing countries are suggested in the Report. These covered only 4 percent of the population of the study area, but nevertheless, statistically they provided the best explanation both for vehicle ownership and for trip generation. Trip origins from Agricultural and Residential land uses did not reach significant proportions. The main generators were Retail and Commercial, Road Transport, and Government Administration land uses, which together accounted for over 75 percent of urban trip origins and

57 percent of all trip origins. (Copyright (c) Crown Copyright 1977.)

Health and Safety Guide for Sawmills and Planing Mills

Jul 77, 132p* Rept no. NIOSH-78-102

Keywords: Safety engineering, *Sawmills, Milling machines, Guidelines, Machine tools, Planning, *Woodworking, Workplace layout, Requirements, Standards, Industrial hygiene, Safety devices, Ventilation, Hazardous materials, Personnel development, Accident prevention, Human factors engineering, Protective equipment, Fire safety, Occupational safety and health.

The guide assists in providing a safe and healthful workplace for sawmills and planing mills. It describes safe practices and helps correct some of the more frequently encountered violations of the safety and health standards. The main topics covered include: the hazards most commonly encountered in saw mills; health and safety guidelines and programs; tools and equipment; walking and working surfaces; standard guard rails; exits and exit markings; occupational health and environmental control; ventilation; noise exposure; hazardous materials, spray painting; personal protective equipment; respiratory protection; sanitation; medical and first-aid; fire protection; compressed air equipment; powered industrial trucks; hoisting equipment; machinery and machine guarding; electrical code.

Farmer-to-Consumer Marketing

Final rept.
H. R. Linstrom, Feb 78, 31p Rept no. ESCS-01

Keywords: Agricultural products, *Marketing, *Vegetables, *Fruits, Profits, Consumer affairs, Benefits, Quality, Legislation, Direct marketing, Farmer to consumer Direct Marketing Act 1976, Farmers markets.

Estimates indicate there were over 13,000 farmer-to-consumer direct-marketing outlets in the United States in 1976. Farmers view this as an alternative market outlet to increase their income. Consumers see it as a means of getting fresher, higher quality foods at less cost. Consumers also see social and cultural benefits from direct contacts with farmers, visits to farms, and a so-called return to nature. Passage of the Farmer-to-Consumer Direct Marketing Act of 1976 reflects national interest in direct marketing of farm products, and there is strong evidence of increased attention at the state level.

Rural Water and Sewer Systems Programs, Needs, Issues, Opportunities, and Goals: A Report on the Proceedings of the National Organizational Conference of the National Rural Water Association (1st) Held in Oklahoma City, Oklahoma on April 15-16, 1976
Aug 76, 47p EDA-78-065

Keywords: Sewers, *Sewage treatment, *Water supply, Meetings, Objectives, Rural areas, Population growth, Financing, Public health, Specialized training, Management, Design, Maintenance, State government, Legislation, Local government, National government.

The purpose of this report is to describe and define briefly the principal problems, issues, opportunities and goals which have a significant impact upon the stability and growth of rural water and sewer system throughout this country. The source for this material is the series of conference sessions held by representatives of eight State Rural Water Associations at the organizational meeting in Oklahoma City. The proceedings were heavily oriented toward water supply systems.

A- Assessment of Anaerobic Digestion in U.S. Agriculture
Final rept.
Ted Thornton. Mar 78, 45p* Rept no. ESCS-06

Keywords: Digestion(Decomposition), Anaerobic processes, *Methane, Agriculture, Anaerobic bacteria, *Agricultural wastes, Cattle, Fertilizers, Economic analysis, Feeding stuffs, Design, Fuels, Digesters, Sludge, Cost analysis, Feasibility, Production, Assessments, *Bioconversion, *Manures.

Anaerobic digestion is a biological process in which bacteria break down organic matter to produce methane, partially stabilized effluent, and other products. Although the process has been advocated as a source of fuel, feed, and fertilizer, its widespread adoption in American agriculture is doubtful. The cost and complexity of most digestive systems make them difficult to incorporate in agricultural operations. Although site specific applications may be feasible, these will not have a major impact on the agricultural sector. As a source of energy, there is little possibility of anaerobic digestion providing even a small percentage of national energy requirements.

Appropriate Technology for Natural Resources Development: An Overview, Annotated Bibliography, and a Guide to Sources of Information
Robert L. Bulfin, and Harry L. Weaver. 1977, 174p
Grant AID/ta-G-1111
Report on Arid/Semi-Arid Natural Resources Program.

Keywords: Technology, Economic development, Bibliographies, Developing countries, Organizations, History, Industries, Agriculture, Water supply, Irrigation, Indexes(Documentation), Data sources, *Natural resources, Appropriate technology, *Information sources, Intermediate technology.

The purpose of this paper is to acquaint the interested reader with the subject matter commonly referred to as Intermediate Technology (IT). The paper is an attempt to capture the essence of the subject by providing an overview, with the bibliography used to obtain additional details. For those who wish to pursue the subject beyond the citations presented in the bibliography, Appendix A, a guide to the sources of information (i.e. indices, journals, and practicing organizations) on Appropriate and/or Intermediate Technology, is included. A brief history of the development of IT is given, followed by its thematic framework. Examples of IT in developing countries are then presented to familiarize the reader with the breadth of applications. The question, Is Intermediate Appropriate, is also discussed.

An Assessment of Controlled Environmental Agriculture Technology
Final rept.

Lawrence H. de Bivort, Theodore B. Taylor, and Miguel Fontes. 17 Feb 78, 476p IRT-469-R, NSF/RA-780024
Contract NSF-C1026

Keywords: Farm crops, *Vegetables, *Agricultural economics, Assessments, Economic impact, Environmental impacts, Agronomy, Cost analysis, Water conservation, Shortages, Farms, Production, Food storage, Solar energy, Greenhouses, Operating costs, Soil conservation, Employment, Transportation, *Crops, Controlled environment agriculture.

Assessment of the economic, environmental, social, and other impacts of large scale use of technology for growing food inside enclosures. Controlled Environment Agriculture (CEA), was initiated to alleviate the agro-food problems of environmental degradation; shortages of arable land, water, and fertilizers; and unreliable production. Primary conclusions were: (1) Large scale use could alleviate these problems; (2) costs of present systems are too high for agronomic crops, but acceptable for some high value fresh vegetables; (3) new systems can be made at lower costs and less total energy consumption; (4) there is a need to link R&D to open field agriculture, solar energy systems, water management, and low-cost structures; and (5) CEA should be used with solar energy and water management systems for large communities. The study includes a conceptual analysis of future systems, cost evaluations, and a diffusion analysis of non-economic considerations.

A Study of the Feasibility of Utilizing Solid Wastes for Building Materials. Phase I Summary Report
B. L. Duft, H. Levine, and A. McLeod. Apr 78, 164p*
EPA/600/2-78/091
Contract: EPA-68-03-2056

Keywords: Construction materials, Solid waste disposal, Industrial wastes, Reclamation, Reinforced plastics, Management planning, Composite materials, Reinforcing materials, Fillers, Fly ash, Glass, *Agricultural wastes, Cellulose, Fibers, Phenolic resins, Bagasse, Cements, Starches, Lignin, Wood wastes, Sludge disposal, Laboratory tests, Performance evaluation, Furfurals, *Building materials, Manure, Rice hulls, Plastic recycling, Glass recycling, Sewage sludge, *Waste recycling.

This document reports on a study to research and develop building materials containing organic and inorganic wastes and waste-derived products. A comprehensive literature search was conducted to review and evaluate wastes with potential as matrices, reinforcements, or fillers in building composites. The most promising candidates were evaluated with limited laboratory studies. From these studies, two types of matrices, furfural-phenolic and inorganic, were selected for further study. Seven reinforcement candidates and five filler candidates were selected for evaluation with the two matrices.

Controlled Environment Agriculture: A Global Review of Greenhouse Food Production
Foreign agricultural economic rept. (Final)
Dana G. Dalrymple. Oct 73, 164p Rept no. FAER-89

Keywords: Horticulture, *Greenhouses, *Agricultural economics, Developing countries, Food, Production, Lettuce, Tomatoes, *Vegetables, Heating, Cooling, Carbon dioxide, Soils, Irrigation, Fertilizers, Capital, Polymeric film, Fixed investments, Manpower, Operating costs, Global.

Controlled environment crop production is most nearly approached, on a commercial scale, in greenhouses. Greenhouses have been used for food production for over a century, mainly in developed regions. The introduction of plastic film during the 1950's lowered construction costs and made it possible for less affluent nations to use greenhouses. Among the newer techniques of environmental control used commercially are artificial cooling, carbon dioxide enrichment, use of artificial soil, and automated irrigation with liquid fertilizers. Greenhouse labor and capital requirements per unit of land exceed those for outdoor food crop production. Much of the work must be done by hand; there are usually few economies of scale beyond family-sized operations. Capital investments for glasshouses in developed nations commonly exceed \$100,000 per acre. The most important crops produced worldwide are tomatoes, cucumbers, and lettuce. On a global basis, environmental control via greenhouses will be increasingly important in agriculture.

Water Problems in the Rural Environment; Alternative Solutions for Water Supply and Wastewater Disposal. Proceedings of a Conference Held at Lincoln, Nebraska on November 4-5, 1976
1978, 142p

Keywords: *Sewage disposal, *Water supply, Rural areas, Meetings, Monitoring, Water quality, Water law, Policies, Social effect, Financing, Water wells, Water distribution.

The purpose of this conference was to describe the current rural water situation. Rural water supply and wastewater disposal problems, including both quality and quantity, were considered. The socio-economic and technological aspects of alternative solutions to rural water problems and the various impacts involved in changing or improving the current situation were examined. Future research and related needs to solve various rural water problems were outlined. The conference focused on domestic and farmstead use of water and included considerations of supply systems ranging from that required for an individual home to that required for a small community.

Puerto Rico Univ., Mayaguez. Water Resources Research Inst.

APPROPRIATE TECHNOLOGY ABSTRACTS

Puerto Rico's Water Resources Problems and Research Needs. Proceedings of Conference and Planning Session (1st) Held at the University Library of the Mayaguez Campus on February 14, 1974

Roberto Vazquez. 14 Feb 74, 95p OWR-T-A-999-PR(2)

Prepared in cooperation with Puerto Rico Dept. of Natural Resources, San Juan.

Keywords: *Water resources, *Puerto Rico, Meetings, Agriculture, Water supply, Industrial water, Sugar crops, Water conservation, Research projects, Water pollution, Water storage, Flood control, Economic development, Virgin Islands, Water demand, Research needs.

The proceedings of a conference and planning session to identify Puerto Rico's water resources problems and research needs are presented. Panel discussions were conducted on water for agriculture, water for development, water for industry, and on water and environmental quality R and D efforts. The agricultural discussion centered on water resource needs for sugar production and on Federal soil and water conservation programs. Economics, flood control, domestic water use problems and research needs, and Corps of Engineers water resources programs were discussed with regard to development. The panel on water and environmental quality discussed water quality problems and research needs, EPA water resources programs, USGS water resources research, and water resources in the Virgin Islands. Elimination of Pollutants by Utilization of Egg Breaking Plant Shell-Waste

Final rept.

J. M. Vandepopuliere, H. V. Walton, W. Jaynes, and O. J. Cottenill. Mar 78, 47p EPA/600/2-78/044 Grant EPA-S-803614

Keywords: Solid waste disposal, Water pollution control, Industrial wastes, Feeding stuffs, Eggs, Dehydrators, Design criteria, Milling, Cost analysis, Operating costs, Chemical oxygen demand, Chemical composition, Performance evaluation, Microorganisms, Moisture content, *Waste disposal, *Water pollution, Land disposal, *Egg breaking plants, Egg industry, Biochemical oxygen demand.

Egg breaking plants yield an estimated 50,000 tons of waste annually. These wastes are commonly disposed of on land. This method of disposal is becoming more difficult due to the potential for pollution of local water resources. A triple pass rotary drum dehydrator was installed at an egg breaking plant. With appropriate engineering modifications a system for producing egg shell meal from the total egg shell waste from the breaking plant was developed. This meal was utilized as a feedstuff by a local mill and incorporated into a layer diet. This diet was fed to several commercial flocks of cage layers. Appropriate data were collected to determine meal production costs, yield of meal, feed produced, feeding data, and layer flock performance. COD and BOD data were generated to determine the pollution potential of the waste were it not converted to a useful by-product.

International Consultation on Ipil-Ipil Research

Jan 78, 164p

Sponsored in part by Agency for International Development, Washington, D.C.

Keywords: Trees(Plants), *Arid land, Developing countries, Meetings, Tropical regions, Plant genetics, Forage crops, Production, Cultivation, Soil properties, Feeding stuffs, Utilization, Wood, Reforestation, Charcoal, *Ipil ipil, *Plants (Botany), Leucaena leucocephala.

Discoveries on the multi-uses of ipil-ipil (*Leucaena spp.*) generated worldwide interest in the production of this versatile plant. Originating from Mexico, this species was introduced to various tropical countries especially in Southeast Asia. Undoubtedly, research on ipil-ipil production and its utilization could vary from one country to another and this could influence the formulation and priority listing of research problems areas.

Participants from the United States, Mexico, Australia and Taiwan merged their expertise, experiences and ideas with Filipino scientists in an effort to: (1) put together all available information of ipil-ipil; (2) identify international potentials of the plant for forage, wood and reforestation purposes; and (3) formulate priority research areas and action to fully realize the potentials of the plant. The main objective of the publication of the proceedings of this important conference is to provide a reference for scientists and development workers in countries where ipil-ipil is or could be grown.

Development and Spread of High-Yielding Varieties of Wheat and Rice in the Less Developed Nations. Edition 5

Final rept. 1965-75

Dana G. Dalrymple. Aug 76, 133p Rept no. FAER-95 Prepared in cooperation with Agency for International Development, Washington, D.C.

Keywords: *Wheat, *Rice, Agricultural economics, Developing countries, Statistical data, International trade, Cultivation, Asia, Egypt, Iraq, India, Latin America, Philippines.

The use of high-yielding varieties (HYV's) of wheat and rice has expanded sharply in the developing nations in recent years. This report reviews the development of these varieties and documents their yearly spread in statistical terms. Major emphasis is placed on semi-dwarf (1) wheat varieties developed at the International Maize and Wheat Improvement Center in Mexico, and (2) rice varieties developed in the Philippines at the International Rice Research Institute. Semi-dwarf varieties developed in national breeding programs are also included. Data cover the 10-year period from the 1965/66 crop year, when these varieties first came into wide use, through 1974/75.

Survey of Multiple Cropping in Less Developed Nations

Interim rept.

Dana G. Dalrymple. Oct 71, 120p Rept nos. FEDR-12, AGERSF-25

Prepared in cooperation with Agency for International Development, Washington, D.C.

Keywords: *Agricultural economics, Agriculture, Developing countries, History, Cultivation, Yield, Climate, Soils, Fertilizers, Pesticides, Irrigation, Water supply, Rotation, Social effect, Economic development, *Crops, Multiple cropping.

Multiple cropping is the practice of growing more than one harvested crop in sequence on the same piece of land in the course of one year. While an ancient technique, multiple cropping is of current importance because of the promise it holds for alleviating important problems in the less developed nations. Technological advances in developing short-season varieties have (1) broadened the area where multiple cropping is possible, and (2) increased the potential number of crops which may be grown in current multiple cropping areas. But to take advantage of multiple cropping, ade-

quate water control must be available, along with farm chemicals in improved farm management. The report surveys the development in current status of multiple cropping in less developed nations.

Intermediate Public Transport in Developing Countries

Laboratory rept.

P. R. Fouracre. 1977, 23p Rept no. TRRL-LR-772

Also Pub. as ISSN 0305-1293.

Keywords: Urban transportation, Developing countries, Urban development, Statistical data, Municipalities, Vehicles, Services, Great Britain, *Transportation, Minibuses, Taxicabs, Rickshaws.

The Report presents a survey of intermediate forms of urban public transport used throughout the developing world. The controversy surrounding intermediate public transport is discussed and the more important issues and problems are identified. Brief descriptions of some examples are also presented which illustrate how these transportation systems are organized and operated. The purpose of the Report is to elucidate the significant role that intermediate public transport performs in the urban sector of developing countries. This provides the background to further research work being conducted by the Overseas Unit of the Transport and Road Research Laboratory into the efficiency of these various forms of transport. Sewage Sludge Entrenchment System for Use by Small Municipalities

Interim rept. for Jun 74-Jun 75

J. M. Walker, L. Ely, P. Hundemann, N. Frankos, and A. Kaminski. Feb 78, 83p* EPA/600/2-78/018

Keywords: Land reclamation, Sludge disposal, Municipalities, Ditches, Soil properties, Drainage, Earth handling equipment, Cost estimates, Manpower, Calcium oxides, Odors, Surface water runoff, Monitoring, Viruses, Metals, Nitrogen, Feasibility, *Sewage disposal, Trenching.

A method of disposing of dewatered sewage sludge by entrenching it into soil was developed for small communities. Readily available and relatively inexpensive equipment was used. Included were a tractor equipped with a loader and backhoe, and dump truck or concrete mixer truck. A tractor operator and a truck driver were required. Trenches, dug with the backhoe, were 60 cm wide, 60 cm deep, and 60 cm apart. The time required to entrench 12 tons of dewatered sludge was one hour. The estimated cost of sludge incorporation was less than \$15.00 per ton of dewatered sludge. Cost items included equipment, personnel, hauling (64 km round trip), land, drainage monitoring, and cultivation. Reuse of a previously trenched site indicated that about 2 years is the minimum satisfactory time lapse between the first and second entrenchment. Trenching of limed sludge cake can be done without odor or surface water runoff problems. Trenching is most appropriate on low quality land where surface application is not feasible.

Survey of the Emerging Solar Energy Industry - 1977 Edition
Justin A. Bereny. ©1977, 417p* Rept no. SEIS-77/01
Library of Congress Catalog Card no. 77-71664.

Keywords: *Solar energy, Surveys, Directories, Solar air conditioning, Solar space heating, Solar water heating, Swimming pools, Solar collectors, Concentrating collectors, Flat plate collectors, Wind power, Evacuated tube collectors, Agriculture, Solar thermal power plants, Electric power generation, Photovoltaic conversion, Orbital solar power plants, Ocean thermal energy conversion, Biomass, Marketing, Economics, Legislation, Public utilities, Reviewing, *Wind energy, *Bioconversion, National Energy Plan, Biological energy conversion.

The Survey of the Emerging Solar Energy Industry offers the first comprehensive overview of an exciting new industry that will revolutionize the way we live. It reviews the six major subdivisions of solar technology in considerable depth, i.e., heating and cooling; solar thermal electric; photovoltaics; wind energy; ocean thermal; and bioconversion. It traces the catalytic role of the federal government in spurring the development of solar technology and includes a comprehensive analysis of all state government solar-oriented legislation. The impact of solar technology on the utility industry is examined; all major solar projects of the electric utilities are listed and some of the major demonstration projects are discussed in detail. The research activities of universities, nonprofit organizations and government laboratories are identified by technical area. All leading companies (both publicly and privately owned—including a number of the "Fortune 500") which are now active in the field are listed in the two Directories that have been incorporated as part of the Survey. Consensus market forecasts are presented and commented upon. The long range financial implications of break-throughs in certain technologies are pointed out. Improving the Quality of Work Life: Strategies for Change
Final rept. Jan 74-Jun 75
Michael Beer, and James W. Driscoll. Jun 75, 121p
ASPER/CON-74/0081/A
Contract DL-74-81
Prepared in cooperation with Massachusetts Inst. of Tech., Cambridge.

Keywords: Quality of life, Job satisfaction, Attitudes, Government policies, Regulations, Social organization, Social welfare, Values, Leadership, Participative management, Emotions, Frustration, Adjustment(Psychology), Innovations, *Employee participation, *Management techniques.

This monograph presents an array of strategies for changing the quality of work life ranging from internal strategies available to individuals and groups inside the organization to means for organizing political and interest groups outside the organization. Also presented are a variety of strategies available to the government. The three stages of the psychological process and their applicability to organizational change are described, as well as the importance of encouraging lower level worker participation in successful change. The boundaries of the change target must be defined (e.g., individuals vs. structure; a combination of power

vs. collaboration; market vs. collective or revolutionary; research and development vs. facilitation; centrally planned vs. decentralized; rapid vs. slow; solving problems vs. changing individual dispositions and organizational culture; and growth vs. decrement). The role of the government is seen to be a middle ground between pressure strategies and court actions, on one hand, and facilitation strategies on the other. The strategies employed by agents of change are seen to vary, depending on the point of view, the situation, and the place in society that the change occupies.

Research on the Application of Solar Energy to the Food Drying Industry
Interim rept.
Rim A. Kaminskas. Oct 74, 94p NSF/RA/N-74/398
Grant NSF-GI-142944
Prepared by California Polytechnic State Univ., San Luis Obispo.

Keywords: *Food processing, Solar dryers, *Solar drying, Food, Dehydration, Computerized simulation, Solar collectors, Farm crops, Fruits, Vegetables, Dehydrators, Cost estimates.

The tasks performed include: analyzing the produce drying requirements from a technical as well as an economic point of view; synthesizing systems which use solar energy as the source of heat which lead to minimum total system costs (solar plus conventional energy) without sacrifice of product quality; and preparing preliminary designs of solar dehydration systems for construction and tests. Various solar dehydration systems were reviewed and analyzed. Results indicate that a system using solar collectors for preheating the air entering the dehydrator is the most economical and practical way to use solar energy, and that limited use of solar energy for food dehydration may be economically feasible now. Included in the report are: (1) a summary of economical and technical aspects of solar food dehydration; (2) a description of food dehydration technology and an historical account of prior efforts at solar food dehydration; (3) computer simulations of various solar dehydration systems; (4) a description of the basis for selection of an experimental system to be built at California Polytechnic State University; (5) Solar system cost estimates; and (6) technical aspects of solar collector design for food dehydration.

Rural Development Programs Among Marginal Farmers in the Western Highlands of Guatemala
Jeremiah O'Sullivan-Ryan. May 78, 147p
Contract AID/1a-c-1118
Sponsored in part by Academy for Educational Development, Washington, D.C.

Keywords: Farm management, Rural sociology, *Guatemala, Farms, Disadvantaged groups, Quality of life, Farm processing, Development, Surveys, Information, Planning, Technical assistance, Developing countries, Low income groups, Training programs, *Agricultural extension services, Adult farmer education.

The general purpose of the study was to examine the role of information and extension services in promoting change in the lives of subsistence peasants in the Highlands of Guatemala. The study was also intended to contribute to an understanding of the social and economic reality within which the Mayan Indian carries on his system of subsistence agriculture. This study concludes that a program of information and credit cannot and will not change significantly the lives of subsistence farmers in the Highlands. Agriculture extension services presently reach a group of relatively well-off farmers and even if these services were extended, the use that the small subsistence farmers can make of them is structurally limited; the changes the program may achieve through the introduction of new technological practices will not produce significant improvements in the lives of the subsistence poor.

Determination of Optimal Well Capacities for Continuous Irrigation Programs
A. K. Sanghi, D. Johnson, and G. Kuepper. Jan 78, 55p NSF/RA-780017
Grant NSF-AER7717031

Keywords: Corn plants, *Irrigation, Water consumption, *Agricultural economics, Mathematical models, Soil water, Ground water, Evapotranspiration, Yield, Revenue, Production, *Water management, *Water wells, Water requirements, Great Plains Region(United States).

This report applies a model of crop response to irrigation to corn production in the Great Plains under center pivot irrigation. Net revenue is calculated for various well output levels chosen in accordance with the crop's water requirement during various critical growth periods. The effect of a water deficit on crop yield is calculated in terms of the water holding capacity of the soil, the amount and timing of water applications, and pan evaporation rate.

APPROPRIATE TECHNOLOGY ABSTRACTS

Water Movement through Soils and Plants as Related to Physical and Meteorological Conditions

Completion rept.
Maurice L. Horton. Mar 78, 80p OWRT-A-035-SDAK(2)
Contract DI-14-31-0001-3542

Keywords: Farm crops, Stress(Physiology), *Water supply, *Irrigation, Evapotranspiration, Temperature, Oat plants, Grain sorghum plants, Soil water, Moisture content, Plant tissues, Water loss, Equations, Photosynthesis, Field tests, Soil water plant relationships, Plant canopies.

One important problem for irrigated agriculture is deciding when to irrigate and how much water to apply. Water management decisions in irrigation are made according to the calendar, soil conditions, plant conditions, environmental conditions, or the reading obtained using an instrument as, for example, the tensiometer. Since the temperature of bodies, such as plants, is responsive to the supply of water for evaporation and to environmental conditions, temperature may become a useful tool for determining the onset of water deficits and the need for irrigation. The study investigated the movement of water within the root zone, the use of surface temperature in equations for estimating evapotranspiration, and the nature of plant response to water deficits. The field study employed soil, plant and meteorological measurements. Oat plants showed a progressive decline in relative leaf water content with an increase in water stress imposed by sheltering the plants from natural rainfall.

Rural Potable Water Chlorination
William E. Hanford, Jr. and Alfred Long. 1970, 41p
Rept no. WWRI/B-78/1
Sponsored in part by Agency for International Development, Washington, D.C. Office of Science and Technology.

Keywords: Rural areas, *Water treatment, Developing countries, Chlorination, Purification, Maintenance, Gravity drainage, Chlorinators, Performance, Specifications, *Water quality, Appropriate technology.

The paper addresses two questions: (1) What is the most desirable form of sanitizing chemical for use in rural water supplies; and (2) What is the best overall means of getting this sanitizing agent into rural water supplies. Several chemicals and hypochlorinators are described and evaluated. In conclusion, a low-cost, dependable feeding device suitable for use in disinfecting marginal waters in the rural areas of developing countries is presented. The operation and maintenance of this device is easy for the unskilled labor in these areas; no sophisticated power source is needed to provide continuous, automatic operation; the device uses a readily available, commercial chlorine chemical that can be economically shipped, stored, and used at these points of need. An appendix is also included giving technical specifications and performance data.

Management Audit for Small Manufacturers
John B. Kline. 1977, 49p* Rept no. SMALL BUSINESS MANAGEMENT SER-29

Keywords: Manufacturers, Businesses, Management, Auditing, Guidelines, Production, Operations, Accounting, Budgeting, Regulations, Taxes, Insurance, Financial management, Purchasing, Marketing, Inventory control, Prices, Personnel management, *Management techniques, *Small businesses, Management audit.

The activities of management require frequent evaluations designed to reveal the operating and financial condition of a business. The best known and most formal of these are prepared by a qualified accountant. These audits are prepared according to a format which is well-known and acceptable to those concerned with financial condition of businesses. Such statements, however, are not adequate to provide what management needs to develop efficient methods of control and direction for the operational activities of a business. To facilitate operational control, it's desirable to provide ways in which management can (1) identify activities that should be observed, (2) establish standards of measurement, and (3) provide suggestions for making improvements. The management audit is an outline for self-appraisal in which the owner-manager answers a series of questions about typical business operations. The material in this booklet was designed for a small manufacturer; each area is applicable to manufacturing activity. Overall, however, the technique could be applied to almost any enterprise in which functional operations are a critical factor in efficiently producing goods or services. The following areas are covered: production and operations, plant and equipment, accounting, budgeting and expense control, cash management, management and organization, laws, regulations, and taxes, risk and insurance, credit management, systems and procedures, outside consultants and resources, inventory control and management, purchasing, marketing and sales promotion, work and time standards, pricing, and research and development.

The Starting and Managing Series. Volume 4. Starting and Managing a Small Bookkeeping Service
Charles H. Sevin. 1962, 71p

Keywords: Accounting, Businesses, *Management training, Services, Operations, Planning, Organizing, Guidelines, *Small businesses, Bookkeeping services.

This series is designed to meet a need of prospective small businessmen as well as new and experienced ones for basic information on particular types of business. In the current volume, both newcomer and veteran should find something of value. The pages which follow confront the newcomer with prestarting problems, many of which he may not have realized existed. But more significant even than the physical activities he must take is the important aspect of inward looking.

APPROPRIATE TECHNOLOGY ABSTRACTS

He must scrutinize his own capacities and ask searching questions about himself and about his fitness for leadership. It is important for him to find out—before he strikes out on his own—whether his personality, physical energy, ability to work with business leaders, and faculty for planning would make him at least potentially successful at managing a business of his own. **Starting and Managing a Small Bookkeeping Service** is designed to spell out the facts about this particular type of endeavor so the reader himself can decide if he is suited to it and if it is to him. Both the advantages and disadvantages are discussed. This booklet should have a special appeal to prospective owner-managers of a small bookkeeping service. They will find in it a guide to operating conditions in that field—one that spells out for them both common problems and pitfalls as well as potential rewards. Those already in the enterprise should also profit from reading it. First, because some of the topics discussed may remind them of the need to follow certain management practices. Second, because some portions of this book discuss the broad area of administration and long-range planning. While important to the newcomer, this is of greatest immediate significance to the person already in the business.

Small Business Management Series No. 4. Third Edition. Improving Material Handling in Small Businesses
1969, 44p

Keywords: Businesses, *Materials handling, Management, Equipment, Storage, Cost engineering, Packaging, Industrial engineering, Plant layout, Workplace layout, Efficiency, Organizing, *Management techniques, *Small businesses.

The booklet discusses the basics of the handling function, and describes the array of equipment available and its capabilities. It tells how to lay out a plant's workplaces and to organize its labor to develop an efficient handling system; it describes some techniques for assuring that the investment in the equipment yields a profit. The following topics are discussed: What is material handling; Selecting material handling equipment; Organizing for material handling; Analyzing material handling problems.

Small Business Management Series No. 3. Third Edition. Human Relations in Small Business
Martin M. Bruce. 1969, 42p

Keywords: Businesses, Personnel management, Industrial relations, Personnel development, Motivation, Morale, Appraisals, Selection, Incentives, *Management Techniques, *Small businesses.

The subject of human relations is as old as history. In the business world, human relations involves finding and selecting a working staff, developing workers, and guiding and motivating them in the direction of gaining management's goals. Well-planned action is much more valuable than a problem-solving approach. Worker-manager relations become more important than ever. It is the supervisor's job to set the climate for the work group. Any man who manages a plant gets the work done through people. The key to accomplishing this lies at least in part in the broad and complex field called human relations, which is the subject of this booklet. The topics discussed are the following: Human relations in small business—why and how; Worker morale; Starting right—personnel selection; Orientation and induction; Training; Continuing personnel relations.

Small Business Management Series Number 31. Third Edition. Management Audit for Small Retailers
John W. Wingate, and Elmer O. Schaller. 1977, 67p*

Keywords: Businesses, Management, Auditing, Guidelines, Public relations, Personnel management, Supervision, Inventory control, Budgeting, Questionnaires, Planning, Purchasing, Prices, Publicity, Financial management, Insurance, Records management, Taxes, *Management techniques, *Small businesses, Management audits, Small stores, Retail stores.

The booklet is designed to meet the needs of the small owner-manager. The approach used is a do-it-yourself technique. The manager does the examining; the answers are private; and none of the intimate facts about the business will be revealed to an outsider. However, it is advisable to compare this self-appraisal with the views of others in whom the manager has confidence. In the present audit, there are 170 questions. The manager's answers to them will give a good indication of how well he or she is doing the planning, organizing, directing, coordinating, and controlling that the business needs. Moreover, the questions the manager cannot answer affirmatively should direct attention to areas which previously have not been given much thought. And, in most instances, from this attention will come the stimulation needed to develop good management practices for these areas. The questions have been divided into 18 sections to cover the essential parts of retail management. These sections are the following: Introduction to the management audit, a look at yourself and your ability to grow, customer relations, personnel management and supervision, merchandise inventory control, budgetary control and productivity, buying, pricing, advertising and promotion, display, equipment and layout, cash and finance, credit, insurance, accounting records, taxes and legal obligations, planning for growth, and publications dealing with managing a retail business.

Small Business Management Series Number 36. Training Salesmen to Serve Industrial Markets
Kenneth Lawyer. 1975, 91p

Keywords: *Marketing, Personnel development, Businesses, Sales, Manufacturers, Coordination, Management, Specialized training, *Management training, *Training, *Small businesses.

The booklet discusses the role of sales in the overall marketing program of a small manufacturer. It offers

suggestions that salesmen can use in servicing industrial customers and provides the owner-manager with specific material to use in a training program. This booklet is issued as part of the management publications program of SBA's Office of Management Information and Training. It discusses the following topics: The successful small firm is customer oriented; Coordinated marketing, for profit; The salesman's job; Training your salesmen; Buying is decision-making—Selling is sound guidance; Selling as a service.

PB-282 733/5 PC A02/MF A01
Small Business Administration, Washington, DC.
Small Business Management Series Number 1. Third Edition. An Employee Suggestion System for Small Companies
Donald Wilhelm, Jr, and C. W. Ufford. 1964, 23p

Keywords: Businesses, Management, Employees, Recommendations, Improvement, Management planning, Opinions, *Management techniques, *Small businesses, Employee suggestion systems.

Suggestion systems are for everyone. Small companies and large, employers and employees, even customers—all benefit. For the small-business manager, a suggestion system can cut costs, increase efficiency, and build better employer-employee relations. For employees, it can bring a chance to earn extra money and, perhaps more important, the realization that they are members of the team—that the company is interested in the total contribution they can make and not just in their capacity as producing machines. For customers, suggestion systems mean better products or services. 'An employee suggestion system for small companies' explain the basic principles for starting and operating a successful suggestion system. It warns of various pitfalls to be avoided and gives examples of suggestions submitted by workers through company suggestion systems. The following areas are discussed: Theory of the suggestion plan; Essentials of a good suggestion system (Appoint an administrator, Appoint a suggestion committee, Employ task teams; Provide suggestion boxes and bulletin boards; Provide suggestion blanks or forms; Provide suitable initial awards; Make sure of followup; Provide additional awards); Additional pointers (Files; Complaints; Duplicate suggestions; Unclaimed awards; Delayed adoption of ideas; Eligibility; Ideas from outside sources; Employee buildup of ideas; Patents; Thought provokers; Advice and publications); Installing and operating the system; Simplifications for the very small company; Problems in 'selling' the suggestion plan; What to expect—Periodic reselling of the plan.

PB-282 739/2 PC A03/MF A01
Small Business Administration, Washington, DC.
Small Business Management Series No. 32. Financial Recordkeeping for Small Stores
Robert C. Ragan. 1976, 42p

Keywords: Businesses, Financial management, Records management, Taxes, *Management techniques, *Small businesses, Small stores.

The author has designed this basic recordkeeping system primarily for the small store owner-manager or prospective owner whose business does not justify hiring a trained, full-time bookkeeper. This system will accomplish three purposes: (1) Maintain a record of all transactions of the business; (2) protect the assets of the business from errors, fraud, and just plain carelessness; and (3) provide a basis for business planning by showing the results of past decisions and furnishing the facts needed for future decisions. But this system will not accomplish these purposes automatically. To be fully useful, a bookkeeping system must be adapted to the needs of the individual business. And then, it can only be as useful as it is up to date and accurate. The information it records must be applied, not just in the preparation of tax returns, but in the day-to-day operation of the business. The following topics are discussed: The why, what, and how of records (Records—for the government or for yourself; Building materials for your recordkeeping system; Methods and equipment); The money comes in—and goes out (The change and petty cash fund. The daily summary of sales and cash receipts, Writing the checks); Lining up the records (The sales and cash receipts journal, The cash disbursements, purchases, and expense journal); Getting set for monthly financial statements (Reconciling your bank statement, Recording accounts payable, Merchandise inventories); The score—win or lose, and

APPROPRIATE TECHNOLOGY ABSTRACTS

how much (The profit-and-loss statement, Departmental operating records); The shape you're in (The general ledger and the balance sheet, Steps to be taken at the end of the year); The absentee asset-accounts receivable (Recording accounts receivable, Aging your accounts receivable, Accounting for bad debts); Some special cash receipts situations (Return sales and refunds, Making purchases from cash receipts, Cashing customers' checks, Redeeming coupons); Depreciation and disposal of plant assets (Computing depreciation of property and equipment, Recording the purchase and depreciation of plant assets, Recording the sale, trade-in, or junking of plant assets); Here they come--taxes (Collecting and recording sales taxes, Payroll records and payroll taxes, Income and self-employment taxes).

Systems Tools for Project Planning
Peter Delp, Arne Thesen, Juzar Motwalla, and Neelakantan Seshardi. 1977, 286p Rept no. ISBN-0-89249-021-7
Sponsored in part by Midwest Universities Consortium for International Activities, Inc.

Keywords: Project planning, Systems analysis, Systems management, Project control, Flow charting, Critical path method, Management methods, Matrix games, Planning, Evaluation, Gaming models, Computerized simulation, Histograms, Forecasting, Benefit cost analysis, Cost effectiveness, Developing countries, *Management techniques, Planning programming budgeting.

Designing development projects requires some form of systems approach. If any plan is to succeed, the factors that will probably determine the outcome must be identified, and their relationships must be established. There will always be surprises as implementation proceeds, for our ability to predict and control the future is limited. The object of planning and design is to keep those surprises at a minimum. A systems approach, properly used, can serve this aim. The examples draw on a broad range of problems and situations confronting project planners in the development fields, ranging from education and health to agriculture and economic policy. Most of the examples refer to a developing country which (for convenience) has a widely varying climate and diverse ecological zones. The population is mostly agrarian. The tools included in this volume fall into a number of categories--generating ideas; assessing qualitative factors; defining objectives; describing complex relationships; analyzing complex processes; accounting for alternative outcomes; forecast and prediction; analyzing projects; and planning, controlling, and evaluating projects. Clearly, many techniques could be included in more than one category. For example, computer simulation models could be used for the last six purposes listed. It is presented in analyzing complex processes because that is the most basic use of computer simulation. Each tool is designed to stand alone as a source of information for a decision maker, as an aid to the analyst, and as a catalyst for multidisciplinary design teams. The tool description provides a basis for action and/or the evaluation of actions by others.

Approaches to the Design of Agricultural Development Projects. A Program of Advanced Studies in Institution Building and Technical Assistance Methodology Design Study
Walter Schaefer-Kehnert. Jan 77, 18p Rept no. ISBN 0-89249-023-3

Keywords: Developing countries, *Agricultural economics, Project planning, Research projects, Economic factors, Objectives, Translations, West Germany, Methodology, *Management planning.

The author identifies three possible approaches to the design of agricultural development projects--three different ways of specialization, by sector, by function, and by area. As a necessary step in responding, the author presents a set of six factors which appears to have important effects upon the chances for a project's success. The result is a cogent set of statements to guide those who would design projects, and do so with the opportunity to choose from among alternative arrangements.

Designing and Managing Basic Agricultural Programs
Earl M. Kulp. 1977, 289p Rept no. ISBN-0-89249-018-7

Sponsored in part by Midwest Universities Consortium for International Activities, Inc., and Agency for International Development, Washington, DC.

Keywords: Management, *Agricultural economics, Developing countries, Mathematical models, Systems analysis, Yield, Objectives, Marketing, Supply (Economics), Linear programming, Manpower, Decision making, Income, Optimization, improvement, Financing, Project planning, *Management planning.

Distilling the experience of those countries which have successfully modernized basic agriculture, this volume presents a new delivery system strategy and the techniques for managing it. The system of concern is the whole complex of basic analytical concepts, policy, strategy, tactics, institutions, and procedures for providing all the necessary services that will induce and enable peasants to modernize, or to change from peasant to farmer. This volume presents essential management tools, the concepts underlying these tools, and a series of quantitative techniques and fairly rigorous decision tools.

Science Development: The Building of Science in Less Developed Countries
Michael J. Moravcsik. 1976, 287p Rept no. ISBN 0-89249-008
Sponsored in part by Midwest Universities Consortium for International Activities, Inc., and Agency for International Development, Washington, DC.

Keywords: Developing countries, Technology, Education, Manpower, Research, Policies, Planning, Government, Scientists, Development, *Science policy, *Research and development, State of the art.

The book is concerned with the deliberate and systematic development of scientific capability in developing countries. The book is a 'summary of the state of the art in science development,' a collection, distillation, and generalization of an accumulated body of experience. It appears to be the first book on the subject, though the literature on science development has become quite extensive. A valuable feature of this book is the list of 500 publications on various aspects

of science development, many of them summarized in the text. Moravcsik argues that science must be developed in developing countries if the desirable goals of a higher standard of living, an independent economy, political and military power, and liberation from a subsistence existence are to be achieved. Domestic science education is, in his opinion, the best way to produce the needed scientists, with strong emphasis on quality as well as quantity. Special attention must be given to retaining competent scientific manpower. He asserts that scientific communication is perhaps the most important tool of science, and that the international scientific communication system is strongly biased against developing countries. There are internal problems of communication as well: while many developing countries have the correct ratio of basic to applied research, connections between the two are not developed. Hence the effectiveness of each, particularly of applied research, is greatly lessened. He maintains that improvement of quality in applied research and the establishment of links between basic and applied should be the primary targets of attention. The best method of allocating funds, he says, is a mixture of individual grants based on merit and institutional grants distributed equally. In developing countries much applied research is poorly done. However, some applied research is well done but has no effect: the linkages between the research and production sectors are so poor that research results never reach the places where they are needed. What are the institutional requisites of science. How can the linkages be established which will enable scientists to participate effectively in their country's development. Presented are a great deal of information on science development, a set of recommendations, and an enthusiastic call for involvement.

Handbook of Water Conservation Devices
Stephen L. Feldman. Nov 77, 84p NSF/RA-770526
Grant NSF-APR76-19369

Keywords: Plumbing, Water conservation, *Water supply, Handbooks, *Pipes (Tubes), Water meters, *Water management, Control systems, Washing machines, Kitchen equipment and supplies, Irrigation, Water consumption, Aerators, Performance evaluation, Circulation, Water saving devices, Toilets, Consumer products.

Current water supply problems and projected near future shortages in the United States have created interest in methods of reducing domestic water demand. These techniques include education of consumers to alter their water using behavior, metering, pricing, and or installation of water saving devices, which is the subject of this handbook. The devices included are (1) water saving toilets and accessories, waterless toilets, bidets, and urinals; (2) flow limiting devices for faucets and showers; (3) alternative plumbing systems; (4) domestic recycling systems; (5) piping insulation; (6) dishwashers and clotheswashers; and (7) lawn and garden irrigation control systems. A description of each type of device is followed by a list of manufactur-

APPROPRIATE TECHNOLOGY ABSTRACTS

ers of that device, and any special details that may pertain to their particular versions. The handbook is intended to guide consumers in product identification and selection.

Improvement in Quality of Work Life and Productivity: A Joint Venture Between Management and Employees
 Final rept.
 Edward M. Glaser, Carrol E. Izard, and Mary Faeth
 Chenery, 2 Jul 76, 169p DLMA-92-06-72-27
 Grant DL-92-06-72-27

Keywords: *Productivity, Quality of life. Attitudes, Job analysis, Job satisfaction, Program effectiveness, Industrial management, Leadership, Manpower utilization, Motivation, Incentives, Performance, Personnel management, Placement, Skilled workers, Unskilled workers, Supervisors, *Management techniques, *Labor relations, Quality of worklife.

The study was designed to assess the relationship between Quality of Worklife (QWL), productivity, and job satisfaction. The report describes developmental events, prevailing conditions, consulting interventions, and outcomes. An analysis is presented of what seems to have worked and what has not. At the time of the project, the corporate organization was beset by financial problems and those related to adjustment to new ownership; the branch plant was overwhelmed by start-up technical difficulties. Nevertheless, positive outcomes can be reported in terms of satisfactorily meeting production goals, ego-involvement of the workforce, comparatively low absenteeism rate, and the plant's survival of the eroding frustrations of start-up delays. Learnings and recommendations have been drawn from the experience in order to provide indications for future efforts to achieve enriched OWL and organizational effectiveness.

Investigative Research and Management of Effluent from Secondary Waste Water Treatment Utilizing a Marine-Aquaculture System for the Removal of Inorganic Nutrients
 Final rept. 15 May 74-30 Apr 75
 John H. Ryther. 1975, 60p NSF/RA/E-75-264
 Grant NSF-GI-43884

Keywords: *Aquaculture, *Waste water reuse, *Sewage treatment, Pilot plants, Oysters, Lobsters, Flatfishes, Algae, Nitrogen, Shrimps, Removal, Growth, Performance evaluation, Tertiary treatment.

A combined waste recycling-marine aquaculture system capable of complete nitrogen removal from treated domestic wastewater has been developed and tested on a pilot-plant scale over a one-year period. Effluent from secondary sewage treatment, mixed with seawater, is used to grow unicellular marine algae in large, continuous-flow, outdoor mass cultures. Harvest from the algae cultures is fed to oysters and other filter-feeding bivalve molluscs and to secondary crops of flounder or lobsters. Dissolved wastes produced by the animals are assimilated by cultures of commercial valuable seaweeds. Successful cultures of unicellular algae, mostly diatoms, and seaweeds have sustained over long periods of time. Bivalve mollusc culture was unsuccessful during the first year of operation. An alternative nitrogen-removal system consisting only of seaweeds fed a continuous flow of secondary sewage effluent mixed with seawater has also been evaluated.

Bioconversion of Saline Water. Phase I Report
 31 Mar 78, 58p P-7705-25, NSF/RA-780066

Keywords: Desalting, *Algae, Feasibility, Economics, Sodium, Cultures(Biology), Chlorides, Salinity, pH, Concentration(Composition), Sludge, Temperature, Energy conservation, *Desalination, *Bioconversion, Sewage sludge, Procedures, Phenol/dinitro, Toxic substances.

Experiments were conducted on the use of algae for removal of salt from water in an attempt to develop an economically feasible, low energy method for the conversion of saline water. Primary project objectives are:

(1) to undertake a literature search; (2) to select and obtain algal cultures; (3) to culture algae in sufficiently large volumes for test purposes; (4) to determine suitable methods for evaluation of media and cellular sodium concentrations; and (5) to test various environmental factors for their effect on algal sodium uptake and excretion. The literature search was completed, stock algal cultures were obtained and grown in relatively large culture volumes. Techniques for monitoring cell sodium levels were evaluated for the most efficient means of removing external sodium and for digestion of the cells prior to sodium analysis. Environmental changes indicated in the literature search and which could be easily manipulated were made in attempts to induce uptake/release of sodium from algal cells. Factors selected for experimental manipulation were: pH, salinity, temperature, light vs. dark conditions, addition and depletion of energy sources, addition of toxic compound, and addition of sewage sludge. No significant uptake or excretion of sodium or chloride were obtained in the algal species studied when the selected environmental manipulations were made, with the exception of a possible uptake of sodium when the algal culture was studied in the presence of activated sewage sludge.

An Annotated Bibliography of 'Macrophomina phaseolina' 1905-1975
 Ankar D. Dhingra, and James B. Sinclair. Jul 77, 251p
 Prepared in cooperation with Universidade Federal de Viscosa, Minas Gerais (Brazil).

Keywords: Bibliographies, Plant diseases, *Fungi, Abstracts, Parasitic plants, *Plants(Botany), Soybean plants, Farm crops, Trees(Plants), Plant pathology, Plant ecology, Macrophomina phaseolina, Glycine max.

The bibliography was begun in 1970 as a working file of the literature concerned with charcoal rot of various plants, particularly soybean (*Glycine max* (L.) Merr.) and the causal fungus, *Macrophomina phaseolina* (Tassi) Goid. Only recently, except for its occurrence on bean (*Phaseolus vulgaris* L.) and jute (*Corchorus capsularis* L.), was the importance of this fungus as a serious pathogen of crop plants and trees fully appreciated. Because this fungus attacks under environmental conditions usually nonfavorable for plant growth, it was considered a weak parasite or merely a saprophyte causing little or no significant damage. However, its seriousness on economic plants throughout the world was more fully recognized during the 1970's. There is now increased interest in the study of this fungus as a plant pathogen. Therefore, the principal purpose of this bibliography is to provide a handy reference to mycologists and plant pathologists interested in this fungus and the diseases it causes.

Standardization in Support of Development. Proceedings of a Seminar, Held at the National Bureau of Standards, Gaithersburg, Maryland on October 17-18, 1977
 H. Steffen Peiser, and John A. Birch. May 78, 172p
 Rept no. NBS-SP-507
 Library of Congress Catalog Card no. 78-7249. Prepared in cooperation with Agency for International Development, Washington, D.C., American National Standards Inst., New York, and American Society for Testing and Materials, Philadelphia, Pa.

Keywords: Developing countries, *Standardization, Measurement, Meetings, Engineering, Industries, Quality control, Argentina, Bangladesh, Bolivia, Egypt, Ghana, Indonesia, Iran, Kenya, Korea, Philippines, Thailand, National Bureau of Standards, Government programs.

The National Bureau of Standards held a two-day Seminar in an effort to appraise the benefits derived from six years of a cooperative program with developing countries designed to improve their standardization and measurement services. With financial support from the Agency for International Development, participants came from Argentina, Bangladesh, Bolivia, Egypt, Ghana, Indonesia, Iran, Kenya, Korea, the Philippines, and Thailand; from regional and international organizations; from key U.S. standards writing bodies;

and from industries, professional societies and government in the United States. The papers presented and the discussions were organized around the session titles: Six Years of National Bureau of Standards and Agency for International Development Programs, and Standardization in the U.S.A.--A Resource for Development. It was concluded that the developing countries concerned with this program had benefited in a variety of ways from the standards surveys and workshops conducted by the National Bureau of Standards in cooperation with them, and that efforts should be made to continue the program with full support. Questions were raised, but no consensus reached on the desirability of standardization being proposed as a distinct topic for the U.N. Conference on Science and Technology for Development.

Manual de Tecnologia para la Comunidad (Village Technology Handbook).
 1972, 342p
 Text in Spanish.

Keywords: Developing countries, Handbooks, Community development, Rural areas, Economic development, Crafts, Water resources, Sanitary engineering, *Irrigation, Construction materials, *Roads, Food, Snails, Washing, Heating, *Food storage, *Solar water heating, *Sewage disposal, *Handicrafts, *Water supply, *Housing, Village technology.

Village development takes on special importance in the light of the fact that 80% of those who live in less developed countries live in villages. This handbook is aimed at helping villagers to master the resources available to them. The general topics covered include water transport, storage, and purification; latrines; Bilharziasis control; Irrigation and road-building; Poultry raising; Silage; Storing food at home; Storing vegetables and fruit for winter use; How to salt fish; Concrete construction; Bamboo construction; Glues; Solar water heater; Washing machines; Cookers and stoves; Home soap making; and Bedding.

Non-Conventional Proteins and Foods: Proceedings of a Conference Held at the University of Wisconsin-Madison on October 18-20, 1977
 Harlow J. Hodgson, and Howard W. Ream. Oct 77, 292p NSF/RA-770278
 Grant NSF-AER77-10185

Keywords: Meetings, Food, Nutrition, Nutritive value, Food composition, United States, Food analysis, Food industry, Seeds, Tables(Data), Methodology, Flavor, Animals, *Food products, *Proteins.

The Non-Conventional Proteins and Foods Program aims to create the technology for increasing the capacity of the United States to produce proteins and other food materials from non-conventional sources on an economically competitive basis. In order to promote exchange of information between grantees and potential users of their results, a grantees/users conference was conducted. Topics relating to protein from seeds included: (1) elimination of objectionable flavor component in Soy, Protein products; (2) production of protein isolates and concentrates from oilseed flours using industrial ultra filtration and reverse osmosis systems; (3) enzymatic hydrolysis of vegetable protein; (4) Jojoba seed meal as an animal feed; (5) breeding, domestication, and utilization of the Buffalo Gourd; and (6) use of linear programming.

APPROPRIATE TECHNOLOGY ABSTRACTS

formation centers, India, Computer networks, Policies, Appropriate technology.

ICSU (International Council of Scientific Unions)/ COSTED (Committee on Science and Technology in Developing Countries)—has organized this Seminar on "Technical Information Services for Developing Countries" with the hope that it will enable scientists and librarians to discuss urgent problems of developing countries and how suitable methods can be evolved to tackle such problems. The information services that are now available are not geared to tackle such problems as they do not even cater to the needs of more than 80% of the rural population. At several informal gatherings during the seminar this topic had come up and over 100 librarians and scientists that were present contributed their ideas as to how this can be rectified. Scientists and librarians from Sri Lanka, Bangladesh, Malaysia, Thailand, Singapore and India participated in the Seminar and presented views regarding problems pertaining to their countries.

A Handbook of Pests, Diseases, and Weeds of Quarantine Significance. Second Edition
1978, 318p Rept no. TT-74-52012

Keywords: Handbooks, Parasites, *Plant diseases, Quarantine, Distribution, Flax plants, Plants(Botany), Weeds, Translations, *USSR, *Pest control, Hemp, Berries, Bacterial diseases, Fungus diseases, Nematoda, Cotton fibers, Parasitic plants, Citrus trees, Fruits, Flowers, *Grains(Food), *Vegetables, *Potatoes, *Weed control, Compositae, Solanaceae.

The recent increase in imported agricultural products, seeds and plants has augmented the danger of introducing plant pests, diseases, and weeds not otherwise found in the USSR or confined to small areas. This threat places a grave responsibility on the quarantine services of the Ministry of Agriculture, USSR, to prevent the entry of exotic pests, diseases, and weeds harmful to Soviet agriculture. The purpose of this Handbook is to provide plant-protection personnel with necessary information on quarantine plants, pests, diseases, and weeds presently unknown in the USSR, the crops affected by them, the regions of their distribution, quarantine checks, and methods of control.

Methods for the Determination of Chemical Contaminants in Drinking Water Participants Handbook
John D. Pfaff, Nov 77, 429p* Rept no. EPA/430/78/008

Keywords: Potable water, Water analysis, Manuals, Instructional materials, Chemical analysis, Education, Metals, Silver, Cadmium, Chromium, Lead(Metal), Mercury(Metal), Arsenic, Selenium, Water pollution, Inorganic nitrates, Organic compounds, Fluoride, Barium, Chlorine, Pesticides, Herbicides, Turbidity, Laboratory equipment, Regulations, *Water quality, Water pollution detection, Drinking water.

This laboratory manual is designed to contain analytical procedures for all parameters listed in the National Interim Primary Drinking Water Regulations (NIPDWR). Some procedures may be carried out by operators or laboratory technicians with little or no experience (chlorine, turbidity, fluoride, nitrate) while other parameters require understanding and experience in using sophisticated analytical equipment (atomic absorption, gas chromatography). Parameters included are procedures for silver, cadmium, chromium, lead, mercury, arsenic, selenium, nitrate, fluoride, barium, chlorine, turbidity, pesticides, herbicides. It is written in a step-by-step format.

This report describes a behavioral science consulting effort intended to improve the quality of working life (QWL) at a newly established pharmaceutical plant. The research covered a period of four years, from late 1972 when the decision was made to institute the QWL program, to early 1977 when consultation was officially terminated. Evaluation data were collected at the Centerton plant, site of the QWL program, and at Baytown, and a comparison plant under the same corporate management. A variety of instruments and methods were employed in the research, including self-administered questionnaires, group and individual interviews, and the analysis of archival data.

A Technology Assessment of Vegetable Substitutes for Animal Protein in Human Food. Volume 1. The Study
H. S. Becker, R. Richmond, E. W. Lusas, and S. P. Clark. Mar 78, 136p* 352-46-21/01, NSF/RA-780070
Contract NSF-C-ERS77-19549
Prepared in cooperation with Texas A and M Univ., College Station.

Keywords: *Technology assessment, *Vegetables, Food, Substitutes, Food consumption, Food chemistry, Legislation, National government, Grains(Food), Oilseeds, Leguminous plants, Potatoes, Tables(Data), *Proteins, Diets, Human nutrition, Recommendations.

The report encompasses a detailed technology assessment of vegetable substitutes for animal protein in human food. The potential exists for vegetable protein to be an important substitute for animal protein in the human diet, but the substitution must take place in areas where consumption of animal protein is or could be high. Vegetable protein is being used in the United States as analogs, ingredients, and extenders of meat and dairy products. Studies have indicated that over the next 10-15 years, emphasis will be placed on using vegetable protein as a meat extender, rather than a direct analog. Federal legislation will continue to be highly important, and most likely will be directed towards the technology and development of new vegetable protein products, rather than influencing consumer purchasing patterns. Several factors are involved in substituting vegetable protein, one of the most important of which is the form the substitution should take. A recommendation is made for a complete technology assessment, which should include all important technological and socio-economic factors.

A Technology Assessment of Vegetable Substitutes for Animal Protein in Human Food. Volume 2. Appendices
H. S. Becker, R. Richmond, E. W. Lusas, and S. P. Clark. Mar 78, 72p* 352-46-21/02, NSF/RA-780071
Prepared in cooperation with Texas A and M Univ., College Station.

Keywords: *Technology assessment, *Vegetables, Food, Substitutes, *Proteins, Diets, Human nutrition, Food consumption, Food chemistry, Legislation, National government, Tables(Data).

The potential exists for vegetable protein to substitute importantly for animal protein in the human diet in the United States. A detailed technology assessment design of vegetable substitutes is the primary intent of this study. Phase I assesses the validity of accomplishing the research and then describes in detail the approach to the technology assessment of (a possible) Phase II. In this volume, Appendices A and B contribute to that assessment. In Appendix A, human physiology and the need for protein is addressed in discussions of metabolism and daily protein requirements and the impact of changes in protein intake. Appendix B includes the results of a mini technology assessment. This assessment of vegetable substitutes for animal protein as human food addresses: (1) factors important to food-consumption patterns; (2) historic food-consumption patterns; (3) important future sources of vegetable protein, including the influence of technology, legislation, and other factors; (4) potential impacts of vegetable substitutes; and (5) potential policy implications.

Parameters for Legislative Consideration of Bioconversion Technologies
Tom P. Abeles, and Janna R. King. Feb 78, 45p
NSF/RA-780196
Grant NSF-ISP76-02379

Keywords: Fuels, *Bioconversion, Ethyl alcohol, *Waste disposal, Ethanol, Minnesota, Fermentation, Sugar beets, Grain crops, Cellulose, Wood, Manufacturing, Agricultural wastes, Solid waste disposal, Nebraska, Recommendations, Planning, Biomass, Gasohol.

Included in this report and the minibrief which accompanies it are conclusions and recommendations that evolved from the examination of various models of biomass production of nonpetroleum fuels. This included the Nebraska Grain and Alcohol Program. It was determined that it was neither economically nor energetically wise at this time for Minnesota to commit itself to a gasohol program modelled after Nebraska's program. Instead of adopting the single source, large scale Nebraska model, it was concluded that Minnesota should do the pilot and demonstration plants for the production of ethanol on the small scale (farm or local co-op size), and encourage the utilization of a variety of feedstocks such as, sugar beets, grains and cellulosic residues.

Application of Sludges and Wastewater on Agricultural Land: A Planning and Education Guide
Technical rept.
Bernard D. Knezek, and Robert H. Miller. Mar 78, 103p* EPA/MCD-35
Also available as North Central Regional Research Project Pub-235.

Keywords: Sludge, Education, *Waste water reuse, Farms, Water pollution control, Agriculture, *Waste recycling, Decis on making, Food processing, Industrial wastes, Municipalities, Economic factors, Soil fertility, Viability, *Production, Farm crops, Site surveys, Farm management, Planning, Public health, Acceptability, Law(Jurisprudence), Land application, Sludge utilization, Guides.

The report addresses the application of agricultural processing wastes, industrial and municipal wastes (i.e., sludges and wastewaters) on agricultural land as both a waste management and resource recovery and reuse practice. The document emphasizes the 'treatment' and beneficial utilization of sludge and wastewater as opposed to waste disposal. These objectives are achieved through incorporation into well-designed and operated agricultural production systems in ways that are compatible with maintaining the soil's normal viability and productivity. Waste characterization, crop selection and management, site selection, management and monitoring are addressed in a

APPROPRIATE TECHNOLOGY ABSTRACTS

manner designed to lead readers logically through the decision making process.

Development Plans and Technology Transfer
 Final rept.
 William F. Beazer, and Jose Peman. Jan 78, 110p
 NSF/PRA-77-SP-0857/1/8

Keywords: *Technology transfer, Developing countries, Economic development, Planning, Objectives, Industries, Technology assessment, Foreign countries, Government policies, India, Afghanistan, Kenya, Philippines, Brazil, Mexico, Needs.

The project was a feasibility study to ascertain the extent to which information provided by official development plans of less developed countries can be used to project these countries' science and technology needs. Past economic development plans of a sample of five countries are examined to determine goals and targets set out in these plans, and an analysis is made of the extent to which these targets were achieved, using past economic and social data. Present development plans are reviewed to determine which specific objectives each nation hopes to accomplish, including industries each nation hopes to establish and/or expand within each sector (agriculture, manufacturing, mining, services). A framework for the assessment of technology needs and imports for developing countries is provided.

A Technology Assessment of Biological Substitutes for Chemical Pesticides
 Final rept.
 Edward W. Lawless, Rosmarie von Ruemker, Gary L. Kelso, Kathryn A. Lawrence, and James D. Maloney.
 Dec 77, 419p * NSF/RA-770508
 Contract NSF-C349

Keywords: *Pesticides, Pest control, *Technology assessment, Hazardous materials, Substitutes, Reviews, Surveys, Regulations, National government, Public policy, Public health, Ecology, Benefit cost analysis, Utilization, Forecasting, Economics, Biological pest control.

A preliminary comprehensive technology assessment has been made of the potential "biological substitutes" for chemical pesticides. The authors identified a group of pest control technologies that would not depend on extensive first-choice reliance on conventional chemical pesticides, and made the assessment for this group. The assessment began with a survey of the driving forces of using pest control, in general, and of the reasons why biological and related methods might be substituted for chemicals. A review was made of the types of pest problems that major pesticide user groups have, and of the approaches they use to control various pests. A review also was made of those government regulations that have been developed to control the use of chemical pesticides and of those that might apply to the proposed use of biological and related methods. Studies were made of the current state of development, production, and extent of use of the chemical pesticides, and of the human health environmental, economic, and other benefits or disbenefits and controversies that accompany this usage. Two scenarios were developed reflecting alternative growth patterns through the year 1990 for both chemical and biological methods. Additional information on the general approach to this technology assessment is given in Appendix A.

Aluminum
 John W. Stamper, and Horace F. Kurtz. May 78,
 38p * Rept no. BUMINES-MCP-14
 Report on Mineral Commodity Profiles.

Keywords: *Aluminum, *Bauxite, Economic analysis, Mining, Reserves, Beneficiation, Extraction, Production, Supply(Economics), Demand(Economics), Metal industry, Forecasting, Utilization, Specifications, Stockpiling, Government policies, Prices, Substitutes, Plant location, Geology, Metal scrap, Containers, Refractories, Chemical industry, Abrasives, Tables(Data), International trade, Contingency planning, Secondary

materials industry, Electric power consumption, Environmental effects.

The world aluminum industry is reviewed in terms of ownership and geographic distribution. Bauxite resources, mining, and production processes through the primary metal stage and secondary recovery are briefly described. The economic and environmental factors associated with aluminum production are discussed. The report gives an overview of the uses of aluminum metal in transportation, construction, food and beverage packaging, electrical equipment, machinery, consumer products, and uses of bauxite and alumina in refractories, abrasives and chemicals, and forecasts the use of aluminum to the year 2000. While U.S. mine production from bauxite and nonbauxitic materials could reach as high as 1.8 million tons (aluminum equivalent), the nation is expected to rely increasingly on imports for a major portion of supply. World bauxite reserves were considered sufficient to supply anticipated world demand for primary aluminum.

 See also PB-279440.

Keywords: Construction materials, Solid waste disposal, Industrial wastes, Reclamation, *Agricultural wastes, Fire resistant materials, Particle boards, *Wood wastes, Composite materials, Reinforced plastics, Panels, Ceilings, Roofs, Walls, Laboratory tests, Mechanical properties, Performance evaluation, Buildings, Cost estimates, *Building materials, *Waste recycling, Rice hulls, Peanut shells.

This report summarizes work to develop building materials containing inorganic and organic wastes and wastes-derived products. Attempts were made to produce full-scale products and qualify them for structural applications. Particle board panels were made of peanut hulls and wood waste on production-type equipment. Particle boards of peanut hulls have mechanical properties that are slightly less desirable than those of commercially available boards, and the economics are marginal. However, particle board panels of wood waste can be competitive with commercial products. Two hour, fire-rated structural walls made from inorganic rice hull foam could also be viable, as could floors, roofs, ceilings, and the 90-minute, fire-rated door with a rice-hull foam core and a wood-waste frame. These tests completed generation of the data required for building code approval.

Keywords: *Houses, Prefabrication, *Concrete, Developing countries, Design, Construction, Assembling, Low cost housing, Developing country application.

The system of construction described in this publication was developed originally in Surinam by Mr. Joseph Coulam under the U.S. technical assistance program and later refined under the Agency for International Development program of technical cooperation with Barbados. Although the publication deals in part with the adaptation of this system to the construction of small movable dwellings known in Barbados as 'Chat-tel Houses', the system is just as useful in building low-cost, permanently located dwellings. The system pro-

APPROPRIATE TECHNOLOGY ABSTRACTS

vides simplicity, durability, and low-cost, and appears to be adaptable for use in aided self-help programs generally.

Strengthening Urban Administration in Developing Countries: With Emphasis on Latin America
 Ideas and methods exchange.
 Jul 71, 74p IME-67

Keywords: *Urban planning, Developing countries, *Latin America, Local government, Management, Development, Planning, Urbanization, Government policies, Legislation, Taxes, Fiscal policies, Urban growth, Developing country application.

The complex problems of managing the massive acceleration of urban growth in the developing countries while at the same time improving the quality of urban services and renewing the obsolete urban structure of the older cities poses administrative, legislative, and financial demands without precedence in the developed countries. In this publication, PADCO, Inc. attempts to summarize the main problems facing Latin American countries in urban administration and to indicate the implications affecting urban development and planning. Each Latin American country has evolved its own set of administrative, legislative, and financial tools for dealing with urbanization. This fact makes it difficult to generalize both concerning experience and recommendations for improvement. It is hoped, however, that this overview of the central issues will prove useful in providing the planner and urban administrator with a better understanding of how his own work is affected by the national, regional and local context in which he operates. The root causes of many day-to-day problems to be faced by urban administrators may not be within their immediate control at all, but rather stem from inadequate or incomplete national policy and legislation. The importance of establishing the national framework for guiding urban development is a recurring theme of this publication.

Use of Hydraulic Rams in Nepal. A Guide to Manufacturing and Installation
 Mitchell Silver. Sep 77, 57p

Keywords: Rams(Pumps), Design, Hydraulic power pumps, Water pressure, *Water supply, Check valves, Assembling, Installing, Developing countries, *Nepal, *Hydraulic rams, Developing country application.

The hydraulic ram pump can be used with great effectiveness in mountain villages which are located at a higher elevation than their source of water. The hydram pump uses the power of falling water to pump a small portion of that water uphill. It requires absolutely no fuel or electricity, only water pressure. The pump was developed about 200 years ago, and the beauty of the hydram lies in its simplicity. There are only two moving parts which are lubricated by the water itself. This manual hopes to show that anyone with a minimal amount of mechanical aptitude can survey, design and build a hydraulic ram from locally available parts, and do any necessary maintenance.

Handbook for Building Homes of Earth
 Lyle A. Wolfskill, Wayne A. Dunlop, and Bob M. Callaway. 1977, 163p
 Prepared for Agency for International Development, Washington, DC. Sponsored in part by Department of Housing and Urban Development, Washington, DC. Div. of International Affairs.

Keywords: *Houses, Construction materials, *Building materials, *Soils, Soil classification, Soil compacting, Soil stabilization, Soil tests, Manufacturing, Foundations, Developing countries, Handbooks, Earth construction, Developing country application, Adobe blocks, Pressed earth blocks.

This manual describes broadly the kinds of soil that are found in various parts of the world and tells what can be expected of them. It then tells what is best to do with each of them, alone or in combination with others, to make them good enough to use or make them better with the use of stabilizers. Then, it explains which of the three general kinds of earth construction is best for use with the kinds of soil available. It also describes simple tests anyone can perform that tell the builder how well he is succeeding in what he is trying to do. After chapters on picking out places to build, how to make a good foundation for any kind of house, and how to build a roof, the manual has separate chapters on adobe, rammed earth, and pressed block construction.

Aquaculture Techniques: Water Use and Discharge Quality
 G. W. Klontz, Irvin R. Brock, and John A. McNair.
 Apr 78, 120p OWRT-A-054-IDA(1)
 Contract DI-14-34-0001-8014

Keywords: Fisheries, *Waste water, *Aquaculture, *Water pollution, Test methods, Feeding stuffs, Rates(Per time), Diets, Oxygen, Dissolved gases, Growth, Fresh water fishes, Size measurement, Temperature, Production, Efficiency, Solids, Predictions, Replacing, Computer programs, Fishes, IRV computer program, Animal populations, OWRT computer program.

The objectives were to develop and test methods of predicting waste product generation from aquaculture facilities. Factors chosen for testing were (1) feeding rate; (2) diet efficiency; (3) growth rate; (4) population density; (5) water replacement time; (6) oxygen consumption; (7) fish size; and (8) water temperature. Significant results are: (1) The identification of factors not only involved with the generation of waste products from an aquaculture facility, but also having the potential of affecting the production of an aquaculture facility; (2) The development of a practical method for determining oxygen consumption of fish in varying controlled environmental conditions; (3) The development of a computerized program for fish growth in optimized loading conditions of population density and water replacement time; (4) The development of a method to predict more accurately the anticipated growth rate of a group of fish; (5) The development of a method to predict the solids, both settleable and suspended, produced daily by a group of fish being held in known conditions.

 Contract DI-14-34-0001-7515

Keywords: Potable water, New Mexico, *Water supply, *Water treatment, Electrodialysis, Design, Osmosis, Fluid filters, Membranes, Selection, Construction, Operations, Project planning, Objectives, Performance evaluation, Residential buildings, Cost engineering, Brines, Ground water, Regulations, Reverse osmosis.

Approximately 800 community-type public water supplies in New Mexico are initially affected by the regulations adopted by the U.S. Environmental Protection Agency under the Safe Drinking Water Act. The project described is primarily the selection, design, construc-

tion, and operating procedures for a portable demonstration water treatment system using reverse osmosis and electro dialysis to provide information to small New Mexico communities for improving their drinking water supplies to meet existing regulations. The project's specific objectives are to develop operating conditions and information for an engineering evaluation of reverse osmosis and electro dialysis and their secondary support processes, to develop specific cost data, to extend available water treatment technology in the area of single solute removal from drinking water containing a large number of ionic and dissolved species, to provide the necessary material for assimilation of this unit or comparable equipment into the educational activities of water supply and water treating, and to evaluate brine disposal methods in compliance with New Mexico groundwater regulations.

Utilization of Waste Heat in a System for Management of Animal Residuals to Recover and Recycle Nutrients
 Final rept.
 L. L. Boersma, E. Gasper, J. R. Miner, J. E. Oldfield, and H. K. Phinney. Apr 78, 299p NSF/RA-780250
 Grant NSF-GI-43681, NSF-AEN74-14960-A01
 Sponsored in part by Office of Water Research and Technology, Washington, DC. and Grant NSF-AEN74-14960-A02.

Keywords: *Methane, Feeding stuffs, *Bioconversion, *Waste heat utilization, Algae, Bacteria, Protein, Biomass, Agricultural wastes, Nutrients, Anaerobic processes, Swine, Cost analysis, Chorella, Process charting, Design criteria, Solid wastes, *Manures, *Waste recycling, Manufactured gas, Synthetic fuels.

Major findings of an investigation into the concept of nutrient and energy recovery from a swine waste management system are reported. Algae and bacteria were used to convert swine manure into methane-rich fuel gas and supplemental protein for animal feed. Waste heat from electricity generating plants was simulated to test its value in enhancing the biological recovery of nutrients and energy. The anaerobic digestion of the manure solids removed 55 percent of the total solids. The destruction of the volatile solids was 56 percent, and the COD was reduced by 41 percent. The daily gas production averaged 1.06 cu m/kg VS removed. The gas contained 68 percent v/v CH₄ and 32 percent v/v CO₂. The necessity to dilute the swine waste with large volumes of water in order to make the liquid phase of the manure suitable for algal growth, and the potentially high cost of harvesting and processing the algae, prompted the consideration of other management systems for the recovery of nutrients and energy from swine manure, including the culturing of yeast, microfungi, and fish. Architectural perspectives and plan views were developed for each management system together with schematic diagrams showing the flow of energy and materials through each system, based on the feed and energy needs and the waste discharge of 100 pigs.

Standards and Procedures for the Design of Water Supply Systems in Rural Areas of Nepal and Bhutan
 Technical manual
 Carl R. Johnson. 1976, 100p*
 Prepared in cooperation with Peace Corps/Nepal.

Keywords: Water distribution, *Water supply, Developing countries, Manuals, Intake systems, Reservoirs, Pipelines, Design, *Water quality, Feasibility, *Bhutan, Embankments, Populations, Rural areas, Hydraulics, Friction, Standards, *Nepal, Developing country application, Water demand, Instruction manuals.

This manual is especially written as a reference for persons engaged in rural water supply design and construction for the Remote Area and Local Development Department of His Majesty's Government of Nepal and its assisting agencies: UNICEF, WHO, American Peace Corps, and German Volunteer Service. The coverage of specific topics ranges from criteria and considerations for the design of certain water system features to fully developed standard designs, estimates, and specifications for other features. Design criteria are presented where standard designs cannot be practically used, while the standard designs that are

APPROPRIATE TECHNOLOGY ABSTRACTS

included are for guide purposes only and should always be carefully scrutinized in light of the specific conditions at the construction site.

Rural Enterprises: An Overview of the Role and Potential of Rural Enterprises to Contribute to the Employment and Income of the Rural Poor
Samuel Daines, Felicia Morrow, and William Rodgers. Apr 77, 19p

Keywords: Rural areas, Farm processing, Developing countries, Agricultural economics, *Employment, Income, Manpower, Economic development, Industries, Food processing, Woodworking, Businesses, Foreign aid, Low income groups, *Small businesses, Developing country application, Nonmetropolitan areas.

As agricultural output increases, new opportunities develop for providing goods, services, and markets in rural areas. Farmers require additional farm inputs and processing and marketing facilities for outputs. In addition, rising rural incomes create new demand for consumer products. By providing a supportive environment for rural based enterprises, governments can potentially improve the welfare of rural populations and further stimulate agricultural production. The paper discusses how rural enterprises can contribute to the overall economy and what mechanisms have been used in attempts to stimulate their development.

Utilization of Earthworms and Microorganisms in Stabilization, Decontamination and Detoxification of Residual Sludges from Treatment of Wastewater
Final rept. 1 Jun 76-31 May 78
Roy Hartenstein, and Miron J. Mitchell. 1978, 34p
NSF/RA-780171
Grant NSF-ENV77-06994

Keywords: Sludge drying, Sludge digestion, Sludge disposal, Aerobic processes, Invertebrates, Worms, Toxicity, Nematoda, Decomposition, Soils, Moisture content, Stabilization, *Sewage treatment, Microorganisms, *Waste water, Sewage sludge, Earthworms.

Findings are presented of studies determining the role of invertebrates in sludge disposal management using four secondary-treatment domestic sludges, including an aerobic digest and anaerobic digesters from three separate wastewater treatment plants. Data previously unavailable on the chemical content of the organic matter in sludge residues are disclosed. Anaerobic sludges are shown to be toxic to earthworms when Eh is low but, if applied to a mineral topsoil, are invaded sequentially by nematodes, enchytraid worms and earthworms, as the sludges become aerated increasing its Eh. Functional moisture and temperature relationships are established for sludge conversion into feces by earthworms and isopods. Earthworms placed into aerobic sludge drying beds cause accelerated sludge stabilization and enhance aerobic decomposition product production when moisture is held below a critical level. Moisture content is the major determinant of whether an aerobic or anaerobic decomposition pathway is taken. Earthworm feeding activity is shown to stimulate an increase in nematode population density which promotes an observed bacterial turnover hastening sludge decomposition and stabilization. Data on the effect of heavy metals and the presence or absence of certain enzymes are discussed. Additional studies on enzymes and decomposition processes are reported in abstract form.

National Bureau of Standards, Washington, DC.
Factors Affecting the Durability of Adobe Structures
Paul Wencil Brown, Carl R. Robbins, and James R. Clifton. Jul 78, 42p Rept no. NBSIR-78-1495

Keywords: Construction materials, Residential buildings, Cohesive soils, Weathering, *Building materials, Physical properties, Mineralogy, Particle size distribution, Size determination, X ray diffraction, Porosity, Durability, Moisture content, Inorganic salts, Chemical composition, Arizona, *Adobe, Historic buildings, His-

toric preservation, Tumacacori National Monument, Fort Bowie National Historic Site, Escalante Ruin.

Adobe samples from three sites of historic interest in the State of Arizona were analyzed to determine their mineral assemblages, particle size distributions, soluble salt contents, and porosities. These analyses were accompanied by microscopic observations of polished sections and thin sections. These data were correlated with the weathering observed and it was found that soluble salt action was responsible for the deterioration of the adobe from one of the sites. The nature of the particle size distribution has resulted in the rapid deterioration of the adobe from a second site. The adobe from a third site was found to be well consolidated due to the presence of large amounts of calcite.

System Planning for Agricultural Education in Developing Countries
Technical rept.
Djafar Esmaili Djawan. Dec 76, 227p Rept no. TR-14

Keywords: *Education, *Agriculture, Developing countries, Farm management, *Iran, Planning, Programmed instruction, Television Broadcasting, Professional training.

A manpower projection model, developed by Iran's Plan and Budget Organization, is reviewed and extended. The model projects expected growth in different sectors of Iran's economy made possible by revenues from oil exports. These projections, together with descriptions of skill needs in each sector, determine the rates of training that would be required to support the indicated growth. The projections show major shortages in the training capacity of Iran's educational institutions, particularly in the areas of professionals and para professionals.

The Industrial Research Institute in a Developing Country: A Comparative Analysis
James P. Blockledge. 31 Aug 75, 273p
Contract AID/csd-3316

Keywords: Research, Industries, Developing countries, Organizations, *Technology transfer, Universities, Technology innovation, Coordination, Management, Government policies, Promotion, *Research and development, *Industrial development, Multinational corporations, Developing country application.

The study was initiated in 1970, with the hope that a pattern of operational characteristics, similarity of problems, and a uniform approach to technical assistance would emerge. The purpose behind this effort has been to provide relevant information which will help research institute managers and their senior staffs achieve stronger programs of interaction with industry, through sharing the experiences and problems of other developing country institutes confronted with similar situations. Further, it has been the author's hope that the study will assist interested persons, institutions, and organizations in the advanced countries to better understand the unique although complex problems facing the developing country institutes, and thus devise more appropriate and meaningful programs of assistance. The objectives of the study have been to: (1) Analyze a variety of approaches to industrial research which have been tried; (2) identify those factors which have contributed or inhibited effective coupling of industrial research institutes with industry and developmental interests; (3) differentiate between those types of constraints to development of viable institutes which are country-specific and those common problems which have limited the value of these institutes regardless of their geographical location. During the course of the study, some 50 research centers in 20 countries have been visited.

A Mass Balance Study of Recycling Secondary Municipal Wastewater on Abandoned Field Ecosystems
Completion rept.
Thomas M. Burton. Jul 78, 57p QWRT-A-091-MICH(1)
Contract DI-14-31-0001-6023

Keywords: Circulation, *Land use, *Irrigation, *Waste water reuse, *Sewage treatment, Phosphorus, Nitrogen, Seasonal variations, Inorganic nitrogen, Concentration(Composition), Nutrients, Harvesting, Soil water, Plant growth, Grasses, Vegetation, Leaching, Michigan, Land application, Old fields, Agropyron repens, Solidago.

An experiment on the management of a municipal wastewater land application system using abandoned fields was conducted in 1976 and 1977 on a 10-year old oldfield site on thirty-six 0.07 ha plots arranged within 6 experimental blocks. Irrigation levels of 0, 5, and 10 cm/week of secondary effluent were used. Harvest treatments included no harvest, one harvest in June, and two harvests in June and September. Mass balances were constructed for phosphorus and nitrogen for all treatments. The oldfield was very effective at wastewater renovation at all levels of irrigation and for all harvest treatments through most of the growing season. Nitrate-N concentrations in soil water leaching past the 120 cm depth remained well below the 10 mg/l drinking water standard except during September and October on the unharvested plots. Phosphorus remained at background levels on all plots at the 120 cm depth. The irrigated harvested plots were dominated by quack grass (*Agropyron repens*) while the unharvested, irrigated plots were dominated by goldenrod (*Solidago* sp.). Vegetation response and plant species interactions are discussed.

Livestock and the Environment: A Bibliography with Abstracts. Volume V
Final rept. 1 Mar 77-28 Feb 78
M. L. Rowe, and Linda Merrymen. Jun 78, 155p*
EPA/600/2-78/137
Grant EPA-R-605151

Keywords: Livestock, *Agricultural wastes, Industrial waste treatment, Bibliographies, *Animal wastes, *Bioconversion, *Water pollution, Beef cattle, Dairy cattle, Sheep, Poultry, Swine, Anaerobic processes, Ventilation, Methane, *Animal husbandry, Runoff, Waste disposal, Indexes(Documentation), Air pollution, Water pollution control, Abstracts, Feedlot wastes, Confinement pens, *Waste recycling, Manure, Waste utilization, Biogas.

Management and research information on animal wastes has expanded in recent years. This material has appeared in such diverse sources as journal articles, conference papers, university publications, government publications, magazine articles, books or book chapters, and theses. This bibliography was compiled in order to speed the flow of information on findings in one segment of the livestock industry to other segments that could benefit from this technology. Included in this publication are the following indexes: (1) author, and (2) animal information categories. These indexes are followed by a section of abstracts of each reference entry found in the bibliography.

La Construction en Climat Chaud (Physiological Objectives in Hot Weather Housing)

Douglas H. K. Lee. May 63, 127p
Text in French.

Keywords: *Houses, Environmental engineering, Hot weather construction, Human factors engineering, Ventilation, Air conditioning, Evaporative cooling, Physiological effects, Structural design, Developing country application, Housing.

The effects of heat on man and other elements of tropical and subtropical climate are discussed. Housing is examined as a protection against the climate. Methods to reduce the conduction of radiant heat from the sun and to reduce convection of heat and humid outside air by shades, awnings, and architectural design, as well as ventilation, air conditioning, and evaporation cooling are explained. The adaptation of design to accommodate alternative hot-dry and hot-humid climates and functional considerations are also reviewed.

L'Eau et la Sante de l'Homme (Water and Man's Health)

Technical series no. 5
Arthur P. Miller. 1962, 120p
Text in French.

Keywords: *Water pollution, *Diseases, Disease vectors, Bacteria, Cholera, Bacillary dysentery, Tularemia, Paratyphoid, Diarrhea, Poliomyelitis, Toxicity, Metals, Radioactive wastes, Cyanides, Sulfonates, Chlorides, Chloroform, Phenols, Standards, Developing country application, Water pollution standards.

This pamphlet studies bacterial and chemical water pollutants. It discusses the transmission of disease through water; cholera, dysentery, leptospirosis, paratyphoid and typhoid fever, tularemia, dracunculosis, echinococcosis, schistosomiasis, amoebic dysentery, infectious hepatitis, diarrhea, pleurodynia, poliomyelitis, and several other diseases are discussed in depth. Chemical pollution of water by arsenic, barium, cadmium, chrome, cyanide, fluoride, lead, selenium, silver, alkylbenzene, sulfonate, chloroform, chlorides, copper, iron, manganese, nitrates, phenols, sulfates, zinc, and radioactive materials are also studied in depth. International and US standards for safe water are compared.

La Prevention Contre les Moustiques dans les Terres Irriguees (Mosquito Prevention on Irrigated Farms)

1969, 47p
Text in French.

Keywords: Culicidae, *Irrigation, Pest control, Irrigation canals, Public health, Life cycles, Rice plants, Aquaculture, Drainage, Terracing, Irrigated land, Ponds, *Insects, *Mosquitoes, Developing country application, Habitats.

This book tells what measures to take to control mosquitos. The nature and extent of the problem is discussed, its socio-economic and public health aspects are given. The mosquitos' biology and habitat, and problems of reconciling mosquito control with other goals such as irrigation, rice growing, and aquaculture are studied. The principal techniques of mosquito control are discussed including calculating, administering, and recording the optimal amount of water for irrigation, creating proper drainage and irrigation systems, and landscaping farm ponds.

Diverses Methodes d'Irrigation (Various Irrigation Methods)

Karl O. Kohler, George A. Lawrence, and William Stanley. 1962, 76p
Text in French.

Keywords: Corn plants, Surface irrigation, *Irrigation, Slopes, Terrain, Sites, Siphons(Water), Maintenance, Pipes(Tubes), Cultivation, Contour farming, Terracing, Developing country application.

This booklet tells how best to irrigate a farm using the slope of the land and grains to best advantage. Contour-furrow irrigation, furrow irrigation, corrugation irrigation, border irrigation, and irrigating corn are treated fully. How to site, survey, space, dig, and maintain the channels is covered, and when to use each method is discussed. The book also tells how much water to admit into each furrow, and covers underground conduits, siphons, sprinklers, preparing the earth, and seed bedding for corn.

Le Developpement de l'Entrepise Privée Africaine (The Development of African Private Enterprise)

Planning pamphlet no. 120.
Mar 64, 218p
Text in French.

Keywords: *Industrial development, *Africa, Businesses, Industries, Services, Distributing, Foreign government, Europe, United States, Foreign aid, Economic surveys, Developing country application, Private enterprise.

The study concentrates primarily upon African private enterprise in industry, distribution, and the service trades. It analyzes the main problems which impede the emergence and development of modern forms of indigenous private economic activity in the countries of tropical Africa, and describes the measures for mitigating them which could be undertaken by African entrepreneurs themselves, by their government, by the Europeans, Americans, and other private companies operating in Africa and by those providing aid to African countries. The purpose of this study is to present a reasonably comprehensive survey of the present problems and future prospects of African private enterprise.

Handbook of Tropical and Subtropical Horticulture
Ernest Mortensen, and Ervin T. Bullard. Jun 70, 197p

Keywords: *Fruits, *Vegetables, Fruit crops, Vegetable crops, Trees(Plants), Horticulture, Tropical regions, Manuals, Fertilizing, Plant growth, Temperature, Insect control, Plant diseases, Handbooks, Soil properties, Planting, Spacing, Weed control, Tables(Data), Insecticides, Subtropical regions, Developing country application.

This manual is written in layman's language in solving their agriculture problems. Major fruit, nut, and tree crops are discussed with emphasis on spacing, pruning, fertilizing, budding, and disease and insect control. A description is given of all major vegetable varieties, fertilizer recommendations, plants spacings, temperature requirements, soil and cultivation. Major diseases with their control are presented in a table for easy reference. (Color illustrations will be reproduced in black and white)

L'Alimentation Sanitaire des Bebes en Milieu Tropical (Health Education of the Tropical Mother in Feeding Her Young Child)
Derrick B. Jelliffe, and John F. Bennett. 1964, 38p
Text in French.

Keywords: Nutrition, Diets, Nutritional deficiency diseases, Tropical regions, Developing countries, Preventive medicine, Infants, *Children, Sanitation, Mothers, *Health education, Developing country application.

Malnutrition in early childhood is the dominant problem in the developing tropical regions of the world, and, although poverty is often a vital causative factor, frequently a considerable proportion of the malnutrition seen is potentially avoidable, if already available local food resources were used to better purpose by parents. An important global target for health education is to persuade tropical mothers to feed their children in the early years of life as well as is possible with already existing available local foods. This paper is largely concerned with the education of the mother in preventing malnutrition among underprivileged children. Topics covered include: breast feeding vs. artificial feeding, the transitional diet, and the adult diet.

1978, 194p
Text in French.

Keywords: *Agricultural machinery, Tractors, Maintenance, Tractor engines, Spark ignition engines, Diesel engines, Lubrication, Carburetors, Ignition systems, Cooling systems, Safety, Instructional materials, Developing country application.

This booklet is a guide to learning the basic mechanics of tractor care which will help prevent costly breakdowns and provide greater productivity. The areas discussed in the book are tractor safety, general lubrication, oil for the engine and hydraulic system, air cleaners, carburetor adjustment, the ignition, and the cooling system. A cross-section of the gas engine is shown and discussed. It also tells how to keep a complete written record of all operating, maintenance, and repair costs of your tractor.

Sponsored in part by American Oil Co., New York, and Agency for International Development, Washington, DC.

Keywords: *Agricultural machinery, Tractors, Maintenance, Tractor engines, Spark ignition engines, Ignition systems, Manual transmissions, Valves, Steering gear, Instructional materials, Developing country application.

The purpose of this booklet is to provide an opportunity to learn the proper care of a tractor which will result in longer life, more power, and lower operating costs. This booklet makes it possible for you to learn how to do many small tractor maintenance jobs that will give you greater production and help to eliminate costly breakdowns. Topics covered include: engine ignition systems, fuel saving adjustments, valves, power transmissions, care of tires, and steering and front wheels.

Keywords: *Health education, Public health, Sanitation, Meetings, Schools, Children, Instructors, Health care services, Instructional materials, Attitudes, Developing country application.

The material in this publication presents the group thinking of many health workers of various professional skills, who participated in a health conference in the Philippines. This report is designed as a training aid and handy reference for the use of health workers everywhere. The functions of the health educator and public administrator in the prevention and treatment of malaria are discussed as well as the importance of educating people in the area of sanitation. The role of the health educator and public administrator in establishing a school health program to teach children and school personnel to attain and maintain good health are discussed. Methods of dealing with community attitudes in maternal and child care are explained.

Developpement Communautaire - Cinq Realisations Interessantes en Afrique (Five Community Development Stories Out of West Africa; Community Development Series, Volume 1, Series B)
Nov 62, 42p
Text in French.

Keywords: *Community development, *Africa, Planning, Improvement, Water wells, Irrigation, Farm crops, Rice, Ghana, Nigeria, Lagos, Construction, Developing countries, Villages, Developing country application.

These five development success stories may inspire efforts to improve the living conditions in villages. Local participation in planning and carrying out improvements obtained good results. Successful deep wells were dug in Patuduase and Apam, Ghana, and a popular literacy campaign completed. In northern Ghana, villages built their own irrigation system for rice growing under the tutelage of development personnel. In Igan Alade, Nigeria, the villagers were inspired to build themselves an auditorium, and in Lagos, a youth club was established which was then used in self-help schemes.

L'Energie et le Developpement Rural: Ressources Renouvelables et Options Techniques pour les Pays en Developpement (Energy for Rural Development: Renewable Resources and Alternative Technologies for Developing Countries)
1977, 331p
Contract AID/csd-2584
Text in French.

Keywords: *Wind energy, *Solar energy, Developing countries, Rural areas, Regional planning, Wind power generation, Biomass, Energy storage, Reviews, Reviewing, *Energy source development, Solar energy conversion, *Bioconversion, Wind power utilization, *Hydroelectric power, Photosynthesis, *Geothermal energy, Developing Country Application, State of the art.

This report provides a summary of the state of the art of alternative (appropriate or soft) technologies frequently suggested as solutions to rural or individual-family energy needs. Moreover, it informs both the technologist and the planner where to go for more detailed information and what kinds of research and development are needed before a particular device or process is ready for use. Thus, it should be of considerable assistance in evaluating the potential of each energy source in each candidate situation. This is the French edition of the original report which was printed in 1976.

Plant Requirements Primer: How to Start a New Factory or Shop
Aug 55, 61p

Keywords: *Management planning, Technical assistance, Businesses, Planning, Industrial plants, Shops, Manufacturing, Workplace layout, Materials, Equipment, Personnel, Operating costs, Marketing, Sales, Capital, Profits, Instructional materials, *Small businesses, Industrial growth, Industrial development, Developing country application.

The pictorial pamphlet outlines steps that should be followed in starting a new factory or shop. Its purpose is to show how ideas for a new business should be collected and presented to obtain the greatest cooperation from lending agencies, other businessmen, and from the Government. The pamphlet first shows in brief pictorial form the types of privately owned enterprises that have often been started in countries with

developing industries. It then discusses the processes of industrial development and the general conditions that are necessary to industrial growth. The last section describes in some detail a typical case of a preliminary study of a new business enterprise which could culminate in its actual establishment.

1978, 40p

Keywords: *Power equipment, *Small businesses, Industries, Rural areas, Belt drives, Power transmission belts, Power supplies, Mechanical drives, Pulleys, Belts, Machine tools, Quality of life, Developing country application, Cottage industries.

This booklet covers the various methods of transmission of mechanical power from its source to the driven member, and the various companion devices which go to make up a suitable power transmission. The transmission elements described are limited to the simple materials which are available locally at little or no cost. Reference is made to the various sources of power which may be available in an area and to the relative economics and practicality of these sources. Only the type of equipment is discussed which may be improvised by rudimentary techniques from simple materials.

Keywords: Agriculture, Financing, Specialized training, Personnel development, Financial management, Credit, Income, Farms, Risk, Real property, Farm crops, Services, Projects, *Agricultural economics, *Training, Credit policies, Economic risks, Financial services, Finance occupations, Guides.

The booklet's purpose is to provide training material and encourage the development of more intensive training programs for officials and employees of agricultural credit organizations in other countries. The sections discussed in the booklet include: the man who needs credit, purposes for which loans are made, capacity of the farm to pay debts, financial strength and progress of the borrower, property and growing crops as security for loans, and loan supervision and collections.

Building a Strong Extension Service. A Guide for Extension Administrators
Fred Jans. Jul 69, 17p

Keywords: Federal assistance programs, Rural areas, Management training, Education, Agricultural economics, Economic development, Rural sociology, Financing, Production, Organization theory, Personnel development, Planning, *Agricultural extension services, Administrator guides, Rural extension, Rural farm residents, Agricultural production, Developing country application, Administrative personnel, Rural development, Organizational development.

The purpose of agricultural extension is to carry the application of science in the fields of agricultural production and family living to people who use the lands regardless of their educational level or stage in life. It also provides a good channel through which practical problems important to farm people are called to the attention of research institutions. The bulletin discusses some of the fundamental steps essential in establishing an effective extension service. It has been prepared by recognized leaders experienced in this field.

Harnessing Tidal Energy
 Current issue outline.
 Aug 78, 15p CIO-78/2, NOAA-78082203

Keywords: Tidal power generation, Electric power generation, Reviewing, Bibliographies, *Tidal energy.

About 3,000,000 megawatts (MW) of power are continuously dissipated through the motion of the tides over the surface of the Earth. Because of physical limitations, only 2% of this may ever be harnessed. This amounts to about 5% of the present worldwide power generation from all sources. Thus, this inexhaustible power source can make a small, but significant, contribution. The background and fundamental principles of tidal power are discussed and recent developments are given. A selected listing of some of the published

material relating to electrical power generation from tides is included.

Thermal Aquaculture
 Richard E. Peterson, and K. K. Seo. 1977, 14p*
 UNIH-SEAGRANT-CP-78-01, NOAA-78082901

Keywords: Cooling water, Thermal pollution, *Aquaculture, Electric power plants, Shellfish, Fishes, Crustacea, Mollusca, Carp, Catfishes, Eels, Lobsters, Mussels, Oysters, Perch, Salmon, Shrimps, Trout, Marine fishes, Reprints, Sea Grant program, *Waste heat utilization.

There now appear to be over 40 demonstration/commercial projects involving the application of thermal waters--often the thermal effluents of electric generating plants--to the aquaculture of fish species. These projects are taking place in several countries, e.g., Canada, England, Iceland, Japan, and the United States (California, Florida, Illinois, Maine, Massachusetts, Minnesota, New Jersey, New York, Oregon, Tennessee, Texas, Washington, and Wisconsin). The crustaceans, mollusks and fishes under culture include carp, catfish, eels, lobsters, mussel, oysters, perch, plaice, salmon, sea bream, shrimp, sole, trout, whitefish, and yellowtail. This paper, based on a literature search and survey replies from sponsoring organizations, operators, and principal investigators, serves the purpose of providing a beginning inventory of current empirical developments in thermal aquaculture.

Engineering Considerations in the Aquaculture of 'Macrobrachium rosenbergii' in South Carolina
 Paul Zielinski, Walter E. Castro, and Paul A. Sandifer. 1978, 6p NOAA-78082304

Keywords: Shellfish, Fresh water fishes, Crustacea, *Aquaculture, Shrimps, Larvae, Selection, Ponds, Aeration, Performance, Cylindrical bodies, Prototypes, Tanks(Containers), Pumping, Macrobrachium rosenbergii, Sea Grant program, Reprints.

A summary is presented of the progress to date on engineering experimentation involved with the culture of the fresh water prawn, *Macrobrachium rosenbergii*. The use of large rectangular tanks for treated culture water is possible, using silk mesh screens to separate larvae from the sump zone where the culture water is removed for treatment and returned to the animal portion of the tank. Large cylindrical tanks can be used in a recirculating flow system for larval culture and small cylindrical tanks are currently in use at MRR1. A large tank and system as described here has not been tested with larvae. Similarity laws can be used to predict performance of prototype tanks from the results of model tests. Several desirable and preferred features of the ponds in use in South Carolina for the culture of *Macrobrachium* shrimp have been identified after three seasons of experience. The operation of an air lift pump at a point of optimal hydraulic performance will also provide maximum aeration efficiency in low lift pumping.

Watercress-Crayfish Polyculture as an Economic Means of Stripping Nutrients from Enriched Waters. Proceedings of the International Symposium Freshwater Crayfish (3rd), Held at Kuopio, Finland on December 1976
 J. Rundquist, G. Gall, and C. R. Goldman. 1976, 15p
 UCAL-WRC-W-475, OWRT-A-056-CAL(2)

Keywords: *Aquaculture, *Waste water reuse, Crayfishes, *Fisheries, Aquatic plants, Circulation, Inorganic nitrates, Ammonia, Phosphorus, Stripping(Distillation), Proteins, Feeding stuffs, Diets, Growth, Mortality, Economic factors, California, Recycling.

An experimental watercress-crayfish polyculture system is described. The watercress bed receives nutrient-rich effluent from a connecting trout hatchery and effectively strips nitrates, ammonia, and phosphorus from the waters. The harvested watercress also provides a clean and easy food source for crayfish. Preliminary feeding trials indicate that the watercress

combined with protein supplement provides a satisfactory crayfish diet in terms of both growth and mortality. The development of watercress-crayfish polyculture is economically promising because of three valuable outputs--cleaner water, watercress, and crayfish.

The Culture of Crayfish for Waste Recycling and Human Consumption
 Completion rept.
 Graham A. E. Gall, and Charles R. Goldman. Jun 78, 15p UCAL-WRC-W-475, OWRT-A-056-CAL(5)

Keywords: Trout, Aquaculture, *Waste water reuse, Crayfishes, Fisheries, Circulation, Nutrients, Growth, Dissolved organic matter, Larvae, Life cycles, Growth, Temperature, Reproduction(Biology), Nitrogen, Mortality, Diets, Aquatic plants, Phosphorus, California, *Fishes, Recycling.

An experimental watercress-crayfish culture system was developed which received a nutrient-rich effluent from a trout hatchery. The watercress system effectively stripped nutrients from effluent water and provided acceptable growth of watercress. The watercress removed 98% of the nitrate-nitrogen and 92% of the total phosphorus reducing the level of these two nutrients to near the level observed in the hatchery inflow supply. However, there was a significant increase of particulate organic matter in the effluent from the watercress growing-beds. Feeding trials indicated that watercress combined with a protein supplement provides a satisfactory diet for crayfish in terms of both growth rate and mortality. A detailed analysis of the growth of young crayfish from hatching through the fifth molt demonstrated that early growth involves two phases. The optimal temperature for growth appeared to be in the range of 17-22C. A successful system of stripping eggs from the female and hatching them in a drip-type egg incubator was developed which yielded a 90% hatch and normal metamorphosis.

Management of Swine Manure for the Recovery of Protein and Biogas
 Final rept.
 L. Boersma, E. Gasper, J. Miner, J. Oldfield, and H. Phinney. May 78, 309p OAES-SR-507, OWRT-78/12108
 Sponsored in part by National Science Foundation, Washington, DC. Applied Science and Research Applications.

Keywords: *Agricultural wastes, Swine, Materials recovery, *Proteins, *Methane, Management planning, Synthetic fuels, Reclamation, Biodeterioration, Algae, Bacteria, Nutrients, Solid waste disposal, Feeding stuffs, Biomass, Anaerobic processes, Tables(Data), *Animal wastes, *Waste recycling, *Bioconversion, Manure, Waste heat utilization, *Chlorella vulgaris*.

Major findings of an investigation into the concept of nutrient and energy recovery from a swine waste management system are reported. Algae and bacteria were used to convert swine manure into methane-rich fuel gas and supplemental protein for animal feed. Waste heat from electricity generating plants was simulated to test its value in enhancing the biological recovery of nutrients and energy. The experimental facility was built adjacent to the Swine Research Center at Oregon State University and consisted of animal quarters with solid concrete floor and gutter to house 50 pigs, an anaerobic digester with a volume of 14 cu m, and 12 outdoor algae basins with a combined surface area of 24 sq m and a combined volume of 6,000 l. Manure was removed from the animal quarters by a gutter flushing system. The solids were separated from the liquids by gravity settling and then pumped into the digester for solubilization and recovery of biogas. The liquid phase of the diluted manure was pumped into the outdoor basins to serve as nutrient substrate for the growth of the high temperature strain 211/8K of *Chlorella vulgaris* as the predominant algal species. The algal biomass was concentrated by centrifugation and freeze dried. Its nutritional value as a protein source was determined by feeding trials with Long-Evans rats.

Trickle Irrigation in Michigan Fruit Plantings
Completion rept. 1 Jul 72-30 Sep 77
A. L. Kenworthy, Jun 78, 16p OWRT-B-029-MICH(1)
Contract DI-14-31-0001-3899

Keywords: Water consumption, Fruit crops, *Irrigation, Apple trees, Peach trees, Berry plants, Field tests, Nitrogen, Fertilizers, Trees(Plants), Size determination, Yield, Volume, Michigan, *Fruits, Trickle irrigation, Cherry trees, Plum trees, Traverse County(Michigan), Leelanau County(Michigan), Ottawa County(Michigan).

Research plots were established on apple, peach, plum, and sour cherry plantings in Grant Traverse County; on sour cherry, sweet cherry and plum in Leelanau County; and on blueberry in Ottawa County. Water application rates were 0, 0.5, 1.0, and 2.0 gallons of water per hour per tree in 1973 and 1974. In 1975 and 1976 the rate was 0, 1.0, 2.0 and 4.0 gph per tree. Duration of irrigation varied with tree size. In 1975, all plots (except blueberry) were subdivided for different rates of nitrogen application through the trickle system. Yield responses indicated that a rate of 2.0 gph was best for all apple cultivars except R. I. Greening, which showed the best response at 4.0 gph. Increase in yield with increased amounts of water was not significant for sour cherry, significant for peach, while plum, sweet cherry and blueberry showed no increase. Nitrogen application test results indicated that the amount of nitrogen could be reduced 50% if applied through the trickle system in June.

Water Quality Renovation of Animal Waste Lagoons Utilizing Aquatic Plants
Final rept. Jul 75-Dec 77
Dudley D. Culley, Jr, James H. Gholson, Tom S. Chisholm, Leon C. Standifer, and Ernest A. Epps. Jul 78, 167p EPA/600/2-78/153
Grant EPA-R-803326

Keywords: Aquatic plants, Lagoons(Ponds), *Agricultural wastes, Water pollution control, Aquaculture, Dairy cattle, Weed control, Yield, Plant growth, Nutrients, Concentration(Composition), Recovery, Ammonium compounds, Proteins, Nitrogen, Phosphorus, Potassium, Standards, *Aquatic weeds, *Animal wastes, *Water quality, Spirodela oligoriza, Spirodela polyrhiza, Lemna gibba.

Duckweeds *Spirodela oligoriza*, *S. polyrhiza*, and *Lemna gibba* (clone G3) grown on dairy waste lagoons gave an estimated maximum annual yield of 22,023 kg dry wt./ha. *S. oligoriza* and *L. gibba* had higher growth rates in the spring, fall, and winter, with *L. gibba* growing throughout most of the winter. Nutrient content of the plants increased with increasing nutrients in the lagoons. Mean crude protein of dry duckweeds was 36%, to a maximum of 42%. The duckweeds recovered on a hectare basis the N, P, and K of 15.5, 34, and 8.8 lactating cows respectively. During the winter the rate was 1.27 mg/l/day (duckweed lagoons) and 0.82 mg/l/day for controls. Ammonium reduction was 84% greater in the duckweed lagoons during winter. Phosphorus reduction in duckweed lagoons, though

significantly different from controls, was insufficient to meet water quality standards.

Use of Solar Energy to Heat Anaerobic Digesters. Part I. Technical and Economic Feasibility Study. Part II. Economic Feasibility throughout the United States
Feasibility study 5 Nov 75-1 Jun 76
Jess W. Malcolm, and David E. Cassel. Jul 78, 99p
EPA/600/2-78/114
Contract EPA-68-03-2356

Keywords: Sewage sludge, Anaerobic processes, Solar heating, Digesters, Sludge digestion, Sewage treatment, *Solar collectors, Flat plate collectors, Storage tanks, Heat exchangers, Computer programs, Economic analysis, Geography, Design, Feasibility, Computerized simulation, Energy conservation, Sludge disposal, Solid waste disposal, *Bioconversion, *Waste disposal, *Solar heating systems.

Two distinct, yet related studies were conducted to determine the technical and economic feasibility of using solar energy as the source of heat for the anaerobic digestion process. Retrofitting a solar energy collection and heat transfer system to a digester at Annapolis, Maryland was proven feasible in the first part of the study and the concept of using solar energy for digester heating throughout the United States, including Fairbanks, Alaska, was shown to be economically feasible in the second part of the study. The Part I study compared five (5) types of flat plate collectors and selected the cost effective design to supply approximately 90 percent of the heat load to maintain digester operating temperatures of 32C to 38C. Three flat plate collectors of varying efficiencies were evaluated for use at numerous locations in the United States. The study showed that optimum-sized flat plate collectors can provide from 82 to 97 percent of the total annual digester heat, the higher percentages being applicable to areas of higher solar radiation. The Part II study developed specific guidelines for determining the optimum size and conceptual design for a solar heating system for any size sludge digester at any location.

Envases para Alimentos Industrializados Chilenos. Tomo I (Packaging for Chilean Commercial Foodstuffs, Volume I)
Jun 77, 244p
Text in Spanish. Prepared in cooperation with Javier Zaldivar Ingenieros Asociados Limitada (Chile), Development Planning and Research Associates, Inc., Manhattan, KS., and Ingenieros y Economistas Consultores (Chile).

Keywords: Food packaging, *Chile, Industrial plants, Canning, Bottles, Beverages, Marketing, Exports, Milk, Fruits, Seafood, Rice, Coffee, Sugar crops, Bread, Wines, Sanitary engineering, Design, Quality, Food industry, *Food products, *Packaging, Developing country application.

Results are presented on the status of foodstuff packaging in Chile; marketing projections are tabulated. The study, limited to 33 categories of foodstuffs selected by the three sponsoring agencies, gives recommendations on various aspects of foodstuff packaging for domestic consumption and for export. Research methodology includes questionnaires and summaries of plant visits to canneries, bottlers, supermarkets, retailers, and exporters. Attention is focused upon milk products, fruits, soups, seafood, margarine and fats, rice, coffee, sugar, crackers, chocolates, carbonated beverages, beer, wine, and bread. Metal packaging in many cases is associated with lost labels, denting, difficulty in opening, and inadequate sanitary protection. It was concluded that Chilean packaging compares well with that of other South American countries, but is less varied in form, size, and materials than European and North American countries. Labels do compare well, and in the future they will be more colorful and attractive. Plastic bottles should be more carefully designed in regard to capping to prevent infiltration of foreign matter and spillage. The Chilean government regulates materials, design, size, and sanitary provisions; it utilizes data from the U.S. Food and Drug Administration, as well as from its own experts. Future programs will cover increased automation methods and reduced costs resulting from improved physical distribution

methods. (Portions of this document are not fully legible)

Corporacion de Fomento de la Produccion (Chile).
Envases para Alimentos Industrializados Chilenos. Tomo II (Packaging for Chilean Commercial Foodstuffs, Volume II)
Jun 77, 202p
Text in Spanish. Prepared in cooperation with Javier Zaldivar Ingenieros Asociados Limitada (Chile), Development Planning and Research Associates, Inc., Manhattan, KS., and Ingenieros y Economistas Consultores (Chile).

Keywords: Food packaging, *Chile, Quality control, Distribution systems, Marketing, Prices, Supply(Economics), *Packaging, Containers, Exports, Regulations, Food industry, *Food products, Developing country application.

Foodstuff packaging in Chile is discussed in terms of quality control, physical distribution, marketing, pricing, supply and demand, and modern technology. Chapter XVI provides plans for creating an institute of packaging and packing; it details budget, staffing, organization, and activities. Topics highlighted are economics of physical distribution of foodstuffs, critical analysis of packaging in exporting, comparative price analysis between Chile and other countries, existing international regulations, price analysis and its impact on selling price, relationship between packaging cost and selling price compared with the United States. Conclusions and recommendations are presented on this study and 10 months of subsequent field work. Attention should be directed toward improvements in packaging as a protector for foodstuffs, physical distribution, and marketing. It is stressed that the cost of packaging bears a significant relationship with selling price of foodstuffs. It is estimated that costs of physical distribution account for 6-12% of the selling price. In Chile, the per capita consumption of canned or bottled beverages and foodstuffs is US \$8 per year, compared with US \$46 in the United States. This indicates possible future growth and expanded economic activity for Chile in the food industry. (Portions of this document are not fully legible)

Envases para Alimentos Industrializados Chilenos. Anexos (Packaging for Chilean Commercial Foodstuffs, Volume III, Appendices)
Jun 77, 149p
Text in Spanish. Prepared in cooperation with Javier Zaldivar Ingenieros Asociados Limitada (Chile), Development Planning and Research Associates, Inc., Manhattan, KS., and Ingenieros y Economistas Consultores (Chile).

Keywords: Food packaging, *Chile, Marketing, Exports, Containers, Food industry, Packaging materials, Sanitary engineering, Design, Quality, *Packaging, *Food products, Developing country application.

The following topics are discussed: a marketing plan for foodstuffs destined for internal consumption or for export; description of surveys undertaken; packaging in metal, glass, plastic or paper containers and the use of each in the food industry; visits to plants manufacturing the different types of packaging and packing materials. Appendix VIII consists of a directory of 36 regional and national institutes of packaging and packing. Some of these are in London, Tokyo, Hong Kong, Taiwan, Bombay, Seoul, Bangkok, Brussels, Copenhagen, Helsinki, Paris, Berlin, Budapest, Dublin, The Hague, Oslo, Warsaw, and New York. Appendix IX lists books, journals, periodicals, and abstract bulletins concerned with food containers. These are English language references, printed in either the United States or in England. Visits to manufacturers included, among others, the American Can Company, Container Corporation of America, Gulf and Western Manufacturing Company, Anchor Hocking, and the Forest Products Laboratory. Research methodology describes the questionnaire design, analytical methods and the evaluation of international trends in the food industry. Factors evaluated are dents in metal containers; presence of foreign substances in cans, bottles, or containers; chemical composition of glass bottles; processing of milk products; consumer acceptance and complaints; as well as deterioration in flavor, taste, or color. (Portions of this document are not fully legible)

Algae and Water Pollution
 Final Manual 1973-76
 C. Mervin Palmer. Dec 77, 133p* EPA/600/9-77/036
 Contract EPA-68-03-0232

Keywords: *Algae, *Water pollution, Identifying, Manuals, Lakes, Reservoirs, Fresh water, Estuaries, Odors, Taste, Sewage treatment, Ecology, Taxonomy, Pest control, Toxicity, Lagoons(Ponds), Oxidation, Plugging, Filters, Columbia River, Industrial waste treatment, Bioindicators, Eutrophication.

Algae are involved in water pollution in a number of important ways. It requires a continuous monitoring and study of algae existing in waters of various quality in order to determine what controls or what changes or what uses can be instituted for the benefit of man and for conservation of water and of desirable aquatic life. This manual presents a simplified identification key limited to algal species of importance in water supplies and associated with pollution. The most important species are illustrated in three-dimensional drawings in color. The manual also deals with the ecology and significance of algae and presents information on filter clogging and mat forming algae, attached forms, algicides and algal control, algae associated with pollution (both fresh water and estuarine), various uses of algae, algae of rivers and lakes, eutrophication, algae as indicators of pollution, methods of recording algae, and the use of algae in waste stabilization lagoons for the treatment of domestic and/or industrial wastes.

Sponsored in part by Nicaraguan Ministry of Public Education, Managua.

Keywords: Instructional materials, Mathematics, Radio broadcasting, Students, Learning, *Nicaragua, *Education, Curricula, Developing country application.

This volume reports on the first experimental year of a research project designed to investigate, in a detailed and systematic way, the use of radio to teach mathematics in the primary-school classrooms of a developing country. Extensive collection of student response data, along with an explicit model for curriculum development, makes possible the type of study previously absent from the research literature. In July 1973 the United States Agency for International Development (AID) contracted with the Institute for Mathematical Studies in the Social Sciences (IMSSS) at Stanford University to carry out a two-stage project. During the first stage, which occupied the first funding year, members of the Institute staff visited several developing countries, whose governments had expressed an interest in teaching by radio, and selected from among them a suitable project site. The second stage of the project, undertaken in conjunction with the Ministry of Education of Nicaragua, is devoted to the development and evaluation of the radio instructional system. At present, the Radio Mathematics Project operates with financial support from both AID and the Government of Nicaragua.

The principal objective is to evaluate, at proof-of-concept scale, the potential of intensive aquaculture operations using power plant thermal discharges to enhance productivity. The field experiments involve the rearing of rainbow trout (*Salmo gairdneri*), channel catfish (*Ictalurus punctatus*) and American eel (*Anguilla rostrata*) for successive periods (semi-annual) in accordance with the temperature of the thermal effluents. Striped bass (*Morone saxatilis*) and the freshwater shrimp (*Macrobrachium rosenbergii*) are also being tested in smaller, laboratory size culture systems. The above mentioned species were selected because of their economic importance. They will be evaluated for food quality and marketability with the cooperation of potential commercial users. Aquaculture facilities were constructed at a steam electric generating plant for studies determining use for waste heat released into condenser cooling water. Growth rates, food conversion ratios, disease problems and mortality rates are being studied in the project. Production of Meal, Oil and Protein-Vitamin Preparations in the Fishing Industry, Third Revised and Enlarged Edition
P. I. Kulikov. c1978, 260p Rept no. TT-74-52058

Keywords: *Fish protein concentrates, Oils, Proteins, Vitamins, Translations, Production, Food processing, Fishes, *USSR, Utilization, Automation, Crustacea, Mollusca, Mammals, Tables(Data), Whales, Epinephrine, Insulin, *Food products.

This book deals with problems connected with the production of fish meal, oil and protein-vitamin preparations in the fishing industry. The technological advances within and outside the USSR are reported; ways of improving the production processes of edible and industrial products and the best possible means of utilizing the raw material are outlined. The topics considered include automation and mechanization of the production processes, the economics of introducing new production technology for whole fish meal and fish flour, and the expansion of the production of medicinal, edible and industrial oils, vitamin-protein preparations, hydrolyzates and other valuable products from low-quality fish, crustaceans, mollusks and marine mammals. The book is intended for engineers and technicians in the fishing industry and university students of fishery science. (Copyright (c) 1978 Amerind Publishing Co. Pvt. Ltd., New Delhi.)

Strategies for Balanced Growth in Developing Countries
Final rept.
Clark Edwards. Jul 77, 35p Rept no. AER-375

Keywords: Economic development, Developing countries, Growth, *Agricultural economics, Strategy, Technical assistance, Rural areas, Urban areas, Marketing, Farm crops, Productivity, Capital, Links(Mathematics), Government policies, *Industrial development, Economic growth, Economy, Technological advancement, Capital investments, Economic sectors, Program implementation.

Strategies for balancing growth among several economic sectors of a developing nation are outlined. The report focuses on programs to increase food production in the developing world and covers four separate sectors of a developing economy: traditional agriculture, advancing agriculture, the rural nonfarm economy, and the urban economy. The report notes that when new technology is introduced to any one sector, planners often overlook unintended side effects, some favorable and some not, on the other three sectors. Multifaceted programs designed to increase technology in rural and urban industries as well as in agriculture may help to alleviate some of the side effects.

Grant NSF-GI-20, NSF-ARA70-01077

Keywords: *Land use, Rural areas, *Agricultural economics, Ecology, Natural resources, Social effect, Management, Design, Irrigation, Decision making, Systems analysis, Mathematical models, Policies, Michigan.

The detailed results of the past two years of work on this project are presented in a series of 16 reports. This final report is a technical and detailed summary of the results given in reports 1 through 13, including a brief narrative discussion of the theoretical framework that provides a congruence to the particulars given in the reports. The principles of resource management suggest that decisions relating to comprehensive planning fall into three general categories: technical alternatives, ecological choices (natural environment), and institutional choices (social and cultural organization). Detailed studies of proto-typical subsystems relating to each class of decision were carried out as part of the overall effort. The results of these studies and their relationship to the overall conceptual framework are summarized in this report.

Keywords: Methyl alcohol, Fuels, Meetings, Coal gasification, Crude oil, Natural gas, Cost analysis, Substitutes, Biomass, Fuel consumption, Utilization, National government, *Bioconversion, *Methanol, *Waste recycling, Solid wastes, Synthetic fuels, Manufactured gas.

Adequate technology exists to process gas, oil, and coal as feedstocks for methanol production; the technology to process solid wastes is still being developed. Methanol can be produced at prices competitive with current premium fuel price levels but, should foreign oil prices drop significantly, investment capital would be hard to attract. Priorities for developing conversion techniques should be (1) foreign flare gas; (2) municipal solid waste; (3) coal. Political and reliability consid-

erations might rule out foreign sources. Uses of methanol fuel that become technically and economically ready in 5-10 years could absorb all methanol that might be available at competitive prices. Public policy could motivate government action to develop new fuel applications, such as automotive fuels. The government should share the risk of developing a methanol fuels industry; a number of alternatives to guarantee a market for methanol might be considered.

Forward Osmosis Extractors: Theory, Feasibility and Design Optimization
Doctoral thesis
Charles Donald Moody. 1977, 150p OWRT-B-053-ARIZ(4)
Contract DI-14-34-0001-7137

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: Desalting, Membranes, Extractors, Theses, Solvents, Mathematical models, Potable water, Fortran, Computer programs, Fertilizers, Cast analysis, Polarization (Charge separation), Water treatment, Irrigation water, Water reclamation, Design criteria, Permeability, Feasibility, *Desalination, Reverse osmosis desalination.

Osmosis occurs when two solutions of differing osmolar concentrations are separated by a membrane permeable to the solvent but not to the solutes. In osmosis, water flows spontaneously from the low concentration source solution to the high concentration driving solution. Forward osmosis is examined as a low-technology, low-energy use process for hydration and dehydration of aqueous solutions. The fundamental mechanical device is a continuous counterflow extractor which incorporates a semipermeable membrane separating the source and driving solutions. The counterflow design permits maximum water recovery from the source solution and maximum dilution of the driving solution. The nonlinear differential equations describing the water and solute flows in the extractor are solved using analytical and numerical techniques. The resulting mathematical models contain design equations which can be used to determine the optimum membrane transport characteristics, optimum membrane size, and the asymmetric membrane orientation which minimizes concentration polarization. Theoretical and experimental results compare well. Two applications discussed in detail are the production of potable water from seawater using human nutrients, and fertilizer-driven forward osmosis (FDFO) for converting saline water to irrigation water.

Aspectos de la Produccion Agropecuaria de Centro-America en el Marco de la Integracion Economica (Aspects of Central American Farming Production within the Framework of Economic Integration)
1977, 91p
Text in Spanish.

Keywords: *Forestry, *Agricultural economics, Developing countries, Production, Farm crops, Cattle, International trade, International relations, Grain crops, Food, Costa Rica, El Salvador, Guatemala, Shortages, Prices, Investments, Honduras, Nicaragua, *Central America, Developing country application.

This publication is divided into three reports: (a) potential for specialization in the farming areas of Central American countries, (b) the farming subsector in Central America, and (c) regional cooperation for the development of Central American forest resources. Between 1974 and 1976, in cooperation with the respective governments, a tripartite study was made of the rural and farming sectors in Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua. The purpose of this publication is to delineate certain problems common to two or more of the countries which may, to a certain extent, be resolved through mutual cooperation. Increased productivity in cattle and crop raising, and hence in income, depends upon the degree of

specialization of the five countries. In each country there are significant differences in soil, erosion, temperature, and precipitation. To offset such differences, efforts are being made to redistribute rural populations to less exploited areas. Trade restrictions on grain crops have hindered optimum utilization of resources and a local shortage of some foodstuff leads to price fluctuations that are undesirable. It is stated that investment and development programs can be aimed toward projects apt to promote competition leading to better organization of total resources.

Informe General Sobre el Desarrollo Agropecuario y Rural de El Salvador (General Report on Rural and Farming Development of El Salvador)
Dec 76, 78p
Text in Spanish.

Keywords: *El Salvador, *Agricultural economics, Production, Farm crops, Cattle, Exports, Project planning, Rural areas, Grain crops, Food consumption, Developing country application.

During August and September 1974, a tripartite study was made for the purpose of assisting the government of El Salvador to study the strategy, policies, programs, and projects for increasing production in cattle and crop raising activities, and for raising the standard of living in rural areas. This report summarizes the background and rationale which gave rise to the principal suggestions and comments. Eight technical annexes, published in two separate volumes, provide a more detailed discussion of certain aspects of this general report. This report and its annexes are part of a series on the five Central American countries. The following main topics are outlined: national economy in relation to the cattle and crop raising sector; trends in the production of grain and cattle; socioeconomic factors affecting development; organization of agencies concerned with agriculture; soil resources in relation to production; incentives for agricultural development; and, strategy for rural and farming development.

Index Retrospectif. Planification et Developpement Agricoles, Nos. 30001-30536, Volume 1 (Retrospective Index. Agricultural Planning and Development, Nos. 30001-30536, Volume 1)
1978, 117p
Text in French.

Keywords: *Agriculture, Planning, Development, Indexes (Documentation), Tunisia, Production, Cooperation, Bibliographies, Irrigation, Farm crops, Farm management, Developing country application.

As the first in a series of new publications, a retrospective index of bibliographic data is presented on agricultural planning and development. Rapid access to such information, by sectors, is needed by Tunisia in order to prevent useless duplication of research efforts. Documentation representing 40,000 reports, dating from 1947, was gathered by the National Center of Agricultural Documentation; it was then analyzed and microfiched. Information from these reports is disseminated through retrospective indexes. These data base of documents and microfiche can be accessed according to the need of users. For example, a user interested in ground water may formulate several questions which are then developed into a search strategy. The end product is a specialized bibliography corresponding to that query. Each bibliographic citation contains a brief analytical summary which is composed of descriptive key words. Some examples of key words are sociological survey, technical report, synthesis. The key words are arranged so as to form a type of annotation. The original language of the document is indicated. Documents selected by the user, according to bibliographic accession number, may be furnished either in microfiche or in hard copy reproduction. The retrospective index also provides subject matter and personal author indexes. An additional index provides a list of accession numbers for each corporate author.

Diagnostico para el Desarrollo de Servicios de Informacion Cientifica y Tecnologica en Panama (Analysis of the Development of Scientific and Technological Services in Panama)

Final rept.
Stella G. Dextre. Dec 77, 149p
Text in Spanish.

Keywords: *Libraries, *Panama, Surveys, *Information services, Requirements, Librarians, Professional personnel, Objectives, Developing country application, Data banks.

An analysis is presented of all sectors concerned with scientific and technical information in Panama. Survey recommendations are provided for information services in Panama, which are neither organized nor centralized. Research methodology includes interviews and survey instruments for existing library resources in such fields as mining, health, telecommunications, education, farming, and housing. Recommendations to fill the needs assessment include bibliographic bulletins, interlibrary loan, query response from a pertinent clearinghouse, and training of subject-matter librarians. Microform-, audiovisual-, and reprographic equipment is to be provided. Holdings of specific libraries are listed. For example, the University of Panama holds Chemical Abstracts, Nuclear Science Abstracts, and Excerpta Medica. The second part of this library survey and analysis quantifies the resources needed to implement the foregoing recommendations. Specific goals are the establishment of an industrial information center, an extension service to provide technical information to outlying sectors, and of data banks such as that being developed for agriculture. Strategy to obtain these goals includes a central coordinating office; this office should then become a member of international documentation organizations. Each Ministry should catalog its own publications; this would provide a basis for exchange of technical information in Panama, as well as selective dissemination of information with clearinghouses abroad.

Improving Management of Farmer Cooperatives
General rept. no. 120
Milton L. Manuel. Jun 64, 55p

Keywords: Management, Organizations, Rural areas, Commerce, Agricultural economics, Rural sociology, Records management, Accounting, Budgeting, Auditing, Cooperation, Financial management, Capital, Industrial relations, Public relations, *Agricultural cooperatives, Cooperatives, Economic cooperation, Cooperative production and marketing systems, Organizational development, Developing country application.

The publication shows how management principles apply to local cooperatives and how they can be used to manage cooperatives successfully. It is intended specifically for managers and directors of these associations. The report also considers tools and techniques that can help put management principles into practice and gives suggestions for performing different management functions. Included in the tools are records and accounts, budgeting to meet various management needs, and the external audit.

Control de Niguas (Controlling Chiggers)
1973, 16p Rept no. USDA/BULL-137
Text in Spanish.

Keywords: Mites, *Pest control, Insecticides, Life cycles, Pesticides, Chiggers, Developing country application, Trombicula.

Various aspects of the chigger including its life cycle, effect on humans and animals, and their control are discussed in depth. The areas/animals/humans most likely to be affected/infested with chiggers can be controlled with an insecticide spray (exact directions for application are given in bulletin) or an insect barrier made of ropes treated in insecticide. Man going into an area infested with chiggers can protect himself by applying insecticide to crucial areas of his clothing. If unable to take precautionary measures against attack, a bathing and medical program are discussed to help relieve discomfort.

Rural Youth Clubs Around the World
 1967, 42p

Keywords: Youths, Rural areas, Project planning, Project management, Group dynamics, Quality of life, Organizing, Farm crops, *Training, *Education, *Agriculture, Developing country application.

Rural youth work has been accepted as a way to introduce new ideas into rural life and train leaders and citizens for the future. Rural youth work is educational and aims at the total development of young people to prepare them for their role as useful citizens. A successful program is valuable to the youth who participate, the families involved, the community, and their country. Rural youth work is an effective way to close the gap between what is known about agriculture and home economics and what is actually practiced. This handbook shows how to establish, operate, and evaluate a rural youth program. Projects and special activities for youth groups are also discussed.

Population Growth Problem in Developing Countries: Coordinated Assistance Essential
 Report to the Congress.
 29 Dec 78, 112p* Rept no. ID-78-54

Keywords: Population growth, Developing countries, Federal assistance programs, Foreign aid, Financing, Coordination, Cooperation, Leadership, Birth control, Sterilization, Organizations, Auditing, Program coordination, *Population control, Financial assistance, Voluntary organizations, Overpopulation.

Rapid population growth in developing countries impedes efforts to improve the quality of life. Many governmental, international, and private and voluntary organizations provide population assistance to an ever-increasing number of countries. Cumulative assistance could now total about \$2 billion; the United States alone provided about \$1.2 billion in the 1965-78 period. Because of the complexity of the problem and the many organizations involved, systematic coordination of assistance is essential to ensure that programs are as efficient and effective as possible. GAO recommends that the Agency for International Development work with the other major contributors and the developing countries to improve coordination, to reach agreement on leadership, strategy, and program responsibility, and to make sure that all participants are adequately informed of each other's activities.

Postharvest Food Losses in Developing Countries
 Final rept.
 Dec 78, 217p Rept no. CIR/BOSTID-78/30
 Contract AID/csd-2584

Keywords: Harvesting, Developing countries, Losses, Food, Farm crops, Estimates, *Food processing, Grains(Food), Leguminous plants, Fisheries, Food consumption, Preserving, Conservation, Education, Specialized training, Recommendations, *Food storage, *Agricultural economics, *Agricultural extension services, Developing country application.

The study is devoted to assessing both the potential of food loss reduction efforts and their limitations. It summarizes existing work and information about losses of the major food crops and fish; discusses some of the economic and social factors involved; identifies major areas of need; and suggests various policy and program options for developing countries and technical assistance agencies. The study confirms that there is no known simple, inexpensive technology that can, by itself, make a profound impact on postharvest losses. On the contrary, postharvest food conservation can be achieved only through a combination of location-specific organization, problem identification, training, information, and adapted technology. Good conservation practice must be applied on a sustained basis, with continual refinement in response to new information. Significant worldwide reductions in food losses will result as the aggregate of these sustained national efforts, which should be given all possible support by bilateral and international technical assistance agencies.

PB-290 422/5 PC A16/MF A01
 National Research Council, Washington, DC. Board on Science and Technology for International Development.

Postharvest Food Losses in Developing Countries: A Bibliography
 Final rept.
 Dec 78, 371p Rept no. CIR/BOSTID-78/30A
 Contract AID/csd-2584

Keywords: Harvesting, Developing countries, Losses, Bibliographies, Food, Farm crops, Estimates, *Food storage, Food packaging, *Food processing, Irradiation, Fumigation, Education, Specialized training, Insect control, Microorganisms, Rice, Wheat, Grains(Food), Fruits, Vegetables, Potatoes, Leguminous plants, Fisheries, *Agricultural economics, *Agricultural extension services, Developing country application.

The Bibliography is a companion volume to 'Postharvest Food Losses in Developing Countries'. The bibliography includes reported estimates of food losses; discussions of loss factors and vectors; papers describing methodologies for food loss assessment; specific food loss reduction procedures; aspects of training for loss reduction; other information sources; and references dealing with the economics of food conservation. The bibliography contains 2,100 entries focusing on the following commodities and food groups: grains (particularly maize, rice, and wheat); pulses and legumes; fruits and vegetables; roots and tubers; and fish. The bibliography contains a table of contents, author index, and country index. Many entries are annotated.

Keywords: Management methods, Textile industry, Technical assistance, Production management, Sales management, Marketing, Financing, Accounting, Cost analysis, Time studies, *Clothing, Manufacturing, Graphic methods, Manuals, Seasonal variations, Salaries, *Management techniques, Business administration, Fashion industry, Organization size(Groups), Developing country application.

The manual was written to provide businessmen in the garment industry with methods and recommendations designed to improve their management techniques. These recommendations are derived from a study of

APPROPRIATE TECHNOLOGY ABSTRACTS

several representative garment factories and are intended to aid in technical assistance work in the clothing field. Depending on the size and type of business, alternate techniques are presented. Special attention is devoted to production, financing, sales and marketing methods. Specific duties and responsibilities are listed for proprietors, sales managers and salesmen in relation to showroom sales, direct sales, wholesalers, retailers, and distributorships. Details are provided to set up an accounting system covering profit and loss, cost analysis, credit and/or cash sales, monthly reconciliation of bank statements, and statement of net worth. Graphics explain planning and controlled production, sales campaigns for special holidays (Christmas) and seasonal events (return to school). Time and motion studies are provided for garment cutters and quality control of the same. An appendix is devoted to the calculation of the actual cost of labor by noting that salary includes vacation pay and social security payments.

La Investigacion Tecnologica Industrial en el Peru. Analisis y Comentarios (Industrial Technological Research in Peru. Analysis and Comments)
 Oct 75, 34p Rept no. POLITICA TECNOLOGICA-4
 Text in Spanish.

Keywords: Technology, Research, *Peru, Finance, Resource allocation, Product development, Marketing, *Technology transfer, Information services, Imports, Capital, Documentation, Problem solving, Government policies, *Research and Development, *Industrial development, Industrial technology, Developing country application, Gross national product.

Ten reports dealing with the solution of technological problems of Peruvian industry are presented. The importance of an industrial technology policy is stressed. Budgetary allocations should be made for this purpose; capital can be accumulated through developing and marketing new products and processes, thereby creating new markets. Technology transfer, technical information depositories, documentation clearing-houses and abstract journals are cited in relation to availability of information and the time lag between capture and dissemination of technical data. Services offered by the National University of Engineering (Peru) are outlined in reference to basic research. Graphics are presented on the present-day 'second' industrial revolution in relation to the gross national product. It is noted that industrial automation does not create unemployment but does provide a method to shorten the technology gap. Technological research can improve industrial processes by utilizing domestic materials instead of more costly imported materials.

 Feb 75, 138p
 Text in Spanish.

Keywords: Technology innovation, Industries, Colombia, Research management, Financing, Resource allocation, Exports, Marketing, Publicity, International relations, Government policies, Technical assistance, Socioeconomic status, Information services, *Industrial development, *Technology transfer, *Research and development, Industrial technology, Scientific enterprise, Developing country application.

A seminar was held on 12-13 February 1975, in Colombia, S.A., to discuss the development of industrial technology. The main objectives were to form an industrial science and technology policy, and to analyze problems related to this development in view of the country's need to raise its socio-economic level. Seminar topics included financing of technological development, the industrial technology system regarding promotion of exports, Colombia's position within the Andean Group, technology and the industrial sector, and the relationship of foreign businesses with Colombia's technological development. Conclusions and recommendations covered financing through budgetary allocation; strengthening local technological capability (e.g., constructing plants and providing con-

sulting services); strengthening domestic demand for science and technology works (e.g., acquisition and analysis of technological information); directing such activities toward priorities of the country; and the formation of a national science and technology policy.

 Text in Spanish.

Keywords: Technology, Economic development, Developing countries, Research management, Government policies, Regulations, Businesses, Universities, Political systems, Information services, *Technology transfer, Assessment, Japan, Colombia, Industrial development, *Research and development, Scientific enterprise, Information dissemination, Developing country application, Industrial technology.

The technical journal consists of an editorial and five articles. The editorial discusses the technological and scientific revolution of the present day and puts into sharp focus the economic differences between the developed and the developing countries. The first article cites three types of institutions involved in a national policy on science and technology: those setting policy and furthering scientific works, those regulating the import of technology, and those directly involved in science and technology activities. The second article discusses the good relations involving science, technology and the university in terms of politics, economics, and governmental authority. Based on conferences, interviews and observation, the third article discusses technology dissemination in Japan and its pertinence to Colombia. The fourth article deals with technology assessment related to Latin America. Methodology and alternative technology are briefly discussed. Ten years of work of the committee on technology transfer is briefly covered in the fifth article.

Cartilla Sobre Adquisicion de Tecnologia (Note on the Acquisition of Technology)
 Feix Moreno Posada. 30 Sep 77, 200p
 Text in Spanish.

Keywords: *Technology transfer, Industries, Colombia, Information services, Acquisition, Technical assistance, Purchasing, Contracts, Patents, Commercial law, International trade, *Industrial development, Industrial technology, *Information sources, Developing country application.

Technology transfer is discussed in terms of information brokers, commercial transfer from developed to developing countries, information acquisition, and patents. Concepts also mentioned are technological gap, know-how, free exchange of information, trademarks, and national science policy. To guide the Colombian entrepreneur in acquiring technical information, some recommendations are provided on how to negotiate a contract. Alternatives to purchasing are listed: copying it, developing it himself, contracting with a research organization, obtaining it through purchasing the hardware and software, and joining foreign investors who already have it. Chapter IV details all possible clauses envisioned in a contract to purchase technical information and equipment. Chapter VII outlines stipulations on guarantees, privileged information, transfer to third parties, most-favored-nation clauses, and applicable legislation. In addition, a check list is provided for the businessman before signing the contract. A 24-item bibliography is included.

Experimental Pond Production of Selected Marine Species
 Completion rept. Jul 75-Sep 78
 William C. Trimble, and Walter M. Tatum. Nov 78, 136p NOAA-78122001

Keywords: *Ponds, *Aquaculture, Brackish water, Marine fishes, Trout, Shellfish, Strimps, Minnows, Feeding stuffs, Growth, Temperature, Photoperiodism, Circulation, Survival, Alabama, Bait fish.

During 1975-1978, ten marine species were evaluated as mariculture candidates at Alabama's Claude Peteet Mariculture Center at Gulf Shores, Alabama. The site, to investigate brackish water food production, as well as bait production, was selected on traditionally agricultural land adjacent to the Gulf Intracoastal Waterway. Earthen ponds were selected as initial experimental units for production and were filled with brackish water from the Waterway. Candidates selected for culture for research conducted during 1975-1978 included: Florida pompano (*Trachinotus carolinus*), penaeid shrimp (*Penaeus aztecus*, *P. duorarum*, *P. setiferus*, and *P. vannamei*), gulf killifish or 'bull minnow' (*Fundulus grandis*), rainbow trout (*Salmo gairdneri*), red drum or 'redfish' (*Sciaenops ocellata*), red snapper (*Lutjanus compechanus*), and river shrimp (*Macrobrachium ohione*).

Conversion and Storage of Wind Energy as Nitrogenous Fertilizer
 Final rept.
 Michael B. Dubey. Nov 78, 264p Rept no. LR-28338
 Contract NSF-C-75-22186

Keywords: Ammonia, Ammonium nitrate, Wind power generation, Hydrogen production, Electrolysis, Fertilizers, Environmental surveys, Design criteria, Energy storage, Manufacturing, Process charting, Technology, Chemical industry, Storage, Performance evaluation, Capitalized costs, Economics, Comparison, *Fertilizers, *Wind energy, Chemical feedstocks, State of the art.

Wind energy, air and water can be combined to make anhydrous ammonia and ammonium nitrate, two important nitrogenous fertilizers that are usually synthesized using natural gas as the primary feedstock. In the sized concept, wind energy is captured by a wind turbine and converted to electricity. The electricity generates hydrogen and oxygen by water electrolysis. The hydrogen is stored in sufficient quantity to serve as chemical feedstock and energy to manufacture anhydrous ammonia or ammonium nitrate solution.

Economic Analysis of Cropping Systems in Dryland Farming
 Final rept. Dec 74-Dec 75

APPROPRIATE TECHNOLOGY ABSTRACTS

Oscar R. Burt, and M. S. Stauber. Apr 77, 124p
OWRC-042
Contract OWRC-10570032
Prepared in cooperation with Montana State Univ.,
Bozeman. Dept. of Agricultural Economics.

Keywords: Grain crops, *Agricultural economics, *Arid land, Salinity, Production, Yield, Optimization, Wheat plants, Barley plants, Soil water, Losses, Fertilizers, Mathematical models, Markov chains, Profits, Montana, North Dakota, South Dakota, Wyoming, *Farming, Crop rotation.

Results of this research provide the basis for determination of economically optimal crop rotation strategies for the Northern Great Plains that will more fully utilize moisture and aid in eliminating saline seeps. The crop yield response relationships estimated in the analysis will be useful for a better understanding of cereal crop yields in relation to climatic variables.

Manpower Forecasting Model for Educational Planning
Technical rept.
James Boettcher, and Lawrence T. Brekka. Dec 76, 73p Rept no. TR-13
Contract NIRT-1

Keywords: *Education, Models, Manpower, Forecasting, Radio broadcasting, Television systems, Specialized training, Requirements, Farms, Mass media, Instructional materials, *Iran, Developing countries, *Management techniques, Teaching methods.

The National Cropping Plan of Iran is reviewed to define the critical improvements in farming techniques required to meet food production needs. Changes that depend on the education of Iran's small farmers are isolated and organized into a series of informational programs for television or radio. Iranian and International Agricultural experts outline over 150 program segments covering the critical practices. The program segments are organized into eight broadcast area schedules to suit the agro-climatic conditions and crop selections in different parts of the country. The procedures to organize the program information and broadcast schedules and much of the subject content itself is felt to be applicable to other developing agricultural countries.

CMU/Intertect Ultra Low Cost Shelters in Relief Situations in Bangladesh
Charles H. Goodspeed, Volker H. Hartkopf, and Frederick C. Cuny. May 77, 18p
Contract AID/TA-C-1174, AID/TA-C-1345
Prepared in cooperation with Intertect, Dallas, TX.

Keywords: Shelters, Developing countries, *Bangladesh, Housing planning, Construction, Citizen participation, Guidelines, Technical assistance, Technology innovation, *Housing, Emergency planning, Developing country application.

This is a report to the Agency for International Development on the two-year evaluation of the CMU/Intertect refugee shelter field test in Bangladesh. The test shelters were built during Spring, 1975, and revisited during Spring, 1977.

PB-291 588/2 **PC A02/MF A01**
Collier's Earthworm Compost System, Inc., Santa Clara, CA.
Conversion of Municipal Wastewater Treatment Plant Residual Sludges into Earthworm Castings for Use as Topsoil
Annual rept. no. 1, 15 Jul 77-14 Jul 78
Jack E. Collier. 14 Jul 78, 21p NSF/RA-780346
Grant NSF-ENV77-18832

Keywords: Worms, Composts, Sludge digestion, Soil stabilization, *Sewage treatment, Vegetable crops, Sludge disposal, Invertebrates, Plant growth, Breeding, Feasibility, Soil analysis, Metals, Field tests, Harvesting, Cost analysis, Soil fertility, Demand(Economics), Evaluation, *Soils, Vermicomposting, Earthworms, Heavy metals.

This experiment demonstrates the physical abilities of earthworms to convert sizable amounts of municipal sewage sludges into worm manure, a stabilized soil known as castings. The process of composting wastes with domesticated earthworms under controlled conditions, called vermicomposting, is believed by the investigator to be an efficient and economical method of recycling sludges and other organic wastes. The report describes the conditions of the experiment and a summary of findings. These include longevity tests of red-worms in sludge, pathogen tests, handling and harvesting techniques, plant growth comparisons, breeding rates in sludge, optimum worm density, product demand, heavy metals analysis, and soil temperatures. In a review of principal findings it is indicated that vermicomposting offers a much higher degree of stabilization over other conventional thermal composting methods. The report also lists publications, conferences, and new objectives.

Programming and Training for Small Farm Grain Storage
Program and training journal manual series
Carl J. Lindblad. Sep 78, 100p Rept nos. ACTION/PAM-4200.27, MANUAL SER-2B

Keywords: Storage, *Grains(Food), Specialized training, Farms, Manuals, Moisture content, Pest control, Insects, Rodents, Drying, Losses, Heat, Fungi, Birds, *Food storage, Developing country application.

Although grain storage program conception and objectives will vary from country to country and within each country, there are basic objectives which will be present in every grain storage program. These include: (1) to preserve the quantity of the harvest, (2) to maintain its quality, and (3) to result in the highest possible sale value for whatever grain is sold or traded. This book is designed to aid in identifying storage problems and devising solutions to them. The approach favors techniques based on the local needs and resources of the farmer. Basic subject areas discussed are the maintenance of storage hygiene; the control of grain moisture; and the specific control of grain pests such as insects, birds, and rodents.

Self-Help Construction of 1-Story Buildings
Program and training journal manual series
Peter Gallant, Nancy Bergau, Peter Hunt, and Jim Seaton. 1977, 244p* Rept no. MANUAL SER-6

Keywords: Residential buildings, Housing planning, Developing countries, Design, Quality of life, Project planning, Construction management, Construction materials, Toilet facilities, Foundations, *Housing, Developing country application.

This manual is designed to assist a community or a family to: (1) plan and design a one-story building for present and future needs, (2) assess the advantages and disadvantages of locally available construction materials, (3) draw and understand their own construction plans; and (4) successfully complete construction

according to their own plans. The focus is on basic principles of construction with materials that are low-cost, available in many parts of the world, and easy to work with. It is illustrated to help make the processes easier to visualize. These buildings are specifically designed for developing countries and do not necessarily meet building code requirements.

Community Water Management, Research Needs for Small and Urbanizing Communities
David A. Del Porto. Jul 78, 70p NSF/RA-780372

Keywords: *Water supply, Water quality management, Urban areas, Sewage treatment, Prices, Water conservation, Conflicts, Waste water reuse, Aquaculture, Water consumption, Toilet facilities, Water treatment, Ground water, *Water quality, Water demand, Water costs.

Various methods of approach in dealing with the water needs of small and urbanizing communities are outlined. One section is devoted to water quality issues, such as types of contamination and sources of pollution. Another, entitled Supply, Demand, and Use concerns historical perspectives of wastewater management, the re-definition and semantics of supply and demand, the conflict of environment vs. energy, and economic considerations. Other sections analyze future trends and viable alternatives to the flush toilet such as compost systems. Wastewater aquaculture and community planning are considered as alternative futures.

Communication Media and Technology: A Look at Their Role in Non-Formal Education Programs
Information bulletin
Henry T. Ingle. Aug 74, 69p Rept no. IB-5

Keywords: Specialized training, Mass media, *Education, Personnel development, Radio communication, Television broadcasting, Mass communication, Quality of life, *Television, Developing country applications, Educational games.

The purpose of this publication is to review the role communication media and technology have played in the area of non-formal education. Specific instances are cited in which media and technology are being used in non-formal educational projects around the world, along with background information on each of these efforts with particular emphasis being given to projects in the developing regions of the world. Discussed is the need for a non-formal approach to education as well as the implications of such an approach. Included is a review of the different types of media and technology which have been used or are currently being used in non-formal programs.

How to Use Natural Energy
Paul McClory, J. C. McVeigh, W. G. Jack, Kuno Tichatschek, and Anthony Wigens. c1978, 61p*
Also pub. as ISSN-0-9506107-1-2.

Keywords: *Solar energy, Wind power, *Hydroelectric power, Heat pumps, Heat recovery, Thermal insulation, Methane, Biomass, Swimming pools, Space heating, Electric power generation, Reviews, Great Britain, *Wind energy, Renewable energy sources, Energy conservation, *Bioconversion, Heat pipes, *Waste heat utilization.

This booklet is for those who wish to take an active part in the natural energy field or to be regularly informed of the latest developments on all aspects of energy conservation, self-sufficiency, and the environment. The objective is to promote a wide range of products which use natural energy as a primary source of fuel and to help conserve reserves of fossil fuels. The emphasis is to combine optimum combinations of quality and cost-effectiveness. Some of the topics discussed in this booklet include: solar heating; power from the wind; water power; heat pumps; waste heat recovery; heat wheels; and home insulation.

Taking Care of Wooden Ships
Maynard Bray. Jan 78, 85p* NOAA-79010502
Grant NOAA-04-B-MO1-79

Keywords: *Ships, Maintenance, Wood, *Wood preservatives, Coating processes, Caulking, Guidelines, *Boats, Constitution vessel, Clearwater vessel, Sea Grant program.

Two papers and discussions are presented on the care of old and relatively new wooden ships. The first was taken with some editing from the proceedings of the Bath Marine Museum's Symposium on American Maritime History, held on May 6-8, 1977, and mainly concerns the maintenance of the U.S.S. Constitution. The second paper is a manual for the maintenance of the Hudson River Sloop Clearwater prepared in 1976 by Maynard Bray. Special care of wooden ships is a skill now limited to a few and efforts are being made to perpetuate these skills.

Effects of Stocking Size and Density on Growth and Survival of 'Macrobrachium rosenbergii' (De Man) in Ponds
Scott A. Willis, and Mark E. Berrigan. 1978, 15p
CONTRIB-289, NOAA-78122801

Keywords: Aquaculture, Shellfish, Growth, Survival, Density(Mass/volume), *Ponds, Weight(Mass), Mortality, Florida, *Fishes, Macrobrachium rosenbergii.

Postlarval and juvenile *Macrobrachium rosenbergii* were stocked in twelve 0.025 ha earthen ponds to study the effects of stocking size and density on growth and survival. The experiment was comprised of four treatments, three replicates each. One treatment consisted of juveniles (0.760-0.792 g) stocked at 5/sq m. The remaining treatments were postlarvae (0.044-0.063 g) stocked at 5, 10, and 20/sq m. Following each four week sampling interval, feeding rates were adjusted based on mean body weight and an estimated 5% mortality. All ponds were fed Purina Marine Ration 25 at rates of 30, 15, 8, 4, 2, and 2% body weight for each respective sampling interval during the 24 week study. Juveniles grew to a mean weight of 43.256 g while postlarvae reached 29.749 respectively. Survival ranged from 38 to 92% and final feed conversion ratios ranged from 1.88:1 to 0.96:1. The maximum equivalent production of 2278.61 kg/ha occurred in ponds stocked with 20/sq m.

Plant Requirements to Set Up and Operate a Small Community Electric System
May 59, 32p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: Electric power plants, Requirements, Electric generators, *Electric power, Electric power distribution, Revenue, Electric utilities, Investments, Profits, *Industrial plants, Developing country application, Villages.

The purpose of the manual is to provide information for establishing electric systems in small villages where such services are not now available. Small electric generators are available that can be used in building systems that will meet the needs of small villages. These systems would be based on the number of homes and stores to be lighted, the number of street lights required, the power requirements of local industries and the estimated expansion requirements. These small electric systems will provide a valuable service to such villages by producing and distributing power at a cost that the average community can afford. Under reasonable conditions, such as those assumed for the plant in this manual, either public operation or private operation would be practicable. Such an electric plant will produce revenue to amortize the investment and at the same time provide an operating profit of more than 15 percent. For the entrepreneur there is an opportunity to invest money, on which he will earn a satisfactory return, have employment at a fair salary, and at the same time be increasing the value of his property. This revised version of the manual includes current costs of labor, machinery, equipment and supplies, as well as additional information relative to engineering, training, safety, markets, sales, financial and economic factors. The manual is designed to provide a general picture of the factors which must be considered in establishing and operating a small-scale plant of this type. It should prove

useful in creating interest in the subject, and serve to give enough understanding of the related considerations to help government officials, other leaders and businessmen to determine whether the potential deserves more-detailed attention.

Plant Requirements for Manufacture of Surgical Instruments
Sep 61, 13p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Surgical instruments, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Industrial management, Production planning, Cost estimates, Developing country application.

The document gives information on the production and plant requirements for the manufacture of surgical instruments including plant layout. Assumption of production at a minimum volume level is made. Most basic instruments have been carefully selected and a list is given. The report is one of a series of reports resulting from overseas technical inquiries on factory, operation, management, and engineering. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Salicylic Acid
Sep 61, 33p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Chemical industry, *Industrial plants, Manufacturing, *Salicylic acids, Requirements, Production management, Production methods, Production capacity, Operating costs, Process charting, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The purpose of the report is to present basic information for establishing and operating a chemical plant in a foreign country for the production of salicylic acid. In the United States salicylic acid is manufactured in three quality grades: technical, crystallized and sublimed (USP). All three of these grades can be manufactured in this plant. Since the technical grade acid has the largest use, all facts and figures shown in this report will be based on the production of technical grade acid. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Apr 62, 43p

Keywords: *Industrial plants, Food processing, Manufacturing, Requirements, Potatoes, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Sanitation, Safety engineering, *Food products, *Vegetables, Developing country application, Potato chips.

APPROPRIATE TECHNOLOGY ABSTRACTS

The purpose of the report is to present basic information for establishing and operating a manufacturing plant in a foreign country to produce potato chips. In the United States, the plant outlined in this report is considered small to medium-sized. Other typical United States plants are more mechanized and have higher production rates. A plant of this kind, if built in a foreign country, could use less equipment and require more labor but a smaller capital investment. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Potash
Jun 62, 11p

Keywords: *Chemical industry, *Industrial plants, Manufacturing, *Potassium carbonates, Requirements, Production methods, Production capacity, Operating costs, Process charting, Materials estimates, Equipment, Plant layout, Production planning, Cost estimates, Labor estimates, Fertilizers, Developing country application.

The major use of potassium salts is for fertilizer, since potassium, along with nitrogen and phosphorus, is one of the three essential minerals for plant food that are rapidly depleted from soils whose crops are harvested annually. Ninety per cent of all the potassium salts mined in the United States go into fertilizer. The refinery described in the report is typical of refining techniques in New Mexico; the description is based on a capacity of 30 tons per day of 50% K₂O and 120 tons per day of 60% K₂O fertilizer. It is assumed that a sylvite or sylvinitic ore of approximately 20-25% K₂O content is available at the required 645 tons per day amount. The report is one of a series of reports resulting from overseas technical inquiries on factory operation, management, and engineering. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Office of Technical Services, Washington, DC.
Plant Requirements for Manufacture of Tungsten Carbides
Nov 55, 16p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Tungsten carbides, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Sintering, Metal shapes, Developing country application.

In its broad outline, the process on making tungsten carbide cutting tools, wire drawing dies, header dies, gages and other industrial products consists of preparing the powder carbide of tungsten, mixing it with a binder (such as cobalt) into compacts of desired forms, and sintering these to get the desired shapes, hardness, strength and other attributes. Though this pattern appears simple, it soon becomes evident from a detailed study that the techniques involved are different from those generally used in powder metallurgy. A survey was made among the manufacturers of the necessary equipment, and technicians experienced in carbide making, and the steps established as the pattern peculiar to this industry are explained in the report. The report is one of a series of reports resulting from overseas technical inquiries on factory establishments, operation, management, and engineering. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Unfermented Grape Juice
Apr 56, 12p

Keywords: *Industrial plants, Food processing, Manufacturing, *Beverages, Grapes, Pasteurizing, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Industrial management, Production planning, Cost estimates, Labor estimates, Sanitation, *Food products, *Fruits, Developing country application.

The report outlines the type of plant required for processing of fifteen tons of unfermented grape juice per

day. Pressing juice out of grapes and processing the liquid into marketable grape juice requires, (a) the most careful selection of equipment which can be operated economically for fifteen tons of grapes per day, (b) maintaining the proper temperatures necessary for successful pasteurization, and (c) adhering strictly to established standards of cleanliness and sanitation. The report is one of a series of reports resulting from overseas technical inquiries on factory operation, management, and engineering. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Problems in Business Management: Incentive Plans
Jun 62, 47p ICA-TB-31

Keywords: Bonuses, Incentive contracts, Personnel management, Incentives, Fringe benefits, Productivity, Efficiency, Industrial relations, Job analysis, Work time standards, Work measurement, Salary administration, *Management techniques, Blue collar occupations, Business administration, Developing country application.

The brochure is one of a series of training courses in 'Problems in Business Management'. It outlines information on establishing incentive plans for factory workers and discusses bonus systems for output quantity and work economy.

Effective Job Organization
Apr 61, 64p Rept no. TB-23

Keywords: *Management training, Personnel development, Organization theory, Industrial management, Executives, Planning, Decision making, Efficiency, Job analysis, Manuals, Scheduling, Supervision, Job utilization, Administrative principles, Administrator responsibility, Skill development, Job enrichment, Organizational effectiveness, Developing country application.

The report explores in detail the executive's responsibility for clarifying jobs, for delegating, for planning, for decision-making, and for generally improving habits of personal efficiency. It probes deeply into the techniques and principles of executive and administrative action. It is designed for managers with some years of experience who can discuss the practical problems of organization that will help to improve their own skills and help their subordinates to perform more effectively.

Training Course in Material Handling
Mar 61, 91p Rept no. TECHNICAL BULL-11

Keywords: Specialized training, *Materials handling, Industrial training, Supervisors, Developing countries, Guidelines, Attitudes, Motivation, Elevators(Lift), Conveyors, Fork trucks, Hoists, Pallets, Cranes(Hoists), Chutes, Efficiency, Work elements, Work measurement, Elevators(Lifts), *Training, Developing country application.

Training in Material Handling is a course which points out the many opportunities that are presented for increasing production, lowering costs and increasing wages through application of modern methods in material handling. The objective of the course is to demonstrate that through the application of sound practice or a well-conceived system materials can be transported from and to storage and through all production stages with a minimum of transfer and handling. Efficiencies in both handling and in total movement of materials avoids production delays, reduces congestion, prevents loss of operation or time, minimizes utilization of machinery and equipment and expedites routing and shipping. Industry spends enormous sums of money for research and development directed towards many types of improvement, such as design engineering, cost engineering, safety engineering and others, but one of the greatest opportunities for reducing manufacturing cost and materially increasing man-hour production is frequently neglected. The aim of this course is assist supervisors to eliminate obvious and unnecessary movements in the handling and transporting of commodities and materials.

Potential Use of Small Dams to Produce Power for Low-Income Communities
Mary M. Allen. 4 Aug 73, 220p
Contract CSA-B8B-5584
Prepared in cooperation with Polytechnic Inst. of New York, Brooklyn, Center for Regional Technology.

Keywords: *Hydroelectric power, *Dams, *Electric power, Low income groups, Communities, Regional planning, Environmental impacts, Safety, Economic analysis, Constraints, Developing country application.

An alternative source of energy which would have a stable cost and alleviate the economic strain of rising fossil fuels is the development of small dam sites to produce hydroelectric power. This report addresses the many issues involved in estimating the potential contribution of hydropower to the energy supply. The issues discussed include: (1) physical characteristics, (2) environmental and safety considerations, (3) institutional constraints, (4) economic issues, and (5) current governmental programs.

Construcciones Resistentes Al Fuego - En El Hogar - Y En La Granja (Fire Construction of the Home--- of Farm Buildings)
Merril S. Himmins, Jr. 1968, 31p Rept no. USDA/BULL-2227
Text in Spanish.

Keywords: Residential buildings, Farm buildings, *Fire safety, Flameproofing, Barriers, Construction, Fire resistant materials, Fire protection, *Houses, Developing country application, Fire barriers.

In order that the farm be as safe from fires as possible, the distance between the home, barn, silo and other out buildings is specifically outlined along with the construction design for additional fire barriers. Fire barriers for the home have been designed for the basement, walls and stairs utilizing wooden blocks placed in strategic areas. Correct chimney construction, radio and television antenna installation and other areas sensitive to fire in the area of the roof are discussed. Also covered in this report is the installation and fireproofing of gas and oil furnaces, floor registers, wood burning stoves, lightning rods and electrical wiring. Because of the number of fires caused by spontaneous combustion and unsafe drying and/or heating methods in the stable, tobacco barn, grain elevator, poultry house and workshops, their proximity to equipment and other farm buildings and their fire barriers are outlined.

Ganado Bovino Para Carne - Descorne, Castracion, Marcacion a Hierro, Marcas (Beef Cattle - Dehorning, Castrating, Branding and Marking)
R. T. Clark, A. L. Baker, and George E. Whitmore. 1968, 20p Rept no. USDA/BULL-2141
Text in Spanish.

Keywords: Cattle, Marking, Castration, Livestock, Methodology, *Animal husbandry, Developing country application, Dehorn.

Complete and detailed instructions of several different methods used to dehorn, castrate, brand and mark cattle are discussed in full. Dehorning--The age of the cow is an important factor and will determine if the Caustic Soda method is applied (just a few days old); or if the Spoon or Tube method is used (less than 60 days old). Any cow older than this is dehorned using the electric dehorning iron, gougers, or electric dehorning saw. Castration--Three surgical methods are explained along with two non-surgical methods; Clamping or Pinching which uses the Emasculator; or the Elastator which uses hard rubber bands. The neutering of cows is also discussed. Branding and Marking--Branding by heat and iron or liquid chemical is given full explanation as is further markings by nitching ears and tattooing.

Plant Requirements for Manufacture of Rubber Soles
Sep 56, 23p

Keywords: *Industrial plants, Manufacturing, Elastomers, *Footwear, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application, Soles.

Rubber soles for footwear are fabricated and combined with shoe uppers by three general methods. The first method is the forming of a patterned, uncured sole

APPROPRIATE TECHNOLOGY ABSTRACTS

and cementing it on a fabric upper section and then curing the entire assembly on a last (as in a vulcanizer or autoclave). This is the conventional method long used in making tennis shoes. The second method is to join a slab (without pattern) of rubber compound directly to a fabric or leather upper section in an automatic heated mold under pressure. This method employs a special machine—typical of which (though varying in design and merits) are the Goliath, Pinto, Bata, Marvel and Desmer machines. The method described in the report is to separately fabricate and cure (with or without a pattern) the soling itself. The cured or vulcanized soling is then attached to a fabric or leather upper by cementing, sewing or nailing—or combinations of these methods. The report is one of a series of reports resulting from overseas technical inquiries on factory operation, management, and engineering. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Sash and Door Plant; A Reference for use in Planning New Industrial Facilities
Feb 57, 68p

Sponsored in part by International Cooperation Administration, Washington, DC. Office of industrial Resources.

Keywords: *Industrial plants, Manufacturing, *Wood products, Requirements, Production management, Production methods, Production capacity, Operating costs, Lumber, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Windows, Doors, Stairways, Moldings, Woodworking, Developing country application.

The purpose of the report is to present basic information for establishing and operating a small plant to be located in a foreign country to engage in fabrication of certain wood products from lumber which has been seasoned and surfaced. Because of the many types of wood products which are manufactured, this report is restricted to the operation of a Sash and Door Plant, as it is usually termed, which makes not only windows and doors, but other items of exterior and interior trim, such as moldings, stairways, and the cabinet work which is generally used in residences, schools, churches, hospitals, offices and stores. The information includes a general description of the usual steps in the manufacturing processes, with notes on materials, machinery, layout, and accounting procedures.

Plant Requirements for Manufacture of Bicycle Tubes and Tires
Jan 62, 32p

Keywords: *Industrial plants, Manufacturing, *Tires, *Tire tubes, Bicycles, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The manufacturing plant described in this brochure is designed to produce bicycle tires made of natural rubber at the rate of approximately 500,000 per year. The tires considered here are of the pneumatic type that require an inner tube. This plant is assumed to

produce natural rubber tubes at the same rate as the outer casings. Tire size is assumed to be either 26-inch or 28-inch diameter to fit an adult size bicycle. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Centrifugal Cast Iron Pipe
Feb 62, 36p

Keywords: *Industrial plants, Manufacturing, Cast iron, *Pipes(Tubes), Centrifugal casting, Requirements, Production management, Production methods, Production capacity, Operating costs, Iron, Scrap, Pig iron, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, *Foundries, *Casting, Developing country application.

The purpose of the report is to present basic information for establishing and operating a small plant to produce centrifugal cast iron pressure pipe in a foreign country. Plants producing centrifugal cast iron pressure pipe in the United States are usually designed for a much larger volume of production. However, the processing methods and equipment described in this report are modern and conform to those now being used in the United States. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Energy for the Villages of Africa. Recommendations for African Governments and Outside Donors
James W. Howe. 25 Feb 77, 146p

Keywords: *Africa, Developing countries, Rural areas, Communities, Solar energy, Biomass, Hydroelectric power generation, Agricultural wastes, Wood, Reviewing, Recommendations, Energy sources, Energy requirements, Developing country application, Wind power, *Energy source development.

This report examines the subject of energy for the villages and farms of Africa and recommends a course of action for African policy makers and outside donors. Village source energy includes those forms of primary energy found in the villages and farms such as the sun, wind, water, animal and crop waste, and wood. The report outlines a course of action for developing the information needed for Africans to make two decisions: (1) whether village-source energy warrants use on a wide scale and if so, (2) what system to use to match energy hardware with village needs and to install it in villages together with a support system that will maintain it, provide repairs and spare parts, and generally keep it operating.

Plant Requirements for Manufacture of Galvanized Steel Pipe
Mar 62, 37p
Prepared in cooperation with Morris and Van Wormer, New York.

Keywords: *Industrial plants, Manufacturing, *Pipes(Tubes), Galvanized materials, Cold rolling, Resistance welding, Requirements, Production management, Production methods, Production capacity, Operating costs, Zinc, Steels, Metal strips, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Plugs, Bushings, Couplings, Water pipes, Gas pipes, Developing country application.

The purpose of the report is to present basic information relative to the establishment in a foreign country of a factory designed to produce certain sizes of galvanized steel pipe. This type of pipe is used for water, air, gas, oil, or other fluid lines, and for structural purposes such as fence posts, scaffolding, and railings. The proposed plant is about the minimum feasible size and will require a substantial capital investment and a small number of skilled workers. Profitable operation in industrially developing countries will depend upon the following factors: (1) the availability of steel strip and slab zinc (spelter) from nearby mills, or the presence of a sufficiently large domestic market, in the absence of a local supply of steel and zinc, sufficiently large to overcome the expense of imported materials; and (2) the availability of accessories such as galvanized couplings, nipples, elbows, unions, plugs, tees, guards, reducers, and bushings. Association with a facility producing the fittings would be advantageous for the pipe manufacturer. The report describes a plant manufacturing pipe threaded on both ends and not equipped with accessories. The pipe may be supplied unthreaded or it may be equipped with couplings or thread guards at an additional cost. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements to Set Up and Operate a Leather Tannery
May 59, 45p

Keywords: *Industrial plants, Manufacturing, *Leather, Requirements, Production management, Production methods, Production capacity, Operating costs, Hides, Tanning materials, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application, Tanneries.

Most tanneries in the United States perform two functions, namely, processing the hide to pelts and tanning the pelts to the finished product, leather. Tanning of leather can be accomplished by any of the six well-known processes: vegetable, alum, chrome, oil, formaldehyde, and sulphur. The two most widely used today are the vegetable and the chrome. Due to the relatively large demand for upper shoe leather, this manual will be developed on processing hides from their raw state to finished upper leather by using the two-bath chrome tanning process. The most desirable upper leather is secured from light cattle hides which weigh approximately 54 pounds each. These hides are purchased by the pound, the average cost being \$0.13 per pound; the finished leather product is sold on the square footage basis at approximately \$0.35 per square foot, or \$0.298 per pound. The tannery herein proposed will be capable of processing 16,000 pounds of raw hides to yield 13,500 square feet of finished upper leather per eight-hour day, utilizing about 56 workers, and would be of minimum economic size. Annual cost of hides, 4,000,000 pounds, at \$0.13 per pound = \$520,000. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Concrete Posts
Oct 62, 38p

Keywords: *Industrial plants, Manufacturing, *Concrete, *Fences, Concrete products, Columns(Supports), Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The purpose of the report is to present basic information for establishing a manufacturing plant, in a foreign country, to produce concrete fence posts. In addition to fence posts, the equipment listed in the report will produce posts of all kinds and shapes up to 16 inches by 16 inches in diameter as well as such products as window sills, door sills, coping, cornice, lintels, decorative blocks, screen blocks, lamp posts, fancy wall blocks, and porch columns. For the purpose of the report only concrete fence posts are considered. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Proceedings of the U.S.-Southeast Asia Symposium on Engineering for Natural Hazards Protection Held at Manila, Philippines on September 26-30, 1977
1978, 438p NSF/RA-780524
Contract NSF-INT77-15418

Keywords: *Buildings, Structures, Hazards, Meetings, Earthquakes, *Floods, Hurricanes, Storms, Safety engineering, Philippines, *Earthquake engineering, Wind loads, *Natural hazards.

This volume contains a collection of thirty papers presented at the U.S.-Southeast Asia Symposium on Engineering for Natural Hazards Protection held in Manila, Philippines. The papers focus on research in risk and safety analysis and the design of structures regarding earthquakes, wind forces, landslides, storms, floods, hurricanes, and extreme events in general. Included in each of the papers is a synopsis, introduction, description of research, mathematical analyses, conclusions, references, and figures. The research represents work performed in the continental United States, Hawaii, the Philippines, Japan, Thailand, Singapore, New Zealand, and Australia. A concluding paper on the damages resulting from the Mindanao Earthquake of August 17, 1976 represents some engineering lessons learned from the damages and makes some recommendations for seismic code revisions under Philippine conditions.

Plant Requirements for Manufacture of Refrigerated Walk-In Coolers
Sep 57, 26
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Coolers, Refrigerators, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The subject of the report is the manufacture or fabrication of commercial or walk-in coolers. It is intended to present the data in a form that a potential plant operator would find useful to consider before entering the business of making walk-in coolers. Before undertaking the manufacture of walk-in coolers, the prospective investor is advised to have a complete administrative, operating and financial analysis made by a reputable firm of management engineers. The report is one of a series of reports resulting from overseas technical inquiries on factory establishments, operation, management, and engineering. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type.

Plant Requirements for Manufacture of Dehydrated Molasses
Sep 61, 33p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Molasses, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The purpose of the report is to present basic information for establishing a by-product plant to produce dehydrated molasses from blackstrap molasses. Blackstrap molasses is a by-product of the sugar refining industry. The molasses has a high food value and can be used advantageously as a diet supplement in animal feeding. The equipment should be installed by a sugar refining company at its refinery in order to eliminate freight and storage costs of the blackstrap molasses which would occur if the plant were located elsewhere. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements to Set Up and Operate a Gray Iron Jobbing Foundry
May 59, 40p

Keywords: *Industrial plants, Gray iron, *Foundries, Cast iron, Requirements, Molding techniques, Pattern making, Operating costs, Materials estimates, Equipment, Plant layout, Industrial management, Financial management, Production planning, Cost estimates, Labor estimates, *Casting, Developing country application.

Because of the variety of metals used and the limitless number of items that are cast, it is difficult, if not impossible, to make generalized statements regarding cost of production and equipment requirements that are comprehensively accurate. Because iron castings are most widely used, the discussion concerns itself with what is known as gray iron castings. A further complication arises in that foundries are of two general types—production and jobbing. Production foundries may be departments of large establishments engaged in the mass production of items of which the casting is only one step in the entire process of manufacture and assembly; or they may be independent foundries making many identical castings where work is repetitive and the foundry process is highly mechanized in order to secure minimum costs. Not only is much of the work done on machines, but the handling of materials is almost completely conveyorized. The job foundry, on the other hand, stands ready to produce for any customer who comes along, provided the foundry has facilities suitable to make the castings required. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Metal Spinning Products
Apr 56, 11p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Metal shapes, Spinning (Extruding), Metal extruding, Requirements, Production management, Production methods, Production capacity, Operating costs, Bronzes, Steels, Aluminum, Copper, Materials estimates, Equipment, Plant layout, Machinery, Tools, Industrial management, Production planning, Cost estimates, Labor estimates, Metal working, Developing country application.

The report outlines the type of plant required for the manufacture of metal shapes formed by means of spinning and its advantages. Metal spinning is a skillful art of folding a flat piece of pliable thin sheet metal over the contours of a pattern. Folding is done by applying a specific spinning tool either by hand or by mechanical means to the fast-rotating sheet metal. The metal may be ferrous or non-ferrous. The tool can be simple or complicated, depending on the shape of the chuck. Present-day spinning techniques permit many ways of fashioning sheet metal shapes, and is favored by metal working shops in many cases. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor,

machinery, equipment and supplies. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. Plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Block Ice
Mar 62, 31p

Keywords: *Industrial plants, Manufacturing, *Ice, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The purpose of the report is to present basic information for establishing a manufacturing plant in a foreign country to produce block ice. All information and figures contained are based on the production of clear, pure ice in block form. Water is the only raw material used in the manufacturing process. The report is based on the production of ice made with water obtained from an approved municipal supply system. Prior to manufacture, the water must be subjected to a softening process to remove dissolved mineral compounds such as calcium, magnesium, and iron. If the water is obtained from natural sources such as wells, rivers, or lakes, it must be treated to remove impurities of a bacterial nature in addition to the softening process. The plant is designed to produce 10 tons of ice per day or 3,650 tons per year in 300 pound blocks. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Abrasive Wheels
May 59, 36p

Keywords: *Industrial plants, Manufacturing, Grinding wheels, Tools, *Abrasives, Aluminum oxide, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The report describes a plant to manufacture a general purpose wheel. The resinoid type of bond is used because of the comparatively simple process in manufacture. The type of abrasive is aluminum oxide—a common type. The equipment described can produce plain disk wheels ranging from 2 inches diameter x 1/4 inches thick to 8 inches diameter x 1 inch thick. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Stainless Steel Utensils
Mar 62, 36p

Keywords: *Industrial plants, Manufacturing, Stainless steels, Requirements, Production management, Pro-

duction methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, *Kitchen equipment and supplies, Developing country application, Utensils.

The purpose of the report is to present basic information for establishing a small factory to manufacture stainless steel utensils in a foreign country. Stainless steel, a corrosion and heat resistant alloy, is very suitable for the fabrication of utensils to be used in restaurants, hospitals, military institutions, industries, or homes. Small utensils of this type, up to 5 inches in diameter, are usually pressed or drawn on a light hydraulic press; while those over 6 inches in diameter are spun on a lathe. They may be produced in a variety of types and sizes such as shallow or deep bowls, cups, pans, and pots; and narrow or wide-necked jugs or cylinders. It is suggested that only simple shapes be processed at first to suit the local needs. Later, the types of items can be widely diversified, and the production rate increased to comply with an expanding domestic market. The plant proposed herein is about the minimum feasible size. It will require a modest capital investment in machinery and tools, and a small labor force of skilled metal workers. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Coarse Wrapping Paper
May 59, 36p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, Kraft paper, Paper mills, Requirements, Production management, Production methods, Production capacity, Operating costs, Wood pulp, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Papermaking, *Paper, Developing country application.

The purpose of the manual is to present basic information for establishing and operating a small coarse wrapping paper mill in a foreign country. The plant is designed to produce one-ton of coarse wrapping paper per hour. The plant may be operated as many hours per day as desired, since no difficulties are presented in closing down and starting up the operations. Only about 15 minutes preparation is required to start production and only about five minutes preparation is required to stop production. Based on current practice, in the United States, this is a small plant. The recommended equipment and production methods are modern and have proven profitable when operated under conditions comparable to those assumed. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Copper Tubing
Mar 62, 34p

Keywords: *Industrial plants, Manufacturing, Copper, Metal tubing, Extrusions, Requirements, Production

APPROPRIATE TECHNOLOGY ABSTRACTS

management, Production methods, Production capacity, Operating costs, Copper, Ingots, Materials estimates, Equipment, Plant layout, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Extruders, Presses, Metallurgical furnaces, *Pipes(Tubes), Developing country application.

The purpose of the report is to present basic information relative to the establishment of a small copper tubing plant in a foreign country. This plant is designed to produce seamless, thin-walled, flexible, copper tubing by the extrusion method only. This tubing is generally used with solder type fittings, requiring no threads, and comes in two types: K (heavy duty), and L (light duty), the only difference being the wall thickness. The report is based on the manufacture of type K only, which is suitable for general plumbing and heating purposes, underground usage, and for gas, steam, and oil lines. This plant, which is about the minimum feasible size, will require a substantial capital investment; however, it can be operated by a relatively small number of skilled workers. Profitable operation in industrially developing countries will depend upon two main factors: (1) the availability of locally mined and refined copper to provide low cost ingots thus enabling the plant to export its products; and (2) the presence of a sufficiently large domestic market, in the absence of domestic copper, to overcome the expense of imported ingots. Association of this tubing plant with a copper wire drawing facility would result in considerable savings and increased profits since the tubing extruder could produce the 5/16 inch copper rod required by the wire plant. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Reforestation in Arid Lands
Program and training journal manual series
Fred R. Weber, Frederick J. Holman, and Virginia C. Palmer. c1977, 244p Rept no. MANUAL SER-5
Report on Appropriate Technologies for Development Series, Number Three. Also pub. as VITA Publications manual series no. 37E.

Keywords: Reforestation, West Africa, Developing countries, *Arid land, Manuals, Conservation, Planting, Soil properties, Water supply, Planning, Site surveys, Plant reproduction, Seeds, Cultivation, Forest trees, Identifying, Forest fires, Fire prevention, Climate, Financing, *Forestry, Developing country application.

Reforestation efforts are begun for the important reasons of conserving and protecting, and to increase production of forestry resources. Reforestation projects have been of great importance over the past few years in Africa. This manual is an attempt to present some current examples of forestry programs in West Africa. It is based upon the collective experiences of foresters and of local farmers and herders. Many of the problems of reforestation of dry areas are the same worldwide. Presented in the manual are methods and planning guides which can be of great benefit in the arid areas of the world.

Plant Requirements for Manufacture of Farm Hand Tools
May 59, 51p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, Tools, Requirements, Production management, Production methods, Production capacity, Operating costs, Forging, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Power equipment, Hammers, Rakes, Forks, *Hand tools, Developing country application.

The manual covers tools for the farm that are used through the application of human effort. It does not encompass farm implements that are operated through animal or mechanical energy. The primary process used in the production of these farm hand tools in the

plant discussed is forging. Because the volume of production covered by this manual will not be sufficient to justify costly drop forging equipment and its accompanying expensive dies, the process of hammer forging by power hammers is proposed. This process is essentially the art of blacksmithing. In addition some of the skill required by the blacksmith to form properly the article he is forging is transferred to the dies used in the power hammers. These dies have simple contours in them that tend to produce the desired shape automatically. Nevertheless, a fairly high degree of skill is required on the part of the hammerman who operates a power hammer. In addition to power hammers, a mechanical forging press is also required to obtain uniformity in the shape of certain tools and to produce shapes that would otherwise be very difficult to obtain. The other operations and pieces of equipment needed in the proposed plant are also discussed. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements to Set Up and Operate a Small Steel Melting Plant
Sep 57, 33p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Steel plants, Melting furnaces, Manufacturing, Ingots, Requirements, Production management, Production methods, Production capacity, Operating costs, Metal scrap, Materials estimates, Equipment, Plant layout, Industrial management, Production planning, Cost estimates, Labor estimates, Cast products (For reworking), *Steel industry,

Developing country application, Steel 1010, Steel 1020.

The small steel melting plant described in the report is intended to manufacture ingots or billets from scrap metal where the demand for such products exists and where such a local operation would be practicable. The product of this plant is intended for use in a small steel rolling mill to produce concrete reinforcing bars and merchant shapes. Either ingots or billets can be produced in the plant. However, for the purpose of simplification, only ingots are discussed in the report. The report is one of a series of reports resulting from overseas technical inquiries on factory operation, management, and engineering. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Carl Lindblad, and Laurel Druben. Sep 76, 209p Rept no. MANUAL SER-2-VOL-1
Also pub. as VITA Publications manual series no. 35E. Also available in set of 3 reports PC E11, PB-292 908-SET.

Keywords: *Grains(Food), Farm storage, Developing countries, Manuals, Drying, Moisture content, Temperature, Insects, Rodents, Fungi, Cleaning, Design, Construction, Harvesting, Heating, *Food storage, Developing country application, Granaries, Appropriate technology.

This brochure discusses grain storage problems as they are faced by small-scale farmers. It contains explanations of the structure of grain, the relationship between grain and moisture, the need for proper drying. One large section contains detailed, fully illustrated plans for constructing a variety of small-scale grain dryers.

Small Farm Grain Storage. Volume II. Enemies of Stored Grain
Program and training journal manual series
Carl Lindblad, and Laurel Druben. Sep 76, 180p Rept no. MANUAL SER-2-VOL-2
Also pub. as VITA Publications manual series no. 35E. Also available in set of 3 reports PC E11, PB-292 908-SET.

Keywords: *Pest control, *Grains(Food), Farm storage, Developing countries, Manuals, Insects, Rodents, Life cycles, Coleoptera, Lepidoptera, Malathion, Poisons, Traps, Insecticides, Dosage, Safety, *Food storage, Developing country application, Appropriate technology.

This is an in-depth study of two major enemies: insects and rodents. Each is discussed in detail with guidelines for (1) defining the size of the problem and (2) protecting grain by both chemical and non-chemical means. This volume includes dose and use information for a variety of pesticides, as well as suggestions for preparing materials to be used in audio-visual presentations.

Small Farm Grain Storage. Volume III. Storage Methods

Program and training journal manual series
Carl Lindblad, and Laurel Druben. Sep 76, 158p Rept no. MANUAL SER-2-VOL-3
Also available in set of 3 reports PC E11, PB-292 908-SET.

Keywords: *Grains(Food), Farm storage, Developing countries, Manuals, Baskets, Bins, Silos, Underground structures, Construction, Construction materials, Insecticides, Maintenance, Cleaning, Containers, *Food storage, Developing country application, Granaries, Appropriate technology.

This brochure contains a survey of storage facilities from the most traditional basket-type granary to metal bins and cement silos. The emphasis in this volume is on improving existing facilities; for example, there are detailed construction procedures for an improved mud silo. Storage in underground pits and sacks also is discussed. There are guidelines for using insecticides in storage situations. The largest silo presented in detail is the 4.5 ton cement stave silo.

The Development of Hybrid Corn Technology in the United States and Selected Countries
Technical series bulletin
G. F. Sprague. Mar 75, 91p Rept no. TSB-16

Keywords: Hybridization, Corn plants, Plant genetics, History, Yield, Selection, Corn oil, Proteins, Insects, Vulnerability, Plant diseases, Marketing, Economic development, Seeds, United States, Europe, Kenya, Colombia, Brazil, Southeast Asia, India, *Crops, Developing country application.

The report presents the background and recent developments of the new high-yielding more nutritive corn types and explains their significance in food-short countries among malnourished populations. This new high lysine corn out-yields native corn types and has more than double the nutritive value of ordinary corn with protein quality essentially equal to that of skim milk. Worldwide development and acceptance have been relatively rapid. Unlike ordinary corn, these new types are not deficient in two essential amino acids—lysine and tryptophan.

Plant Requirements for Manufacture of Hooked Rugs
Oct 61, 30p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Carpets, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The purpose of the report is to present basic information for establishing a Hooked Rug plant in a foreign country. This industry is peculiarly adapted to locations where wage rates are low since only \$260 for machin-

ery and equipment is required and only sixteen workers, direct and indirect, are used. It can be operated as a domestic, home, handicraft employing only the members of a family or as a small industry as shown in the report. The annual capacity of this plant is 1,200 rugs, 36 inches by 56 inches or 14 square feet in size. The annual sales value would remain about the same regardless of the size of the rugs, since smaller rugs would sell for proportionately more per square foot and larger rugs would sell for proportionately less per square foot. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Wire Products
Sep 57, 43p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Wire, Requirements, Production management, Production methods, Production capacity, Operating costs, Wire drawing, Materials estimates, Equipment, Machinery, Industrial management, Production planning, Cost estimates, Staples, Nails(Fasteners), Fences, Barbed wire, Developing country application.

The report concerns the cost and economic feasibility of establishing a wire products factory. It is one of a series resulting from overseas technical inquiries on factory operation, management, and engineering. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions. The following topics are discussed: Machinery and equipment for producing wire; Estimated cost of machinery and equipment for producing wire; Machinery and equipment for producing fencing wire; Machinery and equipment for producing wire garment hangers; Machinery and equipment for producing fly screen; Machinery and equipment for producing nails and staples; Economics of a wire mill and fence making operation; and Technical assistance 'turn-key' operation.

Andrews (George H.) Engineering Associates, Inc., Washington, DC.
Plant Requirements for Manufacture of Radios
Sep 57, 63p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Radio receivers, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The small radio manufacturing plant described in the report is designed to produce radio receiving sets where the demand for this product exists and where such a local operation would be practicable. It has several particular characteristics of special merit in connection with programs for economic development. The most important advantages briefly stated are as follows: Small investment of fixed capital; range of choice as to volume of operation to be undertaken; the rapidity with which the project may be changed; the ease with which operations may be expanded in many different directions; the speed with which unskilled workers can become proficient even though they do not have a technical education; the social and cultural value of the product, which should lead to its wide distribution; the ease with which such a product can be maintained; and the high proportion of production cost which goes to employment of local people. The report was pre-

APPROPRIATE TECHNOLOGY ABSTRACTS

pared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

PB-292 922/2 PC A03/MF A01

Plant Requirements for Manufacture of Boxes and Shooks
Dec 57, 49p

Keywords: *Industrial plants, Manufacturing, Boxes(Containers), *Wood products, Assembling, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, *Containers, Developing country application.

The small box and shook plant described in the report is intended to manufacture wooden boxes and shook where the demand for these products exists and where such a local operation would be practicable. The machinery and equipment recommended is adequate to manufacture any design or size of wooden box or shook. A shook is a knocked down box. It includes all the wood pieces to make a box, bundled together complete, ready for assembling and nailing. The end pieces in a shook are usually assembled, and nailed, if they consist of more than one piece. Boxes are usually ordered in the form of shook where they are shipped long distances before being used. Shipment as shook saves a great deal of shipping space, which, in turn, reduces the cost of freight, and saves warehouse space at the point of use. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Carob Molasses
Sep 57, 24p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, Requirements, Production methods, Production capacity, Operating costs, Fruits, Materials estimates, Equipment, Plant layout, Cost estimates, Labor estimates, Developing country application, *Molasses, Carob.

The report outlines a modern plant of modest capacity which would most likely be applicable to the average economic location where carob is grown and harvested on a limited commercial basis. It is assumed that the basic production is carob molasses or syrup with sugars or sucrose still remaining in the raw liquid. The processing of gums from the seeds and other products from the residual pulps is not considered and would require specific reports, particularly if the refined sugars, gums and residual usable pulp are to be considered end products. The report is based on a daily processing capacity of 21,875 lbs. of unhulled pods. This would accommodate the average annual yield of 8,750 lbs. per acre from 300 acres, with the mill operating on the basis of 120 days per year, 24 hours per day. The report is one of a series of reports resulting from overseas technical inquiries on factory operation, management, and engineering. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual in-

stallations will require expert engineering and financial advice in order to meet specific local conditions.

Health Care and Human Dignity - A Subjective Look at Community-based Rural Health Programs in Latin America
Sep 76, 27p
Sponsored in part by National Fund for Research into Crippling Diseases, London (England). Paper presented at Symposium on Appropriate Technology and Delivery of Health and Welfare Services for the Disabled in Developing Countries, Held at Oxford, England on September 26-30, 1976.

Keywords: *Latin America, Rural areas, Communities, Rural health services, Health care, Developing country application, Health programs, *Health care delivery, Foreign countries, Primary health care, Health planning.

The paper is an interesting and practical look at health care programs in rural communities. It explores ways in which existing health programs help either to cripple communities or to make them whole. Steps are briefly explored which are being taken or could be taken to implement a regional or national approach to rural health care that is community supportive.

Ministerio de Planificacion y Politica Economica, Panama City (Panama). Dept. de Politica Cientifica y Tecnologica.
Estudios Sobre Politica Cientifica y Tecnologica de Panama (Studies on the Scientific and Technological Policy in Panama)
Oct 77, 407p
Text in Spanish.

Keywords: *Technology transfer, Industries, *Panama, Research, Inventions, Patents, Capital, Investments, Developing countries, Food industry, Problem solving, Law(Jurisprudence), International relations, Government policies, *Science policy, *Industrial development, Industrial technology, *Research and development, Trademark registration, Trademarks, Information needs, Scientific research, Developing country application.

In broad terms, all papers deal with technology transfer in terms of industrial property, inventions, patents, technical know-how, scientific and technological needs analyses, the R&D system, and science policy in Panama. Possible problem areas are identified which may result from laws (on patent infringements, novelty of industrial designs and models, commercial trademarks) which a developing country must promulgate to allow free access to, and technology transfer of, scientific and technical information. Rights of third parties are discussed in relation to trademarks which cannot be registered. For example, the well known trademark of a food product should not be used to identify a pesticide. The relationship between multinational capital investment and the foodstuffs industry is outlined. Priority items in the national development plan are mentioned. A study of general lines of generation, dissemination and integration of science policy in Panama is presented as part of the overall effort toward the identification and solution of problems; this will lead to greater development of domestic science and technology in various sectors (tourism, agriculture, fishing, and health).

Instituto de Investigacion Tecnologica Industrial y de Normas Tecnicas, Lima (Peru).
Efecto del Proceso de Importacion de Tecnologia en el Peru (Periodo 1971/74) (Effect of the Process of Technology Importation into Peru (1971-1974 period))
1974, 75p Rept no. POLITICA TECNOLOGICA-5
Text in Spanish.

Keywords: *Technology transfer, *Peru, Methodology, Surveys, Personnel development, Evaluation, Statistical data, Patents, Licenses, Cost engineering, Profits, International trade, Imports, Contracts, Balance of payments, *Industrial development, Industrial technology, Trademarks, Monopoly, Developing country application.

The methodology used to evaluate technology transfer by importation into Peru is outlined. Methodological methods included data collection, personnel training, analysis, and evaluation of results. Research centered upon reducing costs to the country receiving the technology, upon preventing excess profits, and upon restrictive clauses (listed in the document annex). Statistics are presented on the specific nature of the technology to be transferred, by industry, by country of origin, and by the effect on the domestic industry. Concrete costs in relation to their effect on balance of payments and on monetary benefits to Peru are outlined; stronger monetary controls are recommended. A legal analysis of restrictions on technology transfer of 404 existing technology contracts is provided. It is noted that these contracts are the legal instruments by which monopolies are engendered and proliferate. In this connection, it is significant that only 10% of the patents registered in Peru are of national origin. This factor, together with the increasing trademark licensing, accounts for growing technological dependence. Based on this study Peru followed Decision 24 of the Andean Group, which deals with patents and trademarks. Statistics discriminate number of contracts and restrictive clauses by geographical world regions. Although indigenous industries (iron, copper mining, fishing) have been developing, it is noted, in the struggle to consolidate and win new markets, advanced technology is required to decrease costs.

Problems in Business Management: Management Training
Technical bulletin.
Jun 62, 22p Rept no. TB-30

Keywords: *Management training, Personnel management, Organization theory, Meetings, Job analysis, Industrial relations, Human factors engineering, Production control, Cost effectiveness, Leadership, Supervision, Executive ability, Communicating, Instructional materials, Responsibility, Administrative problems, Developing country application.

Good results can often be obtained with a minimum of expense, providing that each head of a department plays his part. The results can be measured as follows: In terms of decrease in the problems which the head of the department encounters which, in turn, gives him: - More time for planning improvements, less disorder, less confusion, fewer accidents, better morale. In terms of economy, some direct results are: less time to train new employees, fewer broken tools, less defective work, increased production.

APPROPRIATE TECHNOLOGY ABSTRACTS

niques, Business education, Administrative personnel, Developing country application.

Planning and control of production as well as of costs depend to a large extent upon anticipated sales. The brochure discusses marketing in all its various aspects. Selling is imperative to any business, and for this reason it takes into consideration the psychological aspect in order to know the attitude required by business management. The three essential functions of any management which are basic for its business are: To finance, to produce, and to sell. Only through sales can a business progress; therefore, can a management ignore the world around it and produce only for the pleasure of it.

Plant Requirements to Set Up and Operate a Phosphate Processing Plant
May 59, 39p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Chemical industry, *Industrial plants, Manufacturing, Inorganic phosphates, Requirements, Production management, Production methods, Production capacity, Operating costs, *Fertilizers, Calcium phosphates, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial manage-

ment, Production planning, Cost estimates, Labor estimates, Process charting, *Phosphates, Developing country application.

Practically all fertilizers used in the United States are prepared on a super-phosphate base. This material is used alone in large tonnages and almost invariably is the component present in large quantities in mixed fertilizer. Since the manufacture of superphosphate consumes much sulphuric acid, the making of this important fertilizer material is often associated with the making of sulphuric acid. In fact, economic considerations are making it necessary that the large scale superphosphate maker be also a sulphuric acid manufacturer. Successful manufacture of either sulphuric acid or superphosphate is today necessarily a large-scale business. The small manufacturer of these commodities usually is at a great economic disadvantage. The capital required for materials handling and skilled supervision for both superintendence and general management place disproportionately great burdens on any plant of small output. This manual describes a plant which is of adequate size and also capable of considerably increased output without proportionate capital expenditures. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Middle West Service Co., Chicago, IL.
Plant Requirements for Manufacture of Brass Table Lamps
Sep 61, 36p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Lamps, Brasses, Assembling, Finishing, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, *Brass, Developing country application.

The purpose of the report is to present basic information for establishing a manufacturing plant in a foreign country to produce approximately 4,000 brass lamps per month. Many types of brass lamps are manufactured in the United States each year, and each type is produced in a vast number of sizes and designs. Thus labor and material costs will vary according to the type, size, and design, in addition to the quality of the lamp produced. Furthermore, it has become a very prevalent practice in the United States for brass lamp manufacturers to buy the component parts of a lamp from other companies, such as white metal casting companies, metal stamping, spinning, and electroplating companies, and lamp shade manufacturers. This results in the lamp manufacturer's activities being confined to finishing and assembling, which is the type of plant described in this report. Separate, specialized operations such as this represent a very economical method for producing brass lamps. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing

Maintenance Training Program
Technical bulletin.
Dec 56, 39p ICA/TB-26

Keywords: Maintenance, Specialized training, Personnel development, Guidelines, Objectives, Performance tests, Requirements, Qualifications, Abilities, Employment, *Training, Developing country application.

The manual is an administrative guide for conducting maintenance training procedures. It provides a description of the procedures involved, and the responsibilities assigned in the operation of a Maintenance Training program. A Maintenance Training Program is a coordinated program of on-the-job training and experience. Its over-all objectives are to develop and assist maintenance personnel to qualify for higher classifications, subject to operating requirements. Measurement of the degree of readiness is determined through the administration of the Maintenance 3rd Class and Maintenance 1st Class tests. The basic elements of the training procedure are as follows: (1) A progress appraisal form; (2) General description of areas of knowledge and ability necessary to qualify for Maintenance 1st Class rating; (3) A perpetual skill and training inventory; and (4) A list of approved related training courses available to local plant personnel.

Contract AID/NE-C-1476

Keywords: *Egypt, Population growth, Africa, Recommendations, Nutrition, Programs, Criteria, Drugs, Emergency medical services, Research, Technical assistance, National government, Demography, Socio-economic factors, Infectious diseases, Public health, *Health care delivery, Developing countries, Agency for International Development, Foreign countries, Hospital administration, Health care, Health status, Health resources, Family planning.

The report sets out criteria for future AID health, population, and nutrition programs, recommends some general program areas, pinpoints some specific problems in these areas, and suggests ways in which the administration of the U.S. program in Egypt might be strengthened. AID support, the report says, should go to sustained efforts to reduce infant, pre-school child, and maternal mortality; a program to improve production and distribution of vaccines and pharmaceuticals needed for the first-mentioned effort; establishment of nationwide emergency medical services; strengthening hospital administration; a cooperative research program for health, family planning, and nutrition. Report also contains five chapters of background information on Egyptian economic, demographic, and social factors; health problems; health resources; population and family planning; and nutrition.

Plant Requirements for Manufacture of Brewers Flakes
Mar 60, 25p
Prepared in cooperation with Robins (A. K.) and Co., Inc., New York. Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, *Food products, Manufacturing, Requirements, Production methods, Production capacity, Operating costs, Grains(Food), Materials estimates, Equipment, Plant layout, Machinery, Production planning, Cost estimates, Labor estimates, Beer, Developing country application, *Brewers flakes.

The report outlines a small plant for the production of Brewer's Flakes of 4 tons per day capacity. The report is one of a series of reports resulting from overseas inquiries on factory operation, management, and engineering. The report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Flexible Steel Conduit
Feb 57, 36p
Prepared in cooperation with Sleeper and Hartley, Inc., Worcester, MA., and Waterbury Farrel Foundry and Machine Co., CT. Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Pipes(Tubes), Flexible structures, Steels, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application, Conduits.

The report outlines the type of plant required for the manufacture of flexible steel conduit. This plant is also capable of manufacturing many similar products with the same equipment, such as flexible tubing and exhaust hose. With the addition of some relatively inexpensive equipment, the plant can manufacture moisture-proof conduit and tube, armored cables, parkway cables, and similar armored products. In addition to steel, other metals such as aluminum, brass, and bronze may be used to make conduit, tubing, and armored cable. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Animal Feed Pellets
May 59, 43p
Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, *Feed pellets, Manufacturing, Feeding stuffs, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, in-

APPROPRIATE TECHNOLOGY ABSTRACTS

dustrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The report outlines the type of plant required for the manufacture of animal feed pellets. The use of scientifically balanced diets is a widely recognized necessity for obtaining best results in the raising of animals and poultry. The diets vary with the type of animal, its age, and the purpose for raising it. In addition, the knowledge gained through research results in continuous changes in the recommended diets. Formulas for each of several applications are included in the report. They are representative of an infinite number of possible formulas for each of the conditions. The food available in each locality should be substituted in these formulas to keep the cost at a minimum. This can be done while maintaining quality. The tables of costs include a blank column where the local costs of all the items can be entered. The capacity of the plant is approximately 2 tons per hour, or 50 tons in 24 hours, based on the capacity of the pellet machine. The annual production is estimated at 12,500 tons. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Woolen Yarn
 Sep 61, 31p
 Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, *Yarns, Manufacturing, Woolen spun yarns, Carding, Spinning (Staple fibers), Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The plant described in the report is intended to manufacture woolen yarn. Compared with the yarn industry in the United States this is a small plant. However the machinery and equipment listed is capable of producing woolen yarn on a competitive basis in a foreign country. The annual capacity of this plant is about 400,000 pounds or 200 tons. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is de-

signed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Shell Buttons
 Jul 55, 22p
 Sponsored in part by International Cooperation Administration, Washington, DC.

Keywords: *Industrial plants, *Clothing, Manufacturing, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Production planning, Cost estimates, Labor estimates, Developing country application, *Buttons, Shells.

The purpose of the report is to present basic information for establishing and operating a plant to manufacture shell buttons in a country with a tropical or semi-tropical climate. The information includes general manufacturing methods, plant layout, and costs of materials, equipment, and labor based on the assumptions contained in this report. The plant described is considered to be the economic minimum in size which utilizes suitable equipment and methods. Products are to be simple and varieties limited in order that costs may be kept to a minimum. As an essential preliminary, potential plant operators must determine whether or not there is a market for the products of this plant. Naturally, they must be willing to assume the risks inherent in any business. The profits shown in the profit and loss statement are illustrative and depend upon market conditions, good management, and local factors.

Plant Requirements for Manufacture of Rice Bran Oil
 Sep 61, 44p
 Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, *Vegetables, Manufacturing, *Rice, Oils, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application, Rice bran, Bran.

The purpose of the report is to present basic information for establishing a rice bran oil plant in a foreign country. The annual production of the plant is 4,000 tons of Rice bran oil, and 22,000 tons of Bran meal. The report was prepared to answer overseas technical inquiries on factory operation, management and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. Plant Requirements for Manufacture of Raw Sugar
 May 59, 36p
 Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, *Sugar, Manufacturing, Sugar crops, Requirements, Production management, Production methods, Production capacity, Operating costs, Sugarcane, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application, Raw sugar.

The sugar plant described in the report is to manufacture raw sugar from sugar cane. Production of cane varies with many conditions such as soil, temperature, water, and climate; and yield amounts to from 40 to 75 tons per acre. The plant herein described requires an input of 600 tons of cane per day for its economical operation and the harvesting campaign usually lasts about five months. It is therefore assumed that it will draw its raw materials from an area of about 2,000 acres under cultivation. The output of this plant will amount to approximately 60 tons of raw sugar per day. Raw sugar is produced near the cane growing areas by mills usually called 'centrals.' The raw sugar from several centrals is then shipped, often long distances and usually overseas, to great refineries at the seaports of more densely populated areas where the consumption is high. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Pharmaceutical Glass
 Sep 57, 36p
 Sponsored in part by International Cooperation Administration, Washington, DC. Technical Aids Branch.

Keywords: *Industrial plants, Manufacturing, *Glass, Medical equipment, Requirements, Production management, Production methods, Production capacity, Operating costs, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The small pharmaceutical glass plant described in the report is intended to manufacture glass tubing, ampoules and vials for antibiotics. Other pharmaceutical products such as syringes and glass for laboratory uses can be produced in this plant. The glass tubing ampoules and vials will be of neutral glass. The ampoules and vials shall have a capacity of from five to eight cubic centimeters. Other sizes and other products may be produced in this plant but for the purpose of the report only the above products will be considered. The annual capacity of this plant is about seven tons of glass per day which will produce ten million ampoules and fifteen million vials per year having a capacity of from five to eight cubic centimeters and provide some additional tubing for other products. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Requirements for Manufacture of Aluminum Kitchenware

Jan 62, 33p

Keywords: *Industrial plants, Manufacturing, *Kitchen equipment and supplies, *Aluminum, Requirements, Production management, Production methods, Production capacity, Operating costs, Metal sheets, Materials estimates, Equipment, Plant layout, Machinery, Financial management, Industrial management, Production planning, Cost estimates, Labor estimates, Developing country application.

The purpose of the report is to present basic information for establishing a manufacturing plant in a foreign country to produce aluminum kitchenware from aluminum sheets. There are many kitchen utensils which can be made from aluminum. These include roasting pans, cake pans, muffin pans, biscuit and cookie baking sheets, casseroles, can openers, knives, forks, spoons, molds, juice extractors. The type particularly suitable for manufacture from aluminum includes kettles, double boilers, waterless cookers, and saucepans. A saucepan has been taken as representative of this group and the estimates in this report are based on the manufacture of such a representative piece. The report was prepared to answer overseas technical inquiries on factory operation, management, and engineering. It includes brief information and cost estimates on labor, machinery, equipment and supplies, as well as information relative to engineering, training, safety, markets, sales, financial and economic factors. However, the report is designed to provide only a general picture of the factors that must be considered in establishing and operating a factory of this type. In most cases, plans for actual installations will require expert engineering and financial advice in order to meet specific local conditions.

Plant Size, Location and Time-Phasing

Alan S. Manne. Mar 66, 341p
Prepared in cooperation with Indian Statistical Inst., Calcutta, and Massachusetts Inst. of Tech., Cambridge. Center for International Studies. Sponsored in part by Ford Foundation, New York.

Keywords: *Site selection, *Management techniques, Plant location, Time measurement, Size determination,

Investments, Financial management, Planning, Manufacturing, Industries, Sodium hydroxide, Cements, Aluminum, Fertilizers, Supply (Economics), Demand (Economics), Materials estimates, Operating costs, Cost engineering, Production engineering, India, Organization size (Groups), Case studies, Economics of scale, Developing country application, Capital, Economic analysis, Dynamic programming.

The volume is concerned with planning investments in a series of future manufacturing facilities. Case studies are reported for four heavy process industries in India: aluminum, caustic soda, cement, and nitrogenous fertilizers. In these sectors, there are significant economies-of-scale in manufacturing, and there is a close interdependence between the size, location and time-phasing of new capacity. Problems of investment planning have both a theoretical and a practical side. They are of common interest to managers, engineers, operations researchers, and economists. In preliminary presentations of this material, the author has observed that the type of question raised depends heavily upon the individual's professional background. The manager or engineer is usually concerned with the practical relevance, the realism and the transferability of these studies; the operations researcher tends to concentrate on the algorithmic and the uncertainty aspects; and the economist focuses upon the implications for development planning.

Development and Testing of the Robovalve
Final rept.
Yaron M. Sternberg, and Robert Knight. Jun 78, 76p
Contract AID/ta-C-1461

Keywords: *Water supply, *Valves, Fire hydrants, Faucets, Polyvinyl chloride, Seals(Stoppers), Diaphragms(Mechanics), Developing countries, Developing country application, Robovalves.

A new valve, Robovalve, has been developed and tested in the laboratory for wear and leakage. The Robovalve appears to be simple to operate, rugged, reliable with a minimum of moving parts, essentially leak-proof, and capable of being manufactured locally. The experimental work and manufacturing of the Robovalve are described in this booklet. Also included are tables, figures, and appendices.

A Demonstration Project to Establish a Technology Delivery System for Small and Medium-Sized Firms
Final rept.
Hardy S. Taylor, Ronald O. Lumpkin, and Sallie G. Daniell. Feb 79, 79p GIT-A-2030-F, EDA-79-076
Grant EDA-99-06-09647

Keywords: Businesses, *Technology transfer, National government, Universities, Technical assistance, *Information services, Research, Industries, Information systems, Coordination, *Small businesses, Demonstration projects, Research and development, Information centers.

The report discusses a technology transfer delivery system which links small and medium-sized firms to the base of technical knowledge and expertise represented by the National Technical Information Service and eight participating University Centers. Also included are recommendations for the appropriate mechanisms, procedures, and operational concepts that can be used in expanding its existing capabilities into a national system.

Manuel Pratique de l'Equipement Rural (V): Aménagement du Foyer (Village Technology Handbook: Home Improvement and Communications)
Jun 63, 74p
Text in French.

Keywords: *Handicrafts, *Home economics, Houses, Improvement, Stoves, Ovens, Furniture, Bedding equipment, Sewing machines, Pottery, Developing countries, Technical assistance, Developing country application, Self help, Villages.

This is the fifth of five books teaching methods to improve one's standard of living through self-help methods. This volume deals with home improvement (includes kitchen stoves, outside ovens, how to make soap at home, low cost stackable beds, locally made mattresses, potter's wheel sewing machine drives, small kilns, and salt glazes for pottery) and communications (includes inexpensive rubber cement, flashlight slide projectors, gelatin duplicators, paper stencils, and silk screen paint). Tables of metric and English measure conversions are included.

L'Aménagement de Points d'Eau dans les Pacages (Stock-water Developments: Wells, Springs, and Ponds)
C. L. Hamilton, and Hans G. Jepson, 1978, 102p
Rept no. FARMERS/BULL-1859
Text in French.

Keywords: *Animal husbandry, Livestock, *Water supply, Climate, Water wells, Cattle, Sheep, Swine, Reservoirs, Terracing, Ponds, Irrigation, Maintenance, Developing country application.

Various methods of watering livestock under various climate conditions are explained in this book. The water needs of cattle, sheep, and pigs are charted for herds of different sizes, and the geography for understanding water tables and artesian wells and other watering holes is explained. Terracing, reservoirs, irrigation, and maintenance and care of the watering devices is also thoroughly described.

L'Engraissement et L'Exploitation des Bovins de Boucherie (The Feeding and Management of Beef Cattle)
Hudson G. Reynolds, R. L. Davis, and W. F. Edgerley, 1978, 128p

Text in French.

Keywords: *Animal husbandry, Beef cattle, Developing countries, Manuals, Forage grasses, Weight (Mass), Feeding stuffs, Nutritive value, Hormones, Quality, Fences, Silos, Equipment, Developing country application.

This booklet outlines all necessary considerations for the management of a beef herd. The pasture is viewed in light of climate, vegetation, cultivating forage, season, wind breaks, load per unit area, rodents and rabbits, watering, seasonal pastures, watering, subdividing lots, destroying shrubs, reseeding, and exploitation of herbs and shrubs. Fattening the animals is studied looking at sex, age, weight, and quality of the animal, storage of forage, nutritive requirements, rations, hormones, forage preparation, and balancing rations. Equipment such as fences, silos, corrals, shades, road grates, and back-scratchers is covered. Dehorning, castration, and branding are also discussed.

Extension Teaching Methods and Other Factors that Influence Adoption of Agricultural and Home Economics Practices
Meredith C. Wilson, and Gladys Gallup, May 54, 87p
Rept no. EXTENSION/CIRC-495

Keywords: *Education, *Agriculture, Methodology, Farm management, Rural sociology, Rural areas, Learning, *Home economics, Instructional materials, Leadership, Instructors, Rural extension, Teaching methods, Rural population, Curriculum, Developing country application.

The bulletin is intended primarily as a reference manual for those who are concerned with the improvement in the use of extension teaching methods. The essential steps in the adult learning and teaching process are outlined. Important factors which affect the adoption of improved farm and home practices are discussed. Various teaching methods are compared on the basis of relative effectiveness and extent of use. Essential elements, principal advantages, and limitations are identified.

Exploitations Agricoles: Preservation des Poteaux de Cloture et des Bois de Construction (Preservative Treatment of Fence Posts and Farm Timbers)
Oscar Blew, Jr. and Francis J. Champion, 1978, 63p
Rept no. FARMERS/BULL-2049
Text in French.

Keywords: *Fences, *Wood preservatives, Agriculture, Buildings, Termites, Decomposition, Creosote, Phenols, Naphthenates, Soaking, Maintenance, Developing country application.

A cross-section of various chemical products and treatments to protect fences and buildings is presented here. Specifically, decomposition and insect damage are explained with a view to treatment. Pressure treatment of posts, hot and cold baths of preservative oils, soaking in cold baths, quick treatments, and treatments of low initial costs are all reviewed. Properties and use of more than a dozen treatment agents are described. Maintenance of posts after

treatment is detailed, and other uses of wood in agriculture such as bridges and silos are studied.

Puericultur : Les Soins aux Bebes (Infant Care)
Laura L. Di'aman, 1963, 155p
Text in French.

Keywords: *Children, *Health care delivery, Humans, Medical services, Nutrition, Diseases, Preventive medicine, Developing country application, Infant health care, Mothers.

The book explains how a mother can best take care of her baby from birth to the end of its first year. Topics covered include the importance of regularly consulting a doctor, preventing sibling rivalry, obtaining a birth certificate, and general care (breast feeding, nourishment for the mother, clothing, bedding, sickness, and grooming). Special chapters are devoted to overseeing new developments from the first to the fourth, the fourth to the eighth, and the eighth to the twelfth months. Two extensive annexes offer special counsel on special problems such as premature birth, vaccinations, poisons, and specific maladies, and nourishment.

Distribution des Eaux: Le Calcul des Prix (Water Rates Manual)
Technical series rept. no. 2.
1964, 78p
Text in French.

Keywords: Cost analysis, *Water supply, Water distribution, Developing countries, Manuals, Prices, Water services, Expenses, Taxes, Developing country application, Water costs, Water rates.

This is the first of a series of four books that offer developing countries a guide to establishing a water distribution service. This book covers how to determine the proper price scale for the distribution of water. The cost price of the service, expenses, cost and expense distribution, and normal subscription rates are covered. Annexes study prior tariffs, rents, insurance, and fire protection.

L'Abattage des Boeufs a la Ferme (Slaughtering, Cutting, and Processing Beef on the Farm)
Richard L. Hiner, 1978, 48p
Text in French.

Keywords: Beef, *Food processing, Manuals, Freezing, Cutting, Cleaning, Separation, Meat, Equipment, Developing country application, Slaughtering.

This handbook for beef slaughtering and processing covers the entire procedure from handling and care of the animal before slaughtering to freezing, salting, drying, or smoking the beef. Topics covered include equipment, felling the animal, bleeding and skinning, opening the carcass, hoisting, cleaning, separating and examining the carcass, the offal, refrigeration, dissecting and rendering the meat.

Fertilización con Nitrogeno en los Tropicos Húmedos (Nitrogen Fertilization in the Humid Tropics)
Richard H. Fox. 1974, 19p Rept no. 72-17
Text in Spanish. Prepared in cooperation with Puerto Rico Univ., Rio Piedras.

Keywords: *Fertilizers, Fertilizing, Tropical regions, Developing countries, Nitrogen, Soil properties, Urea, Ammonium sulfate, Planting, Puerto Rico, Africa, Latin America, Developing country application.

In the humid tropics it is possible to have a healthy and abundant crop of non-leguminous plants only with the application of Nitrogen (N) fertilizer to the soil. Although all soil contains certain levels of organic N (amounts varying in different areas), more may be necessary. This amount will depend on the N level present, the soil's humidity, and the speed of the absorption process. The principal source of N fertilizer in Latin America, as in Africa, is derived from ammonium sulfate, (NH₄)₂SO₄, although the acid residue; the high cost of transportation in relation to the amount of N received; and the low content of N in the ammonium sulfate are definite deterrents to using this source.

Urea, CO (NH₂)₂, having a much higher content of N, thereby being more cost effective in relation to transportation, is difficult to handle because of its hygroscopicity. Urea is most effective when applied after planting. Charts/tables showing N/soil experiments are included along with an extensive bibliography.

Vulgarisation Agricole: La Planification (Extension Looks at Program Planning)
1966, 32p Rept no. EXTENSION/CIRC-478
Text in French.

Keywords: Agricultural economics, Handbooks, Project planning, Organizations, Personnel, Objectives, History, Developing country application, *Agricultural Extension Services.

Designed specifically for accountable managers of agricultural extension programs, this handbook covers the history, theory, and practice of extension services. Inspectors, specialists, and other groups and organizations must be planned for to make the system work. The necessity of accommodating the program to the regional sociological and other conditions is stressed, and the creation and function of the program broken down into stages for easy understanding. The important factors of planning such as administrative subsidy and public comprehension are covered, and follow-up actions explained.

Trade-Offs Between Farm Income and Selected Environmental Indicators: A Case Study of Soil Loss, Fertilizer, and Land Use Constraints
Technical bulletin
Aug 76, 33p Rept no. TB-1550

Keywords: Income, *Agricultural economics, Farms, Mathematical models, Linear programming, Constraints, *Soil erosion, *Fertilizers, *Land use, Flood control, Yield, Farm crops, Economic impact, Budgeting, Revenue, Government policies, Developing country application, Crop rotation, Tradeoffs, Environmental quality.

Changes in farm income associated with alternative restrictions on soil loss, fertilizer use, and the land use mix are analyzed. A linear programming model is used to estimate the effects of the restrictions, which were developed as indicators of environmental quality. Effects of a partial flood control program on farm income and the environmental quality indicators are also examined. Under conditions assumed in this analysis, restrictions on fertilizer use reduce net farm income more than constraints on either soil loss or the land use mix. Soil loss constraints reduce net revenue and fertilizer use while increasing the diversity of land use. Constraints on the land use mix reduce net revenue and fertilizer use. Flood retarding structures mitigate revenue losses only slightly and do not significantly change effects produced by environmental constraints. Public policies requiring lower erosion rates, reduced fertilizer use, or increased diversity of land use could affect rural resources and food and fiber production. Achieving any of those environmental changes has accompanying trade-offs in farm income.

The Herringbone Milking System. Economic Appraisal, Labor Efficiency Analysis, and Adjustment Possibilities
Morris M. Lindsey. Sep 60, 35p Rept no. PRODUCTION RESEARCH-45

Keywords: *Agricultural economics, *Dairies, Dairy equipment, Performance evaluation, Design, Improvement, Dairy cattle, Cost analysis, Efficiency, Comparison, Farm buildings, Manpower, Developing country application, Herringbone milking system.

One of the most important new developments which seem to hold promise for greater efficiency in dairy farming is the herringbone milking system. This system combines well with such modern improvements as loose housing of dairy cows, pipeline milking, and bulk handling of feed and milk. In this report, new information on the herringbone milking system has been brought together and analyzed. The herringbone is compared with other milking systems for different farm situations, and its possible impact on dairy farming is considered. The results should be of interest to dairy farmers who are considering changes in their milking systems, particularly those who are thinking also of expanding the size of their herds.

Strategies for Improving Small Farmer Development in the Tropics

May 77, 146p Rept no. MPUB-152
Contract ARS-12-14-5001-88
Proceedings of Workshop. Held at the University of Hawaii, Honolulu on May 23-26, 1977.

Keywords: *Agricultural economics, Farms, Tropical regions, Developing countries, Meetings, Education, Government policies, Rural areas, Developing country application, Small farms.

The definition of a 'Small Farmer' in this report is grouped as the rural disadvantaged with little or no access to political power, institutional services, full employment, educational opportunities, societal base, and amenities available to some other segments of the non-farm population. This workshop was devoted to working sessions in developing outreach strategies for the small farmer. Development schemes and case studies were presented and discussed by each of the participants but no consensus unanimity in program approach was reached.

Proceedings of Workshop on Appropriate Technology Held January 23-25, 1978

Final rept.
1979, 349p NSF/RA-790002
Contract NSF-C-ERS77-21824

Keywords: Research management, Meetings, Technology assessment, Planning, Guidelines, Policies, Decision making, Problem solving, Management, *Technology transfer, Recommendations, Appropriate technology, Technology utilization.

The purpose of the project was to convene a workshop of people interested in appropriate technology to examine and document locally-focused issues in this field, and to contribute recommendations for a research agenda and program guidelines which could be considered in planning a distinct research program in appropriate technology. For the purposes of this report, appropriate technology is defined as a socio-technical process which encompasses technology design, assessment, and use. This process seeks to optimize solutions, wherever possible, through reliance on local problem-solving capabilities as well as sensitivity to environmental and cultural impacts. Information about the background and purposes of the project, including the rationale for a research program in appropriate technology, the research agenda and program development guidelines is presented. Background information about the issues examined during the project including copies of the project overview and overview of workshop events is given. The document also contains the 25 final papers written by workshop facilitators and participants, as well as other documentation of the ideas and recommendations made by those who attended the workshop. The agenda recommends three main research modes: socio-technical systems research, policy research, and technology transfer research.

Strategies for Small Farmer Development: An Empirical Study of Rural Development Projects. Volume I

Final rept.
Elliott R. Morss, John K. Hatch, Donald R. Mickelwait, and Charles F. Sweet. May 75, 513p
Contract AID/CM/ta-C-73-41

Keywords: *Agricultural economics, Farm management, Developing countries, Productivity, Personnel development, Rural areas, Project planning, Models, Farm crops, Cooperation, Developing country application.

The purpose of this report is to provide information on what can be done to increase the well-being and productivity of the small farmer in the Third World so as to

become self-sustaining. The volume is divided into five chapters with the following topics: (1) research and focus; (2) project success; (3) local action; (4) project components for small farmer development; and (5) summary of findings and their implications for AID and other major donors. Three appendices cover methodology; information systems to support rural development projects; and implication of the findings for future research.

Regional Development: A Review of the State-of-the-Art

James C. Miller. Aug 74, 80p

Keywords: *Regional planning, Economic development, Developing countries, Rural areas, Urban areas, Urban development, Growth, Centers, Models, Development, Coordination, Organizing, Management, Employment, Productivity, Planning, Developing country application, Regional development.

A major impediment to the development and growth of the less developed nations is the deficient spatial organization of these nations, i.e., the absence of hierarchical system of metropolises, cities, towns, and smaller central places through which growth and development impulses are transmitted. The first part of this study discusses the theoretical underpinnings of this notion, drawing together and synthesizing elements of economic development theory, central place theory, location theory, and information theory into a model of the spatial diffusion of economic growth. Next, implications are drawn from the model concerning the deficiencies of spatial organization of developing countries, and several strategies aimed at correcting these deficiencies are discussed. An overview of regional development planning experiences in developed and developing countries is then undertaken, and several conclusions complete the study.

The Role of Sheep and Goats in Agricultural Development. A State of the Arts Study

Aug 77, 230p

Keywords: *Animal husbandry, Sheep, Goats, *Agricultural economics, Reviews, Developing countries, Production, Tropical regions, Proteins, Meat, Milk, Wool, Demand (Economics), Government policies, North Africa, Middle East, Developing country application.

The approximately 1.5 billion sheep and goats of the world are a major resource for feeding and clothing mankind. The current role of sheep and goats in developing countries ranges from a very minor level of production in some of the countries in the wet tropics to being the principal source of animal protein in certain North African and Middle Eastern nations. The lack of understanding of the roles of sheep and goats has generally resulted in their being ignored as a part of the sustenance and development cycle for small farmers and pastoralists. It is hoped that this report will provide the stimulus for attainment of the necessary under-

APPROPRIATE TECHNOLOGY ABSTRACTS

standing to determine the proper role for sheep and goats in future agricultural development efforts.

Economics of Protein Improvement Programs in the Lower Income Countries
Foreign economic development rept.
Lyle P. Schertz. Jul 71, 43p Rept no. FEDR-11

Keywords: *Proteins, Grain crops, *Agricultural economics, *Crops, Developing countries, Improvement, Sources, Human nutrition, Income, Food consumption, Plant genetics, Cost analysis, Foreign countries, Brazil, Pakistan, Technical assistance, Developing country application.

This paper presents an overview of the world protein problem and some major economic considerations important to nutrition improvement programs. It discusses sources and uses of protein, the role of income, and benefit-cost dimensions of various strategies aimed at improving adequacy of protein consumption in lower income countries.

Chemical Processing, An Operation Manual for Cooperative Program Use
Jun 57, 164p

Keywords: *Chemical industry, Manuals, Design criteria, Process charting, Equipment, Dyers, Evaporators, Pressure filters, Heat exchangers, Cost analysis, Rotary filters, Management planning, Performance evaluation, Developing country application.

This manual describes some of the basic equipment for the establishment of chemical processing industries. Six types of equipment are described: dryers; evaporators; pressure filters; jacketed process vessels; heat exchangers; and rotary vacuum filters. The manual is designed as a guide for the operation of many of the more important chemical process systems, which are significant in a growing industrial economy. It should be of help in the planning stages of almost any process industry.

Scientific and Technical Information in Pakistan. The Report of a Joint IDRC/UNDP Mission, October-November 1976
Nov 78, 64p
Prepared in cooperation with United Nations Development Programme, New York. Sponsored in part by Pakistan Science Foundation, Islamabad.

Keywords: Information systems, *Pakistan, User needs, *Information services, Decentralization(Dispersal), Information centers, Developing countries, Professional personnel, Librarians, National government, Cooperation, Developing country applications.

The Pakistan National Scientific Documentation Centre (PANSDOC), was established in 1957, with technical assistance from Unesco, to provide scientific workers and others with services such as the procurement of documents, compilation of bibliographies and translations. In the late sixties, a project was formulated to convert this group into a fully-fledged Pakistan Scientific and Technological Centre (PASTIC), and work on this expanded project was started in 1974. The PASTIC project was based on the concept of a centralized service, which was consistent with what was then being attempted by most developing nations. Pakistan organized a joint IDRC/UNDP Mission, consisting of experts from Unesco, IDRC and UNIDO, to conduct a detailed study of the S&T information needs in Pakistan and make recommendations on the future structure and development of a national S&T information network. A comprehensive report was produced based on a detailed analysis of the existing situation and anticipated future requirements. Since the contents of the report are relevant not only to Pakistan but to other developing countries faced with similar problems, it was decided to publish the mission report with IDRC assistance, for wider circulation.

Demonstration of Virgin Islands Small Boat Fishing Techniques
Completion rept. Jul 75-Sep 78
Susan E. Coleman, Joseph R. Sylvester, Joseph A. LaPlace, Ken Turbe, and Arthur E. Dammann. Mar 79, 33p NOAA-79030604

Keywords: *Fisheries, Fishing, Virgin Islands, *Boats, Design, Traps, Nets, Operating costs, Construction materials, Performance evaluation, Dorries.

Virgin Islands fishery development has centered on technological introduction and resource diversification. This report provides a descriptive study on the use of an easily constructed rough-water dory and assessment of its performance in local waters. This assessment took the form of simulated commercial fishing and explored a variety of fishing techniques to measure daily catch potential in local waters. The basic boat design was suitable to local rough water conditions but lacked sufficient working deck space. Lengthening the boat to 20 feet increased operating expenses. Subsequent shortening to 17 feet indicated that the most economical size may lie between 17 and 18 feet, with a 65-85 hp outboard motor. Gear loss and fuel were the major expense items. Traps, line fishing, gill nets, and bait nets produced more than 90% of the total catch.

Perch Fingerling Production for Aquaculture
Richard W. Soderberg. 1978, 82p WIS/SG/AR-421, NOAA-79030201
Proceedings of a Conference held at the University of Wisconsin on December 12, 1977.

Keywords: Perch, *Aquaculture, Meetings, Reproduction(Biology), Life cycles, Growth, Tanks(Containers), Fisheries, Temperature, Budgeting, Cost engineering, Reviews, Perca flavescens, Sea Grant program.

Perch fingerling production was the subject of a conference held at the University of Wisconsin on December 12, 1977. Because of their small market size and limited growth potential, perch aquaculture will be a fin-gerling-intensive proposition. Larger numbers of fin-

gerlings will be required to produce a given weight of perch than for most other species being cultured. For this reason, purchased fingerlings become a major element in the cost of producing a pound of perch. From an economic standpoint, it is difficult to fit a five to 10 cent fingerling into the cost of producing a fish that will sell for 30 to 40 cents when grown out. The purpose of this conference is to present what is considered the state of the art in perch fingerling production to help reduce the cost of this element of perch aquaculture.

Energy Use and Conservation in the Poultry and Egg Industry
George B. Rogers, Verel W. Benson, and Donald Van Dyne. Oct 76, 58p Rept no. USDA/AER-354
Errata sheet inserted.

Keywords: Fuel consumption, Electricity, *Poultry, Eggs, Poultry houses, Marketing, Space heating, Illuminating, Ventilation, Industries, Energy consumption, *Energy conservation, Poultry industry, Electric power consumption, Developing country application.

Estimates of energy use in the poultry and egg industry are discussed by commodity, type of fuel, season, and function. In 1974, the 146.5 trillion Btu's used in poultry production and marketing cost producers almost \$550 million. Although the efficiency of energy use in this industry has increased in the last decade, energy conservation measures discussed in this report can yield further substantial savings. Development and implementation of new technologies may reduce the use of critical forms of energy in the future. This study is intended to provide a basis for further energy research in the poultry and egg industry and to serve as a prototype for similar energy studies on other agricultural industries.

The Potato Industry in East Pakistan. Improving Seed Potato Multiplication and Storage
D. G. Dalrymple, and R. V. Akeley. May 68, 98p

Keywords: *Potatoes, *Agricultural economics, *Pakistan, Yield, Production, Horticulture, Fertilizers, *Bangladesh, Seeds, Imports, Food storage, Demand (Economics), Plant diseases, Viruses, Prices, Marketing, Nutrition, Food consumption, Developing country application.

Although the potato has been commercially cultivated for centuries in Europe and North America, it is evidently rather new to East Pakistan. One report indicates that it was first produced around 1930. Since then, production has expanded substantially and potatoes are now easily the most important vegetable crop. Present production and marketing methods will be discussed in the first part of this report. One of the major production problems faced in East Pakistan--and other tropical areas--is the difficulty of building up and maintaining good stock. This is, in part, traceable to the heavy year-round insect populations which spread potato viruses. A special problem in East Pakistan is related to topography: the country is almost entirely a low-lying delta and there is essentially no high land suitable for more conventional breeding and multiplication programs. One answer is to import new seed varieties each season. This process, however, takes scarce foreign exchange. A compromise method would be to import a limited amount of seed, multiply it, and then store it for distribution to farmers the following season. The latter method has been proposed for East Pakistan and is discussed in detail in the second portion of this report.

Leaf Protein Concentrate (PRO-XAN) from Alfalfa: An Economic Evaluation
Agricultural economic rept.
C. J. Vosloh, Jr, R. H. Edwards, and R. V. Enochian.
Sep 76, 59p Rept no. USDA/AER-346

Keywords: *Proteins, Feeding stuffs, *Agricultural economics, Economic analysis, Operating costs, Plant tissues, Extraction, Labor estimates, Equipment, Investments, Industrial plants, Distillation, Pro-Xan process, Alfalfa, Developing country application, Wet methods.

Extraction of leaf protein concentrate (Pro-Xan) from alfalfa for use in various livestock feeds provides new investment opportunities under a wide variety of conditions. This report evaluates four systems for making this extraction and the effect of four variables on the annual rate of return on investment. The four systems differ in the method of expressing juice from the fresh alfalfa and the yield of Pro-Xan. The system in which the alfalfa is ground prior to pressing, and which has a Pro-Xan yield of 12 percent, had the highest rate of return on investment. The four variables evaluated were the method of utilizing the press cake remaining after the Pro-Xan containing juice is expressed, the method of disposition of alfalfa solubles remaining after the Pro-Xan is recovered from the juice, the length of operating season, and the size of the processing plant. The most profitable method of solubles disposition is dependent upon the feasibility of disposing of them in a nearby irrigation system, the price that can be obtained for them when concentrated for use as a feed ingredient, and the price of natural gas.

Economic Research Service, Washington, DC.
Recycling Poultry Waste as Feed. Will it Pay
Agricultural economic rept.
Mar 74, 59p Rept no. USDA/AER-254

Keywords: *Waste recycling, *Animal wastes, Agricultural wastes, *Poultry, Water pollution abatement, Agricultural economics, Circulation, Feasibility, Drying,

Feeding stuffs, Lagoons (Ponds), Aerobic processes, Composts, Oxidation, Cost estimates, Processing, Fertilizers, Incinerators, Developing country application, Recycling, Manure, Land application.

The recycling of dried layer waste (DLW) as feed to livestock and poultry is examined in considerable detail, but less information is available on recycling broiler waste. The cost of pollution abatement associated with alternative poultry-waste management systems is also analyzed. The cost of producing 1 ton of DLW is \$25, \$30, and \$46 for flock sizes of 80,000, 50,000 and 10,000 cage layers, respectively. Using available drying systems, on farm processing and feeding of DLW do not appear to be economically feasible for the family-size (10,000 layer) operation. However, processing and feeding DLW may be feasible for the larger operations. The highest net returns are attained by the larger operations when DLW is fed at 12.5 percent of the ration. Cost analyses of the alternative methods of waste abatement show land disposal and anaerobic lagoon treatment to be the least expensive. Mechanical drying, aerobic lagoon treatment, oxidation ditch treatment, and combined anaerobic-aerobic lagoon treatment fall within the intermediate cost range. Composting and incineration are the most expensive.

A Low-Cost Water Pumping Windmill Using a Sail Type Savonius Rotor
S. P. Govinda Raju, and R. Narasimha. Jan 79, 110p
Rept no. 79/FM/2

Keywords: *Wind energy, Windmills, Pumps, Wind power generation, Rotors, Developing countries, Structural design, Rural areas, Developing country application, Savonius rotors, *Water pumps.

A water pumping windmill which can be built largely using materials and skills available in rural areas has been designed and fabricated. The windmill uses a Savonius rotor and incorporates a novel sail type construction. The pump is of positive displacement type using the casing of a pneumatic tire for the pumping chamber. Two prototypes have been constructed and these have indicated a reasonable performance and reliability.

APPROPRIATE TECHNOLOGY ABSTRACTS

Everything a new entrepreneur needs to know about starting a business is thoroughly covered in the handbook. Some of the topics covered include business structure, risks, capital management, mortgages, credit sources, business law, permits, building codes, insurance, employee relations, stock management, publicity and advertising, sales, business documentation for management, building plans and construction, preventing and meeting problems that cause delays, examples of several construction business failures and successes, amassing capital, future planning, land purchase and management, land subdivision and parceling, and transportation. A special section is devoted to sources of further information.

Fluoride Process - A Sodium Silicate Bonded Self-Hardening Sand System Using a Fluoride Hardener
Interim rept.

P. L. Jain, and P. K. Panda. 22 Mar 79, 10p

Keywords: Foundry sands, Binders(Materials), Sodium silicates, Fluorides, Hardeners, Additives, Processing, Molds, Cores, Casting, Cost analysis, *India, *Foundries, Developing country application, Foreign technology.

Investigations have been carried out at NIFFT to develop a self-hardening sand system using sodium silicate binder and an inorganic fluoride hardener. The results obtained indicate a distinct possibility of using this process in preference to other inorganic or organic no-bake processes. The dimensional accuracy and casting finish obtained on the castings with this process are easily comparable to that obtained by other self hardening processes. The bench life, strength, and other sand characteristics are quite favorable and the breakdown properties are much better than in case of CO₂ process. The process is also more economical than other organic and inorganic no-bake or self hardening processes, and can be quite suitable for the production of both moulds and cores for ferrous and non-ferrous castings.

Les Fibres Vegetales et Leurs Utilisations (Vegetable Fibers and Their Uses)
1966, 37p

Text in French.

Keywords: *Fibers, Plant fibers, Processing, Leaf fibers, Cotton plants, Bamboo, Reeds(Plants), Spinning(Staple fibers), Weaving, Ramie, Manila hemp, Sisal, Extraction, *Textile industry, Spinning frames, Developing country application, Villages.

The paper summarizes the processing and use of vegetable fibers with special emphasis on the development of this industry in the small-scale industrial sector in various countries. Covered are several subjects relative to vegetable fibers from the processing to manufacturing phases, including the equipment to be used at several stages, until the final product is obtained.

Development of Low-Cost Roofing from Indigenous Materials in Developing Nations

Final rept. 18 May 73-31 Dec 77

George L. Ball, Ival O. Salyer, Dennis W. Werkmeister, R. A. Cass, and Arthur M. Usmani. 20 Feb 78, 434p Rept no. MRC-DA-751
Contract AID/CM/ta-C-73-12

Keywords: *Building materials, *Housing, Roofing, Developing countries, Composite materials, Fibers, Bagasse, Binders(Materials), Rubber fibers, Thermoplastic resins, Fabrication, Compression molding, Cost estimates, Philippines, Jamaica, Ghana, Developing country application.

This document covers a four-year research program to develop low-cost roofing from indigenous materials in three developing nations (Philippines, Jamaica, and Ghana). In Phase I, resources were surveyed, and collaborating individuals and organizations defined. In Phase II, experimental roofing composite materials systems were developed and optimized. In Phase III, demonstrations of the roofing manufacture were conducted and experimental roofs installed. Four composite panel roofing material systems were developed which use major percentages of indigenous bagasse filler, and minor amounts of phenolic or other resin binder. Three of the four processes use an intensive (Banbury) mixer. All four have compression molding as a final process step in panel fabrication. The products range in raw material cost from 6-14 cents per square foot of roofing panel, depending on composition, resin content, etc. The program was implemented in the three participating countries through advisory committees and technical working groups. Local labor, materials, and facilities were used to demonstrate manufacture of roofing by one or more of the processes.

Expatriate Professionals as International Consultants

Joseph E. Stepanek, and Ming Ivory. Feb 79, 73p

Keywords: Professional personnel, Consultants, Developing countries, Population migration, Manpower utilization, Consulting services, Expenses, *Technical

assistance, Resource allocation, Organizations, Administrative support, Scientific societies, Grants, Foreign nationals, Brain drain, Human resources, Developing country application.

The permanent migration of professionals to the more developed from the less developed regions of the world, in recent years referred to as the 'brain drain', is a problem of growing concern to all countries. The report reviews the major findings of selected studies undertaken during the last decade on the brain drain in order to assist the design of an action program. The report does not attempt an analysis of the brain drain problem but concentrates on one practical way of addressing it through a program which facilitates the return of expatriate professionals, residing in the United States, for relatively short periods as volunteer consultants to their countries of origin. The operational and financial implications of an expanding action program have been presented with suggestions for cost sharing.

Cealandria Environmental Education Project

Gladis A. Bottaro Marques. 1979, 27p

Sponsored in part by United Nations Educational, Scientific and Cultural Organization, New York, and COLCIENCIAS. Proceedings of the International Seminar on Appropriate Technology in Education, Bogota, Colombia, January 29-February 2, 1979.

Keywords: *Education, Schools, Instructional materials, Disadvantaged groups, Communities, Adults, Children, Learning, Citizen participation, Developing country application.

The report is based on the belief that by strengthening the role of education the school will be able to function as a center of resources for the whole community and it will aid the social and educational rehabilitation of neighborhoods. The objectives in the project were to get the community to really participate in the development of their town, make their habitat less aggressive, and achieve a true community relationship. Emphasized in the project were the two technologies considered appropriate for education: (1) open curriculum, and (2) the audio-visual teaching project for educational communication. An analysis of the experiences of the project is included in the document.

Irrigation in Bangladesh
Stephen D. Biggs, Chris Edwards, and Jon Griffiths. Feb 78, 24p

Keywords: *Irrigation, Developing countries, *Bangladesh, Government policies, Rural areas, Manpower, Pumping, Water wells, Ground water, Irrigated land, Water supply, Planning, Employment, Pakistan, Developing country application.

This paper summarizes a longer paper on irrigation in Bangladesh. It suggests that the development of irrigation is a precondition for a significant increase in agricultural output and employment. With scarcely any uncultivated land, higher food output can only come through widespread irrigation, which is applied to a mere 12% of cultivated land; and a more intensive use of land is essential if underemployment and underemployment in Bangladesh is not to further increase as one million additional workers each year look for jobs.

An Introduction to the Health Planning and Budgeting Systems in India

Discussion paper
Andrew Barnett. Dec 77, 34p Rept no. IDS/DP-121
Also pub. as ISSN-0308-5864.

Keywords: *India, Budgeting, Foreign countries, Expenses, Data sources, Statistical data, Developing country application, *Health planning, Government.

Indian Government health expenditures have rarely been analyzed in published material--this omission is rapidly forming yet another constraint to change at a time when the whole Indian health care system is being questioned. This paper provides a guide to sources of material on health planning and budgeting in India and an initial analysis of government health expenditure on the basis of the data publicly available up to June 1976.

Water to the Fields: Institutional Innovations in India's Command Area Development Programme

Discussion paper
Robert Wade. Aug 75, 34p Rept no. IDS/DP-79
Also pub. as ISSN-0308-5864.

Keywords: *Irrigation, *India, Organizations, Irrigation canals, Boundaries, Government policies, Water loss, Efficiency, Water distribution, Developing country application, Institutional framework.

Irrigation development is now receiving high priority in India's agricultural development strategy. This paper describes what is being done to effect a number of major institutional changes in canal-irrigated areas, such as realignment of property boundaries, introduction of rotational irrigation, and formation of water users' associations. The paper argues that research on institutional aspects of water distribution, of which there has so far been remarkably little, is needed not only for understanding the distribution of income and power in rural society, but also for the formation of policies which might make that distribution less unequal.

Sussex Univ., Brighton (England). Inst. of Development Studies.

Towards Rural Futures: An Approach Through the Planning of Technologies

Discussion paper
Robert Chambers. Jun 78, 24p Rept no. IDS/DP-134
Also pub. as ISSN-0308-5864.

Keywords: *Regional planning, Research, Technology, Developing countries, Economic development, Utilization, Rural sociology, Research management, Planning, Benefits, Expenses, Environments, Research and development, Developing country application, Rural population.

The report discusses the potential of technological research and development for creating rural futures in third world countries, especially in South Asia and Africa. Against the background of forces which deepen and extend rural poverty, it suggests that new technology can either impoverish or, through imaginative R and D, may have a countervailing effect on the forces which tend to impoverish. It reviews some current approaches and then speculates on some gaps which they sometimes leave, R and D on R and D itself; learning from and working with rural people; environment-specificity; a future-orientation. It outlines criteria and a method of planning for identifying desirable new technology and lists types of environment for which the method might be useful.

Nutrition and National Development Planning

Discussion paper
J. L. Joy, and P. R. Payne. Oct 75, 40p Rept no. IDS/DP-83
Also pub. as ISSN-0308-5864.

Keywords: Nutrition, Nutritional deficiency diseases, Food, Development, Planning, Requirements, Assessments, Developing country application, *Health planning.

APPROPRIATE TECHNOLOGY ABSTRACTS

Three papers are included in this document and constitute an attempt to define the position of food and nutrition issues in the context of development planning. They take as their starting point the proposition that the primary objective of development planning should be the reduction of deprivation. The areas discussed in the documents are: (1) the nature and range of the choices open to planners confronting the problem of nutrition deprivation and the kind of information needed for effective decision making; (2) the role of the nutritionist in relation to the planner and the politician; (3) the organization of the planning process.

Appropriate Technology for a New System of Education
M. M. Hoda. 1979, 13p

Presented at International Seminar on Appropriate Technology in Education, Held at Bogota, Colombia on January 29-February 2, 1979. Sponsored in part by United Nations Education, Scientific and Cultural Organization, New York, and COLCIENCIAS.

Keywords: *Education, Technology assessment, Developing countries, Regional planning, Citizen participation, Economic development, Educational sociology, Rural sociology, Meetings, India, Educational technology, Teaching methods, Developing country application.

A plan and organization for a new system of education is proposed in this paper. It is an appropriate technology for education because it emphasizes acquiring skills and arts in the fields of village activities from the beginning. The purpose of this education would be to make its recipient a useful member of the community

who should be able to enrich the environment to which he belongs.

 Background paper
 T. Jeyasingam. Sep 78, 39p
 Report of Working Group No. 10, Appropriate Technology for the Manufacture of Pulp and Paper Products.

Keywords: Manufacturing, Corrugating, Boxes(Containers), Developing countries, Economic development, Rural areas, Technology innovation, Production methods, Paper industry, Project management, Raw materials, Pollution, Pulp additives, *Agricultural wastes, Paperboards, *Industrial plants, *Paper, *Pulp, *Containers, *Waste recycling, Research and development, Developing country application.

A project to manufacture liner board and corrugating medium to produce corrugated box containers has been identified as essential to boost the rural economy of developing countries. The appropriate technology for this industry is based on the use of agricultural residues for pulp production, the use of less steam, water and energy for processing, simple process techniques suitable for ease of operation and maintenance, flexibility of operational systems and reduction of pollution load. As this project is based on agricultural residues, it will have far reaching socio-economic benefits to the rural communities of developing countries.

Studying Agricultural Institutions. A Modular Approach
 Summary rept.
 Garland P. Wood. Jan 78, 113p
 Contract AID/csd-3132

Keywords: *Agricultural economics, Developing countries, Organizations, Management, Objectives, Education, Project planning, Economic development, Attitudes, Questionnaires, *Costa Rica, Developing country application, Institutions.

This report details a model of how 'outsiders' can help public institutions become more effective in serving the economic development needs of the small farmer. Results of a partial test of this model in Costa Rica is also reported.

Health Aid: A Comparative Study of Three Donor Countries
 Alastair White, Emmanuel De Kadt, and Neil Anderson. Jan 79, 35p

Keywords: *Health care delivery, Developing countries, Comparison, Great Britain, Sweden, Netherlands, Foreign countries, Agencies, Developing country application, Voluntary organizations, Health programs.

The paper presents a summary of the finds of the IDS health research group's analysis of the aid given in the field of health by the governments and by the voluntary agencies of Britain, Sweden, and the Netherlands. The problems addressed here are the forms of health programs most urgently needed in developing countries and how programs should be ranked in terms of their usefulness.

International Forum on Appropriate Industrial Technology, Held at New Delhi/Anand, India on November 20-30, 1978. Evaluation of Appropriate Technology for Textile Production in a Developing Country
 Background paper.
 Sep 78, 80p
 Sponsored in part by United Nations Industrial Development Organization, Vienna (Austria). Report of Working Group No. 3, Appropriate Technology for the Production of Textiles.

Keywords: *Textile industry, India, Textile processes, Developing countries, Cotton fibers, Synthetic fibers, Spinning(Staple fibers), Fabrics, Textile finishing, Technical assistance, Clothing, Appropriate technology, Developing country application.

The textile industry is one of the earliest industries to occur in many developing countries. This paper attempts to analyze the relevance to developing countries of alternative technologies available for different stages of textile manufacture. The scope is restricted to the main apparel fibres cotton and manmade fibres. The discussion is primarily based on the profile of textile manufacture in India, where a wide range of technologies and scale of operations exist side by side.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. The Role of National Institutions and Raw Materials Problems in Building Materials Industries
 Background paper
 N. R. Hill. Oct 78, 24p
 Report of Working Group No. 5, Appropriate Technology for the Production of Cement and Building Materials.

Keywords: *Building materials, Construction materials, Technology assessment, Developing countries, Raw materials, Industries, Production planning, Industrial training, Laboratories, Appropriate technology, Developing country application.

A common problem affecting the development of building materials and construction in developing countries is the lack of adequate expertise and laboratory facilities for the evaluation of suitable deposits of raw materials. This paper stresses the responsibility that rests with governments to ensure that trained staff and adequate central surveying and testing facilities are available.

Primary Health Care and the Role of Foreign Aid
 Susan Cole King. Jan 79, 24p

Keywords: Foreign aid, Developing countries, Implementation, *Health care delivery, Developing country application, Health care requirements, Health status, Primary health care, Health programs.

The paper discusses the basic health needs and the most important factors contributing to improvement in health status. The principles of basic health needs is summarized in Part I. Part II discusses the operational problems of implementing primary health care programs. Part III outlines the forms of aid required to address these operational problems and discusses the implications for donors' internal organizations and procedures, which at present constitute constraints to assisting programs which aim to meet basic health needs.

Engineering for Appropriate Technology Farming Systems in the Lowland Humid Tropics
 Farming systems program
 Ray Wijewardene. 1977, 41p
 Report for 1977 of the Agricultural Engineering Sub-Program Crop Engineering Department.

Keywords: Tropical regions, *Agricultural machinery, Developing countries, Hand tools, Plows, Tractors, Planting, Harvesting, Pest control, Cultivation, Developing country application.

The subject of this document is alternate methodology which is low in energy and time and is appropriate to the environment. It is directed at the small and intermediate farmer in the humid tropics and discusses the development of tools which will enable them to adopt 'no till' or 'minimum tillage' techniques. The areas of research discussed include tools for weed control, tools for planting, tools for harvesting, and equipment for transportation. Tables for comparison of manpower requirements and productivity are included.

 Farming systems program.
 Ray Wijewardene. Jan 76, 22p

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: Planting, *Agricultural machinery, Sprayers, Hand tools, Design, Spraying, Tractors, Tropical regions, Developing country application.

This document is an illustrated report on the design and development of implements and tools to complement the new systems of farming being developed primarily for use by small farmers in the low-land, humid tropics and capable of indigenous manufacture. The topics covered are: weed control techniques, planting/fertilizer placement, harvesting, power tiller, land development and irrigation engineering.

Engineering for Appropriate Technology Farming Systems in the Lowland Humid Tropics
Farming systems program
Ray Wijewardene. 1976, 28p
Report for 1976 of the Agricultural Engineering Sub-Program Crop Engineering Department.

Keywords: *Agricultural machinery, Tropical regions, Planting, Harvesters, Plows, Tractors, Weed control, Production, Rice plants, Corn plants, Design, Developing country application, Small farms.

The development of energy reducing systems for crop production, and the appropriate tool technology to complement them, requires an appreciation for the range of crops being grown within each of these zones; cultural practices most appropriate to a sustained agriculture; water regime likely to be available; and the methods of weed control which might appropriately be applied. Illustrated and discussed in this report are the tools developed for increased crop production in the humid-tropics. They include: hand-held planters, propelled planters, a controlled droplet application agrochemical applicator, a hand maize sheller, a stripper harvester for rice and similar cereal crops, strip tillage, and mechanized cassava lifting. Tables are given for comparison of methods and productivity.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology for Production of Sugar and Other Sweetening Agents
Background paper.
27 Sep 78, 34p

Report of Working Group No. 4, Appropriate Technology for the Production of Sugar.

Keywords: *Sugar, Production, Technical assistance, Food processing, Developing countries, Manufacturing, Methodology, Technology, Sugar crops, Tropical regions, Foreign countries, India, Appropriate technology, Developing country application.

Different technologies for the production of various sweetening agents such as gur, khandhari sugar, plantation white sugar, raw-sugar, refined sugar, etc. are described in detail in this paper. The quality of the products is specified. The cane, financial and technical skill requirements for various technologies are outlined. The parameters required for adoption of one technology or the other are indicated. It is pointed out that the vacuum pan technology for producing plantation white sugar is the cheapest and is ideally suited for developing countries.

Indian Drugs and Pharmaceuticals Ltd., New Delhi.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology in Drug and Pharmaceutical Industries

Background paper.
Oct 78, 123p
Sponsored in part by United Nations Industrial Development Organization, Vienna (Austria). Report of Working Group No. 2, Appropriate Technology for the Manufacture of Drugs and Pharmaceuticals.

Keywords: Technology assessment, *Drugs, Developing countries, Health, Medical services, Medical supplies, Marketing, Patents, Production methods, International trade, Government policies, Fixed investment, Capital, Pharmacology, Pharmacy, Industrial technology, Industrialization, Institutional role, Developing country application.

The report discusses the different aspects of the drugs and pharmaceuticals industry with particular reference to the drug needs in developing countries. There is no doubt that many developing countries have a long way to go in cultivating sophisticated technology in this field. However, the competence of various developing countries in adopting the production in the field of drugs and pharmaceuticals varies which is due not only to the different stages of educational development in general and of technological competence in particular, but also due to capital-intensive requirements of these industries. All the developing countries are in the process of reorganizing their health needs and today even the more developed among the developing countries are not prepared to provide medical needs to more than 20% of their population. It is fairly

APPROPRIATE TECHNOLOGY ABSTRACTS

necessary that each of the developing countries defines its scope of production and phases out the work to be undertaken in this direction with ability to expand this for future development.

Appropriate Technology in India. Report on a Study Leave, August-December, 1977
J. W. Powell. 1977, 51p

Keywords: *Industrial development, Technology innovation, Rural areas, *India, *Nepal, Industries, Economic development, Engineering, Textile process, Cements, Manufacturing, Crafts, Solar energy, Sugars, Soaps, Vegetable oils, Papermaking, Woodworking, Methane, Ecology, Industrial technology, Rural population, Rural development, Developing country application.

The booklet is a study of small scale industries in India and Nepal and of the efforts being made to develop appropriate technologies for the establishment of decentralized industries in rural areas. It is an easy reference for specialists who may be interested in one or two technologies. Emphasis has been placed upon the advantages of each technology and the opportunities for its application with special reference to the problems of the rural poor. The topics covered are: textiles; engineering; cement making; craft industries; chemical

processes; renewable energy; ecology; and non-mechanized transport.

The Prevention of Farm-Level Food Grain Storage Losses in India: A Social Cost-Benefit Analysis
R. A. Boxwell, M. Greeley, D. S. Tyagi, M. Lipton, and J. Neelakanta. 1977, 252p

Keywords: *Grains(Food), *Food storage, *India, Benefit cost analysis, Project planning, Improvement, Farms, Losses, Platforms, Bins, Aspergillus, Fungi, Metals, Damage, Rodents, Fumigation, Ethylene, Bromides, Chlorides, Developing country application.

The object of this document is to provide a social cost-benefit analysis of farm-level storage improvements in Andhra Pradesh. The major crop studied was paddy, and following a pilot project the main project team worked from 1974 to 1976 in six districts of Andhra Pradesh, with a base at the Indian Grain Storage Institute, Bapatla, Guntur District. The following areas are discussed in this report: The sample and measurement of losses; the present pattern of storage; the structure and pattern of storage; and social cost-benefit analysis of farm-level storage improvements programs. References, tables, and photographs are included.

Preparing, Evaluating, and Managing Development Projects

Lawrence J. Sespaniak, Morris J. Solomon, and John H. Bragg. May 73, 583p
Prepared in cooperation with Massachusetts Univ., Amherst, and Ife Univ. (Nigeria). Inst. of Administration.

Keywords: Project planning, Project management, Economic development, Developing countries, Professional personnel, Government policies, Manuals, Decision making, Investments, Capital, Cash flow, Economic analysis, Value, Benefit cost analysis, *Agricultural economics, *Management planning, Social services, Yield, Prices, Group dynamics, Administrative principles, Case studies, Developing country application.

The purpose of the manual is to provide a methodology for developing projects at the ministerial level by both professional and administrative personnel. Major considerations involved in analyzing projects are described. They include: modules for analysis; data-sheets and worksheets; schedules, cash flows, and difference flows; evaluating cash flows of a project; and human relations implications for project analysis. Several projects which are described are castor seed, agricultural, social, and a village health center. An international bibliography is included. Appendices outline compound interest and present value tables; sources of statistical data; steps in developing enterprise budgets and their interpretation; and project studies by participants.

Protecting Adobe Walls from Ground Water

Final rept.

James R. Clifton, and Frankie Davis. Mar 79, 29p
Rept no. NBSIR-79-1730

Sponsored in part by National Park Service, Washington, DC.

Keywords: Walls, Clays, Fluid infiltration, Permeability, *Ground water, Grout, Membranes, Drainage, *Adobe.

Two methods for creating impervious membranes in existing adobe walls were investigated. They were the injection of chemical grouts and installation of a metallic membrane. Chemical grouting was unsuccessful because of the low permeability of the tested adobe materials. The metallic membrane did prevent the migration of moisture in the adobe underneath the membrane, weakening the adobe. Further, soluble salts migrated to the surface of the wet adobe. Alternative methods for protecting adobe structures from ground water and runoff water are discussed, including the installation of effective drainage systems and upgrading the foundations.

Energy Recovery from Manure Using Plug-Flow Digesters

John H. Martin, and Gene Dale. Dec 78, 9p ASAE/TP-78/4568

Keywords: *Agricultural wastes, *Methane, Anaerobic processes, pH, Stability, Management planning, Feedlot wastes, Michigan, Wisconsin, *Bioconversion, *Waste recycling, *Manures, Solid wastes, Synthetic fuels, Manufactured gas, Developing country application.

Two anaerobic digesters have been treating cow manure in Michigan and in Wisconsin for a few years. Both of them employ plug-flow, contrasted with stirred-pot, management of the manure and operate at mesophilic temperatures. They exhibit very high stability and good methane yield at feeding rates in excess of 10 Kg of volatile solids per day per cubic meter of digester volume (0.8 lb/cu ft/day). Dispersion occurs in the velocity of the material passing through the digester so that large pieces pass much more slowly than the hydraulic velocity. Odors in the effluent disappear when hydraulic detention times are as long as 4 days. From measurements of energy content, the biogas is about 60 percent methane. The pH of the digester is between 7.0 and 7.2 under most steady feeding conditions. Under transient feeding conditions it may range from 6.8 to 7.8.

Calefaccion de Edificios y Agua Caliente para Uso Domestico Mediante Energia Solar (Solar Heating of Building and Domestic Hot Water)

Final rept. Jul 74-Dec 75
E. J. Beck, Jr, and R. L. Field. Jan 76, 121p
Text in Spanish.

Keywords: Insolation, Heat storage, *Solar water heating, Architecture, Design, Cost analysis, *Solar heating systems, Solar water heaters, Solar collectors.

This report provides guidance in the design and cost analysis of solar heating systems for buildings and domestic hot water (DHW). The nature of solar radiation, several types of solar systems, storage devices, and architectural considerations are among topics included. Calculation methods are included for determining collector size, storage size, simplified building and DHW loads, value of fuel saved, and saving-investment ratios. Eleven worksheets are used to enable the engineer with no prior experience with solar systems to accomplish a complete design and cost analysis. With this information he can prepare bidding and specification documents for the job. Tables of solar insolation at various Navy stations, typical building heat loads, collector prices by type, and storage tank prices are included. Two example problems are worked for tube-in-sheet collectors: one for space and DHW heating for a single dwelling; the other DHW supply for a dispensary.

Experiences of Community Participation in Non-Scholarized Initial Education in the Department of Puno - Peru

Walker Chalco. 1979, 20p
International Seminar on Appropriate Technologies in Education, held at Bogota, Colombia, on January 29-February 2, 1979. Sponsored in part by United Nations Educational, Scientific and Cultural Organization, New York.

Keywords: *Education, *Peru, Developing countries, Rural areas, Schools, Children, Attitudes, Roles(Behavior), Developing country application.

The paper describes a project undertaken to help the rural population in Puno, Peru to develop by supplying the maximum educational opportunities needed to satisfy the minimum essential needs to learn and for integral development of the largest number of peasant children under the age of six. The project is based on community participation as the community organizes itself to assume responsibility with the government for solving their different problems.

Catfish Farming

Roy A. Grizzell, Jr, Olan W. Dillon, Jr, Edward G. Sullivan, and Lawrence V. Compton. Nov 75, 25p
Rept nos. FARMERS/BULL-2260, FB-2260

Keywords: Catfishes, Aquaculture, Ponds, Containers, Water supply, Water quality, Eggs, Feeding stuffs, Proteins, Oxygen, Temperature, Turbidity, Animal diseases, Parasites, Harvesting, Cost analysis, *Fishes, Developing country application, Fishkills, Predators.

Catfish farming is using water areas to produce crops of catfish by intensive management. This kind of farming requires constructing facilities; controlling water quality; spawning, hatching, and feeding fish; and harvesting and marketing the fish crop. A fish farmer can grow catfish in ponds, raceways, or cages. This bulletin discusses the production of channel catfish, blue catfish and white catfish. They are suited to warm-water culture where water temperatures are above 70 degrees F for at least 4 months each year. All are native to America and have a good conversion ratio of feed to meat.

Animal-Drawn Agricultural Implements, Hand-Operated Machines and Simple Power Equipment in the Least Developed and Other Developing Countries; Report of a Manufacturing Development Clinic Held at New Delhi, India on 21-30 October 1974

1974, 46p
Ministry of Agriculture, New Delhi (India).

Keywords: Manufacturing, *Agricultural machinery, Developing countries, Hand tools, Plows, Design, Proposals, Investments, Feasibility, Maintenance, Harvesters, Tractors, Disks(Agricultural), Technology transfer, India, *Animal energy, Developing country application.

APPROPRIATE TECHNOLOGY ABSTRACTS

The Manufacturing Development Clinic on Animal-Drawn Agricultural Implements, Hand-Operated Machines and Simple Power Equipment in the Least Developed and Other Developing Countries was held at New Delhi from 21 to 30 October 1974. The Clinic was organized jointly by the United National Industrial Development Organization (UNIDO) and the Ministry of Agriculture, Government of India, as one of several projects to be undertaken jointly. The general objective of the Clinic was to explore ways and means to promote the local manufacture of appropriate agricultural machinery in the least developed and other developing countries of the world.

Experiments in Rearing 'Siganus guttatus' (Pisces: Osteichthyes, Siganidae) in a Sea-Cage and Fishpen in the Philippines
Abduraji S. Tahil. Dec '78, 20p

Keywords: Marine fishes, Aquaculture, *Philippines, Feeding stuffs, Growth, Weight(Mass), Salinity, Temperature, Mortality, *Fishes, Foreign technology, Developing country application, *Siganus guttatus*.

Two different groups of juvenile *S. guttatus* fed entirely with benthic algae were reared in two different culture structures. After 24 weeks of rearing, one group with a mean standard length of 7.89 cm and average weight of 15.49 g, upon being stocked in a sea-cage, increased in length to 10.31 cm and 33.56 g in weight. The other group, reared in a fishpen for the same number of weeks, increased in length from a mean of 7.89 to 10.42 cm and in weight from 15.47 to 34.47 g. There was no significant difference in growth. Mortalities of 15.8 percent and 13 percent were obtained in the cage and fishpen, respectively. Growth comparison showed that *S. guttatus* is slower in growing than the other species of siganids. Some advantages of rearing siganids in the fishpen are described and further improvements are discussed.

Agricultural Development Policy Paper
Jun 78, 70p

Keywords: Food, *Agricultural economics, Developing countries, Policies, Project planning, Irrigation, Rural areas, Marketing, Credit, Nutrition, Income, Employment, Food storage, Production, Education, Developing country application, AID project.

This paper sets forth the major policy implications and issues for A.I.D. of a broadly participatory, employment-oriented agricultural production strategy for developing countries. The "broadly participatory" strategy reflects the major U.S. development assistance objectives of helping developing countries: (1) increase their capacity to expand and distribute food supplies to alleviate hunger and malnutrition, and (2) increase participation of poor people in the process and benefits of development. The strategy outlined in this paper suggests that improved diets in developing countries will in large measure depend on increasing food supplies mainly through accelerating agricultural production and improving food distribution, and expanding employment and income of low income families, thereby enabling them to purchase the food they need. It reviews the evolution of A.I.D. agriculture policy and stress the need for a restatement of policy based on a broadly participatory production strategy. It summarizes the implications of the strategy and raises key issues in terms of five function priorities for assistance to agriculture.

Ethanollic Fuels from Renewable Resources in the Solar Age
Harry P. Gregor, and Thomas W. Jeffries. 1979, 34p

Keywords: *Ethanol, Fuels, Organic compounds, Cellulose, Membranes, *Agricultural wastes, *Sugar, Technology, Cost analysis, Fermentation, Process charting, Hydrolysis, Filtration, Reverse osmosis, Evaporation, *Waste recycling, *Bioconversion, Chemical feedstock, Solid wastes, Manufacturing, Synthetic fuels, Developing country application

This communication describes how ethanol, other liquid fuels, and organic chemicals can be produced from cellulosic biomass at prices that can compete with those of petroleum derived materials by employing presently available or soon to be developed membrane technologies. Contemporary membrane technologies can already effect major savings in process costs for the conventional fermentation of grains or molasses to produce ethanol; developing membrane technologies could employ cheap cellulosic substrates for ethanol production.

U-Form Systems and Technology, Inc., Livonia, MI.
Design Properties, Structural Analysis and Construction Details for a Typical U-Form Wall System
c1978, 28p

Keywords: *Buildings, Construction materials, Compression tests, Wind pressure, Floors, Walls, Building codes, Foundations, Earthquake resistant structures, *Energy conservation, Developing country application, Shear walls, High rise buildings.

U-Form Systems and Technology, Inc. has developed an energy-efficient integrated building wall system called 'U-Form.' U-Forms serve as basic building for a low-cost, poured-in-place, reinforced concrete construction system combines structure, vapor barrier, superior thermal and sound insulation, fire retardance, and interior and exterior veneers. The system is applicable to sophisticated high-rise building and low-cost, low-rise buildings alike. Two 12 story apartment buildings of 116 units each were recently erected at the rate of two floors per week using only one six-man crew. U-Forms can be fabricated and erected with basically unskilled labor using a variety of local materials in low capital-investment situations. Hence, increasing applications are being found in urban renewal and in third world countries. (Copyright (c) 1978, U-Forms System & Technology, Inc.)

Regional Agricultural Production Programs, Training and Design Strategies
Burton E. Swanson. 1976, 31p

Keywords: *Agriculture, Production, *Regional planning, *Education, Agricultural economics, Project planning, Rice, Research, Farm management, Rural extension, *Training, Teaching techniques, Developing country application.

The pamphlet presents a palpable portrait of certain real-world problems of institution building as an instrument of social and economic development, and of some practical responses to them. It presents case material about the training of research and extension workers in an international agricultural research center. It then examines key relationships between training and results—between the preparation of persons for developmental roles and eventual action in the field. The findings offer lessons for the design of certain kinds of agricultural production programs, and for using training as one tool in such design.

APPROPRIATE TECHNOLOGY ABSTRACTS

Developing countries have frequently expressed the need for information on technologies evolved or adapted by other developing countries. Such information will be of benefit to them in the appropriate choice of technologies by providing alternatives and also a basis for promoting the exchange of information and sharing of experiences in this field. As part of its information activities UNIDO has been collecting information on technologies from developing countries through contacts with institutions related to research and development and other sources of information in developing countries as well as through journals, reports and other publications dealing with such matters. This volume brings together in one place information on 138 technologies from developing countries. Generally, under each heading a brief description of the technology and its distinctive features are given.

Cooperative Development in Rural Areas
 Cooperative information rept.
 Sep 78, 39p Rept no. CIR-1-SECT-4

Keywords: Agricultural economics, Agricultural machinery, Marketing, Farms, Income, Financing, Rural areas, Sugar beets, Swine, Tobacco, Vegetables, Fruits, Processing, Fishes, American Indians, Capital, *Agricultural cooperatives, Cooperatives.

Many conventional marketing and supply cooperatives have been formed by farmers in the past four decades. Cooperatives' membership consisted primarily of medium- and high-income farmers, although many also had a number of low-income farmers. Between 1957-75, 2,019 cooperatives were formed. New cooperatives formed by commercial farmers included sugar beet processing, tobacco marketing, peanut storage, and feeder pig marketing and farrowing. New cooperatives formed by low-resource farmers included marketing of fruits and vegetables, feeder pigs, and fish. In addition to providing historical and statistical background, this publication also provides information for organizing, financing, and managing cooperatives.

Problems in Prawn Culture
 Aquaculture series 19
 Kunihiko Shigeno, c1978, 104p Rept no. TT-74-52032

Keywords: Shellfish, Aquaculture, Ponds, Larvae, Sea water, Books, Salt water, Reproduction(Biology), Growth, Packing, Cost analysis, Feeding stuffs, Production, Temperature, Mortality, Japan, Translations, *Fishes, Penaeus japonicus, Prawns, Foreign technology.

Japan is the leading producer of cultured prawns. The present book reviews the work done in Japan on prawn culture in abandoned saltterns. The data obtained from Himejima farms, where prawns are grown in outdoor concrete tanks in unfiltered sea water, are the main source of the material for this book. The author discusses the salient features of seed production with great emphasis on the selection of gravid prawns, methods of hatching and growth of seedlings. Culture methods have been elaborated and valuable suggestions offered on all aspects of prawn culture.

Master's thesis
Alan D. Wood. 1976, 316p
Contract AID/csd-2460

Keywords: Pumps, Developing countries, Water supply, *Irrigation, History, Valves, Reviews, Technology assessment, Theses, *Water pumps, Water lifters, Developing country application, State of the art.

This thesis presents a state-of-the-art on water lifters and pumps which are, or can be, used throughout the world, and particularly in developing areas. A brief review is given of the historical development of these devices. Through an extensive literature review and survey of manufacturers and research organizations, this thesis inventories the wide range of water lifting methods which are randomly discussed by these sources and sets forth: (a) a unifying classification

format, (b) the basic operation and typical applications of each class, and (c) a review of applicable prime movers. In addition, criteria used in the selection of water lifters and prime movers is presented with emphasis on water requirements, availability and cost analyses. In this manner, the present status of water lifting in both developing and developed countries is reviewed and several recent projects by international organizations, e.g., AID, are identified which seek to improve existing methods, develop new ones, and disseminate educational material. Through this state-of-the-art, similar and additional areas of water lifting which need technological or sociological attention are then explicitly or implicitly identified.

Volunteers for International Technical Assistance, Inc., Schenectady, NY. Evaluation of Solar Cookers. Part I
1962, 108p Rept no. VITA-10
Prepared in cooperation with Office of Technical Services, Washington, DC.

Keywords: Cooking devices, Solar heating, Evaluation, *Solar heating systems, Developing country application, *Solar cookers.

The report presents results of tests performed on various solar cookers to determine their potential usefulness in countries served by the International Cooperation Administration. Points evaluated were cooking performance and efficiency, durability, cost, shipping weight, portability, ease of operation, ease of manufacture in the countries involved, and adaptability to local techniques and dietary mores. Of all models available for test, a Fresnel-type cooker developed by VITA showed the greatest promise, due particularly to its efficiency, low cost and ease of construction with universally available tools and materials.

PB-296 411/2 PC A03/MF A01
California Univ., Berkeley. Large-Scale Production of Algae
William J. Oswald, and Clarence G. Goluke. 1967, 50p
Presented at the International Conference on Single-Cell Protein Held at Cambridge, MA. on October 9-11, 1967.

Keywords: Aquaculture, *Algae, Primary biological productivity, Pilot plants, Proteins, Cost analysis, Ponds, Propeller pumps, Competition, Photosynthesis, Food, Water consumption, Utilization, Efficiency, Feeding stuffs, Drying, Processing, Land use, California, Developing country application, Mariculture, Global.

Pilot plant studies in a one-million liter plant at Richmond, California indicate that the cost of algae in projected large plants would be from three to ten cents per pound--about 10% of the cost projections made ten years ago for algae in large-scale culture. Reductions in predicted costs, have resulted from the engineering development of a simple growth system which consists simply of a shallow open pond mixed by means of large conventional propeller pumps. Based on results obtained with the Richmond pilot plant, it can be demonstrated that algal culture should be competitive with conventional agriculture for use of land, water, energy, capital, and human resources. This conclusion is based on the evidence that algae culture requires only one-tenth as much land, one-fifth as much water, three fourths as much power, one-fifteenth as

much labor, and one-fourth as much capital as is required by conventional agriculture to produce an equal amount of protein. Based upon current costs of protein and attainable photosynthetic efficiencies, large-scale algal culture should soon contribute significantly to the world's protein resources at a cost below any competitive source of protein.

PB-296 424/5 PC A02/MF A01
Transport and Road Research Lab., Crowthorne (England). A Guide to the Measurement of Axle Loads in Developing Countries Using a Portable Weighbridge
c1978, 24p Rept no. ROAD NOTE-40

Keywords: *Pavements, Loads(Forces), Axles, Weight measurement, Developing countries, Traffic surveys, Highway planning, Portable bridges, Platforms, Great Britain, *Roads, Foreign technology.

In many developing countries road traffic is growing rapidly both in volume and in the size and weight of the vehicles using the roads. As a consequence highway engineers concerned with designing new roads or the strengthening of existing roads in developing countries require reliable information about the distribution of the axle loads of existing traffic, and when possible, information on national or regional axle load trends. The importance of reliable information on axle loads for pavement design purposes is emphasized by the now widely accepted assumption that the degree of pavement damage caused by an axle load is proportional to approximately the fourth or fifth power of the axle load. To provide adequate information on axle load distributions road-side surveys of axle loads are required. Such surveys can conveniently be made using portable wheel-weighing devices. This note describes a simple and convenient procedure for making axle load surveys in developing countries using portable weighing platforms. The procedure is based on experience gained by staff of the Overseas Unit who have undertaken a considerable number of axle load surveys in several developing countries.

PB-296 425/2 PC A11/MF A01
ACTION/Peace Corps, Washington, DC. Wells Manual. Special Issue
Program and training journal
Francis A. Luzzatto. Jan 75, 243p

Keywords: *Water wells, Manuals, Technology, Construction, Well pumps, Specialized training, Developing countries, Foreign aid, Potable water, Ground water, Africa, *Water pumps.

The manual is to provide information on a wide range of well construction techniques. Hopefully, the user will not see each method of construction separately, but rather be able to synthesize techniques to fit the particular situation. The manual offers a number of technical and methodological combinations, making it possible to select the most efficient well method.

PB-296 444/3 PC A03/MF A01
Bio-Gas of Colorado, Inc., Arvada. Energy Potential Through Bio-Conversion of Agricultural Wastes
Oct 76, 32p
Contract FCRC-651366075
Prepared in cooperation with Colorado Energy Research Inst., Golden.

Keywords: *Agricultural wastes, Fuels, *Fertilizers, Feeding stuffs, Organic compounds, *Methane, Residues, *Algae, Technology, Farm crops, Food processing, Sites, Feasibility, Forecasting, Capitalized costs, Electric power plants, Process charting, Design criteria, Economic analysis, *Waste recycling, *Bioconversion, Synthetic fuels, Manure, Developing country application, Manufactured gas, Solid wastes.

To determine the feasibility of using the bio-conversion process, the Bio-Gas study team examined factors ranging from an inventory of readily collectable agricultural wastes in the area to an evaluation of the potential markets for the products of bio-conversion. The results of this study point favorably toward large-scale bio-conversion plants and to potential applications of bio-conversion on a small scale for dairies and feedlots. The study's economic analysis concludes that the methane produced from such a bio-conversion facility would be cheaper than all other domestic synthetic

APPROPRIATE TECHNOLOGY ABSTRACTS

natural-gas sources. The residue produced from this process could be marketed as fertilizer, and the algae produced has potential use as a high-protein cattle feed.

Factors Limiting the Development of Aquaculture: A Japanese Experience
Technical rept.
Yoshiaki Matsuda. Apr 79, 85p Rept no. WHOI-79-47
Grant NOAA-04-B-M01-149
Sponsored in part by Pew Memorial Trust, Philadelphia, PA.

Keywords: *Japan, *Aquaculture, History, Management, Supply(Economics), Demand(Economics), Rural areas, Developing countries, Social effect, Foreign technology.

An understanding of those factors which have limited the development of Japanese aquaculture may have some applications to the problems of aquaculture in developing countries. The history of aquaculture in Japan is reviewed from chronological, geographical, species and institutional points of view. Conclusions reached in this study reveal that throughout the history of Japan aquaculture development has been limited by variables which can be identified. The most important factor is the existence of leadership which coordinates supply and demand, environmental suitability, technical capability, legality, experience, infrastructure and social welfare incentives with economic feasibility. The development of aquaculture depends on simultaneous development of all these factors, not on the preponderance of any one of them. Within the framework of this generalization, issues pertaining to aquaculture development in developing countries could be handled by adaptation to local conditions.

The Araque Methane Gas and Fertilizer Plant
Project rept. no. 1
Pat Doherty, Stan Huncilman, Max Kroschel, and Paul Warpeha. May 76, 118p

Keywords: *Methane, *Fertilizers, Anaerobic processes, Organic compounds, Technology, Bacteria, Decomposition, Fermentation, *Agricultural wastes, Sludge digestion, Heat treatment, Design criteria, Laboratory equipment, Pilot plants, Forecasting, *Waste recycling, *Bioconversion, Solid wastes, Araque(Ecuador), Manure, Developing country application.

The Araque Methane Gas and Fertilizer Plant Project, funded by the U.S. Agency for International Development and provided technical assistance by the Peace Corps, was conceived for the purpose of investigating the possibility of developing systems of anaerobic bacterial decomposition as a means of providing methane gas, as a fuel, and a high quality fertilizer product for the people of rural Ecuador. This project aimed at the production of methane gas for the ultimate production of bread in the community of Araque, Province of Imbabura, Ecuador. The report deals with the general technology of anaerobic bacterial decomposition and the production of the fuel and fertilizer products; history of the project describing the experimental work and the initial construction; problems encountered and the future of the project.

Graphic Presentation
Oct 67, 53p Rept no. DSAH-5025.4

Keywords: Graphic methods, Visual aids, Management methods, Graphic arts, Instructional materials, Charting, Charts, Diagrams, Maps, Projectors, Flow charting, Cost engineering, *Management techniques, Developing country application.

The handbook is prepared basically as guidance for effective use and economical development of the visual aid as a management tool. It recognizes that the visual aid is the 'end product' of a responsibility jointly shared by the presenter and the illustrator. These guidelines represent an approach to the whole job of graphic presentation, both from the viewpoint of the presenter and the illustrator. The division of remarks in

each of these two separate areas has been purposely avoided throughout to promote a broad understanding of the problems and solutions on both sides.

Methane on the Move. A Discussion of Small Anaerobic Digesters
Final rept.
Susan Schellenbach, Wayne Turnacliiff, Fred Varani, John L. Burford, Jr, and Shelley B. Don. Mar 77, 101p
Contract FCRC-651366075
Prepared in cooperation with Bio-Gas of Colorado, Inc., Loveland.

Keywords: *Methane, Anaerobic processes, *Agricultural wastes, Design, Colorado, New Mexico, Arizona, Utah, Nevada, Process charting, Feasibility, Performance evaluation, Cost analysis, Solid waste disposal, Fertilizers, *Bioconversion, *Waste recycling, *Manures, Synthetic fuel, Manufactured gas, Developing country application.

This report is a discussion of small anaerobic digestion units, stimulated by experiments operated by Bio-Gas of Colorado. A grant from the Four Corners Regional Commission to the Colorado Energy Research Institute enabled Bio-Gas to build a 12 to 50 cow digestion unit on a trailer which could be pulled by a tractor to 19 different demonstration sites in Colorado, New Mexico, Arizona, Utah and Nevada. During this same period, Bio-Gas conducted laboratory experiments to determine yield coefficients of different manures and defined parameters to evaluate the economic feasibility of building digesters on a small or self-sufficiency scale. First the report describes the mobile digestion unit of 6,000 gallons with its start-up phases, operation, production and problems. Secondly, a discussion of the tour and a summary of the Journal in the Appendix tell how the digester performed and how it was received among the people who came to see the demonstration. Finally, the report includes designs for four different sizes of digesters based on data collected from the mobile unit, the tour and the laboratory, along with an order blank for shop drawings. A series of design tables which let interested persons easily size a digestion system and tailor it to their specific needs are included. The tables estimate gas production from a variety of manures and system sizes so the economics of the system can be studied.

PERT Coordinating Group, Washington, DC.
PERT Guide for Management Use
Jun 63, 65p

Keywords: PERT, Network analysis(Management), Management methods, Operations research, Project planning, Decision making, Performance evaluation, Objectives, Time measurement, Scheduling, Coordination, Project management, Organization theory, Control charts, *Management techniques, Program evaluation, Developing country application, Organizational communication.

PERT is a set of principles, methods, and techniques for effective planning of objective-oriented work thereby establishing a sound basis for effective scheduling, costing, controlling and replanning in the management of programs. The purpose of this document is to: establish a basic reference on management and PERT concepts as an improved communication system for all management levels; set forth PERT principles and methods for use by managers in the achievement of objective-oriented work; and to stimulate consistency in the regular application and use of PERT in the decision making process and maintain uniformity among government and industrial teams.

The Manufacture of Low-Cost Vehicles in Developing Countries
Development and transfer of technology series no. 3.
1978, 40p

Keywords: Manufacturing, Vehicles, Developing countries, Ground vehicles, Cost engineering, *Transportation, Marketing, Demand(Economics), Automotive industry, *Automobiles, Automotive engineering, Government policies, Market surveys, India, Philippines, South Korea, Thailand, New Guinea, Developing country application.

The purpose of the study is to assist in promoting the manufacture and use of low-cost vehicles in developing countries. It is designed to assist government officials responsible for formulating policies on modes of transportation in their countries and businessmen concerned with the manufacture of various types of transport vehicles. It describes the main types of low-cost vehicles, what is involved in launching their manufacture, and aspects of marketing them. It reviews recent developments in several Asian countries, with particular emphasis on India and the Philippines, where low-cost vehicles have significantly penetrated the market. Annexes provide a descriptive listing of types of low-cost vehicles with names and addresses of manufacturers.

APPROPRIATE TECHNOLOGY ABSTRACTS

Ditches, Vegetation, Retaining walls, Farms, Developing country application.

This introductory report describes three different types of erosion, their causes, and methods used to control erosion and preventative treatments of the soil. These are described step by step, and applicable diagrams are included, e.g. the construction of drainage channels and ditches, depending on the type and steepness of the soil, different terracing methods; types of vegetation beneficial to the prevention of erosion, especially for the prevention of slides and the building of retaining walls. The report is suited to the available resources in underdeveloped countries, and is primarily for use by farmers and small communities interested in improving the condition of the land. It is by no means a technical treatise.

Text in Spanish.

Keywords: *Industrial plants, *Calcium oxides, Manufacturing, Mines(Excavations), Plant location, Fuel consumption, Marketing, Plant layout, Kilns, Cost estimates, Market surveys, *Honduras, *Chemical industry, Lime, Developing country application.

The study examines the development of lime production in Honduras, the traditional and possible future uses of lime. It also describes the location of the quarries and their geological origin. Included is a design for a limestone plant using available fuel to the best advantage, the most desirable location of such a plant in relation to the availability of limestone deposits, fuel sources, and marketing. In addition, construction layout and a model for an efficient lime kiln is provided. Analysis of different sources of limestone, operating cost efficiency, local markets, estimated consumption, and export analyses are covered. Text in Spanish.

Successful Mexican Tuna Cooperatives: A Model for U.S. Fishermen
John S. Petterson, Mar 79, 15p NOAA-79051504
Grant NOAA-04-7-158-44121
Microfiche copies only.

Keywords: Tunas, Organization, Fishing, Mexico, *United States, *Fishery cooperatives, Sea Grant program, Cooperatives.

Some of the means by which Mexican tuna cooperatives have been able to successfully adapt to physical and social conditions are identified. The difference between the successful adaptation of the Mexican cooperatives and the less than successful adaptation of many U.S. fishing cooperatives has been a product of the complex interaction of numerous historical and cultural variables. Although conditions in Mexico and the United States are not directly parallel, some of the mechanisms employed by the Mexican fisherman in adapting to changing conditions could prove useful to U.S. fishermen in solving their own problems.

Library of Congress catalog card no. 78-62956

Keywords: *Solar energy, Manuals, Solar power generation, Solar cells, Photovoltaic cells, Solar radiation, Biomass, Wind power generation, Heat storage, Swimming pools, Heat pumps, Space heating, Buildings, Heat loss, Heating load, Cooling load, Design, Performance, Thermal efficiency, Cost analysis, Bibliographies, Dictionaries, Industries, Directories, Photographs, Drawings, Systems engineering, Tables(Data), Solar space heating, Solar water heating, Ocean thermal energy conversion, Passive solar heating systems,

Solar collectors, Flat plate collectors, Concentrating collectors, Solar air conditioning, Solar cooling systems, Solar heating systems, Solar power plants.

The Engineer's Guide to Solar Energy is designed to enable professionals in any field of engineering, architects, builders, and tradesmen to develop a working knowledge of solar heating technology. It is also designed to serve as a basic textbook to introduce college students to the field of solar energy. The Guide, organized into 13 basic chapters, offers vital and up-to-date information on the following subjects: (1) An overview of the six basic solar technologies; (2) a comprehensive discussion of the solar resource, including a compendium of worldwide solar radiation data; (3) an introduction to passive solar technology; (4) extensive discussion of active solar systems, including applications for heating swimming pools, domestic hot water, and space heating; (5) methodology for calculating building heat loss and gain, including worldwide design temperature data; (6) an introduction to solar systems sizing through utilization of the f-chart method, including examples and worksheets; (7) a Solar Heating Product Directory divided into four sections: collectors, controls, pumps, and storage; (8) an Annotated Bibliography highlighting significant solar heating literature, including program and planning documents published by the U.S. Government; (9) a four-part Solar Dictionary consisting of: glossary, acronyms, nomenclature and conversion factors (English to metric SI units). Methods of Project Appraisal in Developing Countries
Andre Bussery. Mar 73, 68p

Keywords: Project management, Evaluation, Developing countries, Performance evaluation, Cost effectiveness, Guidelines, Methodology, Accounting, Prices, Employment, Income, Discounted cash flow, Convergence, Divergence, Political science, Economic analysis, *Management techniques, Developing country application.

The document reviews and compares the different methods used for the appraisal of projects in developing countries. The convergencies and divergencies of the various methods are shown as well as the principle practical or theoretical problems arising from their use within the developing countries.

Educating Farmers Through the Mass Media
Oyeniyi Akinde. 1978, 17p
Paper presented at National Seminar on Transfer of Research Results in Agriculture, Held at Ibadan, Nigeria, on November 21-24, 1978.

Keywords: Mass media, *Education, Agriculture, Mass communication, Research, Production, Yield, Techno-

logical intelligence, Agriculture engineering, *Agricultural extension services, Rural extension, Information dissemination, Developing country application, Scientific research, Farmers.

The paper explores the role of the mass media (newspapers, magazines, radio, and television) in assisting the agricultural research workers to get their findings across to the ultimate users—the farmers who have to adopt the new techniques in order to improve their yields.

Bibliography of Intermediate Technology Materials Held at the International Development Data Center
Kay Ellen Auciello. 1976, 62p

Keywords: Bibliographies, Technological intelligence, Technology assessment, *Technology transfer, Information centers, Developing countries, Utilization, Adaptation, Subject indexing, Developing country application.

The document lists various publications concerned with the subjects of technology selection and adaptation for particular situations in developing countries. It contains reports, papers, articles, monographs, and serials that devote substantial coverage to various aspects of intermediate technology. The publications are arranged by broad subject categories and entered alphabetically by author. Publications listed are those as of January 1976 in the IDDC collection.

Secondary Benefits and Irrigation Project Planning
Norman D. Kimball, and Emery N. Castle. May 63, 37p Rept no. TECHNICAL BULL-69
Prepared in cooperation with Department of Agriculture, Washington, DC.

Keywords: *Irrigation, Developing countries, Project planning, Benefit cost analysis, Marketing, Agricultural economics, Businesses, Oregon, Developing country application, Jefferson County(Oregon).

This manuscript presents the conclusions developed on an intensive research study of the experience of an irrigation project. The project known as the North Unit Deschutes Irrigation Project is located in Jefferson County, Oregon, and was developed by the Bureau of Reclamation. The purpose of this report is to state the principal theoretical issues and to present measures of secondary benefits. The study is also concerned with project planning.

Mochudi Tool Bar (Makgonatsotlhe)
Feb 75, 54p

Keywords: Tools, *Agricultural machinery, Developing countries, Drawings, Loads(Forces), Wheels, Cultivation, Bars, Savings, Africa, Developing country application, *Botswana, Tool bars.

The Mochudi Farmers Brigade is a project of the Kgatleng Development Board which is a non-governmental development agency, dedicated to the development of Botswana and its peoples, particularly the rural sector. For a number of years it has been working to develop and perfect a multi-purpose farming implement suited to local conditions. In building simple tools for draught animals the wheels on which the implement is supported represent the single largest investment in materials, therefore, if the same set of wheels can be used for many functions it should be possible to limit the cost of necessary tools by making one set of wheels carry out many operations. After several years of testing, the Mochudi Toolbar has been perfected so that it is possible to perform all the necessary operations of conventional tillage systems as well as many unconventional operations. This booklet contains a complete set of scale drawings for the Toolbar and its various components.

The Firewood Problem in Africa: Report on the AFR Firewood Conference and Request for Field Views

David French. Jun 78, 56p

Keywords: *Wood, *Fuels, *Africa, *Forestry, Meetings, Charcoal, Forest trees, Bibliographies, Planting, Area, Soils, Rainfall, Project planning, Developing country application, Deforestation, Firewood.

Firewood and charcoal are becoming less available and more expensive throughout Africa, presenting an immediate threat to the well-being of both rural and urban poor. This topic was the subject of the Firewood Workshop held June 12-14, 1978. This document discusses the need for collecting data on patterns of deforestation and the strategies for dealing with the problem. An annotated bibliography is included in the document for further investigation.

International Forum on Appropriate Industrial Technology, Held at New Delhi/Anand, India on November 20-30, 1978. Creation of Small-Scale Industry Development in Southern Sweden - The Gnosjo Case
Background paper
Magnus Hult, and Goran Odeen. 25 Sep 78, 29p
Prepared by Swedish International Development Authority, Stockholm. Report of Working Group No. 8, Appropriate Technology for Light Engineering Industries and Rural Workshops.

Keywords: Industries, Statistical data, Economic development, Manufacturing, Employment, Economic factors, *Sweden, *Small businesses, *Industrial development, Developing country application.

The Smaland commune Gnosjo is a region which has had an extremely positive economic development during the 20th century. Gnosjo's economy is highly dependent upon a large number of small-scale industries primarily in the light manufacturing sector. Unemployment is very low. This paper analyzes Gnosjo as a practical case for an analysis model to provide an understanding of the reasons behind the positive economic development of a region.

International Forum on Appropriate Industrial Technology, Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology in the Construction and Building Materials Industry
Background paper
G. Sebestyen. 5 Oct 78, 28p
Report of Working Group No. 5, Appropriate Technology for the Production of Cement and Building Materials.

Keywords: Construction industry, Construction materials, Technology, Manufacturing, Technology assessment, Developing countries, Agreements, Cooperation, Policies, Meetings, *Building materials, Developing country application.

In recent years the construction and building materials industry in less developed countries has become more and more important. Hence it should be awarded second priority after the food and agro industries. In construction there are several subsectors: international modern, domestic modern and traditional and small scale. Appropriate technologies are different for these subsectors. For the modern subsector technologies used in developed countries can be appropriate, however, in many cases production on a smaller scale and a lower degree of mechanization is justified. In the building materials industry too production often is to be organized on a smaller scale (cement, lime, gypsum, etc.). It is important to develop the manufacture and use of local materials (stone etc.) and of industrial and agricultural wastes. Industrialization on various levels leads to an increased effectiveness of the construction and building materials industry, this being a prerequisite to increased outputs in new housing, new industrial complexes and the construction of better national and urban infrastructures (transport systems, etc.). Governments should devote particular attention to the development of the construction and building materials industry, including the choice of appropriate technology, in order to promote economic development and the welfare of the population.

International Forum on Appropriate Industrial Technology, Held at New Delhi/Anand, India on November 20-30, 1978. Choice of Appropriate Construction Technology in the Building Industry in Iran
Background paper
F. Neghabat. 5 Oct 78, 24

Report of Working Group No. 5, Appropriate Technology for the Production of Cement and Building Materials.

Keywords: Construction industry, *Iran, Technology, Urban areas, Houses, Rural areas, Construction materials, Economic factors, Policies, Developing countries, Prefabrication, Statistical data, *Building materials, Developing country application.

An attempt has been made to present the status of construction industry in Iran. Statistics are given reflecting urban housing types, numbers existing and planned, the status of building materials and the extent of industrialization of building industry is presented. Comparisons have been made between the two categories of indigenous and imported Western technologies. Factors most important in evaluating alternative construction techniques are discussed. It is shown that the choice of appropriate technology whether indigenous or imported depends on the specifics of the project and its suitability to local conditions. The economical, labor, technical, and managerial factors, as well as the adaptability of the region to new technology is stressed. The appropriateness of indigenous technology to rural housing, and the applicability to specific project of total, partial or on-site prefabrication is described. Finally, the establishment of component industries as a foundation for a stable, equilibrium condition in building industry is emphasized.

United Nations Industrial Development Organization, Vienna (Austria).

International Forum on Appropriate Industrial Technology, Held at New Delhi/Anand, India on November 20-30, 1978. Building Materials and Components
Background paper
J. P. M. Parry. 5 Oct 78, 53p
Prepared by Intermediate Technology Development Group, London (England). Report of Working Group No. 5, Appropriate Technology for the Production of Cement and Building Materials.

Keywords: Construction materials, Cements, Developing countries, Reinforcement(Structures), Roofs, Bricks, Tiles, Construction industry, Brick industry, Meetings, Africa, Great Britain, *Building materials, Developing country application, Villages.

The paper considers important aspects of the economics and technology of the construction sector in less developed countries especially in Africa. It then applies the lessons drawn from the analysis to suggest future policies. The design and erection of buildings to fit their purpose and the industrial manufacture of building materials are different types of activity but strongly influence each other. The earlier parts of the discussion concentrate on aspects of design from which stem particular requirements for building materials and components. Some traditional low cost ways of extending the life expectancy of normally non durable structures are briefly reviewed in the context of an examination of the normal agents of decay in buildings. Information is provided of one new manufacturing system, a technique for making low cost fibre reinforced cement roof sheets by hand which is suitable for village-scale industries. A fairly detailed examination is made of the one building product which is manufactured extensively in small scale plants--burnt clay bricks. Aspects of the brickmaking technologies and operating set-ups are examined to try to determine what features have made them so resilient. Discussion of rural brickmaking is concluded in an assessment on how it could be improved technically so as to serve its market with better quality products in manufacturing plants which use resources more efficiently, are less vulnerable to seasonal changes and provide a better operating environment for the workforce. The argument is then broadened using information on the strengths and weaknesses of the rural brick and tile industries to give guidance on how other forms of building material manufacture could be encouraged.

APPROPRIATE TECHNOLOGY ABSTRACTS

Finally the question is explored of how rural employment and prosperity through expanded building materials manufacture, could be aided by institutional assistance through public sources. The paper concludes with a description of actions and programs which in the light of the technical and commercial findings, might be considered for implementation on an international scale.

PB-297 258/6 PC A03/MF A01
 United Nations Industrial Development Organization, Vienna (Austria).
International Forum on Appropriate Industrial Technology, Held at New Delhi/Anand, India on November 20-30, 1978. Construction and Building Materials Industry in the United Republic of Cameroon
 Background paper
 E. K. Murdi. 5 Oct 78, 26p
 Report of Working Group, No. 5, Appropriate Technology for the Production of Cement and Building Materials.

Keywords: Construction industry, *Cameroon, Construction materials, Cements, Gravel, Bamboo, Bricks, Wood, Buildings, Developing countries, Africa, *Building materials, Developing country application.

The United Republic of Cameroon is located between West and Central Africa. The country enjoys a tropical to subtropical climate. The country has four major regions distinguished on basis of climate and geology... factors that influence the type and distribution of building materials. The main local building materials are: cement, sand, gravel, stone, cement blocks, clay blocks, burnt bricks, hardwood, raffia bamboo, palm leaves, grass, corrugated aluminum sheets and iron rods. The main building types are constructed by a combination of these materials. Local building types are constructed by a combination of these materials. Local building materials is at a nascent stage as for example: research on concrete with palm nut shells as aggregate and research on lateritic concrete. Both research results are summarized in the paper. In view of the potential and low cost of local building materials serious research is called for at a national and regional level with an aim of understanding these materials and developing norms for their utility.

Co-Operative Organisation; an Introduction
 B. A. Youngjohns. c1977, 37p Rept no. ISBN-0-903031-43-4
 Microfiche copies only.

Keywords: Production, Farms, Industries, Government policies, Control, Organizations, Businesses, Great Britain, Developing country application, *Cooperatives, Cooperative farming.

The booklet is about co-operatives, how they are formed, how they work, what the legal implications are, and what role they play in development. It sets out principles of a cooperative and explains in some detail the various forms it can take, from cooperative farms to industrial production. It also deals with the government's role and the various controls which it places on such organizations.

Accounting and Book Keeping for the Small Building Contractor
 Derek Miles. c1978, 196p
 Sponsored in part by Intermediate Technology Development Group, London (England).
 Microfiche copies only.

Keywords: Accounting, Construction industry, Contractors, Developing countries, Records management, Assets, Liabilities, Fixed investment, Capitalized costs, Depreciation, Profits, Losses, Construction costs, Financial management, *Management techniques, *Small businesses, Developing country application.

The book is the first in a series of publications written to help small contractors in developing countries establish and run a business effectively. Topics covered in the volume include: keeping records; assets and liabilities; basic book-keeping; analysis; fixed assets; depreciation; balance sheets; profit and loss accounts;

reading and comparison of accounts; and practical exercises.

Simple Methods of Candle Manufacturing
 David Schreiber, and Dennis Rose. c1975, 23p Rept no. ISBN-0-903031-49-3
 Microfiche copies only.

Keywords: Manufacturing, *Candles, Pouring, Moulding techniques, Waxes, Melting, Great Britain, Materials, Equipment, *Industrial plants, Developing country application.

The booklet shows how, without expensive and sophisticated machinery, it is possible to manufacture candles. A description of how a candle works is given and the importance of the size of the wick is stressed. Information is provided on materials required, candle making techniques, and of the process. Line illustrations of the simple equipment that may be used are included.

Business Arithmetic for Co-Operatives and Other Small Business; a Basic Manual for the Employees of Primary Co-Operative Societies
 Trevor Bottomley. c1977, 89p Rept no. ISBN-0-903031-47-7
 Microfiche copies only.

Keywords: Arithmetic, Manuals, Great Britain, *Education, Developing country application, *Cooperatives, Cooperative farming, *Small businesses.

The manual is designed to enable those involved in co-operatives or small businesses to train themselves to do the calculations necessary for the running of a business. Part I of the manual is very elementary and intended only for those who feel they need to go back to the beginning. Part II covers all the calculations normally called for in a business.

Small Enterprises in Developing Countries: Case Studies and Conclusions
 Malcolm Harper, and Tan Thiam Soon. c1979, 111
 Sponsored in part by Intermediate Technology Development Group, London (England).
 Microfiche copies only.

Keywords: Manufacturing, Soaps, Leather, Plastics, Fertilizers, Roofs, Tiles, Woolen spun yarns, Production management, Failure, Operations, Developing countries, Great Britain, *Industrial development, Developing country application, *Small businesses, Case studies.

The publication includes over 20 case studies of problems encountered by small businesses in various developing countries. There are individual commentaries on the studies and, in the second part of the book, a general discussion of the factors which determine the success or failure of a small business. A few of the

case studies include soap manufacturing, a candy factory, leatherworks, plastics, fertilizer, roof tile manufacturing, a wool spinning center, and a block maker.

The Work of a Co-Operative Committee
 Peter Yeo. c1978, 83p Rept no. ISBN-0-903031-53-1
 Microfiche copies only.

Keywords: Organizations, Management, Planning, Great Britain, Developing country application, *Cooperatives, Loans, Cooperative farming.

The book has been written as a guide for members and prospective committee members of primary co-operatives. It deals with the basic facts about the committee, how the committee serves the members and what loans can be made to the members of the cooperative. It sets out clearly what a committee member's duties are, as well as his responsibilities in law. The book has been designed as a programmed learning text with material for six meetings of study groups, including the private study needed before each meeting. The book should prove a useful introduction for anyone who is interested in becoming a member of the committee of a cooperative.

Hand Dug Wells and Their Construction
 S. B. Watt, and W. E. Wood. c1977, 226p Rept no. ISBN-0-903031-27-2
 Microfiche copies only.

Keywords: *Water wells, Developing countries, Construction, *Ground water, Water supply, Labor estimates, Materials, Equipment, Mixing, Concretes, Shaft sinking, Excavation, Disinfection, Safety, Linings, Great Britain, Developing country application, Villages, Self help.

The book presents a range of technology suitable for exploiting ground-water sources at low cost, with minimum sophisticated technology and with the greatest input of village labour and skills. The methods de-

APPROPRIATE TECHNOLOGY ABSTRACTS

scribed combine traditional principles with modern techniques. Part I describes some general principles together with a reference to the health implications of a hygienic source of water and some notes on the organization and preparation of well sinking work. Part II describes in simple detail the actual construction of a particular size and type of well that has proved successful in many parts of the world under widely differing conditions. Part III deals with alternative materials and techniques which may be more suitable in certain circumstances. Part IV describes in greater detail the standard equipment and materials used. Part V comprises additional information that may be of some use to those interested in well sinking.

Economically Appropriate Technologies for Developing Countries; an Annotated Bibliography
Marilyn Carr. c1976, 104p Rept no. ISBN-0-903031-19-1
Microfiche copies only.

Keywords: Bibliographies, Developing countries, *Agriculture, Construction materials, Houses, Manufacturing, Public utilities, *Roads, Economic factors, Great Britain, *Building materials, Developing country application, Appropriate technology.

The bibliography provides information on the economic aspects of intermediate technologies for developing countries. This volume is basically concerned with hardware. The material has been divided into six sections. The first four sections cover technologies related to the basic human needs of food, shelter, manufactured goods such as clothing, footwear and various household items, and infrastructural goods such as power sources, water supplies, health services, roads and transportation. The last two sections contain a selection of technical publications and bibliographies which provide useful back-up material to the main studies.

Small Scale Cement Plants
Jon Sigurdson. c1977, 31p Rept no. ISBN-0-903031-46-9
Microfiche copies only.

Keywords: *Industrial plants, Manufacturing, *Cement, India, China, Comparison, Portland cements, Great Britain, Bibliographies, Design, Kilns, Developing countries, Developing country application, Small businesses.

The booklet examines the criteria which would justify the establishment of mini cement plants in developing countries and specifically compares the situation in India with that in China, where more than 57% of cement is produced by small plants. The quality of the cement produced is also discussed and comparisons are drawn between cement from mini cement plants and that of portland cement. A short bibliography is provided as well as designs of vertical shaft kilns taken from a Chinese book on small scale cement plants.

Technology for a Changing World
Roger England, and John Davis. c1978, 66p Rept no. ISBN-0-903031-56-6
Microfiche copies only.

Keywords: *Technology assessment, Economic development, Environments, Social change, Productivity, Manpower, Capital, Energy, Businesses, Education, Technological intelligence, Quality of life, *Industrial development, Small business, Developing country application.

The booklet is concerned with the application of the concepts of appropriate technology to the economy. It is a recognition of the fact that rich and poor countries alike stand in need of a new kind of technology which is more in harmony with people and with the environment. Subject areas include the appropriateness of conventional technology; productivity; energy; small enterprises; local enterprise trusts; education for a new world; and the right to choose technologies.

Equipment for Rural Workshops
John E. L. Boyd, S. A. Bonnist, J. R. Collett, A. Mallett, and H. S. Pearson. c1978, 96p Rept no. ISBN-0-903031-45-0
Microfiche copies only.

Keywords: Equipment, *Woodworking, Metal working, Tools, Workplace layout, Cost estimates, Power equipment, *Machine tools, Great Britain, Developing country application.

The book is a guide to anyone who wishes to equip a workshop from the basic tools required for a one or two man carpentry workshop without power to the more sophisticated establishment requiring power equipment for both wood and metal working. Only well-known and reliable equipment is listed. The tools specified are all illustrated and workshop layouts are suggested. There are photographs of various sizes of workshops in different countries, as well as some pictures of farming equipment that has been manufactured at some of the workshops. Suppliers' addresses are also given in an appendix. Prices quoted in the books may soon be out of date, but they give an inexperienced person some idea of the budget required for a particular size of workshop.

A Manual on the Hydraulic Ram for Pumping Water
S. B. Watt. c1975, 53p Rept no. ISBN-0-903031-15-9
Prepared in cooperation with National Coll. of Agricultural Engineering, Silsoe (England).
Microfiche copies only.

Keywords: Hydraulic equipment, Rams(Pumps), Construction, Construction materials, Fluid flow, Design, Valves, Assembling, Pipe fittings, *Water supply, Developing country application, *Hydraulic rams.

This manual describes the process for building and installing the hydraulic ram. Part 1 explains how a simple ram pump can be made from commercial pipe fittings, how to choose a site for the ram, how to install and adjust the ram, and the sort of maintenance that the ram pump will need during its working life. Part II describes in greater detail the range and limits of the operation of ram pumps, and the different materials that have been used to make them. The manual is in non-technical language so that it can be used by people with little or no technical training.

Southeast Asian Fisheries Development Center, Iloilo (Philippines). Aquaculture Dept.

Design, Operation and Economics of a Small-Scale Hatchery for the Larval Rearing of Supgo, 'Penaeus monodon' Fab
Rolando R. Platon. Jul 78, 35p Rept no. AQUACULTURE EXTENSION MANUAL-1

Keywords: *Fisheries, Aquaculture, Southeast Asia, Developing countries, Production, Sites, Aquatic biology, Feeding stuffs, Disinfection, Reproduction(Biology), Tanks(Containers), Fishing, Harvesting, Cost analysis, Transportation, Developing country application, Penaeus monodon.

The economic importance of *Penaeus monodon* Fabricius (supgo, prawn) cannot be overemphasized. This is evidenced by the interest shown by aquaculturists in Southeast Asia in the mass culture of this species. One of the major problems in the mass production of supgo is how to obtain a constant supply of fry. Since ultimately it is the private sector which should produce the supgo fry to fill the needs of the industry, the Barangay Hatchery Project has scaled down the hatchery technology from large tanks to a level which can be adopted by the private sector, especially in the villages, with a minimum of financial and technical inputs.

Aquaculture Development in Rural Atomistic Societies
James R. McGoodwin. Jun 79, 34p WHOI-79-53, NOAA-79061301
Grant NOAA-04-8-M01-149

Keywords: Rural areas, *Aquaculture, Developing countries, Food, Social effect, Ponds, Shortages, Japan, Mexico, Sea Grant program.

For technological innovations to succeed in alleviating problems of rural underdevelopment they must be appropriate to the sociocultural context in which they are to be developed. Technical and economic feasibility alone is not enough. Atomistic rural societies--which are societies lacking in supra-household organizational entities--are the most common societal type found in the impoverished rural regions of the less developed countries. Development efforts in such societies and especially those where shortage of food is an acute problem, should aim first at intensification and regularization of domestic food production by increasing the productivity of households. When considering aquaculture development, family-operated, houseite, subsistence-oriented ponds, which employ rudimentary technology, would seem an appropriate innovation in atomistic communities. The author's field experience in an atomistic community in rural Mexico provides perspectives for the discussion.

Water Treatment and Sanitation; a Handbook of Simple Methods for Rural Areas in Developing Countries

H. T. Mann, and D. Williamson. Jan 76, 94p Rept no. ISBN-0-903031-23-X
Revision of report dated Jun 73.
Microfiche copies only.

Keywords: *Water treatment, *Sewage treatment, Solid waste disposal, Manuals, Transport properties, Substitutes, Rural areas, Water supply, Sludge disposal, Water resources, Water analysis, Potable water, Equipment, Design, *Waste disposal, Developing country application.

APPROPRIATE TECHNOLOGY ABSTRACTS

The purpose of this handbook is to provide information which must be considered when investigating the development of a water supply and sewage disposal system for a small community which is situated too far from a piped system of water supply. Many of the methods of water and sewage treatment described in this handbook are based on the standard practices used in developing countries but which can be adapted. Chapters 1-6 describe methods which may be applied in sequence, from the selection of a water source, the transport of water, the treatment of water, the disposal of wastes, sewage treatment and the final disposal of treated wastes, and the by-products of treatment processes. In each chapter, a number of alternatives is described, some suitable for self-help situations and others which may be more suitable for larger communities. A glossary is included to explain technical terms used in the text.

Food from Windmills
Peter L. Fraenkel. Nov 75, 83p
Report on the Wind Mill Irrigation Project Initiated by the American Presbyterian Mission at Omo Station in Ethiopia.
Microfiche copies only.

Keywords: Windmills, Farm crops, *Ethiopia, *Irrigation, Omo River, Cultivation, Statistical analysis, Objectives, Design, History, Pumping, Water supply, Field tests, Construction, *Wind energy, Developing country application.

This report describes work done to improve and evaluate a series of wind-mills developed for irrigating small plots of land on the banks of the Omo River in Ethiopia, using river water. The systems were developed by the American Mission for use by the local people in order to permit all year round cultivation which is not otherwise possible. Statistical information is included in the five appendices.

Introduccion al D.C. Para Los Trabajadores de las Aides (An Introduction to Community Development for the Village Workers)
Community Development series A, no. 1
Donald L. Beran. Apr 62, 38p
Text in Spanish.

Keywords: *Community development, Developing countries, Quality of life, Planning, Meetings, Recommendations, Guidelines, *Socioeconomic status, Developing country application, Villages.

The term community development is used to describe the approach many governments have employed to teach their village people and to make more effective use of local initiative and energy for increased production and better living standards. This booklet specifically was planned to give insights into aims, basic principles and elementary procedures in community development on which workshop procedures would be based. It offers a common-sense approach to local village development procedures.

Designing Rural Development Programs: Lessons from Past Experience in Africa
Uma Lele. 1974, 41
Prepared in cooperation with Reading Univ., (England), and Overseas Development Inst., Reading (England). Presented at the Second International Seminar on Change in Agriculture.

Keywords: Economic development, Projects, Rural areas, Saharan Africa, Kenya, Tanzania, *Africa, Low income groups, *Regional planning, Personnel development, Manpower utilization, Land use, Technology assessment, Resource allocation, Credit, Prices, Marketing, Rural development, Governmental role, Developing country application, Rural population.

The study examines ways of designing rural development projects which will effectively reach large numbers of low-income rural people with the limited financial resources, and in particular, the scarce trained manpower available for rural development in Africa. The study involved two components. The first consisted of a review of past projects in sub-Saharan Africa. The second involved rural sector surveys in Kenya and Tanzania. The major findings are based on thirteen sets of rural development projects and programs selected from various parts of sub-Saharan Africa to represent diversity in design and implementation as well as in the environment in which they are situated.

The Small Biogas Plant: Its Construction, Operation and Use
Felix D. Maramba, Sr, Enrico D. Obias, and Calixto C. Taganas. May 77, 23p

Keywords: *Methane, Farms, *Agricultural wastes, Design, Equipment, Agricultural engineering, Cost analysis, *Fertilizers, Sludge disposal, Organic compounds, Digesters, Manufactured gas, Sturries, *Bioconversion, *Waste recycling, Biogas process, Manure, Synthetic fuels, Solid wastes, Developing country application.

This booklet has been prepared in response to the demand for reference material to help interested parties design and operate small biogas plants. It is written in relatively simple language, understandable to people with limited scientific and technical training and it gives the practical approach. Because of the pressing demand for food, more fertilizer is needed to raise more crops, but supply is getting less. With a biogas plant, a one-hectare farm with one work carabao and a two-sow units or three-porker units can produce enough fuel to cook the meals of a family of seven, light his home, iron his clothes, and produce enough fertilizer to continuously crop the farm all year round. The biogas plant is the most practical and least expensive solution to the problem relating to pollution and lack of fuel and food, particularly for rural areas. For the farmer it will be a key towards self-reliance and self-sufficiency.

Farm Equipment Development Project, Daudawa, N.C.S., Nigeria
Rept. for Nov 71-Dec 73
J. E. L. Boyd, and E. A. Ayok. c1974, 118p Rept no. ISBN-0-903031-48-5
Microfiche copies only.

Keywords: *Agricultural machinery, *Weed control, *Nigeria, Herbicides, Farm crops, Harvesting, Equipment, Drawings, Manufacturing, Design, Specialized training, Guidelines, Great Britain, Developing countries, Developing country application.

A survey identified weeding as a labor bottleneck limiting crop production on farms employing animal drought for land preparation. Improvement in the methods of weed control was made the primary objective of the project. The ox-drawn EMCOT ridger plough had been in use for some time in the area, and the report covers the design, development, production and use of several other machines and of attachments for the EMCOT. All items were designed for local construction from easily available materials, using simple equipment. Manufacturing instructions are included for interpretation by the non-engineer. The report is accompanied by a chart summarizing the rainfall, cropping calendar and labor inputs throughout the growing season, and information on land use, tenure, labor, capital and income of a typical traditional family.

Iron Foundry
Feb 75, 20p
Microfiche copies only.

Keywords: Iron and steel industry, *Foundries, Crucible furnaces, Furnace cupolas, Molding techniques, Foundry core making, Pattern making, Foundry core sands, Profiles, *Casting, Developing country application.

This booklet is designed to provide information about basic industrial skills and processes. It includes a profile of the ironfounding industry, describing the technological choices available. This profile includes information on the different levels of production equipment that can be employed; on the capital costs of equipment required for the different levels of technology; on the fuels that can be used; and on labor requirements. The bibliography will be useful to anyone starting a small-scale foundry work.

Towards Village Industry: A Strategy for Development
Liv Berg, Krisno Nimpuno, and Roger van Zwanenberg. c1978, 87p Rept no. ISBN-0-903031-52-3
Microfiche copies only.

Keywords: Planning, Industries, Community development, Developing countries, *Agricultural machinery, Development, Africa, Guidelines, Great Britain, *Regional planning, *Small businesses, Villages, Developing country application.

The book deals with village industry and cottage industries in the very poorest countries, in the context of community development. The basic premise of the book is that industrialization of the rural areas in developing countries must play a vital role and that the mechanization of agricultural methods and production will have to develop in conjunction with this. Illustrations are included. Chapter topics include: rural industries; pre-capitalist industry in East Africa; petty production; the contemporary situation; village work shop design; and strategy towards village workshops.

A Manual on Building Maintenance. Volume 1: Management
Derek Miles. 1976, 80p Rept no. ISBN-0-903031-28-0
Microfiche copies only.

Keywords: *Buildings, Maintenance, Developing countries, Budgeting, Financial management, Cleaning, Renovating, Guidelines, Manpower, Materials, Equipment, Great Britain, Developing country application.

The manual sets out the guidelines for a system of budgeting and financial control of maintenance procedures in developing countries. Maintenance work is very diverse and difficult to group into clear categories for budgeting purposes. This manual will help establish efficient control procedures, including a resource budget which covers finance, manpower, materials and equipment, together with a rational and practical system for measuring output and performance.

An Initial Course in Tropical Agriculture for the Staff of Co-Operatives
Peter Yeo. c1976, 58p Rept no. ISBN-0-903031-39-6
Microfiche copies only.

Keywords: Agriculture, Tropical regions, Soil conservation, Fertilizing, Pest control, Animal husbandry, Developing countries, Guidelines, Instructional materials, Great Britain, *Agricultural cooperatives, *Education, Developing country application, Cooperatives.

The course in this book is meant for those concerned with rural development programs in a tropical country. The course is divided into five sections: soil and the natural environment, fertilizers and plant nourishment, controlling pests and diseases, and animal husbandry I & II. At the end of each section there is a progress test with answers supplied. The book provides a sound basis of agricultural knowledge which can then be followed by practical observation.

Centro de Estudios Mesoamericano sobre Tecnología Apropriada (Guatemala).
Tecnología Apropriada: Concepto, Aplicación, y Estrategias (Appropriate Technology: Concepts, Application, and Strategy)
Bertha Salinas Amescua. Dec 78, 88p
Text in Spanish.

Keywords: Developing countries, Technical assistance, Technology, Development, Improvement, Planning, Rural areas, *Technology transfer, Appropriate technology, Developing country application, Villages.

An analytical description of 'appropriate technology' and its theoretical and conceptual grounds are presented. The minimal criteria used to define a technology as appropriate, the types of socioeconomic groups which develop it, and the advantages ascribed to such technology are analyzed. A discussion of the problems posed by the interdependence of the industrialized world and the third world, and the appropriate technology's image as the solution to these problems are presented. The different vested interests and the political positions of those who propose such a technology or what these groups interpret as 'appropriate technology' are detailed. Specific examples, methodology used in 'disaster areas', and proposed strategies to develop the appropriate technology concept in a beneficial manner are reported.

Quesos Andinos del Peru (Cheeses from the Andine Region in Peru)
Jose Dubach, Javier F. Putgar, and Vidal Biber. 24
Mar 73, 90p
Text in Spanish.

Keywords: Food processing, Cheeses, *Peru, Production methods, *Milk, Fermentation, Pasteurizing, Food contamination, Developing countries, Butter, Dairy products, Equipment, Industrial plants, Cost estimates, *Food products, Developing country application.

Fundamental principles for the production of high-quality, hygienic cheeses are presented. Different physical-chemical tests for both the milk to be used and the ferment to be added are described (e.g.: acidity of the milk, density, fat determination, etc.). The principles of pasteurization and production of cheese using bacterial and enzymatic processes are explained. A detailed chart of the different ferments and their characteristics is included, as well as methods to produce yogurt, butter, and melted cheese. Diagrams for the installation of a dairy and equipment needed for a basic dairy capable of processing 400 liters of milk per day are included. Detailed cost estimates and equipment needs for a semi-industrial dairy (capacity 1200 liters), are given. A list of equipment suppliers in Peru is included. In addition, a step by step description of Tilsit type cheese and Andino type cheese are presented. Problems encountered in the ripening and fer-

APPROPRIATE TECHNOLOGY ABSTRACTS

mentation of the cheese, such as those produced by bacterial contamination are explained and preventive measure described. Recipes for the production of five different types of cheeses are given. Efficiency and cost estimates per type of cheese are calculated.

Quesos para Regiones Tropicales (Cheeses for Tropical Regions)
Javier Pulgar-Vidal Biber. Jan 74, 53p
Text in Spanish.

Keywords: Food processing, Cheeses, *Peru, Jungles, Production methods, Equipment, Cost estimates, Preserving, Tropical regions, Developing countries, *Food products, *Milk, Developing country application.

The method of production of fresh white cheese and ripened cheese in the Peruvian Jungle are presented. The prime material and equipment needed for each kind of cheese are described. The details and production costs are analyzed. Only milk of three percent fat has been used. Temperature conditions for the preparation of the fresh white cheese (Ucayalino), as well as methods for precipitating the protein of the milk are given. The milk used has to be preserved with hydrogen peroxide. Under tropical conditions, this cheese can be preserved for four to five days, although the preservation period can be prolonged to up to fifteen to twenty days if refrigeration is available. The ripened cheese or Provolone Amazonico has different processing conditions. Acidified milk can be used and hydrogen peroxide preservation is not needed. The preservation period for this cheese under tropical conditions is up to two months. Simpler equipment is required for this type of cheese than for the fresh white cheese. No mold, cheese cloth or presses are needed nor is it necessary to wrap the cheese. An estimate of milk needed per kg of cheese produced is given for both types of cheese.

A World Energy Review: Low-Cost Machines for Agricultural and Rural Applications
Raymond A. Willem. 1978, 11p
Presented at the Conference on Energy and Agriculture in the Caribbean, Santa Domingo, November 29-December 1, 1978.

Keywords: Agricultural engineering, Well pumps, *Irrigation, Pumping, Artificial lift(Wells), Windmills, Reviewing, *Wind energy, *Water pumps, Wind power, Developing country application.

Small-scale irrigation appears to be the most effective use of wind energy in the Third World. This coincides with the fact that improving the agricultural output and living standards of the small scale farmer is one of the most pressing developmental goals in these areas. Several wind-powered water-pumping systems of an intermediate-technology level are reviewed and sources of further information are indicated.

Programa de Tecnología Rural Intermedia (Intermediate Rural Technology Program Information Bulletin)
Jul 78, 15p
Text in Spanish.

Keywords: *Food processing, Potable water, Developing countries, Fruits, Methane, Fuels, Dehydration, Drying, Rural areas, Filtration, Chile, *Water supply, *Solar energy, *Bioconversion, Developing country application, Announcement bulletins.

Description of four different 'intermediate' technology projects developed by INTEC are presented: (1) Grape drying using a solar system of natural heat transfer. (2) A bio-fuel generator, using animal excrement and vegetable refuse as sources of methane. (3) Home-made solar dehydrator for agricultural products. (4) Construction of a sand filter for water purification in rural zones. Each succinctly described project is accompanied by a construction diagram. This publication also lists a large number of available intermediate technology project descriptions, which can be obtained by writing to INTEC. The addresses of interna-

tional organizations that have a compiled bibliography of this type of simple technology are included.

Estudio Sobre Fertilizantes (Study on Fertilizers)
1961, 196p
Text in Spanish.

Keywords: *Fertilizers, Developing countries, *Latin America, Materials, Prices, Supply(Economics), Demand(Economics), Nitrogen, Soil analysis, Soil chemistry, Argentina, Chile, Uruguay, Paraguay, Bolivia, Production methods, Production planning, Marketing, Manufacturing, Industries, Cost estimates, Developing country application.

An evaluation of the existing fertilizer materials in the world, and of the exports of the main producing countries are presented. A discussion of the situation of fertilizers in Latin America, prices, supply and demand, role of nitrogen in the fertilizer industry, and of the types of fertilizers in agriculture are offered. A chemical analysis of the soil types in the area of interest (Argentina, Chile, Uruguay, Paraguay, and Bolivia) and recommendations of the appropriate fertilizer needed for each area as well as an evaluation of the agricultural potentials of these areas are included. An analysis of the potential market for fertilizers, the prime location for a fertilizer factory, types of production processes to be employed, and the distribution nets to be established, as well as an estimate of capital to be invested, and total production costs and gains are presented.

Dakar Univ. (Senegal).
L'Energie Solaire, Sur Les Energies Nouvelles (Solar Energy, about New Energies)
Malu Wa Kalenga, and Isengingo Kambere Ng'Isse.
20 Jan 79, 156p
Text in French.

Keywords: *Solar energy, Solar cells, Photosynthesis, Pumping, Insolation, Heating, Zaire, Senegal, Niger, Ivory Coast, *Energy source development, *Bioconversion, *Tidal energy, Developing country application, *Geothermal energy, Wave power.

The uses of solar energy are extensively covered in this highly technical, thorough treatise. Geothermal energy and energy of the waves are briefly examined as other possible renewable, universal, clean sources of energy. Physical, thermodynamic and quantum-chemical properties are analyzed and applied to various transformations: (1) Electrical transformations and industrial applications (photo-electric cell, photo-voltage cell, semiconductor). Se, Si and Ge are examined as sources of photosensitive semiconductors. (2) Transfer to chemical energy (photochemical preparation of chemicals, electrolyses of water using photosensitive semiconductors). Photo-synthesis is extensively treated as a source of both food and fuel (Combustion, pyrolysis, aerobic- and anaerobic fermentation). In the second part of the book solar energy is applied in Zaire in a program to: (1) Measure the amount of solar energy at 12 different stations. Results per station are reported, using graphs. (2) Attempts to receive T.V. (3) Attempts to transmit T.V. (4) Attempts to pump water. (5) To heat. Future programs for Zaire, Senegal, Niger and the Ivory Coast are listed. Other countries that have shown an interest in solar energy are briefly listed.

Elaboración de la Panela (Production of 'Panela' or Brown Sugar Cakes)
1964, 48p
Text in Spanish.

Keywords: *Food processing, Nutrients, Production methods, Sugarcane, Developing countries, *Colombia, *Sugar, Developing country application, Brown sugar.

Methods used in the production of 'Panela' (brown sugar cakes) are presented. A comparison between the nutrients in panela and in refined sugar is included. Quality requirements for different grades of brown sugar in terms of color, turbidity, saccharose and protein content are given. Yield estimates per 1000 kg of sugarcane juice are included. The processes of cane cutting, juice extracting, clarifying (through the addition of monocalcium phosphate, adjusting of pH, and removal of impurities and agglutinates) and the final molding into panela cakes and packaging are depicted. Different types of sugarmill designs, appendices itemizing the terms used in this industry and yield data for different extraction methods are included. A comparison is made between real and artificial panela (consisting of sugar and aniline), in terms of physical and chemical properties.

Reforestacion (Reforestation)
Dick Lemckert, and Luis Gmo. Rodriguez. Feb 78, 19p
Text in Spanish.

Keywords: Reforestation, Developing countries, Erosion control, Droughts, Spanish language, Cost estimates, Planting, Cutting, Plants(Botany), Forest trees, Operations, Foreign countries, *Forestry, Developing country application, Small farms.

Reforestation as a method to control erosion and droughts is presented. Planting techniques and soil preparation methods are described step by step. A list of foreign and local tree species suitable for reforestation purposes in this geographical area (Pacific zone, 0-800 m. above sea level), and a diagram describing each step of the operation are included. Appropriate planting and pruning periods are indicated. Cost estimates for the planting operation are provided, personnel and materials needed per hectare for the different steps in the operation are described, and expected returns for the grown trees are calculated. A 12% gain over invested capital is expected. The report is suited to the available resources in underdeveloped countries. It is described in a clear, concise manner, and is suitable for use by small farmers or as a community project.

APPROPRIATE TECHNOLOGY ABSTRACTS

Secado Solar de Uvas, Programa de Tecnologia Rural Intermedia (Solar Drying of Grapes, Intermediate Rural Technology Program)

Jul 78, 12p
Text in Spanish.

Keywords: Solar radiation, Drying, Grapes, Developing countries, Alkalinity, Chemical properties, Sodium hydroxide, Evaporation, Color, Structures, Construction, Food processing, Marketing, *Chile, Seeds, Objectives, Spanish language, Diagrams, Rural areas, *Solar drying, *Fruits, Developing country application, Raisins.

A new method to accelerate the drying of purple and yellow grapes using a short preliminary chemical treatment is described. By breaking up the skin through a very short immersion in alkaline solution, the evaporation of water is speeded up and the drying time is cut from 90 days to 20 days. To preserve the light color in yellow grapes, an additional sulfur treatment is needed to inhibit enzymatic reactions in the grape skin responsible for the dark pigmentation. A diagram describing the construction of an appropriate structure for the drying process is given. Information on the international market for the raisins and prices per ton paid during the years 1971-1976 are provided. A simplified step by step diagram of the whole process, listing objectives of each step, is supplied.

Evaluacion Pesquera en el Lago de Ilopango y la Laguna de Olomega, 1977. Volume V, No. 5 (Fishing Evaluation of Lake Ilopango and the Olomega Lagoon, 1977, Volume V, No. 5)

Ricardo Alfredo Castro Aragon, and Jose Francisco Godinez. Oct 78, 42p
Text in Spanish.

Keywords: Fishing grounds, Plankton, Lake Ilopango, Olomega Lagoon, Water pollution, Feasibility, Eggs, Soils, Aquatic plants, Oxygen, Dissolved gases, Spanish language, Marketing, Sedimentation, Insecticides, *El Salvador, *Fisheries, Developing country application, Water levels, Eutrophication.

A feasibility report for fish culture in Lake Ilopango and the Olomega Lagoon was undertaken from May 24 to July 23, 1977. In Lake Ilopango, fishing was performed in the miry (muddy) soil area and in the organic matter area as well as in the sandy soil and rocky area. In the Olomega Lagoon, fishing took place in the miry soil and organic matter (dead plants, etc.) area. The fish caught were measured, weighed, and counted. Fish obtained from the Olomega Lagoon were dissected to determine their egg content and choose the best size fish to be kept. Nets with different mesh values were used and evaluated for their efficiency. Different species existing in each lake are listed. The authors list several problems encountered in the Olomega Lagoon. Problems in marketing due to commercial monopoly of fish caught and of fishing equipment are cited, as well as high insecticide level in the waters, low water level in the lagoon area, large amounts of

Eichornia (aquatic plant), the latter two being responsible for low O2 concentration and consequent death of the fish population.

Estudio Limnologico Preliminar de la Laguna de Aramuaca. Vol. II, No. 1 (Preliminary Limnologic Study of Lake Aramuaca. Vol. II, No. 1)

Jose Francisco Godinez, and M. S. Andre DeGeorges. Jan 75, 24p
Text in Spanish.

Keywords: Fishing grounds, Biomass, Plankton, Lake Aramuaca, Water pollution, Concentration(Composition), Hydrogen sulfide, Carbon dioxide, Oxygen, Dissolved gases, Spanish language, Turbidity, Limnology, Temperature, *El Salvador, *Fisheries, Developing country application.

The chemical, physical, and biological studies of Lake Aramuaca were carried out in September 1974 (rainy season). It was observed that the lake of volcanic origin, has a reduced production of plankton and a chemical and thermal stratification occurring mainly at the lake's surface. It was concluded that the existing chemical and physical parameters encountered during the rainy season are unfavorable for the use of this lake as a fishing ground. High turbidity of the water, high alkalinity, and water hardness as well as unfavorable levels of CO2, H2S, O2, and SO4(-) make this lake's waters harmful to the organisms that could live there.

Technical rept.
Franklin Americo Lopez, Jose Francisco Godinez, and M. S. Paul Andre DeGeorges. Sep 75, 106p
Text in Spanish.

Keywords: Fishing grounds, Plankton, Guija Lake, Water pollution, Limnology, Concentration(Composition), Aquatic plants, Benthos, Graphs(Charts), Tables(Data), Spanish language, *El Salvador, *Fisheries, Developing country application, Eutrophication.

A limnologic study of the Guija Lake at the end of the dry season (April 1974) was undertaken. One of the main objectives is to collect data to be compared to earlier data. During the previous rainy season (May-Sept 1973), physical, chemical, and biological parameters were determined for this lake in the dry season. Phytoplankton, zooplankton, and benthos (organisms like mollusks, etc.) at different depths were examined. The authors find noteworthy differences in the dry vs. rainy season parameters. During the dry months, partial stagnation of the lake is noticeable. In the period from November to February, the colder air and the wind lead to a mixture of the top layer of the water, which used to be warm, with the lower layer resulting in an inversion of water layers. This causes a remarkable (50%) lowering of the planktonic population due to a parallel lowering of available chemical nutrients. The authors recommend the rainy season as the best for seeding of the Tilapia Aurea. Graphs and tables comparing all of the studied parameters are included.

APPROPRIATE TECHNOLOGY ABSTRACTS

Limnology, Temperature, *El Salvador, *Fisheries, Developing country application, Thermal pollution.

The report describes an evaluation of the available biomass in Laguna Verde as well as physical chemical characteristics of this lake and determination of its feasibility for exploitation for fishing purposes were carried out in October 1974. Physical parameters i.e. visibility, conductivity of the water, turbidity, and temperature were studied. Chemical parameters i.e. H₂S, CO₂, and O₂ concentration, pH, alkalinity, and water hardness were measured at three different stations in Laguna Verde. Biological studies of the zooplankton and phytoplankton encountered were carried out. Soil samples were also analyzed. An error analysis is included. Tables containing all experimental results and a comparison with measurements of previous years are given. The authors concluded that at the time of the study (dry season) the lake was in its homothermal phase. A high plankton concentration and a scarce ichthyological population were observed. It is also concluded that under the observed conditions, this lake is not really suited as a fishing ground during that season.

Reducing Postharvest Losses of Fish in the Third World
E. R. Pariser. c1979, 9p MITSG-79/11J, NOAA-79061806

Keywords: Harvesting, *Food processing, Losses, *Fishes, Developing countries, Food deterioration, Capitalized costs, Investments, Upgrading, Food storage, Roads, Trucks, Reprints, Sea Grant program, Global.

The National Academy of Sciences conducted a study of the global problem of hunger and malnutrition. The study determined that postharvest fish loss, especially in less-developed countries, is the result of a vicious circle of cause and effect. The Academy study concluded that aid to artisanal fishermen in less-developed countries should come through projects in the general areas of technology, extension (training), and infrastructure (public works and capital investment). It recommended that technological aid be administered through government research and development institutes rather than through universities. Finally it recommended capital investment to upgrade fish marketing and storage areas, water supplies, sanitation, and

APPROPRIATE TECHNOLOGY ABSTRACTS

sewage facilities. In addition, it said that postharvest food losses could be substantially reduced through provision of newer trucks and better roads.

Tropical Legumes: Resources for the Future
Final rept.

Aug 79, 343p* Rept no. CIR/BOSTID-79/25
Contract AID/csd-2584
Library of Congress catalog card no. 79-64185.

Keywords: *Agricultural economics, Tropical regions, Leguminous plants, *Crops, *Plants(Botany), Farm crops, Developing countries, Bacteria, Nitrogen fixation, Taxonomy, Economic development, Acclimatization, Structural timber, Wood, Forest trees, Requirements, Rice plants, Forage crops, Proteins, South Africa, Bean plants, Nut trees, Ornamental plants, *Afromosia elata*, *Dalbergia frutescens*, *Dalbergia nigra*, *Intsia bijuga*, *Pterocarpus soyauixii*, *Pterocarpus dalbergioides*, Carob trees.

This report describes plants of the family Leguminosae, all of them greatly underexploited. Some are extensively used in one part of the world but unknown elsewhere; others are virtually unknown to science but have particular attributes that suggest they could become major crops in the future; a few are already widespread but their possibilities are not yet fully realized. Most of the plants described in the book have the capacity to provide their own nitrogenous fertilizer through bacteria that live in nodules on their roots, and generally require no additional nitrogenous fertilizer for average growth. The object of the book is to show how little-known legumes can contribute to the economies of developing countries.

Manual de Instrumentación y Control de Calidad en la Industria Textil (Manual for Instrumentation and Quality Control in the Textile Industry)
Development and transfer of technology series no. 4
R. Nield. 1978, 57p
Text in Spanish.

Keywords: Manuals, *Textile industry, Textiles, Tests, Humidity, Quality control, Fibers, Fabrics, Torsion, Traction, Laboratories, Physical properties, Chemical properties, Developing countries, Developing country application, Industrial development.

General aspects of textile testing are discussed, in particular, problems caused by the humidity of test samples. The need for atmospheric control in testing laboratories is stressed. Methods to carry out mass and humidity measurements and preliminary treatment of textile samples are given. Guidelines for the consistent testing of textiles and for quality control are included, as well as methods to measure fiber torsion and traction. The mechanical, physical, chemical and physicochemical properties of fibers, threads and fabrics are discussed, as well as testing methods for each of these properties (e.g. permeability, fiber structure, wrinkle resistance, etc.). Properties of textile floor coverings are also considered. Functions to be performed by chemical and physicochemical pilot-plants are outlined. Three appendices are included: Appendix I lists the instrumentation needed by factories and textile labs for testing; Appendix II list suppliers of such instrumentation in several countries (mainly in Europe and in the U.S.A.); Appendix III gives a selection of appropriate units and magnitudes, recommended for the measurement of textile properties.

Los Suelos - Su Uso y Manejo. Cartilla Divulgativa para el Agricultor Colombiano (Soils - Their Use and Management. Primer for the Colombian Farmer)
Cecilia Bejarano de Carvajal, Hernan Cordoba E, and Myriam Acevedo Ro. 1978, 88p
Text in Spanish. Sponsored in part by Federacion Nacional de Cafeteros de Colombia, Bogota.

Keywords: Soil properties, Developing countries, *Soils, *Colombia, Rock, Sampling, Porosity, Nutrients, Concentration(Composition), Soil texture, Soil

fertility, Nitrogen, Phosphorus, Potassium, Calcium, Magnesium, Spanish language, Developing country application.

Soil composition and its importance as a natural resource is explained in simplified form for Colombian farmers. The significance of visible and unseen properties, which make one soil differ from another and which determine its quality and use, is discussed. Soil, subsoil and rock are analyzed and their interrelationship shown. Soil color, texture, structure porosity, permeability, true depth and drainage are portrayed in line drawings and color illustrations (black and white in reproduction). The chemical properties of soils and the influence on soil fertility of the major nutrients, nitrogen, phosphorus, potassium, calcium and magnesium is emphasized. Minor nutrients are listed, and methods of collecting soil samples for laboratory analysis are presented. The principal causes of soil destruction are illustrated, and preventive measures are recommended.

Plantas Tropicales Subexplotadas con Valor Economico Prometedor (Under-Exploited Tropical Plants with Promising Economic Value)
1975, 197p
Text in Spanish.

Keywords: *Plants(Botany), Developing countries, *Agricultural economics, Tropical regions, Market value, Grasses, Grain crops, Vegetables, Bean plants, Fruit crops, Oilseed crops, Forage crops, Livestock, Feeding stuffs, Root crops, Leguminous plants, Requirements, Spanish language, Developing country application, Underexploited plants.

The report is on plants that show promise for improving the quality of life in tropical areas. The report aims to provide a brief introduction to the plants selected. It is neither a textbook nor a comprehensive study of tropical botany. The report does not detail how to introduce the plants to new areas. Readers should appreciate that achieving this goal may be complex and difficult. Many plants discussed in this report have defied dissemination (or domestication) for a century or more. Plant introduction cannot be divorced from plant management: a lack of horticultural knowledge or experience will frequently cause a plant introduction to fail. Differences in elevation, soil type, temperature, day length, and rainfall present other complications. Sometimes newly introduced plants prove to be too aggressive and become weeds. Even if all these problems are overcome, the plant will be successful only if a market exists or can be created.

Tecnologias Apropriadas para el Desarrollo de Panama (Appropriate Technology for the Development of Panama)
Jose Jorge Bonamico. Apr 79, 20p
Text in Spanish.

Keywords: *Industrial development, *Panama, Technology, Developing countries, Guidelines, Manufacturing, Food processing, Rural areas, Refineries, Sugars, Cements, Planning, Developing country application, Appropriate technology.

A theoretical document explaining what appropriate technology is, and establishing guidelines to implement such technology in Panama is presented. A brief analysis of the economic and social development of the Canal Zone vs. the rest of Panama, during the years 1970-1980 is given. The authors discuss the strategy to be followed during the decade of 1980-1990, using appropriate technology to solve some of the problems encountered. The areas where such technology can be used are classified as: Traditional rural activities (tool manufacturing, food production); Slightly more complex activities (production of cement, sugar refining); and Activities especially designed to take advantage of and to develop existing natural and human resources.

Guia de Tecnicas de Promocion en Accion Comunitaria y Saneamiento Rural (Guide to Promotional Techniques in Community Action and Rural Sanitation)

Francisco Alarcon Navarro, Hiram Bravo Barrientos, and Rafael Ibanez Cabrera. 1973, 197p
Text in Spanish.

Keywords: Sanitation, Rural areas, Promotion, Public relations, Health, Community development, Cooperation, Citizen participation, Planning, *Waste disposal, Sanitary engineering, *Water supply, Housing studies, Mexico, Developing countries, Developing country application.

Methods of approach and solution to community problems of rural Mexico are analyzed in this two-part study. Part One presents methods of evaluation of the physical, political, economic and social aspects of the community relative to health education and promotion of sanitation. Rapport with community leaders - priests, schoolteachers, doctors, medical assistants and social workers - is essential to a successful program, and methods of gaining cooperation are recommended. Community and agrarian organisms, such as communal groups (ejidos), are suggested as basic forums for the promotion of programs for change. The study details procedures of organizing and motivating the community. Part Two deals with techniques of rural sanitation. Methods of disposal of garbage, animal and human wastes are presented. Health problems in contaminated living areas are discussed, and sanitary procedures are recommended. A further consideration in Part Two is community water supply and its collection, storage and handling. The final section of the study consists of recommendations for improvement of living quarters in the rural hut (choza). Eighty-four illustrations are included in Part Two, giving design, specifications and materials needed for construction of garbage pits, sanitary land fills, incinerators, sewer systems, rural water plants and domestic water supply systems.

Industrias Quimica S.A. A Proposed Plant to Produce Sulphuric Acid in Panama
Morris Solomon. 19 Apr 63, 45p

Keywords: *Industrial plants, *Panama, *Chemical industry, Manufacturing, *Sulfuric acid, Requirements, Production management, Operating costs, Materials estimates, Equipment, Market surveys, Financial management, Cost estimates, Labor estimates, Developing country application.

The brochure takes into account the domestic consideration, nature and state of the market in Panama. Then it proceeds to delve into the building of a sulphuric acid plant citing land cost, building, furniture, insurance working capital, taxes, maintenance, labor, etc. Numerous charts given at the back of the work show a breakdown in every phase of the project.

Rural Electrification and Windpower in Tanzania
Research rept.
Roland Reichel. Mar 78, 253p Rept no. EP-7

APPROPRIATE TECHNOLOGY ABSTRACTS

Master's thesis.

Keywords: *Electric power, Electric power distribution, Wind power generation, *Wind energy, *Turbines, *Tanzania, Rural areas, Electric power demand, Developing countries, Windmills, Design criteria, Theses, Wind turbines, Wind power plants, Developing country application, Windpowered generators.

Present rural electrification in Tanzania means supplying electricity to townships and to only a few of the existing 8000 registered villages, which are not yet electrified in any considerable numbers due to technical and economical problems. The initial demand is normally low and the distances are too great to justify the expenses of transmission lines. Thus individual power stations seem to be the only alternative. Demand figures for typical villages are evaluated, and compared to data from Europe. Out of the alternative sources of energy only one, the WIND ENERGY, is described in some detail. Some windpower theory and brief explanations of windpower terms are given. The status of current windpower-research is described including a list of past and present prototypes. Based on commercially manufactured WIND ENERGY SYSTEMS and careful cost estimations and calculations, two wind energy supply schemes are proposed: one is for a telecommunication link and the other for a complete village power station of 45 kW rated output. The power station based on wind-energy was found to deliver the electricity at prices cheaper than the diesel-based scheme and, under certain conditions, working profitable if current electricity selling prices in Tanzania are considered. Operating and design criteria are discussed.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Transport Facilities for the Rural Sector in Developing Countries
Background paper

I. J. Barwell, and J. D. Howe. 27 Oct 78, 139p
Report of Working Group No. 12, Appropriate Technology for Rural Transport.
See also PB-297 663/7.

Keywords: *Transportation, Developing countries, Rural areas, Facilities, Vehicles, Marketing, Farms, Roads, Bicycles, Motorcycles, Policies, Recommendations, Rural transportation, Developing country application.

The report is concerned with the provision of appropriate transport facilities in the rural areas of developing countries. It is argued that the technologies applied in the past have been inappropriate to, and ineffective in meeting the transport needs of their poorest people. Further, there are alternative and more appropriate transport technologies which can better meet many of these needs. An essential element of any strategy for improving the transport capabilities of rural populations must be to provide a graduated choice of vehicles whose performance matches need and whose cost is in sensible relation to income. A range of basic vehicles is described—from aids to goods movement by man through to cheap motorized forms of transport—whose technology is shown to be more appropriate to the needs of many rural developing communities. Throughout the report various actions to promote more appropriate rural transport are identified. These are summarized into three categories: information, research and development; and production and marketing.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Lime Burning and Alkaline Pulping
Background paper

J. Leffler. 3 Oct 78, 23p
Report of Working Group No. 10, Appropriate Technology for the Manufacture of Pulp and Paper Products.

Keywords: Manufacturing, *Calcium oxides, *Pulp, *Industrial plants, Pulp mills, Sulfates, Sodium inorganic compounds, Bamboo, Cost estimates, Consumption, Kilns, Requirements, Developing countries, Rural areas, Paper products, Pulping, Developing country application, Lime.

The paper is divided into two parts. The first one describes the consideration taken in a particular case to choose an appropriate installation for lime burning in a developing country in connection with an alkaline sulphate pulp mill based on bamboo. The mill site is situated in a rural area of the country, which is intended to be industrialized. The second part gives some cost estimates, consumption, and efficiency figures covering lime kilns in general. As the prerequisites in this case study mainly differ from the situation if wood is the fibre raw material, if the infra-structure and technical experience have been well established for long time, etc., the choice of lime burning cannot be conventional. The paper is based on own experiences and information and advice which the author has gotten from textbooks, other technical reports and brochures and also valuable discussions with lime kiln manufacturers, lime producers, and pulp producers.

See also PB-294 602/8.

Keywords: Energy, *Energy source development, Rural areas, Developing countries, Trends, Constraints, Recommendations Reviewing, Energy requirements, Developing country application, Energy sources.

This report discusses the energy use and needs in the rural areas of developing countries and summarizes the sources of energy and the current state of the art in energy conversion. Most emphasis is given to the problems impeding the implementation of new energy sources and conversion devices. Some successful developments in this field are described and some guidelines laid down for future programs.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Industrial Technology Application in the Pulp and Paper Industry in the Philippines
Background paper

J. O. Escolano, and F. N. Tamolang. 4 Oct 78, 29p
Report of Working Group No. 10, Appropriate Technology for the Manufacture of Pulp and Paper Products.

Keywords: *Paper, Manufacturing, Paper products, *Pulp, Pulping, Hardwoods, Pulp mills, Paper making, Paper industry, Developing countries, *Philippines, Developing country application.

Pulp and paper research and development work conducted at the Forest Products Research and Industries Development Commission (FORPRIDECON), Philippines during the past years have shown the technical feasibility of using indigenous materials (not only from traditional but also from non-conventional sources), for the production of different types of pulp and paper products, using suitable pulping processes. Practical experience in the Philippines has also demonstrated that appropriate technologies can be successfully applied in commercial operations both in the categories of small pulp mills and large-scale activities, depending on the raw materials used.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology in Production of Cane Sugar
Background paper

B. A. Bhat, and F. Duguid. 29 Sep 78, 61p
Report of Working Group No. 4, Appropriate Technology for the Production of Sugar.

Keywords: *Industrial plants, Manufacturing, *Sugar, Developing countries, Consumption, Statistical data, Sugarcane, Production methods, Machinery, Employment, Molasses, Industries, Profits, Sugar industry, Developing country application.

Described in this paper are alternative sugar production processes, products and their by-products. Some production, trade and consumption statistics to illustrate the likely future importance in the industrialization policies of many LDC's are also included. A brief discussion considers the more important agricultural aspects of sugar cane production, emphasizing the necessarily close relationship with factory operations. Identified are alternative techniques at each major sub-process for two technology types—open-pan and vacuum pan. Briefly discussed are sources of equipment for both technologies. An evaluation is given of a number of alternative technologies based on stated assumptions on season length, operating parameters and cost data. Relevant policy implications and options are presented. An appendix offers a list of suppliers of turnkey packages and specialist equipment for both small and large-scale technologies and a number of consulting firms.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Cane Sugar Techniques in Developing Countries
Background paper

J. M. Paturau. 2 Oct 78, 67p
Report of Working Group No. 4, Appropriate Technology for the Production of Sugar.

Keywords: *Sugar, Manufacturing, Sugarcane, Production methods, Economic development, Technology innovation, Tropical regions, Sugar crops, *Industrial plants, Developing countries, Mauritius, Developing country application, Sugar industry.

The main physical constraints of cane sugar production are briefly described and the sugar production objectives to ensure socio-economic development are considered. Alternative methods of production are compared and possible solutions for the more efficient development recommended. Consideration is given to various technical improvements that would ensure greatly improved results. Cane sugar production is considered an appropriate production for tropical and semi-tropical Third World countries. Some of the main socio-economic data of the Mauritius sugar industry are given to serve as guidelines.

APPROPRIATE TECHNOLOGY ABSTRACTS

Ciencia Tecnología y Desarrollo, Volume 2, Numero 3, Julio/Septiembre 1978 (Science Technology and Development, Volume 2, Number 3, July/September 1978)

Miguel A. Infante D, and German Puentes G. Sep 78, 120p
Text in Spanish. Also pub. as ISSN-0120-1573.

Keywords: *Science policy, *Industrial development, Technology innovation, *Technology transfer, Colombia, Information systems, Cooperation, Coordination, Technological intelligence, Economic development, Employment, Information centers, Culture(Social sciences), Professional personnel, Government policies, Universities, Industries, Economic conditions, Immigrants, Developing country application.

The report contains six articles which focus on a methodology for technological development in Colombia, dependent upon a local capacity to meet its objectives. Cooperation and coordination between Government, University and Industry are shown as central to the problem. Acculturation suffered by local communities with the penetration of western scientific knowledge is described in a historical sketch. The loss of professionals and intellectuals through emigration is discussed, and methods of encouraging repatriation are considered. An intermediate stage of technological development is suggested as a solution to the problems of displacement of workers by modern industrial processes. Development of a national information system, to include a network of libraries and national archives, is presented in a descriptive synthesis of objectives, policies and structure to make resources of information available to the nation.

Keywords: *Science policy, *Industrial development, Research management, Technology innovation, Economic development, Information systems, Technological intelligence, Economic intelligence, Culture(Social sciences), *Technology transfer, Resource allocation, Employment, Production, Fixed investment, Colombia, Developing countries, *Research and development, Scientific research, Developing country application, Research problems.

The report contains six articles which deal with problems in research and the development of a technological policy in underdeveloped countries, with specific reference to the Andean Group. More effective use of resources, creation of more employment, and internal production of capital goods are recommended as means of reducing technological dependence. Methods of implementing systems of scientific, technological, economic and cultural information are considered. A survey among professors and researchers at thirty Colombian Universities focuses on obstacles which research activities have encountered. Statistical data are presented as a point of departure for a study of the nature and problems of the Colombian University System.

Tire Retreading Inst., Washington, DC.
Tire Retread Processing Manual
Revised edition.
1977, 154p

Sponsored in part by National Tire Dealers and Retreaders Association, Inc., Washington, DC.

Keywords: Automobile tires, Reconditioning, Renovating, Failure, Standards, Maintenance, Quality control, Inspection, Plant layout, Manuals, *Automobiles, *Tires, Developing country application, Tire retreads.

This manual is a guide for tire retread and repair shops. It describes the methods to use to produce a safe and serviceable product and calls attention to those conditions and procedures which may be the cause of retread failures. It is designed to help in the training of

new or inexperienced employees and as a reference if needed in a well-established shop. The manual is divided into five sections: retreading; standards; repairing; equipment installation and maintenance; and production of quality control record keeping. A glossary, charts, and illustrations provide additional information and instruction.

Women and Development, Recommendations Resulting from a Workshop, Held at Washington, DC, on March 26-27, 1979

Irene Tinker. 27 Mar 79, 60p Rept no. AAAS/PUB-79-R-5

Contract DOS-1019-966031

Keywords: *Women, Females, Citizen participation, Developing countries, Education, Specialized training, Discrimination, Employment, Meetings, Households, Development, Developing country application.

The dominant theme of the workshop was the critical need to consider the issue of women and development as an integral part of all recommendations and projects resulting from UNCTSD. Participants felt strongly that women should have equal access to and participate in development projects at every stage, including identification, formulation, appraisal, planning, design, implementation, and evaluation. Participants made 21 recommendations which were grouped into two categories: integrated planning and the inclusion of women in the making of technology policy. Within these categories, individual recommendations were directed to international bodies, to national governments, and professional organizations. A number of recommendations centered around the need to improve available household energy sources in both rural and urban areas. The participants suggested that one of the international pilot projects sponsored by UNCTSD focus on present and changing uses and supplies of household energy. Several members of the workshop group designed such a project, specifying its purposes, types of technologies to be considered, the formulation of approach, and the execution and evaluation of the project.

Institutions and Individuals Active in Environmentally-Sound and Appropriate Technologies (Preliminary Edition)
May 78, 283p

Prepared in cooperation with Task Force on Environmentally-Sound and Appropriate Technologies.

Keywords: *Technology transfer, *Environmental management, Directories, Environments, Developing countries, Organizations, Developing country application, Appropriate technology.

The International Referral System for sources of environmental information (IRS) is a component of UNEP's Earthwatch programme, which has been established to facilitate the exchange of environmental information within and among nations. The IRS is a referral system, that is, it does not handle the information per se, but connects those who need environmental information with those who have it. The IRS and the Task Force on Environmentally-Sound and Appropriate Technologies have undertaken a joint effort to identify and assemble potential sources of information on this subject. This Directory is the outcome. Although it was originally compiled to help IRS national focal points identify institutions and individuals which could qualify as IRS sources, it was felt that the Directory contains material which may be of wider interest. Being a preliminary listing of potential sources for IRS, it does not duplicate those institutions already listed in the IRS International Directory; nor does it claim to present a complete coverage of all organizations engaged in Appropriate Technology work.

Low-Volume Roads: Second International Conference

Ray Millard, G. A. Edmonds, I. J. Barwell, J. D. G. F. Howe, and Janet A. Koch. 1979, 352p. Rept nos. TRB/TRR-702, ISBN-0-309-02843-4

Library of Congress catalog card no. 79-17216. Proceedings of a conference conducted by the Transportation Research Board, August 20-23, 1979.

Microfiche copies only. Paper copy available from Transportation Research Board, 2101 Constitution Ave., NW, Washington, DC, 20418.

Keywords: *Traffic engineering, *Road transportation, Highway planning, Meetings, Design criteria, Vehicular traffic, Traffic safety, Financing, Maintenance, Rural areas, Pavements, Flexible pavements, Portland cements, Highway bridges, Gravel, Developing countries, *Roads, Highway transportation, Low volume roads.

The conference discusses how to design and operate low-volume roads under constraints such as limited funding, labor-intensive construction and maintenance, inflation, design criteria that may not be appropriate to low-volume roads, stage construction, complex intragovernmental requirements, inappropriate safety requirements, wide-ranging traffic volumes and vehicle loads, environmental considerations (air and water quality, erosion, and landslides), and providing maximum socioeconomic services in route selection. The Second International Conference on Low-Volume Roads was organized to facilitate the exchange of information on the practical application of engineering principles and current practice in the design, construction, and operation of low-volume roads. The papers in this Record were presented at this conference, which was held at the Scheman Center, Iowa State University, August 20-23, 1979; several informal presentations were also made. Although not all of the above constraints were addressed by the formal papers, informal presentations and panel and other discussions generally covered the entire range of problems.

Marketability of Low-Head Hydropower

Final rept. Jun 78-May 79
Stephen T. Lee, G. Paul Grimsrud, and Man-Loong Chan. 29 May 79, 192p*
Contract DI-8-07-83-V-706
Sponsored in part by Department of Energy, Washington, DC.

Keywords: *Hydroelectric power, Market surveys, *Marketing, Feasibility, Cost analysis, Economic analysis, Low head hydroelectric power plants, Sensitivity analysis, Computer applications, PUPS computer program.

The report addresses the marketability of small low-head hydropower, with head less than 20 meters and electrical generating capacity less than 15 MW. Phase I is an overview assessment for the contiguous U.S., divided into 12 regions defined by the National Electric Reliability Council, from which four geographically dispersed regions are selected for the Phase II analysis. In Phase II, representative small hydro sites are evaluated in detail with the use of a computer program called PUPS (Planning of Unconventional Power Supply) which develops generation expansion plans for the market area for the cases with and without small hydro. By comparing these cases, the benefits or market value of small hydro are determined. Supplemental analyses estimating spinning reserve and transmission and distribution credits are reported, as well as sensitivity analyses of fuel cost escalation and interest rate.

Environmental Impacts of International Civil Engineering Projects and Practices

Charles G. Gunnerson, and John M. Kalbermatten. c1978, 264p

Proceedings of the American Society of Civil Engineers (ASCE) National Convention Held at San Francisco, CA. on October 17-21, 1977.

Paper copy available from American Society of Civil Engineers, 345 East 47th Street, New York, NY 10017.

Keywords: *Health, *Buildings, Civil engineering, *Environmental impacts, Citizen participation, Economic factors, Public health, Technology, Transportation, Irrigation, *Water supply, *Waste disposal, Developing countries, Social effect, Developing country application, Case studies, Environment management.

The document reports on a workshop which was convened to identify factors leading to program successes and failures in international civil engineering. Emphasized are public participation, economic measures, public health, environmentalism, and appropriate technology. The workshop was organized around two sessions. The first session was devoted generally to case studies presented by practicing engineers. The case studies included transportation, impoundment, irrigation, water supply, and waste disposal. The second session concentrated on discussions of socioeconomic and environmental considerations and their impact on civil engineering.

Rural Road Appraisal Methods for Developing Countries

D. I. N. Bovill. c1978, 27p Rept no. TRRL-SUPPLEMENTARY-395
Also pub. as ISSN-0305-1315.

Keywords: *Roads, Rural areas, Developing countries, Evaluations, Objectives, Highway planning, State of the art.

This report is concerned with appraisal methods for roads in rural areas of developing countries where existing traffic levels are very low and where benefits to investments in the area will be mainly related to increases in agricultural production and improvements in social welfare. Commonly used appraisal methods are critically reviewed and improved techniques incorporating social and economic objectives are proposed. (Copyright (c) Crown Copyright 1978.)

Keywords: Urban transportation, *Buses(Vehicles), Services, Routes, Evaluation, Economic factors, Great Britain, *Transportation, Foreign technology, Small cities.

A study is made of fixed route bus services operating in towns with populations in the range 5,000 to 30,000. Analysis of eight such services is carried out to identify and, where possible, quantify those factors which favor their operation. The study was undertaken to assess the potential for and advisability of extending this type of operation to other small towns. Quantitative assessment of the study services is based on the assumed objective of maximizing the number of bus passengers, subject to financial constraint. The implications of this objective are analysed and it is thought to be compatible with the corporate aim of a public transport undertaking and the social aim of a local authority. It is concluded that, although in general such services are not profitable, their provision can be well justified provided that the selection of the town and the service design take sufficient account of the factors discussed. A Handbook of Rubber Culture and Processing
O. S. Peries. cSep 70, 238p

Keywords: *Rubber, Handbooks, Rubber industry, Natural rubber, Plant growth, Soil conservation, Weed control, Harvesting, Processing, Manufacturing, Industrial plants, Production methods, Machinery, Packaging, Developing country application.

There has been a long-felt need in rubber planting industry for a handy manual, which contains information on all aspects of rubber production and processing. This handbook is a first attempt by the Rubber Research Institute of Ceylon to provide this information in a concise manner. Much new information on the culture of the crop and the manufacture of the product. The table of contents of the book is as follows: Part 1. Nurseries and planting material (Seedling nurseries, Budwood nurseries, Budgrafting, Clone evaluation); Part 2. Planting of rubber (Soil conservation, Replanting procedure, Planting of budded stumps, Tapping of Hevea rubber, Yield stimulation); Part 3. Plant nutrition and cultivation practices (Plant nutrition, Ground covers, Weed control); Part 4. Diseases and pests (Diseases, Pests and disorders of Hevea Brasiliensis); Part 5. Processing, manufacturing and packing (General consideration, Latex in the field, Latex in the factory, Ribbed smoked sheet (RSS), Pale crepe, Scrap crepes, New process rubbers, Packing of rubber, Latex preservation and concentration).

Les Facteurs de l'Essor Agricole aux Etats-Unis (How the United States Improved its Agriculture)
Raymond P. Christensen, William E. Hendrix, and Robert D. Stevens. 1963, 61p
Text in French.

Keywords: *Agricultural economics, *United States, Production, Fertilizers, Profits, Yield, Comparison, Japan, Developing country application.

In this translation of an English publication titled 'How the United States Improved its Agriculture', are the factors that gave rise to the tremendous increase in agricultural production such as fast agricultural areas, favorable political conditions, expanding technology, and the resultant use of fertilizers, examined. Cost vs profit considerations are also graphically illustrated. Yields per hectare of lesser developed countries are compared with those of Japan and of the United States and ways to increase the production and to stimulate the economies are briefly discussed.

Sechez vos Fruits et Legumes au Soleil (Sun Dry Your Fruits and Vegetables)
Helen Strow, and Evelyn Spindler. Jul 58, 43p
Text in French.

Keywords: *Solar drying, Food processing, *Fruits, *Vegetables, Drying, Sun, Sulfur, Cookery, Containers, Requirements, Food storage, Developing countries, Food preparation, Developing country application.

The sun drying process is explained, which fruits and vegetables can be sun dried. The importance of cleanliness and of the conditions of the air atmosphere are stressed. The different steps to sun dry fruits, with the answers as to how, why, when, are answered. Selection of fruits and manipulability is discussed, as well as the sulfitation process, with material and equipment required. Listing of different fruits and the different methods are given. Same is done for the vegetables with the addition of steam cooking. Also discussed is the reverse process, namely, how to prepare sundried fruits and vegetables for consumption. This is translated from a booklet called 'Sun Dry Your Fruits and Vegetables'.

Developpement Communautaire: Definitions et Principes (Community Development: An Introduction to CD for Village Workers)
Jean Ogden. Apr 62, 47p
Text in French.

Keywords: *Community development, Planning, Local government, Citizen participation, Meetings, Coordination, Instructional materials, Guidelines, Management, Organizing, Leadership, Developing countries, Developing country application, Villages.

Social and economic community development through education, new product development, and use of local resources is discussed in this translation of an English publication titled 'Community Development'. The importance of raising the standard of living and improving sanitary conditions, thereby influencing the development of the nation, are stressed. Two methods for implementing these changes are outlined: (1) The direct method, where the aid of a specialist is enlisted, a study is done, solutions are suggested. (2) The indirect method, where the agent works with the local population to define problems and to present solutions. Both methods are analyzed as to desirability. Necessary characteristics for agents for community development as well as for leaders in the community are outlined. Ways of judging the success or failure rate of the effort and of long term results are included. Four references are listed.

Sources et Causes de l'Accroissement de la Production Agricole aux Etats-Unis: Suggestions pour l'Agriculture aux Indes (Sources and Causes of Increased Farm Production in the United States: Implications for Indian Agriculture)
Glen T. Barton, and H. L. Stewart. Aug 58, 24p
Text in French.

Keywords: Agricultural engineering, Agricultural products, Farm crops, Productivity, Comparison, *India, *United States, Developing countries, *Agriculture, Developing country application.

In this translation of an English publication titled 'Sources and Causes of Increased Farm Production in the United States' are the factors considered that have led to the enormous increase in agricultural production in the United States, with emphasis on the period during and following the Second World War. Although many of these factors have a parallel in India, a similar large increase in production did not take place. The analysis lists as a major cause of the disparity, the difference in attitudes between the farmers, the American being considered mainly with profit, the Indian sacrificing his standard of living increase, to provide his daughters with a dowry. Hope is expressed that, since many factors are similar between the two countries, an increase in production will be obtained from learning from the United States' experience.

Petite Entreprise - Le Lancement des Produits (New Product Introduction for Small Business Owners)
Peter Hilton. 1961, 99p
Text in French.

Keywords: *Management planning, Industries, *Product development, Sales, Prices, Publicity, Demand(Economics), Competition, Developing coun-

tries, *Small businesses, Developing country application.

Why and how to introduce a new product, and what product to consider, is outlined in this translation of an English publication titled 'New Product Introduction for Small Business Owners'. Competition with large institutions through regional sales, price cutting, imaginative presentation, and obtaining the goodwill of customers, are discussed. Market research, market share, pricing policy, export possibilities, legal restrictions, the use of specialists such as engineering consultants, advertising agencies, and industrial research bureaus are examined. Other factors discussed include warranty, maintenance, saturation point, and ways of measuring success over a period of time. Necessary requirements for a new product launch such as demand, distribution, effect on competition, and timing are also discussed. Some failures of new product launching are analyzed and a table listing results from 200 major firms is included. References to government and private publications are given.

Le Jardin Potager en Pays Chaud (Better Vegetables)
Daniel A. Sekyere, and Sandy J. McCorvey. Jul 67, 100p
Text in French.

Keywords: *Vegetables, Tropical regions, Vegetable plants, Ghana, Developing countries, Cultivation, Hand tools, Soil properties, Planting, Mulches, Plant growth, Plant diseases, Pest control, Manuals, *Africa, Developing country application.

The report describes the different ways of growing vegetables in warm countries. The choice of tools is described with drawings. The location of the garden must take in consideration the nature of the soil, the different levels of the land, the problem of irrigation, the closeness to the home. The preparation of the soil comes next with clearing, digging, enclosing of the plot. Different times are chosen for seeding and sowing in accordance with the regions: seaside, forests, northern or subtropical. Documents appended on hygiene for the garden, on vegetables' parasites and diseases, on sturdy varieties, culture for North African Coasts, rotation of crops, abundance of nutritious elements in the different vegetables. This is translated from a booklet called 'Better Vegetables'.

World Food and Nutrition Study
Interim rept.
Nov 75, 104p ISBN-0-309-02436-6, NSF/RA/E-75/377
Library of Congress catalog card no. 75-37120.

Keywords: *Food supply, Nutrition, Nutritional deficiency diseases, Population growth, Farm crops, Research, Breeding, Agricultural engineering, Water supply, Developing countries, Soil classification, Protein, Resources, World food.

Critical dimensions of the world food and nutrition problem are addressed including malnutrition and population growth. Research areas are concerned with conventional breeding for higher yields on a dozen or fewer crops that produce most of the world's calories and protein, on-farm management, and water in developing countries, large scale soil classification, and collection and evaluation of worldwide germ plasm. The focus is on how the U.S. can best contribute to building the research base to avert mass hunger for future decades. High priority in the field of nutrition should be given to the development of low cost technologies for fortifying mass-consumed foods of developing countries, for the improvement of nutritional programs in developing countries, and for better identification of the extent, nature, and effect of protein deficiencies. Also included in this report is a paper on recommended actions on nutrition research and development.

Gasohol: A Technical Memorandum
Sep 79, 89p* Rept no. OTA/TM/E-1

Keywords: *Bioconversion, *Alcohols, *Waste recycling, *Agricultural wastes, Biomass, *Fuels, Ethanol, Gasoline, Blends, Benefit cost analysis, Technology, Economic analysis, Environmental impacts, Regulations, Synthetic fuels, Solid wastes, *Gasohol, Social impacts.

The Office of Technology Assessment is currently preparing an assessment of energy from biological processes. An extensive analysis of alcohol fuels from agricultural products was performed. This technical memorandum presents these findings in response to congressional interest in synthetic fuels. The purpose of the memorandum is to illuminate the technical and non-technical issues surrounding the development of gasohol. It discusses the resource base, production technologies, and economics of gasohol, and its use as a transportation fuel. The report also contains a discussion of the environmental problems and benefits of producing and using gasohol, and the social and institutional issues about using agricultural products for

energy. The final report on energy from biological processes is scheduled for delivery to Congress in January 1980 and will contain an analysis of policy options about gasohol as well as other bioenergy technologies such as wood and methanol production.

Keywords: *Agricultural machinery, Maintenance, Components, Screws, Nuts(Fasteners), Bolts, Nails(Fasteners), Wrenches, Tools, Engines, Plows, Tractors, Developing countries, Developing country application.

The translation of an English publication titled 'Machinery Care Project D Units' covers the following: Knowledge of parts used in machinery; The importance of screws and bolts, nuts, wrenches, their size, the different size of nails, their different shapes; the main point being for each task, its tool; Gearboxes are described with photos; Diagrams of engines and all mechanical aspects of machinery are shown. Different farm machinery treated in the brochure are tractors, ploughs, harrows, sprays, cultivators, planters, mowers, choppers, harvesters, threshing machines, cotton gins, cotton pickers, and corn snellers. The different systems of coupling machinery are described. Maintenance for all machinery is also included.

Manual para Pozos Pequenos (Small Well Manual)
Ulric P. Gibson, and Rexior D. Singer. Sep 69, 170p
Text in Spanish.

Keywords: *Water wells, Construction, Manuals, Design criteria, Maintenance, Aquifers, Sites, Ground water, Well logging, Cutting fluids, Drilling machines(Tools), Centrifugal pumps, Jet pumps, Rotary pumps, Diagrams, Tables(Data), Installing, Purification, Developing country application.

Information on the installation of small water systems is presented in this report. The material presented can be used by non-technical people working directly in the field, as well as by engineers and hydrologists. Information is given on how to locate, construct, and operate a small well which can provide good quality water to supply the needs of small communities by producing 50 gallons per minute. Topics include: origin, occurrence and movements of ground water, water well design, maintenance, pumping equipment and sanitary protection of ground water supplies.

Cultivo Bisexual de 'Tilapia aurea' en Jaulas Flotantes en el Lago de Ilopango, Volume IV, Number 2 (Bisexual Cage Culture of 'Tilapia aurea' in Lake Ilopango, Volume IV, Number 2)
Technical rept.
Jose Francisco Godinez, and Ricardo Alfredo Castro Aragon. Sep 77, 62p
Text in Spanish.

Keywords: Aquaculture, Fresh water fishes, Developing countries, Feeding stuffs, Weight(Mass), Growth, Cost estimates, Feasibility, Animal nutrition, *El Salvador, *Fishes, Developing country application, Tilapia aurea.

The growth and production of Tilapia Aurea in cubic and cylindrical culture cages was studied for 91 days starting in October 1976. The stocking densities used were 250, 375, and 500 fish/cu m. The two rations of feed that were used were 3.0 and 2.5%, based on the weight of the stock fish mass. The feed formula contained 20.31% of total protein. Best results are obtained using 250 fish/cu m as the stocking density and a 3% feed ratio. This approach gave an average net production of 20.07 kg/cu m and an economic gain of \$38.22/cu m. Estimates of the cost of this fish production operation and its feasibility for commercial exploitation are given in two appendices.

Industrializacion del Banano; Evaluacion de Alternativas Tecnologicas (Industrialization of the Banana; Evaluation of Technological Alternatives)
Flavio Calle M. Apr 79, 138p
Text in Spanish.
Microfiche copies only.

Keywords: *Fruits, *Food processing, Selection, Preserving, Sanitation, Food industry, Food packaging, Pasteurizing, Developing countries, Food storage, Nutrition, Machinery, Kitchen equipment and supplies, Production, Prices, *Ecuador, Bananas, Developing country application.

The banana and several processed products and their uses are discussed. Only products which use the fruit itself are considered, no seed or peel byproducts. For

each of the derived products, there is a separate section on the technology used in the preparation. A general discussion on fruit selection and preservation and on quick and aseptic processing is included. Atmospheric controlled ripening chambers, washing and peeling processes, homogenization, pasteurization, packaging, freezing, and storage are also detailed. Each derived product, which include banana puree, b. flakes, b. powder, b. flour, b. figs, b. juice, b. vinegar, green banana chips, etc. is considered in a separate section. Chemical composition, nutritional evaluation, and step by step diagrams for each technological process are given. Tables on total banana production and on prices of bananas and derived products during the years 1973-78 in Ecuador, are included. Other tables discuss appropriate ripening conditions and need for addition of sugar for some of the derived products. Photographs and diagrams of ripening chambers, washing and peeling machines, pulp extractors, dryers, etc. are included. A color photograph of bananas in various stages of ripeness is reproduced in black and white.

Pharmaceutical Innovation and the Needs of Developing Countries
Final rept.
Jun 79, 30p Rept no. IOM-79/06
Contract DHEW-282-78-0163

Keywords: Developing countries, *Drugs, Meetings, Policies, Costs, Recommendations, History, National government, United States, Vaccines, Diseases, *Health care delivery, Innovations, Research and development, Health care technology, Pharmaceutical services.

Development of new pharmaceuticals by U.S. drug firms is handicapped by a 'major lack in public policy.' The government regulates drug research and development, which adds substantially to the cost and risk of the enterprise, but the government usually does not foster the development of drugs needed for particular threats to the public's health. The lack in policy is the absence of a counterbalance to the regulatory role. The policy problem is of increasing importance now that discovery and development of drugs on a ration, rather than empirical, basis is scientifically feasible. Coordinated programs under government leadership would be required to take advantage of the scientific opportunities. Recommendations are stated to remedy the policy lack.

Pest Management Strategies in Crop Protection. Volume I
Oct 79, 128p* Rept no. OTA-F-98

Keywords: *Pest control, Pesticides, Farm crops, Agricultural economics, Farm management, Assessments, Protection, Herbicides, Rodenticides, Insecticides, Weed control, Apple trees, Wheat plants, Corn plants, Cotton plants, Soybean plants, Grain sorghum plants, Trends, Losses, Predictions, Economic impacts, Developing countries, Technology transfer, Constraints, United States, *Crops, Integrated pest management, Biological pest control, Crop rotation.

The primary focus of the report is on agricultural crop protection. The study sought to: (1) assess crop protection problems, current and emerging control technologies, and projected future developments over the next 15 years for each of seven regional cropping systems in the United States; (2) evaluate Federal constraints to improved pest management in the United States, and (3) review the problems, potentials, and impacts of the transfer of North American crop protection technology to the developing world. These objectives were addressed by nine study groups: one each for the seven cropping systems in 1 and one each for 2 and 3. The crops and regions selected were: wheat in the Great Plains States, corn in the Corn Belt, cotton and sorghum in Texas, deciduous tree-fruits (especially apple) in the northern half of the country, potatoes in the Northeastern States, soybean in the Southeastern sector, and selected vegetables in California. These crops are representative of more than 90 percent of U.S. agricultural production.

Metodología para el Estudio de la Fuerza de Trabajo de los Países en Desarrollo (Conducting a Labor Force Survey in Developing Countries)
Matilda R. Sugg. Jun 64, 114p
Text in Spanish.

Keywords: Personnel management, Developing countries, Manpower, Statistical data, Labor relations, Surveys, Employment, Classification, Recruiting, Specialized training, *Management techniques, Developing country application.

The manual is intended as a training guide for the professional staff which is conducting a labor force survey in developing countries. Such a survey will provide data for which a country may: (1) assess the potential manpower which is available for economic development, its education, experience, skill, and other pertinent information; (2) evaluate the kinds of jobs which must be provided to minimize unemployment and underemployment; (3) project future manpower resources which when compared with the future manpower requirements, will help identify employment and training needs; (4) anticipate possible limitations on development caused by shortages of particular skills; and (5) determine differences in employment, unemployment, and underemployment according to the different economic, social, and ethnic groups existing within the population.

El Agua y La Salud Del Hombre (Water and Man's Health)
Arthur P. Miller. Apr 62, 118p
Text in Spanish.

Keywords: *Water pollution, Disease vectors, Bacteria, Cholera, Bacillary dysentery, Diarrhea, Poliomyelitis, Tularemia, Radioactive wastes, Cyanides, Arsenic, Sulfonates, Chlorides, Chloroform, Phenols, Standards, *Diseases, Developing country application, Water pollution standards.

Much is known of the chemical and biological relationships of water to human physiology but the general place of water in the ecology of mans needs better focus. A precise knowledge of this water-man-health relationship is needed due to the fact that the worldwide development of water resources is of ever increasing importance to the social and economic development of millions of people. This book has been written to improve understanding of this relationship. The four areas discussed are: The role of water; parasites and water; the relationship of water to other chemicals; and radioactive materials in water.

Utilization of - I. Molasses Distillery Stillage. II. Press Mud
M. Aslam, and A. H. Khan. May 79, 21p

Keywords: *Molasses, *Sugarcane, Industrial waste treatment, Solvent extraction, Materials recovery, Costs, *Distilleries, *Waste recycling, Developing country application, Stillage, Waste utilization, Reverse osmosis, Press mud, Cane sugar.

The report attempts to identify all the options that are available for the utilization of Molasses Distillery Stillage and Press Mud (Cane sugar manufacture by the carbonation process leads to the production of up to 8% of press mud on the basis of weight of the cane crushed). Spent Wash is a good energy source for microorganisms and has been exploited for the cultivation of fodder yeast, mucellar fungi and mushroom mycelia, in many countries. On account of different plant operations and composition of molasses, stillage from various distilleries varies in composition. Therefore, in order to use any stillage for biomass production, an assessment of its potential as a substrate for fermentation is described.

Hydropower - An Energy Source Whose Time Has Come Again
 Report to the Congress.
 11 Jan 80, 96p * Rept no. EMD-80-30

Keywords: *Hydroelectric power, Development, Projects, Constraints, Evaluation, Assessments, *Energy source development, Energy sources.

Recent price increases in imported oil demonstrate the urgency for the U.S. to rapidly develop its renewable resources. One such renewable resource for which technology is available now is hydropower. Studies indicate that hydropower potential, particularly at existing dam sites, can save the country hundreds of thousands of barrels of oil per day. But problems and constraints--economic, environmental, institutional, and operational--limit its full potential. Federal programs have had little impact on helping to bring hydro proj-

ects on line. Specifically, the Department of Energy's Small Hydro Program could do more to overcome hydro constraints and problems through an effective outreach program and more emphasis on demonstration projects.

Perceptions of Technology: A Study of the Human Project
 Master's thesis
 Paul Raymond Warpeha. 22 May 79, 106p

Keywords: Composts, *Methane, *Agricultural wastes, *Community development, Sanitation, Technology, Agricultural engineering, Gases, Cooking devices, Theses, Developing countries, *Ecuador, Developing country application, Human project.

In 1976, an integrated project of rural development was begun in highland Ecuador as a collaborative effort between Peace Corps Volunteers and indigenous villagers. Its focus was on the cooperative production and use of methane gas (biogas) within the context of the local community and culture, including the parameters surrounding the utilization of agricultural residues, traditional fuel usage patterns, and community health, nutrition, and sanitation systems. This paper documents the history of the Human Methane Gas/ Nutrition-Health/ Agriculture Project and specifically studies the impact of international development efforts and technological innovation upon a group of rural people. It deals with culturally defined perceptions of technology and the implications of change, taking into perspective the historical and sociocultural factors which determine the world-view of both the indigenous people and the foreign change agents.

The Use of Modern Computer Telecommunications Systems to Encourage the Participation of People in Development
 Glen Leet. 21 Apr 79, 112

Keywords: Developing countries, Telecommunication, *Information services, Development, Real time operations, Computer networks, Time sharing, Minicomputers, Foreign countries, Mexico, Computer applications, Distributed processing, Communications networks, Data bases, Developing country application.

The use of modern telecommunications systems to encourage the participation of people in an integrated, comprehensive national development program is explained. Designed to facilitate communication between sectoral elements and between people and governmental services, it brings to this task the use of telecommunications networks, real-time access, distributed data processing, use of mini-computers and intelligent terminals, and data base storage and retrieval systems. Based on over 30 years' experience in over 50 countries, it involves a deep concern with what motivates people and the use of sophisticated technology to aid them in realizing their aspirations.

Location Analysis: A New Tool for Health Planners
Methodological Working Document no. 53
David Eaton, Richard Church, and Charles ReVelle.
May 77, 50p*

Prepared in cooperation with Tennessee Univ., Knoxville. Dept. of Civil Engineering, and Johns Hopkins Univ., Baltimore, MD. Dept. of Geography and Environmental Engineering.

Keywords: Covering, Position(Location), Methodology, Accessibility, Policies, Geography, *Health planning, Health care facilities, Health care requirements, Developing country application, Health services, Location analysis.

The report describes methods to locate facilities with respect to demand patterns for health services so as to maximize the access of people to health care. This set of methods is called covering techniques. They are termed covering techniques because they try to cover people with services within time or distance restrictions. These methods are of interest because they require relatively small quantities of usually-available information, are relatively inexpensive to use, and yield a rich variety of valuable results. Some of these methods are simple enough to be used by a motivated and patient individual, armed only with some basic data on population and distances, a pad of paper, and a pencil. Other methods require a computer to perform the complicated calculations. This report explains what the methods can and cannot do.

Health Resource Allocation in Rural Colombia. Appendix B
Special project rept.
Bryan L. Hamon. Apr 79, 136p
Contract AID/ta-C-1363

Keywords: *Colombia, *Health care delivery, Resource allocation, Health resources, Developing country application.

The report develops two systematic approaches--computer mapping techniques and location analysis--as tools to assist Colombian health officials in planning for the allocation, development and use of rural health resources. Present allocation methods and issues of rural health extension are discussed. Health and demographic data is presented and analyzed for 14 indicators in the State of Valle de Cauca. Computer mapping and health status index are used for comparing various combinations of health and demographic factors. Maximal covering is used to assess three issues related to deployment of ambulances. Information is presented on village population, travel times and distances between villages and the status of existing health services in Zarzal, a five county region in the State of Valle de Cauca, Colombia. Trade-off curves are presented, maps are developed to show how medical vehicles cover rural population.

Some of these methods are simple enough to be used by a motivated and patient individual, armed only with some basic data on population and distances, a pad of paper, and a pencil. Other methods require a computer to perform the complicated calculations. This report explains what the methods can and cannot do. Text in Spanish.

SYNCRISIS: The Dynamics of Health. Volume III: Perspectives and Methodology
P. O. Woolley, Jr, W. S. Hays, and D. L. Larson. Jun 72, 63p Rept no. DHEW/PUB/OS-72-33

Keywords: *Health, Public health, *Socioeconomic status, Planning, Methodology, Environments, Foreign countries, Rural areas, Developing country application, Health planning, Health care resources.

The monograph uses two perspectives in planning: sectoral and inter-sectoral. Sectoral planning attempts to use fully resource allocations within a given sector. In sectoral planning decision-makers often work with resources immediately under the control of a sector, for example, agriculture or health. However, this does not mean that all resources for successful project implementation are under the control of sectoral planners. Effective planning, therefore, requires the coordination of both sectoral and inter-sectoral planning. Delineating distinct spheres of planning is not an attempt to separate entities but to unify them so that plans can be made, evaluated and restructured according to the criteria.

SYNCRISIS: The Dynamics of Health. Volume IV: The Philippines
P. O. Woolley, Jr, C. A. Perry, L. J. Gangloff, and D. L. Larson. Jul 72, 143p Rept no. DHEW/PUB/OS-72-34

Keywords: *Health, Public health, *Socioeconomic status, *Philippines, Diseases, Environments, Foreign countries, National government, Rural areas, Developing country application, Health planning, Health care resources.

This country case-study attempts to identify problem areas in health and socio-economic development for the Philippines. Particular attention has been given to the definition of those problem areas influenced by or amenable to change by cooperation between the Philippine government and international assistance agencies. There has been no attempt to develop a specific plan for action but rather to find those areas in which planning might be helpful. This study is based upon the reasoning that there are unifying sociocultural forces that influence the operation of economy, the government, education, health care, etc. Disease, the negative manifestation of health, represents the way in which a population deals with the environment as much as it represents the presence of a disease causing agent. Hence comes the hypothesis that the Philippine society is a result of the concepts of limited good and mutual survival whereby they feel that to enjoy good fortune is necessarily to take it away from someone else. Many kinds of data have been used in this hypothesis, and they uniformly state or suggest this conclusion. This study is consequently not a comprehensive view of the health sector as such but is a survey of the various influences that combine to produce the conditions found in the health sector.

SYNCRISIS: The Dynamics of Health. Volume V: El Salvador
P. O. Woolley, Jr, C. A. Perry, and D. L. Larson. Oct 72, 61p Rept no. DHEW/PUB/OS-72-35
Prepared in cooperation with Agency for International Development, Washington, DC.

Keywords: *Health, Public health, *Socioeconomic status, *El Salvador, Diseases, Environments, Foreign countries, National government, Rural areas, Developing country application, Health planning, Health care resources.

The study is a brief overview of the basic health situation in El Salvador. Because of time limitations and scarcity of data, it is a sector assessment rather than an indepth analysis. Certain key problems became obvious; the primary area is malnutrition. There seems to be no programs, either from the government or the assistance agencies, to alleviate this problem. However, the Ministry of Health has proposed to increase the vaccination program to combat the high morbidity and mortality from childhood diseases. Improvement of the nutritional status of the population would have additional benefit for the health and well-being of the population. Another key area is the availability of health services. Some form of health facility is available 85.6% of the people, yet over half of them are not permanently staffed. More sophisticated facilities, however, are fairly evenly distributed throughout the country. El Salvador has a good transportation system, there are not any obvious cultural barriers to seeking modern medical care, and yet the people die from lack of care. The third major problem is sanitation. There is much activity in this area, an encouraging sign. Poor sanitation is one of the basic underlying causes for a large percentage of diseases and until this problem is solved, El Salvador will continue to carry the burden of preventable sickness.

On Deployment of Health Resources in Rural Valle del Cauca, Colombia
Special project rept.
1977, 55p

Sponsored in part by Colombian Ministry of Public Health. Prepared in cooperation with Tennessee Univ. at Knoxville. Dept. of Civil Engineering, and Health Service of Valle del Cauca (Colombia).

Keywords: Deployment, *Colombia, Data collection, Rural areas, Developing country application, Valle del Cauca(Colombia), Health resources, *Health planning.

The paper reports on data collection, problem formulation, analysis and conclusions of a joint Colombian-American Study to integrate the use of location analysis into rural health planning in Colombia. Local planners in Zarzal, Valle del Cauca used census data and common sense to determine good centers from which to recruit rural health workers and at which to base ambulances. Their task can be formulated as a maximal covering location problem and was solved with both a heuristic appropriate to the local computer system and integer programming. Location analysis found better centers for health workers than did the local planners, in the terms of reference of the planners themselves. The ambulance deployment study suggested advantages to modifying system management practices. A portion of the specific recommendations have been implemented in Zarzal. The covering techniques are being applied by planners in other areas of Colombia.

The Use of Location Analysis for Siting Health Promoters in Rural Colombia. Appendix A
Vivienne L. Bennett. Apr 79, 220p
Contract AID/ta-C-1363

Keywords: *Colombia, Sites, *Health planning, Health planning, Developing country application, Rural health services, Location analysis, Health care delivery systems.

Report discusses problem of finding sites for minimally trained health care workers, or promoters, in rural Colombia to develop siting methods, the public-sector location analysis literature is reviewed, recent developments are described, from p-median through location set covering to maximal covering. The promotor siting problem, when formulated, turns out to be a modification of the maximal covering location problem in that it is a non-emergency service and the restrictions on potential facility sites are more complex. The study addresses: (1) how a computerized procedure relates to

APPROPRIATE TECHNOLOGY ABSTRACTS

the conventional Colombian siting methods; (2) the usefulness of these techniques for routine promotoria planning; (3) how much data is necessary for effective solutions to the siting problem. Computer results based on Zarzal regime are described and analyzed. Maps and trade-off graphs are used location analysis is shown by quantifying trade-offs between numbers of promoters and the segment of the population covered by the service.

Electricity from the Wind: A Guide for the Generalist
Paul Bendick. 1978, 23p

Keywords: *Wind energy, Wind power generation, Windmills, Instructions, Developing country application, Windpowered generators, Wind power.

This guide was compiled and written for the generalist working in developing countries who are considering the option of using wind energy to generate small amounts of electricity. It is not intended to be comprehensive nor should it be read as a technical bulletin. It presents basic information to the reader who knows little about the subject and will help him/her to decide whether wind energy should be explored as a practical answer to a specific energy need. Discussed in the paper are wind electric systems, measuring the wind, determining electrical needs, selecting components, and listings of commercial dealers, manufacturers and distributors. Financial considerations are also discussed.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. The Search for Appropriate Technology for the United Kingdom Paper and Board Industry
Background paper
D. Aitwood. 18 Oct 78, 17p
Report of Working Group No. 10, Appropriate Technology for the Manufacture of Pulp and Paper Products.

Keywords: *Paper, Paper industry, Paperboards, *Great Britain, Market surveys, Raw materials, Pulp mills, Papermaking, Paper products, Developing countries, Developing country application, Waste recycling, Paper recycling.

Paper and board are internationally traded products, and most national industries have similar characteristics and problems. In recent years world market conditions have been unfavorable, and the UK paper and board industry has faced severe problems. This paper describes the structure of the current UK paper and board industry and sets this in the context of the common market (EEC) and world scene. The problems in finding indigenous raw materials are described and the role wastepaper plays as a raw material is discussed. The problems caused by the size new pulp mills have to be, to be viable, is examined, especially in the context of building new straw pulping plants which could integrate with existing paper and board mills.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Provision of Drugs by Appropriate Technology
Background paper
Paul Durnill. 3 Oct 78, 36p
Report of Working Group No. 2, Appropriate Technology for the Manufacture of Drugs and Pharmaceuticals. Sponsored in part by Agency for International Development, Washington, DC. Prepared in cooperation with Intermediate Technology Development Group, London (England).

Keywords: *Drugs, Supplying, Requirements, Medical services, Drug industry, Chemical industry, Technology, Developing countries, Developing country application.

The first part of the report outlines the technical considerations which lead the Intermediate Technology Development Organization (ITDG) to develop its current policy. These include: The problem of supply; production of basic chemicals; drugs from microbial sources; drug compounding; the pharmaceutical auxiliary; and other technologies needed for drug production. The objectives of a current project are then described. A brief analysis is given of the ways in which government policies influence the provision of drugs particularly to poor rural communities. An appendix lists technology appropriate to different types of countries. A bibliography is included.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Small-Scale Rural Industries: Light Engineering Workshops
Background paper
V. Austin. 3 Oct 78, 56p
Report of Working Group No. 8, Appropriate Technology for Light Engineering Industries and Rural Work-

shops. Prepared in cooperation with Intermediate Technology Development Group, London (England).

Keywords: *Small businesses, *Industrial development, Industries, Rural areas, Products, Services, Marketing, Technology, Requirements, Industrial plants, Developing countries, Local government, Policies, Developing country application.

Small scale rural industries can make a major contribution to assist the poor and especially the landless, in the rural areas of developing countries. At present, the amount of assistance given by national and international programs is relatively negligible, and from the author's experience, virtually all rural industrial activities at the field level in developing countries are without adequate direct government assistance. If a modest start is to be made to help provide some additional employment and incomes for the poor of rural areas through non-farm activities, a massive training program must be started now, and supported by adequate services, at both the national and international levels.

Microbial Processes: Promising Technologies for Developing Countries
Final rept.
Feb 80, 215p* Rept no. CIR/BOSTID-80/28
Contract AID/csd-2584

Keywords: *Plants(Botany), *Drugs, *Microbiology, Microorganisms, Food, Feeding stuffs, Plants(Biology), Nutrition, Nitrogen fixation, Insect control, Energy, Fuels, Antibiotics, Vaccines, *Waste treatment, *Cellulose, Cultures(Biology). Regulations, Developing countries, Waste utilization.

Ten subpanels selected a number of microbial processes that met either of the following criteria: (1) The process can be beneficially employed in developing countries, or (2) The process has sufficient potential for developing countries to merit research and development for future use. Microbes can be marshaled to aid in solving many important global problems including food shortages, resource recovery and reuse, energy shortages, and pollution. Microbiology is particularly suited to make important contributions to human needs in developing countries, yet it has received comparatively little attention. The range of possible applications covers uses by individuals and industries in rural settings, villages and cities. The ten subject areas covered include raw materials for microbial processes, food and animal feed, soil microbes in plant health and nutrition, nitrogen fixation, microbial insect control agents, fuel and energy, waste treatment and utilization, cellulose conversion, antibiotics and vaccines, and pure cultures for microbial processes.

SYNCRISIS: The Dynamics of Health. An Analytic Series on the Interactions of Health and Socioeconomic Development. XIV: Zaire

Karen E. Lashman, Jun 75, 189p Rept no. DHEW/PUB/OS-75-50019

Keywords: *Health, *Socioeconomic status, *Zaire, Tropical diseases, Africa, Public health, Models, Socioeconomic factors, Developing country application, Health services, Health planning, Health resources.

Zaire is rich in resources, poor in productivity, and with a hot, tropical climate provides a vast incubator for numerous debilitating diseases. High morbidity and mortality in Zaire, notably in the under-five years of age population, largely could be eliminated or substantially reduced through preventive health measures, extension of potable water and sewerage systems, coupled with improved availability of food and a general upgrading of the basic quality of living conditions. Malnutrition, chiefly a protein deficiency, is widespread and actually may be increasing. The problem and possible approaches to resolving malnutrition is urgent. Several different approaches may be needed to remedy health and health-related problems, given the diverse problem-resource mixes of the various geographic areas. Because of the synergistic relationship among health, nutrition, environmental sanitation, and population growth, development of an integrated public health delivery system promises the most cost-effective method to extend coverage rapidly, particularly for the largely unattended rural population. To support such programs, substantial changes will have to be made in the health system infrastructure, including better training, greater fiscal allocations, and more equitable distribution of services.

SYNCRISIS: The Dynamics of Health. An Analytic Series on the Interactions of Health and Socioeconomic Development. XVI: Arab Republic of Egypt
Arthur H. Furnia, Sep 75, 86p Rept no. DHEW/PUB/OS-76-50026

Keywords: *Health, *Socioeconomic status, *Egypt, Tropical diseases, Public health, Models, Socioeconomic factors, Africa, Developing country application, Health services, Health planning, Health resources.

This rather thorough study of Egypt's health and socioeconomic development examines the following topics: (1) history, culture, and geopolitics; (2) population characteristics and human resources; (3) health issues, policies, and problems; (4) Egypt's health system and health plans; (5) environmental services; (6) health manpower resources; (7) nutrition; (8) population programs; and (9) foreign assistance. There are a concluding summary and suggestions for improved health care. Among them research, planning, and evaluative strategies are seen as required urgently. For the improved training of health personnel, Egyptian physicians lack specialized training but it is felt that enough health technicians are being trained. Adequate supplies of potable water and adequate sanitation also are needed. Measures for preventing and eradicating disease are essential, as are family planning and nutrition programs. Finally, it was found that the Egyptian Ministry of Health is deficient in data collection and analysis, health planning and efficient health care delivery.

SYNCRISIS: The Dynamics of Health. An Analytic Series on the Interactions of Health and Socioeconomic Development. II: Honduras

P. O. Woolley, C. A. Perry, W. S. Hays, and D. L. Larson, May 72, 82p Rept no. DHEW/PUB/OS-72-32

Keywords: *Health, *Socioeconomic status, *Honduras, Public health, Models, Socioeconomic factors, Latin America, Developing country application, Health services, Health planning, Health resources.

This study has found that a comprehensive integration of the resources that Honduras has at hand surely would help the country break out of its circular dilemma of disease-poverty-disease. That the major diseases from which the population suffers - malaria, intestinal parasitism, malnutrition, and respiratory diseases - are preventable and fall under the jurisdiction of already established government programs points to the fact that such programs deserve a higher priority and better administration. The health sector appears to be inadequate because of the inadequacies of other public sectors. For example, the Honduran population suffers from malnutrition because most of the high-protein food raised in Honduras are exported. Enteric infections run rampant because water and sewerage systems are virtually non-existent, and water supplies are contaminated by human activity. Health care education counts for little as few Hondurans finish secondary school. With only 65% of the available hospital beds in use, yet with over one-third of the population never receiving any health care whatsoever, efforts at increased communication and availability should be made. In addition, direct concentration on agricultural development, adequate water systems, education, and improved disease eradication procedures are in order. Much of this depends upon administrative reform. These steps are designed to make better use of existing health facilities and to change the relationship between the health sector and other sectors from a negative one to a positive one, thereby reversing the current trend of a population outdistancing its means of support.

Farm Equipment Development Project, Daudawa, N.C.S., Nigeria
c1974, 119p

Keywords: *Agricultural machinery, Agronomy, Weed control, Herbicides, Farm crops, Harvesting, Animals, Equipment, Manufacturing, *Nigeria, Developing country applications.

Information already available was co-ordinated to provide an outline of the pattern of agriculture in the project area. Weeding was identified as a labor bottleneck limiting crop production on farms employing animal draught for land preparation. Improvement in methods of weed control was made the primary objective of the project. Implements were developed for applying liquid and granular herbicides, for mechanical weeding, for harvesting groundnuts and for processing kenaf. Single ox harness for light draught work was introduced into the area. The more promising machines were demonstrated and tried out by local farmers. Four mechanical weeders, a groundnut lifter and single ox harness were found to be suitable for use in the northern states of Nigeria at the present time. All items were designed for local construction from easily available materials, using simple equipment. Prototypes were built at the project workshop, but additional machines for farmer testing were commissioned from local entrepreneurs as a step towards initiating local manufacturing. Manufacturing instructions for the successful machines were drawn up in a form suitable for publication in different languages and for interpretation by non-engineers. SYNCRISIS: The Dynamics of Health. An Analytic Series on the Interactions of Health and Socioeconomic Development. I: Panama
P. O. Woolley, Jr, C. A. Perry, and R. N. Eccles. May 72. 108p Rept no. DHEW/PUB/OS-72-31

Keywords: *Health, *Socioeconomic status, *Panama, Tropical diseases, Public health, Models, Socioeconomic factors, Latin America, Developing country application, Health services, Health planning, Health resources.

The country profile of the Republic of Panama provides a study of its health conditions and their impact upon socio-economic development, and a model for the definition and evaluation of its health problems. In general, the approach has been to review and analyze readily available data in order to identify the most prevalent and severe as indications of disease occurrence and spread. Part One of this report is an analysis of the physical-geographic areas - the living conditions contributing to poor health; the problems of over-burdening health care resources by a growing population; the diseases relating to socio-economic development; the economic and social costs of these diseases; the malnutrition complicating other problems and as a problem within itself. Part Two identifies the resources of the health sector, viewed from the perspective of both recipients of care and the providers of care - domestic and foreign agencies and formal relation to present health conditions; and finally a summary of the demands of the population upon the health sector, which describes the factors affecting these demands and assesses the current use of the health resources in light of these demands.

Arid Land Plant Resources: Proceedings of the International Arid Lands Conference on Plant Resources Held at Lubbock, Texas on October 8-15, 1978

J. R. Goodin, and David K. Northington. Jul 79.
735p *NSF/RA-790553
Grant NSF-AER76-24472, NSF-AER76-82387
Sponsored in part by Grant NSF-ISP77-04295.

Keywords: Plant ecology, *Plants(Botany), *Arid land, Semiarid land, Meetings, *Deserts, Forage crops, Medicinal plants, Tolerances(Physiology), Droughts, Soil properties, Harvesting, Salinity, Plant physiology, Food supply, Ornamental plants, Economic analysis, Soil water, Plant growth, *Jojoba, *Guayule, Juncus.

This report covers developments of new and unused arid land plant resources for food, forage, medicinal, and industrial uses. This subject is especially pertinent in view of the alarming rate at which an ever-increasing global population consumes existing developed resources. The origin and evolution of arid and semi-arid lands are described with emphasis on desert soils and vegetation. Examples of papers on plant resources for the various applications include studies of the jojoba, guayule, and juncus plants, woody plants and fuels from biomass, and salt tolerant crops (the latter harvested for direct human consumption). The workshops comprise research topics together with plant ecology, management, and improvement.

Seminario Nacional Sobre Administracion de la Politica Agricola (National Seminar on Agricultural Policy)
Benito Nunez, J. L. Monterroso, and L. de las Casas.
Jun 78, 147p
Text in Spanish.

Keywords: *Agriculture, Meetings, Policies, Objectives, Research, Equipment, El Salvador, Guatemala, Nicaragua, Honduras, Developing countries, Developing country application.

Included in the report are lectures from Iowa State University, Honduras, El Salvador, Nicaragua, and Guatemala. The objectives of the seminar were to discuss better methods of research, to analyze the political frame on agricultural matters, study strategies, and develop devices. Conclusions and recommendations are included.

Planificacao de Aprovechamientos Hidroelectricos Y Sistemas Electricos Interconectados (Planning of Hydroelectric Development and Power Grids)
L. Ribeiro, J. Aguilera, G. Moamar, and W. Camargo.
14 Jun 79, 174p
Text in Spanish.

Keywords: *Hydroelectric power, Meetings, Planning, Systems engineering, Optimization, Electric power transmission, Foreign technology, Developing country application.

This is the final report of a seminar held in Peru to review approaches to planning hydroelectric projects. Three areas are covered: (1) the three steps of inventory, pre-feasibility and feasibility studies are treated as a coherent system, with consideration of topography, geology, engineering studies and cost-benefit and evaluation methodologies; (2) optimization of hydroelectric development using most successful methodologies based on experience in other Latin American countries; and (3) operational integration of hydrothermal systems, covering all aspects of this type of system: planning, production, and programming.

Matériel de Traitement des Semences (Seed Processing)

John E. Osguthorpe. 1962, 60p
Text in French.

Keywords: *Seeds, Grains(Food), Farm processing, *Agricultural machinery, Separation, Storage, Transportation, Farms, Developing country application.

Seed processing is an important part of modern as well as traditional agriculture. Seeds may be separated by size, length, weight, surface texture, shape, and even by color (with an electric eye). Various screens, machines, and devices, their principle of operation, setting of controls, and use are described to give the farmer the widest choice possible to find the methods most appropriate to his needs. The separating and processing implements covered are winnowers, sieves and screens, sieves with brushes, oscillatory sieves, spiral separators, trimming machines, inclined conveyor belts, velvet rollers, pneumatic separators, suction devices, toothed drums, disc separators, and gravity separators using blowers. Husking, scarification, storage, and transportation of the grain are also covered. Various types of grain conveyors and how to determine the appropriate size of different shaped holes in screens is outlined.

Cuir et Peaux: Depouillement, Salage, Empaquetage (Hides and Skins from Locker Plants and Farms)

J. Naghski, and I. D. Clarke. 1962, 50p
Text in French.

Keywords: Hides, *Leather, Cattle, Tanning materials, Processing, Storage, Packaging, Quality, Pest control, Developing country application.

The sale of leather can be a lucrative addition to the income of a farmer who raises livestock for food, if the hides are properly prepared. A description of the proper preparation of the animals to be slaughtered and the choice and use of necessary tools introduces the art of skinning. It is followed by detailed and explicit step-by-step instruction on how to skin cattle, and the special considerations needed to adapt that method for the skinning of other farm animals. The type and preparation of salt for tanning the hides and the siting and climate for the tanning facility are covered along with the specific considerations necessary for the various animals. The removal of excess salt from the hides, and their folding and packaging is then covered as is labeling, shipment, and storage of hides, safe from pests. A section on how to judge flaws in the hides from disease, parasites, injury, and branding while the animal is still living, to damage done during slaughter, skinning, and tanning is included, which explains how much such damage reduces the value of the hides. The classification of hides by quality and weight for industrial use is also covered.

Comment Déterminer les Besoins du Sol en Elements Nutritifs (How to Determine Nutrient Needs)
Frank G. Viets, Jr. and John J. Hanway. 1952, 32p
Text in French.

Keywords: *Fertilizers, *Soils, Agronomy, Soil properties, pH, Nutrients, Plant growth, Soil fertility, Fertilizing, Developing country application.

The booklet tells how to determine if a soil needs enrichment by judging the health and productivity of the plants as well as by chemical tests. Testing the pH level of the soil is covered as is analysis of plant tissue for specific nutrients. An explanation of how to translate test results into precise measures of what kind of fertilizer is needed is also covered. Several graphs are included to illustrate the explanations given.

Les Petites Scieries (A Small Sawmill Enterprise)
Fred C. Simmons. Apr 59, 119p
Text in French.

Keywords: *Woodworking, *Sawmills, Machinery, Lumbering, Machine tools, Equipment, Saws, Expenses, Safety, Maintenance, Operations, Developing country application.

The publication describes machinery and processes for conversion of logs into lumber as an industrial enterprise from both the mechanical and business aspects. It does not include the processes of extracting logs from forests or the seasoning of products of sawmills. It is useful to those considering the establishment of a sawmill business and may be helpful to those already conducting such a business. The selection, erection, and operation of small circular sawmills of standard and traditional types are described. Machine tools, saws, costs, labor, safety, equipment, storage, insects, maintenance, efficiency, and industrial procurement are discussed.

L'Essai au Tetrazolium pour Déterminer la Vitalité des Semences (The Tetrazolium Test for Seed Viability)
1962, 103p
Text in French.

Keywords: *Seeds, Viability, Tests, Germination, Grain crops, Grasses, Vegetable crops, Color, Developing country application, Tetrazolium compounds.

Seeds can be treated with tetrazolium to determine if they are viable. A brief review of physical, chemical, color, and enzymatic tests for viability are reviewed, and the chemical mechanism of the tetrazolium reaction described. The structure and function of seeds and sprouts of graminaceae and dicotyledons is explained, and the basic methods of testing is covered, listing material and equipment needed. Preparation of tetrazolium solutions; choosing seed samples; treatment, preparation, and coloration of the seeds is outlined and the principles of analysis defined. Interpretation of seed coloration by tetrazolium testing is covered in detail for maize, wheat, sorghum, rice, fescue, paspalum, couch-grass, cotton, soya, vetch, clover, water melon, and radish with up to 16 illustrations for each variety of seed showing different patterns of coloration and their meaning.

La Direction des Coopératives Agricoles (Managing Farmer Cooperatives)
Kelsey B. Gardner. 1962, 35p
Text in French.

Keywords: Management, Policies, Operations, Developing country application, Cooperatives, *Agricultural cooperatives.

For an agricultural cooperative to function efficiently, it is important that its members assume their responsibilities. The functions of managers, members, and administrators are elaborated. Separate sections are devoted to the tools of the management; the rights and responsibilities of the membership; choosing administrators--their qualifications, responsibilities, and number; cooperative politics; the consultative committee of the administration; the choice, qualifications, functions, and responsibilities of a director; responsibility of the employees to the consultative committee and the cooperative's members; and common questions on farmers cooperatives.

Comment Evaluer les Resultats de la Vulgarisation Agricole (Six Keys to Evaluating Extension Work)
Laurel K. Sabrosky. 1958, 20p
Text in French.

Keywords: Services, Evaluation, Effectiveness, Objectives, Developing country applications, *Agricultural extension services.

Evaluation of the results obtained from an agricultural extension program is vital to the project's overall success. Six keys for effective evaluation are explained in detail. In brief they are: Define your objective in terms of change of behavior of those whom you wish to educate; only the targets of your teaching can bear witness to your success or failure; those individuals whom you choose as a proof of your success must be representative of the whole target group; the methods used to furnish your evaluative information must be appropriate to the type of information furnished; formulate your evaluative questions so as to obtain basic and impartial answers; and decide how you will analyze and use your results before you decide their value and meaning.

Vulgarisation Agricole: Les Auxiliaires Visuels (Visuals in Agricultural Extension Programs)

Robert J. Ames, George H. Axinn, Landis S. Bennett, and Ellis Clough. 1962, 155p
Text in French.

Keywords: Handbooks, Specialized training, Instructional materials, Training devices, Developing country applications, *Agricultural extension services, Visual aids.

The handbook is for those who are engaged in the world-wide movement of improving agricultural efficiency through extension education. The value and use of visuals in teaching new ideas is emphasized. Many useful visual aids for communicating new agricultural methods are described. They include samples, specimens, models, photographs, blackboards, flip charts, flash cards, charts and graphs, and projected aids such as slides and movies. The most effective use of these techniques is explained, and later chapters study more complex presentations such as theatre groups, use of media, reproduction of materials, and how to teach others to use visual aids.

Vulgarisation Agricole: L'Elaboration des Rapports (Extension Reports)
1962, 56p
Text in French.

Keywords: Project planning, Efficiency, Documentation, Reporting, Services, Developing country application, *Agricultural extension services.

The preparation of reports is an essential part of a successful agricultural extension service. The value and use of reports for logical project planning and control is explained, and methods to gain the most use from reports are described. The booklet outlines the steps to put an efficient system for preparing reports into operation and how to determine the most effective frequency for a periodic report. Short and long term reports, their contents, and documentation necessary for their preparation are discussed, and basic outlines for various reports are provided.

Le Contremaître au Service de la Petite Industrie (The Foreman in Small Industry)
Philip E. Henderson. 1962, 44p
Text in French.

Keywords: *Small businesses, *Management techniques, Industries, Supervisors, Personnel management, Personnel development, Industrial relations, Job analysis, Developing country application.

APPROPRIATE TECHNOLOGY ABSTRACTS

All aspects of the foreman's job are elucidated in this booklet. First, the tasks, responsibilities, and authority of the foreman are explained with particular emphasis on the special problems of a foreman in a small factory. The foreman's responsibilities discussed in detail are making up production delays, maintaining qualitative norms, holding down production costs, and increasing efficiency. The foreman's role in training new employees, employees promoted to new posts, and substitute workers is studied, and his relations and rapport with the workers, other foremen, his supervisors, unions, and the public are outlined. A final section discusses the qualities of a good foreman, how to find suitable candidates for foremen, their training, how to measure results, and how management can develop its foremen's abilities.

Petite Entreprise: Les Relations Humaines (Human Relations in Small Industry)
John Perry. 1954, 88p
Text in French.

Keywords: *Management techniques, Industrial plants, Personnel management, Public relations, Attitudes, Morale, Labor relations, Counseling, Industrial relations, Developing country application, *Small businesses.

Proper attention to a plant's human relations is vital to its smooth operation. The effects of favorable and unfavorable attitudes are studied, and the role of the business director in creating a good working atmosphere is discussed. Other subjects investigated are the spirit and comportment of the work groups, how to analyze and promote the satisfaction of the workers, the cost of dissatisfaction, foundation of a good organization, worker participation, the role of a work counsellor, and choice of a director of human relations.

Petite Entreprise: La Comptabilite Industrielle (Cost Accounting for Small Manufacturers)
K. Lee Brummet. 1962, 127p
Text in French.

Keywords: *Management techniques, Accounting, Manufacturers, Records management, Prices, Financial management, Purchasing, Budgeting, Developing country application, *Small businesses.

A small manufacturing business has different accounting needs from a larger one, and the accounting system must be adopted to the particular needs of each business. This book explains in detail various accounting measures to enable a small industry's manager to record, analyze, and interpret the effect of his commercial operations on the finances of his enterprises, and to determine the price at which his goods should sell. Different chapters are devoted to job costing, accounting by production stages, accounting for raw materials and bought components, accounting for labor, accounting for overhead, use of predetermined or standard costs, and writing a budget and forecasting profits.

Puericulture: La Periode Prenatale (Prenatal Care)
Muriel W. Brown. 1962, 129p
Text in French.

Keywords: *Children, *Health care delivery, Medical services, Medical examination, Nutrition, Hygiene, Clothing, Birth, Health, Infants, Developing country application, Prenatal care.

The book is a comprehensive guide to proper prenatal care for a baby. A section on medical care covers physical examinations, sexual activity, natural childbirth, and general concerns for the health of the child during pregnancy. The development of the child in the womb is explained and proper diet, health, hygiene, and clothing for the mother are outlined. Special precautions during work and travel are also covered. Changes in the mother's emotions and feelings are explained, and the necessary family adjustments for the new baby discussed. Preparation for confinement and labor, including home birth are outlined. The equipment needed for the new baby that should be on hand

is also listed and explained. Diseases and discomforts associated with pregnancy and their control are studied as are complications at birth. Labor is explained and described in detail with its complications and remedies. Post-natal care of mother and child including bathing, diet, health, care of breasts, exercise, feeding; and special care for premature babies are also covered in detail.

Selection of Production Processes for Utilization of Molasses
Industrial Study Series
F. H. Shah. c1973, 48p Rept no. MONO-1
Errata sheet inserted.

Keywords: *Food products, *Molasses, Feeding stuffs, Processing, Utilization, Agricultural products, Exports, Pakistan, Developing countries, Developing country application.

Described is the prevailing position of the production and utilization of molasses in Pakistan and the different processes available for the utilization of molasses as animal feedstuffs, food products and chemical products. Each of these processes is described briefly with a flow sheet and the uses of the products enumerated. The selection of production processes is weighed against the present return of foreign exchange through the export of molasses. The products showed either substitute imports or encourage exports having a higher value than molasses and accelerated agricultural output and food production. The optimal distribution among various product groups is discussed with special emphasis upon employing the idle plant capacity of existing distilleries attached to sugar mills and upon expansion of animal feedstuffs industry.

Building Operations and the Choice of Appropriate Technologies. Interregional Seminar on Building Operations in Low-Cost Housing Construction, Held at Rotterdam (Netherlands), on 5-16 April 1976

Current paper no. 16
J. W. S. de Graff-Johnson. Apr 79, 55p
Prepared in cooperation with Agency for International Development, Washington, DC.

Keywords: *Building materials, *Housing, Construction, Construction materials, Equipment, Manpower, *West Africa, Developing countries, Prefabrication, Developing country application, Low income housing.

Discussed in the report is the selection of appropriate materials, equipment and labor in the construction of low-cost housing in developing countries, especially West Africa. Topics examined include: the development and use of low-cost building materials, tools and simple equipment in building operations, the use of traditional technologies, alternative building methods, industrialization and prefabrication of materials. This paper attempts to identify certain measures which will help others to select building technologies appropriate to their social and economic conditions.

Cooperatives Agricoles: Principes de Gestion (Principles of Managing an Agricultural Cooperative)
General rept. no. 320
Milton L. Manuel. Jun 64, 79p
Text in French.

Keywords: *Agricultural cooperatives, Management, Organization theory, Organizations, Rural areas, Farm management, Cooperation, Agricultural economics, Commerce, Records management, Financial management, Accounting, Budgeting, Auditing, Public relations, Problem solving, Industrial relations, Job analysis, Cooperatives, Organizational development, Developing country application.

The principles of business administration are equally well suited to local agricultural cooperatives. The book shows how to effectively manage a cooperative in a step by step analysis. First the necessity and means of management are explained with special attention paid to the rules of the cooperative, the principle of cooperation, and the principles of management including problem-solving. The concept of 'management' itself is explained and its role and functions in the cooperative outlined. The division of labor in management is delineated into the roles of the members in choosing and regulating the administration, the administrative council's functions, and the tasks of the appointed personnel. The separation of responsibilities is stressed. Final chapters are devoted to management instruments and techniques such as accounting, external audit of accounts, and budget preparation; and domains of management including financial management, human relations and evaluation. A detailed questionnaire for the evaluation of a cooperative's management is presented as an annex.

Further Research on Road Accident Rates in Developing Countries (Second Report)
G. D. Jacobs, and Wendy A. Hards. c1978, 17p Rept no. TRRL-SUPPLEMENTARY-434

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: Motor vehicle accidents, Developing countries, Statistical analysis, Casualties, Highway transportation, Research, *Roads, *Transportation management, Accident severity, Accident research.

In developing countries in 1974, the authors estimate that there were over 100,000 people killed and 1,500,000 injured in road accidents. However the situation in developing countries, unlike that in Western Europe and North America, appears to be worsening. Until 1972, very little research had been carried out on the problem of road accidents in developing countries but in 1972, following requests for aid and guidance in this field, a small team was formed within the TRRL Overseas Unit. Over the last five years much of the emphasis of the work of this team has been directed towards the collection and analysis of road accident data so that the nature of the problem could be identified. Much of this work has already been published, and in 1975 a paper on this subject was presented at the Summer Annual Meeting of the PTRC. Since publication of the above reports and papers, further research has been carried out on road accident rates and trends in developing countries which illustrates the growing seriousness of the problem. This work is described in the report.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Pulp and Paper Technology and Requirements and Potentialities of Developing Countries
Background paper
Gunnar Gavelin. 27 Sep 78, 61p
Report of Working Group No. 10, Appropriate Technology for the Manufacture of Pulp and Paper Products.

Keywords: *Pulp, *Paper, Paper products, Pulp, Manufacturing, Technology, Requirements, Pulp, Raw materials, Paper industry, Developing country application.

A given paper product can be manufactured from many different pulp grades, used alone or in blends, with or without addition of fillers and chemicals. In addition, many pulp grades can be made from widely different species of trees or plants. The wide choice of technology thus offered is materially narrowed down by the limitations imposed by local conditions and especially by those prevailing in developing countries. When a choice must be made it helps to know a little about the processes available and be able to assess the applicability of each such process to the end product considered, the raw material available, the size of production desirable and the geographic and economic conditions at the site under consideration. It is the purpose of this document to provide such information.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Establishment of Small-Scale Rural Workshops (For Light Engineering Goods) in East Africa
Background paper
A. Hojbak. 6 Oct 78, 50p
Report of Working Group No. 6, Appropriate Technology for Light Engineering Industries and Rural Workshops.

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: *Industrial development, *Small businesses, Rural areas, *Africa, Technology, Metal working, Fisheries, Technology transfer, *Tanzania, Developing country application, Villages.

The paper deals with the conditions in the 'informal sector' primarily exemplified by present conditions in the East African region. It concentrates on three case studies which are typically 'good' projects seen from an overall point of view. Those projects are: the UTUNDU program - a program specifically designed to promote the village blacksmiths of Tanzania who are representing a strategic productive force in the Tanzanian development program; the fishery program - a soft technology solution to an integrated small scale fishery set-up for tropical coastal societies; and the sisal industries agreement - a program whereby know-how, technology, management etc. from an industry in an industrialized country is transferred to a similar industry in a developing country through a special agreement.

The Potential of Energy Farming for Transport Fuels in New Zealand. Report No. 46
G. S. Harris, M. L. Leamy, T. Fraser, J. B. Dent, and W. A. N. Brown. Aug 79, 130p
Prepared in cooperation with Department of Scientific and Industrial Research, New Zealand. Soil Bureau, Forest Research Institute, Lincoln Coll., Canterbury Univ., Christchurch (New Zealand), and Waikato Univ., Hamilton (New Zealand).

Keywords: *Methane, *Bioconversion, Biomass, *New Zealand, Fuels, Farm crops, Forestry, Design, Substitutes, Methyl alcohol, *Ethanol, Economic analysis, Environmental surveys, Scenarios, Forecasting, Synthetic fuels, Biomass plantations, Developing country application, Manufactured gas.

This report shows how energy farming could provide New Zealand substantial quantities of transport fuels from an available and renewable indigenous energy source. The report studies the main technical and economic aspects of energy farming and propounds a set of guidelines along which it is believed energy farming should or could be developed. It draws attention to environmental and social factors associated with energy farming implementation and points the way to the research, development, and demonstration required before energy farming can be successfully implemented on a significant scale.

The Potential of Energy Farming for Transport Fuels in New Zealand. Report No. 46. Appendices G, S. Harris, M. L. Leamy, T. Fraser, J. B. Dent, and W. A. N. Brown. Aug 79, 134p
Prepared in cooperation with Department of Scientific and Industrial Research, New Zealand. Soil Bureau, Forest Research Institute, Lincoln Coll., Canterbury Univ., Christchurch (New Zealand), Dept. of Chemical Engineering, and Waikato Univ., Hamilton (New Zealand).

Keywords: *Methane, *Bioconversion, Biomass, *New Zealand, Fuels, Farm crops, Forestry, Design, Substitutes, Methyl alcohol, *Ethanol, Economic analysis, Environmental surveys, Scenarios, Forecasting, Toxicity, Foreign technology, Synthetic fuels, Biomass plantations, Developing country application, Manufactured gas.

This second volume contains appendices to the study in volume one which shows how energy farming could be used to enable New Zealand to have substantial quantities of transport fuels from an available and renewable indigenous energy source. The report sets out the main technical and economic aspects of energy farming and propounds a set of guidelines along which it is believed energy farming should or could be developed. It draws attention to environmental and social factors associated with implementation and points the way to the research, development, and demonstration required before energy farming can be successfully implemented on a significant scale. The appendices included are: The Suitability and Distribution of Land for the Production of Biomass; Forestry; Agricultural Crops; Maize Grain Production in the Waikato; Processing Routes for Transport Fuels; Advisory

Panel Research in the Waikato; Scenarios for Transport Fuels to 2000; Toxicity and other Potential Danger Considerations Associated with Distribution, and Opportunity Costs.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Universal Pulping
Background paper
E. S. Prior. 5 Oct 78, 24p
Report of Working Group No. 10, Appropriate Technology for the Manufacture of Pulp and Paper Products.

Keywords: *Pulp, *Paper, Pulping, Processes, Paperboard, Manufacturing, Mills, Paper products, Developing country application.

A pulping process is described which is intended to fit the needs of an independent producer of board in an area of limited wood supplies operated in conjunction with a waste paper mill. The process system is designed around a small, simple, low cost installation, very fast and flexible to be operated with average expertise and producing low pollution levels capable of using all practical sources of fibrous material to produce paper making fiber.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Dualism and Technological Harmony for Balanced Development
Background paper
G. K. Boon. 5 Oct 78, 72p
Report of Working Group No. 3, Appropriate Technology for the Production of Textiles.

Keywords: Technology, Investigations, Industries, Development, Developing countries, *Textile industry, Developing country application, *Industrial development, Technology utilization.

The paper explores the possibility of a two-tier industrial development pattern in the Third World and the role technology should play in it. Such a development is aimed at reducing the dualism of these societies and therewith to improve the fate of the vast majority of the population living outside the modern sector. Somewhat more in particular the possibilities of a semi-urban industrialization in textiles is explored.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology for Production and Processing of Oils and Fats
Background paper
K. T. Acharya. 2 Oct 78, 14p

Report of Working Group No. 9, Appropriate Technology for the Production of Oils and Fats.

Keywords: Food processing, *Vegetable oils, Processing, Technology, Facilities, Refineries, Marketing, Production, Cost engineering, Developing country application, Villages, Cooperatives.

In practice, the country's needs of vegetable oil can be met through decentralized rural ghani units, backed up with solvent-extraction units for recovery of the oil left in the cake. Expeller technology represents an intermediate stage with less employment-generating potential. Grouping village crushing units into cooperatives will enable the latter to keep oil prices under control. Such cooperatives could also build up facilities for refining oils and preparing oil-based products, and for marketing these commodities. There appears to be scope for marketing unit-packed unrefined oils, and for exploring the use of vending machines for dispensing liquid oils and thus saving on packaging costs.

Anatomy of a Peasant Economy: A Rice Village in the Philippines
Yujiro Hayami, Massao Kikuchi, P. F. Moya, L. M. Bambo, and E. B. Marciano. 1978, 161p AID-PN-AAG-562

Keywords: *Rice, Technology innovation, Economic impact, *Philippines, Rural areas, Social change, Income, Employment, Economic analysis, Assets, Land titles, Investments, *Agricultural economics, Labor estimates, Rural development, Developing country application.

The influences of improved rice-growing technology in effecting economic and social changes in rural Philippines villages is assessed. The report analyzes the impact of new rice technology on various facets of life such as employment and income distribution. The flow of income from rice farming and other enterprises among classes of village households is monitored. Many photographic illustrations and tables are included as well as a liberal list of reference works.

Sulfur Nutrition of Wetland Rice
Research paper series
G. J. Blair, C. P. Mamaril, and E. Momuat. Nov 78, 32p IRPS-21, AID-PN-AAG-565

Keywords: *Rice, Rice plants, Plant nutrition, *Fertilizers, Sulfur organic compounds, Adsorption, Soil water, Sulfates, Requirements, Plant growth, Soil analysis, Grain crops, Yield, Developing country application.

This report concludes that increased yields of rice being enjoyed through the use of fertilizers containing little or no sulfur, has led to sulfur deficiency in rice. It cites the lack of study in the cycling of sulfur through the rice plant. Discussed in the report is a general outline of sulfur cycle from the viewpoint of soil transformations and plant requirements.

Tropical Climate and Its Influence on Rice
Research paper series
Shouchi Yoshida. Jul 78, 28p IRPS-20, AID-PN-AAG-711
Grant AID/ta-G-1074-GTS

Keywords: *Rice, Climate, Rice plants, Tropical regions, Solar radiation, Plant growth, Atmospheric temperature, Rainfall, Yield, Developing country application.

Major climatic factors are discussed in relation to their influence on crop period, productivity, and stability. Most places in monsoonal Asia receive about 300 cal/sq cm per day during the ripening period of the wet season rice crop. With the right variety and proper management, this level of solar radiation should allow rice crops to produce 4 to 5 t/ha. Advantages and disadvantages of altering plant height and growth duration are described. For direct-seeded rice, the shortest

APPROPRIATE TECHNOLOGY ABSTRACTS

growth duration, without much sacrifice in yield potential, is about 90 days; for transplanted rice, it is about 100 days.

Genetic Interrelationships of Improved Rice Varieties in Asia
Research paper series
T. R. Hargrove, W. R. Coffman, and V. L. Cabanilla. Jan 79, 39p IRPS-23, AID-PN-AAG-564

Keywords: *Rice, Rice plants, Plant genetics, Developing countries, Height, Plant disease, Improvement, *Asia, Developing country application.

The study of genetic interrelationships of rice varieties in Asia as a part of better understanding crop-destructive insect and disease epidemics of the past is presented. The report shows the genetic diversity of improved rice varieties released in Asia, by analyzing selected crosses made in seven Asian countries. Over a ten-year period, the percentage of semidwarf parents used in the total gene pool nearly doubled because breeders were increasing crosses of semidwarf parents with other semidwarf varieties. Taichung Native 1 and IR8 were the most extensively used gene sources in 1965-67 but found to drop off to nearly zero in the next ten years. The study shows the use of other International Rice Research Institute semidwarfs increased significantly but the strongest trend was the use of locally developed semidwarf, up from two percent to 49 percent in 1974-75. It is concluded that cytoplasmic similarity of modern varieties, while posing no immediate problem, is sufficiently relevant for prompt broadening of maternal genetic base of modern rices.

The Economics of Water Reform: Institutional Design for Improved Water Management in the LDC's
Working paper
Daniel W. Bromley, Donald C. Taylor, and Donald E. Parker. Oct 77, 53p WP-8, AID-PN-AAG-544

Keywords: *Irrigation, Water supply, Developing countries, Decision making, Allocations, Management, Availability, Developing country application, *Water management, Irrigation water.

The productivity of irrigated agriculture and the importance of equity in irrigated systems is presented. The report suggests irrigation potentials may be expanded through the construction of new projects; rehabilitation and modification of the infrastructure in existing projects; modification of the operation and maintenance of irrigation infrastructure; and implementation and enforcement of rules and regulations governing the use of irrigation facilities. A range of possibilities for enlarging and making more equitable the use of existing irrigation water supplies is given. The report employs as illustrations projects in which decisions are made to redesign the infrastructure so as to serve most directly land owned by more powerful irrigators.

Methods of Screening Rices for Varietal Resistance to 'Cercospora' Leaf Spot
Research paper series
B. A. Estrada, and S. H. Ou. 1978, 12p IRPS-19, AID-PN-AAG-710

Keywords: *Rice, Plant diseases, Rice plants, Fungus diseases, Spores, Inoculation, Tolerances(Physiology), Selection, Developing country application.

Autoclaved rice stem nodes with pineapple juice provide a favorable medium for the isolation of *Cercospora oryzae*, the fungus causing *Cercospora* leaf spot on narrow brown leaf spot, and for the mass production of spores. Spraying of spores in late afternoon resulted in good infection on plants in the field. As shown by artificial inoculation, rice at different stages of growth is susceptible to *C. oryzae*. An incubation period of 20 days is necessary before the first few lesions appear and 30 days before the maximum number of lesions is reached. A method of artificial inoculation for screen-

ing varieties for resistance and a disease scale of 0 to 9 units, based upon the number of lesions, are suggested.

An Investigation into the Microbiological Quality of Fish in Guatemala and Costa Rica
Working paper
Luis F. Arias, Gonzalo Bonilla, C. O. Chichester, S. M. Constantinides, and Sheryl de Cabrera. Jan 78, 39p ICMRD/WP-3, AID-PN-AAG-781

Keywords: *Microbiology, *Fishes, *Guatemala, *Costa Rica, Bacteria, Surveys, Microorganisms, Quality, Contamination, Coliform bacteria, Staphylococcus, Seafood, Potable water, Ice, Regulations, Materials handling, Distribution(Property), Developing country application, Drinking water.

Two preliminary surveys were made on the quality of fish caught by artisan fishers in Costa Rica and Guatemala. The presence of microbiological contamination was tested from point of catch to sale in Costa Rica, and in various retail markets in Guatemala. Observations were made on sanitary conditions in the marketplaces of both countries. Findings from the Costa Rican study indicate abnormally high counts of bacteria, coliform, and staphylococcus. Since both coliforms and staphylococci are not part of the normal flora of raw seafood, their presence is considered an indication of contamination from human sources. Conclusions made on the results of the two studies: (1) more potable water is needed for washing boats, containers, utensils, and all surfaces that come in contact with fish or ice; (2) ice should be of good quality and should not be reused; (3) pressure on caught fish should be reduced by use of flake ice; and (4) regulations regarding the handling and distribution of fish and other perishable commodities should be more strongly enforced. Separate references for each study are listed on pages 11 and 20.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Technologies from Developing Countries (A Preliminary Compilation)
Background paper.
6 Oct 78, 260p
Report of Working Group Nos. 1-12.

Keywords: *Technology transfer, *Textile industry, *Paper, *Pulp, Technology, Developing countries, Chemical industry, Metal working, *Drugs, Textiles, Construction materials, *Food processing, *Agricultural machinery, Paper products, Pulp mills, Developing country application.

The document compiles information on technologies which have been developed in certain sectors in developing countries and which can be acquired from sources in these countries. The sectors selected for this compilation are: chemicals and metalworking; drugs and pharmaceuticals; textiles; cement and building materials; food storage and processing; agricultural machinery and implements; light engineering and rural workshops; oils and fats; paper products and small pulp mills; energy for rural requirements; and low-cost transport for rural areas. Each technology is presented on a separate page providing information on the following items: title of the product/process; short description and advantages of the product/process; technical and economic details (with diagram/photos, if available); status of commercialization; and contact address for further information. Only those products or processes have been included that are available for introduction on a commercial scale.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Planning of Rural Energy Systems: Issues and Perspective
Background paper
Jyoti K. Parikh. 6 Oct 78, 71p
Report of Working Group No. 11, Appropriate Technology for Rural Energy.

Keywords: Rural areas, Energy, Technology transfer, Planning, Production, Fossil fuels, Wood, Solar heating, Electric power generation, *Energy source development, Developing country application, Energy consumption, Energy demand, Energy supplies.

The present paper identifies the difficulties in the present pattern of rural energy consumption which is largely unplanned and sufficient only for the subsistence level activities. It reflects on future energy demand till 2000 A.D. under the high rural development scenario showing that increase in non-agricultural activities should be foreseen and that intensification of agriculture will also require increased energy inputs. Techno-economic considerations for rural energy supply options and in particular those based on concepts of decentralized systems are discussed, although they are not advocated if found to be more expensive than centralized systems. The need for looking into problems of technology transfer in the rural environment, establishing organizational framework for construction and maintenance and standardization procedures are emphasized.

The Technical and Economic Characteristics of Rice Postproduction Systems in the Bicol River Basin
Apr 78, 232p AID-PN-AAG-561
Prepared in cooperation with University of the Philippines at Los Banos. Process Engineering Dept.

Keywords: *Rice, Rice plants, Production, Philippines, Harvesting, Losses, Food processing, Profits, Agricultural economics, Drying, Investments, Operating costs, Cost estimates, Manpower, Expenses, Bicol River Basin, Developing country application.

Problems in grain losses during rice production processes, as practiced in the Bicol River Basin Region of the Philippines, is examined. The focus is largely on technical aspects of post-production operations including the interdependencies that exist between components of each system. An attempt is made to examine the economic and institutional factors that condition the selection of particular technology patterns. It is assumed that grain losses are unnecessarily high and prescribes the introduction of improved management techniques and technology.

Development Activities and Rural-Urban Migration: Is It Possible to Keep Them Down on the Farm
Richard E. Rhoda. Mar 79, 88p AID-PN-AGG-673
Contract AID/otr-147-79-25

Keywords: *Socioeconomic status, Population migrations, Rural areas, Urban areas, Sociology, Agriculture, Farms, Social services, *Employment, Development, Developing countries, Developing country application, Agricultural extension services.

A review of rural-urban migration literature is provided in this report. Nine different development activities in rural areas, as well as international agency development projects and their impacts on such migration are presented. The report contains discussions of migration literature such as theoretical models and empirical studies; agricultural development activities including land reform, green revolution, agricultural mechanization, agricultural services; off-farm employment; development of rural social services; development projects of international agencies; and conclusions and implications for development activities, project assessment and analysis, and future research. Tables summarizing implications of empirical studies and specific development activities for rural-urban migration are included. A bibliography containing over 100 references is provided.

Latin American Symposium on Mineral Nutrition Research with Grazing Ruminants
Joe H. Conrad, and Lee R. McDowell. 1978, 204p AID-PN-AAG-611
Proceedings of Conference, Held at Belo Horizonte, Brazil, on March 22-26, 1976. Prepared in cooperation with Agency for International Development, Washington, DC.

Keywords: Latin America, Meetings, Mineral deficiencies, Toxicology, *Soils, Toxicity, Research, Ruminants, Productivity, Concentration(Composition), *Plants(Botany), Nutritional requirements, Developing country application.

Included in the report are 27 reports on basic knowledge, methodology, and recent findings relating to mineral deficiencies and toxicities in Latin America. The papers summarize current information about the mineral elements which influence productivity of grazing ruminants in tropical areas. Low productivity, as judged by the meat and milk yield per animal, accounts for the limited supplies of animal protein in LDCs. A wide variety of research topics discuss improving productivity in grazing ruminants. Among these topics are (1) soil mineral concentrations and properties, (2) individual mineral characteristics, (3) soil-plant-animal mineral relationships, (4) techniques of minerals research, (5) current status of locating regions of mineral deficiencies and toxicities, (6) the determination of nutrient requirements of ruminants in the tropics, (7) diagnosis of diseases caused by mineral deficiencies, and (8) methods of mineral supplement formulation and administration for grazing ruminants. Many of the reports display research findings in tables and figures. Included are photographs illustrating mineral deficiencies and toxicities in grazing ruminants.

The Nutritional Situation in Sierra Leone. Report No. 1, Project on Consumption Effects of Economic Policy
Kathryn M. Koiasa. Oct 78, 100p AID-PN-AAG-612
Contract AID/DSAN-C-0008

Keywords: *Food services, *Health, *Diseases, *Africa, Nutrition, Behavior, Food, Nutritional deficiency diseases, Statistical data, Children, Pregnancy, Females, Health status, Developing country application, *Sierra Leone, Women.

Information and data compiled after 1974 on the nutritional status and food behavior of citizens in Sierra Leone, Western Africa are presented. The concentration is mainly on children under five with some data on pregnant and lactating women, owing to the fact that these groups are most likely receiving formal medical assistance. The study relies on available data with some direct observations made by the research team. It is concluded that malnutrition in children under five represents a major nutritional problem, with about 30 per cent of children found to be underweight. The nutritional status of children under five appears to have changed little since 1964. It is believed that pregnant women in Sierra Leone are under nutritional peril, although it is not clear whether availability of food, taboos, or other reasons affect the food intake of these women. A lack of calories represents the primary nutritional problem among working adults. The report provides a wide selection of interviews, professional opinions, papers, and Sierra Leone National Nutrition Survey Questionnaire, as well as extensive lists of figures and tables.

An Economic Evaluation of Apprenticeship Training in Western Nigerian Small-Scale Industries
African rural economy paper
Adewale F. Mabawonku. 1979, 75p AREP-17, AID-PN-AAG-616
Contract AID/ta-C-2

Keywords: *Training, Apprenticeship, *Nigeria, Industrial training, Specialized training, Benefit cost analysis, *Employment, Cost estimates, Socioeconomic status, Demography, Return on investments, Entrepreneurship, Developing country application.

An analysis is given of the structure, conduct, and performance of the apprenticeship system in Nigeria, Africa. The focus is on the apprenticeship system as an institution for acquiring skills. An assessment of the economics of apprenticeship training by comparing returns from apprenticeship and trade school training is provided with recommendations for policies to train small entrepreneurs, who are considered desirable in Nigeria. Findings of the study show that the apprenticeship system provides other sectors of the economy with skilled workers in addition to training new entrepreneurs. It suggests that training under the apprenticeship system be incorporated into national manpower policies and that the upgrading of small proprietors who train apprentices will benefit all industry. Proprietors who provide training for apprentices often subsidize apprentices and suffer a loss of earnings and, in effect, are transferring their income to other sectors of the economy. Many tables are included providing statistical information.

Income Distribution Among Farmers in Northern Nigeria: Empirical Results and Policy Implications
Agrarian rural economy paper
Peter J. Matton. 1979, 130p AREP-18, AID-PN-AAG-617
Contract AID/ta-C-1328

Keywords: Income, *Nigeria, Farm management, *Agricultural economics, Earnings, Demography, Households, Land use, Climate, Soils, Farmers, Ownership, Developing country application.

Despite the Nigerian government objective of achieving a more equal distribution of gains from economic growth, the income gap between rich and poor in that African nation has widened substantially. The report studies income distribution among farmers in Northern Nigeria and concludes that achieving goals have been hindered by insufficient knowledge about designing appropriate policies, implementing them, and measuring their impact. The difficulty in designing policy instruments which effectively reach more than a small proportion of the rural poor is examined. The report describes the need for policies which make farming more profitable, pointing up the importance of improved food grain technologies since most poor farmers themselves are net grain purchasers. The need for further study to explain farm productivity differentials with income classes is cited. Factors which could provide valuable guidance in designing improved technologies appropriate to low-income producers is cited. An extensive bibliography and some illustrations are included.

Murray Milne. Sep 79, 550p* 46, W80-03640
Prepared in cooperation with California Univ., Los Angeles. School of Architecture and Urban Planning.

Keywords: *Waste water reuse, *Water supply, Water conservation, *Theory, Design, Water wells, Pumps, Construction, Residential buildings, Public health, Feasibility, Irrigation, Pipes, Storage tanks, Water storage, Manufacturers, Bibliographies, Reclaimed water, Domestic water.

Greywater, rainwater, groundwater, and surface water are sources of 'free' water already available to every homeowner on-site. This book explains the various ways to collect, store, treat, and distribute this water, and gives examples of how it has been successfully reused for toilet flushing, landscape irrigation, washing, bathing, or drinking. For many of these functions water can be reused directly without treatment. The argument in favor of water reuse is given along with a brief history of residential water reuse, how rainwater and groundwater can be developed as an on-site supply, the uses of greywater for garden irrigation, various residential-scale systems that have been designed for on-site reuse, and an explanation of the components needed to build such systems. The appendix contains a directory of manufacturers, a glossary of specialized terms, units of measure, and an annotated bibliography containing over 500 citations.

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Sisal Fibre Concrete for Roofing Sheets and Other Purposes
Background paper
Hakan Persson, and Ake Skarendahl. 26 Sep 78, 64p
Report of Working Group No. 5, Appropriate Technology for the Production of Cement and Building Materials.

Keywords: *Building materials, *Concrete, Developing countries, Roofs, *Reinforced concrete, Production, Quality, Tensile strength, Deformation, Crack propagation, Durability, Fire safety, Developing country application.

When building in rural areas in developing countries, roofing normally is the major difficulty. Concrete reinforced with sisal fibres is shown to have properties suitable for the production of thin sheets, e.g. for roofing. The production of sisal fibre concrete can be carried out manually by local craftsmen but can also be mechanized in different steps in order to increase the production rate and the quality. The fibre reinforcement gives the concrete higher tensile strength, higher deformation capacity and an improved crack distribution. If properly done, sisal fibre concrete has also all potentially good qualities of normal concrete, e.g. fire resistance, water tightness, durability, ease of production, low price. Sisal fibre concrete is also a low-energy consuming material. The products can be used in traditional as well as in more advanced building techniques.

Las Cooperativas Agropecuarias Como Instrumento de Cambio Social (Farming Cooperatives as Tools for Social Change)
Marcelino Atencio. 1979, 140p
Text in Spanish.

Keywords: Agricultural products, Sales, Cooperation, Interviewing, Statistical data, Social change, *Panama, Developing country application, *Agricultural cooperatives, Cooperatives, Veraguas(Panama).

Evaluation of farming cooperatives in the province of Veraguas in Panama is presented in this report. The research is made by observation and analysis of statistics and interviews from 170 cooperative users. It includes the many advantages that the cooperatives have brought to the inhabitants of the Veraguas region. Topics include: beginning and development of farming cooperatives; farming cooperatives as a tool for social change; and future perspectives of farming cooperatives in Veraguas.

Caracterizacion, Manejo y Almacenamiento de Papaya (The Papaya: Characteristics, Handling, and Storage)
M. C. de Arriola, J. F. Menchu, and C. Rolz. 1976, 52 Rept no. ICATIT-76-104
Text in Spanish.

Keywords: *Fruits, Food storage, Maturation, Tropical regions, Temperature, Ascorbic acid, Pepsin, Chemical reactions, Plant diseases, Fumigation, Guatemala, Developing country application, Papayas.

Papaya were studied during maturation at normal temperatures. The results obtained: the pepsin content increased, changes in pectin and soluble pectin were less noticeable; acid content increased until a maximum and then decreased, the content of sugars increased and also of ascorbic acid, both reaching a maximum when ripe. It was detected that due to its size and delicate skin, the handling of this fruit is difficult. This is also why insects attack the fruit. The most common disease is the anthracosis, caused by some mushrooms. Tests for its storage showed that the fruit can be kept at 12 degrees C for as long as 2 or 3 weeks, followed by a period of 7 to 8 days at normal temperature of 23 degrees C, to reach optimum ripeness.

Regional Forums on Appropriate Technology
 Final rept.
 Jeffrey S. Tiller, David S. Clifton, Jr, and Robert A. Cassanova. Feb 79, 97p NSF/RA-790380
 Grant NSF-ISP78-22994

Keywords: *Technology transfer, Meetings, Requirements, Education, Social services, Problem solving, Resources, Economic analysis, Research projects, Appropriate technology.

The report collates and summarizes the proceedings of seven regional forums on appropriate technology (AT) sponsored by the National Science Foundation. These forums investigated the potential for adoption of appropriate technology, characterized the needs of appropriate technology practitioners and advocates, and determined the role of the National Science Foundation in appropriate technology. Each regional forum is reported with respect to publicity, advisory committee, forum agenda, mechanism for public input, and attendees. The following major critical needs are identified for more widespread adoption of appropriate technologies: (1) education and information dissemination; (2) social science research; (3) determination of economic feasibility; (4) removal of institutional barriers; (5) technical research; (6) marketing and business strategies; and (7) evaluation of holistic technology development.

Socio-Economic Profile of Rural Egypt
 Iliya Harik. Mar 79, 169p AID-PN-AAG-593
 Prepared in cooperation with Cornell Univ., Ithaca, NY. Rural Development Committee.

Keywords: *Socioeconomic status, Agronomy, Rural areas, *Egypt, Farms, Productivity, Social services, *Agriculture, Sociology, Economics, Developing countries, Developing country application, Cooperatives.

A socio-economic profile of rural Egypt focusing on the impact of agrarian reform programs undertaken in recent years is presented. It suggests that despite mixed results, the record of agrarian reform in Egypt has been upheld and that original objectives have been fulfilled, particularly in areas of land distribution, maintenance, preservation of productivity, secure tenancy for small farmers, credit facilities, political domination, participation in national policy regarding agriculture, and extending social services into rural areas. The report notes that small cultivators have become the mainstay of Egypt's agricultural economy and finds that agricultural mechanization has not undermined the country's household economy but rather sustained it through easy credit terms, land consolidation, and large-scale production adjusted to household systems

of cultivation through cooperatives. The study finds continuation of widespread poverty citing national government efforts to reclaim desert lands as a key program in offsetting land shortage.

Small-Scale Fishermen's Perceptions of the Occupation of Fishing in the Gulf of Nicoya, Costa Rica
 Richard B. Pollnac. Jul 77, 18p ANTHROPOLOGY/WP-18, AID-PN-AAG-604
 Contract AID/csd-2455

Keywords: *Fisheries, Attitude surveys, Fishing, Developing countries, Males, Manpower, Children, *Costa Rica, Developing country applications.

The report examines small-scale fishermen's perceptions of the occupation of fishing in the Gulf of Nicoya, Costa Rica. It is based on 125 interviews with open-ended questions concerning what the fishermen liked most and least about their occupation; preferences for son's occupation; and the qualities that make a good fisherman. In addition, information regarding preference for and functions of middlemen was gathered, and correlations between perceptions of the fishing occupation and the independent variables of age, education, years fishing, and area of residence were made.

Biological Nitrogen Fixation: Research Needs for Agricultural Development in the Tropics
L. R. Frederick. 1978, 11p Rept no. AID-PN-AAG-127

Keywords: *Nitrogen, Nitrogen fixation, Tropical regions, Leguminous plants, Nitrogen fixing bacteria, Nitrification, Seeds, Cultivation, Developing countries, Developing country applications.

The biological knowledge and technology, and the training and organization of human resources needed to develop a program in biological nitrogen fixation are discussed. Nitrogen, essential for plant growth and for protein and carbohydrate production, is critically important in the growing world food shortage. The use of legumes and inoculants to produce fixed nitrogen is considered and an alternative to factory fixation of N₂. Legumes are a major part of the native vegetation in tropical regions, yet only a few species have been developed for agricultural use. Optimal culture of legumes requires both an adequate supply of legume seeds and cultures of rhizobia and proper use by the grower. Principles regarding various aspects of biological nitrogen fixation, adapted from six recently published reviews are listed.

Las Tierras del Suroeste de Cocolé (The Land of the Southwest of Cocolé)
Ricardo Ah Chu, and E. Don Hansen. 1962, 49p
Text in Spanish.

Keywords: *Soils, *Land use, Agricultural economics, Soil classification, Investigations, Soil properties, Climate, Project planning, *Panama, Developing country application

A report is given of the general inventory of the lands and soils of the SW region of the province of Cocolé, as the essential element for the utilization of the land, depending on its productive nature. For faster speed in obtaining the data and their application, the method known as "reconnaissance" is used for the solution of farming and cattle raising problems. The inventory will be useful for the design of agricultural programs, will help the farmer to understand and to better know the soils and land that he works, and will be of great value for the technicians and developers to express judgments and conclusions.

Los Asentamientos Campesinos: Una Experiencia Panameña en Reforma Agraria (Rural Settlements: An Experiment on Agrarian Reformation in Panama)
Stanley Heckadon. Apr 73, 118p
Text in Spanish.

Keywords: *Socioeconomic status, *Agriculture, Agronomy, Populations, *Panama, Rural areas, Surveys, Evaluation, Developing countries, Developing country application, Villages, Self help.

The situation of the Panama rural population is analyzed through historical periods. The marked differences between the two zones of the country; the more sophisticated area crossed by the Canal and the hinterland of the interior are contrasted. Comparisons are made between the Agrarian Reformation (1963-1968) and the rural settlements (1969-73), designed at self-help enterprises. Conclusions and evaluations considering the problems and the achievements during the four years of existence of the rural settlements are given. Maps, tables, and a bibliography are included.

El Cocotero en Panama (The Coconut Tree in Panama)
Louis A. Gattoni. 1968, 54p
Text in Spanish.

Keywords: *Coconuts, Nut trees, Tropical regions, Developing countries, Cultivation, Soil properties, Insects, Plant diseases, *Panama, Developing country application, Coconut trees.

The coconut tree is considered to be one of the most profitable plants that help the economy of tropical countries. Its trunk, fruits and flowers are applicable in many industrial uses. In Panama the production of coconuts has greatly diminished due to several causes such as: poor soils lacking in calcium, plagues and diseases generalized in the Caribbean coast, and lack of technical attention. After emphasizing the industrial importance of the coconut, recommendations are listed for the improvement of the cultivation of this tree.

Consultation Visit to the Honduras Department of Engineering and Standardization
Final rept.
H. Steffen Peiser. Feb 80, 55p Rept no. NBSIR-80-1969
Grant PASA-TA(CE)-7-71

Keywords: *Metric system, *Standardization, *Honduras, Developing countries, National government, Quality control, Industries, Consultants, Metrication.

The Government of Honduras, with support from the Agency for International Development, asked the National Bureau of Standards to provide consultation on an increased concern with standardization and measurement services. In this report, the author describes his brief visit to Tegucigalpa and his constructive discussions with governmental, industrial, and university authorities. Honduras has very considerable unexploited natural resources and a developing industrial manufacturing base in need of standardization, especially for quality control, to enter world markets. Honduras needs a new Weights and Measures Law and metrology and test laboratories, as well as some assistance for training technicians. Closer cooperation with regional standardization organizations is advocated. Domestically, measurement control in retail markets needs to be developed. Although officially Honduras is metric, the change to metric units has not been widely accepted by the public.

Land Preparation and Crop Establishment for Rainfed Lowland Rice
Research paper series
S. K. De Datta, R. A. Morris, and Randolph Barker.
Nov 78, 28p IRPS-22, AID-PN-AAG-563

Keywords: *Rice, Rice plants, Cultivation, *Arid land, Soil water, Planting, Water storage, Weed control, Yield, Mulches, Soil fertility, Insects, Plant diseases, Developing country application, Wetlands.

The traditional rainfed rice land preparation transplanting system and alternative new systems of land preparation and crop establishment are reviewed. These latter systems may become economically feasible as a consequence of new rice technology including short duration varieties, herbicides, powerful tillage machinery. The report cites major advantages of wet land tillage in the reduction of draft requirements, weed control, ease of transplanting, lessened soil fertility, and reduced percolation losses. Disadvantages of soil tillage discussed in the study include increased late-season drought risk, high transplanting labor require-

ments, and power unit size limitations. The report also reviews forms of dryland tillage.

Management of Rangelands and Other Grazing Lands of the Tropics and Subtropics for Support of Livestock Production
Technical series bulletin
Howard B. Sprague. May 79, 115 Rept nos. TSB-23, PN-AAG-547

Keywords: *Forestry, *Animal husbandry, Range grasses, Forage grasses, Livestock, Tropical regions, Management, Land use, Grassland, Deserts, Soil properties, Plant growth, Animal nutrition, Developing country application.

The report assembles and summarizes available information on tropical and subtropical grasslands with particular reference to their potential development and utilization. Examples of outstanding successes in increasing forage production and nutritive values of permanent grasslands are cited. It is concluded that substantial increases in productivity of ruminant livestock is widely feasible by applying known principles and practices.

Desertification: Process, Problems, Perspectives. Papers Presented During a 14-Week Seminar Series, November 1975-April 1976
Patricia Paylore, and Richard A. Haney, Jr. Sep 75, 134p AID-PN-AAG-604
Report on Arid/Semi-Arid Natural Resources Program.

Keywords: *Deserts, *Arid land, Meetings, Soil erosion, Deterioration, Vegetation, Ecology, Droughts, Salinity, Developing country application, Desertification.

This report contains a series of twelve papers which were presented during a continuing program of seminars addressing the process of desertification between November 1975 and April 1976 at the University of Arizona. Desertification is defined as the process of environmental change characterized by increasing aridity and intensification of distinct geomorphological processes, desiccation and increasing salinity of soils, and a manifest degradation of vegetative cover. The first seven papers discuss the process of desertification from the view point of the generalist, and address the problems of reversing desertification, consequences of desertification, effects of atmospheric dust and surface albedo on desertification, ecology of desertification, effects of desertification on land degradation and water resources, and the interrelationship between vegetation, erosion, and stream flows.

Standardization and Measurement Services in Indonesia
Final rept.
H. Steffen Peiser, Noel J. Raufaste, Raymond C. Sangster, Benjamin M. Gutterman, and Penelope M. Odar. Sep 79, 350p Rept no. NBSIR-78-1583
Grant PASA-TA(CE)-6-71

Keywords: Measurement, Standards, *Indonesia, *Standardization, Calibrating, Metrology.

At the request of the Indonesian State Minister for Research and Technology, the National Bureau of Standards conducted a two-week survey of standardization and measurement systems in support of industrialization. There were six topics of specialization: (1) Food and Food Safety, (2) Building and Construction, (3) Quality Control in Industry, (4) Safety Standards, (5) Calibration, Instrumentation, and Metrology, and (6) Industrial Measurement Techniques. In the executive summary the appraisal of the existing systems for standardization and measurement is coupled with recommendations. A background section is followed by one with the Indonesian specialists' assessments of needs and opportunities.

Transportation in Underdeveloped Countries
 Feb 79, 98p

Keywords: *Transportation, Developing countries, Meetings, Urbanization, Mobility, Economic development, Urban transportation, Urban areas, Rural areas, Tanzania, Transportation planning, Energy consumption, Rural transportation, Developing country application.

These papers were presented in one of the Work-Sessions at the Second International Symposium of Engineering held at 'Universidad Centroamericana Jose Simeon Canas' from the 19th to the 23rd of February 1979. The document describes problems in underdeveloped countries related to transportation; rapid urbanization, which leads to the development of high residential areas, and often bad-planned transportation systems. Energy expenditure in transportation is usually a high percentage of total Energy consumption; therefore, the necessity of evaluating transportation programs and planning transportation alternatives is of prime importance, especially because present trends indicate that such energy consumption is increasing.

How to Start a Cooperative
 Educational circular 18
 Irwin W. Rust. 1963, 25p

Keywords: Organizations, Management, Facilities, Operating costs, Personnel, Marketing, Developing countries, Cooperatives, *Agricultural cooperatives, Developing country application.

The step by step outline of how to bring a cooperative into being starts out by explaining what a cooperative is. The steps it follows are: Arranging the first meeting; examining the need for a cooperative and estimating potential membership; management skills needed; facilities needed; operating costs; capitalization; drafting legal organization papers; first meetings of members and board of directors; and general rules for success. The rules for success are explained and cover legal matters, expert help, management, flexibility, and quorums. A sample survey report and a sample organization agreement are included as appendices.

Papel de la Tecnologia en el Desarrollo Y Dependencia de los Pueblos (The Role of Technology on the Development and Dependency of Countries)
 Feb 79, 168p
 Text in Spanish.

Keywords: *Technology transfer, *Industrial development, Economic development, Latin America, Technology assessment, Agricultural engineering, Food, Technological intelligence, Nutrition, Economic analysis, Developing countries, Developing country application.

The patterns of economic growth experienced in Latin America countries are discussed, mainly during the last 20 years. Some attention is given to the philosophical meaning of appropriate technology, and to the nutritional problems in Latin America and their relationship with economics. Some of the themes studied include: Efficiency and justice in the utilization of technology; examples of developing with inappropriate technology; the role of agriculture and sciences and technology of foods, and others. An abundant bibliography, some statistics, and tables are included.

Central America: Fungal Fermentation of Coffee Waste
 Suellen Sebald Edwards. Dec 79, 24p
 Contract AID/ta-C-1337
 Report on Industrial Research Institutes: Their Role in the Application of Appropriate Technology and Development, Case Series No. 6.

Keywords: Technical assistance, Farm processing, *Coffee, *Agricultural wastes, Fermentation, Fungi, Feeding stuffs, Proteins, Pollution control, Technology, Organizations, *Guatemala, *El Salvador, Developing countries, Developing country application.

The case history has been written to assist development planners, personnel of industrial research institutes, and USAID mission personnel in understanding the role that IRIs can and do play in the application of technology to development. It describes the fungal fermentation of a coffee waste program under way in Guatemala and El Salvador that will result in useful protein byproducts. The cultivation of fungi on the coffee pulp juice represents a useful technological advance for less developed countries--it will help the control of some of the pollution involved with coffee production.

Irrigation on Western Farms
Jul 59, 60p Rept no. AIB-199

Keywords: *Irrigation, Farms, Irrigation canals, Soil properties, Drainage, Water pipelines, Ditches, Selection, Efficiency, Maintenance, Developing country application.

Proper irrigation will help the farmer obtain the maximum yield from his acreage. This booklet will help the farmer know his land and understand the soil profile and soil properties important to irrigation. Soil moisture and crop growth, and topography and drainage are explained and the means to determine how to analyze one's own farm. The principle methods of irrigation including border irrigation, level border and basin irrigation, contour ditch irrigation, furrow irrigation, corrugation irrigation, sprinkler irrigation, subirrigation, are covered. Other problems concerning irrigation are also discussed.

Contract ARC-78-204/NC-6521
Sponsored in part by North Carolina State Dept. of Administration, Raleigh. Prepared in cooperation with Wind and Water Power, Harrisville, NH.

Keywords: *Hydroelectric power, Feasibility, Site surveys, Evaluation, Cost analysis, Financing, Appalachian Mountain Region (United States), Electric power plants, Hydroelectric power plants.

The project identified small hydroelectric sites in the Appalachian counties of North Carolina with development potential. From this list, three sites, North Fork Reservoir Dam owned by the City of Asheville, the Town of Highlands Dam, and Capitola Dam were chosen for further detailed feasibility analyses. Based on (1) detailed inspection of the sites, (2) analysis of construction costs, and (3) identification of generic problems associated with small hydro, a cost-effectiveness analysis of the financial feasibility of each site will be prepared. As part of this task, the effects of power generation on existing operations at each site and the potential power customers will be identified.

Manualidades (Handmade Crafts)
A. Martinez Surroca. 1954, 176p
Text in Spanish.

Keywords: *Handicrafts, *Wood products, *Food storage, Crafts, Developing countries, *Furniture, Decorating, Manuals.

The manual describes how to make numerous objects. It is used to encourage the imagination of students to be able to build practical and economic objects such as simple furniture, flower pots, lamp shades, radios, and how to preserve fruits and vegetables, wines, vinegars, and cheeses. The manual is illustrated.

Problemas Hidraulicos en Paises Centroamericanos (Water Problems in Countries of Central America)
Pedro Miguel Estrada, Fidel Antonio Ramos, Daysi Sobalvarro, and Ricardo Jimenez. Feb 79, 72p
Text in Spanish.

Keywords: Developing countries, *Water supply, Soils, *Drought, Bibliographies, *El Salvador, Maps, Developing country application.

Three studies in water problems are presented. Water Problems in El Salvador is a technical study of the cycle of water in this country, with final recommendations to solve future problems of scarcity. Torrential Problems in El Salvador is a study of the land, water resources, inclination of the land, soils, and sewages. Water Supply in Rural Areas cites international agreements on the problem of water supply, statistics, and analysis of the problem. A bibliography, maps, and photos are included.

Water, Waste and Quality Management During Preparation and Processing of Vegetables
Completion rept. Apr 75-May 79
W. A. Strunk. Aug 79, 85p PUB-65, OWRT-A-032-ARK(1)

Keywords: *Vegetables, *Food processing, *Industrial wastes, Operations, Washing, Cooling, Biochemical oxygen demand, Potatoes, Beans, Anaerobic processes, Solid waste disposal, Nutrients, Canning.

Effluent from vegetable processing plants in the Ozark region was monitored to test and develop new systems of washing, peeling and blanching; to develop methods for utilization of solid wastes; and to reduce effluent wastestrength without affecting vegetable quality. From a processing plants' survey the following operation or factors were found to be the most critical: (1) washing and cleaning, (2) blanching and cooling,

APPROPRIATE TECHNOLOGY ABSTRACTS

(3) high wastestrength from Irish potatoes, dry beans, and hominy processing, (4) suspended solids removal, and (5) excessive fresh water use. Various processing techniques were tested and waste water was sampled for biochemical oxygen demand, chemical oxygen demand, total suspended solids, settleable solids, and total solids. The new system of leafy greens washing cut water use by 70% while reducing wastestrength by 50%.

Solar Domestic Hot Water. A Reference Manual
 1979, 117p HUD-0001230
 Sponsored in part by Department of Energy, Washington, DC., and Boeing Aerospace Co., Seattle, WA.

Keywords: Manuals, Hot water heating, Performance evaluation, Design, *Solar water heating.

For builders, contractors, architects, and engineers, this reference manual details the decisionmaking process that the builder or designer follows to evaluate and select the appropriate solar hot water system. It provides methods for estimating and evaluating the performance of any solar hot water system, as well as successful applications which have occurred through the HUD Demonstration Program. It also highlights the common pitfalls encountered in this field, such as installation practices, collector quality control, and system leakage, and suggests ways to avoid their recurrence. The manual also addresses such topics as how to employ codes and solar standards, as well as legislative and economic considerations. A sample problem is included which systematically works through the entire design process leading to a solution. Diagrams and tabular data are included. An appendix contains a bibliography, a glossary, an index, a survey of sizing methods, an annual insolation chart, and conversion factors.

Guidelines for Analysis of Communicable Disease Control Planning in Developing Countries: Communicable Diseases Control Planning
 International Health Planning Methods series no. 1
 Karl A. Western, Stanley I. Music, A. N. Angle, S. O. Foster, and R. C. Hogan. 1979, 244p* Rept no. DHEW/PUB/PHS-79-50080

Keywords: *Diseases, Infectious diseases, Developing countries, Public health, Programs, Evaluation, Guidelines, Immunization, Surveillance, Preventive medicine, Epidemiology, Disease vectors, Manuals, Developing country application, *Health planning, Program evaluation, Disease control, State of the art.

This volume for the planning and evaluation of communicable disease control programs is the first volume in a series of works known collectively as the International Health Planning Methods Series. The series provides AID advisors and health officials in developing countries with critically needed guidelines for incorporating health planning into national plans for economic development. This volume discusses specific aspects of disease control programs, such as program organization, surveillance systems, and immunization projects. Articles on specific disease and disease types cover malaria, tuberculosis, leprosy, venereal disease, filariasis, schistosomiasis, onchocerciasis, trachoma, bacterial enteric diseases, parasitic enteric disease and rabies. This manual presents the current 'state-of-the-art' in the planning and evaluation of specific disease control programs. It outlines the complexities of epidemiologic interactions between disease causing organisms and their reservoirs and hosts in different geographic, climatologic, and cultural settings. With an understanding of a disease and its epidemiologic correlates in a given setting, effective control methods can be planned and evaluated.

Guidelines for Analysis of Environmental Health Planning in Developing Countries
 International Health Planning Methods series no. 2
 John Hanlon, Vic Wehmann, Gar Hart, James Thompson, and Ivy Taylor. 1979, 127p* Rept no. DHEW/PUB/PHS-79-50081

Keywords: Developing countries, Manuals, Guidelines, Hazards, Public health, Developing country application, *Health planning, Environmental health, Health plans.

This environmental health planning manual is the second volume in a series of works known collectively as the International Health Planning Methods Series. The series provides AID advisors and national health officials in developing countries with critically needed guidelines for incorporating environmental health planning into national plans for economic development. The manual contains a compilation of assessment issues, data considerations, alternative technologies, and practical planning methods specifically related to developing countries. Three general objectives are used: (1) to describe the inter-related environmental hazards to health relevant to people in developing countries; (2) to identify competing elements, priorities, and institutional relationships affecting available solutions; and (3) to offer components needed to make planning decisions, including recommendations for data collection methods, surveillance methods, standards, and alternative technologies. In addition to the need for fundamental improvements in such areas as drinking water supply, wastewater and excreta disposal, and pest control, the occasionally adverse effect of economic development projects is cited. Examples are drawn from the fields of agriculture, industry, transport, and land use patterns.

Guidelines for Analysis of Health Manpower Planning: Health Manpower Planning
 International Health Planning Methods series no. 3
 Robert J. Staff, and Dennis R. Porter. 1979, 86p* Rept no. DHEW/PUB/PHS-79-50082

Keywords: Developing countries, Manuals, Guidelines, Assessments, Models, Education, Developing country application, *Health manpower, *Health planning.

This manual for health manpower planning in developing countries is the third volume in a series of works

known collectively as the International Health Planning Methods Series. The series provides AID advisors and national health officials in developing countries with critically needed guidelines for incorporating health planning into national plans for economic development. Generally, an assessment model for health personnel planning in undeveloped countries is not available. This assessment manual provides a conceptual and methodological framework for the analyst and policy planner for the development and use of health personnel. Health manpower planning is a difficult task, affected by numerous variables. It is also a relatively long range task, since the health manpower supplies of the future must be developed through training and education opportunities years before new practitioners become active in the field. This manual discusses various methods of planning for the use of medical assistants and auxiliaries to provide primary health care in rural areas where it is difficult to attract or maintain full time physicians.

 Public Health Service, Rockville, MD. Office of International Health.
Guidelines for Analysis of Socio-Cultural Factors in Health: Socio-Cultural Factors in Health Planning
 International Health Planning Methods series no. 4
 John Hanlon, and Susan C. M. Scrimshaw. 1979, 79p* Rept no. DHEW/PUB/PHS-79-50083

Keywords: *Socioeconomic status, Developing countries, Behavior, Public health, Guidelines, Manuals, Psychology, Central America, South America, Middle East, Asia, Africa, Technology transfer, Developing country application, *Health planning, Sociocultural patterns, Social factors, Delivery of health care.

This manual describes sociocultural and behavioral factors that affect the planning and delivery of health care services in developing countries. It is the fourth volume in a series of works known collectively as the International Health Planning Methods Series. Material selected for use in this volume includes a broad range of sociocultural, psychological and behavioral information. Central and South American, Middle Eastern, Asian and African medical systems are described within a cultural context, and special attention is given to obstacles to the transfer of medical technology. The purpose of this volume is threefold: (1) to identify socio-cultural, psychological and behavioral factors for the benefit of health care planners in developing countries; (2) to discuss principles of culture and cultural change to the extent that it aids effective and responsible health care interventions; and (3) to suggest methods for gaining relevant data for making accurate assessments and effective plans for improved health care.

Guidelines for Analysis of Health Facilities Planning in Developing Countries: Health Facilities Planning
 International Health Planning Methods series no. 5
 Dennis R. Porter, Robert J. Staff, and Melvin Whitfield. 1979, 92p* Rept no. DHEW/PUB/PHS-79-50084

Keywords: Developing countries, Public Health, Guidelines, Manuals, Development, Distribution, Developing country application, Health facilities, *Health planning.

This manual deals with the subject of health facilities planning in developing countries. It is the fifth volume in a series of works known collectively as the International Health Planning Methods Series. The series provides AID advisors and national health officials in developing countries with critically needed guidelines for incorporating health planning into national plans for economic development. This manual provides a framework for the planner who is concerned with the development and distribution of various types of health care facilities. While several specific examples are provided to illustrate particular points throughout the text, the emphasis in this manual has been placed on developing a conceptual framework that is useful as a model planning tool that can be adapted to meet local needs and resources. For example, geographical, climatic, and socio-cultural factors should have great impact on the architectural design and site selection of the health facility. While general concerns have been

APPROPRIATE TECHNOLOGY ABSTRACTS

identified here, no attempt has been made to provide a detailed architectural design to meet the needs of each climatic or geographical condition. Specific adaptations must be made by the planner.

Guidelines for Analysis of Pharmaceutical Supply System Planning in Developing Countries: Pharmaceutical Supply System Planning

International Health Planning Methods series no. 7
Leif Schaumann, Martin M. Rosner, and John M. Morson. 1979, 93p* Rept no. DHEW/PUB/PHS-80-50086

Keywords: *Drugs, Developing countries, Distribution systems, Manuals, Guidelines, Public health, Rural areas, Low income groups, Developing country application, *Health planning.

This manual for pharmaceutical supply systems planning in developing countries is the seventh volume in a series of works known collectively as the International Health Planning Methods Series. The series provides AID advisors and national health officials in developing countries with critically needed guidelines for incorporating health planning into national plans for economic development. Generally, less is known about pharmaceutical supply systems than about the overall health care systems of which they are an integral part. Particularly in rural areas of lesser developed countries, the pharmaceutical supply system can be a critical part of the health care system. Evidence suggests that no country possesses an ideal pharmaceutical supply system, and virtually all supply systems are affected to some degree by issues and policies more concerned with politics, economics, education, and law, as well as those governing medicine and public health. This manual provides objective guidelines to assist health care planners to develop improved pharmaceutical supply systems within the framework of national development planning. Particular emphasis has been placed on the importance of making pharmaceutical products available to the rural poor segment of the LDC population.

Guidelines for Analysis of Health Sector Financing in Developing Countries: Health Sector Financing in Developing Countries

International Health Planning Methods series no. 8
Robert L. Robertson, Dieter K. Zschock, and John A. Daly. 1979, 69p* Rept no. DHEW/PUB/PHS-79-50087

Keywords: Developing countries, Manuals, Guidelines, Public health, Evaluation, Data collection, Developing country application, Health financing, *Health planning, Health care costs.

This manual is number eight in a series of studies known collectively as the International Health Planning Methods Series. The Series provides AID advisors and health officials in developing countries with critically needed guidelines for incorporating health planning into national plans for economic development. This manual presents an action-tested procedure for appraisal of health sector financing which may be used, with some local adaptations, to examine health sector financial resources. The guidance presented in the text of the manual, combined with the prototype data collection and tabulation arrangement in Appendix A, are sufficiently detailed to lead a host-country health planner or financial specialist through the assessment process. For successful completion of such an evaluation, it is anticipated that a senior-level economist or public finance specialist would be available to assist the analyst, both in initial design and final interpretation of the results.

A Compendium of Papers on Community Health Planning Issues: Community Health Planning

International Health Planning Methods series no. 9
Paul Ahmed, Aliza Kolker, Susan C. M. Scrimshaw, and Richard H. Hart. 1979, 113p* Rept no. DHEW/PUB/PHS-79-50088

Keywords: Developing countries, Manuals, Public health, Developing country application, *Health planning, Community health services.

This volume consists of a collection of papers dealing with the integration of community health concerns into development planning. It is the ninth volume in a series of works known collectively as the International Health Planning Methods Series. The series provides AID advisors and national health officials in developing countries with critically needed guidelines for incorporating health planning into national plans for economic development. A recognition and concern for the role of health in development planning was the central theme of a three-day conference on Planning for Health Care in the Context of Economic Development held in San Diego during May 1978. Its purpose was to identify problems and suggest solutions which would encourage and improve planning for health care in the developing countries of the world. The articles in this volume are: Bridging the Health Gap: The Use of Indigenous Resources in Meeting the Manpower Requirements of the WHO Definition of Health; Family Composition and Structure in Relation to Nutrition and Health Problems: Impact and Measurement; Rural Health Reorganization in Tanzania: The Implications of Change Implementation; The Community Health Workers: Guidelines for Training the Community to Power the Program; Critical Environmental and Economic Interdependencies: The Search for Societal Values; Health Sector Assessment; Socio-Cultural Factors in Health Planning Throughout the World; and Psycho-Social and Cultural Aspects of International Health Planning: The Challenge of Providing Health Care Assistance to Developing Countries.

PB80-179971 PC A05/MF A01

A Compendium of Papers on Health and Economic Development: Health or Wealth

International Health Planning Methods series no. 10
W. Boyd Littrell, Milton I. Roemer, and Paul O. Wooley. 1979, 97p* Rept no. DHEW/PUB/PHS-79-50089

Keywords: Developing countries, Economics, Public health, Manuals, Guidelines, Developing country application, *Health planning, Health care requirements, Health resources.

This volume deals with the delicate relationship between health and economic development, expressed as a choice between health or wealth. It is the tenth volume in a series of works known collectively as the International Health Planning Methods Series. The series provides AID advisors and national health officials in developing countries with critically needed guidelines for incorporating health planning into national plans for economic development. This volume consists of three articles by recognized experts in the field of international health. The papers are: Health, Income Distribution, and Source of Health Expenditures in Developing Countries; A Systems Perspective on Health and Development; and Needed Development Research for Measuring the Health of Populations in the LDCs. The basic dilemma frequently expressed in the form of the following questions: Is economic development essential for improved health or is improved health required for economic development. These three papers point out that neither alternative is very promising unless supported by reliable assessments of local health needs and resources. A suggested middle path includes identification of specific health sector targets, upon which public spending can be concentrated to make a maximum impact upon overall health improvement.

Report to AID on an NBS/AID Workshop on Standardization and Measurement Services

Final rept.
H. Steffan Peiser, Charles C. Raley, and Penelope M. Odar. Apr 80, 67p Rept no. NBSIR-80-2021
Grant PASA/TA(CE)6-71
Report on Workshop Held at Gaithersburg, MD on October 3-21, 1978. For 1977 workshop, see PB-296326.

Keywords: Meetings, *Standardization, Measurement, Standards, Developing countries, Federal assistance programs, International relations.

The object of the Workshop was to give standards officials of industrializing nations insight into the standards and measurement systems of the United States and the role of the National Bureau of Standards, so that these officials might consider what parts of the U.S. system might usefully be adapted to conditions in their home countries. During the Workshop, papers were presented to exchange standardization experience from each participant's country. (These papers were previously published in NBS SP-543, the report on the UNCSTD seminar.) The presentations of the special evening speakers for the Workshop are featured in this report and also a special contribution by the representative from the Arab Organization for Standardization and Metrology. The other participants were from Argentina, Barbados, Brazil, Guyana, India, Indonesia, Jordan, Kenya, Korea, Pakistan, Panama, Saudi Arabia, Sudan, Tanzania, and Tunisia.

Design of a Cost Effective Solar Powered Water Pump

Hydrology and hydraulics series rept.
Duane G. Chadwick. Apr 80, 44p UWRL/H-80/02,
OWRT-A-036-UTAH(1)
Contract DI-14-34-0001-8047

Keywords: Vacuum pumps, Design, Cost effectiveness, *Solar water pumps, Solar collectors, Flash boilers.

The design and performance of a vacuum lift, solar powered water pump is discussed. The basic design consists of an expanding gaseous piston confined inside a chamber which is located in series with, and between, an inlet and an outlet check valve. The gas is generated by volatilizing cyclopentane or hexane. Four variations of this basic design concept were built and evaluated. The various features of each are discussed. Considerations in the choice of a cost-effective solar collector are also reviewed. Several of the more promising types of solar collectors were built and evaluated for use on the pump. A 70C heat source temperature is required to operate the pump if cyclopentane is used as the volatile fluid, 90C is required if hexane is used. The volatile fluid is not expended in the pumping process. The pumps constructed on this project have a capacity of approximately 6 liters/minute when pumped to a height of 2 meters. Two square meters of sunshine are sufficient to operate the pump.

 Melvin L. Whitfield, and Wendy Graf. 1979. 52p
 Rept no. DHEW/PUB/PHS-79-50095

Keywords: Bibliographies, Developing countries, Abstracts, Reviews, Developing country application, Health facilities, *Health planning, State of the art.

This combined literature review and annotated bibliography of 131 references deals with the subject of health facilities planning for developing countries. It is the sixth volume in the series of works known collectively as the International Health Planning Reference Series. The series provides AID advisors and national health officials in developing countries with critically needed references for incorporating health planning into national plans for economic development. This volume is intended primarily as a companion piece to volume five in the Methods series, entitled Health Facilities Planning. References included here are intended to identify works to support and enlarge upon material contained in the basic manual. The bibliography makes no claim to be an exhaustive or comprehensive listing of available resources. It contains a literature review on organization and philosophy of health care systems; assessment and planning; utilization; architecture; and climatic conditions.

Guidelines for Analysis of Indigenous and Private Health Care Planning in Developing Countries; Indigenous and Private Health Care Planning
 International Health Planning Methods series no. 6
 Paul Ahmed. 1979. 50p Rept no. DHEW/PUB/PHS-79-50085

Keywords: Developing countries, Manuals, Guidelines, Assessments, Behavior, Developing country application, *Health planning.

This manual is the sixth volume of the International Health Planning Methods Series. The series provides national health officials in developing countries with critically needed guidelines for incorporating health planning into national plans for economic development. The manual helps health planners assess the importance, extent, and impact of non-public health care in developing countries. This includes individual and familial health care, indigenous practitioners, and private practitioners trained in the Western medical tradition. Guidelines are provided for assessing the indigenous medical systems and private sector health care in: Assessment of use patterns by characteristics of users, circumstances and frequency of use, and types of services used; the meaning and importance of

APPROPRIATE TECHNOLOGY ABSTRACTS

various available health services to users; assessment of ways of integrating or developing complementarity between indigenous medicine, the private sector, and public health services.

Case Studies Handbook: An Aid to Evaluate the Utilization of Scientific and Technical Information
Francisco J. Pardo de Zela. Oct 79, 107p
Grant PASA-CZ(TAB)-1114-2-77, PASA-CZ(LAR)-0572-1-77

Keywords: Information systems, Developing countries, Utilization, *Technology transfer, National government, *Information services, User needs, Specialized training, Bibliographies, Developing country application, National Technical Information Service.

The handbook contains an elaborated discussion on how to develop case studies describing some of the uses of scientific and technical information in development projects. Suggestions are offered to establish techniques adaptable to the needs and specifications of the reader. Sample case studies are provided on the use of information available through the US AID Network. These resulted from interviews with users in nine participating countries. This handbook can also be used as a reference tool to identify interview candidates from among users of appropriate technology information obtained from the NTIS bibliographic data base.

Preliminary Project Report on Animal By-Products Utilization
1979, 9p

Keywords: *Waste recycling, Cattle, Animal diseases, Pollution, *India, Byproducts, *Leather, Feeding stuffs, Livestock, Fertilizers, Cost analysis, Project planning, Developing country application, Institutional framework, Recycling.

The city of Madras, India suffered from numerous stray dogs that posed the threat of rabies and the spread of other diseases through the city. To combat this problem and to simultaneously remove the carcasses of larger animals such as cattle and mules, the Municipal Corporation of Madras set up a self-supporting plant to tender the polluting animal carcasses and strays into leather, protein supplement in stock feed, and fertilizer. The report covers the institutional framework, objectives, implementation, and costs of the project.

Building Science Research in India (A Quantitative Study of the Literature)
S. C. Sinha. 1979, 92p
Sponsored in part by Indian National Scientific Documentation Centre, New Delhi.

Keywords: *India, Housing studies, Residential buildings, Research projects, Reviews, Reviewing, Data acquisition, *Housing, *Buildings, Foreign technology.

The primary aim of building science research should be to provide a decent house to each family at reasonable cost. The building research activities lead to original articles published in primary periodicals, papers presented in Conferences and Symposia and research and technical reports. This dissertation attempts to study the contribution of India with the help of 'Building Science Abstracts 1972-1976'. An effort has also been made to see its impact on the world literature through analyzing the data and carrying out a citation, analysis with the aid of 'Science Citation Index 1973-1977'.

Solar Passive Systems for Buildings
Mar 80, 54p

Keywords: *Buildings, Design, Reviewing, Reviews, *Solar heating systems, *Solar cooling systems, Foreign technology, Passive solar heating systems, Passive solar cooling systems, Developing country application.

A survey is provided of what is known about the design of solar passive buildings. A systematic presentation is given of proven concepts with suitable illustrations. It is intended as a general guide for architects, designers and other building practitioners. Topics include the various concepts of solar passive heating and cooling; design factors such as location, climate, microclimate, form; building metabolism; thermal and visual comfort; location and form of illumination; and natural cooling via wind towers and cisterns.

Water Purification, Distribution, and Sewage Disposal for Peace Corps Volunteers
Apr 69, 256p ACTION/PC/RS-29
Contract PC-25-1709

Keywords: *Water supply, *Water treatment, *Sewage disposal, Developing countries, Manuals, Education, Water supply, Distribution systems, Water distribution, Toilet facilities, Construction, Field tests, Public health, Financing, Developing country application, Peace Corps.

This volume aids both the technical instructor as a training manual and the extension worker as a field reference. The volume is divided into instruction units on: Water supply sources; water treatment; planning the distribution system; characteristics of an adequate system; construction techniques; operation and maintenance; the scope of disposal system projects in host communities; the privy method of excreta disposal design for a village; and water carried sewage systems construction and maintenance. Each unit of instruction is sub-divided into an overview; objective; tasks; functional skills; terminal performance tests; related information such as financing; role of the health department, and human factors; and lesson plans. Many illustrations are included.

Irrigation Management - A Mechanism for Saving Energy and Water
Technical completion rept.
Paul E. Fischbach. 1 May 80, 192 OWRT-B-033-NEB(1)
Contract DI-14-31-0001-5137

Keywords: Water conservation, *Irrigation, Design criteria, Soil texture, Efficiency, Fluid infiltration, Soils, Requirements, Scheduling, Nebraska, *Water management.

Research was conducted to determine irrigation management practices on the various soil textures in Nebraska. The basic objective was to design and select irrigation systems to minimize water and energy requirements. To meet this objective, improved irrigation practices were investigated for more efficient use of water and energy resources. Research has indicated that irrigating at maximum non-erosive stream size and automating the furrow irrigation system, one can reduce the irrigation set time and amount of water applied to acceptable levels. This design criteria substantially increases the efficiency of water and energy used. Research has also shown that the selection of various furrow opening and furrow smoothing practices influences the amount of water applied and should be selected according to the soils infiltration characteristics.

The Availability of Solar Energy in Thailand
R. H. B. Exell, and Kaya Saricali. Feb 76, 93p Rept no. AIT/RR-63

Keywords: *Solar energy, Insolation, *Thailand, Solar radiation, Distribution, Periodic variations, Diurnal variations, Developing country application.

Meteorological data have been used to produce a comprehensive survey of the solar energy available in Thailand. The results have been presented in a form suitable for use in designing and predicting the performance of solar energy equipment. Geographical, seasonal, and diurnal variations of global solar radiation in Thailand are surveyed. Detailed maps are given of the geographical distribution of solar radiation

prepared from data on cloudiness at 44 stations, duration of sunshine at 18 stations, and linear regressions relating radiation to sunshine at Chiang Mai and Bangkok. Rough estimates of diffuse solar radiation and atmospheric turbidity are made from the radiation-sunshine regression parameters. Fluctuations in the daily solar radiation are examined in an unbroken five-year sequence of measurements at Bangkok, and are also estimated from daily sunshine measurements at Bangkok and three other stations in Thailand. The time series of daily totals of global solar radiation at Bangkok is analyzed as a second order random process. The observed annual frequencies of runs of consecutive days with low radiation at Bangkok are given. The diurnal variation of global solar radiation determined from hourly measurements at Chiang Mai and Bangkok is analyzed.

Choice of Technology at Project Level. Proceedings of the Ad-Hoc Expert Group Meeting on Criteria for the Selection of Appropriate Building Technologies Held at Amman, Jordan on December 10-14, 1977
Emanuel Csorba. 30 Nov 77, 49p

Keywords: *Building materials, *Housing, Construction industry, Buildings, Construction materials, Technology assessment, Perlite, Calcium oxides, Concrete blocks, Prefabrication, Floors, Developing country application.

This paper views the building as an integrated product of various technologies. It discusses flow diagram and hierarchy of building technologies, main factors to be considered when choosing appropriate technologies for building materials industries and for construction activities at project level. Emphasized are building materials production technologies; prefabricated building units production technologies; prefabricated load-bearing structure production technologies; complementary building structures prefabrication technologies; and rationalized monolithic technologies.

Small Capacity Ferrocement Bins
1977, 19p

Keywords: *Grains(Food), *Food storage, *India, Bins, Rural areas, Insects, Durability, Maintenance, Rodents, Hazards, Cost analysis, Developing country application, Graineries, *Ferrocement.

Improper methods of storage adopted at present are estimated to account for a loss of about 11 million tons of grain, representing about 10% of the total annual production. With 70% of the grain stored in villages, the answer is to develop and promote scientific and inexpensive methods of storage at the rural level. This booklet presents complete instructions on how to make rodent and insect proof grain storage bins that are relatively inexpensive to make and easy to repair. The bins can also be coated with bituminous paint and used as water tanks. From the point of view of long term durability, minimum maintenance and special treatment against rodent attack and fire hazard, ferrocement bins are economical when compared to other types of bins.

The Role of Plastic Pipe in Community Water Supplies in Developing Countries
Frederick E. McClunkin, and Charles S. Pineo. 1971, 175p
Contract AID/csd-1888

Keywords: *Water supply, Plastic pipes, Piping systems, Manufacturing, Standards, Developing countries, Market surveys, *Plastics, *Pipes(Tubes), Developing country application.

Pipe is a major cost element of community and household water systems. In the most common diameters pipe made of plastics is competitive in cost and performance, and in many circumstances, costs less than pipe of other material. Plastic pressure pipe can be readily manufactured in developing countries with a minimum of hard-currency investment, skilled labor relative to other forms of pipe, and expenditure for imported materials, relative to production of other pipe. The intent of this report was to prepare a document which would enable engineers, administrators, public

officials, industrialists, development personnel, the international banks, and others to review the role of plastic pipe in community water supply in developing countries, and to provide a resource document to support further technical or administrative action. Extensive use has been made of specialized appendices. The subject areas include the use of plastic pipe; plastic pipe standards and codes; manufacture of plastic pipe; and the market for plastic pipe. Appendices cover the topics of abbreviations; bibliography; standards and specifications for plastic pipes; a glossary of plastic piping terms; directory of manufacturers; installation of plastic pipe; and plastic pipe for sewers.

Potential of Diesel Engines, Fuels and Lubrication Technology
Final rept.
Giorgio Cornetti. Mar 20, 62p DOT-HS-805-241
Contract DOT-TSC-1424

Keywords: *Automobiles, *Diesel engines, Diesel fuels, *Lubrication, Fuel consumption, Fuel additives, Substitutes.

The chemical and physical properties of diesel fuel are reviewed along with their relationships to the fuel economy and emissions of diesel powered automobiles and light trucks. The fuels considered include both conventional and alternative diesel fuels. Additives are surveyed and their impacts on combustion and overall engine performance are discussed. The fuel economy potential of future lubricants is investigated, particularly (1) upgraded mineral oils, (2) synthetic oils, and (3) colloidal suspension in mineral oils.

Contributions to a Changing Agriculture (IARI Annual Report, 1977)
:979, 166p

Keywords: *Agriculture, *India, Yield, Food, Production, Research projects, Farm crops, Technology transfer, Wheat plants, Barley plants, Grain sorghum plants, Rice plants, Oilseed crops, Cotton plants, Arid land, Planting, Cultivation, Developing country application.

Indian agriculture continues to be in early stages of its transformation from subsistence to modern with emphasis on high levels of yield. Already some progress has been made in increasing food production, but much remains to be done to accelerate the change. A key role in this process of transformation is being played by new crop varieties and their associated production technology. This report describes studies undertaken at the Institute that are helping to generate new production technologies. Topics include production technologies for wheat, barley, maize, sorghum, pearl millet, rice, pulses, oilseeds, and cotton; multiple and intercropping systems; dryland cropping; various mission-oriented research projects; evolving new techniques.

NBS/AID/PCSIR (Pakistan Council of Scientific and Industrial Research) Survey on Standardization and Measurement Services in Pakistan
Final rept.
H. Steffen Peiser, Theodore M. Manakas, and Penelope M. Odar. Jun 80, 116p Rept no. NBSIR-80-2051
Grant PASA-TA(CE)-5-71

Keywords: *Standardization, Measurement, *Pakistan, Standards, Temperature Surveys, Meteorology, Units of measurement, Corporations, Technological intelligence, Weights and measures.

Following similar projects conducted by the National Bureau of Standards in other countries, the Ministry of Science and Technology of Pakistan and under it the Pakistan Council of Scientific and Industrial Research invited NBS to organize a six-man international team of experts in selected topics of metrology to advise on the adequacy and needs for standards and measurement services and to comment upon the plan to establish a new laboratory in Islamabad which would be the primary national standards body under the title of National Physical and Standards Laboratory. The team strongly endorsed the NPSL plan, having found every indication that a national focal point for good measurements appeared as a critical need for Pakistan's development. A summarizing letter of conclusions and recommendations is reproduced with other recommendations and relative remarks by visiting team members (Section III). For readers not familiar with Pakistan, Sections V and VI give some background on science and technology in Pakistan.

Desalting Handbook for Planners (Second Edition)
Sep 79, 299p* W60-06013
Contract Di-14-54-0001-8701
Also pub. as OWRT-8701(1).

Keywords: Desalting, *Industrial plants, Handbooks, Technology, Cost analysis, Economic analysis, Distillation, Evaporation, State government, National government, Environmental impacts, Plant location, Ion exchanging, Performance evaluation, Scaling, Design, Electrodialysis, Membranes, Construction costs, Brines, Brackish water, Operating costs, Capitalized costs, *Desalination, Vacuum freeze vapor compression desalination, Vertical tube evaporation, Multistage flash distillation, Reverse osmosis desalination, Water quality, Vapor compression distillation.

This revised Handbook has extensive updating of text material and cost curves, primarily resulting from the most currently published literature from the Office of Water Research and Technology (OWRT). All chapters of this Handbook have been comprehensively revised to reflect latest technology and most recent costing information available to the desalting field. Major sources of data are referenced in the Handbook. Data together with background information and input from OWRT is compiled in a form suitable for water planner's use. The Handbook has been prepared for use in preliminary planning as a source of up-to-date information on the state of development, costs, economics, and applicability of those desalting processes which are available for providing water supply. It is anticipated that the Handbook will fill a particular need in conducting Western U.S. Water Plan Studies. The Handbook is not meant to substitute for the thorough engineering and economic analysis that should precede the decision to build a desalting plant.

Methods for the Determination of Chemical Contaminants in Drinking Water - Participants Handbook
Training manual.
Mar 80, 439p* Rept no. EPA-430/1-80-006

Keywords: Potable water, Water analysis, Manuals, Instructional materials, Chemical analysis, Education, Metals, Silver, Cadmium, Chromium, Lead(Metal), Mercury(Metal), Arsenic, Regulations, Laboratory equipment, Herbicides, Pesticides, Turbidity, Selenium, Inorganic nitrates, Fluorides, Barium, Chlorine, *Water quality, *Water pollution, Drinking water.

This laboratory manual is designed to contain analytical procedures for all parameters listed in the National Interim Primary Drinking Water Regulations (NIPDWR). Some procedures may be carried out by operators or laboratory technicians with little or no experience (chlorine, turbidity, fluoride, nitrate) while other parameters require understanding and experience in using sophisticated analytical equipment (atomic absorption, gas chromatography). Parameters included are procedures for silver, cadmium, chromium, lead, mercury, arsenic, selenium, nitrate, fluoride, barium, chlorine, turbidity, pesticides, herbicides. It is written in a step-by-step format.

IULU-WRC-80-0151, OWRT-A-083-ILL(4)
Contract DI-14-34-001-8015
Prepared in cooperation with Illinois Natural History Survey, Urbana.

Keywords: Carp, *Agricultural wastes, Livestock, *Water pollution, Organic wastes, Plankton, Bacteria, Feces, Food processing, Ponds, Feeding stuffs, *Water quality, *Fishes, *Animal wastes, Hypophthalmichthys molitrix, Aristicthys nobilis, Ctenopharyngodon idella, Cyprinus carpio.

This study evaluated the contributions of four Chinese carps to the biological treatment of organically polluted waters. Results established that through consumption of large quantities of organic matter, both living (plankton, bacteria) and dead (detritus, feces), the four carps in proper densities can significantly improve the quality of organically polluted waters and that properly designed systems would have practical application for small communities, livestock producers, and food processors. Four Chinese carps were added to the four oxidation ponds receiving swine wastes.

Small Hydroelectric Project Manual for Appalachian New York
Mar 80, 259 ARC-78-202/CO-6520
Grant ARC-78-202/CO-6520
Prepared in cooperation with Gibbs and Hill, Inc., New York.

Keywords: New York, *Hydroelectric power, Feasibility, Head(Fluid mechanics), Manuals, Economic analysis, Assessments, Low head hydroelectric power plants.

A major New York State energy goal is reducing dependence on expensive, imported oil. Throughout the Appalachian Region of New York State there are existing dam sites that have potential for development as small/low-head hydroelectric generating plants. These hydroelectric sites include those with abandoned generating facilities as well as those which were constructed for purposes such as flood control, navigation, and water storage. To encourage and assist efforts to develop these sites, this manual has been prepared to help identify those sites that have potential for hydroelectric power generation and to provide guidelines for the performance of preliminary feasibility assessments of the sites. The manual guidelines will assist municipal officials, planners, and others who do not have hydroelectrical engineering backgrounds in estimating the generating capacities and approximate power generating costs of small hydroelectric power installations. Legal, regulatory, and institutional issues affecting small hydroelectric power facilities have also been identified, and discussions of various approaches to these problems are included.

APPROPRIATE TECHNOLOGY ABSTRACTS

ories, Assessments, Education, *Environmental impacts, Developing country application, Deforestation.

This report summarizes recently completed, current, and proposed forestry activities in LDC's. Included are ecological impacts of these activities, constraints in implementation of projects, and some examples of success and failure to be used to design a strategy to deal with LDC deforestation problems. Specific objectives were to provide: An inventory and assessment of the ecological impact of the forest-related activities of the major donors assisting LDC's; an assessment of the constraints on donors dealing with forestry and deforestation; an inventory showing the most critical obstacles or opportunities of the forestry problems of LDC's and which of these to address through research, pilot projects training, or other means; and selected case studies.

Treatability Manual. Volume I: Treatability Data
Jul 80, 1035p Rept no. EPA-600/8-80-042A
Also available in set of 5 reports PC E99, PB80-223043.

Keywords: *Waste water, *Water pollution, Manuals, Inorganic compounds, Metals, Ethers, Phthalates, Nitrogen, Aromatic compounds, Hydrocarbons, Biphenyl, Chlorine organic compounds, Halohydrocarbon, Phenols, Polycyclic compounds, Pesticides, Oxygen, *Water treatment, *Waste water reuse.

Volume I is a compendium of treatability data for specific compounds. Volume I of the Treatability Manual supplies data on specific compounds. It is intended to provide facile reference to physical data on the pollutants, their occurrence patterns, and methods of treatment and/or removal.

PB80-223068 PC A99/MF A01

Treatability Manual. Volume II: Industrial Descriptions
Jul 80, 978p Rept no. EPA-600/8-80-042B
Also available in set of 5 reports PC E99, PB80-223043.

Keywords: *Waste water, Industrial waste treatment, *Water pollution, Standard, Electric power plants, Wood, Textiles, Paints, Metals, Wood pulp, Leather, Copper, Mineral ores, Explosives, Plastics, Machinery, Adhesive, Iron and steel industry, Inorganic compounds, Coal mining, Electroplating, Automobiles, *Waste water reuse, *Water treatment.

Volume II of the Treatability Manual provides generic process descriptions for the industrial categories listed. The objective of this volume is to characterize the wastewaters discharged on a facility by facility basis, prior to treatment and after treatment. The pollution control methods used with the treated final effluent pollutant concentrations are also provided.

PB80-223076 PC A99/MF A01

Treatability Manual. Volume III: Technologies for Control/Removal of Pollutants
Jul 80, 730p Rept no. EPA-600/8-80-042C
Also available in set of 5 reports PC E99, PB80-223043.

Keywords: *Waste water, *Water pollution, Manuals, Screening, Gravity, Separation, Clarification, Flotation, Filtration, Lagoons(Ponds), Activated sludge process, Activated carbon treatment, Nitrification, Electrodialysis, Ozone, Chlorination, Osmosis, Trickling filters, *Water treatment, *Waste water reuse, Rotating disc process, Denitrification, Reverse osmosis.

This volume presents performance data and related technical information for 56 unit operations used in industrial water pollution control. These 56 unit operations include 24 sludge treatment and disposal technologies and 32 generic wastewater treatment technologies classified as preliminary, primary, secondary, or tertiary treatment. Section 2 discusses the rationale used to segregate the 32 wastewater treatment technologies into four classifications.

Treatability Manual. Volume IV: Cost Estimating
Jul 80, 403p Rept no. EPA-600/8-80-042D
Also available in set of 5 reports PC E99, PB80-223043.

Keywords: *Waste water, *Water pollution, Manuals, Cost estimates, Industrial waste treatment, Municipalities, Licenses, Law enforcement, Personnel, *Waste water reuse, *Water treatment.

The objective of the treatability program are: To provide readily accessible data and information on treatability of industrial and municipal waste streams for use by NPDES permit writers, enforcement personnel, and by industrial or municipal permit holders; To provide a basis for research planning by identifying gaps in knowledge of the treatability of certain pollutants and wastestreams; To set up a system allowing rapid response to program office requirements for generation of treatability data.

Roofs for Warm Climates
R. Spurling. 1979, 141p

Keywords: Roofs, Tropical regions, Design, Durability, Construction materials, *Houses, Insulation, Waterproofing, Ceilings, Foreign technology, Developing country application.

This publication is an attempt to deal with the problem, as it concerns the roof, which is perhaps the most important component of all, influencing to a considerable extent the design and construction of the rest of the building. The requirements of flat roofs are considered in this volume, and it is anticipated that later ones will be concerned with pitched roofs. This survey should assist architects and builders in their efforts to improve the general standard of roof construction in warm climate and to develop suitable forms of construction.

Information on Early Childhood
Final rept.
Jun 80, 130p
Grant DHHS-ACYF-90-C-1801

Keywords: *Children, Accident prevention, Immunization, Stimulation, Trends, Parents, Developing countries, *Health, Infants, Benefits, Breast feeding, *Health education, Maternal and child health services, Mothers, Training.

The report is a set of documents on breast-feeding, immunization, prevention of childhood accidents, and early stimulation of infants and children. It contains information addressed to (1) policy makers; (2) academicians; (3) practitioners; and (4) mass media specialists in French, English and Spanish. The essential information includes: the biological value and benefits of mother's milk; the arguments for breast-feeding; and data on trends in breast-feeding for both developing and industrialized countries. The document contains information on programs to educate health personnel and mothers on the best methods of breast-feeding and includes suggestions for a training curriculum. For policy, suggestions are made about legislation, work-

ing mothers, maternity leave, maternal and child health care, and other economic and social measures. Public information is central to changing policies. Charts and bibliography are included. The set is one of ten addressing issues and concerns of children, and may be used for further translation and adaptation for local use for both developing and industrialized countries. Requests for additional information may be directed to the International Children's Center.

Preservative Treatments for Constructional Timber
Current papers
R. Cockcroft. c1977, 13p Rept no. CP-17/77

Keywords: Construction materials, *Wood, Preserving, *Wood preservatives, Fungus proofing, Timber construction, Durability, Foreign technology.

The paper argues that there is a good economic case for considering wood preservation at the design stage when using constructional timber. It explains when preservation is necessary and defines four hazard categories which have been adopted in the new British Standard BS 5268: Part 5:1977. The questions of how long untreated timber lasts, how it may be preserved and which wood preservatives and methods of treatment are available are dealt with in detail. Basements in Housing: A Feasibility Study
Current papers
S. A. Covington. c1978, 15p Rept no. CP-4/78

Keywords: Residential buildings, Basements, Structural design, Cost comparison, Slopes, *Buildings, *Houses, Foreign technology.

A study has been made of the feasibility of providing habitable basements in housing. In the study, alternative methods of constructing basements were examined, basement house plans were developed and a comparison was made, on a cost and amenity basis, of basement houses and comparable non-basement houses. It is shown that, in general, basement houses are more expensive on both flat and sloping sites than the nearest comparable non-basement houses. When measured as cost per unit of 'useful shell area' (i.e. the

APPROPRIATE TECHNOLOGY ABSTRACTS

floor area excluding circulation areas and garage) the basement house is 22 percent to 28 percent more expensive on flat sites and 8 percent to 11 percent more on sloping sites. However, the notional plot area required for basement houses is less, giving scope for higher densities of development and reduced land costs. (Copyright (c) British Crown Copyright.)

A Cost-Benefit Analysis Applied to Foamed Plastics Ceilings
Current papers
I. C. Appleton. c1977, 13p Rept no. CP-50/77

Keywords: *Buildings, Ceilings(Architecture), Structural plastics, Fires, Foam laminated fabrics, Polyurethane resins, Benefit cost analysis, Fire resistance, *Foam plastics, *Cost benefits, Foreign technology.

A few fires in recent years, in particular two fires in Ashtford, Kent in 1973 and 1975, have led to much controversy over the use of foamed plastics as a building material and it has been proposed that such materials be replaced by some more traditional materials, e.g. plasterboard. The cost of such action would be significant. A cost-benefit analysis has been applied to this particular problem. The objective is not to favor one answer or another, but rather to provide the policy makers with the necessary data to assist them in making a rational decision. Sanitation Facilities for Slums and Rural Areas
V. Raman. Dec 75, 28p

Keywords: Sanitation, Facilities, *India, Foreign countries, *Waste disposal, *Water treatment, Public health, Rural areas, Central city, Hygiene, *Sanitaryware, Foreign technology.

Urban slums and rural areas present a dismal picture in respect of environmental sanitation. NEERI is seized

with this problem and engaged in devising ways and means to ameliorate the situation. The means to achieve this have got to be necessarily simple, easy to operate and well within the reach of a household. This brochure presents typical designs of sanitation facilities. It is hoped that the brochure will serve as a guide to Government Departments, local bodies and individuals for successful implementation of the sanitation program. Even though such schemes might not be remunerative on their value, the improved living conditions will indirectly reflect on increased productivity. Moreover, such a program forms a social responsibility to communities.

Instructor's Manual for Allied Health Apprenticeship Training
Jul 80, 41p
Grant DL-20-24-79-44

Keywords: Apprenticeship, Instructional materials, Public health, Students, Nurses, Training devices, Job description, Orientation(Training), Specialized training, Manuals, *Health education, Allied health personnel

Under a research contract from the U.S. Department of Labor's Office of Research and Development, Society for Advanced Medical Systems (SAMS) has developed an Instructor's Manual for Allied Health Apprenticeship Training. The instructor's manual is part of the first phase of a demonstration project of performance-based career development in Allied Health Care Apprenticeship training. Instructors in Allied Health Care Apprenticeship training will find the manual useful in identifying the best methods of instruction, in determining the objectives of the instruction in ways that leave no opportunity for misunderstanding, in evaluating the apprentices' progress, and in diagnosing any barriers to learning that may occur.

Economics, Statistics, and Cooperatives Service, Washington, DC. National Economics Div.
Farmers' Access to Markets
Staff rept.
Allen B. Paul, Robert W. Bohall, and Gerald E. Plato. Sep 80, 61p Rept no. AGESCS-800926

Keywords: *Marketing, Agricultural products, Farms, Commerce, Sales management, *Agricultural economics, Fruits, Vegetables, Dairy products, Eggs, Curn, Cattle, Poultry, Cotton fibers, Beef cattle, Government policies, Cooperatives, Future trading, Hogs.

Many forces in the modern industrial age interact to make farmer access to buyers more difficult. The nature and dimensions of the problems do not remain the same under the continuous march of technology, changing market requirements, changing business practices, and evolving government policies. Farms of all sizes are caught up in the need to adjust their lines of production and modes of selling. Smaller farms usually have the harder time taking advantage of economies of size or in gaining access to major commercial markets but they often have opportunities to improve their lot through direct marketing or local markets.

The Ventilation Required to Permit Growth of a Room Fire

Current papers
M. L. Bullen. c1978, 18p Rept no. CP-41/78

Keywords: Residential buildings, Fires, Heat loss, Ventilation, Heat transfer, Mass flow, *Fire safety, *Buildings, Foreign technology, Room fires, Fire spread.

In this report the heat release and heat loss rates for a fire in a domestic room are compared to establish a criterion for continuing fire growth in terms of the ventilation area. The equivalent ventilation areas for various combinations of leakage components are evaluated and thus the likelihood of fire growth assessed. The limitations of the model are considered and influence of the nature of the fuel briefly discussed.

Home Builder's Guide for Earthquake Design. Guideline 6
Jun 80, 65p HUD/PDR-565
Prepared by Shapiro, Okino, Horn and Associates, San Francisco, CA.

Keywords: Residential buildings, Earthquakes, Structural design, Design criteria, *Buildings, *Houses, Seismic design, Seismic risk, *Earthquake engineering.

This HUD publication, a methodology for seismic design and construction of single-family dwellings, is condensed from a longer publication. The publication was issued following HUD's analysis of damage caused by a moderate earthquake which struck San Fernando, Calif., in 1971 and caused over \$60 million of damage to single-family dwellings. It provides details to ensure that family dwelling units contain structural features which are positioned, dimensioned, constructed, and interconnected properly to resist earthquake forces. It also includes a brief discussion of how earthquake forces affect buildings and presents some cautionary constraints regarding site selection and architectural designs. Discussions of the basic earthquake-resistant structural components, such as diaphragms, shear walls, and connections, are presented. The guide also gives design requirements for general features of dwelling construction, such as foundations, roofs, floors, and walls, and special features. Seismic Zones to which the guide refers are shown on Seismic Risk Maps of the United States. Finally, 46 construction details are recommended for use as supplements to existing buildings regulations to achieve the goal of improved design and construction of dwelling units in resisting earthquake forces. (Author abstract modified.)

Pavement Engineering in Developing Countries
C. I. Ellis. c1979, 34p Rept no. TRRL-SUPPLEMENTARY-537
Also pub. as ISSN-0305-1315.

Keywords: Highways, Developing countries, Design, Cost analysis, *Roads, Flexible pavements, Concrete pavements, *Pavements, Foreign technology.

This report discusses the reasons for the differences between pavement engineering in temperate climates and in developing countries with tropical or sub-tropical climates. The importance of earth and gravel roads in developing countries is emphasized, and commonly used methods of pavement design for bitumen surfaced roads are described and compared. Recent developments in techniques and equipment for improving construction standards and for assessing road performance are described. The use of appropriate forms of contracts is briefly discussed and the need to improve knowledge of the factors which would enable total transport costs to be minimized is emphasized. Before the Well Runs Dry. Volume I. Literature Survey and Analysis of Water Conservation
Final rept.
Jul 80, 240p Rept no. WC-80-1

APPROPRIATE TECHNOLOGY ABSTRACTS

Sponsored in part by Geological Survey, Reston, VA. Resource and Land Investigations Program.

Keywords: *Water supply, Water conservation, Urban areas, Constraints, Prices, Demand(Economics), Project planning, Regulations, Water meters, Waste water reuse, Maintenance, Plumbing, Bibliographies, Cost effectiveness, Education, *Water management, New England, Water saving devices.

This volume summarizes the research that was done to develop a methodology for designing a local water conservation plan. The characteristics and problems of New England water suppliers servicing 10,000 or more persons were identified from a questionnaire. Similar information on suppliers in the rest of the United States was obtained from literature sources. This volume also examines economic concepts which a utility can use to assess and design alternative water conservation programs. The effects of conservation programs on water utility revenues and costs are described. Information on costs, percent of water reduction expected, money saved and other relevant facts are presented in tabular form on the following conservation measures: price structures; regulations; education campaigns and materials; metering; leak detection and repair; pressure reduction; water saving fixtures; and reuse/recycle systems.

Before the Well Runs Dry. Volume II. A Seven Step Procedure for Designing a Local Water Conservation Plan
Final rept.
Jul 80, 185p Rept no. WC-80-2
Sponsored in part by Geological Survey, Reston, VA. Resource and Land Investigations Program.

Keywords: *Water supply, Water conservation, Urban areas, Management, Project planning, Objectives, Constraints, Cost effectiveness, Demand(Economics), Evaluation, Sales, Environmental impacts, Regulations, Design, Prices, Water meters, Education, Flow charting, *Water management, New England.

This volume presents a 7-step procedure for designing a water conservation plan for a supply system. The procedure is flexible, can be used by local water supply planners, and can meet multiple goals including reduced energy use and maintenance of water resources. The procedure is designed to respond to a problem within a supply system that can be solved by water conservation, solely or in conjunction with other water supply management methods. This volume describes how to perform each step in the procedure; lists what information is required to do each step; and provides guidance on which conservation programs are most effective for various goals.

Breeding Improvement of Rubber Yield in Guayule
Progress rept. no. 6
George P. Hanson. Jun 80, 211p NSF/RA-800118
Grant NSF-AER76-24472
Papers presented at the International Guayule Conference (3rd), Pasadena, California, April 29-May 1, 1980.

Keywords: Natural rubber, Hybridization, Plant genetics, Yield, Improvement, Acclimatization, Plant growth, *Rubber, Distribution(Property), Plant ecology, Plant diseases, Tolerances(Physiology), Greenhouses, Seeds, Texas, Mexico, *Guayule.

Summarized are recent studies in the breeding improvements of rubber yield in guayule. Breeders working for the Emergency Rubber Project developed a number of cultivars from which seed was preserved and stored by USDA. These cultivars, augmented by new collections from Texas and Mexico, serve as the germ plasm base for recent breeding programs. Topics covered in this report include: Breeding for high rubber yield and improved adaptation in guayule; observation on the distribution and ecology of native guayule populations in Mexico; harvesting and cleaning of bulk guayule seed; guayule propagation and growth under greenhouse conditions; interspecific hybridization; evaluating resistance in verticillium wilt disease in species of Parthenium; Phytophthora root rot disease and other pests of guayule cultivars; distribution of rubber and comparative stem anatomy of high and low rubber guayule from Mexico; and growth studies of cultivated guayule.

Energy from Biomass: The Simplex Process for the Gasification of Coal and Forest Pulp
Final rept. Jan 79-Mar 80
J. C. Arbo, and D. P. Glaser. Apr 80, 103p
NYSERDA-80-2

Keywords: Coal, *Wood wastes, Biomass, *Gasification, Briquetting, Briquets, Solid waste disposal, Simplex process.

Simplex is a process which simultaneously turns coal and cellulosic materials such as municipal solid wastes, forest pulp and sewage sludge solids into gas. This report summarizes a series of tests performed to investigate the adaptation of the Simplex process to the gasification of forest pulp or wood wastes. A coal and forest pulp briquette formulation, needed for the gasification process, was developed as part of the project. The sample briquettes were successfully turned into gas.

Also available in set of 3 reports PC E17, PB81-110777.

Keywords: *Aquaculture, Cooling water, Fresh water fishes, Thermal pollution, Electric power, Recovery, Trout, Shrimps, Catfishes, Eels, Prototypes, Larvae, Reproduction(Biology), Feeding stuffs, *Waste heat utilization.

A three-year research study on the constructive use of electric generating station waste heat in cooling water

effluents for fish production is summarized. Results of the project indicate not only that it is biologically feasible to rear fresh water shrimp and rainbow trout alternately during warmer and cooler months directly in these effluents, but that it appears to be economically and technically feasible. A prototype commercial waste heat aquaculture facility for the high density culture of both finfish and shellfish is described in a subsequent proof-of-concept study. This volume presents the research objectives, approach, and product use and a technical section outlining the engineering, biological, and economic feasibility as well as product quality.

Grant NSF-ENV76-19854
Also available in set of 3 reports PC E17, PB81-110777.

Keywords: *Aquaculture, Cooling water, Fresh water fishes, Chlorination, Electric power, Seafood, Trout, Shrimps, Catfishes, Eels, Pumps, Circulation, Oxygen, *Waste heat utilization.

A three-year research study on the constructive use of electric generating station waste heat in cooling effluents for fish production is presented. This volume specifically describes that part of the research conducted by Trenton State College. Water temperatures from the discharge canal of the Mercer Generating Station in New Jersey were blended with those from the Delaware River by pumps installed in strategic locations to achieve desired temperatures. The report further describes how recirculation is controlled during chlorination periods by activating and de-activating certain pumps. As a result of this procedure, plus an oxygen injection system, trout density was greatly increased. Techniques for growing and maintaining shrimp larvae and early juveniles in nursery systems are described. Harvest densities of the shellfish did not compare with those obtained for finfish.

Grant NSF-ENV76-19854
Also available in set of 3 reports PC E17, PB81-110777.

Keywords: Cooling water, *Aquaculture, Thermal pollution, Electric power, Fresh water fishes, Shrimps, Trout, Survival, Growth, Metabolism, Coal, Animal behavior, Histology, Mercury(Metal), Temperature, Dissolved gases, Oxygen, Calcium, *Waste heat utilization, Water pollution effects(Animals).

This report is part of a three year research study on the constructive use of electric generating station waste heat in cooling water effluents for fish production. It describes procedures and methods for the commercial culture of the giant fresh water shrimp, Macrobrachium rosenbergii, and the rainbow trout, Salmo gairdneri, in the thermal discharge water of the Mercer Power Plant in Trenton, New Jersey. Discharge water from this plant was used in a preliminary assessment of the survival, growth, and food conversion ratio of these species. It was shown that acute or chronic exposure to power plant intake and discharge water; discharge with or without coal particles; and discharge with or without slurry overflow mix does not significantly affect metabolism, short-term survival, growth, or conversion efficiency of shrimp or trout.

Keywords: *Sewage treatment, Urban areas, Manuals, Sewage disposal, Septic tanks, Sewers, Gravity, Cost analysis, Grants, Allocations, Regulations, Evaluation, Design, Maintenance, Environmental impacts, Population growth, *Community development, Small communities, Alternative planning, Trade offs.

This manual presents a set of procedures for planning wastewater management facilities for small communities and is directed at areas with populations of under 10,000. It is designed to aid engineers and the communities they serve in evaluating various options for treatment and disposal of wastewater, which range from septic tanks and on-site disposal fields to conventional gravit, sewers and centralized treatment plants. Information and techniques are presented for recognizing and evaluating wastewater management problems frequently faced by small communities and for planning the range of facilities which will solve those problems, giving due consideration to costs, community characteristics, and growth management.

Land Biomass Program
Annual rept. 1 Apr-31 Dec 79
K. Jain, Sep 80, 83p GRI-79/0055
Contract GRI-5011-323-0159

Keywords: Biomass, *Wood, *Plants(Botany), *Methane, *Grass, Sampling, Anaerobic processes, Gasification, Chemical analysis, Farm crops, Residues, Concentration(Composition), *Fuels, Land biomass.

This report describes the results of the 1979 efforts on the Land Biomass program. The program is a long range research and development effort and the results described are preliminary. The overall objective of the program is to develop integrated processes including production, harvesting, and conversion, to produce methane from land-based crops that are cost-competitive on a commercial basis with alternative sources of energy. A program plan based largely on short rotation farming of herbaceous and woody biomass is described. Significant land related issues such as suitability and availability of land, and system parameters such as biomass productivity, methane yield, feedstock cost, unit product cost, and overall system efficiency are reviewed. Sixteen candidate species of woody and herbaceous biomass were selected based on certain selection criteria discussed in the report. Samples of these species were collected for composition analysis and to obtain experimental data on methane yields. Both the anaerobic digestion and thermal gasification techniques are being evaluated for the production of methane from biomass samples.

Fire Investigation Handbook
Final rept.
Francis L. Brannigan, Richard G. Bright, and Nora H. Jason, Aug 80, 200p* Rept no. NBS-HB-134
Sponsored in part by Fire Administration, Washington, DC. Prepared in cooperation with Maryland Univ., College Park. Fire and Rescue Inst. Library of Congress catalog card no. 80-600095.

Keywords: Fires, Investigations, Handbooks, Ignition, Combustion, Law(Jurisprudence), *Fire safety, Fire investigation, Arson.

The handbook is a reference tool designed to be used by the beginning or by the experienced fire investigator. How each person uses this book will depend upon a particular need and level of experience. The broad areas covered are: Fire Ground Procedures; Post-fire Interviews; The Building and its Makeup; Ignition Sources; the Chemistry and Physics of Fire and Sources of information. The appendices have sections on how to organize an arson task force; the expert witness; independent testing laboratories; and selective bibliography.

Air Pollution and Agriculture Seminar
Final rept.
J. Hodge Black, Oct 79, 77p ARB-R-79/127
Contract ARB-A7-189-30
Proceedings of a conference held at Davis, California on October 10, 1979.

Keywords: *Air pollution, Meetings, Sulfur, Nitrogen oxides, Ozone, Farm crops, Humidity, *Agriculture, *Vegetables, Vegetable crops, Cotton plants, Trees(Plants), Potatoes, Defects, Plant tissues, Smog, Exhaust gases, Chemical reactions, Hydrocarbons, California, Precipitation washout, Air pollution effects(Plants), Alfalfa.

On October 16, 1979 an all day conference entitled 'Air Pollution Effect on Vegetation in Northern California', was held on the Davis campus of the University of California. A second conference was held in Bakersfield on October 10, 1979, entitled 'Air Pollution and Agriculture'. These conferences were intended to disseminate information gained from several years of research on air pollution effects. Topics covered included sulfur pollutants, problems of nitrogen oxides and ozone, the interaction of pollutants with humidity and crop growth, and the problem of acid rain. Increased discussion of siting coal fired power plants and oil development in some of the State's richest agricultural land made the research and conference timely.

United Nations Seminar of Experts on Building Codes and Regulations in Developing Countries, Held at Taellberg and Stockholm (Sweden) on March 17-24, 1980
Mar 80, 89p ISBN-91-540-3251-2, D18:1980, CHS/R-80-1

Keywords: Building codes, Developing countries, Meetings, Regulations, Quality of life, *Housing, *Houses, *Buildings, Housing studies, Housing planning, Foreign technology.

The Seminar sought to explore ways in which governments and the international community, especially UNCHS, might build upon the recommendations adopted by HABITAT: the United Nations Conference on Human Settlements. Thus, effort concentrated on examining how building codes and regulations can be adapted to meet the basic needs of the poor. As noted in the Preamble, the Seminar recommends: what Governments institute programs for a graduated or a step-by-step improvement in the quality of life of the least advantaged on a continuous basis, thus ensuring that the total population can achieve an acceptable standard of living within a reasonable period of time. Within this framework, ten detailed recommendations were approved and are presented in this report. Each recommendation addresses specific actions that should be taken in respect of building codes and regulations.

Characterization and Land Application of Seafood Industry Wastewaters
Michael R. Overcash, and Dhiraj Pal, Aug 80, 40p
UNC-WRRI-80-142, ORWT-B-100-NC(10)
Contract DI-14-34-0J01-7173

Keywords: Irrigation, Seafood, *Food processing, Industrial waste treatment, Soil properties, *Waste water, *Industrial wastes, Clay soils, Soil texture, Loams, Sands, Nitrogen, Phosphorus, Calcium, Decomposition, Shrimps, Oysters, Crabs, Aerobic processes, Biochemical oxygen demand, North Carolina, Land application.

Soil-plant systems are capable of utilizing seafood industry waste water with little or no pretreatment requirements. Raw waste from seafood processing plants contain substantial plant nutrients including nitrogen, phosphorus and calcium. In calculating a capacity for soil-plant assimilation of waste effluents, land areas necessary for the environment compatible operation of a treatment site were estimated. Four segments of the seafood processing industry: (shrimp, crab, tuna, and oyster) were selected for land treatment evaluation. Bulk volume and composition of waste were characterized for average size plants. One objective was to further demonstrate the utility of a recently developed complete design procedure for land treatment of the entire waste stream from any given industry. Two common soil characteristics were focused on as representing significantly different soil textures: a sandy loam, and a clay loam soil.

Production of Crayfish in Rice Fields
Reprint
Yew-Hu Chien, and James W. Avault, Jr. Apr 80, 7p
LSU-R-80-005, NC 80-30631510

Keywords: *Rice, Crayfishes, *Aquaculture, Ponds, Growth, Volume, Calcium, Soils, Production, Yield, Mathematical models, Field tests, Tables(Data), Louisiana, Reprints.

A study was conducted to determine how rice (*Oryza sativa*) and crayfish (*Procambarus clarkii*) affect each other in the field and to determine optimal stocking rates of crayfish. High rice production correlated with large numbers of adult crayfish present during the rice-growing season. Average crayfish production was significantly higher in rice pond than in control ponds. Von Bertalanffy's growth model revealed that the average maximum length attained by crayfish in rice ponds was greater than in control ponds.

Proceedings of the Symposium on Science, Technology and Development: Views from the Developing World Held at Kuala Lumpur, Malaysia on April 27-30, 1979
 Apr 79, 52p AID-PN-AAG-948

Keywords: Research management, Developing countries, Meetings, *Agriculture, *Technology transfer, *Education, *Information services, *Natural resources, Public health, Developing country application.

The report summarizes the proceedings of the symposium. Draft documents, prepared earlier by groups of scientists, were discussed in group meetings and in plenary sessions at Kuala Lumpur. Each section of this report represents a summary of those draft documents. The proceedings are envisaged as an input from the LDC scientific community into the UN Conference on Science and Technology for Development. The summaries cover eight topics: the concept of development, science education, scientific research, scientific information services, agricultural development programs, health services and medical education, technology transfer, and natural resources. The summaries include the following recommendations: (1) formulation of development programs to meet human needs; (2) integrated exploration, conservation, utilization, and management of natural resources; (3) support for locally relevant science education, teaching aids, and technician training; (4) promotion of development-oriented scientific research through a suitable reward system; (5) provision of primary health care for all people; (6) popularization of diversified food sources; (7) support for scientific and technical information dissemination; (8) provision of an integrated plan of technology transfer covering all aspects of development, production, and marketing.

Proceedings of the Symposium on Battery Systems in the 80s Held in New Delhi, India on February 26, 1979
 Nov 80, 85p

Keywords: Electric batteries, Meetings, Technology, Trends, Lead acid batteries, Industrial plants, Electric vehicles, Solar cells, *Batteries, *India, Foreign technology.

A symposium on 'Battery Systems in the 80s' was held in New Delhi on 26th February 1979, with the objective of systematically presenting not only the status of the battery industry in the country but also to make a realistic assessment of the emerging trends in battery technology. While acknowledged experts in the fields of lead and lead acid batteries from India and abroad presented papers covering comprehensively the different aspects of battery systems, the participants were senior executives, technologists and government officials from user and producer interests. Representing the producer interests were the producers of lead and zinc and battery manufacturers. The symposium afforded an opportunity for not only exchange of information but also for cross-fertilization of ideas.

New Directions Rural Roads
 A.I.D. program evaluation discussion paper no. 2
 Judith Tendler. Mar 79, 82p Rept no. AID-PN-AAG-670

Keywords: Rural areas, *Roads, Construction, Developing countries, Manpower, *Employment.

The paper examines rural road projects in the light of the Agency's 'New Directions' mandate to improve the lot of the rural poor. Attention is focussed in particular on the relative merits of labor-based vs. equipment based construction techniques. Although equipment-based techniques are traditional in donor-recipient projects and often prove administratively or financially more attractive to both, labor-based techniques more greatly benefit the poor by generating employment and by reducing costs.

Policy Directions for Rural Water Supply in Developing Countries
 A.I.D. program evaluation discussion paper no. 4
 Ian Burton. Apr 79, 55p Rept no. AID-PN-AAG-691

Keywords: *Water supply, Rural areas, Policies, Design, Education, Equipment, Maintenance, Questionnaires, Trends, Evaluation, Developing country application.

This report presents ideas and current state of knowledge on the design, installation and maintenance of rural water supply systems throughout the developing world. Evaluation techniques have included questionnaires and protocol methods, quick on-the-spot field investigations, and a few in-depth studies. Greater emphasis is being placed on education, manpower training, institution building, and relations with local communities. Continued operation and maintenance of water supply systems following the departure of foreign personnel is a significant problem. The author recommends that in the future greater priority be given to rehabilitation of existing systems and to consumer satisfaction.

AID-PN-AAG-706
Contract AID-519-193

Keywords: Specialized training, *El Salvador, Project planning, Cost analysis, Requirements, Schools, Employment, Rural areas, *Training, *Education, Developing country application, Curricula.

The document provides the final report on a series of studies conducted by the Academy for Educational Development, under contract with AID, to assist the Ministry of Education of El Salvador and USAID develop a Rural Living Skills Project. The report consists of documents in six specified areas and is prefaced by an introduction which presents an overview of the authors' findings and recommendation. The first document presents a brief history of non-formal education in El Salvador. The second document outlines the structure and function of the Ministry of Education's present training system. The third presents a time-phased training plan for both in-service and participant training for the Rural Living Skills Project. The fourth document outlines the basic theories for a model system of investigation-evaluation of the project. A large part of this latter document is written in Spanish. The two final documents outline the technical assistance and facilities demanded by the project, including budgetary considerations and recommendations on the use of mobile training units.

Small Manufacturing and Repair Enterprises in Haiti: Survey Results
 Steve Haggblade, Jacques Defay, and Bob Pitman.
 1979, 123p MSU/RURAL DEVELOPMENT WP-4,
 AID-PN-AAG-937
 Contract AID/ta-CA-2
 Prepared in cooperation with Pragma Corp.

Keywords: *Haiti, Economic development, Repair shops, Manufacturing, Economic surveys, Maintenance, Demand(Economics), Capital, Fixed investment, Skilled workers, Management, Raw materials, Manpower, *Employment, Income, Businesses, *Small businesses, Industrial structure, Developing country application.

The paper is designed to enhance the ability of AID missions and host country institutions to identify and implement programs and policies that generate off-farm employment and income opportunities benefiting the rural poor. The paper itself presents the results of a survey of small manufacturing and repair businesses (less than 50 workers) in Haiti. After a brief outline of the overall industrial sector, the survey methodology, geographic coverage and data collection procedures are first sketched. A broad overview of the small enterprise sector follows, describing its extent, composition, and basic characteristics. Next, the potential constraints faced by Haitian small enterprises are examined in detail, with specific discussion of issues concerning the demand for small enterprise output, capital constraints, raw materials, and management and skilled labor problems. The report concludes with a summary of the main findings and recommendations.

Energy From Biological Processes. Volume II. Technical and Environmental Analyses
 Sep 80, 228p* Rept no. OTA-E-128

Keywords: Biomass, *Fuels, Technology, *Ethanol, *Bioconversion, Anaerobic processes, Fermentation, *Alcohols, *Agricultural wastes, *Wood, Sources, Thermochemistry, Environmental impacts, Synthetic fuels, Biological processes, Alcohol fuels, Chemical feedstocks.

This volume presents the technical and environmental analyses on which the conclusions in volume I are based. Part I: Biomass Resource Base includes forestry, agriculture, processing wastes, and various unconventional sources including oil-bearing and aquatic plants. Part II: Conversion Technologies and End Uses considers thermochemical conversions, fermentation for ethanol production, anaerobic digestion, use of alcohol fuels, select energy balances, and a brief description of chemicals from biomass. In each case, appropriate technical, economic, and environmental details are presented and analyzed.

Energy from Biological Processes. Volume III. Appendixes. Part A: Energy from Wood
 Sep 80, 387p*

Keywords: Biomass, *Wood, Fossil fuels, Substitutes, Residues, *Fuels, *Forestry, Economic analysis, Technology, Environmental impacts, Scenarios, Synthetic fuels, Biological processes, Chemical feedstocks.

This working paper was written for OTA to assist in preparation of the report, ENERGY FROM BIOLOGICAL PROCESSES. The purpose of the study is to inquire into the feasibility of fostering further substitution of wood for fossil fuels. It is the author's conclusion that there is a surplus of wood that could be used for fuel in substitution for fossil fuels, and, on a renewable basis, this supply could be very substantially increased if it were national policy to do so.

A Bibliography on Rural Development in Tanzania
 James E. Kocher, and Beverly Fleischer. 1979, 85p
 MSU/RURAL DEVELOPMENT PAPER-3, AID-PN-AAG-938
 Contract AID/ta-CA-3

Keywords: *Tanzania, Rural areas, Economic development, Bibliographies, Land use, Demography, Socio-economic status, Finance, *Agricultural economics, Rural sociology, Education, Marketing, Prices, Females, Housing, Developing country application.

The comprehensive bibliography on rural development in Tanzania contains 761 English-language publications, classified by subject area. These works were published mainly during the 1970s. Subject categories include historical perspective on rural development; rural development ideology and policy; physical geography and land use; demography; social stratification and participation; development planning and finance; agricultural and rural development policy and planning; women in development; and ujamaa (villagization), and planned settlement. Other major subject areas fall into the general categories of agriculture, health, education, housing and related infrastructure, rural industry, marketing, and price policy. A list of authors cited and citation numbers are also provided.

Alternative and Banking Institute Delivery to Bolivian Campesinos
 Final rept.
 Wendy DeMegret. 28 Aug 79, 108p AID-PN-AAH-029
 Contract AID-511-186

Keywords: Credit, *Bolivia, Agriculture, Financing, *Agricultural economics, Interest, Farms, *Banking, Farmers, Small businesses, Cooperatives, Loans, Financial services, Developing country application.

The report contains a feasibility study of a project to provide alternative, non-banking agricultural credit systems which can respond favorably to the credit needs of Bolivian campesinos (small farmers). The report is based on a six-week inquiry among the clients and personnel of four Bolivian institutions which extend agricultural credit to campesinos, three alternate sources (savings and loan organizations) and one bank. The primary finding of this study is that the fundamental premise of channeling loans to small farmers through alternate, non-banking sources is sound.

Agricultural Sector Analysis in Thailand. Final Report

Jul 79, 99p DAE-CARD SECTOR ANALYSIS SER-16, AID-PN-AAH-110
 Contract AID/CM/SA-C-73-19, Grant AID/CSD-2824
 Prepared in cooperation with Iowa State Univ., Ames, Center for Agricultural and Rural Development.

Keywords: *Thailand, Developing countries, *Agricultural economics.

This is the final report on the six-year Agricultural Sector Analysis project to improve the ability of the Royal Thai Government (RTG) to make decisions affecting agriculture. Large scale national and regional models that allow comparison of alternatives in policy and developmental programs were constructed and applied. These models provide detailed and operational policy and planning information in order to identify those development potentials/policy alternatives that are complimentary rather than competitive to the economic growth of the country. The models are also used for developing five-year plans in the agricultural sector and are kept operational for continuous analysis of agricultural alternatives and policy inputs. This report contains a description of the five major types of analysis addressed in the project—agricultural sector, rural development, macro-modeling, commodity demand, and transportation and marketing analysis.

Assessment and Recommendations for Community Water Resources Planning
 Oct 80, 132p* OWRT-C-80104-P(8402)(1)
 Contract DI-14-34-0001-8402
 Prepared in cooperation with Environmental Research and Technology, Inc.

Keywords: *Water supply, *Water resources, *Urban planning, Local government, Water conservation, Water distribution, Shortages, Water consumption, State government, Massachusetts, Water demand, Water allocation(Policy), *Water management, Stoughton(Massachusetts).

This study examined local planning in response to water supply shortages and related water quality and land management factors in a case study suburban town (Stoughton) near Boston, Massachusetts. Following initial survey of local water resource issues in the study town, the study team provided planning and technical assistance to aid the development of a local resource management strategy. A six-step planning process was prepared and tested, based on apparent guidance needs in resource planning techniques. It was concluded that local government appears to be the most appropriate body to deal with local resource management issues, but also that it is often ill-equipped to do so.

Value Loss of Hardwood Lumber during Air-Drying
 Forest Service research paper (Final)
 Leland F. Hanks, and Margaret K. Peirsol. 1975, 14p
 Rept nos. FSRP/NE-309, NEFES/81-164

Keywords: Lumber, *Drying, Losses, Hardwoods, Market value, Prices, *Wood, Shrinkage, Thickness, Tables(Data), Air drying.

Dry lumber prices were applied to green and air-dried lumber that was measured with a dry board rule. Values were summed by species, lumber grade, and thickness class. Differences between green and air-dried lumber value have been termed value losses and are given in dollars and in percentages. The percentages have been separated into loss due to shrinkage and loss due to degrade. Data for 10 hardwood species are included.

Strength of Timber Roof Connections Subjected to Cyclic Loads
 Polat Gulkan, Ronald L. Mayes, and Ray W. Clough.
 Sep 78, 137p UCB/ERC-78/17, HUD-0001491
 Contract HUD-H-2387

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: *Buildings, Roofs, Timber construction, Construction, Joints, *Wooden structures, Cyclic loads, Earthquakes, *Earthquake engineering.

The investigations described in this report examined the adequacy of typical timber roof connections used in masonry housing construction in resisting forces developed during earthquake ground motions in the less seismically active areas of the United States. Displacement controlled load tests using both in-plane and out-of-plane forces were performed on five basic types of roof-to-masonry wall connection mockups comprising a total of 19 models. The five types of connections contained load-bearing and nonload-bearing connection details of both gabled truss and flat roof construction. Test results indicated that the connection of the truss rafters to bearing and nonbearing walls was adequate. However, supplementary anchorage devices need to be used for connections employing ledgers, since bolts tend to fail by pulling out of the face shell of the masonry units and ledgers fail easily when subjected to cross grain tension. Graphs, drawings, and photographs are used throughout the report and a total of 19 references are provided. (Author abstract modified).

Hired Farmworker Housing
Staff rept.
Ronald Kampe. Dec 80, 23 Rept no. AGESS-800812

Keywords: Residential buildings, Farms, *Houses, Market value, Water services, Plumbing, Leasing, Sewage disposal, *Housing, Agricultural workers, Farm workers, Migrant workers.

The typical home of a hired farmworker, compared with a rural farm and nonfarm home, was more likely to have fewer rooms, be part of a multiunit structure (although most were single-unit structures), and be connected to a potable water source and a sanitary sewage system. Farmworkers' homes had lower estimated resale values and rented for less than did rural nonfarm homes but hired farmworker housing were about as likely to have complete plumbing facilities as were rural farm homes. Temporary housing available for migrant workers was typically less desirable than permanent farmworker housing.

A Comparison of Four Techniques for Producing High-Grade Furniture Core Material from Low-Grade Yellow-Poplar
Forest Service research paper (Final)
Philip A. Araman. 1978, 12p Rept nos FSRP/NE-429, NEFES/81-181

Keywords: Lumber, *Furniture, Defects, Quality, *Wood, Yield, Cost analysis, Poplar wood.

Four methods of converting low-grade yellow-poplar lumber into high-grade furniture core material (lumber core) were compared. High-grade core material is used in tops, shelves, doors, and drawer fronts and only minor defects are allowed. Three gang-rip first and the conventional crosscut-first manufacturing sequences were evaluated in combination with 1 Common, 2A Common, and 2B Common lumber.

Food Potential of Aquatic Macrophytes
Peter Edwards. Mar 80, 55p Rept no. ICLARM STUDIES AND REVIEWS-5
Prepared in cooperation with Asian Inst. of Tech., Bangkok (Thailand). Also pub. as ISSN-0115-4389.

Keywords: Food production, *Aquatic plants, *Plants(Botany), *Algae, Ferns, Protein, Feeding stuffs, Nutritive value, *Food supply, Fertilizers, Aquaculture.

A review is presented of the pathways in which aquatic macrophytes may be involved in the food production process, directly as human food, as livestock fodder, as fertilizer (mulch and manure, ash, green manure, compost, biogas slurry), and as food for aquatic herbivores, such as fish, turtles, rodent and manatees. An attempt is made to identify the strategies which may have the greatest potential at present. The following research areas are suggested as worthy of attention: protein content and yield of Ipomoea aquatica and Neptunia oleracea, two vegetables which grow year round in the tropics and can be propagated from cuttings; protein content and yield of various types of duckweed in the tropics as a function of different concentrations of various organic wastes; Azolla and filamentous blue green algae as biofertilizers; composting aquatic macrophytes and the use of the compost as an organic fertilizer in fish ponds; aquatic macrophytes in biogas production and the use of the slurry as an organic fertilizer in fish ponds, and the feasibility of stocking herbivorous fish in irrigation systems with large aquatic macrophyte populations.

Improved Sanitation Practice for Control of Dutch Elm Disease
Forest Service research paper (Final)
Jack H. Barger. 1977, 8p Rept nos. FSRP-NE-386, NEFES/81-218

Keywords: *Plant diseases, Sanitation, Surveys, Dutch elm disease, Disease control, Ulmus americana.

In Detroit, Michigan, 12 plots, each containing about 600 American elm trees, *Ulmus americana* L., were subjected for 3 years to intensive and conventional sanitation treatments to control Dutch elm disease. In the intensive treatment, three disease surveys were conducted each year; each followed by tree removal within 20 working days. In the conventional treatment, one survey was conducted each year, and diseased trees were removed in late fall and winter. Results showed that the intensive sanitation treatment was significantly better than the conventional treatment each year.

Septage Management
Final rept. Jul 75-Apr 77

Joseph W. Rezek, and Ivan A. Cooper. Aug 80, 140p
EPA-600/8-8C-032
Contract EPA-68-03-2231

Keywords: Sludge disposal, Design criteria, Management planning, Substitutes, Performance evaluation, *Sewage disposal, Equipment, Sewage treatment, *Septic tanks, Sludge treatment, Land disposal, State of the Art.

This report presents state-of-the-art information for implementing cost effective and environmentally sound solutions to the nationwide problem of septic tank sludge (septage) treatment and disposal. Current hauler practices, septage characterization, and regulatory control are presented. Design concepts of full scale and pilot installations are presented for land disposal schemes, for separate septage treatment processes in areas with sufficient septage volumes to support such a facility, and for septage disposal at sewage treatment plants (STP). Actual system costs and environmental and socio-economic acceptability for many actual and proposed treatment schemes are detailed to assist in the selection of the best treatment scheme for a particular locale at the least possible cost. A significant bibliography is presented which embodies most of the pertinent U.S. references on the subject.

PB81-144552 PC A14/MF A01
Transportation Research Board, Washington, DC.
Transportation Technology Support for Developing Countries. Compendium 3: Small Drainage Structures
1978, 325p Rept no. ISBN-0-309-02810-8
Contract AID/OTR-C-1591

Keywords: Highway planning, Drainage, Developing countries, Design, Construction, Maintenance, Hydraulics, Channel flow, Aerial surveys, *Transportation, *Roads, Rural transportation.

Low volume rural roads are perhaps the most crucial element of the transportation system of developing countries. While traffic on such roads generally amounts to just 5 to 10 vehicles per day and seldom as many as 400 (by definition), these roads are often the only link-up remote areas have to health and educational services, information sources, and marketplaces. This document is the third in a series of compendiums designed to assist project planners and technical and administrative personnel with the planning, design, construction and maintenance of low volume roads. This particular compendium focuses on small drainage structures for such roads. It contains eight technical reports, reprinted in full or excerpted, which present some information on general drainage design, but primarily provide technical information on the design and installation of culverts and associated structures.

Transportation Technology Support for Developing Countries. Compendium 6: Investigation and Development of Materials Resources
1979, 249p Rept no. ISBN-0-309-02821-3
Contract AID/OTR-C-1591

Keywords: Highway planning, Construction materials, Developing countries, Soil classification, Aerial photography, Remote sensing, Soil science, Natural resources, Terrain, South Africa, Subsurface investigations, Mines(Excavations), *Transportation, *Roads, Rural transportation.

A key link in rural transportation systems in developing countries are low volume roads--roads which generally carry only 5-10 vehicles per day and seldom as many as 400. This document is one in a series of compendiums designed to improve the access of LDC and donor agency road planners to significant literature on various aspects of low volume road technology. The eight texts selected for inclusion in this compendium focus on the investigation and development of material resources, within LDC's, that would be used in the construction of such roads. Topics covered by the texts include the basic requirements for and comparisons of various soil classification systems, the evaluation of soil patterns, including the use of aerial photography and remote sensing, methods for materials inventory, and technologies for development of materials deposits.

Arizona Univ., Tucson. Coll. of Medicine.
Development and Health in the Tropics. Part I. West Africa
Frank L. Lambrecht. 1980, 168p

Keywords: *Africa, Environments, *Ecology, Agriculture, Animal husbandry, Conservation, *Environmental impacts, Diseases, Parasitic diseases, Public health, Sociology, Housing, Sanitation, Nutrition, Environmental health.

The natural ecological zones in Africa are the result of long evolutionary development with completely interrelated fauna and flora components. The upset of only a few elements in these ecosystems in many instances results in a gradual breakdown of relationships, followed by degradation of the system. Bushfire and floods, the destruction of forest through shifting cultivation, overgrazing of grasslands, followed by large scale soil erosion, have depleted large areas, turning them into marginal lands of poor agricultural or pastoral potential. Moreover, these lands often develop into acacia bushland suitable to the tsetse fly, carrier of human and animal trypanosomiasis which further decreases the opportunity for reoccupation.

Appropriate Technology for the Bolivian Campaign: A Background Social Feasibility Study
Leslie A. Brownrigg, Inge Maria Harman, and Roger Neil Rasmike. 2 Nov 79, 162 AID-PN-AAH-032
Contract AID-511-193-T

Keywords: *Technology assessment, *Bolivia, Social organization, Agricultural engineering, *Agriculture, *Food processing, *Energy, *Water use, *Housing, Demography, Population(Statistics), Migration, Households, Organizations, Production, Rice, Corn, Public health, Social change, Culture(Social sciences), Resource allocation, Food processing, Farmers, Developing country application.

The report presents research data relevant to the design of an appropriate technology project in Bolivia. Parts II and III of the report are studies of the Yura and Huaytu communities in Potosi and Santa Cruz, respectively. These two sections are divided into discussions of social organization, current technology and production, and recommendations for the proposed appropriate technology project. Recommendations concerning specific types of appropriate technology to be promoted are presented by subject area--agriculture, food processing, energy, sanitation, diet, water, and housing. Specific technologies for these subject areas are included in the appropriate technology sections of the Yura and Huaytu community studies. A 21-item bibliography of references cited (1951-1978) is appended to the report.

Instructional Technology and Learning Resource Center-Based Community Education
James W. Brown. 15 Dec 77, 202p AID-PN-AAH-019
Grant AID/1A-G-1169

Keywords: *Education, *Latin America, Communities, Developing countries, Professional personnel, Paraprofessional personnel, Instructors, Surveys, Bibliographies, Mass media, Developing country application.

The report presents excerpts from a survey of literature and descriptions of nonformal community education activities involving specific uses of media for various educational and informational purposes. In addition, recommendations and media utilization techniques and procedures having special application to the Learning Resource Center-Based Community Education Project (LRC-BCES) are also included. It is intended that this paper assist paraprofessional and professional personnel who may be employed in the LRC-BCES programs in Latin America. Though not exhaustive, the survey of literature consists of a fair sample of journalistic opinions, reports of actual experience, and, where available, of field-based objective studies of several different kinds. Three appendices are provided to facilitate the researcher's further study of this topic. Finally, a bibliography of 200 entries (1964-1978) lists all items consulted in the preparation of this study.

Fire Safety of Wood-Burning Appliances, Part 1: State of the Art Review and Fire Tests, Volume 1 and Volume 2
Final rept.
Richard D. Peacock, Efrain Ruiz, and Roberto Torres Pereira. Nov 80, 80p Rept no. NBSIR-80-2140

APPROPRIATE TECHNOLOGY ABSTRACTS

Sponsored in part by Department of Energy, Washington, DC.

Keywords: *Stoves, *Wood, *Fire safety, Fire tests, Chimneys, Flues, Heating equipment, Heat transfer, Wood burning stoves.

A series of 18 full-scale tests was conducted in an instrumented test room using five different wood-burning appliances. These tests were designed (1) to establish typical operating conditions including temperatures on the appliances, chimneys, and adjacent combustible surfaces; (2) to study the effects of a variety of combinations of appliance design, clearance to combustibles, and room construction on temperatures on adjacent combustible surfaces; and (3) to compare these measured values with theoretical predictions of wall surface temperature. Additional tests were conducted to compare a standardized fuel source with typical oak logs. A review of literature related to wood-heating safety included in this study revealed that current codes are based on data almost 40 years old. The results of these tests point out some areas where the codes should be modernized to accurately reflect the newer appliances and construction techniques.

Text in Spanish. Library of Congress catalog card no. 79-87957. Prepared in cooperation with Mississippi State Univ., Mississippi State. Seed Technology Lab.

Keywords: *Seeds, Harvesting, Storage, Farm crops, *Central America, *Panama, *Caribbean, Developing country application.

This document, written completely in Spanish, contains the proceedings of a two week international seminar on seed technology for Central America, Panama and the Caribbean. The seminar was sponsored by the Grain and Seed Research Center of the University of Costa Rica and the Seed Technology Laboratory of Mississippi State University, and was held in August, 1978. The purpose of the gathering was to develop a better comprehension of seed technology theory and to increase the participants' practical knowledge in the areas of seed production, processing, analysis, drying, storage, and distribution, including important considerations of a socioeconomic nature. In order to achieve these objectives, 75 hours of conferences and practical workshops were conducted in the areas of: (1) the organization and development of a seed program; (2) the fundamentals of production harvesting, analysis, processing, storage, distribution, and marketing; and (3) analysis of the economic feasibility of the different program phases and their administration. This volume begins with an overview of the seminar, its objectives, structure, topics covered, schedule, participants, and the professors who led the sessions. Next, 20 conference papers are presented which cover the whole spectrum of topics addressed during the two week proceedings. The concluding section reviews some of the practical workshops which took place in laboratory and in processing plant settings. A bibliography of books and reference works for seed specialists is appended.

Selected Bibliographies and State-of-the-Art Review for Health Manpower Planning
R. J. Staff. 1979. 83p DHEW/PUB/PHS-79-50092, AID-PN-AAH-123
Prepared in cooperation with Plog Research, Inc.

Keywords: Bibliographies, Developing countries, Medical personnel, Manpower utilization, Rural areas, Reviews, Abstracts, Assessments, Foreign countries, *Health manpower, State of the art, *Health planning, Health services.

This literature review and selective, annotated bibliography, the third volume in the international Health Planning Series, contains nearly 400 references in the field of health manpower planning in developing countries. The review of literature is organized into three categories, the assessment of supply, demand, and balance behaviors. Each category is further divided into specific topics, accompanied by a list of authors published on that topic, which is contained in a subsequent chapter. An assessment of supply behavior includes topics analyzing the supply of manpower to the health field. Topical discussion on physicians, nurses, midwives, health teams, technicians, dentists, health center staff, medical education, health training, and productivity is also included. Assessment of demand behavior includes topics of demand analysis and projection and economic constraints. Finally, the assessment of balance behavior, one author's term for administration and management, deals with organization, distribution, access utilization, planning, and evaluation. The selected bibliography contains 224 entries presented alphabetically. The dates of all publications range from 1958 through 1978.

Experimental Macroalgal Mariculture
Quarterly rept. no. 5, 1 Jul-30 Sep 80
M. Neushul. Nov 80, 40p NSF/RA-800335
Grant NSF-PFR79-11715

Keywords: *Algae, *Aquaculture, *Coasts, Irrigation, Plant growth, Fertilizers, Plant nutrition, Oceanographic data, North Pacific Ocean, California, Macrocyctis.

Recent efforts and the continuing environmental monitoring of oceanographic conditions are reported. The growth of farmed macroalgae has been enhanced by employing nutrient irrigation. Growth rates for the agarophyte, Gelidium, were maximally 1.26 percent/day for fertilized plants during the low-nutrient period. These plants were provided with 0.18gm of fertilizer per day per plant. This is the highest yield obtained to date for nutrient irrigated plants. The growth of Macrocyctis was very rapid. Plants grew at 2.9 to 3.8 percent per day. The seed stock was obtained from stored gametophytic cultures in the laboratory. It is now comparatively easy to make controlled crosses and propagate, plant, and grow Macrocyctis in the sea.

National Crop Model of Thailand
Arthur L. Stoecker. Mar 79, 200p DAE-CARD SECTOR ANALYSIS SER-15, AID-PN-AAH-112
Contract AID/CM/SA-C-73-19, Grant AID/CSD-2824
Prepared in cooperation with Iowa State Univ., Ames. Center for Agricultural and Rural Development.

Keywords: *Thailand, *Agricultural economics, Developing countries, Planning, Food supply, Growth, Economic factors, Surveys, Forecasting, *Crops, Foreign technology.

The purpose of this report is to provide a semi technical description of the crop model, the assumptions and the results of a study which provided guidelines for Thailand's Fourth Five-Year Agricultural Development Plan. The study is primarily concerned with the productive capacity of Thai agriculture relative to food needs of a growing population and relative to alternative levels of exports. Problems of income and employment are further compounded by a declining area of unexploited croppable land.

Rural Development in Costa Rica
Jeffrey Ashe. c1978, 111p Rept no. ISBN-0-89192-194-X

Keywords: Rural areas, Farm management, *Costa Rica, Farms, *Agricultural economics, Production, Agricultural products, Farm processing, Industries, Land use, *Employment.

The study finds that small farms generate between three and four times more employment per hectare than large farms and are generally as productive as medium and large farms. This points the way for a program aimed at intensified agriculture production, primarily by moving away from using land for pasture to use for annual and perennial crops and by encouraging technologies appropriate for efficient production on the smaller farms. It is essential that this intensified agricultural production be complemented with small-scale industries throughout the rural areas, especially those which process the produce of small farms, thus insuring steady markets and better prices. The report is divided into chapters on Population and Migration, Employment, Land Use, Land Distribution and Agricultural Production.

Microbusiness and Employment in Central Maine: A Summary
John C. Hammock, and Gerard R. Dodd. c1979, 77p

Keywords: *Employment, Maine, Unemployment, Marketing, Subsidies, Economic assistance, Salaries, Fringe benefits, Credit, Technical assistance, Opinions, Central Region(Maine), *Small businesses, Entrepreneurship.

In spite of unprecedented growth in national development, the more isolated urban and rural areas of the United States continue to face stubborn problems of unemployment and underemployment, increased dependence on government subsidies and the flight of skilled laborers, entrepreneurs and youth to the large cities. This study explores micro-business marketing, employment, salaries and benefits, credit use, credit needs, technical assistance, and opinions of micro-business owners.

Assisting the Smallest Scale Economic Activities of the Urban Poor. PISCES: Program for investment in the Small Capital Enterprise Sector Phase I
Jeffrey Ashe. 1980, 114p

Keywords: Low income groups, Urban areas, Developing countries, Economic assistance, Credit, Community development, Economic development, Entrepreneurship, *Small businesses, Industrial development.

The need for assistance to the smallest of entrepreneurs, many of whom could apply these resources profitably, is clear. However, without an understanding on the part of donors of this group's special circumstances, constraints, and potential, the smallest of entrepreneurs will almost certainly never receive the wherewithal to help themselves. This report examines the characteristics of micro-enterprises, paying close attention to their role and importance in the urban economy. It then classifies methods of assisting these enterprises and describes the projects observed. Finally, the report summarizes the lessons learned about direct assistance methods and discusses their implications for donors and practitioners.

Firewood Crops: Shrub and Tree Species for Energy Production
Final rept.
1980, 50p* Rept no. CIR/BOSTID-80/27
Contract AID/csd-2584
Library of Congress catalog card no. 80-83796.

Keywords: *Wood, *Fuels, Developing countries, Trees(Plants), Shrubs, *Forestry, Indexes(Documentation), Tropical regions, Arid land, Semiarid land, Descriptions, Photographs, Listings.

APPROPRIATE TECHNOLOGY ABSTRACTS

More than one-third of the world's population depends on wood for cooking and heating. Eighty-six percent of all the wood consumed annually in the developing countries is used for fuel, and of this total at least half is used for cooking. In the face of global concern over the dwindling supply of firewood, the rate of forest decimation to provide basic human necessities in developing countries is alarming. This report suggests potentially significant fuelwood candidates for introduction to suitable environments. Primary emphasis is on species suitable for growing firewood for individual family needs. However, species suited to plantation cultivation for fueling small industrial factors: electric generators, and crop driers are also considered.

Rice Production: A Training Manual and Field Guide to Small-Farm Irrigated Rice Production
Information collection and exchange reprint series
Michael L. Morris. Jul 80, 104p Rept no. REPRINT R-40

Keywords: Cultivation, Rice plants, North Africa, Manuals, *Irrigation, Plant growth, Morphology, Plant reproduction, Fertilizers, Seeds, Pest control, Plant diseases, Weed control, Harvesting, Storage, Drying, *Rice, *Sierra Leone.

This manual presents a simple, step-by-step description of irrigated rice production in Sierra Leone. It is geared specifically to the role and needs of Peace Corps Volunteers. Placed in rural areas throughout the country, Volunteers work with local farmers as advisors, co-workers, and friends in helping introduce a new farming technology: water control agriculture. As extension agents, their role includes surveying undeveloped swamps, designing effective water control systems, and teaching farmers productive and appropriate rice cultivation practices.

Primary School Arts and Crafts: Developing Manual Skills, Lesson Plans, Classes I thru VI
Information collection and exchange reprint series
Mildred Douglass. Oct 80, 135p Rept no. REPRINT R-37

Keywords: Crafts, Instructional materials, *Children, Creativity, Manuals, National government, *Education, Peace Corps.

This book, a lesson plan manual, is designed to be of assistance to primary school teachers who have had little training in Arts and Crafts, and for use in teacher training colleges. The book is not meant to be rigid or exhaustive. Lessons have been suggested for class levels in groups of I to III and IV to VI or for all classes. However, if some lessons appear too difficult or too simple for the suggested classes, they may be used in any manner the teacher chooses. For children who have never had any craft work, the simplest lessons would not be too easy. The teacher should feel free to improvise, change or vary the lessons.

An Analysis of the Characteristics of Households, Household Size, Household Heads and the Relationship within the Households
G. M. K. Kpedekpo, K. Asuming, S. N. Blumenfeld, F. K. Wurapa, and D. W. Belcher. Mar 75, 31p MONO SER-8, AID-PN-AAH-261
Prepared in cooperation with California Univ., Los Angeles. School of Public Health.

Keywords: *Ghana, Education, Characteristics, Surveys, Rural areas, Ethnic groups, Statistical data, Demography, *Birth control, *Health, Foreign technology, Households, Health statistics, Marital status.

This analytical survey, containing extensive data collected on the patterns of home life in Ghana, has been compiled for use as a comprehensive rural health and family planning project. The Danfa region, in which this project is conducted, has been divided into four survey areas and includes the survey of approximately 50,000 rural inhabitants ranging 10 to 50 miles from Accra. Topics of the demographic survey include: characteristics of households and houses; relationships within the households; characteristics, and marital and occupational status of heads of households; and characteristics of heads of households of selected ethnic groups by religion, occupation, and relationship to head of household. Statistics are presented in tabular form by subarea, with short, narrative summaries analyzing the results under each topic. Extracted from the concluding section summarizing the main findings, it was demonstrated that while the average size of a household varies little between the four project areas (4.1 in Area II to 5.4 in Area IV), the average number of persons per house varies considerably, ranging from 5.9 persons per house in Areas II and III to 13.0 persons per house in Area IV. Additionally, farming and fishing are the primary occupations for all areas, but these activities vary in proportion from one area to the next. Heads of households tend to be male in both single and multiple member households; female heads of households suffer more frequently from divorce and widowhood than their male counterparts.

Motivational Structure and the Transfer of Technology
Hilgard S. Schoeman. Feb 79, 33p
Sponsored in part by Universidad Centroamericana Jose Simeon Canas, San Salvador (El Salvador). Proceedings of the International Symposium of Engineering Held at UCA on February 19-23, 1979.

Keywords: *Technology transfer, Developing countries, Farm crops, *South Africa, Interpersonal relations, Family relations, Developing country application.

The paper describes a number of case studies drawn largely from the self-governing territory of Garzankulu (South Africa). It outlines and defines the motivational structure of rural Tsonga. The Garzankulu data shows that development experts, particularly those concerned with the transfer of technology require an adjustment of perspectives. It underlines that the transfer of technology should not be a conflict between different kinds of technology, but a scientifically programmed fusion of them.

Estudo Sobre a Vegetacao Aquatica e Marginal Relacionada com a Vida dos Peixes (Study on Aquatic and River Margins Vegetation Related to Fish Life)
Jose Elias de Paula. 1978, 83p
Text in Portuguese.

Keywords: *Fishes, *Fisheries, *Aquatic plants, Feeding stuffs, Brazil, Foreign technology.

This study is part of the Ichthyology Research Project of the Araguaia-Tocantis region. The objective was to identify the aquatic and river margins species which are directly or indirectly related to the fish life, specifically as a source of food for them. In conjunction with the vegetation studies, the stomach contents of 27 fish were analyzed. The results indicate that the vegetation along the river margins is as important as the aquatic vegetation for the fish.

Direct Farmer-to-Consumer Marketing Program Should Be Continued and Improved
Report to the Congress.
9 Jul 80, 52p Rept no. CED-80-65

Keywords: *Marketing, Sales management, Agricultural products, *Food, Farm management, Consumers, Distribution systems, Prices, Sales, Farmers, Energy consumption.

Direct farmer-to-consumer sales offer additional income opportunities for farmers and fresher, cheaper food for consumers. Direct marketing may also reduce energy consumption, help preserve farmland, and decrease the reliance of many areas on out-of-region food sources. The Federal Direct Marketing Program has encouraged direct sales, but it is limited. As it ends in 1980, questions will remain about its overall impact and potential to improve farm viability, consumer satisfaction, and resource use.

The Functional Properties of a Legume Seed (Phaseolus Vulgaris) Protein Concentrate
Guillermo Sao., and Frank V. Kosikowski. Feb 79, 38p

Sponsored in part by Universidad Centroamericana Jose Simeon Canas, San Salvador (El Salvador). Proceedings of the International Symposium of Engineering (2nd) Held at UCA on February 19-23, 1979.

Keywords: Beans, Food composition, Food preparation, *Proteins, Food analysis, Nutritive value, *Food fortification, *Leguminous plants, *Latin America, Developing country application.

The present study was aimed at the production of a protein concentrate from a typical legume seed (Phaseolus Vulgaris) and the study of its functional properties. The leguminous seeds, particularly beans (Phaseolus) constitute traditional foods in the diet of population of tropical and subtropical areas. They are very important sources of protein in the diet of Latin American populations, providing from 20 to 30 percent of the total protein intake, and are second only to corn as a staple food.

Solar Powered Highway Sign

Final rept.
Robert L. Hayden, and Werner Hutter. Sep 80, 59p
CDOH-DTP-R-80-9, FHWA-CO-RD-80-9
Prepared in cooperation with Federal Highway Administration, Washington, DC.

Keywords: Solar power generation, Photovoltaic cells, *Solar energy, *Roads, Highway signs.

A roadside sign was equipped with lights powered by photovoltaic solar panels to improve nighttime visibility and evaluate equipment performance and needs. The photovoltaic panels were found to be reliable and effective for powering flashing lights on a highway warning sign. Cost of the panels is high so their use should be limited to locations where commercial electrical power is not available. Solar electric systems should be carefully designed to minimize costs and produce a reliable system. Sufficient protection for the solar panels should be provided in areas where theft or vandalism might be a problem.

An Alternative to Bridge Painting

R. R. Bishop, and M. A. Winnett. c1980, 19p Rept no. TRRL-SUPPLEMEN; ARY-621
Also pub. as ISSN-0305-1315.

Keywords: Highway bridges, Protective coatings, Girder bridges, Humidity, Corrosion resistance, Maintenance, *Bridges, *Corrosion, Foreign technology.

A novel approach to the protection of the structural steelwork of composite bridges is proposed by physically changing the environment to which the steelwork is exposed. Clean steel does not corrode at relative humidities up to 99 percent if environmental contaminants are absent. It is apparent that the most critical factor affecting corrosion rates in enclosed spaces is pollution by chlorides and sulphur dioxide and not high relative humidity. A small scale experiment has shown that it is possible simply to enclose the already sheltered steelwork of a composite bridge to produce an environment which is contaminant-free and in which corrosion does not take place. It is very reasonable to assume that blast-cleaned painted steel will have a very long maintenance free life in such environments free from contaminants. There is also interesting preliminary experimental work which indicates that the corrosion rate of pre-corroded specimens reduces rapidly when introduced into a contaminant-free enclosure. This concept of steelwork enclosure is novel but if the observations and experiments carried out to date are proved correct then potential savings in maintenance painting could be considerable. Tensile and Compressive Strength of Some Stabilised Road Bases in Kenya

C. R. Jones, and H. R. Smith. c1980, 31p Rept no. TRRL-SUPPLEMENTARY-623
Also pub. as ISSN-0305-1315.

Keywords: *Roads, *Pavements, Africa, Tensile strength, Compressive strength, Moisture content, Sampling, Foreign technology, *Kenya.

This report describes the measurement of the direct tensile and unconfined compressive strength of samples cut from stabilized roadbases in Kenya. The test methods used are described, and the strength of the samples is compared with the performance of the roads. The report concludes that although the bases have lost tensile strength in service, they have not suffered serious structural damage and with routine maintenance these pavements should continue to perform satisfactorily. Small Waste to Ethanol Plants, Phase II
George F. Huff, and M. Clark Fogle. Nov 80, 33p
NAFC-80-16

Keywords: *Ethanol, *Cellulose, Hydrolysis, Economic analysis, Acid treatment, Enzymes, Fuels, Desirability criteria, Performance evaluation, Feasibility, Fermentation, *Automotive fuels, Solid wastes, Alcohol fuels.

The economics of the conversion of waste cellulose to ethanol through acid hydrolysis are estimated at three levels of production: 1 million, 5 million, and 10 million gallons per year of motor fuel grade alcohol. Assumptions and estimating techniques are the same as used in Phase I of the study: the feedstock is the combustible portion of MSW; a waste separation plant is assumed to be nearby; the alcohol plant is assumed to be located inside the fence of an existing operating facility with steam and other utilities available for purchase. The results indicate that, as with the case of enzyme hydrolysis, none of these levels will produce alcohol competitively. It is found, however, that the acid process seems to have a slight edge.

Appropriate Technology and Scaling Considerations for Developing Nations

Harold A. Le Sieur, Jul 80, 47p
Sponsored in part by Universidad Centroamericana Jose Simeon Canas, San Salvador (El Salvador). Paper presented at the International Symposium of Engineering (3rd) Held at UCA on July 25-30, 1980.

Keywords: *Technology assessment, Developing countries, Agricultural chemistry, Agricultural products, Chemical engineering, Raw materials, Fertilizers, Limestones, *Appropriate technology, Developing country application, Waste recycling.

The paper emphasizes the role of the chemical engineer as "promoter" on the basis that most chemical engineers have been raised on the proposition that large scale and high technology are essential for process viability. But some of them do not take into consideration that economy of scale is not always appropriate, feasible or even possible in developing countries. It concludes that appropriate technology may call for high technology in certain cases, but more often intermediate or low technology better fits with available resources. To illustrate, four examples are cited, all based on salvaging waste or underutilized raw materials for the manufacturing of food products or fertilizers. It considers (1) banana waste, (2) the discharged sludge from palm oil processing (agricultural residues), (3) pyrolytic conversion of rice hulls, logging, coconut, oil palm wastes, rubber and bagasse, (4) mini fertilizer generator for farm use (for the manufacture of modest amounts of fertilizer based on small, low quality phosphate and limestone deposits using alternate energy sources).

Remanufacturability and Repairability of Durable Products as Technology More Appropriate for Both Developed and Developing Countries

Charles M. Overby, Feb 79, 45p
Paper presented at the International Symposium of Engineering (2nd) Held at UCA on 19-23 Feb 79. Sponsored in part by Universidad Centroamericana Jose Simeon Canas, San Salvador (El Salvador).

Keywords: *Technology assessment, Developing countries, *Maintenance, Manufacturing, Product development, Design criteria, Labor estimates, Conservation, Waste disposal, Meetings, Recycling.

It is the thesis of this paper that in some ways, technology appropriate to less developed countries (LDC's) could come from technology of the developed countries (DC's) that is more appropriate for DC's in a future world of resource constraints (materials and energy) and environmental constraints. More specifically, this paper explores the idea of durable products which have been designed with remanufacturability and repairability as more important design criteria than presently appears to exist. The majority of this paper is an overview of contemporary remanufacturing activity, issues, and questions in the U.S.A. from both the private sector and governmental perspective.

Trail Suspension Bridge Study. Part A: Effects of Trail Bridges. Volume 1: Introduction, Summary and Recommendations

Final rept.
Jun 78, 99p AID-PN-AAG-446
Also available in set of 7 reports PC E99, PB81-161192.

Keywords: Foot bridges, *Nepal, Developing countries, Construction, Economic analysis, Rural sociology, Social change, Transportation, *Bridges, Developing country application.

This volume presents an overview of an extensive study to develop a set of criteria for the selection of trail suspension bridge sites in Nepal. The study report as a whole is divided into three parts with seven total volumes, of which this is the first. The four remaining volumes in Part A contain case histories of thirteen trail bridges constructed under former USAID projects between 1956 and 1975; the volume comprising Part B discusses the study of traditional suspended bridges built with local initiative and technology in the District of Baglung; and the one volume of Part C presents an annotated bibliography and general information on trail bridges and trails in Nepal. The present volume first sets out the study's objectives and methodology, the latter relying heavily on opinion polls of local penchayat people and government officials, school teachers, porters, traders, and common rural folk. A general discussion of trail bridge construction in Nepal and of the socioeconomic background of the rural hills people precedes the report summary and recommendations.

Trail Suspension Bridge Study. Part A: Effects of Trail Bridges. Volume 2: Case History, Analysis and Findings on Bridges Studied in Central Development Region

Final rept.
Jun 78, 192p AID-PN-AAG-447
Also available in set of 7 reports PC E99, PB81-161192.

Keywords: Foot bridges, *Nepal, Developing countries, Construction, Economic analysis, Rural sociology, Social change, Transportation, *Bridges, Developing country application.

This is the second volume of an extensive final report describing a study to develop a set of criteria for the selection of trail suspension bridge sites in Nepal. The study as a whole was a reaction to the confusion, lack of integration with other development projects, and lack of thought to the social and political aspects of development which have characterized earlier USAID suspension bridge projects in Nepal. These efforts have not proven entirely successful and, on occasion, have even resulted in the misplacement of bridges, with the inevitable consequences of minimal benefits. This volume contains case studies of former USAID trail bridge projects in the Central Development Region of Nepal, including the Karambot, Syabrubesi, Kagune, and Pachuwarghat bridges. The volume is divided into four sections, one for each case study. Each contains an area description and history (including the bridge location history and selection process); analysis and findings of the socio-anthropological, institutional, and economic impact studies, as well as those of the engineering investigations; and illustrative photographs.

Trail Suspension Bridge Study. Part B: Baglung District Bridge Construction Study
Final rept.
Jun 78, 78p AID-PN-AAG-451
Also available in set of 7 reports PC E99, PB81-161192.

Keywords: Foot bridges, *Nepal, Developing countries, Construction, Economic analysis, Rural sociology, Social change, Transportation, *Bridges, Developing country application.

This is the sixth volume of an extensive final report describing a study to develop a set of criteria for the selection of trail suspension bridge sites in Nepal. The study as a whole was a reaction to the confusion, lack of integration with other development projects, and lack of thought to the social and political aspects of development which have characterized earlier USAID suspension bridge projects in Nepal. These have not been entirely successful and, on occasion, have even resulted in the misplacement of bridges, with the inevitable consequences of minimal benefits. This volume contains an examination of traditional suspended bridges built with local initiative and technology in the District of Baglung. Forty such bridges were completed and commissioned for use during the period 1975-1978. At the time of the study, this was the only instance of such a large-scale, organized bridge-building effort undertaken with local initiative and government participation in Nepal, and as such had created widespread interest throughout the country and in foreign agencies like USAID, the United Nations Development Program, the German Embassy, and others. This Baglung District study utilized the case study approach and was based primarily on a review of relevant Nepalese government documents, inspections of bridge locations, and interviews with government officials, panchayat workers, school teachers and local people. The study report is divided into sections containing an introduction and purpose statement, methodology, case history in brief, the socioeconomic background of the district, technology and project background, analysis, and a summary and recommendations. The major conclusion is that this type of local initiative and participation should be encouraged and supported by the Government, which should immediately initiate this type of program on an experimental basis in other neighboring districts.

Trail Suspension Bridge Study. Part C: Annotated Bibliography and General Informations on Trail Bridges and Trails in Nepal
Final rept.
Jun 78, 51p AID-PN-AAG-452
Also available in set of 7 reports PC E99, PB81-161267.

Keywords: Foot bridges, *Nepal, Developing countries, Construction, Economic analysis, Rural sociology, Social change, Transportation, Bibliographies, *Bridges, Developing country application.

This is the seventh and final volume of an extensive final report describing a study to develop a set of criteria for the selection of trail suspension bridge sites in Nepal. The study as a whole was a reaction to the confusion, lack of integration with other development projects, and lack of thought to the social and political aspects of development which have characterized earlier

USAID suspension bridge projects in Nepal. These efforts have not been entirely successful and, on occasion, have even led to the misplacement of bridges, with the inevitable consequences of minimal benefits. This volume contains a 59-item annotated bibliography (1960s and 1970s) on trail bridges and trails in Nepal, consisting mainly of guidebooks/atlasses, bridge project feasibility studies and progress reports, socio-economic studies, civil engineering studies and manuals, and government development plans. General information concerning related Nepalese and foreign institutions; engineers, technicians and other persons who have knowledge of the trail bridge construction projects; steel fabricators; and trekking agencies in Kathmandu is also included. A list of abbreviations used in preparing the report is appended.

A Survey of Agro-Mechanical Technology Applications on Small Farms in Selected Latin American Countries
J. M. Patrick, and R. L. Clark. Feb 79, 24p
Paper presented at the International Symposium of Engineering (2nd) Held at UCA on 19-23 Feb 79. Sponsored in part by Universidad Centroamericana Jose Simeon Canas, San Salvador (El Salvador).

Keywords: Farms, Agricultural engineering, Technology transfer, *Latin America, Central America, Chemical engineering, Return on investment, Employment, Colombia, Costa Rica, Guatemala, Honduras, Cultivation, Irrigation, Production, Harvesting, Agronomy, Meetings, *Agricultural machinery.

The study sought to evaluate the actual and potential role of chemical technologies to increase food production, create more employment opportunities, and increase income for the small farmer in Colombia, Costa Rica, Guatemala and Honduras. The paper includes a limited description of the existing on-farm technologies presently used for crop production, with an emphasis on power sources, tillage, irrigation and harvesting. It is pointed out that tillage operations require the highest energy input of all crop production processes for annual crops; therefore, tillage should be given prime consideration for initial mechanization. The paper provides an interpretative discussion of the actual and potential role of appropriate technologies for the small farmer in the region examined.

Bamboo Pipes for Pressurized Water Systems: The Potential for Home and Agricultural Use
Stanley Lippert. Feb 79, 24p
Paper presented at the International Symposium of Engineering (2nd) Held at UCA on 19-23 Feb 79. Sponsored in part by Universidad Centroamericana Jose Simeon Canas, San Salvador (El Salvador).

Keywords: Water pipes, *Bamboo, Pressurizing, *Water supply, Assembling, *Pipes(Tubes), Foreign technology, Developing country application.

This is a study to determine the feasibility of using bamboo pipes for pressurized water systems in or at home. Procedures were developed for the testing of samples cut from bamboo culms approximately one

meter in length. A field test was conducted in Costa Rica. The test consisted in cutting the bamboo, pressure-testing samples of the cuttings, and developing simple methods of sizing pipe by standardizing end diameters and letting length vary. The feasibility of using bamboo pipes for pressurized water systems was demonstrated with regard to pressure properties and assembly procedures.

The Role of Professional Training in Technology Development
D. J. Billau, and R. J. Sury. Jul 80, 21p
Paper presented at the International Symposium of Engineering (3rd) Held at UCA on 25-30 Jul 80. Sponsored in part by Universidad Centroamericana Jose Simeon Canas, San Salvador (El Salvador).

Keywords: Industrial training, Technology innovation, Professional personnel, Design, Engineering, Manufacturing, Production engineering, Developing countries, Meetings, *Training, *Industrial development.

Manufacturing development does not occur as a natural phenomenon; it requires engineers with vision and creative ability to initiate the process and create the achievement. Technological change introduces the need for a knowledge of a widening range of manufacturing methods, techniques and processes if the most appropriate solutions to the associated manufacturing problems or requirements are to be achieved; the requirements for professional training are widening accordingly. The document illustrates the way in which emphasis can be placed on Design and Manufacture to fulfill particular industrial needs.

Integrated Agriculture-Aquaculture Farming Systems
Conference proceedings
Roger S. V. Pullin, and Ziad H. Shehadeh. 1980, 254p Rept no. ICLARM/CP-4
Proceedings of the ICLARM-SEARCA Conference on Integrated Agriculture-Aquaculture Farming Systems Held at Manila, Philippines on 6-9 Aug 79.

Keywords: *Agriculture, *Aquaculture, Meetings, Rice plants, Fishes, *Poultry, Agricultural wastes, Swine, Ponds, Waste treatment, *Agricultural economics, *Southeast Asia.

Integrated livestock-fish, fowl-fish and rice-fish farming and crop rotation in fishponds have been practiced for centuries in Asia. The integration of aquaculture with livestock and crop farming offers greater efficiency in resource utilization, reduces risk by diversifying crops and provides additional food and income. The immediate objective of the conference was: to provide an overview of integrated agriculture-aquaculture farming systems as currently practiced in a number of Southeast Asian countries; to review available experience and technology; to discuss the social and economic aspects of these systems and identify research and development requirements.

Regional Guidelines for Building Passive Energy Conserving Homes
 Jul 80, 300p* HUD/PDR-355(2)
 Contract HUD-H-2384
 Sponsored in part by Department of Energy, Washington, DC.

Keywords: Residential buildings, Handbooks, Climate, Structural design, Regional planning, Guidelines, Architecture, United States, *Solar heating systems, *Solar cooling systems, *Buildings, Passive solar heating systems, *Energy conservation, Passive solar cooling systems.

This handbook presents and illustrated guidelines for building passive energy-conserving homes in 13 regions of the United States, ranging in climate from the biting cold temperatures of New England to the rainy damp climate of the Gulf Coast area. An introductory chapter defines the concepts of basic climate condition, climatic liabilities, and climatic assets. For each residential climate, a chapter presents guidelines in two sections. The first section provides a brief climate description, includes a map showing the general region, lists the climates liabilities and assets, and provides a more detailed description of regional climatic design conditions. The second section lays out a series of general building principles to aid in energy conservation and includes illustrated ideas on how to apply these principles. Two additional sections of the book discuss methods for heating without mechanical heating and methods for cooling without mechanical cooling. Case studies and photographs are presented of architectural designs using both passive heating systems, such as solar heating, and passive cooling systems, such as natural and induced ventilation systems.

Removal of Phenolic Compounds from Wood Preserving Wastewaters
 Final rept. 20 Nov 78-20 May 80
 Bruce K. Wallin, Arthur J. Condren, and Roy L. Walden. Mar 81, 150p EPA/600/2-81-043
 Contract EPA-68-03-2605

Keywords: *Wood preservatives, Industrial waste treatment, *Water pollution, *Phenols, Chlorine aromatic compounds, Adsorption, Solvent extraction, Reviews, Ion exchange resins, Oxidation, Wood processing, Phenol/pentachloro, State of the art.

Laboratory and pilot-scale studies were undertaken to develop economically feasible technologies for the treatment of wastewaters from wood preserving operations. Of prime concern was the removal of phenol

and its chlorinated derivatives, in particular, pentachlorophenol. Screening analysis of the wastewater indicated that pentachlorophenol was the only chlorinated derivative consistently present in concentrations of approximately 100 mg/l. Treatment technologies investigated for the treatment of these wastewaters included: (1) adsorption; (2) biological oxidation; (3) chemical oxidation; (4) coagulation; (5) extraction; and (6) pH adjustment. Each of the above, along or in combination, was capable of yielding a measurable reduction in the concentration of total phenols and pentachlorophenol in the untreated wastewater. Two technologies yielded consistently high levels of treatment: pH adjustment of the wastewater, followed by adsorption with bentonite clay and final polishing by the polymeric adsorbant, XAD-4; and pH adjustment of the wastewater, followed by extraction with a mixture of No. 2 fuel oil and a co-solvent such as still bottoms from amyl alcohol production.

Using Crop Residues to Produce Alcohol
 William Lockeretz. May 80, 73p NAFC-80-18

Keywords: *Alcohols, Ethyl alcohol, *Agricultural wastes, Resources, *Fuels, Plant residues(Organic), Soil erosion, Cost analysis, Plant nutrition, Refuse derived fuels.

Crop residues are receiving considerable attention as a source of fermentable sugars for alcohol production. Most of the cost of producing residues is associated with the primary crop, i.e., the grain. Using 'cost' in a very narrow sense, the only cost of producing residues is that of the additional harvesting, transportation, and storage operations to bring the residues from the field to the point of use. Moreover, residues can also be used as a boiler fuel. Residues are also valuable in ways not reflected in any market. The most important of these is their critical role in reducing soil erosion from cropland. The relative costs and benefits of using grains and crop residue for alcohol production is a complex question. This report examines three important aspects of the relative benefits and problems of using crop residues to produce alcohol. The first is the gross production of residues in a purely physical sense, and the economic costs of using them. The second main topic concerns the value of crop residues in maintaining soil quality. Finally the policy issues relating to residue use for alcohol, especially the need to insure that such use occurs only when it does not lead to long-term degradation of the nation's cropland are discussed.

Grain Production for Alcohol Fuels
 William Lockeretz. May 80, 87p NAFC-80-19

Keywords: *Fuels, Grains crops, *Agricultural economics, Production, Ethanol, Corn, Wheat, Grain sorghum, *Grains(Food), Income, Food, Prices, Exports, Supply(Economics), Trends, Policies, *Alcohols.

This report provides primarily an assessment of the resource base for producing alcohol fuel from grain. The effect of different levels of alcohol production are discussed with respect to farm income, land conservation practices, food prices, and exports. The economics of ethanol production from the standpoint of feedstock availability and price are comprehensively examined.

Feasibility Study of an Integrated Pest Management Information Dissemination System
 James W. White. 25 Jul 80, 228p*
 Sponsored in part by Council on Environmental Quality, Washington, DC.

Keywords: Information systems, *Pest control, Information centers, Pesticides, Data retrieval, Specialized training, User needs.

Integrated pest management is an approach to pest control which maximizes the effectiveness of natural controls of pest population and reduces the need for application of chemical pesticides. The concept of integrated pest management has been demonstrated to be economically feasible, efficacious, and environmentally effective with specific crops. This study seeks to establish the requirements for, and the feasibility of, an effective system for IPM information dissemination.

Technology Choice in Developing Countries
 Final rept. on Phase 1
 Erik Thorbeck, Jan Svejnar, William Whyte, and Walter Lynn. Jan 80, 115p
 Grant NSF-PRA78-24018

Keywords: *Technology assessment, Developing countries, *Agricultural economics, Agricultural engineering, Economic development, Technological intelligence, Research projects, Technology transfer, Farm management, *Research and development, Industrial technology, Industrial development.

Factors are examined which influence the choice of technology and its effects at various stages of economic development. The prime purpose is to formulate conceptual frameworks for analyzing technology choices (TC). The report presents two conceptual models for carrying out this function and discusses the following areas of concern: ongoing research on agricultural research and development (R & D) with respect to small (poor) farmers; effects that different forms of farm/firm organizations and market structure could have on TC; and efforts to analyze existing economic and engineering approaches and to examine the possibilities for a fruitful interdisciplinary synthesis. Institutional research carried out in countries visited during the first phase of the study is reported with special attention devoted to preliminary assessment of contributions of S & T institutions to TC and industrial development. Major findings and plans for future research are summarized.

Energy and Labor Use by Rural Manufacturing Industries

Rural development research rept.
Edward J. Smith. Feb 81, 27p Rept no. RDRR-26

Keywords: Manpower, *Employment, Rural areas, Manufacturing, Industrial plants, *Industrial development, *Energy, Shortages, Industries, Requirements, Labor estimates, Energy consumption, Energy use.

Energy use was weighed against labor use in 450 manufacturing industries to help judge the effect on jobs of rationing energy during a shortage. In 1975, over one-half of manufacturing energy was used by 32 industries employing less than 5 percent of manufacturing labor. Nonmetro areas, where manufacturing is the largest employer, had over one-third of U.S. employment in industries with a high energy-to-labor ratio, larger than their one-fourth share of all manufacturing employment. Regionally, the South Central and Rocky Mountain States accounted for about one-third of high energy-to-labor employment, but only one-sixth of all manufacturing employment.

Tecnologia Apropriada para Paises Subdesarrollados. (Appropriate technology for Underdeveloped Countries) (2nd Symposium)

c1979, 681p
Text om Spanish.

Keywords: *Technology assessment, Developing countries, Meetings, Technology transfer, Economic conditions, Sociology, Urbanization, Ecology, Education, Political systems, Engineering, *Appropriate technology, Developing country application.

This is the first volume of lectures presented by several scientists from 16 countries of the world discussing their experiences with the problem of acquiring Appropriate Technology in developing countries. The papers are in English and Spanish, in almost an equal number. The objectives are: (1) study the technical aspects related to technology utilization in developing countries; (2) promote the use of those technologies, appropriate to the socio-economic conditions in those countries; (3) look for solutions to technical, ecological and social problems that arise from the application of technologies appropriate to developed countries without critical judgement to developing areas and others. Various topics are included: economy, sociology, urbanism, ecology, education, politics, etc. related to the present knowledge on different aspects of engineering.

Capturing the Sun Through Bioconversion
W. Carey, L. B. Schlieve, and J. Quarles. c1976, 500p* NSF/RA-760273
Sponsored in part by Environmental Protection Agency, Washington, DC., Department of Commerce, Washington, DC., and Department of Agriculture, Washington, DC. Proceedings of a conference held at Washington, DC. on March 10-12, 1976.

Keywords: Biomass, Meetings, Plants(Botany), Fuels, Foods, Technology, Environmental impact, *Solar energy, *Biological energy conversion, *Bioconversion, Chemical feedstocks.

This conference reviewed bioconversion techniques by which solar energy can be stored in plant forms, recovered from organic wastes, and transformed into fuels, foods, and chemicals to help meet mankind's increasing needs. Broad conference statements addressed the gas deficit, the ecology of bioconversion, bioconversion opportunities, and overview perspectives. Presentations on biomass sources covered urban, industrial, agricultural, and forestry wastes. Papers on bioconversion processes/products described gaseous, liquid and solid fuels, related products, and long-range concepts. Overall impacts were discussed with respect to technology assessment, environmental economic/social impacts, and international

aspects. The conference indicated the following major needs: (1) stepped-up pilot projects with emphasis on waste disposal, alcohol fuels, small-scale digesters, and special energy farming; (2) net impact assessment focusing on economic/social and environmental impacts, and (3) international cooperation stressing carefully-related conferences, project-result circulation, and international network of clearing-houses. Prepared in cooperation with Development Planning and Research Associates, Inc., Manhattan, KS.

Keywords: *Ethanol, Biomass, Starches, Sugars, Cost analysis, By products, Fuels, Farms, Design criteria, *Alcohols, *Automotive fuels, Fermentation, Utilization, Feeding stuffs, Solid wastes, Chemical feedstock.

This report describes in substantial detail technical and economic aspects of small-scale ethanol production from on-farm units producing up to 360,000 gallons per year and community plants producing up to 2 million gallons per year. The description of feedstock materials is limited to those containing starches and sugars, not cellulosic materials. Factors influencing the introduction of small-scale ethanol production are evaluated, including the availability and technical capabilities of production equipment. Also discussed are the types and sizes of farms and community operations for which ethanol production is appropriate. The report describes the characteristics of ethanol and its use as a motor fuel, the production and use of co-products, and problems typically encountered by small-scale producers. Information on investment, operation, maintenance and feedstock costs is estimated and analyzed. A sensitivity analysis describes changes in the cost of ethanol production resulting from changes in the major cost elements.

Technology Assessment of Guayule Rubber Commercialization

Final rept.
Kenneth E. Foster, William G. McGinnies, Jonathan G. Taylor, Jean L. Mills, and Ralph R. Wilkinson. May 80, 299p NSF/PRA-7811632
Grant NSF-PRA78-11632
Prepared in cooperation with Midwest Research Inst., Kansas City, MO.

Keywords: Elastomers, Natural rubber, Technology assessment, Economic factors, Land use, Yield, Prices, Plant reproduction, Seeds, Soil properties, Salinity, Soil water, Demand(Economics), Shrubs, Deserts, United States, *Rubber, *Guayule, *Parthenium argentatum*.

A technology assessment has been conducted of the potential commercialization of the desert shrub guayule (*Parthenium argentatum*) as a domestic source of natural rubber for the United States. This report presents synopses of elastomer supply and demand projections during the next 20 years, the state of development of guayule technology, and the driving forces and constraints of guayule commercialization. Also included are the first publication of the development scenarios, projected consequences of guayule

development, and public policy issue-analyses. The study focuses on policy implications of alternative means of guayule commercialization.

Proceedings of the International Symposium on Biological Applications of Solar Energy Held at Madurai Kamaraj University, India on December 1-5, 1978

A. Gnanam, S. Krishnaswamy, and Joseph S. Kahn. c1980, 231p
Prepared in cooperation Madurai Kamaraj Univ. (India), and North Carolina State Univ. at Raleigh.

Keywords: Meetings, *Solar energy, Photosynthesis, Productivity, Nitrogen fixation, Biomass, Models, Risk, *Plants(Botany), Environments, Metabolism, *Bioconversion, Foreign technology.

This book contains the articles presented and discussed during the International Symposium on Biological Applications of Solar Energy held at Madurai Kamaraj University in December 1978. The focal theme of the symposium was to look into the solar option as an alternate source of energy to the traditional commercial forms through biological means. Solar energy harvesting through photosynthetic means for biomass and biofuel production constituted the major thrust of the deliberation. The articles are grouped into eight parts: global and regional aspects of solar energy; photosynthesis and productivity, experimental studies; photosynthesis and productivity, field studies; nitrogen fixation; biomass; extreme environment; model systems; and biofuels and chemicals.

Fabricas de Cemento de Pequena Escala (Small-Scale Cement Plants)

John Sigurdson. 1977, 44p
Text in Spanish.

Keywords: *Industrial plants, *Cement, *India, *China, Portland cements, Shaft kilns, Production, Plant location, Developing country application.

The booklet examines the criteria which would justify the establishment of mini cement plants in developing countries and specifically compares the situation in India with that in China, where more than 57% of cement is produced by small plants. The quality of the cement produced is also discussed and comparisons are drawn between cement from mini cement plants and that of portland cement. A short bibliography is provided as well as designs of vertical shaft kilns taken from a Chinese book on small scale cement plants.

A Solar Heated Fish Hatchery Water Recycling System

Technical completion rept.
Evelyn S. Sawyer, and Philip J. Sawyer. Jul 80, 42p
OWRT-C-80165-R(8811)(1)
Contract DI-14-34-0001-8811
Also pub. as OWRT/RU-81/3.

Keywords: *Waste water reuse, *Solar water heating, Aquaculture, *Fisheries, Filtration, Chemical removal(Sewage treatment), Water consumption, Pumps, Temperature, Tanks(Containers), Growth, Survival, Cost analysis, Trout.

The purpose of this project was to rear smolts, young salmonids large enough for seawater entry, in a water recycling hatchery. High reuse was necessary to overcome temperature and groundwater limitations in coastal Maine and New Hampshire. Four rearing units were operated in a partially underground building. Each unit consisted of a 2,000 gallon fish tank and 500 gallon flooded biological filter, and reared 20,000 to 25,000 rainbow trout to smolt size (4 inches). Water consumption averaged 10 gallon/day/unit compared to 57,000 gallon/day/unit in a flow-through hatchery. Solar heating of water to accelerate fish growth resulted in shortening production time for a 4 inch fish from 18 months to 6 months. Costs/unit were approximately the same as those of a flow-through hatchery.

Integrated Pest Management
Research summary.
Sep 80, 33p Rept no. EPA-600/8-80-044

Keywords: *Pest control, *Pesticides, Insecticides, Insects, Management, Farm crops, Forests, Biological pest control, Federal government.

This Research Summary describes an alternative approach towards pest management—an approach that takes into account both the necessity and the danger of pesticides. Integrated pest management involves the carefully managed use of multiple pest control tactics. It is a highly effective alternative that minimizes the use of chemical controls and maximizes the use of natural processes, thereby avoiding many of the problems associated with pesticides use.

Safe Disposal Methods for Agricultural Pesticide Wastes
Final rept.
Charles V. Hall, James Baker, Paul Dahm, Loras Freitburger, and Greg Gorder. May 81, 243p *EPA-600/2-81-074
Grant EPA-R-804533

Keywords: *Pesticides, *Waste disposal, Sampling, *Agricultural wastes, Linings, Entomology, Bacteriology, Evaporation, Safety, Degradation, Water pollution, Path of pollutants.

A systematic evaluation of disposal systems for diluted waste pesticides was conducted at two Iowa State University experimental farms. One system, located at the Horticultural Research Station, consisted of a 30,000-liter concrete-lined pit filled with a layer of soil between two layers of gravel and equipped with a rain-activated cover. The second system, located at the Agronomy-Agricultural Engineering Center, involved two polyethylene-lined pits. In addition to investigation of these macropit disposal systems, a study was made of 56 covered, vented minipits where additions of pesticides were controlled. Evaluation of the pit disposal systems included detailed chemical sampling of the systems and their surrounding environments, identification and counts of bacterial populations, entomological studies, estimation of pesticide volatilization rates, and evaluation of pit design for efficiency, effectiveness, and convenience of operation.

Water Resources Thesaurus, Third Edition
1980, 137p *OWRT/IT-80/1, W81-02718

Keywords: Thesauri, *Water resources, Subject index terms, Information retrieval, Documentation, Vocabulary, *Information services, Dictionaries, Classifications, Subject indexing.

The third edition of the Water Resources Thesaurus, which represents a major revision of the previous 1971 edition, provides a vocabulary for indexing and retrieving the literature of water resources research and development. The terms in this edition were selected from the more than 105,000 indexing terms used in the 'Selected Water Resources Abstracts'. Some high frequency terms were excluded because they were too broad or ambiguous. Also deleted were the names of specific legislative acts, rivers, oceans, bays, birds, and most chemical terms. Due to changes in retrieval capability, such as text searching, this edition emphasizes terms useful for classifying or grouping specifics because such terms are needed in selecting subsets, but may not appear in the abstract. The Thesaurus has three sections: Thesaurus of Descriptors, Descriptor Words, and Descriptor List. The Thesaurus of Descriptors, the main indexing and retrieval tool, is an alphabetical list of terms interfiled with five types of cross-references: USE, Used For, Broader Term, Narrower Term, and Related Term. Descriptor Works is an alphabetical listing of each significant word comprising a term in the Thesaurus. The Descriptor section contains all approved terms, allowing for quick verification of terms and their spelling.

The Use of Economic Models in Evaluating the Impact of Rural Development and Income Redistribution Programs in the LDC's
Working paper no. 38
Michael J. Applegate. May 75, 95p AID-PN-AAG-784

Keywords: Economic models, Developing countries, Economic development, Rural areas, Income, Agriculture, Technology assessment, *Guatemala, Land use, Social welfare, *Socioeconomic status, Industrial development, Developing country application.

Whether rural development results in a redistribution of income in favor of the poor is an unresolved question in the development literature. This study approaches this question by analyzing the use of existing economic models to evaluate the impact of rural development and allied income redistribution programs in LDC's. In part one, two-sector models of economic dualism are discussed in regard to their implications for improving income distribution between agricultural and nonagricultural sectors and for agricultural development policy. The use of quantitative techniques to measure the effects of changes in the size distribution of income is examined in part two. In part three, some recent attempts to measure the effects of technology and of various inputs, such as credit and technical assistance, are analyzed. The final section presents a dynamic multisectoral model of Guatemala used for measuring the effects both of technological change in the traditional agricultural sector and of a proposed land reform program. A bibliography containing 40 titles in both English and Spanish is also included.

The Microeconomics of Solar Energy
Final rept.
R. T. Ruegg, and G. T. Sav. 1981, 42p
Pub. in Chapter 28 in Solar Energy Handbook, p28, 1-28, 42 1981.

Keywords: Cost effectiveness, Economic analysis, Discounted cash flow, Cost estimates, Design, Size determination, Performance evaluation, *Solar heating systems, Life-cycle cost, Financial incentives.

The purpose of this chapter is to explain and illustrate how the techniques of microeconomic analysis can be used in the design, sizing, and evaluation of solar energy systems. For the purpose of exposition, the focus is on solar hot-water and space-heating systems for residential and commercial buildings. However, the basic concepts and procedures will generally apply to

the analysis of solar energy in diverse applications, e.g., industrial process heat systems, power production, and total energy systems.

Keywords: Information systems, Medical services, Hospitals, Telecommunication, *Television, Utilization, Availability, Rural areas, Communities, Accessibility, Rural health services, *Health care delivery, Health care technology, Quality assurance, Maine, Delivery of health care, Telemedicine, Medical information systems, Franklin County(Maine), Communication networks.

This study examines the efficacy of an innovative system for health care delivery in a rural environment and responses to it by public and private sectors. The system integrates a poverty population into an ongoing fee-based group practice organization on a prepaid basis and simultaneously introduces an interactive two-way television (IATV) to aid the delivery of health services in three geographically remote satellite stations in Franklin County, Maine. The impact of the organization, known as the Rural Health Associates (RHA), and the telecommunication technology on the service population is ascertained in terms of availability, accessibility, quality, and cost of health care. The specific role and performance of IATV in health care delivery in the context of RHA is analyzed. Chief characteristics of the RHA program and primary uses of IATV are outlined. The methodology is presented for implementing the system and consists of basic attitudinal questions to be addressed, sampling procedures, and data collection instruments. Questionnaires in the appendices include a community survey, a community leader survey, a provider study, and an IATV user study.

Un Sistema Economico de Calefaccion Solar para Viviendas. (An Inexpensive Economical Solar Heating System for Homes).
Johnny W. Alfred, Joseph M. Shinn, Jr, Cecil E. Kirby, and Sheridan R. Barringer. Jul 76, 80p*
Text in Spanish.

Keywords: Residential buildings, *Houses, Installing, Manufacturers, Cost analysis, Performance evaluation, *Solar heating systems, Developing country application.

This report describes a low-cost solar home heating system to supplement the home-owner's present warm-air heating system. It has three parts: (1) A brief background on solar heating, (2) Langley's experience with a demonstration system, and (3) information for the home-owner who wishes to construct such a system. Instructions are given for a solar heating installation in which he supplies all labor needed to install off-the-shelf components estimated to cost \$2000. These components, which include solar collector, heat exchanger, water pump, storage tank, piping, and controls to make the system completely automatic, are readily available at local lumber yards, hardware stores, and plumbing supply stores, and they are relatively simple to install. Manufacturers and prices of each component used and a rough cost analysis based on these prices are given for the owner's convenience. This report also gives performance data obtained from a demonstration system which has been built and tested at the Langley Research Center.

Hue Factor - A Measure of Heat Utilization Efficiency of a Mill
Research note
J. S. Parajia, M. Ratna Prabhu, and K. Subrahmanvam. Mar 76, 19p Rept no. ENG-78

Keywords: *Textile industry, Textile processes, Thermal efficiency, Heat loss, Boilers, Fuel consumption, Steam, *Energy management, *India, Foreign technology.

Efficient utilization of heat is a matter of great importance since fuel is becoming progressively more scarce and expensive. In order to assess the heat utilization efficiency of a mill as a whole, certain standards are to be had for steam and fuel consumption. These standards are the norms which on one hand signify an ideal efficiency but on the other, they are also totally practical and achieved under normal working conditions in mills. The first part of this paper therefore, deals with the norms and the second part, the method of computation of HUE factor where HUE stands for Heat Utilization Efficiency. Having defined the HUE factor and described the norms for various processing machines in the first part, Part II deals with the application of these concepts to evaluate the HUE factor of a mill. Various unavoidable fuel losses in a mill are enumerated; the fuel consumption norm is defined and details of how to calculate the HUE factor are explained. Possible uses of the HUE factor approach are also given and methods of improving HUE factor briefly covered at the end.

The Chinese Tallow Tree as a Source of Petroleum Substitutes, Phase I
Final rept.
H. W. Scheld, S. I. Mason, N. B. Bell, A. D. Krikorian, and G. N. Cameron. 28 Feb 81, 136p* NSF/PCM-81003
Grant NSF-PFR80-10567
Prepared in cooperation with Houston Univ. at Clear Lake, New York State Univ. at Stony Brook, and Houston Univ., TX.

Keywords: *Vegetable oils, Crude oil, Trees(Plants), Substitutes, Cultivation, Seeds, Drainage, Salinity, Ecology, *Plants(Botany), *Oil, Environmental impacts, Harvesters, Design, Chemical analysis, Lipids, Fats, Tallow, Polymers, Protective coatings, Graphic arts, Lubricants, Sapium sebiferum, Chinese tallow tree, Underutilized species, Cosmetics.

Growth habits, production, and seed characteristics of the wild Chinese tallow tree (*Sapium sebiferum* (L.) Roxb.) were investigated, since seeds from this tree could be a major source of vegetable fats and oils and a substitute for petroleum. The Chinese tallow tree grows well on poorly drained or saline soil. Seeds were selected for future projects; methods of clonal propagation were investigated; management and the ecological impact of large plantings were studied; and the design of a mechanical harvester was discussed. Chemical analysis of seed components indicates that the seeds contain high proportions of two lipid fractions in the seed oil, and a heavy fat or tallow in the seed coating. Both tallow and oil can be substituted for current commercial products, and the rare estolide fraction of the oil may have special uses in the field of synthetic polymers. Possibilities for use of tallow tree seed oil in the protective coatings, artists' supplies, synthetic lubricants, toiletry and cosmetics, and fatty chemicals industries were discussed.

Development of Mineral Wool from Industrial Wastes. Phase I
Final rept. 1 Sep 80-28 Feb 81
M. Akbar Ali. Feb 81, 48p NSF/ISP-81008
Grant NSF-ISP80-09362

Keywords: *Mineral wool, *Industrial wastes, Solid waste disposal, Coaf, Kilns, *Waste recycling.

The feasibility of using unprocessed industrial wastes to produce mineral wool was investigated by literature and patent searches and by experimental production of mineral wool. Slag ash from coal burning utilities and cement kiln waste from cement companies were combined in batch formulations having acid to alkali ratios of 0.8 to 1.2, then melted, fiberized, and analyzed for physical, thermal, chemical, and optical properties. Cement kiln waste added to the slag ash in controlled quantities served as a fluxing agent, and lowered the melting point of the slag ash from 2800 degrees F to 2500 degrees F. The softening point of the fibers was between 1250 degrees F and 1480 degrees F. The surface of the fibers was smooth at a magnification of 800x, and X-ray analysis showed no crystallization. The glasses were chemically stable, and possessed the rheological properties necessary to produce mineral wool. Potential applications include using the mineral wool for insulation. Immersion in cement slurry for 24 hours did not affect the fibers, indicating that they might also be used as alkali resistant components for fiber-reinforced concrete.

Management of Phosphorus Fertilizers in Establishing and Maintaining Improved Pastures on Acid, Infertile Soils of Tropical Latin America
W. E. Fenster, and L. A. Leon. 1978, 34p AID-PN-AAG-790
Grant AID/ta-G-1218
Prepared in cooperation with Centro Internacional de Agricultura Tropical.

Keywords: Farm management, *Fertilizers, Agricultural chemistry, *Latin America, Soil chemistry, *Soils, Phosphorus, Forage crops, Soil analysis, Forage grasses, Cost engineering, Developing country application.

The Oxisols and Ultisols (soil types) of tropical Latin America have a high phosphorus fixation, so that substantial amounts of phosphorus must be added to satisfy the requirements of the soils and of the plant species which grow in them. The extremely low levels of both total and available phosphorus therefore create a major problem in establishing and maintaining improved pastures on these soils. Because of these constraints, along with the high unit cost of phosphorus fertilizers, alternative methods of managing improved pastures must be considered. This paper considers four economical methods of improving forage production while still satisfying the phosphorus requirements of the plant.

Although the population of Asia is immense, its land mass vast, and its agriculture varied, one factor, rice, serves as a common denominator for this disparate group of nations and people. This report, concentrating on wetland rice production, assesses how the adoption of improved agricultural technology has influenced agricultural production and income distribution on small Asian farms. Asian rice yields have increased significantly over the past decade through use of modern varieties, fertilizers, agricultural chemicals, and water management techniques. Concern is increasing as to the way the benefits have been distributed among rural families, and its effect.

Whole Soybean Foods for Home and Village Use
International Soybean Program rept.
A. i. Nelson, M. P. Steinberg, and L. S. Wei. May 78, 36p INTSOY-14, AID-PN-AAG-984
Contract AID/ta-C-1294

Keywords: *Food processing, *Soybeans, Developing countries, Oilseeds, Proteins, Humans, Milk, India, *Food products.

Commercial processing of whole soybeans, a high-protein, low-cost food source, must be simplified if soy products are to have wide applicability as a food source for the undernourished of developing countries. This document contains five papers that develop concepts, methods, and processes for home use of the whole soybean for human food consumption.

Developing an Appropriate Grain Storage System
Research rept. no. 8
Dale G. Anderson. 1978, 53p AID-PN-AAG-989
Contract AID/ta-C-1162

Keywords: Grain crops, *Food storage, Farm crops, Grain elevators, Stockpiling, Cost analysis, Cash flow, Guidelines, *Grains(Food), Developing country application.

Grain storage problems in LDCs are becoming increasingly critical. This document discusses this subject by presenting a computerized model for storage planning which was developed by Kansas State University. Since the model is complex, the document's focus is on offering general guidelines in the areas of storage facility size, location, type, and pricing.

Recovery, Utilization and Treatment of Seafood Processing Wastes
L. F. Hood, and R. R. Zail. 1979, 10p NOAA-81042006

Keywords: Seafood, *Food processing, *Waste treatment, Clams, Coagulants, Recovery, *Spisula solidissima*, Sea Grant program.

Shellfish and finfish processors are faced with increasing problems of waste handling and disposal, plant-sanitation, raw material availability and cost, production efficiency, and escalating labor and energy costs.

Conversion of unused waste materials into marketable products not only provides such opportunities but reduces waste disposal problems. The objectives of the work have been threefold: (1) recovery of protein, other nutrients and flavor materials from fish-processing wastes, (2) conversion of the recovered materials into food ingredients or marketable food products, and (3) development of procedures for (pre)treatment the non-recoverable solids. The goal has been to attain total utilization of seafood processing wastes for food or feed.

Evaluation of New Species of Drought Tolerant Plants for Highways
Final rept. Jun 75-Jun 80
Martha A. Conaway, and Robert L. Thayer, Jr. Jan 81, 115p FHWA/CA-80/02
Sponsored in part by California State Dept. of Transportation, Sacramento. Office of Landscape Architecture.

Keywords: *Plants(Botany), Highways, Droughts, Tolerances(Physiology), Germination, Trees(Plants), Shrubs, Vegetation, Climate, Cultivation, Plant reproduction, Performance evaluation, Sites, Esthetics, Weed control, Fruit crops, Attractants, Plant diseases, Insect control, Maintenance, California, *Roads, Highway beautification, Drought tolerance.

This report describes results of a research project (carried out from January, 1973 to January, 1980), intended to identify and introduce into use a wide array of drought tolerant, low maintenance, native and exotic trees, shrubs and ground covers. These plants are specifically intended for highways in those areas of California characterized by a Mediterranean climate. One hundred and seven (107) plant species were planted out between 1975-76 at seven highway and one nonhighway location(s). This final report describes the methods and results of the field tests.

An Annotated Listing of Training Institutions Offering Communications Courses to Developing-Country Personnel
Jeanne Moulton, and Peter Spain. Jul 78, 352p AID-PN-AAH-142
Contract AID/ta-C-1472

Keywords: Specialized training, Developing countries, Telecommunications, Radio broadcasting, Schools, *Training, *Communications, Developing country application, Curricula.

In anticipation of an increasing demand for training in development communications and educational technology for personnel from developing countries, A.I.D. commissioned an overview of U.S. and European institutions offering graduate training in these areas. Course orientations and faculty background germane to developing country needs are highlighted. Emphasis is placed on training in broadcasting and in social science approaches to communication and development. Journalism training or training in the engineering aspects of communications are excluded.

Cooperatives, Initiative, Participation and Socio-Economic Change in the Sahel
Bill Derman. 1978, 82p AID-PN-AAH-310
Contract AID/afr-C-1260

Keywords: Social change, *Sahel, Marketing, *Socio-economic status, Sudan, Agriculture economics, Animal husbandry, Economic development, Low income groups, *Agricultural cooperatives, Cooperatives, Developing country application.

Are the Sahelian peasants and herders, who have resisted change and refused to become market-oriented, irrational. Some theorists of development have reached that conclusion. Others take the viewpoint that there are a variety of paths to development, and that one should expect to find greater variability in the responses of rural peoples. The author of this report aligns himself with the latter viewpoint, emphasizing that the Sahel has never been an unchanging area.

APPROPRIATE TECHNOLOGY ABSTRACTS

Indigenous initiative is just as characteristic of the Sahel as stability and tradition. Examples are cited. The report also focuses on the role of cooperatives and the degree of local participation generated by them. Experiences in Senegal, Mali, and Niger are related through quotations from a number of studies.

An Analysis of the Labor-Intensive Continuous Rice Production System at IRRRI
Research paper series
Y. Morooka, R. W. Herdt, and L. D. Haws. May 79, 44p IRPS-29, AID-PN-AAH-235

Keywords: Planting, Harvesting, *Rice, *Philippines, Production, Land use, Labor, Water consumption, Capital, Yield, Foreign technology, Developing country application.

A thrice-weekly rice planting and harvesting system on 250 sq m plot is evaluated. The system is compared with conventional production systems in the Philippines and elsewhere in terms of production, land use, labor use, labor distribution, water requirement, capital use, and economics of the system. The continuous rice production system (rice garden) efficiently utilizes about twice as much as labor, uses land fully throughout the year, and produces three times the output of conventional two-crop rice production systems.

Determining Superior Cropping Patterns for Small Farms in a Dryland Rice Environment: Test of a Methodology
Research paper series
D. P. Garrity, R. R. Harwood, H. G. Zandstra, and E. C. Price. Jul 79, 14p IRPS-33, AID-PN-AAH-234

Keywords: *Arid land, *Rice, *Philippines, Rotation, Planting, Corn plants, Pests, Tolerances(Physiology), Yield, Field crops, Foreign technology, Developing country application.

A methodology for cropping systems research, proposed in 1975, involved the farmer as an active participant in the research, with test patterns grown on his land under joint farmer-researcher management. Experience with the use of this methodology in developing a dryland rice-based cropping systems test site in the Philippines is discussed. The potential for increased crop productivity in the major dryland rice-producing region of eastern Batangas province, where the predominant cropping pattern involves dryland rice followed by field crop, was studied by testing the impact of these cropping pattern alternatives: following rice with field crops other than the local organic flint corn, an intercrop pattern, and a three-crop-per-year pattern.

Fertilizer Mixing Plant Feasibility Study
M. Terry Frederick, and Robert T. Smith. Nov 78, 106p IFDC-00215-78, AID-PN-AAG-787
Contract AID-511-165T

Keywords: *Fertilizers, Demand(Economics), Feasibility, *Bolivia, Farm crops, Soils, Manufacturing, Cargo transportation, Developing country application.

In August 1978, USAID/Bolivia requested the International Fertilizer Development Center to prepare a feasibility study for a fertilizer mixing plant in Bolivia. Emphasis was to be placed on an analysis of existing and potential fertilizer demand among small farmers. This document presents that study. After an overview of the Bolivian climate, soil, and crop production, current exploitation of Bolivia's major fertilizer raw materials is described. Next, the nation's infrastructure and its influence upon the farming sector are outlined. Succeeding section treats community development programs, extension services, etc. Several conclusions are drawn. A bibliography of English and Spanish sources is included.

Utilization of Phosphate Rock in Tropical Soils of Latin America
W. E. Fenster, and L. A. Leon. Mar 78, 53p AID-PN-AAG-789
Grant AID/ta-G-1218
Prepared in cooperation with Centro Internacional de Agricultura Tropical.

Keywords: *Soils, *Fertilizers, Developing countries, *Latin America, Developing country application, *Phosphates.

The high cost of fertilizers, especially those containing high amounts of phosphorus, is one of the main limiting factors in increasing crop production in tropical Latin America. The direct use of phosphate rock or of some of its low-input altered products would seem to present a logical approach to overcoming this constraint. This paper selectively reviews the literature on soils and phosphorus fertilizer problems in tropical Latin America, identifies objectives for further research, and outlines a research program to meet those objectives. Various charts and graphs and a 51-item bibliography (1943-77) of English, Spanish, and Portuguese language references are also included.

A Compilation of Age-Specific Fertility Rates for Developing Countries
International research document no. 7.
1979, 161p ISP-RD-7, AID-PN-AAH-250

Keywords: Developing countries, Fertility, Africa, Asia, Latin America, Oceania, Census, Surveys, Vital statistics, *Birth control, Statistical data, Age groups, Birth rate, Foreign technology, Health statistics, Natality.

To interpret fertility levels and patterns for a given country, it is useful to examine a consistent set of fertility data. This publication presents a compilation of age-specific and total fertility rates for 126 LDCs of Africa, Asia, Latin America, and Oceania. Rates are shown either directly, as derived from vital registration systems, surveys, or censuses, or as adjusted by various techniques, particularly the Brass fertility technique.

Rural Adult Education and the Role of Mass Media: A Comparative Analysis of Four Projects
Frans Lenglet, and Emile G. McAnany. Aug 77, 68p AID-PN-AAG-834
Contract AID/af-C-1158
Prepared in cooperation with Stanford Univ., CA. Inst. for Communication Research.

Keywords: *Education, Adults, Television systems, Rural areas, Developing countries, *Ivory Coast, Developing country application.

The paper is meant to compare four rural adult education projects that use media as an important component. It describes each project in some detail, giving special attention to the following characteristics: objectives; organization; selection and recruitment of supervisors, monitors and participants; use of communication media; feedback and evaluation systems; impact (insofar as evidence is available) and constraints. Such an examination should provide the reader with a general understanding of how each system operates and its strong and weak points within its own context. Equally important for the reader is the judgement of whether the variety of approaches represented here has anything to offer other countries who are facing similar problems in rural education. A more specific purpose of the paper is to provide decision-makers in the Ivory Coast with a brief analysis of their own Extra-Scolaire project, along with three other approaches to adult education (from Tanzania, Guatemala and the Dominican Republic). Such an analysis should help them reexamine their own efforts in the light of evaluation evidence on their own and other cases.

The Impact of 25 Television Programs on 'Water' Produced and Broadcast by the Ivorian Out-of-School Education Project
Frans Lenglet. 1976, 110p AID-PN-AAG-831
Contract AID/af-C-1158

Keywords: *Education, *Water supply, *Ivory Coast, Television broadcasting, Incentives, Instructions, Rural areas, Motivations, Developing country application.

In an attempt to help villages of the Ivory Coast deal with the water supply problem, especially during the dry season, the Ivorian Out-of-School Education Department broadcast a series of 25 TV programs on water and related issues during the period November 1974 to December 1975. This report evaluates the reach and impact of these programs, which constitute one element of a massive Ivorian Government information and education campaign on hygienic and sanitary measures and the use of drinking water. After a brief introduction, the research design and the evaluation methodology are outlined. Next a discussion of the content of the 25 water programs, their development, and their outreach is presented. The programs dealt with the basic problems of water supply, quality, and

APPROPRIATE TECHNOLOGY ABSTRACTS

pollution, the relationship between contaminated water and disease, and the various possibilities and means to obtain safe(r) drinking water. Three types of objectives were pursued by these programs and by discussion sessions led by local animators following each broadcast: (1) sensitization and information; (2) understanding and learning; (3) incitement to action.

Genetic Analysis of Traits Related to Grain Characteristics and Quality in Two Crosses of Rice
Research paper series
B. Soomrith, T. T. Chang, and B. R. Jackson. Aug 79, 17p Rept nos. IRPS-35, AID-PN-AAH-233

Keywords: Hybridization, *Rice, Developing countries, Plant genetics, Yield, Quality, Breeding, *Philippines, Foreign technology, Developing country application.

A genetic study was made on the rice crosses IR648-3-1-2-3/Gow Ruang 88 and IR648-3-1-2-3/Khao Pahk Maw 148 to determine the genetic components of five grain characteristics and plant type and the genotypic relationship between the two groups of characters. The genetic materials in each cross included the two parents and F1, F2, F3, B2S populations grown in replicated plots. The different types of gene effects controlling selected traits and the independence between the yield component characters and grain characteristics found in this study provide directions in formulating useful effective selection procedures for specific traits or the combination of desired traits in a breeding program.

Aliwalas to Rice Garden: A Case Study of the Intensification of Rice Farming in Camarines Sur, Philippines
Research paper series
Y. Morooka, P. Masicat, V. Cordova, and R. W. Herdt. Aug 79, 26p Rept nos. IRPS-36, AID-PN-AAH-236

Keywords: Production, *Rice, *Philippines, Magnitude, Food, Growth, Land use, Cultivating, Planting, Manpower, Income, Asia, Foreign technology, Developing country application, Luzon(Philippines), Land reform.

Frustration with the failure to achieve national development goals, caused by population growth rates exceeding those of food production, promotes the idea that agriculture in developing countries is static. Close examination often shows exactly the opposite, however. In the Philippines' Bicol region (the southern extreme of Luzon), the traditional system of rice cultivation called aliwalas involved little effort. Rice was transplanted and harvested with little farmwork activity between. After land reform and technological change, some farmers began to intensify their production systems. This case study traces the intensification process for one farmer who began with the aliwalas system in the 1950s and was growing rice continuously by the 1970s. He now employs about twice as much labor as most conventional rice farmers and generates an annual net income of more than P7,000/ha.

Wastewater Treatment by Rooted Aquatic Plants in Sand and Gravel Trenches
Final rept. Aug 77-Aug 79
Pamela R. Pope. Jun 81, 31p EPA-600/2-81-091
Grant EPA-R-805279

Keywords: *Aquatic plants, *Sewage treatment, Municipalities, Sands, Gravel, *Waste water, Harvesting, Effectiveness, Ditches, Reeds(Plants), Manpower, Energy, Equipment, California, Phragmites, Scirpus, Reeds, Bulrush, Secondary treatment.

The objective of this project was to evaluate a patented process developed by the Max Planck Institute (MPI) of West Germany for the treatment of industrial wastes, as an energy-efficient method for the treatment of municipal wastewater. The major goal was to achieve effluents meeting the United States Federal Effluent Standards by this novel biological treatment process that uses a minimal amount of mechanical equipment and does not require a great amount of

manpower for normal operation. An eleven-month study demonstrated that raw screened wastewater applied to the trench system at a rate not exceeding 95 m³/d (25,000 gpd) could be treated to secondary effluent quality. Spatial requirements were about the same as for a septic tank system.

Experience in Selecting, Training and Supervising Interviewers in a Rural Health Project: Danfa Project, Ghana. Danfa Comprehensive Rural Health and Family Planning Project, Ghana
D. W. Belcher, F. K. Wurapa, I. M. Lourie, K. Kwabia, and S. K. Avle. Dec 76, 33p MONO Ser-11, AID-PN-AAH-270
Prepared in cooperation with California Univ., Los Angeles. School of Public Health.

Keywords: *Ghana, Family planning, Recruiting, Specialized training, *Training, *Birth control, Interviewers, Health surveys, Rural health services.

This paper describes the recruiting and training of five classes of interviewers over a 20-month period, when baseline studies were conducted for the project. Following are the recommendations of the authors: (1) Course supervisors should be exposed to field conditions and should conduct household interviews in the same communities where trainees will be working. (2) Trainees should be held in a probationary status until their work is acceptable. (3) By increasing the amount of course time spent in the field, clearly defined instructional objectives for interviewing can be developed and feedback provided to the trainee of his progress toward becoming a skilled interviewer.

Proceedings of the Consultants' Group Meetings on Downy Mildew and Ergot of Pearl Millet Held at Hyderabad, India on 1-3 October 1975
R. J. Williams. 1 Oct 75, 139p

Keywords: *Plant diseases, *Fungi, Meetings, India, Grain crops, Rye plants, Semiarid land, Tropical regions, Grain sorghum plants, Leguminous plants, Nuts(Fruits), *Tolerances(Physiology), Moisture, Humidity, Soils, Rainfall, Yield, Plant genetics,

*Grains(Food), Foreign technology, Claviceps, *Millet, Pulse crops.

ICRISAT, the International Crops Research Institute for the Semi-Arid Tropics, was created to serve a large segment of humanity which has been left behind in modern advances in the sciences of agricultural production. Pearl millet is the major crop able to withstand the moisture stresses so common on the sandier and less moisture retentive soils and of the drier areas of the semi-arid tropics. But their susceptibility to downy mildew and ergot, when they are grown on an extensive scale, have proven to be the major obstacle to the realization of the high hopes aroused by these more productive genotypes. The report describes the problem and progress on this vital problem.

Keywords: Semiarid land, Tolerances(Physiology), *Leguminous plants, *Plant diseases, India, Tropical regions, Soils, Control, Peas, Epidemiology, Fungi, Nuts(Fruits), Peanut plants, Selection, Greenhouses, Laboratories, Bean plants, Foreign technology, Pigeonpea, Chickpea, Rhizoctonia.

The International Crops Research Institute for the Semi-Arid Tropics (ICRISAT) has a mandate to improve three legumes-pigeonpea, chickpea, and groundnut-in the semi-arid tropical regions of Asia, Africa, and Central and South America. These legumes, like others, are affected by diseases; and those diseases caused by soil-borne pathogens are widespread and devastating. In order to review the present knowledge of some of the major diseases of pigeonpea and chickpea, with special emphasis on disease resistance, and to develop recommendations for research priorities leading to better disease control, ten leading scientists from several countries were invited for an in-depth discussion with ICRISAT staff in early 1979. The report discussed this research.

The Kenyan Low Cost Modular Timber Bridge
J. D. Parry. 1981, 41p

Keywords: Truss bridges, Wooden bridges, Structural design, Modular structures, Loads(Forces), Bridge decks, *Bridges, *Wooden structures, Construction joints, Construction costs, *Kenya, Foreign technology.

A novel design of a type of timber truss bridge that has been developed in Kenya is described. The bridge comprises a number of identical timber frames that are assembled into trusses of the required span. Two or more parallel trusses are supported on conventional abutments, and the timber deck rests on top of the trusses. Loading tests carried out on individual frames, on groups of frames, and on complete bridges, have indicated that the design is suitable for bridges ranging

APPROPRIATE TECHNOLOGY ABSTRACTS

in span from 12 m to 24 m required to carry limited numbers of vehicles up to 20t gross weight provided that the deck is accepted as contributing to the structural strength of the bridge. This assumption would not normally be made for bridges of this kind, but in practice measurements show that the deck does contribute significantly to the strength of the bridge. Roof Cooling: An Aid to Textile Air-Conditioning
Research note
S. P. Patel, K. Subrahmanyam, N. Chandran, and J. J. Mistry. May 76, 16p Rept no. ENG/82

Keywords: Textile industry, Air conditioning, *Roof cooling systems, *India.

Two mills installed roof cooling two years ago and a few more during last summer. The system is working satisfactorily in all the mills. All the theoretically anticipated advantages have been born out in their actual experience. The temperature of the roof-top was found to be as high as 140F in summer afternoons because of radiation from the sun. Roof cooling lowers this temperature to about 90F. Roof cooling was installed in several mills, with substantial benefits. Ambient conditions improved in all the mills. The same degree of improvement could have been achieved if a humidification plant of adequate capacity were added to the existing one, but the plant could cost ten times as much as a roof cooling system and its running cost also would be about ten times as that of roof cooling.

Keywords: Developing countries, *Irrigation, Evaluation, Flooding, Improvement, Farms, Water distribution, Distribution systems, Field tests, Losses, Math-

ematical models, Flow charting, Open channel flow, Hydrodynamics, Fluid infiltration, Tables(Data), Developing country application, Border irrigation.

Border irrigation is a method of controlled surface flooding involving a rectangular field bounded by dikes along its longer dimension to restrict the lateral flow of water. This report is concerned with the evaluation and improvement of the graded border type in which there is a gentle and uniform slope in the direction of irrigation. Several different models are described, as are the processes for applying them.

Autonomie Energetique de Villages de l'Inde, Modelisation du Bilan Demande-Ressources, Planification Optimale d'Une Production Unit. (Energy Self-sufficiency in Indian Villages, Model of Demand-Resource Balance Sheet, Mathematical Planning of Optimal Production Unit).
Doctoral thesis

Christine Tournand-Brosset. 24 Jun 80, 175p Rept no. ORDER-692
Text in French.

Keywords: *India, Rural areas, Theses, Mathematical models, Foreign technology, *Energy, Renewable energy sources, Resource development, Energy consumption, Energy models.

The shortage of water and of wood for fuel is examined. Two solutions are considered--centralized production and local production--for the problem of supplying energy to the village. Local potentials, in all sources of renewable energy, are inventoried. An assessment is drawn up, showing the potential for local energy self-sufficiency based on use of renewable sources of energy within the village. A model of energy development and consumption was constructed for self-sufficiency in food and energy; ecology, technology, economics and sociology are taken into account.

Innovative Small Farmer Credit in Nicaragua
Ronald L. Tinnermeier, and Claudio Gonzalez-Vega. 1979, 33p AID-PN-AAH-360
Contract AID/ta-BMA-7

Prepared for the International Conference on Rural Finance Research Issues (2nd), Paper No. 15, held at Calgary, Canada, on August 29-31, 1979. Prepared in cooperation with Colorado State Univ., Fort Collins, and Costa Rica Univ., San Jose.

Keywords: Farms, Credit, Financing, *Nicaragua, *Banking, Finance, Cash flow, *Small businesses, Loans, Developing country application, Financial services.

This document reviews the innovative steps taken in Nicaragua by the Institute for Campesino Development (INVIERNO) to provide credit for low-income farmers. INVIERNO provides a set of integrated services directed towards local needs by dispatching teams composed of an agricultural technical (AGRO-MOC), an input and marketing specialist (CREDEMERC), and a community specialist, to the local Development Center (CEDE). Much of INVIERNO's success

has been due to cutting loan costs. INVIERNO has coordinated its services with other agencies to expand its outreach.

Individual, Family and Village Literacy in Development

Edgar G. Nesman, Thomas A. Rich, and Sarah E. Green. 31 Mar 80, 163p AID-PN-AAH-530
Contract AID/DSPE-C-0040

Keywords: Literacy, Developing countries, Rural areas, Farms, Behavior, Interpersonal relations, *Education, Developing country application.

Literacy has long been considered an important factor in promoting individual change toward more modern behavior. An individual's own literacy has traditionally

APPROPRIATE TECHNOLOGY ABSTRACTS

been the variable investigated--with conflicting results. It has been proposed by several authors that a clearer picture of the importance of literacy to individual behavior change in peasant societies may be gained by investigating the relationship between an individual's membership in a literate group (and the amount of literacy in the group) and his tendency to change his behavior in the direction of more modern practices. It is the purpose of the current study to explore the relationships between an individual's literacy, that of his family and village and his tendency to adopt modern farm practices.

Intercropping in Traditional Farming Systems
N. S. Jodha. 1979, 27p AID-PN-AAH-424
Grant AID/ta-G-1421

Keywords: Mixtures, Farm crops, *India, Rainfall, Sites, Planting, Soil properties, Mixing, *Farming, Grain sorghum plants, Seasonal variations, Tables(Data), Yield, Cotton plants, Developing country application, Vertisols, Castor bean plants.

Though largely neglected by researchers and planners, intercropping is a key element of traditional farming systems. Its superiority over sole cropping has been shown in terms of higher and dependable gross returns per hectare as well as per unit of peak period labor use. Its potential for greater employment is also revealed. Studies show that intercropping is largely a system of small and unirrigated farms.

Jobs for Women in Rural Industry and Services
Ruth B. Dixon. Jul 79, 60p AID-PN-AAH-490
Contract AID/otr-147-79-52

Keywords: Females, *Employment, Developing countries, Rural areas, Productivity, Income, *Women, Developing country application.

Increasing landlessness in combination with other economic and demographic forces has created a compelling need in most developing countries for the expansion of nonagricultural employment in rural areas. Because women tend to be particularly vulnerable to displacement from land and from traditional income-generating activities by the commercialization of agriculture for cash crops and by investment in capital-intensive industries, policies of agrarian reform and rural development will need to design support systems to: raise the productivity of labor in which rural women currently engage; transform subsistence activities into income-generating activities; and create new employment opportunities for women, particularly outside of agriculture. This paper provides new statistics on female labor in 56 countries; and proposes strategies for mobilizing rural women for employment.

Dryland Agriculture in Winter Precipitation Regions of the World: Status of the Technical Art
1979, 218p* AID-PN-AAH-329

Keywords: Semiarid land, *Arid land, *Deserts, *Agricultural economics, *Agriculture, Grain crops, Prices, Manpower, Farm crops, Dry farming, Winter, Livestock, Range grasses, Cultivation, Soil fertility, Tables(Data), Populations, Forage grasses, Developing country application, Small farms.

Drylands are more than exclusively cereal producing regions. Farmers grow both cereals and forage for livestock with the mix dependent upon relative prices and values of cereals and livestock, as well as cost and availability of production inputs. Relatively abundant and cheap labor may tilt the balance in favor of livestock production. Viewed in another way, technologies and crop rotations which assign importance to forage and livestock production may stand a better chance of succeeding because they will employ more of the available resources than alternatives which concentrate on cereal production to the exclusion of livestock. Furthermore, combined operations can be expected to benefit smaller farms where labor tends to be most abundant.

Human Labor Use in Existing and Prospective Technologies of the Semi-Arid Tropics of Peninsular India
Progress rept.
R. D. Ghodake, James G. Ryan, and R. Sarin. Dec 78, 73p AID-PN-AAH-421
Grant AID/ta-G-1421

Keywords: Low income persons, *India, Developing countries, Technology transfer, *Employment, Manpower utilization, *Management techniques, Developing country application.

Labor is a key resource in the developing world in the semiarid tropical (SAT) regions, where more than 500 million poor eke out a living. The purpose of this study was to determine the effect of newly developed land, water, and crop management technologies on existing labor patterns in a SAT region, in this case peninsular India. The performing organization based its study on six villages, detailing the use of family and hired labor by 30 farmers in each village. Topics covered in this report include labor patterns and the size of the farm, composition of labor, seasonality of labor use, regional labor patterns, and labor patterns with the introduction of watershed-based technologies.

New Lands Productivity in Egypt: Technical and Economic Feasibility
L. F. Hesser, and E. Asmon. Jan 80, 235p AID-PN-AAH-511
Contract AID/NE-G-1645

Keywords: *Water supply, Land reclamation, *Agricultural economics, *Egypt, *Land use, Investments, Water resources, Yield, Farm crops, Cost analysis, Financing, Irrigation, Feasibility, Developing country application, Priorities.

Egypt has made heavy public investments in land reclamation during the past 25 years. The economic and social pressures that undergird the emphasis on expanding the cultivated area are real and understandable. This reports states that a number of land reclamation opportunities with potentially attractive rates of return do exist if proper criteria is followed. Priority should be given to rehabilitating already reclaimed lands in areas where the required water lift is low.

Protein Recovery From Beef Packing Effluent
Final rept. 1977-81
John C. Ward, Walter Adams, and H. Chr. Isaksen. Jun 81, 178p* EPA/600/2-81/112
Grant EPA-S-804505
Prepared in cooperation with Sterling Colorado Beef Company, Sterling, CO. and Alwatech, Oslo, Norway.

Keywords: *Proteins, *Water pollution, Food packaging, Beef, *Industrial wastes, *Food processing, Materials recovery, Cost analysis, Biochemical oxygen demand, Operating costs, Capitalized costs.

The wastewater from a beef packing plant contained 4,600 mg/l COD and 2,500 mg/l of suspended solids. A physicochemical wastewater treatment process that recovers protein removed 80% of the oxygen demand and suspended solids, and 94% of the fat, oil, and grease. Total cost was \$3 per 1,000 gallons (44% capital costs). About 2 pounds of protein were recovered per head. A price of 42 cents per pound of protein would pay all costs. The discharge of BOD was reduced to less than 3 pounds per head. For every pound of BOD entering the wastewater treatment plant, 0.77 pounds of product was recovered with a composition of 38% protein, 11% grease and oil, 27% inorganic solids, and 24% other solids (dry weight

basis). This wastewater treatment process can be used as a pretreatment process for beef packing effluent prior to discharge to a conventional sewage treatment plant. A literature survey covering 7 different beef packing wastewater treatment processes was developed from 87 papers and reports. The cost figures given above were observed in a full scale plant and should not change significantly with different size wastewater treatment plants.

The Utilization of Straw for Heating and Other Purposes
Final rept.
F. Moller. c1980, 95p Rept no. EUR-6935-EN
Customers in the European Community Countries should apply to the office for official publications of the European Communities, B. P. 1003, Luxembourg.

Keywords: Straw, Plant residues(Organic), Feeding stuffs, Animal nutrition, Heating, Paper products, Fiberboards, Paperboards, Utilization, *Agricultural wastes, *Fuels, Foreign technology, Energy sources.

Utilization of excess straw in Denmark was attempted by mucking; however, it had little effect on the humus content of the soil or on increased yield. Improving its feed value through removal of lignin by caustic soda or ammonia treatment doubled its feed value. Straw chipboard was produced having a bending strength and quality equivalent to that of wood chipboard. Straw added to beet silage absorbed the juices normally lost and so improved the feed value. Protein production from straw was attempted but many problems still need to be overcome. As a heating agent, 3 kg of straw were found to be equivalent to 1 liter of oil, but work would be required on an automatic firing system, chimney size, etc. to make it completely viable as a fuel.

Clean Fuels from Bioconversion of Solar Energy
Annual rept. 21 Jan 80-20 Jan 81
Scott D. Feighner, and Harish C. Sikka. Mar 81, 26p* GRI-80/0052
Contract GRI-5014-361-0265

Keywords: Biomass, *Algae, *Methane, Anaerobic processes, Fuels, Bacteria, Enzymes, Laboratory equipment, Carbon dioxide, Concentration(Composition), *Bioconversion, Glycolic acid, Chlorella pyrenoidosa, Chlamydomonas reinhardtii, Scenedesmus obliquus, Ankistrodesmus braunii.

The study seeks to enhance glycolic acid excretion by unicellular algae. The strains of algae selected to evaluate glycolic acid accumulation in culture medium were: Chlorella pyrenoidosa (UTEX 395), Chlamydomonas reinhardtii (UTEX 89), Scenedesmus obliquus (UTEX 393), and Ankistrodesmus braunii (UTEX 245). C. pyrenoidosa and C. reinhardtii, based on the amount of glycolic acid produced, were selected for further study. Initial experiments were conducted to measure the effect of different environmental growth conditions on the rate of glycolic acid accumulation in defined culture medium. The most pronounced effect on glycolic acid excretion was obtained by varying the concentration of carbon dioxide in air. At 1% CO₂ in air, C. pyrenoidosa accumulated 5.2 ppm glycolic acid in culture medium. Neither the pH of the culture medium nor the incubation temperature affected glycolic acid accumulation by growing C. pyrenoidosa cultures.

Energy Balance and Utilization of Agricultural Waste on a Farm
Final rept.
B. S. Pathak, A. P. Bhatnagar, Daljit Singh, and K. S. Salariya. 1980, 90p
Sponsored in part by Tata Energy Research Inst., Bombay (India).

Keywords: Biomass, *Agricultural wastes, Farms, Utilization, *Fuels, Straw, Assessments, Farm crops, *India, Manure, Developing county application.

The report assesses the possibility of using crop residues and other agricultural works as a renewable energy source. Some conclusions drawn are: Energy requirements of tractor operated farms are only marginally higher than bullock operated farms; the use of commercial fuels for cooking in rural areas is very limited. Most crop residues except paddy straw is used for fodder or fuel. Farmers use dung as fuels although they know its use as a fertilizer. All energy required by farms could be self-generated. Paddy straw should be burned to produce electricity. References and other data are included.

D. J. Case, and J. C. R. Latchford. c1981, 34p Rept no. TRRL-SUPPLEMENTARY-659
Also pub. as ISSN-0305-1315. Prepared in coopera-tion with Mackay (Jamieson) and Partners Ltd., London (England).

Keywords: Urban transportation, Urban areas, Com-parison, Operations, Services, *Southeast Asia, *Transportation, Foreign technology, Public transpor-tation, Fare structures.

Information from eight cities in South East Asia has been compared to examine, mainly from the user's viewpoint, the characteristics of different public trans-port modes. Classification of the available public trans-port modes was made according to fare level and method of operation. As a result, a distinction is made between mass transit modes - defined as having fixed routes - and personalized public transport (PPT) modes. With few exceptions, mass transit modes have low fares and PPT modes have high fares. In only one city, Chiang Mai in Thailand, is there a PPT mode which is widely used and for which fare levels are sim-ilar to mass transit fares. (Copyright (c) Crown Copy-right 1981.)

Irrigation of Sugarcane Fields with Sewage Ef-fluents in Southern Puerto Rico
Ning-Hsi Tang. Jun 79, 64p OWRT-A-049-PR(1)

Keywords: *Sewage treatment, *Irrigation, *Puerto Rico, Biochemical oxygen demand, Inorganic nitrates, Sugarcane, Climate, Salinity, Metals, Soil water, Sodium, Adsorption, Nitrogen, Leaching, *Sugarcane, Heavy metals, Sewage irrigation.

Primary and secondary sewage effluent and fresh groundwater were used to irrigate sugarcane fields in southern Puerto Rico. Because of a shortage of sur-face and groundwater, irrigation water production in this region is low and new sources of water are being urgently sought; it is estimated that production could be doubled if sufficient additional irrigation were avail-able. Two sources of additional water used were the Ponce primary treatment plant effluent (10mgd), and the Fort Allen secondary treatment plant effluent. Ponce primary effluent was found to be generally good for sugarcane irrigation, comparing favorably with groundwater. Fort Allen secondary effluent was not suitable because of high salt content. Plots using

sewage effluent were tested to determine their chemi-cal state before and at the end of the study.

Soil Filtration of Sewage Effluent of a Rural Area
Final rept. Jun 77-Sep 80
B. R. Savey, K. A. Barbarick, and N. A. Evans. Aug 81, 115p EPA/600/2-81-151
Grant EPA-R-805401

Keywords: Fluid filtration, *Soils, Farm crops, *Irriga-tion, *Sewage treatment, Summer, Lagoons(Ponds), Operations, Ice, Rural areas, Soil water, Ground water, Elevation, Land use, Capitalized costs, Storage, Winter, Land application.

The treatment performance of irrigation using primary lagoon treated municipal sewage is compared to normal stream or ditch water irrigation when applied to mountain meadows and crops in a high altitude climate during summer months. The two irrigation waters are applied at different rates to plots that have both natural drainage and tile underdrains. A special winter oper-ation is evaluated for applying primary lagoon treated municipal wastewater to ridge and furrow basins after they have been covered with an insulating sheet of ice and snow. Development of winter operations allow capital cost of constructing winter storage to be drasti-cally reduced for small rural treatment facilities.

Solar Radiation as a Forest Management Tool: A Primer of Principles and Application
Forest Service general technical rept. (Final)
Howard G. Halverson, and James L. Smith. Apr 79, 19p* Rept no. FSGTR-PSW-33

Keywords: Solar radiation, *Forestry, Sun, Hydrology, Watersheds, Heat transfer, Shadows, Control, Heat transmission, Energy transfer, Equations, Seasonal variations, Exposure, Soil properties, Temperature, Evapotranspiration, Control, Plant growth, *Solar energy, Forest management, Forest watersheds, Pa-cific Northwestern Region(United States), Polar tilt.

Forests are products of solar radiation use. The sun also drives the hydrologic cycle on forested water-sheds. Some basic concepts of climatology and solar radiation are summarized including earth-sun relations, polar tilt, solar energy, terrestrial energy, energy bal-ance, and local energy. An example shows how these principles can be applied in resource management. This paper is designed to be used with an earlier report on controlling solar light and heat in a forest by manag-ing shadow sources.

Marketing Low-Grade Hardwoods for Furniture Stock--A New Approach
Forest Service research paper (Final)
Hugh W. Reynolds, and Charles J. Gatchell. 1979, 12p Rept nos. NEFES/81-271, FSRP-NE-444

Keywords: Marketing, Hardwoods, Shortage, Furni-ture, Structural timber, Prices, *Wood, *Wood prod-ucts, *Furniture.

A hardwood shortage of high-grade lumber exists while there is a surplus of low-grade hardwood timber. Two things are needed for the surplus to correct the shortage: a new manufacturing system and a new mar-keting technique. Utilization research at the Princeton Forestry Sciences Lab. has developed the new system for converting low grade hardwood into furniture. The manufacturing steps can be integrated with the exist-ing marketing system from the timber grower to the logger to the sawmiller to the dimension maker to the furniture producer.

Directory of Industrial Information Services and Systems in Developing Countries
16 Feb 81, 125p* Rept no. UNIDO/IS.205

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: Information centers, Developing countries, *Information services, Directories, Facilities, Industries.

Developing nations have come to recognize that industrial and technological information is a key element in accelerating the process of industrialization. In recent years, an increasing number of industrial and technological information centers have been established in developing countries. The types of services they perform and the subjects on which they provide information are varied. The aim of the present Directory is to make more widely known and to promote the full use of existing industrial and technological information facilities in the developing countries. Furthermore, as a contribution to the program of technical cooperation among developing countries (TCDC), it is intended as a networking instrument which should help those institutions interested in developing their own linkages at the national, regional and international level.

The Conversion of Agricultural By-Products to Sugars
Final rept.
Peter J. Reilly. Mar 81. 200p ISU-ERI-AMES-81188, NSF/CPE-81008
Grant NSF-PFR77-00198

Keywords: *Agricultural wastes, Hydrolysis, Chemical composition, *Sugar, Temperature, pH, Enzymes, Purification, Xylanases, Xylosidase, Immobilized enzymes.

The following objectives were attained: (1) optimizing the immobilization of beta-xylosidase; (2) determining the effects of temperature and pH on the activity and stability of immobilized beta-xylosidase and comparing the results with those from soluble beta-xylosidase; and (3) preparing model substrates of known composition. A summary of what is known about the xylanase family is given, including results of this study. A comprehensive literature search of the catalytic properties of the glycoside glycohydrolase family, of which beta-xylosidase is a member, is presented. Results on the purification, immobilization, and characterization of beta-xylosidase are given. An overview of the purification of various xylanases is supplied. The purification and characterization of the five homogeneous xylanases purified in this study are detailed.

Housing Needs Assessment: A Manual for Planners No. 5
Final rept.
J. M. Blackwell, and B. C. Murphy. Nov 79. 148p
Rept no. ISBN-906120-27-6

Keywords: *Housing, Demand(Economics), Estimates, Research, Planning, Ireland, Foreign technology.

This is the third manual in a series dealing with techniques for planners. The purpose of this manual is to describe how estimates of housing need might best be derived. Issues such as effective demand (based on ability to pay or social ambitions) or the allocation to the private or public sectors are not considered in the manual. It is hoped that the techniques described will be of assistance to professional and technical staffs and students concerned with the provision of housing.

Survey of Irrigation in Eight Asian Nations: India, Pakistan, Indonesia, Thailand, Bangladesh, South Korea, Philippines, and Sri Lanka
Foreign agricultural economic rept.
William R. Gasser. Jul 81. 123p Rept no. FAER-165

Keywords: *Water supply, Developing countries, *Irrigation, Surveys, Area, Ground water, Investments, Surface waters, Production. *Asia.

Most good land in the eight Asian nations surveyed is cropped, so large production increases will likely come from more intensive cultivation made possible by irrigation. Extension of irrigated areas and better water management could double production in some areas of India, Pakistan, Indonesia, Thailand, Bangladesh, South Korea, Philippines, and Sri Lanka. But, large in-

vestments will be required. This report reviews the current state of irrigation, plus prospects and plans, in these countries.

The Utilisation of Alcohol in Light Duty Diesel Engines
Final rept.
28 May 81, 41p* DP-81/935, EPA/460/3-81/010

Keywords: *Diesel engines, Utilization, Methyl alcohol, Ethyl alcohol, Forecasting, Revisions, Design criteria, Performance evaluation, Fuels, Air pollution, Energy conservation, Foreign technology, Light duty vehicles, *Alcohols.

This report reviews the various approaches which can be employed to facilitate the utilization of alcohols - methanol and ethanol - in light duty diesel engines. The characteristic problems and the relative advantages of each approach are discussed. It is concluded that successful application to an engine of any of the available systems would require considerable development efforts. The choice of which system to employ is likely to be most heavily influenced by the proportion of alcohol substitution which is required and the resulting engine first cost penalty which is deemed to be acceptable. Alcohol utilization by more or less conventional spark ignited engines appears to be far less problematical than conversion of diesel engines.

Impact of Weather and Climate on Agriculture: A Selected Bibliography
Gary H. Adams, Robert R. Walter, and Douglas A. Mcmanus. May 81, 132p* NOAA-81063001

Keywords: Operations, *Agricultural economics, Weather, Bibliographies, Economic impacts, Social effect, *Meteorology, Political objectives, Income, Farm crops, Plant diseases, Pest control, Mathematical models, Warning systems, Pasture, Fruit crops, Dairy cattle, Beef cattle, Animal diseases, Decision making.

This bibliography covers the impact of weather and climate on various socioeconomic and political sectors of modern society relating to agriculture. The literature on climatic impacts on agriculture is voluminous, and many of its subtopics had to be excluded, such as aquaculture and fisheries; forestry, drought, desertification, and land use; water resources and hydrology; and man-induced weather modification. The references in this bibliography were retrieved by computer searching of about 30 bibliographic databases covering scientific, technical and social science topics. No form of literature has been excluded. Time coverage has generally been limited to 1970-1979.

Water Pumping Windmill Designs: A Handbook
Tarangini Rastogi, and Narsing R. Rao. Jun 81, 162p

Keywords: Windmills, Structural design, Handbooks, Pumps, Water supply, Reciprocating pumps, Rotary pumps, Diaphragm pumps, *Water pumps, *India, *Wind energy, Foreign technology, Savonius rotors, Darrieus rotors, Developing country application, Vertical axis windmills.

This handbook covers 29 indigenous windmill designs that can be built locally with inexpensive and locally available material and skills. Three categories of windmill designs: horizontal axis, vertical axis and non-conventional type have been described and each design is supplied with following information: Name of the Designer, Institutional Affiliation, Type of Windmill, Specific Applications and Suitability, Design Features (Rotor Assembly, Sails/Blades, Power Transmission, Tower Structure, Tail Assembly, Pump, etc.) and Operating Data, as reported by the Designers. Most of these designs have been tested and are successfully being used in different parts of the world. Commercially obtainable windmills are also listed along with complete address of the manufacturers and relevant technical specifications. The introductory chapter describes types of windmills, their characteristics, and the differ-

ent kinds of reciprocating and rotary pumps suitable for water pumping windmills. Annexure includes Glossary of useful windmill terms, Conversion Table, and Important Formulae for estimating power from wind.

Feasibility of Demand Incentives for Non-Motorized Travel
Final rept. Oct 76-Apr 80
Ferrol C. Robinson. Apr 81, 235p FHWA/RD-80/048
Contract DOT-OS-60183
Prepared in cooperation with Cambridge Systematics, Inc., MA.

Keywords: Travel, Incentives(Psychology), *Bicycles, Motivation, Attitudes, Surveys, Walking.

The report examines the potential of various strategies for increasing the use of walking and bicycling for utilitarian purposes. The analysis is based on extensive attitudinal surveys conducted in five locations across the U.S. Perception models are developed to identify underlying consumer perception of the transportation services offered by walking, bicycling, auto and transit. Subsequently, preference models are developed to identify the relative importance of each underlying dimension. Consumers' preferences are compared to their actual choice. Costs and benefits of improving the infrastructure for walking and bicycling are identified, and a methodology for their estimation is presented.

Harvesting Wood for Energy
Forest Service research paper

APPROPRIATE TECHNOLOGY ABSTRACTS

Rodger A. Arola, and Edwin S. Miyata. Apr 80, 29p*
Rept no. FSRP-NC-200

Keywords: *Wood, *Fuels, Harvesting, Hardwoods, Cutting, Wooden logs, Recovery, Forest trees, Machinery, Wood wastes, Sawmills, Cost analysis, Equipment, Productivity, Thinning, Energy production.

There is a lack in the literature of well documented information on the costs and productivity of timber harvesting with various types of commercial logging equipment. Since each logging operation is different, each must be analyzed independently, taking into account the equipment used, the stand conditions, and other considerations. The objective of this paper is to present pertinent cost and productivity data for several harvesting operations. These operations were not all conducted to provide wood fuel, but the information is still of value to those considering the harvest of wood for energy.

Vocational Education Training in Environmental Health Sciences: Collecting Stream Samples for Water Quality, Module 16
Fredric C. May. Jul 81, 43p DE/OVAE-80-0088-16
Contract OE-300-80-0088

Keywords: Handbooks, Sampling, Streams, Laboratory equipment, Sites, pH, Guidelines, *Environmental surveys, *Water quality, *Water pollution, Procedures.

In this instructional module, students learn to collect stream samples for specific laboratory analyses. Training Prerequisites: Before beginning this module, students must know how to work safely in a laboratory; adjust the pH of a solution to a given value, using an acid or a base; use a graduated Mohr pipet to deliver amounts of liquid accurate to 0.01 ml; read a Centigrade thermometer accurate to the nearest degree; and sterilize equipment using dry heat or an autoclave. Objectives: Upon completion of this module, students will be able to perform the following function: Use a job aid to identify all the equipment and reagents needed to collect stream samples for water quality analyses, clean and prepare sampling bottles needed for collecting stream samples for water quality analyses, and select the most suitable location for collecting water samples at a pre-designated sampling site at a stream and take a grab sample.

Working Children in Bombay: A Study
Musafir Singh, V. D. Kaura, and S. A. Khan. 1980, 297p

Keywords: *Children, *Employment, Foreign countries, *India, Central city, Surveys, Blighted areas, Exploitation.

The study defines and identifies working children and seeks to highlight their problems within a perspective on the basis of a selected sample of 300. It portrays the various facets of their work life and uncovers the socio-economic factors embedded in the family situation which compel children to join the labor force. The study also discusses relevant legislation and points out the bottlenecks in their effective implementation. In the end, it suggests an action strategy aimed at mitigating the unhealthy and undesirable aspects of child labor.

People's Participation in Adult Education: Report of the National Seminar, January 4-8, 1971
1971, 115p
Prepared in cooperation with Indian Adult Education Association.

Keywords: *Education, Adults, *India, Meetings, Literacy, National government, Foreign countries, Citizen participation, Females, Attitudes, Instructors, Students, Requirements.

Illiteracy and ignorance are at the root of many a problem relating to change and development in India. In a developing country like India, with constraints of financial resources and technical manpower, coordinated and organized efforts on the part of the government and the voluntary bodies over a period of a decade or more alone can make a dent on the problem of mass illiteracy. Primary education and adult education are two core sectors in the field of education, which deserve our immediate attention. Prevention of massive drop-outs and expansion of educational facilities to all children at the primary level, are necessary for enabling the present generation to grow up as educated adults. But a nation cannot afford to wait for a generation to see its children get educated so as to participate in the process of change and development. The adults of today must therefore be simultaneously educated through programmes of adult education. The latest scheme of the Government to launch Pilot Projects in 30 educationally and economically backward districts of India with a view to eradicating illiteracy completely from these areas in a period of five years is a laudable experiment. The setting up of a National Board of Adult Education, and similar Boards in all the States, will help in giving the necessary guidance and ensure effective coordination between official and non-official agencies.

Special Nutrition Programme in Delhi: A De Novo Evaluation Study

Nagendra Nath, Usha Abrot, Kalyani Roy, and Midula Sharma. Dec 79, 138p

Keywords: *Nutrition, *India, *Health, Foreign technology, Delhi(India), Child health care, Maternal health care.

A number of nutrition intervention programs have been launched in the country to combat the wide-spread malnutrition among the vulnerable sections of society, specially the children and expectant and nursing mothers. Of these, Special Nutrition Program, launched with the object of providing supplementary nutrition to pre-school children below 6 years of age, expectant and nursing mothers in urban slums, tribal areas and drought-prone areas has emerged as an important program in terms of target group coverage and budgetary allocations. The successful implementation of the scheme is contingent upon several functional variables like judicious selection of the target group, effective delivery system, proper utilization of services, adequate community participation and close supervision and monitoring. These factors should be consistently supported by community education about the need, objective, services, etc. of this important program.

On Getting People to Participate: Seven Case Studies

S. R. Ramdev, N. V. Lalitha, V. D. Kaura, and R. M. Varma. Feb 71, 177p

Keywords: *Social services, *India, Citizen participation, Organizations, Children, Females, Disadvantaged groups.

The need for people's participation in programs of national development is a widely accepted fact in a democratic society. This presentation is based on seven case studies of voluntary agencies which were conducted by four members of the Institute's faculty at different times between 1968 and 1970. Besides describing the activities and organizational aspects of each agency, an attempt has been made to analyze the factors which promoted or hindered the process of people's participation in agency's programs and development. An overall analysis based on all the seven

cases has also been made to highlight the correlation between the features of these agencies and the nature and extent of people's participation received.

Working Mother and Early Childhood Education

1978, 128p

Sponsored in part by United Nations Educational, Scientific and Cultural Organization, New York.

Keywords: Females, *Employment, *Children, Day care centers, *India, Parent child relations, Socioeconomic status, Attitudes, Urban areas, Rural areas, *Education, *Women.

This study is one of a series of national studies funded by UNESCO as a part of its program to promote the status of women and their participation in national development programs. The aim of these studies is to gather specific information on how and to what extent

working mothers are able to provide early childhood education to their children and in doing so how they seek to meet their dual obligations as mothers and as workers outside the home. India was selected as one of the five countries where the study was conducted. The National Institute of Public Cooperation and Child Development was called upon to undertake the responsibility of conducting the study.

Low Cost Brick House

Nov 80, 15p Rept no. ROOF OVER YOUR HEAD-2

Keywords: *Houses, Rural areas, *Bricks, Clays, Construction, Instructional materials, Developing countries.

Use of burnt clay bricks is very commonly made for construction of pucca houses. Brick masonry walls of both load-bearing and non-load-bearing types are constructed. In many parts of India reinforced brick roof arch or vault roof is also made. Use of bricks is also made for paving the floors, construction of jallies and lintels over windows and doors. A view of a demonstration low cost rural house put up by the NBO Regional Rural Housing Wing, Bangalore. The plinth area of the house is 26 sq m having one room, kitchen, bathroom and veranda. The cost of the house is Rs. 4,580. Burnt bricks have been used in construction of walls and Mangalore tile roofing over jungle wood rafters has been adopted.

Building Foundations. Part I: Site Investigation
Dinesh Mohan, and G. S. Jain. 1961, 15p Rept no. TECHNICAL INFORMATION SER-5(A)

Keywords: *Buildings, Foundations, Site surveys, Soil surveys, Soil analysis, Soil properties, Field tests, Seasonal variations, *Site selection, Foreign technology.

The object of site investigation is to get information regarding the nature, thickness and variation of soil strata; physical properties of the soil strata; and seasonal variation in the ground water level. This information is useful for the design of safe and economical foundations and for the design of other structures in soil such as embankments, cuttings, etc. Such information also helps in the final location of the structure and in the selection of suitable materials for construction. In the case of existing works it helps in attributing the causes of failure and in formulating steps to be taken for further safety.

Research Report on Nail-Joints in Timber Structures. Part III
N. J. Masani, K. S. Pruthi, Sundar Lal, and Bhagirath Prasad. Apr 71, 46p Rept no. TECHNICAL/RR-26

Keywords: *Wooden structures, Construction joints, Nails(Fasteners), Design, Structural timber, *Houses, Foreign technology.

Nail joints are suitable for use in light and medium structures like roof trusses, beams and columns. Traditional carpentry joints in such structures normally make use of heavy steel gusset plates, jibs and cotters and they call for employment of skilled carpenters. In nail joints these fastening devices are dispensed with and in their place, ordinary wire nails are utilized. The jointing method is also very simple and does not need skilled workmen. The Forest Research Institute has obtained data on the behavior of nail joints through a number of tests on primary as well as secondary species of timber. Various factors that affect the strength of nail joints, like, the type of nails, pre-bores and the direction of application of load with respect to the grains, have been taken into account. The findings of the research work are presented in this report. It is hoped that the information in this publication will promote increased adoption of nail jointed construction for effecting economies. The publication also serves the cause of secondary timbers by making available reliable research data, which is an essential pre-requisite for their acceptance.

A Regional Analysis of River Floods and Low Flows in Malawi
R. S. Drayton, C. H. R. Kidd, A. N. Mandeville, and J. B. Miller. Jul 80, 89p Rept no. 72
Also pub. as Malawi Water Resources Div., Lilongwe rept. no. 72

Keywords: Flood forecasting, Stream flow, Civil engineering, *Malawi, *Floods, Mathematical models, Regression analysis, Design criteria, Intake systems, *Irrigation, Embankments, Slope, Maps, Flow frequency, Low flow.

River flow data for Malawi have been examined in a regional analysis to provide methods of estimating floods and low flows for engineering and agricultural applications. Floods for 28 stations have been analyzed to produce (a) a regression model for the Mean Annual Flood on catchment characteristics and (b) a regional flood frequency curve. An archive of daily flows for 53 stations was used to produce estimation methods for (a) the average daily flow, (b) the flow duration curve, (c) the low flow frequency curve, (d) storage-yield analysis, and (e) recession forecasting.

Soil Physical Processes of Groundwater Recharge through Indian Black Cotton Soils
Apr 81, 40p Rept no. 77

Keywords: Soil water, Ground water recharge, Cotton plants, Runoff, Water flow, *Soils, *Ground water, *Hydrology, Tensiometers, Evaporation, Hydraulic conductivity, Moisture content, Droughts, Clay soils, Silts, Basalt, *India, Foreign technology.

Soil physical studies were carried out in the black cotton soil areas of the Betwa Basin, Central India, to assess their role in partitioning monsoon rainfall into runoff and groundwater recharge. The regional and annual variations of soil moisture were studied first, followed by studies of the soil water flow mechanisms at representative sites. The studies suggested that significant recharge is possible only in the shallow soil areas, where structured clay/silts directly overlie the weathered basalt surface aquifer.

The Effect of Form and Orientation on the Radiant Solar Heat Load on Buildings under Zambian Conditions
B. A. Gouveia. Apr 70, 14p Rept no. NCSR/TR-6

Keywords: *Buildings, *Solar heating systems, Meteorological data, Seasonal variations, Solar radiation, Design criteria, *Zambia, Foreign technology, Developing country application.

The solar load on a building is related to the geographic location of the building, i.e., latitude, altitude, climate, etc., the form of the building, the orientation of the building and the surface details of the building. This study takes into account the first three variables, i.e., geography, form, and orientation, and attempts to provide a comparative tool for design decisions and a specification for detailed design.

The Selection of Geometric Design Standards for Rural Roads in Developing Countries
R. Robinson. c1981, 19p Rept no. TRRL-SUPPLEMENTARY-670
Also pub. as ISSN-0305-1315.

Keywords: *Roads, Rural areas, Developing countries, Design standards, Geometry, Safety, User needs, Foreign technology.

This Report discusses the underlying principles upon which it is recommended that geometric design standards for rural roads in developing countries should be based. The basic elements of geometric design are listed and an indication is given of their purpose and the objectives normally sought when geometric standards are adopted. The development of geometric design standards from first principles is discussed, with particular reference to existing geometric design policies currently being applied in industrialized countries. Finally, the problem of devising appropriate standards for roads in developing countries is considered. It is concluded that the basic standards of safety and comfort that are appropriate for a particular country are a matter for the national authorities to decide. In setting geometric standards consideration should be given to the costs of vehicle operation as well as to road construction costs. (Copyright (c) Crown Copyright 1981.)

An Investigation of the Properties of Rural and Urban Bricks
R. J. S. Spence. Jan 71, 40p Rept nos. NCSR/TR-9, BR-3

Keywords: Construction materials, *Bricks, Structural clay products, *Building materials, Fabrication, Sampling, Brick industry, *Zambia, Foreign technology, Developing country application.

In the investigation, 38 samples of urban bricks and 14 samples of rural bricks were obtained from a total of 18 different brickworks. Most of the brickworks were also visited in the course of the investigation. The first two sections of the report deal with the properties of urban and rural bricks, respectively. As all samples of urban bricks were coal-fired, and all samples of rural bricks were wood-fired, a clear distinction can be made. A third section deals with the typical manufacturing processes in each category, and this is followed by a summary and conclusions. An appendix dealing with some of the properties of typical brick soils is included. Most brick quality was found to be low, unsuitable for unplastered use let alone load-bearing use. Many suggestions for improving brick quality are given.

Keywords: *Agricultural economics, Developing countries, *Land use, Production, Farm crops, Acclimatization, Statistical data, Dominican Republic, Costa Rica, Nicaragua, Syria, Honduras, Tables(Data), Economic models Constraints, institutional framework.

This report documents the development and adaptation of agricultural resource planning concepts and procedures for use in developing countries. Major concepts were those applicable to land resource delineation, major land use delineation, and the disaggregation of agricultural production and cropping pattern statistics to land resource delineations. The procedures used in the five developing countries are discussed. A limited discussion is presented on the design and application of two information systems that manage information obtained by inventory and assessment. The goals, purposes, and products of institutionalization activities in each of the five countries are presented.

Age Misreporting and Age-Selective Underenumeration: Sources, Patterns, and Consequences for Demographic Analysis
Rept. no. 4
Douglas C. Ewbank. May 81, 129p Rept no. ISBN-0-309-03141-9
Library of Congress catalog card no. 81-81759. Sponsored in part by Council on Environmental Quality, Washington, DC.

Keywords: Populations, Developing nations, Demography, Growth, Fertility, Mortality, Errors, *Population control, Data acquisition.

The report reviews the data and conclusions of studies of age misreporting errors, age-selective underenumeration, and the interview process regarding the collection of information on age. The report also reviews techniques used to detect distortions in reported age distributions, and it describes typical patterns of distortion and how these distortions affect demographic estimation procedures. Age misreporting is only one type of response error that arises in data collection processes. Others include underreporting and misdating of vital events, inaccurate reporting of information on individual and household characteristics, and the failure to include required or requested information.

Grant AID/ta-G-1111

Keywords: Fiber plants, Plant growth, Irrigation, Harvesting, Processing, Plant breeding, *Rubber, Environmental impacts, Soils, Arid land, Feasibility, *Guayule, *Parthenium argentatum*, Developing country application.

Development of guayule, *Parthenium argentatum*, as a dependable source of domestic rubber is complicated by the plant's anatomical, physiological, and genetic complexity, especially when cultivated under conditions not native to it. Domestication of the guayule plant involves several problems, among them genetic manipulation and breeding, the expense of guayule stand establishment, and the effects of irrigation on its rubber-producing capacity. In addition, economically feasible rubber production depends on the assessment of economic, environmental, institutional, and socioeconomic factors.

Topical Investigation and Analysis of Nutritional Supplements in Family Planning Programs in India and Pakistan
Michael v.E. Rulison. 1970. 75p AID-PN-AAH-576
Contract AID/nesa-460

Keywords: Family planning, *Nutrition, Fertility, Developing countries, *India, *Pakistan, Programs, *Birth control, Infants, Foreign technology, Mothers, Developing country application.

The theory that improving the nutritional status of mothers and infants lowers fertility rates has been divided into several hypotheses concerning the effects on fertility of nutrition interventions in family planning programs. This report uses a modified systems analysis approach to test these hypotheses in India and Pakistan in terms of such variables as numbers of births and deaths, nutritional levels, and numbers of family planning acceptors.

Topical Investigation and Analysis of Promoting Family Planning Through Health Services
Fredric D. Kennedy. 1970, 127p AID-PN-AAH-577
Contract AID/nesa-460

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: Family planning, Promoting, *Birth control, Reproduction(Biology), Fertility, *Health care delivery, Models, Data, Health services, Developing country application.

This investigation is concerned with the potential that health services provide for the promotion of family planning. This area of interest has many implications; these include economies of shared facilities and personnel, behavioral aspects of combined programs, priority conflicts in joint operations, long-term effects of fertility arising from mortality reduction, etc. The results of this investigation—three models for analysis and a structure of hypotheses to be tested using these models—can best be summarized under two general headings: first, the long-term effects of health services upon fertility behavior through mortality reduction and, secondly, the health service system as a means of promoting family planning.

Draft Environmental Report on India
F. Bauman. Mar 80, 178p AID-PN-AAH-752
Sponsored in part by National Committee for Man and the Biosphere, Washington, DC.

Keywords: *Natural resources, *India, *Environmental surveys, Water resources, Fisheries, Wildlife, Forestry, Agriculture, Mineral deposits, Economic factors, Population growth, Soils, Pollution, Legislation, Developing country application.

Many of India's environmental problems arise from attempts to meet the basic needs of its enormous population for food and energy. This draft report profiles India's environment and natural resources in order to specify these problems. Basic descriptions are provided on the country's topographical and geological characteristics and of such natural resources as climate, water, soils, forests, wildlife, coastlands, and beaches, fisheries, minerals, and air and the atmosphere.

Draft Environmental Report on Morocco
S. A. Parker. Feb 80, 98p AID-PN-AAH-874
Contract NPS-CX-0001-0-0003
Sponsored in part by National Committee for Man and the Biosphere, Washington, DC.

Keywords: *Natural resources, *Morocco, Profiles, Economic development, Population growth, *Environmental surveys, Environmental impacts, Soil erosion, Water pollution, Vegetation, Legislation, Agriculture, Forestry, Wildlife, Arid land, Developing country application, Desertification.

Desertification due to accelerating population growth, and heavy dependence on agriculture has become a growing threat to the economic and ecological balance of many developing countries. To address this situation, environmental investigations, such as this draft environmental report of Morocco, are urgently needed. The report consists of an introductory description covering Morocco's geography, population, and economic characteristics, followed by an examination of the country's environment and natural resources, legislation governing the environment and natural resources, including flora, mineral resources, soils, water resources, legislation governing the environment and natural resources, and relevant organizations.

Calendar Singularities of Rainfall in Rhodesia
D. L. McNaughton. 29 Apr 70, 12p

Keywords: Rainfall, Climate, *Rhodesia, Periodic variations, Hall, Ice, Freezing, Rainfall intensity, Comparison, *Meteorology.

For each of 55 stations rainfall totals accumulated over periods varying between 20 and 71 years are examined for Rhodesia according to calendar date. The agreement as to which dates favor the most rain is remarkable. It is also shown that Salisbury and Bulawayo derive almost coincident peaks with rain falling in different years. Bowen's meteor hypothesis could be the explanation, especially as the area of southern hemi-

sphere land is comparatively small, and interhemispheric exchange of air is fairly slow.

Draft Environmental Profile on Tunisia
A. P. Grant. Feb 80, 82p AID-PN-AAH-876
Contract NPS-CX-0001-0-0003
Sponsored in part by National Committee for Man and the Biosphere, Washington, DC.

Keywords: *Natural resources, *Tunisia, *Environmental surveys, Arid land, Soils, Population growth, Agriculture, Wildlife, Mineral deposits, Soil erosion, Water resources, Pollution, Legislation, Developing country application, Desertification.

Intensified by the country's population increases, the major problem burdening Tunisia today is a swiftly eroding landbase. This report of the natural resources of this small, arid country emphasizes major environmental problems, legislation already passed for environmental protection, and provides recommendations to reverse environmental degradation. The survey of the country's water, soils, lands, wildlife, and mineral resources reveals several critical problems.

Environmental Profile of Liberia, Phase I
P. T. Hazelwood. Jul 80, 72p AID-PN-AAG-978
Sponsored in part by National Committee for Man and the Biosphere, Washington, DC.

Keywords: *Natural resources, *Liberia, *Environmental surveys, Water resources, Wildlife, Forestry, Agriculture, Mineral deposits, Economic factors, Soils, Population growth, Pollution, Developing country application.

Liberia has a tropical climate favoring high forest vegetation and is rich in natural resources, notably iron ore, timber, and rubber. Its major topographical and biogeographical regions include a coastal plain, a belt of rolling hills, a belt of low mountain ranges and plateaus, and northern highlands. This report is a preliminary review of information available in the United States on Liberia's environment and natural resources. Topics covered by the report include the nation's physical, demographic, and social and economic characteristics; renewable resources; non-renewable resources; parks, reserves, and other protected areas.

Proposed Water Management Program for Major Irrigation Schemes in Sri Lanka
Edwin Lance, Roger Willsie, Michael Moore, Mel Hagood, and Doral Kemper. Feb 79, 315p AID-PN-AAG-841
Contract AID/OTR-C-1618

Keywords: *Irrigation, *Water resources, *Sri Lanka, Organizations, Water supply, Water distribution, Farms, Water consumption, Ditches, Local government, Project planning, Benefit cost analysis, Evaluation, Developing country application, Water management(Applied).

Because of poor irrigation management, much of Sri Lanka's agricultural lands can be farmed only occasionally or only during the Maha season—despite the fact that sufficient rainfall exists for one or more crops per year. The purpose of this study is to determine the institutional, organizational, and physical components of a proposed A.I.D. irrigation program in Sri Lanka. The country's water management problems are primarily due to poor maintenance and a lack of control over water use.

Analysis of Nutrition-Related Activities in Honduras
David Stanfield, James Eckroad, and David Sahn.
Dec 79, 153p AID-PN-AAH-242
Contract AID/SOC/PDC-C-0082

Keywords: *Nutrition, Nutritional deficiency diseases, Developing countries, *Honduras, *Children, Law(Jurisprudence), National government, Planning, Diet, Foreign technology, Developing country application.

Present estimates indicate that nearly 75% of Honduras' preschool population and nearly 50% of its school-age population suffer from some degree of malnutrition. In 1976, the Government of Honduras established the Sistema de Analisis y Planificacion de la Alimentacion y Nutricion (SAPLAN) to plan and stimulate the implementation of nutrition programs. However, SAPLAN has encountered numerous problems. A major difficulty has been the inability of the Honduran and U. S. bureaucracies to operate smoothly and to reach agreement on administrative procedures satisfying the legal requirements of both governments. A second difficulty has been the slowness, cost, and limited impact of many of SAPLAN's projects. The authors recommend that USAID form a multisectoral nutrition team, drawing from its agricultural, education, health, and engineering sections, establish an internal planning group, and develop a simplified model of the development process in Honduras.

Changing Patterns of Fertility: The Impact of Contraceptive Technology on a Maya Village
1980, 92p AID-PN-AAH-954
Grant AID/p-ha-G-1184
Sponsored in part by Research Inst. for the Study of Man, New York.

Keywords: Family planning, Fertility, Contraceptives, Mexico, *Birth control, Counseling, Socioeconomic factors, Education, Foreign technology, Developing country application, Population growth, Yucatan.

Acceptance and implementation of strategies to limit family size have increased among the women of Chan Kom, a Mayan peasant village located in Yucatan. This report explores the factors supporting fertility control by analyzing the counseling and services of the family planning program and the age, health condition, and desired number of children of women who accept and use some form of birth control. Also assessed are socioeconomic variables such as the education level of women and children and income-generating work of women and men both in and outside the village.

Oral Fluid Therapy in Diarrhea and Dehydration: Current Concepts and Practical Considerations
Robert L. Parker. Jul 80, 33p AID-PN-AAH-928
Contract AID/DSPE-C-0055

Keywords: Diarrhea, Dehydration, Ingestion(Biology), *Children, Nutritional deficiency diseases, *Diseases, Therapy, Implementation, Developing country application, Fluid therapy.

Dehydration—the loss of water and electrolytes through diarrhea—can fuel a vicious cycle in a child in which malnutrition begets diarrhea and diarrhea causes further malnutrition, until the child ultimately dies. The recent widespread use of oral fluid therapy (OFT) has significantly reduced diarrhea mortality, showing it to be an effective cure of relatively lower cost and greater convenience than intravenous feeding therapy. This report outlines the major approaches to OFT, ways of implementing these approaches, and issues still unresolved.

Water Supply and Diarrhea: Guatemala Revisited
Evaluation special study no. 2
Daniel Dworkin, and Judith Dworkin. Aug 80, 52p Rept no. AID-PN-AAJ-007
Prepared in cooperation with Arizona Univ., Tucson. Dept. of Hydrology and Water Resources.

Keywords: *Guatemala, Diarrhea, *Water supply, Gastrointestinal diseases, Rural areas, Sanitation, *Water treatment, *Diseases, Developing countries, Sewage disposal, Waste disposal, Foreign technology, Developing country application, Environmental health, *Water pollution.

Evidence indicates that improved water supplies in rural communities reduce the incidence of diarrhea. To demonstrate this phenomenon, two communities in Guatemala, Florida Aceituna and Guanagazapa, were selected for study due to their similar population, environment, and health characteristics. The former, which obtained water from shallow wells and rivers, served as a control to establish a norm for diarrheal incidence without project assistance. The latter was provided with a piped chlorinated supply system. Data from both communities were analyzed independently. Halfway through the project, a program to alter sanitary behavior and encourage latrine construction was instituted in Guanagazapa, allowing changes in diarrheal incidence to be ascribed either to water alone or to both water and the new program. The mean amount used per person over the project was 25 liters daily for each person in Florida Aceituna and 68.4 liters in Guanagazapa. Eighty percent washed their clothes and bathed at home in Guanagazapa compared to less than 1/3 who did laundry and 1/5 who bathed in the control village. Guanagazapa showed a significant improvement in sanitary awareness over the project period and 79 new latrines were installed.

The Fertility Impact of Traditional and Changing Childspacing Practices in Tropical Africa
Working paper
John Bongaarts. May 79, 33p WP-42, AID-PN-AAH-321
Contract AID/pha-C-1199

Keywords: Family planning, Fertility, *Birth control, Contraceptives, *Africa, Relationships, Mathematical models, Developing countries, Foreign technology, Developing country application.

This paper presents a mathematical model to study the relationship between fertility levels and intermediate fertility variables such as the proportion reproductive years spent in marriage and the frequency of use of natural or artificial contraceptive measures. This analytic framework is demonstrated by calculating and comparing the fertility rates of one African and two Western societies. Next the author discusses the role of variations in the duration of postpartum abstinence on fertility levels. The relationship between lengths of abstinence (3-30 months) and the proportionate female use of contraceptive on fertility is calculated, and the strong fertility-inhibiting effect of lactation is made evident. For example, according to the model, an 88% decrease in the length of the abstinence period doubles fertility, while a 50% increase in use of contraceptive measures reduces fertility by 50% for all durations of infecundability. Further research into the prevalence of postpartum abstinence customs in Africa is encouraged.

The Income and Production of Guyana Rural Farm Households: An Analysis Based on the 1979 Guyana Rural Farm Household Survey
Apr 80, 158p AID-PN-AAH-642
Contract AID-504-INST-781

Keywords: Households, *Guyana, Farms, income, Rural areas, *Home economics, Recommendations, Surveys, Developing country application.

Obtaining a clear picture of the economic well-being of farm households in Guyana is a prerequisite for providing assistance to the country's poorest and neediest farmers. To this end, the results of a survey of the income and production of Guyana's rural farm households for the year 1978 as derived from interviews of individuals from these families, are presented in this report. Major findings of this report include: (1) four-fifths of rural farm households had annual incomes below Guyana's target level for development assistance; (2) two-thirds of rural farm household income came from off-farm sources; (3) one-third of farm households reported difficulty in obtaining needed production and service inputs for rice production; (4) irrigation systems and conditions were better on non-target farms than on target farms. Based on these findings, the following basic program and policy directives aimed at raising rural farm income are set forth: (1) increasing government support for rural households; (2) encouraging farmers to increase the amount of land under cultivation; (3) improving on-farm water control;

(4) creating more opportunities for off-farm employment.

Third Evaluation of the Thailand National Family Planning Program
Program evaluation rept. no. 3
Donald Minkler, and Debanom Muangman. Feb 80, 125p AID-PN-AAJ-314
Contract AID-pha-C-1100

Keywords: Family planning, *Thailand, *Birth control, Developing countries, Contraceptives, Fertility, Statistical data, Foreign technology, Developing country application, Population growth, Program evaluation.

Since the development of the first family planning (FP) project implemented in Thailand in 1968, great progress has been made there in FP and the use of contraceptives. The NFPP has had the following significant impact upon population growth: contraceptive use, especially of the pill, has increased substantially since the commencement of NFPP; fertility is decreasing faster in rural areas than in urban areas; the steady decline in the fertility rates since the mid-1960's has accelerated since NFPP began; and the population growth rate has decreased from 3.6% to 2.6% during 1960-75. For the success of this program to continue, increased support is required from the Royal Thai Government (RTG) and international donors. Other recommendations arising from this evaluation include: (1) giving priority to geographic regions and subpopulations where FP acceptance is low; (2) emphasizing improved management and supervision at the village level; (3) including information about FP in health education programs; (4) giving all health education personnel rural health; (5) evaluation of the impact of NFPP on health status; (6) continuing pilot projects to determine the use of nonphysician personnel in FP service delivery and (7) continuing subsidy to RTG.

Senegal: The Sine Saloum Rural Health Care Project
Project impact evaluation rept. no. 9
Richard F. Weber, Graham B. Kerr, Herbert B. Smith, and James M. Seymour. Oct 80, 98p Rept no. AID-PN-AAJ-008

Keywords: Africa, Evaluation, Developing countries, Public health, Financing, Family planning, Design, Implementation, Foreign technology, Rural health services, Developing country application, *Senegal, *Health care delivery, Program evaluation, Health services, Health facilities.

This evaluation of the Sine Saloum Rural Health Care project to establish a network of village health huts to deliver basic health services provides a partial answer to this question. With the help of villagers, health huts were constructed and equipped in 200 target communities. Three conditions must be met, however, if the project is to succeed: the huts must earn enough to cover operating costs; government supervision and support must improve; and the medicine resupply system must function. Other problem areas include a

APPROPRIATE TECHNOLOGY ABSTRACTS

high turnover of hut health workers; the close proximity of the huts to each other which forces some to close; and the high salaries paid to village health workers which drain the systems capital. Recommendations include: altering the health hut financial system to avoid collapse; closing health huts which overlap services; halting construction of additional health huts until the existing huts are improved; including a family planning component; obtaining firm assurances of budgetary support from the government; and strengthening A.I.D.'s project management team. Since this evaluation several corrective measures have been made such as delaying project expansion; recruiting an experienced project manager; studying similar more successful projects and redesigning the project.

During September and October 1979, a multidisciplinary team of experts in environmental and renewable natural resources undertook a general review in Bolivia of the following topics: wildlands and wildlife, natural forests, plantation forests, soil erosion and watershed management, high altitude range management and condition, and industrial and urban pollution and its health impacts. The purpose of the review was to orient future efforts by AID, the Government of Bolivia and the international assistance community in environmental and natural resources work.

The Philippines: Rural Electrification
Project impact evaluation rept. no. 15
David H. Mandel, Peter F. Allgeier, Gary Wasserman, Gerald Hickey, and Robert Salazar. Dec 80, 97p AID-PN-AAH-976

Keywords: Electrification, Rural areas, Low income groups, Economic analysis, *Philippines, *Electric power, Communities, Developing country application.

A.I.D.'s overall evaluation of its Philippine Rural Electrification (RE) program, consisting of eight successive projects, had limited effect on the rural poor and the economic development process. This program began in 1965 and has since energized 844 (59% of the national total) Philippine municipalities, 9,088 (27% of the national total) households, and 101 new cooperatives; resulting in a change of schedule for total national energization from 1980 to 1987. To improve the productive capacity of the poor, cooperatives were organized and lent funds to extend electrical power into their areas. Many of the poor, however, could not afford its installation, continued use, or more than one or two light bulbs a month. Community lighting, such as street-lighting, indirectly helped the poor in various ways, such as by providing greater personal security. Those with sufficient financial resources or skills were able to use the electricity for entrepreneurial activities. RE impact upon development occurred in areas with a

concentrated population, available technical skills and capital, and access to large and diverse markets. Active promotion of electricity-dependent investments and projects also increased program impact.

Applied Policy Analysis for Integrated Regional Development Planning in the Philippines
Dennis A. Rondinelli. 1979, 32p AID-PN-AAH-244
Contract AID/ta-C-1356

Keywords: *Regional planning, *Philippines, Urbanization, *Urban planning, Developing countries, Urban areas, Rural areas, Urban development, Policies, Local government, Developing country application.

The development in many LDC's of urban industrial centers at the expense of rural areas requires that national development planning be based on a clear articulation of urban-rural (spatial) relationships. This research paper evaluates the methods of integrated spatial analysis used in A.I.D.'s Sico River Basin Project in the Philippines in order to develop the framework for such development planning. The Bicol project is of interest for three reasons: (1) the spatial analyses used in it are potentially replicable in other countries; (2) the problems in Bicol addressed by these analyses are common in other LDC's; and (3) a study of the project provides insights into urban-rural relationships and the spatial dimensions of rural poverty that are useful in reformulating national investment strategies.

Profiles of Basotho Farmers. Part I: Images of Basotho Farmers. Part II: Are the Basotho Subsistence Farmers. Part III: Progressive Farmers in Lesotho
Discussion paper
Gene C. Wilken, and Martin H. Fowler. Jun 79, 59p
LASA/DP-8, AID-PN-AAH-351
Prepared in cooperation with Colorado State Univ., Fort Collins. Dept. of Economics.

Keywords: Personnel, *Lesotho, Farms, Characteristics, Manpower, Policies, Land development, *Agriculture, Management planning, Developing country application.

Understanding the complex characteristics of Basotho farmers - who are resilient but who also resist introduction of new crops, tools, or techniques - is necessary if development planning for Lesotho's agricultural sector is to be effective. This report characterizes Basotho farmers through three essays entitled Images of Basotho Farmers, Are the Basotho Subsistence Farmers, and Progressive Farmers in Lesotho. All three studies elucidate the relationship between previous assumptions and present policy. It is uncertain that these programs can effectively disseminate new methods or produce widespread benefits in the agricultural sector. Indeed, they may create social disparity and thus impede agricultural development. Reliance on the inherent hardness of the Basotho farmer and his highly developed local institutions represents a sounder basis for future sector development.

Text in French.

Keywords: Nutritional deficiency diseases, Developing countries, Africa, Children, Characteristics, *Health, *Children, Mother, Etiology, Mortality, *Nutrition, Morbidity, Diets, Developing country application, Mothers, *Cameroon.

The extent of malnutrition among mothers and children in Cameroon has prompted the Government of Cameroon to undertake a joint research study with the University of California, Los Angeles, School of Public Health to determine the causes and characteristics of this malnutrition. This report, written in French, presents the results of that study. The study is based on a

control group of 506 children, 5-years old or under, of relatively high economic rank whose nutritional status can serve as a point of reference for Cameroon and an experimental group of 5,689 children (5-59 months), 3,350 mothers, and 3,383 households. After introductory sections on Cameroon's demography, economy, and health condition are explained. The physical and laboratory signs, (i.e. hemoglobin concentration) of malnutrition in children and mothers are discussed. Conclusions of the study include: chronic malnutrition in young children reflects prolonged deficiencies in calories and proteins; and evidence of malnutrition based on physical traits is more difficult to define in mothers than in children because of the greater impact of environmental factors on the former. Extensive annexes, tables and diagrams, as well as a 64-item bibliography (1955-78) French and English references are appended.

Potable Water Supply in Rural Morocco
Jarir S. Dajani. 1 Jan 79, 25p AID-PN-AAH-575
Contract AID/ne-C-1575

Keywords: *Water supply, Rural areas, *Morocco, Improvement, *Water wells, Feasibility, Upgrading, Springs(Water), Potable water, Recommendations, Developing country application.

The shortage of potable water supplies in Morocco has been the target of an extensive project to rehabilitate 400 rural wells in eight provinces. After assessing the project's technical feasibility, the author of this report concludes that such a vast project, besides being difficult to manage, would be too diffuse to show any tangible improvements. The author proposes instead that extensive efforts to rehabilitate wells be undertaken in one, or at most two, provinces; and he provides a model for such a scaled-down effort.

Comparative Analysis of National Plans and Budgets of the Sahelian Countries
Nadine Horenstein. Dec 79, 196p AID-PN-AAH-371
Contract AID/afr-C-1199

Keywords: *Management planning, Developing countries, Resources, Allocations, Budgeting, *Africa, Agriculture, Mali, Niger, Senegal, Gambia, Mauritania, Upper Volta, Cape Verde, Chad, Urban development, Trends, Developing country application.

The low rate of return (53%) realized by Sahelian nations from their development plans makes imperative a careful analysis of plans and budgetary resources. This report presents such an analysis with the purpose of identifying trends for future planning. A key factor affecting investment realization rates is the heavy reliance by these nations on external financing. Shortfalls in the availability of foreign assistance have had a crucial impact on investment realization. In addition, there is the problem of mobilization of capital -- a factor which varies considerably on a sectoral and subsectoral basis according to the particular donor institution. Another factor is the frequent revisions of investment levels. These upward and downward revisions are, in turn, related to such factors as inflationary pressures, availability of financing, changing donor priorities, etc. Until recently, the Sahelian nations have allocated substantial portions of their resources to industrial and urban development to the detriment of agriculture. Recent drought has made a change of emphasis even more critical. Mali, Niger, and Senegal are now devoting 24%, 32%, and 14%, respectively, of their rural sector allocations to herd reconstitution and to reversing the deteriorating condition of the rangeland. Infrastructure investment is another priority need. For example, transporting food from surplus-producing areas is often difficult, if not impossible. As a whole, Sahelian nations have devoted relatively small amounts of funds to health, education, and other social services. Programs benefitting people directly, such as village-based health care and formal and non-formal education systems, are urgently needed. A review of annual budgets shows that overall expenditures are growing faster than revenues. This, in combination with a paucity of managerial and technical expertise, prevents these nations from assuming the recurrent costs of donor-financed projects. The remainder of the report consists of individual analyses of the plans and bud-

Morocco: Food Aid and Nutrition Education
Project impact evaluation rept. no. 8
Judith W. Gilmore, Carol C. Adelman, Anthony J. Meyer, and Melvyn C. Thorne. Aug 80, 68p AID-PN-AAH-851
Contract AID/pha-C-1199

Keywords: *Morocco, *Food, *Nutrition, Developing countries, Sanitation, Therapy, Children, Diseases, Foreign technology, Developing country application, *Health education, Curricula development.

Although Morocco has a high per capita GNP relative to most developing countries, its income distribution pattern is skewed and the health and nutrition status of many is deficient. In this report, the impact of the introduction by Catholic Relief Services of nutrition education into 250 Moroccan social education centers (SEC's) which distribute PL 480, Title II food is described. To launch this education program, a nutrition institute was established at Marrakech to train a cadre of Moroccan women in basic nutrition and health. This cadre developed a curriculum of practical lessons in nutrition, sanitation, and the treatment of childhood diseases which were presented at monthly nutrition classes held at the SEC's. Class attendance was spurred on by the prospect of obtaining Title II food. There was a significant correlation noted between increased education and improved nutrition in the children taking part in the program.

Socio-Economic and Environmental Impacts of Low-Volume Rural Roads—A Review of the Literature
Program evaluation discussion paper no. 7.
Feb 80, 184p AID-PN-AAJ-135

Keywords: *Roads, Rural areas, Developing countries, Social effect, Economic impact, *Environmental impacts, *Agriculture, Production, *Employment, Developing country application.

The focus of current development investments in transportation has shifted from highways and railroads to low-volume rural roads, but few evaluations of the socioeconomic and environmental impacts of these roads have been conducted. This study reviews the available evaluative literature and presents issues to be considered in designing future rural road projects. Emphasis is placed on the broad social impact of rural roads and the diffusion of benefits to the rural poor. Impact areas in which roads are a significant factor are identified, e.g., agricultural production, employment, health, and education. Examples are offered of the potential benefits and problems of road construction in each impact category and questions are proposed for use in future evaluations.

Catalog of Holdings and Other References in the Lesotho MOA/LASA Library
Research rept.

Gene C. Wilken, Matsaba J. Leballo, Betty J. Eckert, and Makhothatsa Motleleng. Feb 80, 375p LASA/RR-5, AID-PN-AAH-529
Prepared in cooperation with Colorado State Univ., Fort Collins. Dept. of Economics.

Keywords: Bibliographies, *Lesotho, Books, Documents, *Agriculture, Public health, Social sciences, *Natural resources, *Health, *Education, *Employment, Specialized training, Developing country application, Library collections.

In 1978 the Lesotho Agricultural Sector Analysis (LASA) project team compiled a bibliography listing reference materials on agricultural planning and development in Lesotho which were held in collections in the United States, Europe and Africa. Since that time, the acquisition efforts of the LASA project team have focused on obtaining materials from Lesotho, such as national and ministerial documents and technical and statistical reports, as well as project papers, data analyses, and related consultant reports reflecting indig-

enous research and development activities. This second bibliography represents the collection of the LASA library, which has recently merged with that of Lesotho's Ministry of Agriculture. This combined collection contains the most complete and accessible agricultural and development planning materials and project documents in Lesotho. The bibliography contains nearly 3,000 entries (1841-1979) of English, Italian, Sesuto, German, French, and Spanish publications, and is organized into the following subject categories: geography and natural resources; agriculture; agricultural marketing; industry and commerce; population, employment, and migration; education, training, and extension; health and nutrition; society, culture, and the political process; Lesotho planning and development assistance; and theory and methodology.

Colombia: Small Farmer Market Access
Project impact evaluation rept. no. 1
G. R. van Raalte, Steve Singer, Benjamin Severn, and Jose C. Colon. Dec 79, 51p AID-PN-AAH-768
Contract AID/pha-C01199

Keywords: Access roads, Construction, *Colombia, Communities, Availability, *Marketing, *Roads, Agriculture, Education, Mountains, Rural areas, Developing countries, Developing country application.

Can labor-intensive (pick and shovel) construction of market access roads in the mountainous regions of Colombia result in significant improvements in the welfare of local campesinos. This document assesses the impact of one such effort--The A.I.D.'s Small Farmer Market Access Project. Some 900 km of all-weather, unpaved access roads were planned to link isolated mountain communities with the nearest market road in order to stimulate agricultural production and trade and to open these communities to agricultural extension, health, and educational services. Construction was directed by the host government agency Caminos Vecinales, but as most of the work was performed by the intended beneficiaries, 60-65% of road construction costs were paid as wages to local campesinos. Substantial underestimates of the cost of construction will cause the final total of 59 roads averaging 8 km in length to fall well short of the projected total. Impacts of road construction and road use are discussed in detail. Marginal farmers, the landless, and the unemployed provided the main labor source, using the income gained to make improvements on house and farm, for fertilizer and improved seed, and for purchase of consumer goods. The resulting switch from animal to motorized transportation sharply reduced transport costs, leading to increased agricultural production without changes in policy or agricultural extension services.

Manager's Guide to Data Collection
Molly Hageboeck, Glynn Cochrane, Lawrence Cooley, and Gerald Hursh-Cesar. Nov 79, 101p AID-PN-AAH-434

Keywords: Information systems, Data acquisition, Data processing, Financing, *Information services, *Management training, Decision making, Methodology, Cost analysis, Developing country application.

Project managers, who rely on data to assist them in decisionmaking, project design, and evaluation, often lack the ability to collect the data themselves and must therefore turn to experts. This report is intended as a guide for managers, enabling them to differentiate between credible and suspect data and to direct all data collection efforts on a timely, cost-effective basis. Four aspects of a manager's role in data collection and analysis are discussed: (1) identifying why, what, and when information is needed; (2) determining the appropriate level of funding and time investments; (3) choosing the most effective information-gathering approach; and (4) managing the data collection and analysis process. For example, a manager faced with a need to fund or replicate a project, or to terminate specific activities, may find he needs baseline information. He must then evaluate the prospective cost of data collection to determine whether the value of the information warrants a lesser, or greater, level of investment. The amount of money or time to be appropriated to the data collection necessarily affects the choice of a collection method, as does the existence of relevant in-

formation in Mission or Washington offices or in other resource centers.

Korean irrigation
Project impact evaluation rept. no. 12
David I. Steinberg, Robert B. Morrow, Ingrid Palmer, and Kim Dong-il. Dec 80, 93p AID-PN-AAH-975

Keywords: *South Korea, *Irrigation, *Agricultural economics, Rice plants, *Rice, Grain crops, Income, Evaluation, Employment, Developing country application, Barley plants.

The irrigation project evaluated in this report was designed to help South Korea become self-sufficient in rice and barley and to raise farm incomes. Fifty-five irrigation works including pumping systems, drainage, reservoir construction, and land reclamation were completed. Rice self-sufficiency was achieved by 1975, soon after the project began. Farm incomes increased.

Population: Current Status and Policy Options
Working paper
Bernard Berelson, W. Parker Mauldin, and Sheldon J. Segal. May 79, 77p WP-44, AID-PN-AAH-324
Contract AID/pha-C-1199

Keywords: Populations, Developing countries, Developed countries, Fertility, *Birth control, Population growth, Forecasting, Policies, Developing country applications, Family planning.

In the past 15 years, the amounts of money, time, and personnel allocated by developed and developing nations alike toward the study and resolution of the problem of overpopulation have increased dramatically. In almost every instance these inputs have been directed toward research, training, and policy measures to reduce fertility. In this paper the authors review actions taken to date, then use their conclusions to make projections for future demographic trends and policy. The authors conclude with an analysis of projected contraceptive technology and various policy options to improve both the supply (via more integrated FP services) and the demand (via increased education and information on FP) for fertility and mortality-reducing programs. Included are appendices on priority donor-recipient countries, changing population rates, and means of fertility regulation and contraception, as well as a 69-item (1962-79) reference list.

Research in Population and Development: Issues and Comment
Working paper
Paul Demeny. May 79, 37p WP-45, AID-PN-AAH-325
Contract AID/pha-C-1199

Keywords: Populations, Developing countries, *Population control, Fertility, Economic analysis, Mortality, Trends, Policies, Developing country application.

The diversity of issues in the field of population and development poses a problem for the researcher, who must decide where and how to allocate his efforts. The following issues are addressed: (1) demographic variables in development policies and plans; (2) disciplinary perspectives on economic demography; and (3) estimating fertility and mortality in developing countries. The author emphasizes the responsibility of each researcher to approach scientific problems with sensitivity to their social significance. The author also suggests that research in economic demography should proceed along two main lines. First, work should be organized around territorially defined populations and should attempt to draw a comprehensive view of past, current, and future trends. Second, policy issues should be defined politically rather than demographically. This would mean that traditional issues such as fertility, mortality, migration, and growth would be replaced by family policy, public health programs, rural development policy, and the like. In his final commentary, the author suggests that demographers not rely

APPROPRIATE TECHNOLOGY ABSTRACTS

solely on statistics supplied by national governments in formulating policy recommendations. Rather, decentralized statistical information should be used since it corresponds more closely to the reality of how people live, work, and interact.

Population General: Technology and the Social Regulation of Fertility
Working paper
Geoffrey McNicoll. Jun 79, 28p WP-46, AID-PN-AAH-326
Contract AID/pha-C-1199

Keywords: Fertility, *Birth control, Developing countries, Children, Regulations, Foreign technology, Developing country application, Social factors, *Population control.

The 25-year history of efforts by modern national governments to limit high fertility has concentrated solely on biological approaches such as legitimizing and increasing the use of contraceptives and introducing family planning programs. Fertility behavior, however, is at the core of society's economic, cultural, and institutional patterns; therefore, sole reliance on applied biomedical approaches is invariably insufficient. In this paper, the author examines the effects of contemporary patterns of technological and institutional change on fertility and on possibilities for its regulation. He examines the structure of fertility demand, i.e., the desire for a specific (usually rather high) number of children. The author points out that the distribution of fertility costs (loss of the mother's income, costs of raising children, etc.) cannot be separated from the distribution of income and wealth in society; it is society's institutional arrangements that diffuse or concentrate the economic costs of children. Such institutional arrangements include the nuclear family, local communities, and economic classes. As the development effort proceeds, the costs of children are increasingly relegated from larger groupings to the family. Likewise, the power of institutional arrangements to regulate fertility decreases. In addition, nonmedical technologies (e.g., those of transportation, communication and production) continually impact on society's institutions and consequently on fertility behavior. It follows that successful resolution of the world's fertility-related problems will have to go beyond family planning programs and other biomedical techniques to respond to the reality of rapid technological and institutional change faced by developing nations. Footnotes supporting the author's study are appended.

Female Migration in Developing Countries: A Framework for Analysis
Working papers
Veena N. Thadani, and Michael P. Todaro. Aug 79, 53p WP-47, AID-PN-AAH-327
Contract AID/pha-C-1199

Keywords: *Migration, *Women, Females, Developing countries, Rural areas, Urban areas, Marriage, Mathematical models, Developing country application.

Potentially significant gender-related differences in the migratory process suggest the need for a specific analysis of female migration. The emergence of a new category of migrants--unattached women--reveals the inadequacy of existing research approaches which are based on the assumption that female migration reflects patterns of family or household migration. This report uses research conducted in Latin America, Africa, and India to develop a mathematical model of female migration patterns in LDC's. The authors show that where increased economic and/or educational opportunities for women are greater in urban than in rural areas, the increase in female migration rates from countryside to city is marked, and in many cases even greater than male migration levels. The authors argue that two additional variables, mobility marriage (marriage as a means to financial or social improvement) and marital/migration migration (movement to join or to seek a mate) are particularly important as determinants of the individual woman's propensity to migrate. The authors then introduce a mathematical model to demonstrate that the proportion of women in a given society who choose to migrate is a function of: (1) the differential between expected urban income and aver-

age rural income; (2) the probability of marriage to males employed in the modern sector ('mobility marriage' factor); (3) the probability of marriage to any eligible male; (4) sex role constraints on spatial mobility for women; and (5) residual factors such as distance and extended family contacts. The net effect of including the two marriage-related variables in the equation is to find a mathematical basis for the increased female propensity to migrate which has been noted in a number of studies based strictly on economic models.

AID's Role in Indonesian Family Planning: A Case Study with General Lessons for Foreign Assistance
Program evaluation rept no. 2
James R. Heiby, Gayl D. Ness, and Barbara L. K. Pillsbury. Dec 79, 87p AID-PN-AAH-425

Keywords: Project management, *Indonesia, *Birth control, Family relations, Populations, Fertility, Grants, Financing, Foreign countries, Developing country application, Family planning.

The AID-financed family planning program in Indonesia is one of the world's most successful, prompting the question of how to replicate that success in other family planning assistance programs. This report uses data collected from field visits and interviews to evaluate AID's assistance to the Indonesian program and identify the underlying reasons for its success. The report describes the program's service network, its consumers, demographic impact, and AID inputs. A sociocultural study of the country shows that high population growth, administrative support, and community acceptance are the three factors whose convergence most favored the project's success. The history and description of the program, particularly the types and extent of service, are given. AID's support is described in terms of leadership, commodities, organization, resources, local-cost programming method, and inter-agency linkage.

A Preliminary Study in Three Countries: Indonesia Report
Pauline Milone. Sep 78, 306p AID-PN-AAH-417
Grant AID/otr-G-1477

Keywords: Females, *Indonesia, Ethnic groups, Marriage, Education, *Women, *Socioeconomic status, Employment, Children, Literacy, Developing country application.

In Indonesia, a country of over 300 ethnic groups, the enormous diversity of language, religion, education, culture, and custom makes the term Indonesian woman inadequate. This paper documents the social, legal, and economic status of Indonesia's 66 million women without neglecting ethnic differences. The first section describes the country's Islamic, Christian, and commonlaw marriage customs, which impact on every aspect of a woman's existence. The history of Indonesia's women's movement, especially in eliminating child and forced marriages, polygamy, and husband-initiated arbitrary divorce are discussed. This is followed by a portrayal of the difficulties faced by women - particularly the young and/or unmarried - in achieving equal status under the law in regard to child custody, property ownership, control of income, tax liability, access to credit, political participation, and educational opportunities. Also included are the many factors responsible for the high rates of female anemia/malnutrition and maternal mortality, women's communications networks, economic and demographic profiles of women, and the author's impressions of the effects of modernization on women.

Lesotho's Employment Challenge: Alternative Scenarios, 1980-2000 AD
Discussion paper
Jerry Eckert, and Ron Wykstra. Dec 79, 39p LASA/DP-7, AID-PN-AAH-330
Prepared in cooperation with Colorado State Univ., Fort Collins. Dept. of Economics.

Keywords: *Employment, *Lesotho, Personnel, Population migration, Males, Females, Trends, Growth, Farms, *Migration, Developing country application, Labor force.

This paper is the second of three closely interrelated research works dealing with one of Lesotho's most important development issues: employment. It considers migrant labor and probable growth in the labor force to arrive at alternative estimates of the total labor supply which must be absorbed by the domestic economy. Subsequently, alternative possible scenarios for labor utilization in non-agricultural sectors are developed, with the intent of deriving the required increase in rural and agricultural jobs as a residual.

Evaluation of Low-Cost Extrusion Cooker in Sri Lanka
Special rept.
A. A. Ackels, R. E. Gaylor, and E. E. Kuphal. Jul 77, 132p LEC-3, ID77-78-1, AID-PN-AAH-435

Keywords: Cooking devices, *Food processing, Performance evaluation, *Grains(Food), Developing countries, *Food supply, Foreign technology, Developing country application, *Sri Lanka.

The low-cost extrusion cooker (LEC), a simple system used to convert indigenous grains into low-cost, nutritious foodstuffs, was developed to reduce dependence on food-for-peace programs as a means of solving LDC food supply problems. This paper evaluates the performance of a pilot LEC system in Sri Lanka, determines its suitability for use in other LDC's, and recommends changes and improvements. The investigating team spent 10 days onsite evaluating Sri Lanka's LEC system, which used the Brady Crop Cooker to cook soybeans for farm animal consumption. The evaluation focused on raw materials used, grain cleaning and storage processes, operating and performance of the B.C. and support equipment performance. The team noted improper usage of tools and parts, lack of spare parts, and machines operating with missing or damaged parts. Final recommendations for Sri Lanka LEC are: (1) to investigate and install continuous-duty equipment so that a 98% 120-hr. equipment reliability factor can be reached, (2) to improve LEC maintenance so as to increase production to at least 70% of its maximum production capacity. The authors urge prompt initiation of pilot plant LEC development program to increase world use of the system.

On Allocating Resources for Fertility Reduction in Developing Countries
Working paper
Bernard Berelson, and Robert H. Haveman. Mar 79, 90p WP-40, AID-PN-AAH-322
Contract AID/pha-C-1199

Keywords: Resource allocation, Fertility, Family planning, Effectiveness, Programs, Developing countries, *Birth control, Efficiency, Foreign technology, Developing country application, *Population control, Expenditures.

Population growth in LDC's has led to a yearly allocation of \$200 million by donor agencies to programs designed to reduce fertility. In view of expense surprisingly little investigation of resource allocation efficiency has taken place. To determine a superior allocation method, the authors of this paper analyze responses from recognized population planning experts on the effectiveness of current donor funded programs; they also identify the most efficient strategies of intervention by analyzing variations in fertility response according to changes in resource allocation. The paper presents a 108-cell matrix composed of 12 strategies of supply and demand oriented interventions; three social settings (SSs) delineated by favorable responses to fertility interventions and three program implementation (PI) categories describing the strength or weakness of LDC government support. The effectiveness of each cell is rated and the results analyzed. The most effective strategies are judged to be supply-oriented, specifically family planning programs augmented by abortion and/or an unspecified new method. Accord-

APPROPRIATE TECHNOLOGY ABSTRACTS

ing to the model only 25 of the 108 cells would be effective results in reducing fertility.

Jamaica Feeder Roads: An Evaluation
Project impact evaluation rept. no. 11
Robert J. Berg, Carleen Gardner, Michael M. Horowitz, Palmer Stearns, and Charles Vandervoort. Nov 80, 103p Rept no. AID-PN-AAJ-199
Prepared in cooperation with State Univ. of New York at Binghamton, and Department of Transportation, Washington, DC.

Keywords: Access roads, Planning, Project management, *Roads, Rural areas, *Jamaica, Developing country application.

Although it upgraded a total of 181 miles of rural roads between 1972 and 1976, the Jamaican feeder roads project failed to have any demonstrably significant benefits. This report investigates the causes of that failure by examining the logic, appropriateness, and achievement of the project's goals. The authors conclude that the haste brought about by the project's high political priority ultimately caused its failure. A more methodical design and review process would have revealed the ineffectiveness of the rural roads approach and its propensity for failure. These conclusions are particularly important since politically-oriented foreign assistance from any source could encourage repetition of similar difficulties.

Risk and Allocative Errors Due to Imperfect Information: The Impact on Wheat Technology in Tunisia

Doctoral thesis
David Fergus Nygaard. Dec 79, 147p AID-PN-AAH-602
Contract AID/ta-BMA-5

Keywords: *Wheat, *Agricultural economics, *Tunisia, Production, Decision making, Mathematical models, Risk, Income, Profits, Policies, Allocations, Errors, Theses, Developing country application.

In the 12 years since high-yield varieties of wheat were introduced in Tunisia, only 15% of all farmers have adopted them. This Ph.D. thesis explains the low adoption rate by analyzing the factors affecting a producer's input decisions (including seed choice), the judgemental errors made in output projections, and the effect of such misjudgements on wheat productivity. The author develops a theoretical model to describe this decisionmaking process. This model incorporates risk and uncertainty variables and notes the difference, or 'allocative error', between the producer's output expectations - based on input decisions - and the actual outputs.

Surface Dressing in Developing Countries: Research in Kenya
L. S. Hitch. c1981, 43p Rept no. TRRL-LR-1019
Also pub. as ISSN-0305-1293.

Keywords: *Roads, Surface finishing, Bituminous, Aggregates, Binders(Materials), Trafficability, Materials specifications, Seasonal variations, *Kenya, Developing countries, Foreign technology.

In many developing countries surface dressing is used as a running surface on new low-cost roads as well as a maintenance treatment for existing roads. These countries are usually characterized by combinations of road surface condition, traffic, climate, and materials, that are not found in Britain and that are not favorable for good surface dressing. In such cases the recommendations for road surface dressing given in Road Note 39 which is intended for use in Britain, are not applicable. Jackson (1963) has proposed a method of surface dressing design based partly upon ideas put forward by Hanson (1935). This method was used to design a total length of 27 km of experimental sections of surface dressing in Kenya during 1975-77. This report describes the construction, monitoring and performance of the sections during the first 3--4 years traf-

ficking. It is concluded that Jackson's design method works satisfactorily in Kenya conditions over the range of chipping size used in these trials, namely 5 mm to 13 mm average least dimension. (Copyright (c) Crown Copyright 1981.)

The Minibuses and the Public Transport System of Kuala Lumpur

Jamison Mackay. c1981, 35p Rept no. TRRL-SUPPLEMENTARY-678
Also pub. as ISSN-0305-1315.

Keywords: Mass transportation, Developing countries, Urban areas, *Buses(Vehicles), Traffic surveys, *Transportation management, *Malaysia, Public transportation, Kuala Lumpur(Malaysia), Minibuses.

This report is one of a series of studies undertaken by the TRRL, examining public transport in developing countries, and describes the minibus system of Kuala Lumpur, Malaysia's capital and largest city. In 1975 a fleet of minibuses was introduced into the city, operating in competition with the existing stage buses. The operation and service of the minibus system is examined to determine why it has been so successful in attracting passengers away from the conventional stage bus system. While the stage bus is more efficient per unit of capacity, various institutional factors have made the minibus more successful. (Copyright (c) Crown Copyright 1981.)

The Role of the Agricultural Tractor in Road Haulage in Sri Lanka
A. J. Plumbe, and H. M. Byrne. c1981, 21p Rept no. TRRL-LR-1007
Also pub. as ISSN-0305-1293.

Keywords: *Cargo transportation, *Agricultural machinery, Tractors, *Sri Lanka, Rural areas, Surveys, Ownership.

The agricultural tractor fills an important role in the freight haulage sector of the Sri Lankan economy. While some machines have been acquired by operators to use exclusively for this purpose, others are employed in this role only when not needed for soil cultivation. The report describes the geographical distribution of ownership, the scale of employment of tractors in this role and shows that before November 1977

road haulage was a profitable business for the owners of machines. After this date when the import of duty was substantially increased the report explains that the position was changed with owners of new machines being unlikely to cover their capital and running costs from revenue. Bullock Cart Haulage in Sri Lanka
A. J. Plumbe, and D. J. Savage. c1981, 23p Rept no. TRRL-LR-1006
Also pub. as ISSN-0305-1293.

Keywords: *Cargo transportation, *Sri Lanka, Rural areas, Surveys, *Animal energy, Developing countries, Bullock carts.

The characteristics of bullock cart haulage are described and the estimated profitability of operating bullock carts based on data collected from surveys conducted in 1977/78. The paper concludes that while the basic design of the bullock cart has changed little over time, and could well be improved, it is easily maintained and well suited to its role in satisfying the demand for goods transport at the most local level and in small unit loads. Details are given of the types and quantities of commodities carried and trip distances, speeds and tariffs are reported. (Copyright (c) Crown Copyright 1981.)

Labour Intensive Technology in Water Resources Development-Indian Experience
Oct 79, 230p Rept no. PUB-139

Keywords: Professional personnel, *India, *Water resources, Skilled workers, *Irrigation, *Employment, Engineers, *Dams.

India has been bestowed with substantial water resources. The construction of dams and the associated canal systems involving the investment of substantial funds afford an opportunity for providing employment opportunities for a large number of technical, non-technical, skilled and unskilled personnel. This can make a substantial contribution to the reduction in the unemployment situation in the country also in the construction phase. The present publication contains some of the experiences of engineers in the country on adoption of the labor intensive technology on a few water resources development projects.

El Tratamiento y Saneamiento de Agua: Manual de Metodos Simples para Areas Rurales de los Países en Desarrollo. (Water Treatment and Sanitation: A Handbook of Simple Methods for Rural Areas in Developing Countries).
H. T. Mann, and D. Williamson. Jan 76, 111p
Text in Spanish.

Keywords: *Water treatment, *Sewage treatment, Solid waste disposal, Developing countries, Manuals, Water distribution, Rural areas, Filtration, Coagulation, Trickling filters, Disinfection, Potable water, Equipment, Substitutes, Spanish language, Translations, Foreign technology.

The purpose of this handbook is to provide information which must be considered when investigating the development of a water supply and sewage disposal system for a small community which is situated too far from a piped system as water supply. Many of the methods of water and sewage treatment described in this handbook are based on the standard practices used in developing countries but which can be adapted. Chapters 1-6 describe methods which may be applied in sequence, from the selection of a water source, the transport of water, the treatment of water, the disposal of wastes, sewage treatment and the final disposal of treated wastes, and the by-products of treatment processes. In each chapter, a number of alternatives are described, some suitable for self-help situations and others which may be more suitable for larger communities.

Monitoring and Information System for Plan Implementation
C. S. Parthasarathy. 1973, 18p

Keywords: Management information systems, Information systems, Evaluation, Planning, Government, Personnel, Requirements, *Management planning, *Information services, Foreign technology.

There is a distinction drawn between the management function of planning and that of monitoring. Monitoring may usually be looked upon as the process of ensuring that performance takes place in conformity with plans. This would be in sharp contrast to plans which determine the objectives, means, and standards against which performance can be measured. Planning and monitoring, both conceptually and operationally, are inextricably interwoven. The role of information is pervasive in the operations of government. Information is rarely an end in itself; yet information—its availability, relevance, accuracy, timeliness, completeness and presentation format—plays a crucial role in almost every activity of government, namely, in policy-making, planning, decision-making, project/program formulation, implementation, monitoring, and evaluation. Thus, the excellence and effectiveness of government at all levels is, to a considerable extent, based on the quality of its information.

Keywords: *Irrigation, *Philippines, Project planning, Income, Production, Economic impact, Social effect, *Water supply, Credit, Developing country application, Cooperatives.

Since 1976, the Philippine Government (GOP), with A.I.D. support, has built or rehabilitated over 1,000 village irrigation systems. This document evaluates the two successive A.I.D. projects which have contributed to this effort. The evaluation begins with a brief description of the projects, in which small, subsistence farmers are encouraged to form cooperative organizations called Irrigators Service Associations (ISA's) in order to gain access to loans and electricity and to construct, operate, and maintain village irrigation systems.

Turkish Fertility Survey, 1978: A Summary of Findings

Jul 80, 23p AID-PN-AAJ-144
Contract AID/csd-3604

Keywords: Fertility, *Turkey, Reproduction(Biology), Interviews, Surveys, Females, *Population control, Developing countries, Population growth, Foreign technology, Developing country application, Females.

From 1945 to 1975, Turkey's population grew at an annual rate of 2.5% until it numbered over 40 million people. Now, however, there are signs that the nation's fertility rate is beginning to decline. This report summarizes the results of the 'Turkish Fertility Survey', which was based on interviews with a representative sample of 4,431 Turkish women. The survey revealed that Turkey has pronounced urban-rural, regional, and social differentials in practically every aspect of fertility investigated, indicating that the nation is in a demographic transition. This report details Turkey's trends toward later marriages, reduced cumulative childbearing, increased knowledge and use of contraceptives, and moderate family size preferences.

Reaching the Rural Poor: Indigenous Health Practitioners Are There Already
Program evaluation discussion paper no. 1
Barbara L. K. Pillsbury. Mar 79, 65p Rept no. AID-PN-AAG-685

Keywords: Medical personnel, Developing countries, Utilization, Attitudes, Rural areas, Low income groups, Policies, Developing country application, *Health manpower, *Health education.

Because over 2.3 billion people worldwide continue to rely on traditional healers and midwives rather than utilize a system they neither understand nor trust, a sensible policy to improve rural health is to encourage and utilize the resources represented by indigenous health workers (IHW's). This paper examines the potential for incorporating IHW's into formal primary health care (PHC) systems to increase community acceptance and improve the utilization of PHC services. The author recommends that A.I.D. follow the World Health Organization's lead in adopting the following policy changes: (1) encourage and support programs which train and utilize IHW's; and (2) focus attention on traditional practices in training professional health workers and in PHC project designs. Specific program guidelines and recommended sector studies conclude the report. Annexes on information needs, a 1977 World Health Assembly resolution, recommendations of a congress sponsored by the Pan American Health Organization, and a 100-item bibliography (1962-79) are included.

Perspectives in Maternal-Infant Nutrition
Naomi Baumslag, and Edward Sabin. Sep 78, 29p
AID-PN-AAH-710

Keywords: Nutritional deficiency diseases, Infants, Humans, *Children, *Nutrition, Diets, Food, *Women, Maternal health care, Developing country applications, *Health education, Mothers.

Mainnutrition is a major contributor to high LDC infant mortality rates. This paper examines the special problem and nutritional needs of those most vulnerable to malnutrition--infants, children, and pregnant and lactating mothers--and recommends specific remedial practices and programs. This report recommends that health personnel strongly encourage the practice of breast-feeding to dispel misconceptions and to ensure better child nutrition. Calorie-protein studies should be instituted and followed by integrated health and nutrition interventions, especially in family planning and mother/child health programs. The mother should be the focus of these efforts as the most cost-effective and enduring means of ensuring the infant's health. Marketing practices and misleading information by formula companies should be minimized. A 28-item bibliography (1966-78) is appended.

Effectiveness and Impact of the CARE/Sierra Leone Rural Penetration Roads Projects
Project impact evaluation rept. no. 7
G. William Anderson. Jun 80, 117p Rept no. AID-PN-AAH-751

Keywords: *Roads, Rural areas, *Sierra Leone, Developing countries, *Agricultural economics, Marketing, Highway transportation, Developing country application.

After years of dependence on declining mineral exports, the Government of Sierra Leone (GOSL) recently shifted its focus to agricultural development. The feeder roads projects reviewed in this report were intended to complement that shift. Project benefits have included more frequent visits by extension agents, increased stops by light vans providing local transportation, increased ownership of motorcycles and bicycles, and greater access to health care. Fertilizer use and marketing of greater varieties and quantities of crops are also more prevalent, and commercial activity (new rural markets, bank lending, new rice mills) has been stimulated. On the negative side, indications are that CARE roads may have precipitated shorter fallow periods for upland rice cultivation, greater rice scarcity, and increased swamp rice cultivation. These factors suggest that food crops are being replaced with cash crops such as cocoa, coffee, and oil palm--and are thus associated with reduced soil fertility, erosion, deforestation, and increased exposure to waterborne diseases. During project implementation, there was a shift from labor-based to equipment-based road construction.

Effectiveness of Four Rodenticides in Deepwater Rice: Technical Report No. 4
Richard M. Poche, Y. Mian, E. Haque, and P. Sultana. Mar 80, 25p AID-PN-AAH-712
Contract AID/BNG-0003-78

Keywords: Rodenticides, Rodent control, *Bangladesh, Effectiveness, *Rice, Damage, Rats, *Pest control, Zinc inorganic compounds, Phosphorus inorganic compounds, Developing country application, Benzene sulfonic hydrazide, Zinc phosphides, Difenacoum, Brodifacoum.

Over one-half of Bangladesh is flooded each year, causing villages to become small, separated islands infested by rodents driven from the flooded fields. The rodents are a terrible problem for the production of deepwater rice, a major crop in Bangladesh's delta regions, as they raid the crop for food and nest materials. This report was based on a study that identified the rodent species that damage deepwater rice and compared the efficacy of four rodenticides used for their control.

Kitale Maize: The Limits of Success. Project Impact Evaluation No. 2
Charles W. Johnson, Keith M. Byergo, Patrick Fleuret, Emmy Simmons, and Gary Wasserman. Dec 79, 64p Rept no. AID-PN-AAH-723

Keywords: *Corn, Plant genetics, *Kenya, Hybridization, Seeds, Production, Government policies, Economic impact, Developing country application, Maize.

Ninety percent of Kenya's people depend on maize as their staple food. This report examines the impact of A.I.D.'s support to maize breeding projects in Kenya, which aimed to make regular improvements in hybrid maize through development of a breeding methodology and to create an institutional capacity in East Africa for maize research. The evaluation is particularly concerned with the spread of improved hybrid technology and its impact on economic growth, equity, and government policy.

Rural Electrification: Linkages and Justifications. Program Evaluation Discussion Paper No. 3
Judith Tendler. Apr 79, 84p Rept no. AID-PN-AAG-671

Keywords: Electric power distribution, Rural areas, Evaluation, Projects, *Electric power, *Community development, Developing country application.

The author notes that rural electrification planners generally tend to seek replication of the successful

Philippine rural electrification (RE) project, which strongly favored household consumption. The author concludes that an RE project is not justified on the basis of household consumption alone; most often the poorest members of the community cannot take advantage of the benefits offered by household electricity. They can benefit much more significantly from the increase in employment which accompanies RE use by producers and from the increase in public services resulting from RE's municipal use. A.I.D. should investigate means of encouraging employment generation in RE projects, e.g., by providing credit and technical assistance to small industries. A.I.D. should also identify public services which are electricity-dependent, such as clinics and schools, and link provision of RE projects with extension of these services. The author also recommends the creation of a central A.I.D. office to promote local (rather than international) suppliers for the equipment and labor demands of infrastructure projects and favors an AID-supported central fund to promote local cooperatives and auto-generation projects. A 94-item bibliography (1966-78) is included.

Child Care Needs of Low Income Mothers in Less Developed Countries: A Summary Report of Research in Six Countries in Asia and Latin America
Sep 79, 90p AID-PN-AAH-982
Contract AID/ta-G-1413

Keywords: Day care centers, Developing countries, Females, *Children, Income, *Health, Requirements, *Women, Vocational guidance, Developing country application, Labor force.

The need to expand women's roles to include contribution to household finances in addition to caring for a family is impaired by the lack of options for child care available to women. This report summarizes studies conducted on the effect of women's income-generating activities on child care patterns, health, nutrition, and alternative approaches to child care in six developing countries—Korea, Malaysia, Sri Lanka, Brazil, Dominican Republic, and Peru. The report recommends that national and international agencies make child care and women's needs a priority.

The Kenya Fertility Survey, 1978: A Summary of Findings
1980, 20p AID-PN-AAJ-146
Contract AID/csd-3606

Keywords: Fertility, *Kenya, Reproduction (Biology), Interviews, Surveys, Females, Developing countries, Population growth, *Birth control, *Population control, Foreign technology, Developing country application, Females.

At its current annual population growth rate of 4%, Kenya's population of about 15.3 million people will double in 18 years. This International Statistical Institute (ISI) survey report assesses factors contributing to Kenya's growth rate: the strength of marriage, high fertility rates, preference for larger families, limited contraceptive usage, and the slight effect of noncontraceptive factors upon fertility. From 8/77 to 5/78, ISI interviewed 8,100 single and married women from

8,891 households. ISI's most important discovery was Kenya's extremely high fertility rate, an average of eight children per woman. Of these, an average of 6.3 survive—with only 2.5 children required for a balanced population level. Additional data suggest an increase in population fertility over the past 15 years. Responses to questions about preferred family size indicate that Kenya has a very pronatalist culture. Most women wanted large families and only a few, including those who already had six children, wished to have no more. Although 88% of the women (in all categories) had heard of at least one contraceptive method, only 29% had tried one and only 11% had used a modern one.

Manpower versus Machinery: A Case Study of Conservation Works in Lesotho
Research rept. no. 6
Ron Wykstra, and Jerry Eckert. Apr 80, 31p LASA/RR-6, AID-PN-AAH-742
Prepared in cooperation with Colorado State Univ., Fort Collins. Dept. of Economics.

Keywords: Labor estimates, Capitalized costs, Public works, Conservation, Civil engineering, *Productivity, Cost estimates, Capital, Fixed investment, Construction costs, *Employment, *Lesotho, Job creation, Developing country application.

This paper propounds the use of labor-intensive over capital-intensive methods in conservation and other public works as a way of providing domestic employment—an argument supported by extensive cost-benefit comparisons and analyses of both methods. Using the results of an earlier analysis as augmented by new data on labor productivity and increased fuel prices, this paper clearly demonstrates that a program of labor-intensive public works is a viable strategy for further developing Lesotho's infrastructure, as well as for contributing significantly to its employment objectives. An 8-page appendix detailing the underlying cost analysis, as well as extensive tables and equations, are provided in support of the authors' conclusions.

Proceedings of the USAID/ASIA Bureau Conference on Energy, Forestry and Environment Held in Manila, November 12-16, 1979
1979, 317p Rept no. AID-PN-AAH-942

Keywords: Meetings, India, Nepal, Philippines, Thailand, Indonesia, Sri Lanka, Bangladesh, *Asia, *Forestry, *Environmental impacts, Planning, *Energy source development, Developing country application.

In response to increasing energy needs among Asian countries, a USAID Asia Bureau Conference was held in Manila, November 12-16, 1979, on energy problems and policies in Asia and their related forestry and environmental aspects. This report contains the proceedings of that Conference. The specific purpose of the Conference, which was attended by energy experts, host country specialists, A.I.D. and USAID officials, and donor agency representatives, was to make preliminary recommendations for A.I.D. assistance to Asian countries in ameliorating their energy problems. Conference presentations, to which brief bibliographies are included, were of three types: papers presenting overviews of major issues, papers analyzing current energy planning, and A.I.D. country background papers. The role of energy in development was addressed from international, national, regional, functional, and sectoral perspectives. Workshop discussion groups examined the energy situation and program options in India, Nepal, Philippines, Thailand, Indonesia, Sri Lanka, and Bangladesh and the possible A.I.D. roles supporting energy interventions in these countries.

Impact of Rural Roads in Liberia
Project impact evaluation rept. no. 6
Richard Cobb, Robert Hunt, Charles Vandervoort, Caroline Bledsoe, and Robert McClusky. Jun 80, 63p Rept no. AID-PN-AAH-750

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: *Roads, Rural areas, *Liberia, Evaluation, Economic impact, Social effect, Agriculture, Developing countries, Developing country application.

Since the construction in Liberia of four all-weather rural roads, some villagers of the Lofa, Nimba, and Grand Jide counties enjoy increased accessibility to markets, schools, and health clinics. In order to assess who the actual beneficiaries were and how they benefited, a five-person evaluation team was set up. It was found that the roads were economically justified in terms of the volume of passenger and cargo traffic. It was also found that the roads have had a mixed impact: improved transportation has bettered educational opportunities for children of tribal communities, stimulated the cultivation of the cash crops of coffee, cocoa, and rubber; and reduced not only produce loss due to spoilage but also cargo costs of agricultural products by 90% in more isolated areas. Perhaps the most serious, long-term impact which negates these short-term benefits is the change in the land tenure and use system.

 AuLunn Univ., AL. International Center for Aquaculture, Review of Aquaculture Development Activities in Central and West Africa
 John H. Grover, Donald R. Street, and Paul D. Starr. 1979, 100p AID-PN-AAH-936
 Contract AID/DSAN-C-0053

Keywords: *Aquaculture, *West Africa, Acceptability, Education, Economic development, Water supply, Climate, Rural areas, Developing country application.

Fish farming is not widely practiced in Central and West Africa despite promotion efforts dating back to the 1940's, the acceptance of fish as a food by the vast majority of people, and the availability of suitable lands. The purpose of this study is to assess the reasons why these efforts have not had more impact and to suggest improvements. It is concluded that aquaculture has the potential to provide both food and income for rural village dwellers.

Women in Forestry for Local Community Development: A Programming Guide
 Marilyn W Hoskins. Sep 79, 65p Rept no. AID-PN-AAH-678

Keywords: *Forestry, Females, Developing countries, Wood, Utilization, *Community development, Models, Foreign technology, Developing country application, *Women.

To deal effectively with local forestry problems in developing countries, it is necessary to focus on the group using forest products the most: the women whose principal chores are centered around wood. This report explores the problems and issues related to women's participation in forestry. Women's roles in forestry development include the important tasks of gathering fuelwood and obtaining food and medicine from trees. Women are more likely to participate in projects that expand upon familiar activities, especially if women have direct control over, and benefit from, the project. Two models for forestry programming are proposed. The first model, the integrated approach, involves a project design directly suited to the needs of a particular community. The second model entails designing the forestry project first and then finding a community which could benefit from this type of project. Community responsibilities toward forestry projects include agreeing upon long- and short-range goals; plans for integrated resource use; a maintenance plan; projected benefits; and an evaluation plan.

Rural Development and Fertility Transition in South Asia: The Case for a Broad-Based Strategy
 Samuel S. Lieberman. 1980, 58p AID-PN-AAH-950
 Contract AID/pha-C-1199

Keywords: Rural areas, *Population control, *Asia, Developing countries, Fertility, *Employment, Japan, Models, Developing country application.

A point of contention for many population planning and development experts is the relationship, if any, be-

tween rural development programs and fertility--how can the two be integrated to simultaneously achieve gains in employment and output while reducing fertility. This paper addresses this issue by examining a broad-based strategy of agricultural development inspired by the Japanese experience and by discussing the applicability of that strategy to South Asia in general. The author discusses the limited applicability of the Japanese model in the South Asia situation because of differences in the political, economic, and agricultural structures between the two regions. Finally, two alternative broad-based strategies are presented; their major departure from the Japanese model is that a much more extensive scope of government involvement in development policy is envisioned. The two strategies, integrated rural development and guaranteed employment, are explained and their possibilities for the South Asia context are discussed. The report concludes with supporting footnotes and a 156-item reference list (1951-79).

Rural Water Projects in Tanzania: Technical, Social, and Administrative Issues. Evaluation Special Study No. 3
 Daniel Dworkin. Nov 80, 36p Rept no. AID-PN-AAH-974

Keywords: Water distribution, *Water supply, *Tanzania, Operating costs, Rural areas, Water wells, Pumps, Reliability, Developing country application.

For this evaluation of A.I.D.'s rural water projects in Tanzania, a survey was conducted of 20 Tanzanian villages whose completed water systems used the four major technologies available for dry, wet, and mixed regions. Three major results from this survey are presented in this report. It was found that of the types of water systems surveyed, handpumps represented the most appropriate technology due to their greater reliability and lower capital and operating costs. Shallow wells were also labor-intensive and the use of local construction and maintenance materials increased employment.

Upgrading in Lusaka: Participation and Physical Changes
 Carole Rakodi, and Ann Schlyter. 1981, 82p Rept no. ISBN-91-540-3607-0

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: *Housing, Developing countries, Regional planning, Residential buildings, Upgrading, Land use, Schools, *Zambia, Foreign technology.

Upgrading of squatter settlements was introduced as a policy in several African countries during the early seventies. A steadily increasing rate of the population in the rapidly growing cities was living in squatter settlements. Site and services schemes as well as low cost housing projects had failed to contribute to the housing of the poor. The squatter settlements reached such dimensions that the environmental problems had to be recognized. International organizations such as the World Bank began to support upgrading project by giving loans. One of the first large projects of this kind was carried out in Lusaka, Zambia. The Lusaka Housing Project is the common theme for the two separate articles in this volume. The first one concentrates on the physical aspects, discussing to what extent the physical changes are a real improvement of the environment of the inhabitants, while the second article analyzes the inhabitants' role in the implementation of the project.

Study of Family Planning Program Effectiveness
Program evaluation discussion paper no. 5
Steven W. Sinding. Apr 79, 29p Rept no. AID-PN-AAG-672

Keywords: *Birth control, Developing countries, Populations, Fertility, Control, Government policies, Health, Females, Employment, Education, Developing country application, Family planning.

It is generally accepted by population experts that a decline in fertility rates depends upon the interrelationship between the supply of family planning (FP) programs, determined by a government's political commitment and its administrative capability, and the demand for FP services, determined by the acceptability and adoption of the small family norm. This paper analyzes the results of a review of the literature on the relation of demand and supply determinants to FP effectiveness; it also develops guidelines to determine the conditions under which a major FP action is appropriate. The paper's major conclusion is that political will and administrative capability alone cannot overcome basic sociocultural obstacles unless direct government action on reproductive behavior is an important feature of the program. Recommendations for specific countries conclude the paper.

Proceedings of Joint Research Committee Workshop on the Collaborative Research Support Programs Held at Washington, DC. on June 9-10, 1980
Glenn Beck, and Jonellen Goddard. 1980, 128p Rept no. AID-PN-AAH-949

Keywords: Research management, Developing countries, Meetings, Financing, Universities, *Food supply, *Technical assistance, Developing country application.

The Collaborative Research Support Program (CRSP) concept was designed in response to the Title XII Amendment to the International Development and Food Assistance Act of 1975 calling for 'program support for long-term collaborative university research on food production, distribution, storage, marketing, and consumption.' In order to improve and strengthen the processes leading to the execution of future CRSP activities, a Joint Research Committee (JRC) Workshop on CRSP's was organized to review and evaluate CRSP experiences in planning, management, and early implementation. This document contains workshop papers discussing such experiences and expressing the insight gained by the JRC, A.I.D., and participating universities into some of the problems and successes of CRSP's. Issues covered in the plenary session on planning included conducting exploratory studies in order to describe problems, to recommend to the JRC potential research approaches (including CRSP's), and to assist the JRC in establishing priorities; mission involvement in CRSP's; university selection and contracting procedures; and administration of business arising between regular JRC meetings.

The Future of Basotho Migration to the Republic of South Africa
Research rept. no. 4
Jerry Eckert, and Ron Wykstra. Sep 79, 31p LASA/RR-4, AID-PN-AAH-103
Contract AID/afr-C-1387
Prepared in cooperation with Colorado State Univ., Fort Collins. Dept. of Economics.

Keywords: Population migrations, Developing countries, *Employment, Income, *South Africa, Mining, Unemployment, *Migration, Migrants.

The paper analyzes demographic, economic, social, and political factors affecting the future of Basotho migratory labor in the Republic of South Africa, predicts the magnitude and timing of changes that may be expected, and considers the implications of such changes for Lesotho. Migrant opportunities are likely to decline substantially during the next two decades, due to chronic domestic unemployment in South Africa and changing trends in gold and coal mining production. Studies indicate that the South African labor force will increase annually well in excess of employment

rates needed to absorb this growing force. This situation will result in a displacement of 0.5 million foreign migrant laborers, 47% of which are Basotho. This study asserts that the reality of displacement is beginning to appear. However, because the Government of South Africa and mining industries are aware of the consequences that a sharp reduction in the Basotho labor force will have, a gradual reduction with advance notice is predicted. Further, most of the adjustments will occur during the 1980s, probably resulting in a 50% reduction of currently employed Basotho by the year 2000. The study continues to cite economic and social implications of this reduction for Lesotho: requirements for job generation; maldistribution of income; a decline in the gross national product; and a decrease in imported products providing a source of additional revenue.

APPROPRIATE TECHNOLOGY ABSTRACTS

Assessing the Impact of Development Projects on Women

Program evaluation discussion paper no. 8
Ruth B. Dixon. May 80, 125p Rept no. PN-AAH-725

Keywords: Projects, Females, *Employment, Specialized training, Objectives, Personnel development, *Women, Developing country application.

The current methodology for evaluating development projects - even women-specific projects - concentrates on logistical questions of timing and supplies rather than on social impact questions and is therefore inadequate to assess a project's impact on women. In order to develop a new evaluative framework which addresses these inadequacies, this study reviews evaluations of 32 A.I.D. and private voluntary organization women-specific projects. The evaluations only indirectly assess women's concerns but provide sufficient information to analyze the success of projects in meeting three basic goals for women-in-development projects: (1) participation in project decisionmaking; (2) access to immediate project benefits; and (3) improvement in socioeconomic status. Specific factors which contribute to the achievement of these three goals are identified.

Keywords: Economic development, *Costa Rica, Developing countries, *Employment, Growth, *Socioeconomic status, Developing country application.

Increased concern with equity objectives of development - employment, equality, participation, meeting basic needs - has prompted the search for cases of successful equitable growth. Costa Rica, whose growth is analyzed in this report, represents an example where a rising GNP has been maintained along with an equitable distribution of benefits. The report begins by presenting a brief overview of Costa Rica's growth and of the historical components, i.e., the physical setting, colonial influences, economic developments, and political changes, which have been responsible for its current socioeconomic condition. Public sector programs developed between 1960 and the early 1970's are treated next, including the development of physical infrastructure such as roads, electricity, and housing; human resources, including education, health care, family allowances, and nutrition; and land reform and wages policy. Issues and alternatives for equitable growth are treated in a concluding chapter.

Kenya Rural Water Supply: Programs, Progress, Prospects
Project impact evaluation rept. no. 5
Daniel Dworkin. Jun 80, 50p Rept no. PN-AAH-724

Keywords: *Kenya, *Water supply, Rural areas, Ground water, Recommendations, Developing countries, Developing country application.

Despite high levels of investment, Kenya's 10-year old water supply program has been unable to build successful water supply systems in rural areas; even as new systems are built, the number of inoperative systems increases. This paper evaluates the impact of the national program and the reasons behind its failure and makes policy recommendations for future A.I.D. water supply projects.

Rainfall Oscillations in Lesotho and the Possible Impact of Drought in the 1980s
Discussion paper

Jerry Eckert. Aug 80, 28p LASA/DF-10, AID-PN-AAH-923
Grant AID/ta-BMA-6
Prepared in cooperation with Colorado State Univ., Fort Collins. Dept. of Economics.

Keywords: Rainfall, *Agriculture, *Lesotho, *Drought, Corn plants, Wheat plants, Water conservation, *Me-

teology, Seeds, South Africa, Developing country application.

Scientific research from the last several years has confirmed that rainfall over much of southern Africa follows a pattern of regularly spaced wet and dry spells of 9-10 years each in length. This report examines the findings mentioned and finds that Lesotho is now coming to the end of an above-normal rainfall period and if the 'quasi 20 year oscillation' continues will average below normal from 1982-1990. Such a dry spell may affect both maize and wheat production severely. The report points out that the Ministry of Agriculture should take the following steps to minimize the effects of the predicted dry spell during the 1980's: conduct research to improve farmer management of soil-plant-water interactions; give priority to water conservation programs; utilize the government seed importation capacity to obtain and spread seeds of drought-resistant varieties.

Proceedings of the International Workshop on Energy Survey Methodologies for Developing Countries Held at Jekyll Island, Georgia on January 21-25, 1980
1980, 223p * AID-PN-AAH-940
Grant AID-DSAN-G-0190

Keywords: Developing countries, Meetings, Bangladesh, Jamaica, Kenya, Philippines, Burundi, *Energy, Cameroon, Rural areas, Urban areas, Energy demand, Developing country application, Transportation sector, Industrial sector, Energy consumption.

The inadequacy of current information on escalating LDC energy consumption prompted the National Academy of Sciences to hold an international workshop in January 1980 to review existing surveys of energy consumption and potential demand in LDC's. Proceedings of that workshop are provided in this report. Working group reports on LDC energy needs in urban, rural, transportation, and industrial settings are presented, along with excerpts from 12 energy-related LDC studies and abstracts of 55 studies on energy assessments, energy survey design, and data analysis systems.

A Handbook for the Promotion of Industrial Projects
C. D. Msuya. Dec 79, 93p

Keywords: Economic development, *Tanzania, Government policies, Handbooks, Investments, *Industrial development, Developing country application.

This Handbook is intended to shed some light upon existing regulations and practices related to the initiation of new projects in industry in Tanzania. By clarifying the basic economic and industrial development policy of the Government, it is hoped that in situations where clear guidelines might be lacking - or even on occasion existing rules or recommendations might appear conflicting - this Handbook will enable both investors and officials to act in accordance with the overall basic strategy for industrial development in Tanzania.

A Manual for Investors in Tanzania
C. D. Msuya. 1980, 53p

Keywords: *Tanzania, Investments, Manuals, Government policies, *Industrial development, Incentives, *Foreign investments, Developing country application.

This manual is intended to inform potential investors as factually as possible about investment opportunities and conditions in Tanzania. It describes what investment opportunities exist, how to develop them and where further useful information may be obtained. The main purposes of the Manual are: to assist the Government in reviewing investment possibilities and in considering the scope for investment by various parties; to introduce to the prospective foreign investor the econ-

omy of Tanzania and particularly its industrial sector; to guide the investor on the opportunities for investment, and to define for the investor those areas of industrial investment which are reserved for the Government and those which are open to other bodies either by themselves or in co-operation with government; to inform the investor on investment procedures and incentives offered by the Government in order to promote industrial development in Tanzania.

National Adult Education Programme: The First Year
Oct 79, 43p

Keywords: Adults, *Education, *India, Developing countries, Literacy, Developing country application.

The report contains a one year appraisal of the National Adult Education Program (NAEP) formally launched on October 2, 1978 in India. The most significant aspects of NAEP are the flexibility of approach built into it and the conceptual position which visualizes it as indispensable to the country's development. It points out that from the point of view of social and economic planning the main justification for NAEP is that it can involve in the process of development the vast masses of illiterate and poor people who have remained deprived. Chapters of the report are devoted to implementation agencies, resource development, program management, financial arrangements, monitoring and evaluation, and future projects.

Control of Important Fungal Diseases of Potatoes: Report of the Planning Conference, Lima, Peru, 1978

Jun 78, 187p AID-PN-AAH-722
Grant AID-DSAN-G-0079

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: *Plant diseases, *Fungi, *Potatoes, Vegetables, Parasites, Foreign technology, Developing country application, Pathogens, Disease control, Verticillium.

Since potatoes constitute the staple food of much of the world's population, many studies have been conducted on methods of controlling potato diseases. This report of the Fifteenth Planning Conference sponsored by the International Potato Center presents an overview of the latest research on fungal potato pathogens. Disease-specific recommendations of this conference include: using three potato types with high, medium, and low disease resistance at all late-blight testing sites to provide standards with which to compare new potato clones; conducting studies on the physiology of late blight parasites to increase the ease and rapidity of identifying stable resistance in potatoes; determining if usable levels of resistance to early blight exist in potato germ plasm; and conducting a survey to determine the geographic distribution and importance of Verticillium (a soil-borne fungal pathogen). General recommendations include: preventing the spread of viruses, bacteria, and fungal pathogens to various regions of the world; and adopting tests for detecting the presence of pathogens other than fungi. A total of 265 references (1879-1978) in English, French, Dutch, and German conclude several of the papers.

R. K. Sanyal, and V. R. Naik. 6 Jun 75, 74p

Keywords: *Birth control, Developing countries, Contraceptives, Population growth, *Southeast Asian, Family planning, Developing country application, *Health education.

Thirty-two senior communication workers from eleven South-East Asian countries met on May 6, 1975 in a communication research training program at the National Institute of Family Planning, New Delhi, to share their experiences and learn together as to how best investigate the problems of family planning communication. They deliberated on methods and tools of research for reliable information and approaches for their common programs in their respective countries. The workshop continued for one month. This volume No. 1 of the course report covers various aspects concerning the planning and organization of the course, including course objectives and contents, program phasing, and evaluation. Another volume (No. 2) of the course report deals with the course material provided to the participants.

Acute Encephalopathy Syndrome in Children
Technical rept. series no. 3
Baldev Singh. 1970, 24

Keywords: *India, *Children, Encephalitis, Epidemiology, Public health, *Diseases, Diagnosis, Foreign technology, Developing country application, Medical research.

Repeated outbreaks of an encephalitis-like syndrome in children were reported in the past from Nagpur in Maharashtra and from several other parts of India. The disease was characterized by high fever of sudden onset followed by convulsions and sensory disturbances of varying degrees leading to a high case fatality. During 1969 the Council launched a comprehensive investigation with a team of investigators, representing different disciplines, who were assembled at Nagpur during the period of the epidemic so that the specialists could have constant consultation and interchange of information in the course of their day-to-day work. It was concluded that the clinical studies, EEG, recording, laboratory findings, serology, microbial and virus culture of blood and cerebro-spinal fluid and autopsy examination left no doubt regarding the fact that the Nagpur encephalitis syndrome was an encephalopathy. The epidemiological study revealed that this encephalopathy was the peak of an iceberg of pyrexial illnesses possibly due to some infective agent, viral or bacterial, and aggravated by the increase in ambient temperature. However, the usual organisms, microbial and viral, could not be demonstrated in spite of the meticulous studies done in the laboratory and the autopsy material.

Research in Malaria (An Outline)
C. Gopalan. 1977, 41

Keywords: *Malaria, Infectious diseases, *India, Parasitic diseases, Tropical diseases, *Diseases, Forecasting, Public health, Ecology, Drug therapy, Serology, Parasites, *Immunology, Foreign technology, Developing country application, Medical research, Disease control, Pest control, Chemotherapy.

The Indian Council of Medical Research convened a meeting of a group of experts on Malaria in 1977 in order to review the current status of research in this field, and to indicate future lines of research. This group prepared a detailed report which would serve as a blue-print for future research-cum-action programmes in the field of malaria. The broad outlines of the recommendations of the group with regard to future areas of research have been presented in the report. They are (1) Research on operational aspects of malaria control; (2) Ecology and control of vectors of malaria; (3) Chemotherapy of malaria; (4) Drug resistance in the malaria parasite; (5) Serology of malaria; (6) Cultivation of malaria parasites; and (7) immunological aspects of malaria.

Nutrition for Mother and Child
P. S. Venkatachalam, and L. M. Rebelo. 1978, 68p
Rept no. SR/SER-41

Keywords: Nutritional requirements, *Children, Diets, *Nutrition, *India, Pregnancy, Infants, Females, *Women, Mothers, Developing country application.

The booklet sets out the nutritional needs of the mother during pregnancy and lactation, and of the infant and the pre-school child. It contains information regarding the diet for each of these groups and also practical ways of improving the present inadequate diets of the expectant and nursing woman, infants, and children at different economic levels. The low-cost nutritious preparations for children, described in the booklet, have been demonstrated to a group of rural mothers and later tested of their children for acceptability and tolerance. This booklet will serve a wider purpose than the training of the workers of the Health Centers, and will prove useful to the average Indian housewife in ensuring better health for herself and her child. An Appendix covers the choice and method of preparation of vegetables.

Appropriate Technology Project at Nagina
1980, 61p

Keywords: *Technology transfer, Industrial plants, Skilled workers, Craftsmen, *Appropriate technology, *India, Motivation, Attitudes, Developing country application.

The report is a discussion and analysis of the hypothesis that a medium-sized industrial organization in the private sector, with the right blend of management and technical skills, can be motivated to scale down its technology and pass it on to relevant traditionally skilled craftsmen who will benefit from such a transfer of technology. Also discussed is how such an organization can participate in the technococio-economic development of the traditionally skilled craftsman. Conclusions of the report indicate that modern technologies can be scaled down and blended with traditional skills to provide a viable livelihood for local artisans.

Proceedings of National Conference on Population - December 6-8, 1974
A. K. Ishaque, and Karan Singh. Dec 74, 83p

Keywords: Meetings, Population growth, *India, *Birth control, *Population control, Developing countries, Family planning, Developing country application, Natality, Birth rate.

The National Conference on Population was held in New Delhi, India, between December 6-8, 1974. This proceeding contains the findings of the Conference together with a selection of some papers presented in Plenary Sessions. The target for family planning raised in the conference was to bring down the population growth rate in India by one point per thousand every year for the next ten years, lowering the growth rate to 1.7 percent by the end of the Fifth plan and 1.4 percent by the end of the Sixth Plan. It was found in the Conference that the prospects of the reduction of the birth rate were closely linked with the prospects of economic development and were also lined with vigor and viability of the family planning program. Without the attainment of a level of economic and social development satisfying at least the minimum needs of the people, it was unrealistic to expect a rapid reduction in the birth rate. The participants of the Conference also

discussed various contraceptive technologies and put forward detailed recommendations in this field. Also discussed at the Conference were population policy, and organization and management of the program.

Soils and Men, Yearbook of Agriculture 1938. Part 2: The Farmer and the Soil
A. L. Patrick. 1938, 433p
Also available in set of 5 reports PC E99, PB82-171679.

Keywords: *Agriculture, *Soils, Cultivation, Soil fertility, Humus, Nitrogen, Phosphorus, *United States, Potassium, Fertilizing, Arid land, Acidity, Forest land, Developing country application, Crop rotation.

This part of the yearbook deals with soil management and practices, with a view to increasing the individual's understanding of possible ways to solve his own problems. Beginning with tillage and tillage implements, the author discusses deficiencies of the soil in organic matter, nitrogen, phosphorus, and potassium, and tells in general how these deficiencies may be corrected. Next, the author considers the purpose and use of rotations, cover crops, farm manures, and other organic amendments in the farming system.

APPROPRIATE TECHNOLOGY ABSTRACTS

culture, *Soils, *United States, Humus, Developing country application.

Physics, chemistry, and biology all contribute to our knowledge of the soil. In this part of the Yearbook, an effort is made to summarize the main outlines of this science as it is understood today. The first article gives a soil scientist's philosophy of the part played by soil in the affairs of mankind. Following this are articles on the physical nature, the water relations, and the chemistry of the soil. The role of organic matter and the activities of living organisms in the soil are then discussed. Following this is an article on the rather complex business of classifying soils according to the principles worked out in the 1930's.

Soils and Men, Yearbook of Agriculture 1938. Part 5: Soils of the United States
Charles Kellogg. 1938, 218p
Also available in set of 5 reports PC E99, PB82-171679.

Keywords: *Agriculture, *Soils, *United States, Soil profiles, Geography, Vegetation, Climate, Developing country application.

The report attempts to bring together and summarize, on a comparatively small scale, the data accumulated during the past half century on the enormous variety of soils in the United States. It describes the U.S. soil associations and the soils that compose them. The associations are arranged under the great soil groups. First there is a description of the region dominated by the great soil group, and then more detailed descriptions of each soil association within the region. These descriptions include the geographic setting, the climate, the native vegetation, the parent material from which the soils have developed, the characteristics of the soils themselves, and their general uses.

Keywords: *India, Operations research, Management, Health services administration, *Health care delivery, Health services.

In order to improve the Indian health services administration, A Task Force on Operations Research for Improved Delivery of Health Services was constituted by the Ministry of Health and Family Planning of India in July, 1974. The report is the outcome of the Task Force. It presents a critical appraisal of the health care delivery system and the studies thereon, the scope and content of operations research in health services, problem areas for operations research studies and their prioritization, and the administrative machinery for management research.

Pig Farming - Feeding and Management Practices
S. Krishnamurthy. Feb 81, 30p

Keywords: Swine, Feeding stuffs, Proteins, Fertility, Reproduction(Biology), *Animal husbandry, *India, Developing country application.

Much of the success of pig production depends on the feeding program. The booklet gives tips for computa-

tion of rations and the recommended levels of protein in swine ration. It describes the management of breeding herds, particularly the causes of infertility and the measures for improving fertility.

Factors Associated with Knowledge and Practice of Family Planning
V. Dutt Mullick. May 74, 22p Rept no. NIFP/TP-19

Keywords: Family planning, *Birth control, Demography, Socioeconomic factors, *Employment, *Education, Age, *India, Developing country application.

Most of the studies on knowledge and practice of family planning have been of descriptive nature, with no attempt to relate them to other factors. In this study, factors related to knowledge and practice of family planning have been sought, to be identified with focus being placed on demographic factors such as age, living children, male living children and desire for more children, and socio-economic characteristics such as the occupation and education of the wife and husband and their religion.

Status of Women and Fertility in India
D. C. Dubey, and Anita Bardhan. 1970, 55p Rept no. MONO/SER-18

Keywords: Fertility, *India, Reproduction(Biology), Status, Families, *Women, Mothers, Developing country application.

The monograph describes the relationship between women's role as a mother and how it influences her status. In part 1 the authors tried to associate women's status with her reproductive role in the family and the larger society. In part 2 the authors have discussed some major social changes in terms of urbanization, industrialization, education, the political system, and employment of women brought about by progressive state policies, and discusses what their implications on the status and fertility of women are.

Growing Pointed Gourd
S. S. Chatterjee. Jan 76, 14p Rept no. 12

Keywords: *Vegetables, Plant growth, Climate, Soil properties, Planting, Fertilizers, *Plant diseases, *India, Developing country application, Trichosanthes dioica, Pointed gourd.

Pointed gourd is widely cultivated in some states of India. The total area in the country under this crop has been estimated at about 10,000 hectares. The booklet briefly describes its food value, suitable climate conditions, the soil and its preparation, varieties, planting, manures and fertilizers needed, cultivation and irrigation, yield, and diseases and pests and their control.

Low Viscosity Tamarind Kernel Powder: A Low Cost Sizing Material
H. C. Srivastava, J. R. Madi, H. P. Patel, and T. D. Thakkar. Apr 76, 58p

Proceedings of half-day seminar held at ATIRA on 21 Apr 76.

Keywords: Sizing(Shaping), *Textile industry, Meetings, *India, Low viscosity tamarind kernel powder, Developing country application.

In the context of population explosion and recurrent shortage of food in India, alternatives to maize and tapioca starches for textile sizing were sought. As a result of this search and extensive basic and applied work, Low Viscosity Tamarind Kernel Powder (LTKP) was born. This report discusses the nature and properties of LTKP, evaluates it as a sizing material, and presents some practical experiences in the use of LTKP.

Improved Implements for Rice Growing in Rainfed Areas and Manual Weeding Tools
P. J. Zachariah, P. N. Pangotra, and V. A. Patil. Mar 81, 51p Rept no. FARM BULL-2/1978

Keywords: *Rice, *Agricultural machinery, Cultivation, Plows, Disks(Agricultural), Fertilizing, Harvesting, *Weed control, *Hand tools, *India, Developing country application.

Drill sowing ensures good germination, optimum plant population and full utilization of fertilizer which are essential for increasing the yield of rice. Implements required for seedbag, preparation, drilling the seed and fertilizer accurately and for making weeding operations easy are described in this booklet. In the booklet different methods of weed control are also described with special reference to the mechanical method of weed control with weeding tools.

Growing High Yielding Varieties of Paddy and the Pests of Rice and their Control
J. N. Hota, and J. P. Kulshrestha. Jul 71, 51p Rept no. BULL-1/71

Keywords: *Rice, Planting, Yield, Fertilizers, *Weed control, *Plant diseases, Rats, *Pest control, *India, Developing country application.

The report includes two parts. In the first part, the characteristics of some important high-yielding varieties of paddy rice is given and the points for attention necessary in seed treating and care, direct sowing, field preparation and manuring, transplanting, weed control, insects, diseases, rat control, water managing, and harvesting are listed. In the second part, it is pointed out that in India, seventy species of insect pests on rice have been recorded attacking at various stages of its growth. This part briefly describes the characteristics of different pest species, the signs of attack, and the control methods.

Exploration and Identification of Alternative Raw Materials for Paper and Newsprint Manufacture: Properties of ETA Reed Pulps, Laboratory Study
Research progress rept. no. 1
S. V. Singh, T. C. Mantri, U. K. Deb, D. Ghosh, and A. G. Kulkarni. Dec 77, 49p

Keywords: *Pulp, Chemical properties, Bleaching, Tear strength, *Reed, *Paper industry, *India, *Paper, Eta reed pulps, Developing country application.

The variations in chemical composition, and variation of pulp properties of eta reeds from various Ochlandra species and variations are investigated. Both unbleached and bleached eta reed pulps have an unusually high tear factor, much higher than bamboo pulps, even higher than kraft softwood pulps. Breaking length, burst factor, and double folds are higher than bamboo pulps and only slightly lower than those of softwood pulps.

Wheat Import Demand Among Middle-Income Developing Countries: A Cross-Sectional Analysis
Cathy L. Jabara. Feb 82, 26p* Rept no. AGES-820212

Keywords: *Wheat, Demand(Economics), *International trade, Developing countries, Imports, Prices, Income, Populations, Economic models, Production, Earnings, Constraints.

Middle-income developing countries have an important role in international grain trade. This paper examines wheat import demand relationships for 20 middle-income developing countries. Parameters for hypothesized relationships are estimated through econometric analysis. Key variables which appear to affect wheat import are population, foreign exchange earnings, wheat production and stocks, and the level of consumer prices.

Un Manual sobre Mantenimiento de Edificios. Tomo 2. (A Manual on Building Maintenance. Volume 2: Methods).
Derek Miles. 1976, 94p
Text in Spanish.

Keywords: *Buildings, *Maintenance, Developing countries, Cleaning, Services, Walls, Foundations, Plastering, Painting, Roofs, Roofing, Guidelines, *Great Britain.

The volume deals with the basic technology of building maintenance. The function of maintenance includes three parts: cleaning and servicing, rectification and repair, and replacement. The book will assist in the examination of maintenance problems, suggesting some of the more common causes of failure and methods for dealing with these problems. The contents include: foundation, walls, plastering and rendering, paints and thin coatings, and roofing.

Exploration and Identification of Alternative Raw Materials for Paper and Newsprint Manufacture: Examination of Salai Groundwood and Cold Soda Pulps and Bamboo Sulphate Pulp from National Newsprint Mill, Napanagar
Research progress rept. no. 5
T. C. Mantri, Y. K. Sharma, V. Ragunath, S. Bharati, and Y. V. Sood. Dec 78, 36p

Keywords: *Bamboo, Newsprint, Optical properties, Mechanical properties, *Pulp, *Paper industry, *India, Tensile strength, Tear strength, Cold soda pulps, Salai groundwood, Developing country application.

Mill samples of salai (*Boswellia serrata*) cold soda, salai groundwood, and bamboo chemical pulps were collected from National Newsprint Mills Limited, Napanagar, to evaluate their strength and optical properties. Examination indicates that pulps with higher strength properties and improved brightness values can be produced. The main area requiring attention as far as strength properties are concerned is in the salai cold soda plant. Beating in laboratory equipment (PFI mill) to a CSF of 180 gave more than a five fold increase in tensile strength and a 50% improvement in tearing strength. This improvement in bonding characteristics is important to the strength of the newsprint finish.

Dairy Demonstration Units at National Dairy Research Institute, Karnal (Five Hectare Dairy Demonstration Unit. Two Hectare Mixed Farming Unit. One Hectare Buffalo Unit. One Acre Mini Dairy Unit)
S. C. Das, R. K. Patel, and Ram Singh. 1980, 44p

Keywords: *Dairies, Dairy cattle, *India, Performance evaluation, Forage crops, *Animal husbandry, *Milk, Land use, Production, Investments Feeding stuffs, Dairy equipment, Expenses, Developing country application, Buffaloes.

The report describes four dairy demonstration units developed in the National Dairy Research Institute, Karnal, India. The first demonstration unit commenced in 1971 with 5 hectares of land supporting initially 20 high yielding cows, subsequently, raised to 30. The performance of this unit for an 8 year period is presented. The second demonstration unit was commenced in 1973 as a 2 hectare farm unit with one hectare supporting 6 animals and another hectare producing high yielding crops. In 1974, a demonstration unit with 6 buffaloes supported by 1 hectare of land was developed.

An Evaluation of Community Health Workers' Scheme: A Collaborative Study
Technical rept. no. 4
Sharad Kumar, J. P. Gupta, T. J. Ramiah, and K. G. Rao. 1978, 161p

Keywords: *India, Objectives, Selection, Profiles, *Community development, Performance, Foreign technology, *Health manpower, Developing country application, Community health services, *Health education, Health services administration.

This report is the outcome of collective effort on the evaluation of the community health Workers' (CHW) Scheme undertaken at the instance of the Government of India. It delineates several dimensions of the Scheme. Including its understanding, perception of its objectives, and role of officials concerned in its implementation at different levels. A study has been made of the processes that exist in different States in the selection of CHW's; various kinds of inputs brought into the Scheme such as training, medicines and drugs, kits, honoraria, and appointment of additional Medical Officers at the Primary Health Centre; the profile of selected CHW's; and perception and attitudes towards the Scheme as well as towards the selected CHW's of the community leaders, community members, Primary Health Centre staff, and other non-health functionaries at the block and district levels. Based on the analysis of data collected and processes adopted, inter-state variations of the scheme are identified. Specific recommendations have been made for taking corrective measures with regard to the Scheme.

Nutrient Requirements of Goats: Angora, Dairy, and Meat Goats in Temperate and Tropical Countries
Rept. no. 15 (Final).
1981, 100p Rept no. ISBN-0-309-03185-0
Sponsored in part by Agency for International Development, Washington, DC., Science and Education Administration, Washington, DC., Food and Drug Administration, Rockville, MD. Bureau of Veterinary Medicine, and American Dairy Goat Association, Spindale, NC. Library of Congress catalog card no. 81-84592.

Keywords: Animal nutrition, Goats, Requirements, Temperate regions, Tropical regions, Proteins, Vitamins, Toxicity, Water supply, Grasses, Feeding stuffs, Animal diseases, Metabolism, Food composition, Tables(Data), Reproduction(Biology), Meat, Hair, Dairies, Rations, *Animal husbandry, Silage.

The report establishes nutrient requirements of goats from original studies directly concerned with the needs of goats. Past efforts relied heavily on extrapolation of values derived from cattle and sheep studies. The discussion of energy and protein requirements contains much new information from extensive research at the Raja Balwant Singh College at Bichpuri (Agra), India. The material on mineral, vitamin, and water requirements and on nutrition-related metabolic disorders relied mostly on reviewing past work. The discussion on herbage and browse utilization includes new work from Texas. Treatment of ration formulation and exam-

ples of typical rations and tables of nutrient requirements are described in the report. Because of the unique nature of goats, the nutrient requirement tables also include allowances for activities during grazing.

Effect of Calcium Chloride on the Properties of Concrete and Mortar
Technical memo.
P. K. Nagarkar. Jun 77, 26p Rept no. TM/MT-137

Keywords: *Concrete, Mortars(Materials), Calcium chlorides, Cement additives, Admixtures, *Building materials, Materials specifications, Foreign technology.

Specifications for using calcium chloride in concrete and mortar provide that calcium chloride should be used in small amount expressed as percent weight of cement to get an early age strength development. This effect is more visible when it is used with a mixing and curing temperature below 70F. This study was taken up to find out experimentally the optimum percentage of calcium chloride which can give early strength development generally in hot weather and also to find out its effect on setting time, rate of strength development of concrete and mortar as well as its effect on corrosion of steel and shrinkage.

Properties of Cellular Concrete
Technical memo.
P. K. Nagarkar. Jun 77, 13p Rept no. TM/MT-139

Keywords: Cellular concretes, Lightweight concretes, Fly ash, Cement additives, Water cement ratio, Compressive strength, Foreign technology, *Concrete, *Industrial wastes.

The purpose of the study is to evolve a method of manufacturing light weight cellular concrete produced by using cement as a binder and flyash as filler material. The concrete becomes cellular if aluminum powder and sodium hydroxide is added to it. The structure of the concrete becomes cellular due to introduction in it, of either gas or air. The aluminum powder on reaction with alkalis liberates hydrogen gas which is uniformly distributed in the matrix. To add to the alkali content, and for proper dispersion NaOH and different dispersing agents are used. The ingredients of the cellular concrete are cement, fly ash, aluminum powder, sodium hydroxide and water. For good dispersion of aluminum powder and cement some dispersing agents are also tried.

PB82-186859 PC A06/MF A01
Indian Society of Earthquake Technology, Roorkee.
A Manual of Earthquake Resistant Non-Engineered Construction
1981, 114p

Keywords: Earthquake resistant structures, *Buildings, Construction materials, Structural design, Guidelines, Foundations, Structural analysis, Foreign technology, *Earthquake engineering, Seismic design.

The non-engineered constructions in stone, brick, adobe, and composite systems with wood, concrete or steel pose a serious damage-risk problem in seismic belts of the earth. Most losses of life during earthquakes have occurred due to the collapse of this type of buildings. It is unfortunate that this risk is increasing, rather than decreasing, in most countries on account of rising population, poverty of the people, scarcity of wood, cement and steel, lack of understanding of earthquake resistance features, etc. The increasing magnitude of seismic risk to life could be imagined by the fact that number of dwelling units and other related small scale constructions may double itself in the next 25-30 years due to the explosion of population in India and other developing countries. There is thus a great urgency that the know-how of inexpensive earthquake resistance measures in such constructions should be propagated very quickly and by simple illustrations, so that these techniques could find application at least in the new constructions. This publication is aimed at fulfilling this urgent need of providing the relevant information for ready use to not only the architects and en-

gineers but also the public and private builders who may not have the necessary technical background.

Karan Swiss Developed at National Dairy Research Institute
D. S. Bhatnagar, R. C. Sharma, and D. Sundaresan. 1979, 63p Rept no. PUB-155

Keywords: *India, Dairy cattle, Genetics, Breeding, *Animal husbandry, Growth, Animal nutrition, *Milk, *Dairies, Animal physiology, Animal diseases, Reproduction(Biology), Developing country application, Karan Swiss.

A strain of cattle with about half Indian indigenous Sahiwal and half American Swiss inheritance has been bred and named 'Karan Swiss.' The report describes the development, growth, and reproduction, milk production performance, nutrient requirements for maintenance and milk production, and physiological and health status of the Karan Swiss. It is a more efficient converter of feeds into milk as compared to Indian indigenous cows and buffaloes. Karan Swiss continued to be efficient even in lean fodder season.

Dairy Handbook (Production)
Nov 79, 243p

Keywords: *India, *Dairies, Handbooks, Breeding, *Milk, Feeding stuffs, Dairy cattle, Goats, *Animal husbandry, Animal diseases, Urea, Feeding(Supplying), Dairy equipment, Developing country application, Buffaloes.

The handbook provides information concerned with milk production, including breeding, calf rearing, feeding, health care, and equipment practices used in raising cattle, buffaloes, and goats. The handbook gives the workers and dairy farmers a basic understanding of appropriate technology available for and standard management practices in producing milk.

PB82-194804 PC A03/MF A01
Economic Research Service, Washington, DC. International Economics Div.
Impact of Land Degradation on Future World Food Production
Harold E. Dregne. Mar 82, 39p* Rept no. ERS-677

Keywords: *Land use, Erosion, *Agricultural economics, *Food, Developing countries, Population growth, Cultivation, Soils, Farming, Technology transfer, Land development, Africa, Asia, South America, Central America, Improvements, *Soil erosion, Marginal lands, Global.

Land degradation will likely curb agricultural production increases in the developing countries of Africa, Asia, and Central and South America. Growing populations and weak economies in many countries will seriously hamper efforts to bring new land under cultivation. Forty percent of the world's available land is being farmed, representing the best soils, but cultivating the remaining sparsely populated and often marginal 60 percent of land will require expensive farming techniques and new technology. Improved land management will likely spur per capita food increases in the developed countries.

Financing Housing for Urban Low-income Households in Africa: A Matter of Technical Building Codes

Jens Knocke, Feb 82, 69p Rept nos.
MEDDELANDE/BULL-M82:1, ISBN-91-540-9119-5

Keywords: Low income groups, *Housing, *Africa, Requirements, Building codes, Regulations, Construction management, Financing, Developing countries, Foreign technology.

The study is a discussion of the possible usefulness of research (and development) concerning technical regulations suiting the particular business of building houses for families with limited resources. Not regulations for the sake of regulating, but because codes could pave the way for conventional housing finance, on a large scale, for the average family in Africa. The report thus addresses itself to housing finance managers, and to others - civil servants, architects and engineers, and, of course, researchers - preoccupied by housing conditions in developing countries.

The Water Buffalo: New Prospects for an Underutilized Animal
Final rept.

1981, 128p
Contract AID/ta-C-1433, Grant AID/DSAN-G-0130
Library of Congress catalog card no. 81-83416.

Keywords: Livestock, Tropical regions, Developing countries, Research projects, *Animal husbandry, Reproduction(Biology), Comparison, Materials handling, Loads(Forces), Acclimatization, Tolerances(Physiology), Milk, Yield, Meat, Genetics, Rivers, Swamps, Distribution(Property), Bubalus bubalis, Water buffaloes, Underutilized species.

The water buffalo is an animal resource whose potential seems to have been barely recognized or examined outside of Asia. Throughout the world there are proponents and enthusiasts for the various breeds of cattle; the water buffalo, however, is not a cow and it has been neglected. The study indicates that the water buffalo could become an important resource in tropical, subtropical, and warm temperate zones in developing and developed countries. If this is the case, then it is clear that many countries should begin water buffalo research.

Lime-Fly Ash Stabilised Soil for Road and Building Constructions
1979, 47p

Prepared in cooperation with Central Building Research Inst., Roorkee (India).

Keywords: *Roads, *Soil stabilization, Calcium oxides, Fly ash, Pavement bases, Subgrades, *Industrial wastes, Foreign technology.

This report is the result of a comprehensive collaborative study undertaken by Central Road Research Institute and Central Building Research Institute for stabilization of different soils with lime and flyash for use in the lower layers of pavement systems as bases/sub-bases in both roads and airfields, as well as manufacture of building blocks as an alternative to burnt clay bricks.

Manual de viveros Forestales. (Tree Nursery Practice Manual).

Jul 79 232p
Text in Spanish.

Keywords: Forest trees, Reforestation, *Guatemala, Manuals, Site surveys, *Forestry, Planning, Management, Seeds, Planting, Water supply, Germination, Construction, Tropical regions, Spanish language, Foreign technology, Forest management.

Any community or individual wishing to have a tree nursery can find in this manual everything that is needed to know and do. Its contents go from the proper site selection to the administration including installation, sections, seed handling, planting and watering, and the use of local materials in its construction. Could be useful for agricultural extension workers and for forest management and reforestation courses.

Manual on Planning and Design of Reinforced Concrete Multistoreyed Buildings: Volume II

T. S. Vedagiri. 1978, 109p

Keywords: *Buildings, Reinforced concrete, Structural design, Foundations, Footings, *Concrete, Concrete slabs, Beams(Supports), Engineering drawings, Developing country application, Foreign technology.

This manual deals with the design and detailing aspects of reinforced concrete multi-storied buildings. The CPWD have designed and constructed a number of multi-storied buildings all over the country, and the expertise accumulated by the department in the course of years is reflected in the manual which outlines the procedure of design of various structural elements, illustrating the same with the worked out examples. Some of the tables and charts have been prepared on the basis of the Computer Cell of CDO. Specimen drawings appended to this Manual indicate the various structural details that are to be exhibited on working drawings.

Agricultura Basica. (Basics in Agriculture).
Jun 79, 185p Rept no. INTECAP-81-003

Text in Spanish.

Keywords: *Guatemala, *Agriculture, Rural areas, Handbooks, Fertilizing, Mulches, Erosion control, Water supply, Cultivation, Plants(Botany), Pest control, Harvesting, Drawings, Spanish language, Ecology, Seeds, Foreign technology.

This handbook was conceived as an aid for rural people wishing to learn more about agriculture. It is written in simple, everyday language, to be understood at any level, but provides technical ideas for easy application. Its contents include the very basics of botany, seeds, ecology, soils, cultivation, fertilizers and pests control. It is heavily illustrated with drawings which compliment the explanations in the text.

Manual on Sewerage and Sewage Treatment (First Edition)

1980, 220p

Keywords: *Sewage treatment, Manuals, Design criteria, Performance evaluation, Sedimentation, Activated sludge treatment, Solid waste disposal, Foreign technology, Trickling filters, Chemical treatment, Developing country application.

There has been a long felt need for forging uniformity in planning, design and construction of sewerage and sewage treatment facilities. With this objective in view, this manual lays emphasis on the various pertinent aspects for execution of a comprehensive sewage collection and treatment scheme to serve the interest of the practicing Public Health Engineer. This manual has considered the recent technical advances and trends in the field of sewerage and sewage treatment. All units of measurements, operational parameters and design criteria have been furnished in the metric system. Other appendices contain useful information which will serve as a guide for solving the problems.

World Population and Fertility Planning Technologies: The Next 20 Years

Feb 82, 260p
Library of Congress catalog card no. 82-600516.

Keywords: Population growth, Fertility, *Birth control, *Population control, Contraceptives, Developing countries, Technology innovation, Research projects.

This report covers the status of current and projected technologies that affect fertility change. It presents current projections for population growth to 2000 and the implications of this growth; identifies the determinants of fertility change; reviews current reproductive research and contraceptive R and D; discusses the factors that influence the acceptance, distribution, and use of fertility planning technologies in the less developed countries; and examines past and current U.S. funding arrangements in support of population assistance requests from less developed countries.

Food, Fuel, and Fertilizer from Organic Wastes
Final rept.

1981, 165p * Rept no. CIR/BOSTID/31
Contract AID/ta-C-1433, IAD/DAN-5538-G-00-1023
Library of Congress catalog card no. 81-84731.

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: *Food, *Fuels, *Fertilizers, Organic wastes, Meetings, Utilization, Economic factors, Operating costs, Capitalized costs, Manpower, Rural areas, Rice plants, Developing countries, Plant residues(Organic), Industrial wastes, Technology innovation, *Agricultural wastes, Foreign technology.

This report examines some of the opportunities for the utilization of organic wastes and residues commonly found in the poorer rural areas of the world. It is based on discussions and presentations at a panel meeting of the Advisory Committee on Technology Innovation held on 6-8 August, 1979, in Airlie, Virginia, USA. The purpose is to set forth in array of alternatives for possible application where existing waste usage (or nonusage) is no longer appropriate. The processes described range from simple and inexpensive techniques to those more complex and costly. Many are already in use in rural areas, but some are still being developed at universities and research institutes. Although there are some generalizations on economic factors, projections of operating and capital costs in vastly different environments are impossible. Most of the processes described are both labor intensive and site sensitive.

Planificación Financiera para el Pequeño Contratista Constructor (Financial Planning for the Small Building Contractor), Derek Miles. c1982, 224p
Text in Spanish.

Keywords: *Financial management, *Construction, Contractors, Planning, Scheduling, Cash flow Investments, Billing, Accounting, Capital, Cost engineering, Resource allocation, Financing, Project management, Labor estimates, Materials estimates, Budgeting, Developing countries, Translations, *Small businesses, Developing country application.

The material on which this report is based was prepared for a course on Regional Management on Building in Africa. It is the result of the experience of helping during 10 years small constructors to establish and manage their business. It deals with the timing of the construction and its costs, in relation with the economy of the country. It includes: the planning of the work to accomplish in the year, prioritization and balance of resources, how to ask for loans, how to invest the capital, control of debtors, selection of the techniques of research studies.

Contabilidad y Teneduría de Libros para el Pequeño Contratista Constructor (Accounting and Bookkeeping for the Small Building Contractor), Derek Miles. c1982, 237p
Text in Spanish.

Keywords: Accounting, *Construction, Contractors, Developing countries, Records management, Assets, Liabilities, Fixed investment, Capitalized costs, Depreciation, Profits, Losses, Construction costs, *Financial management, Translations, *Small businesses, Developing country application.

The material on which this report is based was prepared for a Regional Course in Management Building in Africa. It emphasizes ideas and useful techniques that the reader may apply to increase his knowledge and control over his business. Most of these ideas and techniques apply to the management of agencies of public works as well as to the administration of the private building constructor. It contains: the construction contracts as a financial transaction, documentation and organization in the office, basic bookkeeping, depreciation, balance sheets, accounts of gains and losses, comparison of accounts. Included also is a chapter on practical exercises, charts and illustrations.

The Performance of High-Flow Bus Lanes in Bangkok, N. W. Marler. c1982, 36p Rept no. TRRL-Supplementary-723
Also pub. as ISSN-0305-1315.

Keywords: Urban transportation, *Roads, *Transportation management, *Buses(Vehicles), Vehicular traffic control, Developing countries, *Thailand, Travel time, Highway transportation, Bangkok(Thailand), Traffic lanes, Bus lanes.

Bus lanes are a useful traffic management measure in Third World cities, particularly as the use of buses is high and often rising. Bus lanes are typically expected to reduce congestion and shorten bus journey times, but there is usually little attempt to monitor their full impacts. Bus lanes were introduced in Bangkok in 1980. Surveys carried out on six diverse sections, before and after the event, showed that in almost all cases, either bus travel times or car travel times, or both, were improved significantly. The most successful section showed improvements to both bus and car mean travel times of 25-3 per cent. The bus flows observed in the study were very high, with up to 250 state-owned buses and 150 private minibuses using a single bus lane in an average peak hour.

Adaptation of Traditional Systems of Agriculture in a Developing Economy: Some Reflections on the Indian Gestalt, Nitish R. De. Sep 77, 33p Rept no. OP/SER-2/77

Keywords: *Agricultural economics, Rural areas, Industries, Improvement, *India, Quality of life.

The paper presents a case for exploration of rural development, 'Walking on two legs'. With a few exceptions, the rural leg has so far been hampered by reliance on impressive, modernized industrial conglomerates which have transformed agriculture into a sophisticated industry. The paper identifies some dimensions of rural development and suggests ways to improve the quality of agrarian life.

Accessibility of the Poor to the Rural Water Supply: A Quick Evaluation Study 1978-79 1980, 76p

Keywords: Accessibility, *Water supply, Rural areas, *India, Income, Potable water, Distribution systems, Water distribution, Pipes(Tubes), Water wells, Developing country application.

With a view to undertaking an extension of benefits accruing to the poor under the Rural Water Supply Scheme, the Program Evaluation Organization, at the instance of the Planning Commission undertook a 'Quick Study'. The study was conducted in 17 major states in India covering 34 districts and as many Community Development Blocks. For a detailed investigation, a total of 99 villages and 1,174 poor households were selected. The study has brought out that although the poor have been benefitted by the drinking water provided mainly through the piped water and bored/tube/drilled wells under the MNP/ARP, their share in relation to the non-poor has been less.

An Assessment for the Possibilities for the Use of Agriculture Residues, and Some Nonwood Plant Fibres for the Manufacture of Paper, Paperboard and Newsprint in India
Working document 21
T. T. Colline, Jr. Jan 78, 252p
Sponsored in part by United Nations Development Programme, New Delhi (India).

Keywords: Plant residues(Organic), Pulp, *Agricultural wastes, Bagasse, Straw, Economics, *Pulp, *India, *Paper industry, Assessments, *Paper, Newsprint, Paperboards, Developing country application.

The objective of this study is to list, to explore the availability of, and to assess the economic and technical viability of collecting and pulping the major agriculture residues and non-wood plant fibres (except of bamboo) in India. The fibrous raw materials reviewed are bagasse; jute and mesta fibers, stalks, and sticks; rice and wheat straw; reeds; areca nut fibrous wastes; groundnut shells; and miscellaneous nonwood plant fibres and agricultural residues of crops grown in India. The need and possibilities for spent liquor recovery

systems for small mills pulping agricultural residues and nonwood plant fibres are also discussed.

Honduras Rural Roads: Old Directions and New
Project impact evaluation rept. no. 17
John Hamilton, Norman M. Chapin, and Michael C. DeMetre. Jan 81, 57p Rept no. AID-PN-AAH-971

Keywords: *Roads, Rural areas, *Honduras, Developing countries, Development, Agriculture, Farm crops, Productivity, Mobility, Developing country application.

Honduras has the lowest ratio of roads to area and population in all of Central America. To assist Honduran road construction, A.I.D. developed two roads approaches differing in inputs and impacts. In 1965, A.I.D. approved a project to build feeder roads in areas isolated from marketplaces on the 'trickle-down' theory that the roads would benefit rich and poor alike, lead to cash crop production, and reduce subsistence farming and cattle ranching. The project called for road construction with no complementary credit, extension, or marketing services. Case studies of two of the feeder roads showed that the roads stimulated the cultivation of additional land, the production of cash crops, and also improved local access to medical and educational services. Project benefits varied, however, depending on external factors.

Report of the Working Group on Energy Policy 1979, 129p

Keywords: *India, Energy policy, Energy demand, Energy supplies, Energy consumption, *Energy.

This document presents, in detail, the report of the 'Working Group on Energy Policy' set up by the Government of India in December 1977. It gives an estimate of the prospective energy demand in different sectors of the economy for a decade; it surveys the present and prospective supplies of energy; it recommends measures for optimum use of available energy resources; and finally it outlines the future national energy policy for the country. The specific subjects covered by the report are: Trends in energy consumption; Forecast of demand for energy; Energy resources in India; Energy in the household sector; Energy in agriculture sector; Energy in industries sector; Energy in the transport sector; Policy for the power sector; Oil policy; Coal policy; Rural energy policy; Costs and prices in the energy sector; and Research and development in the energy sector.

Lathyrism: A Preventable Paralysis
1981, 20p

Sponsored in part by Indian Council of Medical Research, New Delhi (India).

Keywords: Paralysis, Nervous system disorders, Grains(Food), Toxicity, Toxic diseases, Males, Youths, *Diseases, *Food supply, Preventive medicine, Developing countries, Recommendations, *India, Food, Diets, Lathyrism, Toxins, Developing country application, Lathyrus sativus.

Lathyrism is a nervous disease that cripples man, especially young men between the ages of 15 and 45 years. The report points out that the disease is caused by eating large amounts of pulse Lathyrus sativus. The toxin in Lathyrus sativus has been isolated. The harmful nature of this toxin is revealed by injecting small amounts of it into animals. It is suggested that in order to avoid the toxic effect, Lathyrus sativus should never form more than a quarter of the total amount of cereals and pulses eaten per day. Some simple preventive measures to destroy the toxin are also suggested.

Nutritive Value of Indian Foods
C. Gopalan, B. V. Rama Sastri, and S. C. Balasubramanian. 1980, 214p

Keywords: *Food, *India, *Nutrition, Diets, Nutritional deficiency diseases, Children, Pregnancy, Developing countries, Developing country application.

A brief outline of general principles and considerations that govern the planning of satisfactory diets is given in this book. In the section dealing with dietary principles, information is given on the importance of the various nutritional constituents that are present in foodstuffs. The dietary allowances for various nutrients as recommended by nutrition experts are discussed in the next section; and typical balanced diets that satisfy the nutritional requirement of persons belonging to different age and sex groups are suggested. The prevalent Indian diets are known to be deficient in some important nutrients, and therefore hints on improving the nutritive value of the present diets are also given. The effects of malnutrition in different segments of the population are then briefly discussed. Pregnant and lactating women and also young children are particularly prone to suffer from malnutrition. This point is emphasized, and practical suggestions involved in the nutritional care of these segments of the population are indicated. Available information on the composition of Indian foods is given in the Tables that follow the text. An appendix at the end gives the names of the common food-stuffs in Indian languages.

National Dairy Research Inst., Karnal (India).
The Karnal Sahiwal and Red Sindhi Cows
D. S. Bhatnagar, R. C. Sharma, M. Gurnani, and D. Sundaresan. 1979, 48p

Keywords: Dairy cattle, *India, Tropical regions, Breeding, *Milk, *Dairies, Production, Fats, Weight(Mass), Growth, Cost analysis, Reproduction(Biology), Mortality, Survival, Developing country application, Inbreeding.

Sahiwal and Red Sindhi cattle are milch cattle with high yielding potential, heat tolerance, and disease resistance, best suited to the tropical climate prevailing in India. Bred at many Indian Military and other state farms for milk production, the best strain of Sahiwal breed has an average 305 days lactation yield

of 2100 kg., and individual highest of 4433 kg. The report describes the following work done on these strains: breeding policy, birth weight and growth rate, cost of calf rearing, productive performance of the herds, cost of milk production, fat and SNF contents, reproductive performance, effect of inbreeding coefficient on production, reproduction and survivability traits, mortality rates, and progeny testing of bulls.

The Impact of Irrigation on Development: Issues for a Comprehensive Evaluation Study
Program evaluation discussion paper no. 9
Leonard Berry, Richard Ford, and Richard Hosier.
Oct 80, 87p Rept no. AID-PN-AAJ-208

Keywords: Economic development, *Irrigation, Design, Project planning, Evaluation, History, Salinity, Agriculture, Production, Assessments, Developing country application.

Although irrigation can greatly improve the world's capacity to feed itself by increasing agricultural production, most irrigation projects fall short of this goal.

APPROPRIATE TECHNOLOGY ABSTRACTS

These failures are due sometimes to defective design, but more often to the expense involved, poor management and leadership, and improper use of resources. A sound system of evaluation can improve the effectiveness of these projects. This report examines A.I.D.'s current evaluation process and recommends revisions to improve project design. After reviewing the current status of irrigation in the developing world, the authors discuss A.I.D.'s evaluations, which typically concentrate on a project's conformity to its original purpose or on the performance of the implementing agency.

Bolivia: Rural Electrification
Project impact evaluation rept. no. 16
Edward Butler, Karen M. Poe, and Judith Tendler.
Dec 80, 58p Rept no. AID-PN-AAH-978

Keywords: *Electric power, Rural areas, *Bolivia, Developing countries, Evaluation, Economic impact, Social effect, Quality of life, Developing country application.

Two rural electrification systems initiated in Bolivia in 1973 and 1974 are the subject of this report. By 1979, all distribution networks were completed, except in the La Paz region. Power was supplied to 42,000 consumers and was used primarily for residential lighting. Although demand outpaced supply, consumption per household was lower than projected, and irrigation and industrial use was negligible. The preponderant positive impact of the projects was social. Household lighting improved the physical quality of life for 7% of Bolivia's rural population.

Lesotho Agricultural Sector Analysis Project, Maseru.
Quantitative Analyses of Lesotho's Official Yield Data for Maize and Sorghum
Research rept.

Jerry Eckert, Jul 80, 38p LASA/RR-8, AID-PN-AAH-922
Prepared in cooperation with Colorado State Univ., Fort Collins. Dept. of Economics.

Keywords: Corn plants, Grain sorghum plants, Rainfall, Farm crops, South Africa, Yield, Estimating, *Crops, Statistical analysis, Accuracy, Developing country application, Maize, *Lesotho.

Crop yield estimates computed by Lesotho's Bureau of Statistics have undergone considerable scrutiny recently. The Bureau's data seem unreliable, showing a long-term decline in yields, a high degree of variability both within each year and between districts, and, in 1976/77, a jump of more than 50% over earlier averages. Climate fluctuation, however, heavily influences cropping patterns in Lesotho and may account for these anomalies. This paper analyzes, at the macro-data level, the relationships between crop yields and rainfall in Lesotho and develops mathematical equations to estimate maize and sorghum crop yields.

Lesotho Agricultural Sector Analysis Project, Maseru.
A Critical Analysis of Manpower Utilization Issues in Lesotho

M'ampiti Francisca Nchapi, Aug 80, 55p LASA/RR-9, AID-PN-AAH-921
Prepared in cooperation with Colorado State Univ., Fort Collins. Dept. of Economics.

Keywords: Manpower utilization, *Lesotho, Personnel, *Employment, *Migration, Agriculture, Mining, Income, Specialized training, Developing country applications.

According to a recent study, the supply of labor requiring employment within Lesotho's economy will increase to 900,000 persons between the years 1976 and 2000, with 93,000 agricultural jobs needed in the next 5 years and over 100,000 such jobs required in each of the following 5-year periods. Development of an effective manpower utilization strategy is thus crucial in solving Lesotho's employment dilemma. This paper reviews an agriculturally-based, employment-intensive theory of development and applies it to the case of Lesotho, critically examines existing data and analyses on the employment situation, and formulates broad policy implications for the Government of Lesotho. The author delves into the major dimensions of Lesotho's manpower utilization. These issues include

rural-urban migration; the magnitude of labor surplus or shortage; migration into South Africa and miners' incomes; growth of the labor supply during the years 1980-2000; and labor-intensive technologies and labor absorption. It is demonstrated that while the agricultural sector must be developed as the primary employer of returning migrants, the industrial and public works sectors also have an important role in this regard. Recommendations are made in the areas of agricultural production and marketing, import and export substitution, expansion of industry from urban areas, distribution of improved social services to village people, transfer of technology to small farmers and local personnel, and the quantity and quality of training.

Lesotho Agricultural Sector Analysis Project, Maseru.
The Future Environment for Agricultural Planning: 1980-2000 AD

Jerry Eckert, and Joseph N. Mohapi, Jun 80, 37p LASA/DP-9, AID-PN-AAH-920
Prepared in cooperation with Colorado State Univ. Fort Collins. Dept. of Economics.

Keywords: South Africa, *Agricultural economics, Population growth, Rural areas, Manpower, Rainfall, Farm crops, Yield, Roads, Mountains, *Employment, Law(Jurisprudence), Allocations, Farms, Trends, Developing country application, *Lesotho, Land Act of 1979.

Because the dominant factors affecting Lesotho's overall economic development are also those which affect the agricultural sector, characterization of these factors would provide agricultural planners with the economic environment around which their long term programs and policies should be based. Providing such a characterization, this analysis predicts major problems confronting economic planners that may occur in the absence of a well-defined and implemented development strategy.

Specific Soil Chemical Characteristics for Rice Production in Asia
Research paper series
F. N. Ponnampuruma, Dec 76, 22p IRPS-2, AID-PN-AAH-909

Keywords: Soil properties, *Rice, *Asia, Production, Flooding, Population growth, Drying, Arid land, Semiarid land, *Soils, Developing country application.

Although more than 80% of the world's rice is grown and consumed in Asia, increased production is required to keep pace with population growth. Since the extent of arable land in this densely populated region is limited, additional rice cultivation must take place in lands that remain uncultivated largely because of soil problems. To evaluate potential rice lands, an understanding of the specific properties of flooded soils and of the physiology of the rice plant is necessary, because the chemical changes induced in flooded soils drastically alter the criteria used to evaluate land for dryland farming. This report examines the nature of these changes.

Rural Roads in Thailand
Project impact evaluation no. 13
Frank J. Moore, Charles T. Alton, H. Leedom Lefferts, Suthep Soonthornpasuch, and Richard E. Suttor, Dec 80, 50p Rept no. PN-AAH-970

Keywords: *Roads, *Thailand, Rural areas, Developing countries, Public works, Local government, Economic impact, Developing country application.

Nearly 30 million people in the formerly isolated villages of North and Northeast Thailand have benefited from the 8,000 miles of roads built between 1964 and 1974 under the Accelerated Rural Development (ARD) Project. This report focuses on the impact of ARD on Thais who experienced for the first time a wide range of opportunities within and away from their home community. ARD's institutional objective was to increase the capability of provincial governments to respond to rural needs by delegating to local governors the responsibilities of planning, designing, building, and

maintaining rural roads, water facilities, and other public works. The roads have generally impacted favorably on those in formerly isolated areas.

South African Mine Wages in the Seventies and Their Effects on Lesotho's Economy
Research rept.

Jerry Eckert, and Ron Wykstra, May 80, 33p LASA/RR-7, AID-PN-AAH-871
Prepared in cooperation with Colorado State Univ., Fort Collins. Dept. of Economics.

Keywords: Mining, Income, South Africa, Economic development, Manpower, Economic impact, *Migration, *Employment, Developing country applications, *Lesotho.

During the period January 1973-June 1976, the mining industry of the Republic of South Africa increased mine wages by an unprecedented 500 percent to attract higher numbers of South Africans to mining jobs, thereby reversing South Africa's dependence on foreign labor. The economic impacts of such a reversal were severe, particularly in Lesotho, South Africa's prime source of migrant labor. This paper quantifies the more important of these impacts in order to identify the causes of major economic developments in Lesotho and to suggest the magnitude of economic difficulties that may occur if migration opportunities continue to diminish.

Preliminary Trails of Cement-Gobar Gas Plant Designs
David J. Fulford, and Nick Peters, Jul 81, 41p

Keywords: *Cement, *Gas storage, Design criteria, Cost analysis, *Bioconversion, *Nepal, Biogas process, Developing country application.

One way to reduce the cost of bio-gas plants is to use cement to make gas storage domes, instead of steel. A total of 7 different designs of cement bio-gas plants have been made and tested. Both floating ferrocement gas drum designs and fixed dome displacement digesters were built, with varying success. Details are given of construction techniques, costs and effectiveness of these various designs. The two most effective designs of the seven were a displacement digester (Chinese design) with a cement gas dome and a design that used a floating hemispherical ferrocement gas dome. Both showed significant savings (35%) in materials cost over a steel drum (Indian) design, although some of this saving was offset by increases in labor costs.

A Comparative Evaluation of Some Storage Bins for Rural Grain Storage
T. S. Krishnamurthy, and S. K. Majumder, 1978, 18p

Keywords: *Grains(Food), *Food storage, Bins, *India, Thermal conductivity, Moisture, Condensation, Termites, Rodents, Insects, Cost analysis, Plywood, Polyethylene, Metals, Panels, Ferrocements.

The main requirements for sound storage of food grains are that their moisture content should be below 11 percent and that they should be free from internal infestation. Grain storage structures should therefore have (1) low thermal conductivity to prevent moisture condensation in stored grain, (2) gas-worthiness for fumigant retention, (3) resistance to rodent and termite attack, and (4) resistance to cross-infestation by insects. A comparative evaluation of plywood, ferrocement and high molecular weight high density polyethylene bins of capacity 0.5 to 3 tons showed that the plywood and ferrocement bins meet these requirements both for indoor and outdoor storage of grains.

Review of Work Done on Rural Water Supply in India

Technical rept.
S. J. Arceivala. 1972, 39p Rept no. ICMR/TR-SER-19

Keywords: *Water quality, *Water supply, *Water wells, Rural areas, Public health, Fluoridation, Iron, Manganese, Disinfection, *India, Pumps, Maintenance.

The report summarizes the progress made in rural water supply and the problems encountered in India since 1947. It describes the improvement in health as a result of community water supply, and reports the studies done on tube-wells and the maintenance of hand-pumps fitted to tube-wells in rural areas.

Keywords: Infants, *Children, *Food supply, Planning, Rural areas, Developing countries, India, *Nutrition, Weaning, Developing country application, Feeding behavior, Poverty groups.

The report is the result of a comprehensive study on infant and child feeding practices carried out in six different regions of India, under the auspices of the Indian Council of Medical Research. The main aims of this study are: (1) to collect data regarding the feeding patterns and weaning practices among the poor socio-economic groups and (2) to develop suitable weaning foods from locally available resources and to devise appropriate methods of evaluating and popularizing them among the communities.

Adoption of a New Contraceptive in Urban India

Dinesh Chandra Dubey. 1969, 140p Rept no. MONO/SER-6

Keywords: Demography, Mass media, Publicity, Communicating, Social effect, Attitudes, *Birth control, Developing countries, *India, Contraceptive, Developing country application, Family planning, Intrauterine devices.

The book analyzes the communication and family decision making processes involved in the adoption of the Intra-uterine Contraceptive Device. The main findings were that women were more aware of IUD information than men and that women tended to get their information from personal sources while men tended to get theirs from the mass-media. Both husband and wife took part in decision making regarding the use of the IUD.

Timber and Timber Products in Structural Uses

H. N. Jagadeesh, and M. K. Radhamani. 1977, 14p

Keywords: *Wood products, Structural timber, Structures, Plywood, Panels, Wood preservatives, Savings, Reliability, *Wooden structures, Shortages, Adhesives, Cost analysis, India, Developing country application, Hardboards.

Development of timber engineering techniques at some of the Research Organizations of the country amply demonstrates the possibility of saving considerable quantities of timber without sacrificing structural efficiency. Nailed construction techniques and glued plywood techniques offer a wide range of solutions to design and construct structures applicable to present day building practice. Use of wood based panel materials, in particular plywood and hardboard, can considerably bring down the pressure on supplies of seasoned and preservative treated timber.

The Estimation of Recent Trends in Fertility and Mortality in Egypt

Rept. no. 9 (Final).
1982, 161p* Rept no. ISBN-0-309-03238-5
Library of Congress catalog card no. 81-86662.

Keywords: Mortality, Fertility, *Egypt, Vital statistics, Population growth, Demography, Populations, Trends, Women, Developing countries, Metropolitan areas, *Population control, Infant mortality.

This report is one of a number designed to examine levels and trends of fertility and mortality in the developing world. In Egypt, beginning in the 1940s, infant mortality and crude death rate began an extensive decline. Both mortality and fertility rates vary by region in Egypt, and the report examines the following rates: infant mortality, general fertility, overall fertility, marital fertility, and the proportion married among women of childbearing age. A reduction in fertility in Egypt between 1960 and 1976 was found to be caused by later marriage and a small decrease in marital fertility. These declines began sooner and were larger in large metropolitan areas.

Grain Storage Bins of Plywood

H. N. Jagadeesh, V. Padmini, and Joseph George. 1976, 15p

Keywords: Bins, *Plywood, Grain crops, *Food storage, *India, Standards, Weight(Mass), Termites, Flexural strength, *Grains(Food), Stiffness, Fumigation, Moisture, Rodents, Damage, Cost effectiveness, Weather, Developing country application.

Exterior grade plywood is a versatile engineering material. It has high strength-weight ratio, and is completely weather-proof, water-proof, decay resistant, and insect and termite-proof. Theoretical and experimental studies at the India Plywood Industries Research Institute have shown that it is possible to make grain storage bins of any capacity in the range 0.1-60 tones or more from exterior grade plywood using nail gluing technique. Structurally, plywood bins have high strength and stiffness. Functionally, plywood bins can be made practically gas-tight to facilitate fumigation and to prevent moisture entry.

Nuptiality Patterns in Developing Countries: Implications for Fertility

Jane S. Dorch, Dec 80, 48p
Contract AID/DSPE-C-0024

Keywords: Fertility, Asia, Latin America, Demographic surveys, Age, Developing countries, *Women, *Birth control, Developing country application, Family planning, Marriage rates.

This report, based on World Fertility Survey data from 15 selected Asian and Latin American countries, examines patterns in the formation and dissolution of marital unions and the relationship of these patterns to fertility. In brief, the data indicate that: (1) In Asia age at first marriage varies widely among countries, but nearly every country considered shows evidence of a trend toward later marriage for women; (2) The Latin American countries are generally similar in the average age at which women first marry; no particular trend toward later marriage seems to exist; (3) In Latin America, informal consensual unions are widespread. Two patterns predominate--(1) numerous consensual unions among young women which are gradually outnumbered by formal marriages; and (2) a relatively steady but low level of such unions at all ages; and (4) Women with more education or with urban backgrounds tend to marry later. Changes in marriage patterns are one means of reducing fertility. Increased education and employment opportunities for women may lead to later marriage and increased numbers of women who never marry.

Preliminary Experiments with Improved Hypochlorite Bleaching of Bamboo Pulps

Research progress rept. no. 24

N. R. Mohan Rao, R. M. Mathur, R. Pant, and T. K. Roy. Dec 80, 32p

Sponsored in part by United Nations Development Programme, New Delhi (India).

Keywords: *Bamboo, *Pulp, Degradation, Tear strength, *Paper industry, Fiber strength index, Developing country application.

Investigations were carried out to find out the degradation of bamboo pulp (especially tearing strength) in the Hypochlorite stage of the CEHH sequence by determining the viscosity and fiber strength index. Attempts have been made to retain the strength by replacing 20% chlorine by hypochlorite in the chlorination stage while attaining a brightness of 68% ISO with 12% chlorine in the H 1 stage. Considerable improvement in tear strength was observed using the H/C (20:80) EHH sequence over the conventional CEHH sequence in the case of bamboo (*Dendrocalamus strictus*) pulp of a low Kappa number. The behavior of a commercial flash-dried bamboo pulp of a high Kappa number was observed to be difficult.

Viscosity and Fibre Strength Measurements in Relation to Bleaching

Research progress rept. no. 25

Y. V. Sood, T. K. Roy, N. R. Mohan Rao, K. S. Moorthy, and R. M. Mathur. Dec 80, 19p

Sponsored in part by United Nations Development Programme, New Delhi (India).

Keywords: *Bamboo, *Pulp, Viscosity, Tear strength, Bleaching, Folding endurance tests, *Paper industry, Fiber strength index, Developing country application.

Studies carried out on bamboo (*Dendrocalamus strictus*) pulp showed that fiber strength index (FSI) is strongly related to the tearing strength and folding endurance. The correlation between intrinsic viscosity and these properties is not as significant as with FSI. While carrying out bleaching optimization, it is not sufficient to assess the pulp quality by viscosity date alone, because sometimes a decrease in viscosity may not necessarily mean a decrease in paper strength. FSI should also be determined along with viscosity as an indicative of paper strength. Measurement of FSI using the Pulmac Zero span tensile tester can provide a quick measure of pulp degradation during the bleaching operations. For better assessment of pulp quality, viscosity data should be supplemented with FSI.

Vasectomy Camps: A Study

Sep 73, 155p Rept no. NIFP/REPT/SER-13

Keywords: Evaluation, Interviewing, Demography, Socioeconomic status, Social psychology, Developing countries, *India, *Birth control, Vasectomy, Developing country application, Family planning, Characteristics.

This report has three parts. The first part deals with the demographic and socioeconomic characteristics of the acceptors of vasectomy and tubectomy in different camps in India. Studies included in this part have been arranged state-wide. The second part is an indepth study of the perception of how compensation for loss of wages (incentives) promotes higher acceptance and how this is generally viewed by the acceptors. This study is based on a sample of acceptors taken from Baroda district of Gujarat. The third part covers an otherwise unexplored area of psychological indepth studies of higher compensation for loss of wages among the acceptors. The study is based on indepth interviews of acceptors from Bulandshahr and Baroda district vasectomy camps.

Bleaching Investigations on Bamboo (*Dendrocalamus strictus*) Pulps

Research progress rept. no. 21

R. Pant, N. R. Mohan Rao, R. M. Mathur, and Y. V. Sood. Oct 80, 51p

Sponsored in part by United Nations Development Programme, New Delhi (India).

Keywords: *Bamboo, Bleaching, *Pulp, Calcium hypochlorites, Chlorine oxides, Hydrogen peroxide, Viscosity, *Paper industry, Tear strength, Chlorine dioxide, Fibre strength index.

Bleaching studies were carried out on bamboo (*Dendrocalamus strictus*) pulp using different bleaching chemicals, viz., calcium hypochlorite, chlorine dioxide, and hydrogen peroxide in different sequences with a view to retain the tear strength of the unbleached pulp to the maximum extent. Studies have shown that the H/C (40:60) EHH sequence improves the viscosity, fibre strength index, and the tear strength of the bleached pulp over the conventional CEHH bleached pulp. The D/C (20:80) EDH sequence retains the maximum tear strength of unbleached pulp.

The Village Health Promoter Trainee's and Instructor's Manuals are designed to aid in the training of community level primary health care workers, utilizing both formal and nonformal training techniques. The training material and its presentation are intended for use in the training of selected trainees who have achieved basic literacy. The material contained in the trainee's manual of 37 chapters, and 335 pages in the English version, is broad in scope, extending from training in basic curative care in a wide range of common illnesses, to considerable emphasis on preventive health care in such areas as maternal and child health, nutrition education, environmental sanitation and hygiene, family planning, and health education in general. The manuals are published in English, Spanish, and French. This volume is in French. The English version is available as PB82 214 966 and the Spanish version is available as PB82 214 974. The Instructor's Manual is available in French as PB82 214 941, in English as PB82 214 925, and in Spanish as PB82 214 933.

The New Nepali Chulo: Fuel Efficient and Smokeless Cooking Stoves
Jul 80, 39p

Keywords: *Stoves, Manuals, Design, Construction, *Wood stoves, *Energy conservation, *Nepal, Wood burning appliances, Developing country application.

This report explains with diagrams how to build a new fuel efficient and smokeless woodburning stove, using designs chosen from several tested. The stoves can be built with local materials, using and developing skills from the area where they are to be used. These stoves result in a smokeless kitchen, improving the health conditions, and the fuel consumption is reduced by as much as 50%, depending on such things as the proper handling of dampers. Although the book does not claim to be a do-it-yourself manual, a person with basic masonry skills should be able to fashion several different kinds of these stoves from the information provided.

Selected Papers from Training Course on Sociological and Economic Aspects of Housing
Proceedings of symposia and seminars no. 13.
1972, 382p

Keywords: *Housing, Economic factors, Sociology, Rural areas, Urban areas, Planning, Communities, Construction, Manpower, Financing, Policies, Developing countries, Specialized training, Instructional materials, India, Foreign technology, Developing country application, Curricula, Villages.

The National Buildings Organization organizes training courses on the 'Sociological and Economic Problems in the Field of Housing' for the benefit of 'in-service' officials connected with the various disciplines of housing and building. The objective of these courses is to acquaint men in the field with the problems encountered and to suggest methods of tackling them suitably. Lectures on subjects concerning sociological and economic aspects of housing are delivered by specialists in the field. This publication is a compilation of selected lectures from the first three training courses held by the National Buildings Organization. It contains 64 lectures presented under 8 chapters. The chapters are: Evolution of Housing (3 lectures); Urban and rural sociology (8 lectures); demographic aspects in relation to housing (7 lectures); housing statistics (9 lectures); housing economics and finance (19 lectures); community planning (4 lectures); productivity labor, manpower and materials planning in building sector (5 lectures); housing policy, schemes, programs and administration (9 lectures).

Bacterial and Fungal Diseases of Potato
B. L. Dutt. Jun 79, 204p
Sponsored in part by Indian Council of Agricultural Research, New Delhi.

Keywords: *Plant diseases, *Potatoes, Vegetables, Fungi, Bacteria, India, Signs and symptoms, Diseases, Plant pathology, Fungus diseases, Developing country application, Pathogens.

This report is a special treatise on potato diseases caused by fungi and bacteria in India. The author has discussed in detail the distribution of the diseases, their symptoms, sources of infection, factors affecting the diseases, host range of the pathogen and methods of control. This report is mainly intended for use by technical field workers and farmers to identify a disease in the field and to take proper control measures. It should also be of interest to researchers, students and teachers of plant pathology. Bacterial diseases covered are brown rot or bacterial wilt, blackleg or soft rot, and common scab. Fungal diseases covered are wart disease, powdery scab, late blight, powdery mildew, black scurf and stem canker, sclerotium rot, black dot, verticillium wilt, early blight, silver scurf, leaf blotch, cercospora leaf spot and stem canker, dry rot, fusarium wilt, charcoal rot, ozonium rot. An appendix lists symptoms for easy identification of potato diseases.

Silviculture, Management and Utilization of Poplars: Proceedings of a Symposium Held at Srinagar on October 15-16, 1979
R. V. Singh. Oct 79, 196p

Keywords: Poplar wood, *India, *Forestry, Meetings, Planting, Germination, Pest control, Plant diseases, *Wood, Wood pulp, Feeding stuffs, Utilization, Developing country application, Poplar trees.

Poplars, which are fast growing and produce multipurpose wood, can help the problem of depleting forest resources. This report contains papers presented at a symposium. A total of 45 papers cover: Silviculture of Poplars; Management of Poplars; and Utilization of Poplars. Specific subjects covered are planting, germination, and rooting branch cuttings under silviculture of poplars; growth rate, seasonal variation of wood, insect pests, and diseases under Management of poplars; and wood boxes, artificial limbs, pulp and paper, animal feed, and match industry under utilization of poplars.

Glossary of Indian Medicinal Plants
R. N. Chopra, S. L. Nayar, and I. C. Chopra. c1956, 350p

Keywords: *India, *Medicinal plants, Dictionaries, Drugs, Chemical compounds, Vitamins, Yeast, Lactic acid, Oxalic acid, Heart diseases, Developing country application, Peppermint, Pinus, Cannabis, Kaempferia, Juniperus, Digitalis.

This volume provides the medicinal properties of about 3,000 plants. The plants have been arranged in alphabetical order according to their scientific names so readers can find any particular drug on which information is required. Many of the commonly used synonyms and Indian vernacular names have been inserted and cross references to their modern scientific names are given. The conditions of disease for which the particular plant is used are also briefly listed and brief descriptions of the active principles of plants are included.

Wood Pellet Feasibility Study
 C. H. Dohrer. 31 Oct 79, 133p
 Contract EY-77-C-06-1030

Keywords: Boiler fuel, Fuel substitution, *Wood wastes, Air quality, Cost benefit analysis, Economics, Efficiency, Feasibility studies, Fire hazards, Fuel pellets, Materials handling, Pelletizing, Standards, Steam, *Wood, *Fuels, Synthetic fuels, Solid wastes.

This study effort was undertaken to determine the feasibility of using pelletized wood as an alternative fuel supply while retaining the capabilities of returning to the use of coal without interrupting steam production. Pelletized wood fuel was fired in two of four boilers rated at 80,000 pounds of steam per hour each. No

modifications to the existing systems were required in order to conduct the study. Wood pellets can be fired efficiently at up to 85 percent of boiler capacity without exceeding particulate emission or opacity standards which eliminates the need for gas control exhaust measures. The lower ash volume of wood pellets can produce a 75 percent savings in ash handling and disposal costs. The need for additional receiving, storage and conveyance facilities for dust control and reduction of the fire and explosion hazards presented by wood pellets cannot be justified by savings in fuel or operating costs. The estimated yearly delivered cost of wood pellets to Hanford exceeds the known yearly delivered cost of the equivalent Btu value of coal. The increased operating costs incurred by firing wood pellets are not offset by savings in ash handling and baghouse operating costs. Based on the capital cost of additional facilities for wood pellets and increased operating cost while using this fuel in lieu of coal, the use of wood pellets as an alternative to coal in the 200 West Area powerhouse is not economically feasible at this time. Wood pellet and coal prices should, however, remain under observation and the option of firing wood pellets be reviewed if a change in cost dictates an economic advantage. It is recommended that steam plants faced with expensive emission improvements or high fuel costs seriously consider the use of wood pellets as a substitute fuel. (ERA citation 05:013227)

 Plastics Inst. of America, Inc., Hoboken, NJ.
Maximizing the Life Cycle of Plastics. Final Report
 W. L. Hawkins. Feb 80, 800p
 Contract EC-77-S-03-1609

Keywords: Plastics, Plastics industry, Combustion, Co-ordinated research programs, Energy conservation, Materials recovery, Recycling, *Waste recycling.

The Plastics Research Institute has conducted a co-ordinated research program designed to extend the useful life of plastics. Since feedstock for practically all synthetic plastics is derived from fossil fuel, every effort should be made to obtain the maximum useful life from these materials. Eventually, plastic scrap may

be used as a fuel supplement, but this disposal route should be followed only after the scrap is no longer reusable in its polymeric form. The extent to which plastic scrap will be recovered and reused will be affected by the economic situation as well as the available supply of fossil fuel. The Institute's program was conducted at five major universities. Dedicated faculty members were assembled into a research team and met frequently with members of the Institute's Board of Trustees to review progress of the program. The research was conducted by graduate students in partial fulfillment of degree requirements. Summaries are presented of the following research projects: Improved Stabilization; Separation of Mixed Plastic Scrap; Compatibilizing Agents for Mixed Plastic Scrap; Controlled Degradation of Plastic Scrap; and Determination of Compatibility.  Sandia Labs., Albuquerque, NM.
Engineering of Wind Energy Systems.
 J. F. Banas, and W. N. Sullivan. Jan 76, 27p
 Contract AT(29-1)-789

Keywords: *Turbines, *Wind energy, Wind turbines, Performance, Comparative evaluations, Configuration, Efficiency, Electric power, Power generation, Wind power generation.

The engineering of wind energy systems is analyzed from the point of view of component selection and performance assessment. Combinations of two load types (variable and constant speed) and three turbine types connected by a fixed-gear-ratio transmission constitute the various systems investigated. The three turbine types result from introducing the notions of nested, unnested, and hybrid power coefficients suggested by current performance characteristics of American Multiblade, Darrieus, and Darrieus/Savonius turbines. The engineering problems associated with these systems are discussed qualitatively, emphasizing the nature, magnitude, and variability of the problems. 11 references.

 Solar energy symposium, Tokyo, Japan, 5 Feb 1979,

Keywords: *Solar collectors, Comparative evaluations, Concentrating collectors, Design, Efficiency, *Solar water pumps, Performance, Reviews, Technology assessment, Uses.

Solar thermal energy conversion systems represent a method of reducing dependency on stored energy reserves; this is done at the expense of an increased dependency on materials and land resources. The various technologies being investigated to convert solar radiation into thermal energy are reviewed, and general guidelines which should be followed in designing and applying cost-effective solar conversion systems are presented. This information is expanded upon and illustrated by a comparison of performance results for a range of solar thermal technologies and by one solar irrigation application in the United States. Fuel from Farms - A Guide to Small Scale Ethanol Production
Feb 80, 163p*
Contract DOE-EG-77-C-01-4042

Keywords: *Ethanol, Farms, *Agricultural wastes, Fermentation, Gasohol program, Economic analysis, Crops, Biomass plantations, Technology utilization, Design, Equipment, Management, Capital, Operating costs, State government, National government, Regulations, Environmental surveys, *Bioconversion, Synthetic fuels, Solid wastes, Process charting, Management planning, Capitalized costs, Manufacturing gas.

The expanding support for gasohol in this country over the last several years provides an opportunity to directly reduce U.S. oil imports in the very near future. Interest is evident by the many requests for information about gasohol that are being received throughout the federal government daily. This guide has been prepared to meet the challenge of filling the information void on fermentation ethanol in a balanced, reasoned way, with emphasis on small-scale production of fermentation ethanol using farm crops as the source of raw materials. The report covers the following aspects: Decision to produce--(Benefits, markets and uses, market assessment, production potential, equipment selection, financial requirements, and decision and planning worksheets); Basic ethanol production--(Preparation of feedstocks, fermentation, and distillation); Feedstocks--(Types of feedstocks, coproduct yields, agronomic considerations, and feedstock considerations); Plant design--(Overall plant considerations, individual system considerations, process control, representative ethanol plant, and maintenance checklist); Business plan--(Analysis of financial requirements, organizational form, financing, and case study). The appendices include these topics: Summary of legislation, Bureau of Alcohol, Tobacco, and Firearms permit information; Environmental considerations; Reference information; Resource people and organizations.

Keywords: Developing countries, Renewable energy sources, Economics, Financing, Institutional factors, *Energy, Investment, Solar Energy Research Institute.

Within the last several years, foreign-assistance donor agencies have begun to provide significant aid for the search for renewable energy sources for developing nations. This paper reports preliminary results from a survey of development--assistance projects in renewable energy sources, indicating which areas are extensions of traditional assistance areas and which are new areas of involvement. The last two portions of the paper indicate certain shortcomings in the current effort, and linkages that must be emphasized in order to increase the effectiveness of the range of donor activities. Educating the Design Professional: Energy-Conscious Design for Commercial Buildings
N. Carlisle, and G. Franta. Apr 81, 5 Rept no. CONF-810509-15
Contract AC02-77CH00178
Annual conference of the International Solar Energy Society, Philadelphia, PA, USA, 26 May 1981.

Keywords: Commercial buildings, Solar architecture, Architects, Design, Education, Engineers, Meetings, Solar process heat, *Solar energy, *Buildings.

The energy problem in a residence is substantially different from that in a commercial building; therefore, the approach to using renewable resources in a commercial building differs from that in a residence. For this reason, educational materials, seminars, and workshops developed to teach architects and engineers basic design principles to integrate renewable energy into commercial buildings must differ from that developed for residential building designers. The purpose of this paper is to identify some of the differences in approach between residential and commercial solar design, discuss what the Solar Energy Research Institute (SERI) Commercial Buildings Group has learned about educating commercial building design professionals through experience, and describe the American Institute of Architects (AIA) national effort to educate architects about energy-conscious design. Solar Ponds and Their Applications
T. S. Jayadev, and M. Edesess. Mar 80, 12p Rept no. CONF-800352-4
Contract AC02-77CH00178
Energy technology conference and exposition, Washington, DC, USA, 24 Mar 1980.

Keywords: *Solar ponds, Cost, Efficiency, Heat storage, Payback period, Resource potential, Reviews, *Process heat, *District heating, Solar district heating, Uses.

Solar ponds are probably the simplest and least expensive technology for conversion of solar energy to thermal energy. The solar pond is unique in its ability to act both as collector and as storage. The cost of a solar pond per unit area is considerably less than that of any active collector available today. The combination of their economic and technical factors make solar ponds attractive for district heating and industrial process heat applications. Solar ponds have the potential to displace significant quantities of fossil fuel in low-temperature heating applications in non-rban areas. (ERA citation 05:028814)

Developing Common Information Elements for Renewable Energy Systems: Summary and Proceedings of the SERI/AID Workshop
J. H. Ashworth, and J. W. Neuendorffer. Jun 80, 125p Rept no. CONF-800250-
Contract AC02-77CH00178
Workshop on evaluated systems for renewable energy systems, Golden, CO, USA, 20 Feb 1980.

Keywords: Developing countries, Renewable energy sources, Appropriate technology, Colorado, Decision making, *Information sources, Information, Information needs, Meetings, Program management, Recommendations, Surveys, Total energy systems, *Energy.

This report describes the activities, conclusions, and recommendations of the Workshop on Evaluation Systems for Renewable Energy Systems sponsored by the Agency for International Development and SERI, held 20-22 February 1980 in Golden, Colorado. The primary objectives of the workshop was to explore whether it was possible to establish common information elements that would describe the operation and impact of renewable energy projects in developing countries. The workshop provided a forum for development program managers to discuss the information they would like to receive about renewable energy projects and to determine whether common data could be agreed on to facilitate information exchange among development organizations. Such information could be shared among institutions and used to make informed judgments on the economic, technical, and social feasibility of the technologies. Because developing countries and foreign assistance agencies will be financing an increasing number of renewable energy projects, these organizations need information on the field experience of renewable energy technologies. The report describes the substance of the workshop discussions and includes the papers presented on information systems and technology evaluation and provides lists of important information elements generated by both the plenary sessions and the small working groups. Survey of Biomass Gasification. Volume I. Synopsis and Executive Summary
Jul 79, 45p
Contract EG-77-C-01-4042

Keywords: Biomass, Gasification, Synthetic fuels industry, Ammonia, Anaerobic digestion, *Bioconversion, *Agricultural wastes, *Fuels, Commercialization, Economics, Gasoline, Methane, Methanol, Pyrolysis, Recommendations, Reviews, Synthesis, Waste processing, Solid wastes.

Biomass can be converted by gasification into a clean-burning gaseous fuel that can be used to retrofit existing gas/oil boilers, to power engines, to generate electricity, and as a base for synthesis of methanol, gasoline, ammonia, or methane. This survey describes biomass gasification, associated technologies and issues in three volumes. Volume I contains the synopsis and executive summary, giving highlights of the findings of the other volumes. In Volume II, the technical background necessary for understanding the science, engineering, and commercialization of biomass is presented. In Volume III, the present status of gasification processes is described in detail, followed by chapters on economics, gas conditioning, fuel synthesis, the institutional role to be played by the federal government, and recommendations for future research and development. Survey of Biomass Gasification. Volume III. Current Technology and Research
Apr 80, 302p
Contract EG-77-C-01-4042

Keywords: Biomass, *Gasification, Chemical reactors, Commercialization, Cost, Data compilation, Diagrams, Economics, Flowsheets, Graphs, Tables, Design, Directories, Manufacturers, Research programs, Air, Gas burners, Oil burners, Retrofitting, Hydrogenation, Scrubbers, Ammonia, Chemical reaction yield, Conversion, Gasoline, Methane, Methanol, Production, Synthesis gas, Financial incentives, Government policies, Grants, Recommendations, *Plants(Botany).

This survey of biomass gasification was written to aid the Department of Energy and the Solar Energy Research Institute Biological and Chemical Conversion Branch in determining the areas of gasification that are ready for commercialization now and those areas in which further research and development will be most productive. Chapter 8 is a survey of gasifier types. Chapter 9 consists of a directory of current manufacturers of gasifiers and gasifier development programs. Chapter 10 is a sampling of current gasification R and D programs and their unique features. Chapter 11 compares air gasification for the conversion of existing gas/oil boiler systems to biomass feedstocks with the price of installing new biomass combustion equipment. Chapter 12 treats gas conditioning as a necessary adjunct to all but close-coupled gasifiers, in which the product is promptly burned. Chapter 13 evaluates, technically and economically, synthesis-gas processes for conversion to methanol, ammonia, gasoline, or methane. Chapter 14 compiles a number of comments that have been assembled from various members of the gasifier community as to possible roles of the government in accelerating the development of gasifier technology and commercialization. Chapter 15 includes recommendations for future gasification research and development. (ERA citation 05:025595)

Agricultural Sector Impacts of Making Ethanol from Grain
D. Hertzmark, D. Ray, and G. Parvin. Mar 80, 74p
Contract EG-77-C-01-4042

Keywords: *Agriculture, *Bioconversion, *Ethanol, Biomass, Biosynthesis, Cost, Data compilation, Economic impact, Graphs, Income, Maize, Net energy, Prices, Simulation, Soybeans, Statistical models, Stochastic processes, Supply and demand, Tables, Theoretical data, Usa.

This report presents the results of a model of the effects on the agricultural sector of producing ethanol from corn in the United States between 1979 and 1983. The model is aggregated at the national level, and results are given for all of the major food and feed crops, ethanol joint products, farm income, government payment, and agricultural exports. A stochastic simulation was performed to ascertain the impacts of yield and demand variations on aggregate performance figures. Results indicate minimal impacts on the agricultural sector for production levels of less than 1 billion gallons of ethanol per year. For higher production levels, corn prices will rise sharply, the agricultural sector will be more vulnerable to variations in yields and demands, and joint-product values will fall. Possibilities for ameliorating such effects are discussed, and such concepts as net energy and the biomass refinery are explored. (ERA citation 05:023776)

Renewable Energy Sources for the World's Poor: A Review of Current International Development Assistance Programs
J. H. Ashworth. Oct 79, 81p
Contract EG-77-C-01-4042

Keywords: Developing countries, Low income groups, Renewable energy sources, Demonstration programs, *Wind energy, *Bioconversion, *Hydroelectric power, Financing, Global aspects, International cooperation, Research programs, *Solar energy.

Foreign assistance funding of the creation, testing, and use of renewable energy sources concerning worldwide efforts to provide energy for Third World de-

velopment is examined. Donor agencies and developing nations give serious attention to technologies that have been considered exotic and marginal: small-scale hydroelectric generation, solar water heating and distillation, biomass conversion to methane gas and alcohol, wind power, photovoltaic-powered small-scale irrigation, and village-level solar-powered absorption refrigeration. An initial effort to assist in the international coordination of donor activity and in the sharing of information generated by foreign-assistance projects that use renewable energy sources is reported. The report mainly provides information about specific development projects. It contains only a few of the projects that have been approved and funded by 1 June 1979. (ERA citation 05:008716)

Passive Solar Energy Information User Study
W. W. Belew, B. L. Wood, T. L. Marie, and C. L. Reinhardt. Nov 80, 276p
Contract AC02-77CH00178

Keywords: Passive solar cooling systems, Passive solar heating systems, Architects, Construction industry, Education, Information, Information needs, Manufacturers, Solar energy, Surveys, Uses, *Solar heating systems, *Solar cooling systems, *Information services.

The results of a series of telephone interviews with groups of users of information on passive solar heating and cooling are described. These results, part of a larger study on many different solar technologies, identify types of information each group needed and the best ways to get information to each group. The overall study provides baseline data about information needs in the solar community. An earlier study identified the information user groups in the solar community and the priority (to accelerate solar energy commercialization) of getting information to each group. In the current study only high-priority groups were examined. Results from seven passive groups respondents are analyzed in this report: Federally Funded Researchers, Manufacturer Representatives, Architects, Builders, Educators, Cooperative Extension Service County Agents, and Homeowners. The data will be used as input to the determination of information products and services the Solar Energy Research Institute, the Solar Energy Information Data Bank Network, and the entire information outreach community should be preparing and disseminating. Feasibility Study for Anaerobic Digestion of Agricultural Crop Residues. 1980 Update. Final Report
C. E. West, and E. Ashare. Mar 81, 170p
Contract AC02-77CH00178

Keywords: *Agricultural wastes, Anaerobic digestion, Maize, *Methane, Animal feeds, Batch culture, Biosynthesis, Continuous culture, Cost, Economic analysis, Farms, Feasibility studies, Fertilizers, Waste product utilization, *Animal wastes.

The objective of this study was to provide cost estimates for the digestion of corn stover to fuel gas. Engineering economic analyses were performed for digestion of corn stover for small farm cooperative and industrial scales. The small farm scale processed the residue from an average size U.S. farm (400 acres), and the other sizes were two and three orders of magnitude greater. Recent experimental results obtained by Gaddy and by McCarty for yield and kinetics of corn stover digestion were used in the analysis. The results of the analyses indicate that production of fuel gas from corn stover is, at least, marginally economically feasible for both continuous and batch digestion processes. A sensitivity analysis was performed to assess which parameters significantly affect system economics. It was found that a credit for digester effluent would yield economically feasible process. Recommendations arising from this study include continued development of a batch hole-in-the-ground controlled landfill digestion of corn stover and investigations into the effect of shorter retention time continuous digestion. The digester effluent should also be evaluated to determine its use as an animal feed or fertilizer. (ERA citation 06:021730)

Anaerobic Fermentation of Beef Cattle Manure. Final Report
A. G. Hashimoto, Y. R. Chen, and V. H. Varel. Jan 81, 76
Contract AC02-77CH00178

Keywords: *Manures, *Methane, Anaerobic digestion, *Animal feeds, Biosynthesis, Cattle, Chemical reactors, Cost, Economic analysis, Energy consumption, Experimental data, Kinetics, Operation, Optimization, Performance, Pilot plants, Productivity, Proteins, Slurries, Theoretical data, Thermophilic conditions, *Bioconversion, *Animal wastes.

The research to convert livestock manure and crop residues into methane and a high protein feed ingredient by thermophilic anaerobic fermentation are summarized. The major biological and operational factors involved in methanogenesis were discussed, and a kinetic model that describes the fermentation process was presented. Substrate biodegradability, fermentation temperature, and influent substrate concentration were shown to have significant effects on CH₄ production rate. The kinetic model predicted methane production rates of existing pilot and full-scale fermentation systems to within 15%. The highest methane production rate achieved by the fermenter was 4.7 L CH₄ sub 4 /L fermenter day. This is the highest rate reported in the literature and about 4 times higher than other pilot or full-scale systems fermenting livestock manures. Assessment of the energy requirements for anaerobic fermentation systems showed that the major energy requirement for a thermophilic system was for maintaining the fermenter temperature. The next major energy consumption was due to the mixing of the influent slurry and fermenter liquor. An approach to optimizing anaerobic fermenter designs by selecting design criteria that maximize the net energy production per unit cost was presented. Based on the results, we believe that the economics of anaerobic fermentation is sufficiently favorable for farm-scale demonstration of this technology. (ERA citation 06:018280)

Contract EG-77-C-01-4042

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: *Solar thermal power plants, Comparative evaluations, Cost, Performance, Power range 1-10 mw, Remote areas, Rural areas, Solar collectors, Electric power plants.

Recent studies have suggested a significant potential for small solar-thermal electric power generating plants to be used by small communities, rural areas, and remote load centers. The Small Power Systems Program has been initiated by the Department of Energy to explore the technical, economic, and institutional feasibility of small power plants. SERI, in conjunction with Jet Propulsion Laboratory and Battelle Pacific Northwest Laboratories, has been contracted by the Department of Energy to perform a comparative analysis and ranking of various solar thermal generic systems with capacities in the 1 to 10 MW/sub e/ range. The systems will be evaluated to a predetermined set of criteria which will include factors such as safety, environmental status, cost, and performance. (ERA citation 04:029633)

1974, 70p
Grant OEO-30094G-73-01
Executive Summary available from PROJECT SHARE, P.O. Box 2309, Rockville, Md. 20852 as SHR-000101/ES.

Keywords: *Social services, Multistate government, State government, Relationship, Private organizations, National government, Methodology, Management, Local government, Integration, Coordination, Counties, Alabama, Arkansas, Iowa, Minnesota, Montana, New York, Oregon, Pennsylvania, Rural areas.

A quarterly progress report presented by the National Association of Counties Research Foundation provides descriptions of current activities of the Rural Human Resources Project, designed to help rural counties respond to the human services needs of their citizens. Participating in the project are the State associations of counties in Alabama, Arkansas, Iowa, Minnesota, Montana, New York, Oregon, and Pennsylvania. Part One presents an overview of the eight-State project with emphasis on the development of closer ties between the State associations of counties and local community action agencies. Human services integration at the county level is discussed, together with a description of the roles played by the new staff position added by each State association -- human resources coordinator, and presents individual status reports for each participating State. These reports describe the conditions under which human services are delivered in each State, the principal objectives of each State's project, and current progress. Human resources coordinators for the project are listed by name and address.

Getting Human Services to Rural People
Final Rept.
Jun 76, 147p Rept no. HEW/ORD/DC-76/06
Executive Summary available from PROJECT SHARE, P.O. Box 2309, Rockville, Md. 20852 as SHR-0001658/ES.

Keywords: *Social services, Rural areas, Delivery, Services, Service related organizations, Regulations, Program financing, Position(Location), Population migrations, Planning, Outreach, Organizing, Organizations, Organization theory, Operations, Methodology, Management, Management systems, Local government, Legislation, Integrated services, Input, Inadequacies, Government, Financing, Federal aid, Evaluation, Effectiveness, Coordination, Consumers, Constraints, Community relations, Communicating, Clients, Capacity, Capabilities, Agency role, Abilities.

The results of field evaluations of 11 rural human services projects are reported, barriers to the delivery and receipt of services in rural areas are identified, and implications for action by DHEW are discussed. The projects visited, nine of which received DHEW funds, operated within generally similar contexts: rural agricultural communities with dispersed populations and high levels of poverty. However, the projects varied considerably in the number and type of services provided and

in the primary target groups served. A strongly constituted board of directors was found to be one good indicator of a strong project. Projects with broadly defined target groups and diverse goals appeared weaker than those with narrower target groups and well defined, integrated goals and objectives. All projects expended high levels of effort on obtaining funding. Recognition of the need for interagency cooperation was widespread. Planning and evaluation components were generally weak. Barriers to effective delivery of DHEW services in rural areas include transportation problems, lack of information about rural projects, limited flexible funding and staff capacity at the local area, and attitudinal problems, as exemplified in the common belief that DHEW's involvement in rural affairs is inappropriate. It is recommended that a long-range national strategy for rural development be established and that a commitment be made to providing dollar and manpower resources for overcoming imbalances between rural and urban America. Case studies are presented for 8 of the 11 projects visited.

Needs Assessment: A Working Manual
Phyllis Q. Schmitt, 19 Oct 77, 64p

Keywords: Requirements, *Social services, Statistical data, Analyzing, Assessments, Characteristics, Clients, Confidentiality, Data acquisition, Data processing, Data, Demography, Forecasting, Information, Input, Management systems, Management, Mathematical analysis, Measurement, Methodology, Planning, Simulation.

This manual presents a multilevel, multisource approach to needs assessment, from which the reader may choose methods within his / her capabilities and interests. Each chapter contains a series of approaches in gathering and handling data, beginning with the simplest and ending with the most complex. The initial chapter covers use of objective measures which already exist (census data) or which can be compiled (record search material). Discussion then proceeds to methods of obtaining expert opinion from community leaders. Several methods of conducting a "felt need survey" to collect data are described. Alternative ways of obtaining information from the target population, the group who already has or has had problems with the entity under study, are also presented. Finally, a plan for action summarizes the monograph, including a hypothetical example of a needs assessment survey. The example illustrates the combination of the foregoing methods. A number of sections stress the importance of the confidentiality of information where it could be injurious or embarrassing to the community. Brief illustrations serve as simple working examples of principles discussed in the text. Exhibits are included for users of the manual to serve as prototypes in creating their own charts and graphs. Textual references and the table of contents direct the reader to these aids. Portions of this document are not fully legible.

Needs Assessment in Community Planning: An Evaluation of Ten Approaches
Feb 78, 30p

Keywords: Assessments, Requirements, *Social services, Agency role, Cases, Clients, Communicating, Community relations, Consumers, Coordination, Core services, Delivery, Direct services, Feedback, Flow control, Followup contacts, Followup, Forecasting, Input, Intake, Integration, Interactions, Interrelationships, Management systems, Management, Measurement, Methodology, Organizing, Planning, Program effectiveness, Reasons, Services, Social indicators, Statistical data, *Community development.

Needs assessment remains the most fundamental aspect of any human services program. Poor evaluations of many programs result from errors made during the needs assessment phase of the program planning process. Needs assessment is the process of identifying and describing individual, family, or community conditions that may be amenable to total or partial amelioration through a human services program. Information gathered in needs assessment studies is used to set goals, program objectives, and priorities, and thus, influences the effectiveness of service delivery. By documenting problems, it justifies the development

and implementation of a specific program. In the same vein, it determines the continuing validity of the goals, objectives, and services of an existing program. This pamphlet, distributed by the Health and Welfare Council, attempts to give a general introduction to needs assessment through a pragmatic examination of ten methods commonly used by planners and program developers. The techniques examined include: (1) the community survey; (2) the experience survey; (3) the available data approach; (4) the resource inventory; (5) the consumer demand approach; (6) the outreach approach; (7) public hearings and forums; (8) demonstration projects; (9) social indicators; and (10) beneficiary analysis. Exploration of the concept of needs shows that community service needs can be viewed as either manifest (clearly evident) or latent (felt to be present). The former is broken down into expressed and felt needs, while the latter is divided into inferred, ascribed, and comparative needs. Each technique is evaluated in terms of its ability to assess each of these categories of community needs.

Fuels from Sugar Crops: Systems Study for Sugarcane, Sweet Sorghum, and Sugar Beets
R. A. Nathan. Jul 78, 148p

Keywords: *Ammonia, *Ethanol, *Sorghum, *Sugar beets, *Sugarcane, Acetic acid, Biosynthesis, Cultivation techniques, Economics, Feasibility studies, Fermentation, High btu gas, Information needs, *Methanol, Recommendations, Reviews, Synthesis, Synthesis gas, Technology assessment, Thermochemical processes, *Bioconversion, Manufactured gas, Synthetic fuels, Anaerobic processes.

An extensive analysis is made of the technical and economic feasibility of producing fuels and chemicals from the sugar crops (sugar cane, sweet sorghum, and sugar beets). It is concluded that ethanol and ammonia are the most promising products. Ethanol produced by fermentation on juice or molasses is close to economic competitiveness. The ammonia cost is not yet competitive but could be competitive with coal-produced ammonia. Sugar cane appears to be the most promising crop in the short and intermediate term; sweet sorghum has the greatest long-range appeal. The development of processes to manufacture ammonia, methanol, acetic acid, and thermochemical substitute natural gas (SNG) from sugar crop residues depends on technology to generate synthesis gas. Anaerobic digestion of sugar cane or juices to SNG is not attractive on economic grounds. The agricultural aspects of sugar crops research are summarized. Energy balances of input/output are derived for sugar cane and sugar beets. Recommendations are made for USDOE actions and policy decisions. (ERA citation 04:002696)

Evaluation of the Emery Dredge for Determining Numbers of Snails in Tropical Reservoirs.
W. R. Jobin, and F. F. Ferguson. 1973, 56p

Keywords: *Diseases, Snails, Abundance, Pest control, Planning, *Schistosomiasis, Puerto rico, Populations, Sampling, Water reservoirs.

Since control of the aquatic snails which transmit schistosomes can be very expensive in large hydroelectric and irrigation reservoirs, it is important to understand precisely the dynamics of these snail populations in order to plan efficient programs for their control. Thus sampling methods are needed to measure the numbers of snails in the reservoirs and this report concerns the use and evaluation of the Emery dredge in nine reservoirs in Puerto Rico. The results showed that the Emery dredge could be utilized under certain conditions to accurately estimate numbers of snails in these reservoirs. In addition field results showed that *Biomphalaria glabrata* could be stranded by water receding very slowly and that they were highly resistant to desiccation. These results are important for planning snail control through periodic fluctuation of the water level.

Highlights are given of Federal and State presentations at a conference on research priorities for energy conservation in buildings and agriculture held in Chicago on Oct. 20, 1975. The conference was sponsored jointly by US ERDA and the National Governor's Conference. The five top priority categories recommended by the States for Federal R and D related to energy conservation in buildings were: insulation materials; technology transfer; economic factors; solar heating and cooling; and construction techniques. The top priority items recommended for research on energy conservation in agriculture were: development of substitute fuels for natural gas; improved fertilizer production processes; energy production from wastes; more efficient crop-drying techniques; and more efficient food- and fiber-processing methods. Bioconversion of Agricultural Wastes for Pollution Control and Energy Conservation. Final Report
W. J. Jewell, H. R. Davis, W. W. Gunkel, D. J. Lathwell, and J. H. Martin, Jr. Sep 76, 341p
Contract ERDA-NSF-741222A01

Keywords: *Bioconversion, *Waste recycling, *Manures, *Methane, Air pollution, Anaerobic digestion, Biosynthesis, Economics, Energy conservation, Feasibility studies, Land pollution, Water pollution, *Agricultural wastes, Air pollution control, Water pollution control.

The combination of concerns for energy shortages and pollution control has renewed interest in the possibility of generating energy from organic wastes. This report is a comprehensive study of the feasibility of generating a substitute natural gas on U. S. dairies (40 and 100 cows) and beef feedlots (1000 head) using the anaerobic fermentation process. The feasibility in technical, economic and practical terms is estimated. Excluding energy use in manufacture of equipment and farm chemicals, the total energy use on 40 and 100 cow dairies, and 1000 head feedlots were estimated to be 164 x 10 exp 6, 307 x 10 exp 6, and 670 x 10 exp 6 kcal per year, respectively. The estimated maximum annual methane energy that could be generated on these operations was estimated as 216 x 10 exp 6, 473 x 10 exp 6, and 2280 x 10 exp 6 kcal, respectively. Thus, a dairy farm in northern New York could produce more energy than it consumes, and a feedlot could produce more than 3 times the quantity consumed. The estimated costs of generating methane on 40 and 100 cow dairies and on a 1000 head beef feedlot were \$22.80, \$13.40, and \$4.50 per 10 exp 6 kcal. Detailed analyses of the three operations estimated that the actual costs for utilization would increase to \$80, \$39, and \$11 per 10 exp 6 kcal for specific operations, respectively. Farms with more than 100 cows can begin to consider the technology as an income producing operation. It is therefore concluded that anaerobic fermentation of agricultural wastes has significant potential and should receive increased attention. (ERA citation 02:021947)

Maintenance and Adjustment Manual for Natural Gas and No. 2 Fuel Oil Burners
1977, 52p

Keywords: *Burners, Furnaces, Industrial plants, *Energy conservation, Combustion, Efficiency, Fuel consumption, Fuel oils, Fuel-air ratio, Maintenance, Measuring methods, Natural gas, Operation, Process heat, Manuals, Thermal efficiency.

With the nation facing fuel shortages, there is considerable interest in various techniques for conserving fuel. Fuel savings of 10 to 30% appear likely when burner equipment is properly adjusted and maintained. This manual is intended as a practical contribution to bring about greater energy efficiency by describing adjustment and measurement procedures for some natural-gas and No. 2 fuel-oil burners. Because of the many variations among burner types, details peculiar to individual installations cannot be included. It is assumed that burner manufacturers' specifications are being followed by those maintaining burners. For safety reasons one should never undertake a burner adjustment without proper training according to burner manufacturers' specifications. This manual is directed toward answering the following three questions: does

burner adjustment increase efficiency and reduce fuel consumption without sacrificing production; how can one determine whether a system is operating efficiently or whether it is wasting, sometimes, substantial amounts of fuels; and what adjustments must be made after a system has been found to be operating inefficiently. Fuels from Sugar Crops. Second Quarterly Report
E. S. Lipinsky, S. Kresovich, T. A. McClure, E. W. Helper, and W. T. Lawhon. 31 Oct 77, 167p
Contract W-7405-ENG-92

Keywords: *Bioconversion, *Ethanol, *Sorghum, *Sugar beets, *Sugarcane, Biosynthesis, Brazil, Climates, Cultivation techniques, Diagrams, Drying, Economics, Fermentation, Florida, Flowsheets, Louisiana, Maps, Processing, Recovery, Research programs, Tables, Texas, Waste heat, Yields, Biological energy conversion, Manufactured gas, Synthetic fuels.

Substantial progress was made on both the agricultural and the processing aspects of the fuels from biomass research program. Despite droughts and hurricanes, yields on narrow row spacings show substantial gains over conventional spacings at all locations for both sugarcane and sweet sorghum. The biomass gains are most pronounced (40% to 100% increase) for Louisiana sugarcane and for sweet sorghum in Louisiana and Texas (50 to 100% gains). Although biomass increases are smaller in Florida, early ripening and possible soil conservation effects cause interest in close spacing in Florida to be maintained. The concept of integrating sweet sorghum production with sugarcane production could expand the area available for extensive sugar crop production by a factor of 10 or more. Sugar beets and sweet sorghum mesh together well from an agronomic viewpoint and the introduction of the Canadian Separator Equipment Process may make feasible integration of the processing of these crops. Evaluation of U.S. and Brazilian ethanol technology indicates that ethanol can be made quite economically in locations with long sugarcane processing seasons (e.g., Hawaii and Puerto Rico). The Melle Process practiced in Brazil appears to make possible extremely short fermentation times (10 to 16 hours, compared with 24 to 30 hours for U.S. practices). The primary key to reducing processing costs lies in increasing the concentration of ethanol in the fermented mash, not reduction in fermentation time. Suggestions for appropriate improvements have been made and the Reports of Invention filed with DOE's patent office. Five appendices are included. (ERA citation 03:030557)

Guide to Demonstrations of Energy Conservation, Solar Energy and Other New Technologies: Energy Extension Service
N. Ignatius. Sep 77, 307p

Keywords: *Solar water heating, *Wind energy, *Bioconversion, Agriculture, *Buildings, Commercial buildings, *Energy conservation, *Geothermal energy, Houses, Industrial plants, *Process heat, Solar cell arrays, *Solar cooling systems, *Solar heating systems, Solar water heaters, Wind power, Manuals, Biomass, Demonstration programs, Farms, Greenhouses, Office buildings, Passive solar heating systems, Planning, Residential sector, School buildings, Solar air conditioning, Solar energy, Solar heating, Solar space heating, Underground, USA, Subsurface structures.

This guide was compiled by the Energy Extension Service (EES) for use by State EES planners. It is intended to facilitate viewing of solar, conservation, and other energy technologies at work. The demonstrations listed in this Guide have generally been limited to those most applicable to individual homeowners, small businesses, schools, and farms. In a few states, however, municipal systems have also been included. Many of these projects have received Federal funding. The majority of projects demonstrate some form of solar energy. In addition to solar heating and cooling for homes and commercial buildings, a number of examples of farm applications such as solar crop drying are listed, as well as demonstrations of wind energy, biomass, photovoltaics, etc. Since all successful solar heating and cooling systems incorporate sensible

APPROPRIATE TECHNOLOGY ABSTRACTS

energy-conserving design, each solar heating and/or cooling project is at the same time an energy-conservation project. When these conservation designs are of special interest or inventiveness, this has been noted. In a few cases, projects demonstrate only conservation measures, such as the construction of buildings underground. (ERA citation 03:118509)

Sugarcane Production Residues: Technologic and Economic Assessment of Methods for Conversion to Utilizable Energy Forms. Final Report
R. A. Nordstedt, P. H. Smith, L. O. Bagnall, and F. le Grand. 1976, 82p

Keywords: *Agricultural wastes, *Bioconversion, *Waste recycling, Anaerobic digestion, Bagasse, Combustion, *Pyrolysis, Comparative evaluations, Economics, Florida, Inventories, *Methane, Pyrolytic oils, Steam generation, Technology assessment, Refuse derived fuels, Feasibility, Solid waste disposal, Synthetic fuels, Manufactured gas.

This report examines the technologic and economic feasibility of converting sugarcane production residues in South Florida to utilizable energy forms. Quantity and location of the residues are given. Current uses of the residues are outlined and compared with other potential uses which are described in the literature. Technological problems in collection of the field residues are discussed. The resulting research and development needs are outlined. An in-depth economic comparison of anaerobic digestion, shaft pyrolysis, and waterwall incineration is presented. Economic feasibility of each of the three processes is presented as a function of plant size using current market prices for energy and the energy price increases which would be necessary to make each of the processes economically feasible. Technical and Economic Assessment of Methods for Direct Conversion of Agricultural Residue to Usable Energy. Final Report
R. C. Bailie. 20 Oct 76, 136p

Keywords: *Waste recycling, *Bioconversion, *Agricultural wastes, *Ethanol, Low Btu gas, *Methane, Acid hydrolysis, Anaerobic digestion, Biosynthesis, Chemical reactors, Comparative evaluations, Feasibility studies, Fermentation, Fischer-tropsch synthesis, Flowsheets, Hydrogenation, Mesophilic conditions, Production, Pyrolysis, Tables, Thermophilic conditions, Time dependence, Manufactured gas, Synthetic fuels, Solid waste disposal, Forecasting, Refuse derived fuels.

Various methods for conversion of agricultural wastes to usable energy were evaluated for further consideration for user operated and commercially operated systems. Advantages and disadvantages of anaerobic digestion and low Btu gas pyrolysis, the only two alternatives that were considered to be worthy of evaluation for user operated systems, are discussed. Both systems were also considered feasible for use with commercially operated systems. In addition, two liquid product systems, hydrolysis and fermentation to ethanol and medium Btu gas pyrolysis followed by Fischer-Tropsch reaction to form a liquid product, were evaluated. Production of Sugarcane and Tropical Grasses as a Renewable Energy Source. First Annual Report, June 1, 1977-May 31, 1978
A. G. Alexander, C. Gonzalez-Molina, and J. Ortiz-Velez. 1978, 104p
Contract EG-77-G-05-5422

Keywords: *Grass, Sorghum, *Sugarcane, Biomass, Clone cells, Cloning, Comparative evaluations, Fertilization, Harvesting, Plant growth, Plant growth regulators, Productivity, Renewable energy sources, Solar drying, Tropical regions, *Fuels.

Tropical grasses from *Saccharum* and related genera are being evaluated as candidates for intensive production of solar-dried biomass. Categories of candidate grasses include short-, intermediate-, and long-

rotation species for intensive co-production with conventional food commodities. Minimum-tillage candidates are also sought for extensive production on marginal lands. The hybrid forage grass Sordan 70-A (Northrup-King Company) is the outstanding short-rotation plant tested to date. It completes both the tissue-expansion and maturation phases within 10 weeks, yielding at least 4 tons of oven-dry biomass per acre. Napier grass (var. Common Merker) is a promising intermediate-rotation crop which possibly may be exceeded by several napier grass hybrids. Interspecific *Saccharum* hybrids and the *Saccharum* species *S. spontaneum* and *S. sinense* are being investigated for both long-rotation and minimum tillage cropping. Direct comparisons of sugarcane hybrids with napier grass indicate that sugarcane is an inferior candidate for short-term production of tropical forages. Sugarcane responded well to narrow spacing for about 6 months after seeding. Napier grass failed to respond to close spacing. Both species increased yields with decreasing frequency of harvest. Fertilization rates based on conventional sugar and forage production data were inadequate to sustain maximum biomass yields. Candidate grasses have shown two discrete biomass production phases, i.e., tissue expansion which is highly visible but consists mainly of water, and tissue maturation which has little visibility but yields the bulk of the plants' dry matter. Additional progress was made in sugarcane growth control with chemical growth regulators. (ERA citation 04:052801)

Bird Embryology.
V. V. Rolnik. 1970, 386p* Rept no. (SFCSI-Agr(TT-70-50038))
Trans. of mono. *Biologiya Embrionalnogo Razvitiya Ptits*, Leningrad, 1968 425p.

Keywords: Birds, Embryology, *USSR, Translations, Embryos, Physiology, Morphology, Development, Eggs, Environments, Effectiveness, Reproduction(Biology), Genetics, *Poultry.

The different aspects of embryo development in birds are of great interest to research biologists. The bird embryo, especially the chick, is a favorite subject of study for morphologists, physiologists, and biochemists and also concerns physicians, poultrymen, and other specialists in applied science. This book deals with the main aspects of biology of embryo development in birds (formation and structure of the egg, morphology and physiology of embryo development) and provides data on the necessary environmental conditions for normal development. The biology of embryo development in poultry is the chief consideration, but to complete the picture, data on the ontogeny of some other bird species are also presented. (Author)

Trans. of Gosudarstvennyi Nauchno-Issledovatel'skii Institut Ozer'nogo i Rechnogo Rybnogo Khozyaistva. *Izvestiya (USSR)* v61 260p 1966, by E. Hoz, and M. Yariv.

Keywords: *Fishes, Breeding, Carp, Breeding, USSR, Translations, Lakes, Rivers, Fresh water biology, Reproduction(Physiology), *Ponds, Aquaculture, Fish-eries.

This volume contains articles on various problems of pond pisciculture. The first section is devoted to the genetics and selection of carp. The primary aim of this collection is to state the theoretic principles of carp selection. Several articles deal with the theory of selective breeding, drawing both on the experience of Soviet scientists and on the comparatively scant non-Soviet literature on this problem. The first part of the collection also includes articles on variability of carp as well as on intraspecific and interspecific hybridization and heterosis. Articles on the organization of fish breeding in the northwestern RSFSR end the section

and vindicate the policy of dividing fish breeding farms into three types: research stations, fish breeding nurseries, and commercial fish farms. The second section of this collection consists of articles on intensification of pond pisciculture. Two studies report fish pond diseases and control measures. Konradt and Sakharov report a new commercial method of hatching larvae of carp and other thermophilic fish, involving removal of the egg from its surrounding mucous envelope and incubating it in special apparatus. The method is being tested in reservoir hatcheries and in some fish-breeding farm ponds, and offers much promise. (Author)

Keywords: Industrial relations, *Africa, *Labor relations, Developing countries, Labor unions, Organizations, Professional personnel, Government policies, Interactions, Management, Personnel, Surveys, France, Translations, Employers, Employees.

A panoramic survey is made of the fundamental tendencies prevailing in the relations between employers, workers, and public authorities in the African countries which have just attained independence. There would appear to be not so much a question of bettering the standard of the working class, a rather privileged class as compared to the entire population, as of bringing officials, political leaders and some entrepreneurs, to preoccupy themselves with the masses. The role of the trade unions is not reduced in this new context. (Author)

Interaction of Wood Species in Different Types of Forests
D. D. Lavrinenko. 1972, 339p
Trans. of mono. *Vzaymodeistvie Drevesnykh Porod v Razlichnykh Tipakh Lesa*, Moscow, 1965. Sponsored in part by National Science Foundation, Washington, D.C. Special Foreign Currency Science Information Program.

Keywords: *Forestry, Forest land, Forest trees, *Wood, Cultivation, Economic development, Rotation, Plant growth, Interactions, Soil properties, Mixtures, Acclimatization, Plant genetics, Management, Pine trees, Oak trees, Hardwoods, Translations, USSR, Topology, Handbooks, Silviculture, Forest management, Forest plantations.

The book incorporates theoretical principles of the interaction of wood species in different types of forests and makes recommendations on cultivating high productive plantations of economically important species. The following aspects have been dealt with in this work: studies on the interaction of wood species, trials in forest-steppes for developing stable plantations, typological investigations, aspects of rotation of species, and the problems of intraspecies and interspecies relationships. The author examines the relation of wood species with the environmental conditions, especially with the soil conditions, establishes the competition indices of wood plants and proves the advantage of mixed plantations over pure plantations. The author also deals with the methods of investigation and the ways of controlling the interactions of the wood species.

Mass Cultivation of Invertebrates: Biology and Methods
I. V. Ivleva. 1973, 154p*
Trans. of mono. *Biologicheskie Osnovy i Metody Massovogo Kultivirovaniya Kormovykh Bespozvochnykh*, Moscow, 1969 171p, by A. Mercado. Sponsored in part by National Science Foundation, Washington, D.C. Special Foreign Currency Science Information Program.

Keywords: Invertebrates, Cultures(Biology), *Fishes, Feeding stuffs, Morphology, Microorganisms, Nematoda, Crustacea, Daphnia, Larvae, Growth, Distribution(Property), Translations, *USSR.

APPROPRIATE TECHNOLOGY ABSTRACTS

The monograph deals with the biology and cultivation of some invertebrate species which are reared on a mass scale in the USSR: soil oligocheates; free-living nematodes; phyllopod crustaceans; daphniids; chironomid larvae. The author characterizes the biology of these species more or less uniformly, and gives a brief outline of the gross morphology. Also discussed are the following topics: distribution and relation to environmental factors; reproduction, growth, and development; population growth; feeding; chemical composition of the body; respiration. The description of culturing methods includes such basic standard data as the initial and peak density of the culture, rearing periods, the maintenance of optimal conditions, manipulations of the culture, feeds and feeding regime, and output. Methods for the maintenance of these animal groups in the laboratory are given in some cases. The book is intended for hydrobiologists, ichthyologists, and fish breeders. (Modified author abstract)

Diseases of Pond Fishes
O. N. Bauer, V. A. Musselius, and Yu. A. Strelkov. 1973, 228p
Trans. of mono. Bolezni Prudovykh Ryb, Moscow, 1969 335p, by A. Mercado. Sponsored in part by National Science Foundation, Washington, D.C. Special Foreign Currency Science Information Program.

Keywords: *Fishes, *Animal diseases, Fresh water fishes, *Ponds, Pathology, Carp, Trout, Parasitic diseases, Infectious diseases, Aquaculture, *USSR, Translations.

The book deals with the important infectious, parasitic and noncommunicable diseases of pond fishes. It presents new concepts of the prevention and treatment of diseases by modern means within the framework of the intensive fish breeding methods used today. The book deals not only with diseases of fish commonly occurring in the USSR, carp and trout, but also with diseases of fish imported for cultivation in ponds. Particular attention is given to the etiology, biology and epizootology of the disease agents, since knowledge in these fields is necessary for the development of efficient methods for the control of the diseases of fish. The book is intended for veterinarians, fish pathologists and fish breeders. (Author)

The Structure of Yarn
Witold Zurek. 1975, 430p
Trans. of mono. Struktura Przedzy, Warsaw, 1971 436p, by Michal Zaorski. Sponsored in part by National Science Foundation, Washington, D.C. Special Foreign Currency Science Information Program.

Keywords: *Textile industry, *Yarns, Books, Microstructure, Physical properties, Numerical analysis, *Fibers, Textile processes, Spinning, Cotton fibers, Silk, Rayon, Synthetic fibers, Translations, *Poland.

The book contains physical (A) and mathematical (B) tables. Tables of the A group (physical) are meant to help designers at the selection of fibers for an intended end use. After some conclusions have been drawn with regard to the magnitude of particular characteristics (strength, or elongation of yarn), final calculations are made with the use of data referring to definite materials. Tables of the B group (mathematical) allow to determine quickly and accurately the auxiliary values (twist factor, C,D as well as z parameter necessary for calculation of strength), which are used at an appraisal of physical properties of yarn.

Methods of Direct Conversion of Thermal Energy into Electrical Energy.
1975, 107p
Translation of Sektsiya C-6 of Doklady Vsesoyuznoi Konferensii po Ispol'zovaniyu Solnetsnoi Energii, Ervan, 17-21 June 1969, Moscow, 1969.

Keywords: *Solar energy, Meetings, Buildings, Greenhouses, Solar air conditioning, Solar energy conversion, Solar space heating, Solar water heaters, *Solar cooling systems, *Solar heating systems, *Solar thermal power plants, *Photovoltaic power system, Translations, *USSR.

Articles are presented that deal with conversion of solar energy into electrical energy, solar heating and cooling of buildings, solar water heating, and application of solar energy in greenhouses. (Portions of this document are not fully legible).

Flat-Plate Solar Collector Handbook: A Survey of Principles, Technical Data and Evaluation Results
H. W. Newkirk. 29 Mar 76, 96p*
Contract W-7405-Eng-48

Keywords: *Solar heating systems, *Solar cooling systems, *Solar collectors, Flat plate collectors, Performance testing, Solar air conditioning, Solar space heating, Solar water heaters, *Solar water heating, Handbooks.

This report begins with a discussion of flat plate solar collector principles. Evaluation data are presented for thirteen manufacturers of medium temperature collectors that have met the criteria: (a) intention by the manufacturer that the equipment be used only for heating and cooling buildings and for domestic hot water heating and (b) evaluation of the collector by NASA using a solar simulator as a basis for collector selection and performance prediction. Two-Week Training Program for Building Solar Thermosiphon Domestic Water-Heating Systems
S. Upton, and J. Costa. 31 Aug 77, 73p
Contract W-7405-ENG-48

Keywords: Solar water heaters, Manuals, Brazing, Construction, Education, Educational tools, Lectures, Maintenance, Pipes, Pumps, Size, *Solar collectors, *Solar water heating, Soldering, Testing, Thermosiphon effect, Specialized training.

Lecture outlines and handouts are presented for a two-week course on building a solar thermosiphon system for home water heating. The course covers solar-energy theory but focuses on practical skills required to build such a system: brazing, soldering, carpentry, sizing pipes, selecting pumps, sizing collectors, and determining domestic hot-water needs. This course is based on one taught at San Jose City College, August 8-19, 1977, for the CAL/NEVA Community Action Agency weatherization crews. (ERA citation 03:039786)

Small Hydroelectric Power Development in China
F. R. Skidmore. Aug 80, 18p
Contract W-7405-ENG-48

Keywords: *China, Low-head hydroelectric power plants, Cost, Power generation, Reliability, *Hydroelectric power, Reviews, *Technology assessment.

The small hydroelectric development in China is extensive, with more than 90,000 units, but represents a very small resource in terms of total electricity generation (or as little as 4%). In the rural areas, however, small hydro is an important tool for modernization and represents a substantial percentage (30%) of the elec-

tricity. Its characteristics - simplicity, reliability, and low cost are ideal for isolated underdeveloped areas. Good turbine design is largely an empirical science. The Chinese experience in developing technology for a large variety of operating conditions has provided an empirical basis for good designs. Their small turbines and accompanying control mechanisms thus appear to be competitive in the American market. It is not obvious that other technology, especially on the electrical side, has advantages for the American market. It appears that the Chinese emphasis on small hydroelectric development, in parallel with large central development, will continue in the future. Technical development, especially in the small standardized turbine area, should continue as well. (ERA citation 05:034624)

Challenge of a Desert: Revegetation of Disturbed Desert Lands
A. Wallace, E. M. Romney, and R. B. Hunter. 1977, 23p Rept no. CONF-770369-1
Contract EY-76-C-03-0012
NAEG Pu program report meeting, Las Vegas, Nevada, USA, 2 Mar 1977.

Keywords: *Plants(Botany), *Deserts, Revegetation, *Arid land, Biological adaptation, Climates, Economics, Genetic variability, Germination, Moisture, Plant growth, Plants, Productivity, Seeds, Terrestrial ecosystems, Shrubs, Irrigation, Trees(Plants), Grasses.

The revegetation of disturbed, arid lands is one of the great challenges of a desert. It is not an impossible task, however, if one utilizes and properly manages both the natural and the man-made resources available. Through better understanding of the processes governing revegetation and the ability to control them, it is possible for man to more rapidly restore disturbed desert lands. Terrain manipulation to form moisture catchment basins, selection of seed from pioneering shrub species, preservation of existing shrub clump fertile islands in the soil, supplemental fertilization and irrigation, and transplanting vigorous shrub species are some of the important things that can be done to help restore disturbed desert land. Some of the costs can be off-set by restoring the land to economically important trees and shrubs, or grasses, instead of back to the original vegetation. Thousands of years of historical evidence of man's survival on arid lands attest to success in meeting the challenge of the desert. (41 references). (ERA citation 03:001379)

Community Applications of Small-Scale Solar-Thermal Energy Systems
J. H. Baldwin, C. Steinberg, and D. Stea. Feb 81, 177p
Contract AC03-76SF00012

Keywords: Communities, *Solar thermal power plants, Aesthetics, Agriculture, Air quality, Altitudes, *Community development, Building codes, Commercial sector, Demonstration programs, Environmental impacts, Evaluation, Financial incentives, Financing, Industry, Legal aspects, Legislation, Market, National government, Power range 1-10 mw, Power range 100-1000 kw, Public opinion, Public utilities, Regulations, Residential sector, Safety, Social impact, Socio-economic factors, Solar access, Solar process heat, State government, Taxes, Total energy systems, Urban areas, Uses, Water quality, Zoning.

Rapid technological development of small scale solar thermal energy systems (STES) may bring them on line before communities are adequately prepared for them. Information for analyzing and siting STES is presented along with discussions of community applications, regulations, impacts and incentives. By providing this information to community planners, it is hoped that barriers to STES utilization can be anticipated and mitigated. (ERA citation 06:018323)

Methanol as an Energy Source and Its Synthesis
T. Yamamoto. 1975, 27p
Translated from Koatsu Gasu 12 n4 p141-145 1975.

APPROPRIATE TECHNOLOGY ABSTRACTS

Keywords: *Methanol, *Automotive fuels, Boiler fuel, Hydrogen production, Single cell protein, Synthesis, Town gas, Uses, Translations, Japan, *Fuels, Production.

The processes used for the production of methanol from naphtha, natural gas, heavy petroleum, or liquefied natural gases are summarized. The use of methanol as an energy source is considered from six aspects: as a hydrogen source, as a source of city gas, for the production of reductive gas for the steel industry, as an automotive fuel, as a fuel for streaming contact combustion in boilers, and as a source of single cell protein. The use of nuclear energy for the production of methanol is briefly considered. (ERA citation 01:023013)

Design Guide for Shallow Solar Ponds
A. B. Casamajor, and R. E. Parsons. 8 Jan 79, 65p
Contract W-7405-ENG-48

Keywords: *Solar ponds, Butenes, Cost, Design, Diagrams, Films, Operation, Performance, Polyethylenes, PVC, Size, Specifications.

The Solar Energy Group at LLL has developed shallow solar ponds to supply solarheated water for industrial and commercial use at a cost that is competitive with conventional energy sources. Three aspects of this SSP technology are discussed: (1) an introduction to SSP technology, potential, and limitations; (2) a de-

tailed description of the design and operation of an SSP system including component drawings and specifications; and (3) planning information so that an SSP system can be sized for a particular application and the cost can be estimated. (ERA citation 04:029707)

Engineering Feasibility of a 150-KW Irrigation Pumping Plant Using Shallow Solar Ponds
E. A. Platt, and R. L. Wood. 3 Apr 78, 26p
Contract W-7405-ENG-48

Keywords: *Irrigation, *Solar ponds, Solar water pumps, California, Cost, Economics, Engineering, Feasibility studies, Freons, Installation, Rankine cycle engines, Refrigerants, Solar collectors, Weather, Working fluids, *Water pumps.

The economics was analyzed of a field of shallow solar ponds that presumably supplies the heat for a Rankine cycle engine using refrigerant R-113 for the working fluid. When operating, the engine supplies 150 kW of shaft power, 125 kW of that is available for deep-well irrigation pumping. The system components have been chosen to produce the maximum net energy--April through October--per dollar of installation cost. Weather data are from Inyokern, California, 1962 records for most calculations. It was estimated that, for a private investor, the real internal rate of return for this installation would be positive only if in the foreseeable future the cost of conventional energy were to inflate 8% faster than the cost of the commodities needed by

the solar system. A 17% differential inflation rate would produce a 10% rate of return. Reduction in cost of the shallow solar ponds potentially could reduce the system installation cost by about 20%. (ERA citation 03:042543)

Early Impact of Solar Energy Through Industrial Applications
R. C. Maninger. 23 Jun 77, 16p Rept no. CONF-770707-1
Contract W-7405-ENG-48

Western plant engineering conference and show, Anaheim, California, United States of America (USA), 13 Jul 1977.

Keywords: *Solar energy, Commercialization, Information, Technology transfer, Research management.

The Energy Research and Development Administration (ERDA) has established a Solar Technology Transfer Program (STTP) as an important part of the ERDA mission to promote rapid and widespread commercialization of solar energy. This program is an innovative approach to technology transfer through information dissemination and training in solar energy. This is done by means of an integrated network of regional technology agents who interact directly with multiplier groups in both the public and private sectors. Details of the program and ways of industrial participation in it are described. (ERA citation 02:051156)

INDUSTRY PROFILES AND INDUSTRIAL PLANT REPORTS

INDUSTRY PROFILES

In 1966 and 1967, the United States Agency for International Development's Industry Profiles Program published a series of professional analyses to promote the growth of industry in developing countries. Each analysis presented preliminary information on one specific type of small or medium-sized industrial plant. These 4-8 page profiles deal with the industry's marketing problems, approximate amount of capital needed to establish a plant of specified capacity, and the estimated annual costs, by categories, of running the plant at full capacity. A sample follows.

Users of these profiles are reminded that the cost figures were calculated on the basis of United States operating expenses during the late 1960's, so the figures are generally out-of-date. In addition prices and conditions vary greatly in differing countries. The profiles may, nevertheless, still be applicable to situations in certain countries but will need to be adapted to local conditions, including availability of materials, government restrictions, labor costs, etc.

The profiles provide workflow diagrams and plant layouts, as well as supplementary reference information on technical journals, articles, books, patents and professional services. It should again be considered that this information is from the 1960's and improvements may have been made in structural elements and processes.

The profiles can be quite beneficial for potential entrepreneurs who need a general idea on what are the initial steps involved in starting-up a new industry. It should be remembered that the profiles are *not* a substitute for specific studies, whether simple or elaborate, that would precede the actual establishment of new plants. What these profiles do is help the planner decide whether or not to continue working on a specific project.

INDUSTRIAL PLANTS REPORTS

While industry profiles give a brief description of an industry, the industrial plant reports are detailed and *were prepared to answer overseas technical inquiries on factory operations, management, and engineering. Most reports include information and cost estimates on labor, machinery, equipment and supplies, markets, sales and financial and economic factors.* However, these reports are designed to provide only a general picture of the factors that must be considered in establishing and operating a factory. In most cases, plans for actual installation will require expert engineering and financial advice in order to meet specific local conditions.

SOME ADVICE

Before an investment is made in a plant, a feasibility study should be conducted. This may require skilled economic and engineering experience. Some questions that must be answered but which are not covered in these profiles are:

- 1) What is the present demand for the product, and how is it now being satisfied?
- 2) Will the market absorb the production of the new plant?
- 3) Will the estimated sales prices and quality of the product make it competitive?
- 4) How will the plant be financed?
- 5) What is the marketing and distribution plan and to whom will the product be sold?

- 6) How can a realistic time schedule be developed for: supplies, training personnel, and start-up time for the plant?
- 7) Have arrangements been made to obtain needed materials and supplies?
- 8) Are trained personnel available?
- 9) Do adequate transportation, storage, power, communications, fuel, water, and other facilities exist?
- 10) Has a sound plan for equipment, design, construction, and operations been developed?
- 11) Have proper management controls for design, production, quality-control, and other factors been developed?
- 12) Will the industry fit into the development plans for the area?
- 13) Will the industry be environmentally sound?
- 14) Most important of all, will the industry contribute to the local quality of life?

ORDERING INFORMATION FOR INDUSTRY PROFILES

NTIS has 400 Industry Profiles and numerous industrial plant reports. They are listed by subject in alphabetical order beginning on the following pages. The price for each individual Industry Profile is \$6.00 if you live in North America (Mexico, Canada, USA) or have a USAID mission assisting your country. The price is \$12 in all other countries. The Plant Reports priced individually. See ordering information to find the price code for them.

Complete sets of the 250 Industry Profiles published in 1966, AID-IP-66001 through AID-IP-66250 consecutively, cost \$75 per set in North American and USAID countries or \$150 in other countries. The order number is AID-OP-66-ALL

Complete sets of the 150 Industry Profiles published in 1967, AID-IP-67251 through AID-IP-67400 consecutively may be purchased for \$45 per set by North American or USAID countries or \$90 per set in other countries. The order number is AID-IP-67-ALL

After selecting the profiles in the subject areas of interest, find the order number directly to the right of the subject listing (example AID-IP-66020). The order may be placed using the form in the back, or through the local NTIS cooperating organization (see inside back cover).

INDICE DE LIBROS EN ESPAÑOL /INDEX OF BOOKS IN SPANISH

Los títulos incluidos en este Índice pueden encontrarse en la BIBLIOGRAFIA, donde los resúmenes van enumerados ordenadamente.

- N72-18152 Televisión Educativa Vía Satélite. Estudios de Antecedentes y Proyecto preliminar de Plan, Tomo 2
- PB 217 119 Conservación del medio ambiente físico y el desarrollo
- PB 224 224 Un Modelo de Fortificación del Maíz con Harina de Soya, Lisina y Otros Nutrimientos, en una Comunidad Rural de Bajo Nivel Socioeconómico
- PB 224 506 Control químico de murciélagos vampiros
- PB 245 004 Erosión y sedimentación: Medidas temporarias de control
- PB 262 745 Glosario de términos agrícolas: Inglés/español, español/inglés
- PB 262 928 Glosario de términos ambientales
- PB 263 349 Manual didáctico: Huertos escolares y nutrición
- PB 263 849 Método para el cultivo del ostión de mangle en Puerto Rico
- PB 269 049 Contabilidad para la micro empresa: Manual de enseñanza
- PB 276 507 Manual talla de madera
- PB 283 958 Manual de tecnología para la comunidad
- PB 286 582 El servicio público de empleos
- PB 286 585 Mejoramiento de la vivienda por autoayuda subsidiada
- PB 287 060 Envases para alimentos industrializados chilenos. Tomo I
- PB 287 061 Envases para alimentos industrializados chilenos. Tomo II
- PB 287 062 Envases para alimentos industrializados chilenos. Anexos
- PB 287 063 Productos biológicos veterinarios: Ayuden a combatir las enfermedades
- PB 287 064 La industria cementera
- PB 287 251 Alimentos para la paz de todo el mundo
- PB 287 264 Técnicas demográficas para el planeamiento de la mano de obra de países en desarrollo
- PB 289 983 Aspectos de la producción agropecuaria de Centro América en el marco de integración económica
- PB 289 984 Informe general sobre el desarrollo de servicios de información científica y tecnológica en Panamá
- PB 289 986 Diagnóstico para el Desarrollo de Servicios de Información Científica y Tecnológica en Panamá
- PB 289 988 Control de niguas
- PB 289 989 Construyendo con ladrillo
- PB 290 423 Manual de administración para la industria del vestuario
- PB 290 424 La investigación tecnológica industrial en el Perú: Análisis y comentarios
- PB 290 425 Memoria del seminario sobre desarrollo de tecnología industrial
- PB 290 426 Ciencia, tecnología y desarrollo, Vol. 2 Número 1: Enero-marzo, 1978

- PB 290 427 Cartilla sobre la adquisición de tecnología
- PB 291 858 Manual de métodos para el análisis de aguas y desechos
- PB 292 746 Construcciones resistentes al fuego en el hogar y en la granja
- PB 292 747 Manual para la construcción de casas de tierra
- PB 292 766 Ganado bovino para carne: Descorne, castración, marcación a hierro y marcas
- PB 292 899 Cómo instalar un sistema doméstico de eliminación de aguas negras
- PB 292 937 Estudios sobre Política científica y tecnológica de Panamá
- PB 292 938 Efecto del proceso de importación de tecnología en el Perú
- PB 293 876 Fertilización con nitrógeno en los trópicos húmedos
- PB 294 426 Cartilla de desayunos escolares
- PB 294 427 Características de la industria del abono: Fertilizantes fosfatados
- PB 295 087 Calefacción de edificios y agua caliente para uso doméstico mediante energía solar
- PB 296 654 Métodos simples para fabricar velas
- PB 296 655 Un manual sobre mantenimiento de edificios, Tomo 1: Administración
- PB 296 720 La erosión y su control
- PB 296 721 Estudio técnico-económico para la fabricación de cal en Honduras
- PB 296 722 Evaluación comparativa entre países de organizaciones de pequeños agricultores
- PB 297 632 Introducción al desarrollo comunitario para los trabajadores de las aldeas
- PB 297 633 Nutrición infantil en países en desarrollo
- PB 297 854 Tecnología apropiada: Concepto, aplicación y estrategias
- PB 297 856 Quesos andinos del Perú
- PB 297 857 Quesos para regiones tropicales
- PB 297 859 Programa de tecnología rural intermedia
- PB 297 865 Estudios sobre fertilizantes
- PB 297 867 Elaboración de la panela
- PB 297 868 Reforestación
- PB 297 869 Tecnología para campesinos hondureños: Informe de un seminario
- PB 297 870 Secado solar de uvas: Programa de tecnología rural intermedia
- PB 298 058 Evaluación pesquera en el lago Ilopango y la laguna de Olomega
- PB 298 059 Estudio limnológico de la laguna de Aramuaca
- PB 298 060 Contribución al conocimiento limnológico comparativo del lago de Guija en la época lluviosa de 1973 y la época seca de 1974. Vol. II. No. 9
- PB 298 061 Informe técnico: Estudios limnológicos preliminares de la laguna Verde
- PB 298 451 Manual de instrumentación y control de calidad en la industria textil
- PB 298 470 Los suelos—su uso y manejo. Carilla divulgativa para el agricultor colombiano
- PB 298 481 Plantas tropicales subexplotadas con valor económico prometedor
- PB 298 525 Tecnologías apropiadas para el desarrollo de Panamá
- PB 298 564 Guía de técnicas de promoción en acción comunitaria y saneamiento rural
- PB 298 717 Cómo obtener información en diferentes campos de la ciencia y la tecnología
- PB 298 869 Ciencia, tecnología y desarrollo, Vol. 2, No. 3 Julio/septiembre 1978

- PB 298 884 Ciencia, tecnología y desarrollo, Vol. 2, No. 2 Abril/junio, 1978
- PB 299 367 Areas funcionales de la empresa y su interrelación
- PB 299 382 Proyectos de investigación en progreso en ciencias de la salud, 1974-1975
- PB 299 488 Investigaciones en progreso
- PB 80-111 339 La investigación en la universidad colombiana
- PB 80-112 790 Memorias: Simposio internacional sobre el terremoto de Guatemala, del 4 de febrero de 1976 y el proceso de reconstrucción
- PB 80-115 884 Manual para pozos pequeños
- PB 80-116 361 Cultivo bixesual de 'Hilapia aurea' en jaulas flotantes en el lago de Ilopango, Vol. IV, No. 2
- PB 80-116 379 Industrialización del banano: Evaluación de alternativas tecnológicas
- PB 80-121 486 Metodología para el estudio de la fuerza de trabajo de los países en desarrollo
- PB 80-122-203 El agua y la salud del hombre
- PB 80-138 050 Análisis de ubicación: Una guía para los planificadores de servicios de salud
- PB 80-148 034 Seminario nacional sobre administración de la política agrícola
- PB 80-148 042 Planificación de aprovechamientos hidroeléctricos y sistemas eléctricos interconectados
- PB 80-154 677 Manual práctico para la construcción de casas de bloques
- PB 80-154 701 Memoria del primer seminario nacional de energía
- PB 80-154 727 Manual de sanidad en la vivienda rural
- PB 80-155 302 Caracterización, manejo y almacenamiento de aguacate
- PB 80-156 250 Las cooperativas agropecuarias como instrumento de cambio social
- PB 80-156 268 Caracterización, manejo y almacenamiento de papaya
- PB 80-157 035 Guía para el cultivo de Hortalizas
- PB 80-157 043 El cultivador de cítricos
- PB 80-157 092 Caracterización, manejo y almacenamiento de la piña
- PB 80-157 100 Producción caprina en medios difíciles de América Latina
- PB 80-157 118 Cultivo de la soya en Panamá. Análisis y recomendaciones preliminares
- PB 80-157 126 Construcción naval
- PB 80-157 746 Caracterización, manejo y almacenamiento de algunas frutas tropicales
- PB 80-157 753 Cultivo de frutas
- PB 80-158 306 Manual de recomendaciones para cultivar café
- PB 80-159 312 Subproductos del café
- PB 80-159 841 Inventario de residuos orgánicos de uso potencial en Panamá para su conversión a gas metano y fertilizantes orgánicos
- PB 80-160 674 Resumen de la investigación pecuaria del Centro Experimental de Gualaca
- BP 80-160 682 Las tierras del suroeste de Coclé
- PB 80-160 740 Los asentamientos campesinos. Una experiencia panameña en reforma agraria
- PB 80-161 540 El cocotero en Panamá
- PB 80-169 444 Papel de la tecnología en el desarrollo y dependencia de los pueblos
- PB 80-169 998 Aprovechamiento de desechos para la generación de bio-gas como fuente de energía
- PB 80-170 079 Laboratorios experimentales para la formación de cuadros organizadores de empresas de autogestión campesina

- PB 80-170 285 Tecnología simplificada de la producción del cuero
- PB 80-170 293 Problemas energéticos en países subdesarrollados
- PB 80-170 301 Utilización de la pulpa de café en la producción de gas combustible
- PB 80-170 319 Obtención de un frijol precocido mediante extrusión
- PB 80-170 723 Principios fundamentales de la tecnología quesera
- PB 80-170 814 Utilización de la harina de papa en panificación
- PB 80-171 002 Reporte técnico sobre la industrialización integral del pseudo-tallo del banano
- PB 80-171 234 Utilización de la harina de yuca en panificación
- PB 80-171 242 Utilización de la harina de arroz en panificación
- PB 80-171 267 La soya: Fuente de proteína y aceite
- PB 80-173 719 Diagnóstico y evaluación técnica de los molinos de caña para panela
- PB 80-173 792 Salud integral y medicina comunitaria
- PB 80-175 060 Informe del programa de capacitación de Centro América
- PB 80-175 078 Manualidades
- PB 80-175 326 Problemas hidráulicos en países centroamericanos
- PB 80-175 789 Problemas de contaminación y tratamiento de contaminantes
- PB 80-176 985 Posible transferencia de la tecnología para el desarrollo rural basado en la experiencia de Costa Rica
- PB 81-147 704 Seminario Internacional Sobre Tecnología de Semillas para Centroamérica, Panamá y Caribe
- PB 81-152 076 Los Caminos Rurales en México
- PB 81-152 258 Aprovechamiento del Falso Fruto del Jocote Marañón
- PB 81-159 105 Trilladora de Frijol de Superficie Suave
- PB 81-159 402 Modelo Matemático para Simulación de Secado y Almacenamiento de Granos
- PB 81-159 410 Potencial de la Ganadería Tropical Tecnificada Bajo el Sistema del Pastoreo Rotativo Intensivo-Repercusión Social y Economía
- PB 81-160 962 La Problemática Tecnológica Latinoamericana y Sus Implicaciones en el Desarrollo de Una Ingeniería Nacional
- PB 81-184 160 Tecnología Apropriada para Países Subdesarrollados
- PB 81-191 777 Guía de Cosechas para Los Trópicos y SubTrópicos
- PB 81-195 877 Fábricas de Cemento de Pequeña Escala
- PB 81-204 059 Manual de Construcción de un Ariete Hidráulico para Bombear Agua
- PB 81-204 414 Un Sistema Económico de Calefacción Solar para Viviendas
- PB 82-111 915 Algo Sobre Pequeña y Mediana Empresa
- PB 82-114 000 Guardafuego: Manual de Prevención, Combate y Extinción de Incendios Forestales
- PB 82-116 765 Manual de Plantas Procesadoras de Carne
- PB 82-129 909 Listado de Categorías de Materias COSATI
- PB 82-140 039 La Condicionante Económica en el Habitat
- PB 82-141 235 Bio-gas en El Salvador, sus Especialistas, sus proyectos y su Grado de Avance
- PB 82-151 572 El Tratamiento y Saneamiento del Agua: Manual de Métodos Simples para Areas Rurales de los Países en Desarrollo
- PB 82-153 750 El Contratista de Obras de Pequeña Escala y el Cliente

- PB 82-161 712 Manual para el Cultivo de Peces en Jaulas Flotantes en Reservorios Naturales y Artificiales
- PB 82-177 718 Un Manual sobre Mantenimiento de Edificios. Tomo 2
- PB 82-200 106 Panificación con Harinas Compuestas
- PB 82-200 114 Manual de Viveros Forestales
- PB 82-200 130 Agricultura Básica
- PB 82-200 981 Planificación Financiera para el Pequeño Contratista Constructor
- PB 82-200 999 Contabilidad y Teneduría de Libros para el Pequeño Contratista Constructor
- PB 82-206 418 Cómo Hacerlo y Hacerlo Bien-Manual de Gestión de Proyectos

INDEX DE LIVRES EN FRANÇAIS /INDEX OF BOOKS IN FRENCH

On peut trouver les titres inclus dans cet Index dans la BIBLIOGRAPHIE qui contient les abrégés des titres, énumérés par ordre de lettres et de numéros.

- N75-17045 (Partly in French) A Survey of Meteorological Data Available in Six Sahelian Countries of West Africa
- N77-32589 Mise en place à Dakar d'une pompe alimentée par des panneaux de cellules solaires
- PB 251 094 Manuel technique du village
- PE 262 851 L'utilisation du silo fosse et des leçons techniques
- PB 268 988 Conseils de santé à la faille Africaine
- PB 274 429 Perspectives de la recherche agronomique en Afrique
- PB 274 612 Expansion des ressources en eau dans les zones arides: Techniques prometteuses et possibilités de recherches
- PB 286 423 Maisons en terre
- PB 286 424 La construction en climat chaud
- PB 286 425 L'eau et la santé de l'homme
- PB 286 426 Manuel pratique de l'équipement rural. Vol. IV: Aménagement de la ferme
- PB 286 428 Les ravageurs de grans entreposés
- PB 286 429 La prévention contre les moustiques dans les terres irriguées
- PB 286 430 Diverses méthodes d'irrigation
- PB 286 431 La culture du sorgho pour la production de sirop
- PB 286 432 L'aviculture sous un climat subtropical et semi-aride
- PB 286 433 Amélioration de l'habitat par la promotion de l'effort personnel
- PB 286 435 Le développement de l'entreprise privée Africaine
- PB 286 436 Manuel d'horticulture tropicale et sub-tropicale
- PB 286 438 L'alimentation sanitaire des bébés en milieu tropical
- PB 286 440 L'entretien des tracteurs
- PB 286 444 Petites conserveries
- PB 286 447 L'exploitation des pâturages
- PB 286 448 L'aménagement des marchés ruraux en Afrique
- PB 286 450 Comment conserver le poisson: Salage, séchage, fumage
- PD 286 452 Le béton: Principes élémentaires
- PB 286 455 L'éducation sanitaire
- PB 286 457 Irrigation par déversement
- PB 286 459 La nutrition de l'enfant dans les pays en voie de développement
- PB 286 461 Développement communautaire: Cinq réalisations intéressantes en Afrique
- PB 286 464 Manuel pratique de l'équipement rural: Vol. III, Installations sanitaires
- PB 286 465 Manuel pratique de l'équipement rural: L'eau au village

- PB 286 467 L'énergie et le développement rural: Ressources renouvelables et options techniques pour les pays en développement
- PB 286 470 Comment créer une usine
- PB 286 472 Les transmissions de force motrice dans l'artisanat familial
- PB 286 474 Apareils à kérosène
- PB 286 476 Un facteur du développement économique-La sélection des industries
- PB 286 572 Manuel de crédit agricole
- PB 286 574 Le crédit agricole: Source de prospérité
- PB 286 576 La prévision des besoins en main-d'oeuvre
- PB 286 578 Les coopératives agricoles aux Etats-Unis
- PB 286 580 Création d'un service de vulgarisation agricole
- PB 286 583 Les services publics de l'emploi
- PB 286 587 Nourrir un monde surpeuplé
- PB 286 590 Créer et gérer une petite entreprise de comptabilité
- PB 286 614 Créer et gérer un petit restaurant
- PB 286 616 Le rôle d'un Ministère du travail dans les pays en voie de développement
- PB 286 618 Evolution de l'agriculture dans 26 pays en voie de développement
- PB 286 622 Améliorer l'alimentation de l'enfant
- PB 287 253 Comment faire une robe
- PB 287 255 Les auxiliaires visuels dans la télévision scolaire
- PB 287 257 L'entretien des canaux de drainage à ciel ouvert
- PB 287 258 L'importance de la formation dans les services publics
- PB 287 260 Détermination des aptitudes et de la formation requises pour la main-d'oeuvre
- PB 289 985 Index rétrospectif: Planification et développement agricoles
- PB 292 950 Programme de vivres pour la paix: L'alimentation des populations
- PB 293 762 Petites entreprises: 150 questions
- PB 293 763 *Formation professionnelle: Conseils aux maîtres*
- PB 293 765 Petite entreprise: Manuel de gestion financière
- PB 293 767 L'élevage du lapin
- PB 293 845 Manuel pratique de l'équipement rural, Vol. V: Aménagement du foyer
- PB 293 863 L'aménagement de points d'eau dans les pacages
- PB 293 864 L'engraissement et l'exploitation des bovines de boucherie
- PB 293 865 Besoins nutritifs de la volaille
- PB 293 867 *Exploitation agricole: Préservation des poteaux de clôture et des bois de construction*
- PB 293 868 Puériculture: Les soins aux bébés
- PB 293 869 Distribution des eaux: les calculs des prix
- PB 293 870 L'abattage des boeufs à la ferme
- PB 293 871 Comment on obtient le crédit agricole aux Etats-Unis
- PB 293 872 Parasites internes du porc
- PB 293 873 Petite entreprise: La conception des produits
- PB 293 874 Les maladies parasitaires du mouton
- PB 293 916 Vulgarisation agricole: La planification

PB 294 246	Le système de crédit agricole coopératif aux Etats-Unis
PB 294 284	Maladies communes et parasites de volailles
PB 294 285	L'élevage des abeilles
PB 294 286	Les brise-vents
PB 294 297	Manuel de conservation du sol
PB 294 311	Le casse-croûte scolaire
PB 294 344	Distribution des eaux
PB 294 366	Puériculture: Votre enfant de un à six ans
PB 294 415	Créer et gérer une petite entreprise de construction
PB 294 419	Les fibres végétales et leurs utilisations
PB 294 447	Une méthode logique d'élevage avicole
PB 294 448	Distribution des eaux: Les compteurs d'eau
PB 294 449	Distribution des eaux: La gestion des services
PB 294 896	Manuel sur l'emploi des engrais
PB 294 897	L'étude des insectes
PB 294 898	L'exploitation forestière
PB 294 899	Puisard maraîcher en béton

WHO OR WHICH GROUPS MAY REQUEST NTIS SUBSIDIZED DOCUMENTS

The U.S. Agency for International Development (USAID) established a subsidy program in NTIS so that Latin American and Caribbean groups assisting communities or organizations with scarce resources can acquire NTIS appropriate technology documents free of charge.

Applicants must complete the form on the back and **demonstrate that the documents will be used exclusively to directly aid low-income individuals, indicating how and who will benefit. The form must be specific**—just stating the document will be useful to help the poor is not sufficient. It must indicate, for example, that the documents will be used to “to help the Santa Clara community build a solar plant which will provide energy to X number of needy individuals,” or “the information will be used to help construct a small handicrafts shop or business that will employ X number of workers in Santa Marta,” etc.

The subsidized reports are presently, only available to organizations or individuals residing in Latin America and the Caribbean. Specific countries eligible to receive them are: Barbados, Bolivia, Chile, Colombia, Costa Rica, the Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Nicaragua, Panama, Paraguay, Peru, and Surinam. **The subsidy is not available** to students working on their thesis or University Professors working on basic research projects as they are not working with a project which will directly assist the poor; along the same line, NTIS will not be able to provide subsidized documents to stock libraries or document centers as their use does not provide immediate benefit to the poor. The program is for tangible problem-solving by, for, or with low-income groups.

If you believe you or your organization qualifies to receive the subsidized NTIS appropriate technology documents, please complete the form on the reverse of this page and send it to:

S. Dickson Tenney
National Technical Information Service
Office of International Affairs, Room 306YT
5285 Port Royal Road
Springfield, Virginia 22161

Please Fill Out the Below Form as Completely and Fully as Possible

Name: _____
 Organization: _____
 Telephone: _____
 Complete Address (include P.O. Box) _____

DESCRIPTION AND OBJECTIVES OF THE PROJECT

1. Indicate how you or your organization work with low-income individuals. _____

2. Describe the social improvements you expect to result from the use of these documents. _____

3. Who specifically will use these documents to provide the technical assistance. _____

4. Which specific individuals or communities will benefit from the use of the documents. _____

CRITERIO PARA SOLICITAR DOCUMENTOS SUBVENCIONADOS AL SERVICIO NACIONAL DE INFORMACION DE LOS E.U. (NTIS)

La Agencia para el Desarrollo Internacional de los E.U. (USAID) estableció un programa de subsidio para el NTIS, con el fin de asistir a individuos y organizaciones de Latinoamérica y del Caribe con la adquisición de documentos de los archivos de NTIS sobre tecnologías apropiadas.

Para ser elegible, el solicitante deberá llenar el formulario al dorso. El solicitante deberá **demostrar que el documento pedido será usado exclusivamente para ayudar a personas de escasos ingresos**, indicando como y quiénes se han de beneficiar. Así pues, **no solo deberá indicarse que el documento será de utilidad al pobre**, sino detallar que "beneficiará al pueblo de Santa Cruz, donde una planta solar proporcionará energía a un número X de gente necesitada" o bien, que "la información será utilizada para la construcción de un pequeño taller de artesanía o industria de trabajos manuales que empleará un número X de trabajadores en Santa Marta", etc.

Estos informes, por el momento sólo están disponibles para organismos o individuos residentes de la América Latina y países del Caribe. Los países en condiciones de recibirlos son: Barbados, Bolivia, Chile, Colombia, Costa Rica, Ecuador, El Salvador, Guatemala, Guyana, Haití, Honduras, Jamaica, Nicaragua, Panamá, Paraguay, Perú, República Dominicana, and Surinam. El Programa de subvención **no incluye pedidos procedentes de estudiantes universitarios** que estén llevando a cabo trabajos de investigación (comprendidos los estudios de tesis doctorales o proyectos de los mismos catedráticos), así como *tampoco los pedidos de bibliotecas o centros de documentación*. En otras palabras, el programa concretamente es para la ayuda inmediata y exclusiva del necesitado.

Sí usted cree que su organización goza de los requisitos para recibir los documentos subvencionados sobre tecnologías apropiadas, llene dicho formulario, y remítalo a:

INSTRUCTIONS FOR COMPLETING THE INTERNATIONAL TECHNICAL INFORMATION NETWORK ORDER FORM

Please, before ordering, review the sections "How To Use This Bibliography" and "Ordering Information Guide" at the front of this bibliography.

- 1) **NAME and ADDRESS:** Fill in the name, organization, and complete address to which the document should be sent.
- 2) **ORDER NUMBER and TITLE:** Fill in the titles of the desired reports and find the order/accession number (example: PB-000 000) in the upper left hand corner of each citation and enter it on the order form. Order/accession numbers **must** be entered for each title. If you are ordering Industry Profiles enter the subject and special order number (example: AID-IP-66001) in the appropriate column.
- 3) **QUANTITY:** Enter the number of copies of each item you are ordering in paper copy (PC) or microfiche (MF).
- 4) **PRICE CODE:** Find the price code next to the NTIS order number (example: PC-A03/FM A01) and enter on the form. PC = paper copy, MF = microfiche. The prices of NTIS products may vary in some countries due to differences in handling costs (for example the NTIS cost to airmail publications is presently \$5 but may rise depending upon airmail costs).
- 5) **AMOUNT:** To determine the cost of each document, you must first review the price schedule, below.

If there is an NTIS representative in your country (check listing on back cover), you should send your requests directly to the representative. It will tell you the local price of the desired information. Note that there is a considerable advantage using the local representative's services as the organization is accustomed to working with NTIS and knows exactly what must be done to get an order filled as quickly as possible.

If there is no NTIS representative in your country you must, using the information below, determine what price schedule pertains to your country.

If you live in Canada, Mexico, or the United States, or if your country has a USAID mission, the Price Schedule A in the section on Ordering Information lists the price you will pay for the publication. Industry Profiles for this schedule are \$3.50 each. If you are located outside of North America and do not have a USAID Mission in your country, the prices are exactly TWICE those on Price Schedule A. Please calculate the price of each document and enter on the order under Amount.

PAYMENT: If you have a local representative, you may pay it in local currency. If you order directly from NTIS, payment, in U.S. dollars, must accompany all orders. Payment may be made by one of the following methods: Check drawn on a U.S. bank; International Money Order; International Postal Coupon; UNESCO Coupon; NTIS deposit account; or your American Express, VISA or MasterCard account. Check the box before your choice of method of payment on the order form, enclose payment and mail to:
