CONFERENCE PROCEEDINGS INDEX

INTRODUCTION TO CUMULATIVE INDEXES

This volume contains Author, Subject, Report Number, and Conference Proceedings Indexes to all four volumes of ENERGY FROM THE WIND — ANNOTATED BIBLIOGRA-PHY.

Under each index term, the entry numbers are grouped by the volume in which they appeared. This makes the indexes useful both to those who have merged the volumes, and to those who have left them separate.

EXAMPLE:

ARGENTINA

- (B) 19250009, 19520009
- (1) 19620022, 19640028
- (2) 19670020
- (3) 19800129

In this case, entries 19250009 and 19520009 are to be found in the Basic Volume; entries 19620022 and 19640028 are in the First Supplement; entry number 19670020 is in the Second Supplement; and entry number 19800129 is in the Third Supplement.

CROSS REFERENCES

Cross references are included to enhance the usefulness of the Subject Index.

SEE references are used to refer from an incorrect term to the correct term.

EXAMPLE:

AEOLIAN LANDFORMS---SEE EOLIAN LANDFORMS

SEE ALSO references are used to refer from a correct term to other correct terms which are related and may be of interest.

EXAMPLE:

ALCOA---SEE ALSO ALUMINUM
AFRICA---SEE ALSO NAMES OF COUNTRIES

HIGH VOLUME DESCRIPTORS

There are a number of terms which are used so frequently in the bibliography that to list all of the entry numbers would result in long lists which would be tedious and inefficient to search manually. For these terms, the entry numbers have been replaced with the statement:

HIGH VOLUME DESCRIPTOR---USE ONLY IN COMPUTER SEARCHING, IN COMBINATION WITH OTHER DESCRIPTORS. SEE INTRODUCTORY PAGES FOR INFORMATION ON WINDSEARCH.

These terms can be used quite efficiently, when combined with other terms, when formulating strategies for doing a WINDSEARCH. The WINDSEARCH service is described following this introduction.

The subject indexing in this volume for the Basic Volume and First Supplement uses the thesaurus developed during the compilation of the Second and Third Supplements, and is far superior to the very limited "Broad Subject or Type of Material Index" originally issued with those volumes.

AN ALTERNATIVE TO TEDIOUS MANUAL LITERATURE SEARCHING -

WINDSEARCH

ENERGY FROM THE WIND — ANNOTATED BIBLIOGRAPHY now includes in four volumes over 6300 references to wind power. Manually searching these volumes could be very time-consuming and, due to the single-term approach necessary, not very efficient. The entire file is on computer and searchable. The main advantage of this is the ability to combine terms to fine-tailor searches to specific interests. Also, some terms are so frequently used as to be virtually useless in manually searching. But, when combined with other terms by the computer, they can help identify a very specific body of literature.

We are offering WINDSEARCH — access to the data base at low, cost-recovery rates. You may find that a fairly inexpensive WINDSEARCH is much more cost-effective than manually searching the four volumes of ENERGY FROM THE WIND. You simply submit a statement of the subject of your search, including all relevant keywords, synonyms, and other requirements (language, date, geographic location, type of material, etc.). Through various combinations of these parameters we produce a special listing of relevant citations.

This service is priced to just recover our costs, and will vary from search to search, depending on their complexity. Searches will range from \$10.00 minimum to \$40.00 or \$50.00 for more complicated strategies. Search requests can be mailed, or phoned in, and will be invoiced when printouts are mailed to you.

For more information, or to discuss or order a search, call:

Barbara Burke 303-491-8476

To order a WINDSEARCH by mail, use the request form on the reverse of this page.

WINDSEARCH

ENERGY FROM THE WIND - ANNOTATED BIBLIOGRAPHY

The computer system used to produce ENERGY FROM THE WIND has a search component which allows the running of custom literature searches tailored to the requestor's needs. Keywords can be combined using the Boolean "and", "or", or "and not" to produce specialized lists of references on narrower aspects of wind energy. Any part of the references can be searched. The most common, and efficient, use of the system is to combine descriptors from the Subject Index. These can be further combined with free terms, date of publication, language, issuing agency, or any other parameters which can be easily identified in the reference.

SAMPLE SEARCHES:

- 1. All references on "design small scale" and ("developing countries" or "remote areas" or "appropriate technology").
- 2. All references from the Brace Research Institute.
- 3. All references to "patents" on "vertical axis" turbines from 1976 to date.

WINDSEARCH REQUEST FORM

SUBJECT OF WINDSEARCH:

Α.		of search in se		-	riptors from	Subject	index whe
			1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	nes (11), es enunciales es los en nomes e estantes en los estantes estantes			
В.	List additional	descriptors, free	terms, synon	yms relevant	to the subje	∍ct:	
C.	List any additio	nal requirements	, such as yea		ered, type o	f material,	etc.:
	CITY	STATE	ZIP		Engineering Colorado Sta		
	· 1985年 [1985] [1985] [1985] [1985] [1985] [1985] [1985] [1985] [1985] [1985] [1985] [1985] [1985] [1985] [1985]	ARGES ACCEPTE	14 A 15 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	.	Fort Collins,	Colorado	80523

^{*}You will be billed a minimum of \$10.00 for your WINDSEARCH. The actual amount will depend on the complexity of the search and be based on our costs.

111. Eggers, A.J. Solar energy: status and prospects as a national resource. ASHRAE J: 41-43, November 1975.

4, 6

The current state of solar energy R&D, including objectives of the six solar program areas, is examined. Areas are: bioconversion, ocean thermal conversion, wind energy, photovoltaics, solar thermal conversion, and solar heating and cooling of buildings (including agricultural applications). Proved economically viable, power systems for heating and cooling buildings, bioconversion to fuels, and wind energy should be commercially available in the late 1970's. Power systems based on solar thermal, photovoltaic, and ocean thermal technology are expected to be available in the mid-1980's.

112. Eldridge, F.R. Wind machines. McLean, Va., Mitre Corporation, October 1975. NSF-RA-N-75-051. 77 p. NTIS, PB249936, 1975. 85 p.

1, 2, 4, 5, 6

The purpose of this document is to provide a brief survey of the present status of the viability, history, taxonomy, and future potential of various types and sizes of wind machines that might be used to help meet future U.S. energy demands. The document also discusses various possible applications of wind machines, as well as siting problems, performance characteristics and system designs for such machines.

5

The development of a cheap rugged windmill--from the initial wind tunnel tests, through power output/capital investment optimization exercises to the final design and running--is traced. It is shown that the concept of a constant-speed, self-regulating, fixed-blade windmill appears to be a practical way of achieving a rugged low cost windmill which will produce power with a low overall cost/kWh generated. The cost reduction

achieved by using extruded aluminum blades of constant crosssection far outweighs the slight loss in performance incurred in comparison with tapered blades and the fatigue life of the blades should be reasonably long. For supplying cheap kWh, a relatively small-diameter, high-speed machine designed to give its maximum output at wind speeds of about 50 mph is to be preferred to large-diameter, low-speed machines.

121. Executive summaries of project reports of the Council. Texas Governor's Energy Advisory Council, Austin, Texas. NTIS, PB249936, March 1, 1975. 142 p.

6

As part of the work of the Texas Governor's Energy Advisory Council a series of special projects were initiated to gather information, provide background, evolve technological assessments, and develop analyses and projections on a series of topics related to energy in Texas. This document presents brief Executive Summaries of each of the reports. A summary of the objectives, program, and management plan under which the work of the Council was carried out is included.

122. Fact sheet - solar energy. Federal Energy Administration, Wash., GPO, 1975. 9 p.

4

This brochure presents a brief review of solar energy status, including a section on wind power.

3, 4

This study seeks to explore, in a preliminary way, reactions of the general public in various parts of the country toward the construction of different types of windmills for generating electric energy. It should throw light on the extent to which people may object to the placement of windmills in different types of landscapes, as well as the extent to which different types of people are likely to raise such objections.

124. Finch, R.D. and H. Hahn. Texas Energy Scenarios. Texas Governor's Energy Advisory Council, Austin, Texas. NTIS, PB243357, January 1975. 93 p.

4, 6

This report presents four scenarios of the future of energy in the state of Texas. The first case is a Baseline Scenario which projects the future as it might have appeared during the relatively stable period from 1967 to 1970. This is then compared with a Market Forces Scenario in which various constraints on the operation of the U.S. market are removed. A Regulated Conservation Scenario and a New Technology Scenario are then presented to illustrate the trends that might result from government actions aimed at reducing demand or increasing supply.

3, 4

A graphically and tabularly documented overview of applications is presented.

127. Focusing on energy--unclearly. New York Times, March 3, 1975, Section 3, page 3.

4

The U.S. Energy R&D Administration, the newest federal bureaucracy, was established to direct and coordinate all governmental energy activities under a single agency. ERDA is responsible for developing such disparate programs as more efficient car engines, atomic bombs, windmills for generating electricity, nuclear power plants for producing more fuel than they consume, solar panels for heating and cooling buildings, and the conversion of coal into gas.

128. Frair, L.C. Proposed allocation model of wind power systems to geographical regions. Proc. AIIE Annual Conf. Conv., 26th. Washington, D.C., May 20-23, 1975, p. 377-381.

3, 6

An allocation model is presented that may be used to generate plans for the implementation of wind power systems in suitable geographic regions. The proposed allocation model consists of four main steps. In step one, the energy requirements that are to be furnished by wind power are determined. Secondly, the number and type of wind power systems needed to satisfy the wind energy requirements specified in step one are determined. The third step consists of the application of a screening mechanism which evaluates the feasibility of the allocation from step two in regard to technological capabilities, gross economic considerations, social and political considerations, and environmental guidelines. Step four consists of a detailed benefit-cost analysis.

This is a good review of the current status of the world's energy situation and some summarized information from the papers presented at a session entitled "Electrical Energy Technology Forecast" held at the 1975 Winter Meeting of the IEEE Power Engineering Society.

132. Friedmann, P.P. Aeroelastic modeling of large wind turbines. Presented at the 31st Annual National Forum of the American Helicopter Society, Washington, D.C., May 1975.

3, 5

4

A set of coupled flap-lag-torsional equations of motion for a single wind turbine blade are derived in a general, nonlinear, partial differential form. These equations are suitable for determining the aeroelastic stability or response of large wind turbine blades. Methods for solving the equations together with some possible simplification of the equations are discussed. Finally, the formulation of the complete rotor-tower aeroelastic problem is considered in general terms.

U.S. National Conference on Wind Engineering Research, 2d, Fort Collins, Colorado, June 22-25, 1975. Conference Preprints. Fort Collins, Colorado State University, 1975, p. V-12-1 to V-12-3.

3, 6, 8, 15

Solid wastes and waste waters of domestic and industrial origin are the damaging by-products of our modern industrial civilizations.

In the treatment of these waste waters some of the important steps are screening, sedimentation and aeration followed by disinfection. Aeration is a significant phase consisting of providing waste waters with oxygen in order to promote bacterial growth and consequent bio-degradation of the organic wastes. The design presented in this report is a first attempt to assess the feasibility of using wind energy for the aeration of waste waters.

6

In the very near term, solar energy can provide hot water and space heating, and in the intermediate term, space cooling for both commercial and residential buildings. In the longer term, terrestrial solar power systems based on focused solar energy, wind energy, or ocean thermal gradients are possible regional sources of auxiliary power. Photovoltaic conversion of solar energy to electricity with solar cells could provide supplemental power if the costs of solar cells are reduced. By the year 2000, a satellite solar power station could be a technically and economically viable continuous source of primary electric power whenever needed throughout the world. It will use solar cells to collect the solar radiation, which would then be converted to microwave energy. The Microwaves will be beamed to a receiving antenna on earth and be reconverted to electricity. Such solar systems can help meet future energy demands without significant detriment to man's environment.

Wind power has been used in the U.S. and in Europe for many years. Today some 150,000 old windmills are still utilized in the U.S. Wind power generation is feasible in many special situations, but will not be generally available till costs come down. Examples of the use of wind, from private homes to oil exploration, are described. Many generator designs and energy storage methods are reviewed.

148. Hammond, A.L. Artificial tornadoes: novel wind energy concept. Science 190(4211): 257, October 17, 1975.

4, 5

A novel energy concept involves the utilization of intense vortices, similar to miniature tornadoes, inside large circular towers. This wind system appears capable of generating far more power than conventional wind turbines of similar size can. A combination of the tornado-like vortex and the tower in which it is generated collects and concentrates energy from a far greater volume than the air immediately around the turbine blades does.

3, 6

The potential of two energy conversion systems which use the natural solar collection of the earth and its atmosphere over land and sea as their power input is discussed. The first concept, for large scale power generation, is based on a Rankine cycle heat engine driven by the thermal difference (15 to 22 degrees Celsius) which exists between the warm tropical surface waters of the ocean and the great mass of cold water below. Windpower, the second concept, is discussed in the context of small to large scale systems comprising a number of methods for extracting a portion of the kinetic energy of the earth's atmosphere. A brief history and a current status report on recent research developments as well as the basic technical descriptions of these concepts are presented. Suggested configurations for energy distribution systems utilizing these natural energy resources complete with energy storage and transmission systems are given. In addition to the potential impact of these systems, the recognized technological and institutional problems standing in the way of their potential implementation are enumerated.

4,6

During the past four years, NSF has been developing program plans for increased federal support of terrestrial solar energy research. The status and plans of the U.S. Solar Energy Research Program are described. Research is organized under the program areas of: heating and cooling of buildings and agricultural applications; solar thermal conversion; photovoltaic conversion; bioconversion to fuels; wind energy conversion; and ocean thermal conversion. The NSF-Research Applied to National Needs solar energy budget for FY75 is estimated at \$50 million. The FY71 budget was \$1.2 million.

160. Hewson, E.W. Generation of power from the wind. Amer. Meteorol. Soc. Bull. 56(7): 660-675, July 1975.

4,6

There is vast energy available in the earth's winds for man's use. It is conservatively estimated that the wind power available to man is the equivalent of the output of 1000 typical fossil fueled or nuclear power plants of 1000 megawatts (MW) capacity pach. By contrast, the water power potential of the earth is only one-tenth as large. Large wind generators have been built and used during the past 50 years. Research on wind power sites in the mountainous, coastal and valley areas of the Pacific Northwest is being conducted. Terrain modification, aerogenerator "farms," special duty installations, environmental impacts, land use, and net energy costs are all taken into consideration. It is concluded that wind power shows promise of supplying substantial amounts of supplementary electrical energy and that the development of this wind power potential should proceed with the federal government taking a lead role.

161. Hewson, E.W. Wind-power potential in the Pacific Northwest. In: Citizens' Forum on Potential Future Energy Sources, Proceedings. Portland, Ore., Oregon Department of Geology and Mineral Industries. Miscellaneous Paper No. 18, 1975, p. 7-24.

3, 6

Research on the wind-power potential of Oregon and neighboring areas described in this article, was commenced in 1971 by Oregon State University under the sponsorship of the four Oregon P.U.D.'s and has continued since that time under the same sponsorship. The primary thrust of the research has been to study various possible wind-power sites, especially those at or near the Oregon coastline and in the Columbia River Valley. These studies have involved the detailed analysis of existing wind records and the establishment of new wind-measuring stations. At the same time, the wind tunnel at Oregon State University has been enlarged and improved to permit model studies of air-flow patterns around terrain features. If a comparison of model

and actual air-flow patterns over and near pronounced terrain features shows satisfactory agreement, then the location of desirable wind-power sites will be greatly facilitated and expediated. Other project uses of the wind tunnel are also described.

162. Hewson, E.W., R.W. Baker and R. Brownlow. Wind power potential in selected areas of Oregon. Oregon State University, Report No. PUD 75-3, August 1975. Third Progress Report. Corvallis, Oregon, Oregon State University, 1975.

6

During the third year of the project, research centered on further analysis of potential wind power sites, the development of a promising new wind analysis technique and continued research on wind tunnel simulations of wind flow over a model of a coastal headland. Offshore coastal power sites look promising, though expensive. The report concludes with an assessment of the feasibility of wind power in Oregon after three year's research, with a recommendation.

4, 6

Japan may become, without any domestic natural resources, the world's second most powerful economic nation. Since 1958, various unsuccessful attempts were made to improve the coal industry situation, which reached its peak in 1961 and has been decreasing steadily. Oil covers more than 70% of the total energy mix, and will continue to do so for the next 15 years. At least 99% of this oil is imported. There is little natural gas production in Japan, but various contracts with other

nations could raise the level of imports to 30 million metric tons in 1985. Electricity is generated by thermal rather than hydro capacity. With oil as the dominant fuel for thermal production, aside from power production and nuclear energy, only a small amount of R&D is performed in the energy field. Some research has been done on nonconventional energy sources, such as solar energy (and the manufacture of a solar battery), wave energy, wind energy, geothermal energy, and coal gasification and liquefaction.

This final report describes progress made at the Oklahoma State University on wind energy utilization. The specific objectives of this research program were: (1) to develop and build a working field modulated generator system in the 10/20 kW range suitable for use in a wind energy system to deliver standard 110/220 V single-phase 60 Hz power over a 2 to 1 range of speeds; (2) to develop and build a working high-pressure moderate-temperature electrolysis system in the 2-3 kW input range in the available high pressure test facility; and (3) to design and construct a wind generator test station at the Stillwater airport using existing field modulated generators and bicycle-wheel type aeroturbines developed by the American Wind Turbine Company. Final reports are presented covering performance details on the products of each of the three objectives. A large Appendix reproduces 13 papers generated during the two year contract period.

McLean, Va., Mitre Corp., 1975. NSF-RA-N-75-050, p. 149-155.

3, 10

Past work in Israel has shown that wind turbines enclosed in specially designed shrouds can increase the output of power of the turbine by a factor of 3 or so, as compared with unshrouded turbines under the same free wind stream conditions. However, first generation shrouds were found to be unacceptable for economical use, i.e., the ratio of the shroud's total length to throat diameter was of the order of 7. The main purpose of the present work was to arrive at a compact shroud configuration, without sacrificing aerodynamic performance. The results clearly indicate that it is possible to obtain shrouds with a total length to throat diameter ratio that is smaller than 3, and that have an aerodynamic performance similar to the first-generation model.

173. Igra, O. Shrouds for aerogenerator. Ben Gurion University of the Negev, Department of Mechanical Engineering, Report No. 2, March 1975. 53 p.

10

In order to exploit the wind power as economically as possible, it was suggested that the wind turbine be enclosed inside a specially-designed shroud. Past work has shown that such shrouds can increase the output power of a given turbine by a factor of 3 or so, as compared with the bare configuration under the same free stream conditions. However, the geometry of the first generation shrouds was unacceptable for economical use, i.e., the ratio of the shroud's total length to throat diameter was of the order of 7. The main purpose of the present work was to arrive at a compact shroud configuration without sacrificing good aerodynamic performance. The results clearly indicate that it is possible to obtain shrouds with total length to throat diameter ratio smaller than 3, with performance similar to the first-generation model.

5, 17

A clutch-controlled, wind-operated, multibladed power producing propeller includes a plurality of propeller blades mounted on a hub for rotation about a power output shaft, a clutch connected between the hub and output shaft and operable to remain disengaged until the propeller blades attain a predetermined speed of rotation. The clutch then engages to transmit power from the propeller to the output shaft.

180. James, E.C. Unsteady aerodynamics of variable pitch vertical axis windmill. American Institute of Aeronautics and Astronautics and American Astronautical Society, Solar Energy for Earth Conference, Los Angeles, April 21-24, 1975. AIAA Paper 75-649. 7 p.

3, 5, 9

A linearized theory is developed to treat the unsteady aerodynamics of a vertical axis windmill. The wind speed is uniform and steady. The circular orbit of the blades represents a large amplitude flight path motion. Along this trajectory the blades are free to execute small amplitude pitching. The results include blade force, moment, power required to sustain a specified windmill speed, and the rate of energy loss due to shedding of vorticity. Relative to the wind speed, the high and low speed cases of windmill operation are investigated.

181. Jayadev, T.S. Novel electric generation schemes for wind power plants. In: Workshop on Wind Energy Conversion Systems, 2d, Wash., June 9-11, 1975. McLean, Va., Mitre Corp., 1975. NSF-RA-N-75-050, p. 298-306.

3, 13

A variable speed prime mover would drive a conventional a.c. generator with d.c. excitation, resulting in variable frequency. To interconnect the wind energy system (WES) to existing power systems demands the output of WES to be of constant frequency and voltage. Constant voltage can be obtained by common voltage regulator techniques, but obtaining constant frequency from a

variable frequency generator is not simple. Converting WES output to "utility grade" power by cost effective techniques is discussed.

182. Jayadev, T.S. and R.T. Smith. Generation schemes for wind power plants. IEEE Trans. Aerosp. Electron. Syst. AES11(4): 543-550, July 1975.

13

This paper reviews various electric generation schemes for wind energy conversion suitable for interconnection with a power grid. The schemes can be generally classified as constant speed constant frequency (CSCF) and variable speed constant frequency (VSCF) systems. Historically, only CSCF systems have been used for large power generation in wind power plants. However, with the advent of power electronics and the availability of solid state devices capable of handling large amounts of power, VSCF systms are becoming competitive. Various schemes under each classification are discussed and compared. It is stressed, however, that the optimum choice of the generating scheme is not decided by considering the generator alone. The optimum choice is one which minimizes the cost of energy generated by the wind power plant.

3, 4, 6, 11

Windpower use for electrical power generation is reviewed in terms of past and current development, both in the USA and Europe. Technical data and operating experience are presented for a number of important windpower generation systems (WGS) in Denmark, Germany, and particularly, the Putnam 1000 kW plant at Grandpa's Knob, Vermont. Recent programs initiated by the National Science Foundation are described, as well as the USA windpower R&D program proposed for the next 5-10 year period. Consideration is given to the maximum available power from the wind and how much of this power can actually be extracted and utilized. Various systems for processing the variable speed mechanical power of wind turbines are discussed in terms of complexity, cost, availability, and specific application. Systems evaluated include synchronous, induction, commutator, and solid-state power conversion techniques. The means for storage of the varying electrical energy output are described.

U.S. National Conference on Wind Engineering Research, 2d, Fort Collins, Colorado, June 22-25, 1975. Conference Preprints. Fort Collins, Colorado State University, 1975, p. V-9-1 to V-9-3.

3, 9, 14

The KSU College of Engineering is investigating a proposed fuel system that involves the use of hydrogen as a mobile fuel for farms throughout the Great Plains states. The system envisioned is that of vertical axis wind rotors driving electrical generators which supply power to electrolysis cells. Off-peak electric energy from coal and nuclear-fueled conventional generating stations could be used to insure a stable energy supply during light wind conditions. The hydrogen is collected and stored for use as needed in the farm heat engines. Rotors, control systems, and special-purpose electrolysis cells are now in the preliminary design stage.

3, 6

Previous estimates of wind power potential in the U.S. have been based on statistics of the mean wind speed at various sites across the country. While the average power output of a wind generator will certainly depend on the mean wind speed, it will also have a dependence on other factors, e.g., variance of wind speed about the mean. A method for computing

actual expected output power from a wind generator, given the observed wind speed distribution, and results of application of this method, in the form of aerogenerator plant factor (ratio of average power output to rated power) for the continental U.S. are presented. Plant factors are evaluated for aerogenerators with characteristics of NASA's 100 kw Plumbrook unit and the design characteristics of NASA's 1 MW aerogenerator.

3, 6

The cost of generating electrical power by wind turbine generator systems is analyzed for different wind regions. Minimum cost systems are discussed. Various system configurations are studied.

196. Kling, A. Precessor system for wind energy conversion. In: Workshop on Wind Energy Conversion Systems, 2d, Wash., June 9-11, 1975. McLean, Va., Mitre Corp., 1975. NSF-RA-N-75-050, p. 465-467.

3, 5

The Precessor Wind Energy Conversion System is based on a concept which utilizes the rotor system of a wind energy converter as a gyroscope and uses the precession, which occurs whenever an external torque is exerted on a spinning rotor, to position the rotor to face into the wind and to adjust its position to the slightest changes of wind direction. The system does not fight against the precessional forces of the rotors, but puts precession to work for the system.

198. Kolm, K., et al. Evaluation of wind-energy sites from aeolian geomorphologic features mapped from LANDSAT imagery. First results. NTIS, ERDA/NSF/00598-75/T1, December 1, 1975. 39 p.

6

This research effort relates aeolian geomorphologic features, interpreted from satellite imagery, to areas of high-wind-energy potential. Preliminary results, gathered during spring and summer months, were evaluated statistically to determine the critical interrelationships for the Killpecker test area. These tests indicate that the morphology of individual dunes is not a unique indicator of wind velocity or persistence, but the morphology of the dune field is an indicator that can be used to predict areas of high wind-energy potential. These results will be used as a guide to prediction of other areas of high wind-energy potential. Field measurements will then be used to test these predictions. Similar evaluations are being made in the Big Hollow Area where aeolian erosional phenomena dominate the geomorphologic development.

199. Krueger, J.N. Evaluation of wind energy available in North Dakota. U.S. National Conference on Wind Engineering Research, 2d, Fort Collins, Colorado, June 22-25, 1975. Conference Preprints. Fort Collins, Colorado State University, 1975, p. V-20-1 to V-20-3.

3, 6

The University of North Dakota's Wind Energy project was initiated in November of 1973. The purpose of the project was to make an evaluation of the energy in the winds blowing over North Dakota during a year's time. Energy would be extracted from the wind by a conventional high speed propeller coupled to an electric generator. Continuous readings of the wind velocity and the energy produced would be recorded.

200. Lapin, E.E. Theoretical performance of vertical axis wind turbines. ASME Paper 75-WA/Ener-1, 1975. 11 p.

9

An elementary theory is developed for the power extraction capability of a vertical axis wind turbine comprising a number of blades which operate either at fixed or at continuously variable incidence. The performance according to that theory is computed for some examples and applied to estimate the economic feasibility of a turbine of 10 megawatt rating.

201. Larsen, H.C. Summary of a vortex theory of the cyclogiro. U.S. National Conference on Wind Engineering Research, 2d, Fort Collins, Colorado, June 22-25, 1975. Conference Preprints. Fort Collins, Colorado State University, 1975, p. V-8-1 to V-8-3.

3, 5

The cyclogiro was first proposed by Congreve in 1828 as a manpowered airborne vehicle. In the succeeding 147 years, it has received sporadic development. Several theories based on aerodynamics of wings combined with the momentum theorem to calculate a uniform induced flow through the rotor have been developed. An Army Air Corps study of 1943-45 recommended against the further development of the cyclogiro, although aircraft utilizing the concept were competitive or superior to fixed wing aircraft. This was because of the high level of vibration due to heavy, cumbersome mechanical blade actuation mechanisms, unsteady aerodynamic effects, and the lack of a suitable theory to predict correctly the induced flow through the rotor. auto-rotation characteristics of the cyclogiro clearly indicated that it could be used as a windmill. The successful use of the fly-by-wire concept in modern aircraft, stability augmentation systems, and the modern high-speed digital computer have advanced technology to the point where these techniques can be utilized to design and control cyclogiros, and provided the impetus for a careful reappraisal and analysis of the problem. This paper is a brief summary of the progress so far, and an application to the design of wind energy generation devices.

3, 6, 8

Historically, agriculture was a major user of wind generated power before inexpensive power from other sources became available. Because of this, it is reasonable to expect that agriculture, rural and remote area applications can again play an important role in the development of a future viable wind energy industry in the United States as fossil fuels become more scarce and expensive and that the wind energy used in such applications can substitute for an appreciable portion of the fossil fuel energy currently used in the current agricultural industry.

3, 6, 13

The objective of Honeywell's study is to define the attributes and performance requirements of a system capable of yielding a satisfactory return on investment to a utility company. An

initial system definition will be developed by designing and evaluating the most cost-effective system based on available wind information and today's technology. The system will be tailored to the Minnesota Power and Light (MPandL) Company region. Within MPandL's region is located a sparsely populated, high-wind-energy area that could be used to alleviate the load problems caused by a fast-growing taconite industry. In addition, the nation's highest utility load factor and operational flexibility derived from having significant hydro and high voltage d-c sources place MPandL in an ideal position to accept the output expected from wind power systems.

Solar heating and cooling is generally believed to have the best chance of making a substantial energy impact in the near term. Electricity generation from solar energy, solar cells, ocean thermal gradients, wind power, and bioconversion techniques are possible, or nearly possible today, but economically they shape up on the minus side of conventional techniques. At

best, by 1980 about 1% of U.S. homes could be generating up to 80% of their energy requirements, which, given the cost of oil, could save about \$2 billion/yr.

3, 5

The obvious similarities to propellers and helicopter rotors suggest that helicopter technology might be used to improve wind generator performance, perhaps including development of a windmill airfoil. In a back-to-basics approach, this paper reviews the analyses of Glauert to determine basic size-power relations. The energy method of Wheatley developed for helicopter/auto-gyro performance prediction is then incorporated into the basic theory. Equations and charts are presented showing ratios of power output to the ideal power capability as functions of mean blade lift and drag coefficients, solidity and rotor tip speed ratio. It is found there is little possibility for improved performance by using improved airfoils. The basic assumptions of the Glauert theory are reviewed and means are suggested for achieving the basic power capability indicated by momentum theory.

221. McGowan, J.G. and W.E. Heronemus. Ocean thermal and wind power: alternative energy sources based on natural solar collection. Environ. Aff. 4(4): 629-660, 1975.

6

This article discusses the two most important natural solar collection methods for large-scale energy production: (1) the collection of solar energy by the Earth's atmosphere that causes the winds; and (2) the natural collection of incoming solar radiation by the oceans that creates large temperature differences in the ocean waters. The size of these energy conversion systems could range from a few kilowatts for individual household windpower systems to large-scale 400-MW ocean thermal difference power plants. The historical development of systems designed to utilize these renewable energy sources and their potential for making a significant contribution to the energy supply of the U.S. are discussed. Recent research results and technological developments in total power systems and important subsystem components, including those used for the storage of energy, are discussed. An attempt is made to enumerate the recognized technological and institutional problems standing in the way of their potential implementation. A compilation of 63 footnotes completes the articles.

3, 8, 15

Practical systems are described which will enable the placing of an aerogenerator on communication aerostats. These tethered

aerostats are high-altitude platforms for wide-area telecommunication and broadcast functions. The purpose of this effort is to investigate the use of airborne windmills to increase the operational availability of the aerostat system. Preliminary calculations indicate that useful amounts of power could be generated economically without increasing the weight of the aerostat and without appreciably changing its angular position.

Brisbane, Australia, December 3-5, 1975. Sydney, Australia, Institute of Engineering, 1975. (National Conference Publ. No. 75/9) p. 37-41.

3, 6, 9

The Savonius rotor, a special form of panemone, has scientific application as a current velocity meter in hydrographic investigations, but its industrial users are limited at present to powering ventilators. The practical advantages of a machine of such extreme simplicity, and the uncertainty as to its performance or underlying principles of operation, led the Department of Mechanical Engineering of Queensland University to begin investigations into vertical-axis machines in general, and the Savonius rotor in particular. This paper reports some preliminary results. It is suggested that an extension of the Savonius rotor geometry leads to a multiblade rotor, resembling the cross-flow fan or the Banki turbine.

Workshop on Wind Energy Conversion Systems, 2d, Wash., June 9-11,
1975. McLean, Va., Mitre Corp., 1975. NSF-RA-N-75-050, p. 353-355.
3, 6

The objective of the research is to test whether ERTS observations of aeolian geomorphology features can be used to locate areas of favorable wind energy conversion sites.

230. Mason, R.M., et al. Macro analysis of the potential for fuel savings using wind generators in a utility power grid. In: Modeling and Simulation. Vol. 6. Proceedings of the Sixth Annual Pittsburgh Conference, Pittsburgh, Pa., April 24-25, 1975. Part 1. Pittsburgh, Pa., Instrument Society of America, 1975, p. 121-126.

3, 6

Surveys of wind energy potential were conducted and an electric power grid model was developed to examine the potential of using wind energy as a means of conserving fuel. An economic interpretation of the results is presented. 231. Massart, G. Utilisation de l'energie eolienne. [Utilization of wind energy.] Onde Electr. 55(4): 225-230, April 1975. (In French)

Utilization of wind energy, which is available in important quantities on the earth's surface, cannot be conceived without having a good idea of all the factors involved. The first part of this article sums up these factors, meteorological as well as technological. The second part is a quick survey of attempts to use wind energy on more or less large scale as well as of projects actually studied.

232. Mayo, L.H. Legal-institutional implications of wind energy conversion resources. In: Workshop on Wind Energy Conversion Systems, 2d, Wash., June 9-11, 1975. McLean, Va., Mitre Corp., 1975. NSF-RA-N-75-050, p. 385-391.

3, 4, 6

The principal concern of this unsolicited project is to examine the existing legal and institutional constraints on, and the corresponding changes necessary to optimize development of a variety of possible wind power configurations in certain defined social and geographical environments.

233. Meier, R.C. Concept selection and analysis of large wind generator systems. In: American Helicopter Society, Annual National Forum, 31st, Washington, D.C., May 13-15, 1975. Proceedings. New York, American Helicopter Society, Inc., 1975. 10 p.

3, 6, 7

The increasing need to develop alternative energy sources has renewed interest in the use of wind energy for the generation of utility quality electricity. This paper discusses a program to evolve a preliminary design of a cost competitive large wind generator system. An examination of a number of technically feasible alternative wind energy configurations is reported, and the rationale used in selecting the preferred system concept is presented. In addition, preliminary results of an optimization study conducted on the preferred concept are summarized. These show that considerable latitude in the selection of the system design parameters is possible. This permits design decisions to be based on other important factors such as development risk and the suitability of common component designs for systems with different power ratings.

234. Meier, R.C. Concept selection, optimization, and preliminary design of large wind generators. In: Workshop on Wind Energy Conversion Systems, 2d, Wash., June 9-11, 1975. McLean, Va., Mitre Corp., 1975. NSF-RA-N-75-050, p. 46-58.

3, 6, 7

A preliminary design of a large wind generator system for use by electric utilities is described. The conceptual design task covered the examination of a number of suitable WGS concepts, an evaluation of three of the most promising of these concepts, and the selection of the system concept which appeared to be most suitable for the utility application. The parametric analysis covered the development of a computer program capable of optimizing the system and its components, and the system optimization. The applications and requirements analysis identified with specific utility interface requirements of a WGS in a standard electric utility application, and estimated the cost goals necessary for the system to be competitive with conventional generation equipment. These three initial tasks have been completed, and the results are presented.

3, 6

The objective of this research is to increase technical capacity to locate favorable wind system sites, reduce uncertainty in the prediction or validation of the characteristics of sites, and thus assist in the sizing and performance prediction of wind systems. The research will include evaluation of low speed aerodynamics over terrain and boundary flow conditions over ridges and in valley exits to mountain barriers by means of modeling and analytic techniques.

5

The energy of the wind could be harnessed by controlling the atmospheric process so that wind energy is released at high intensity at selected locations. An engine consisting of a controlled tornado-like vortex is proposed.

3, 6, 14

Analytical, wind tunnel, and full scale studies of a novel wind powered electrical generating plant were conducted in the 1930-1934 time period. This system, invented by Julius

Madaras, using the Magnus force generated by rotating, vertically mounted cylinders to propel an endless train around a closed track. Generators geared to the car axles produced the electric power. The system was proven to be technically feasible, and preliminary cost figures were encouraging. The project was discontinued due to the lack of funds in the depression years. The system concept is presented along with current results from our study including performance data and cost estimates of the Madaras rotor system.

National Aeronautics and Space Administration, Langley Research Center, Langley Station, Va. NASA-TM-X-72662. NTIS, N76-11032, October 1975. 85 p.

5, 9

A general analysis capable of predicting performance characteristics of cross-wind axis turbines was developed, including the effects of airfoil geometry, support struts, blade aspect ratio, windmill solidity, blade interference and curved flow. The results were compared with available wind tunnel results for a catenary blade shape. A theoretical performance curve for an aerodynamically efficient straight blade configuration was also presented. In addition, a linearized analytical solution applicable for straight configurations was developed. A listing of the computer program developed for numerical solutions of the general performance equations is included in the appendix.

3, 5

In this report the concept of the linearly moving, reciprocating airfoil cascade is being introduced as a possible means for the conversion of wind energy into useful mechanical energy. A small scale model of the reciprocating wind machine has been built and tested. The results assert the technical feasibility of the concept. Because of its inherent geometrical properties, the machine possesses a strong potential for use in urban areas as well as other conventional wind sites. Currently, the research efforts at the IIT aim at measuring the output power of the machine, estimating its efficiency and establishing means for further improvements.

3, 5, 6, 10

The Diffuser-Augmented Wind Turbine (DAWT) concept to be developed in this project is aimed at increasing the output and reducing the cost, the off-duty time, and the technical risk of large wind turbine systems for commercial power production. Rotors 100 feet in diameter and larger, encased in diffuser shrouds, with the shroud supports functioning as a variable stator stage ahead of the rotor are studied. The stator blades have trailing edge flaps that need no pitch or speed change to accommodate the wind speed variations. The goals of the project are to demonstrate large aerodynamic augmentation with very compact diffusers, design and compute the performance of stator/rotor systems that give efficient performance at precisely constant rotational speeds over a broad wind range with fixed-pitch rotors, and to establish cost comparisons for these and competitive wind systems.

3, 5

The basic response characteristics of wind turbine rotor blades are developed using elementary analytical techniques. The uncoupled flapping response to the vertical gradient of wind, crosswind, rotor shaft yaw precession, and gravity forces; and the uncoupled lead-lag response to gravity forces are treated. The influence of blade number and hub articulation on blade loads and tower loads is examined and basic scaling relationships are discussed.

Information contained in the detailed publication "World Energy Conference Survey of Energy Resources 1974" is summarized.

Resources of coals and lignites, peat and noncommercial fuels, petroleum, natural gas, hydraulic energy, nuclear energy, geothermal energy, tidal power, ocean thermal gradients, wind power, and solar energy are reviewed. The coal equivalent of world annual energy consumption rose from 4707 MT in 1963 to 7410 MT in 1972, that is, by 54.7% in 10 years. Per capita consumption of energy per annum increased by 33% in the same period.

6

A preliminary feasibility study indicates that present laser transmitters and receivers are capable of ranges applicable to wind-power prospecting and site surveying. This study shows that a $\rm CO_2$ laser system is preferable, given present technology. However, in tropical areas, such as Oahu, Hawaii, the advantages of the $\rm CO_2$ system are somewhat reduced due to absorption by water vapor, although they still outweigh present visible laser systems.

263. Proposal for the use of a controlled tornado-like vortex to capture the mechanical energy produced in the atmosphere from solar energy. Am. Meteorol. Soc. Bull. 56(5): 530-534, May 1975.

5

An engine consisting of a controlled tornado-like vortex to harness the energy of the wind by controlling the atmospheric process, so that wind energy is released at high intensity, is described. Based on an average of 10 w/sq m, the amount of mechanical energy produced in the atmosphere is 5100 TW, while that of humans is 10 TW. Control of the atmospheric engine

could make the vast amount of mechanical energy being produced in the atmosphere available to do useful work.

In: American Helicopter Society, Annual National Forum, 31st, Washington, D.C., May 13-15, 1975. Proceedings. New York, American Helicopter Society, Inc., 1975. 9 p.

3, 5, 6

Design approaches to electric-power-generating windmills that may achieve economically attractive cost of energy are discussed. Innovative approaches to the design of the three highest cost components; rotor, gearbox, and tower are presented. Advantages of the one-bladed rotor are shown. The importance of rotor hub articulation is discussed. Sizing of the windmill so that there can be an adequate market to justify production is also considered. The need for standardization in assumptions made in the accounting aspects of cost analyses, and the requirements for wind prospecting to determine with assurance the geographic areas that have sufficient wind are shown.

5, 17

A wind power generator is described which has a horizontally rotatable platform with a plurality of vertical blades mounted around its periphery, all of the blades rotating coaxially around a central axis and each rotating on its own axis. The vertical blade rotation is responsive to changes in wind direction, as well as to changes in wind velocity and the rotation of each blade is controlled in such manner that through about three quarters of the platform rotation power is absorbed from the wind, while during the remaining period in which the blades are traveling against the wind, the blades will be substantially in phase with the wind for minimum resistance.

3, 6, 7

A case is made for the continued development of solar and wind energy systems to provide viable alternatives to fossil fuels in the years to come. A simplified economic analysis of solar and wind energy systems of the type being developed at Oklahoma State University is presented and the calculated generation costs in mills per kWh are compared with those of conventional fuel-burning systems for different fuel costs, load factors and interest rates. The results show that certain aspects of solar and wind energy conversion can, at present, generate energy at costs competitive with conventional systems and that more favorable conditions can be expected in the future as fossil fuels become scarce and fuel costs further go up as predicted.

4, 111

Solar energy research under way at Oklahoma State University in solar energy technology is discussed. Several components required to engineer a continuous duty power system from intermittent energy sources, such as solar radiation and wind energy, have been developed. A solar energy storage system for the future is outlined, and the economics of such a system are presented. Present methods of solar energy collection, conversion, storage, and utilization are reviewed. Appendixes include energy storage comparisons, properties of hydrogen, electrolysis data, and information on wind power.

Stillwater, Oklahoma, Oklahoma State University, 1975, p. 14-1 to 14-16.

3, 6

The paper discusses briefly the prospects of several technologies for supplementing energy resources in the coming decade, including wind energy, biomass, solar thermal conversion, ocean thermal gradient systems, and photovoltaic conversion, and then gives an assessment of solar and wind energy economics. Breakeven capital cost limits for solar and wind energy systems have been calculated for different fuel costs, interest rates, and load factors. The necessity of the electric utility sector to look into such variable power sources as solar and wind is expressed.

3, 4, 5

A brief overview is presented of the electrical technology research associated with wind energy conversion systems. Salient features of the research work at Oklahoma State University as applied to wind energy systems sponsored by NSF/RANN Grant GI-39457 are also included.

277. Ramakumar, R., W.L. Hughes and H.J. Allison. Wind energy utilization prospects. Annual Technical Meeting of the Institute of Environmental Sciences, 21st, Anaheim, Cal., 1975. Proceedings. Mt. Prospect, 111. Institute of Environmental Sciences, 1975, p. 138-142.

The chief technical, economic, and environmental aspects of wind energy utilization are considered. One approach being studied is to allow the aeroturbine RPM to vary with wind velocity and employ variable-speed constant-frequency generating systems to obtain constant-frequency power to be pumped into existing utility mains. Study of generation costs for wind energy systems indicates that wind energy has the potential to be competitive at present as a supplemental energy source. Wind energy systems appear to be environmentally benign, though more research is needed on the impact of large scale wind energy utilization.

The Western Great Plains experiences a great flux of wind power that might be exploited. Even with conservative assumptions about collection efficiency, the supply exceeds total national demands by a factor of at least two. Wind speed increases with height above the ground friction layer, so that very large turbines, 30-60 m in diameter, could capture even more energy than shown by weather station anemometer data.

6

Energy conservation can make some contribution to solving the energy problem, but the U.S. standard of living cannot be increased or even maintained by using less energy per capita. Coal and nuclear power are the only feasible fuels for additional and replacement central station power in this century and possibly for some time thereafter. Even with a maximum effort, less natural gas and oil will be produced in 10-20 years than in 1975. Solar and fusion power utilization will be well beyond the year 2000, while geothermal and wind power have only limited potential. Synthetic gas and cil and shale oil, much of which may be environmentally unacceptable, will be very expensive. Nuclear energy, the least expensive alternative, is safe, reliable, and environmentally acceptable. Congress, the federal government, and state agencies should unshackle its development.

The government and the public must have a good understanding of the position and problems that the nation faces with respect to energy. The U.S. has sufficient potential energy resources from most sources to rely on continuing expansion of production as required to meet growing needs and to remain largely self-sufficient in energy, provided that the nation follows policies designed to achieve that objective. The current position, development problems, outlook for, and recommendations involving wind, solar, and tidal energy, petroleum liquid fuels, natural gas, coal, hydroelectric power, nuclear energy, synthetic oils, and synthetic gas are summarized.

290. Review of Project Independence. Blueprint-Panel Sub-Committee Reports on FEA-Interagency Task Forces. Commerce Technical Advisory Board, Washington, D.C. Report on CTAB Recommendations for a National Energy Program. Sub-Committee Working Documents. NTIS, COM-75-10500, 1975. 308 p.

4, 6

Data, assumptions, and background information used to develop Project Independence Blueprint are discussed. Topic areas covered include: Energy demand/conservation; Coal; Oil, Natural gas; Nuclear energy; Future energy sources; Oil shale; Transportation; Water and environment; Human resources; Finance; and Materials, equipment, and construction.

291. Robinson, J.P. Is the answer to the energy crisis blowin' in the wind? Ocean Ind. 10(1): 37-39, January 1975.

4, 6

The ability of a wind plant to capture power from the wind is discussed. Wind-driven power generators work; the key is how

to get the costs down to make them competitive with other energy sources. Large capacity wind plants are more economical, but large wind plants in existence are primarily research models. A wind plant built to develop 1000 kW might cost \$3.5 million; 4880 windmills would be required on offshore platforms to supply the same annual energy total as one 12,000 BPD oil platform.

3, 5

This aerodynamic research program is aimed at providing a reliable, comprehensive data bank on a series of wind turbines covering a broad range of prime aerodynamic and geometric shape variables. Such data obtained under controlled laboratory conditions on turbines designed by the same method, of the same size, and tested in the same wind tunnel are currently not available in the literature. Moreover, this research program is further aimed at providing a basis for evaluating the adequacy of existing wind turbine aerodynamic design methodology, for assessing the potential of recent, advanced theories, and for indicating the need for further method development and refinement.

3, 5

This paper presents a brief discussion of the aerodynamic methodology for wind energy generator turbines, an approach to the design of aerodynamically optimum wind turbines covering a broad range of design parameters, some insight on the effect on performance of nonoptimum blade shapes which may represent lower fabrication costs, the annual wind turbine energy for a family of optimum wind turbines, and areas of needed research.

On the basis of the investigation, it is concluded that optimum wind turbines show high performance over a wide range of design velocity ratios; that structural requirements impose constraints on blade geometry, that variable pitch wind turbines provide excellent power regulation and that annual energy output is insensitive to design rpm and solidity of optimum wind turbines.

The National Science Foundation and NASA's Lewis Research Center are cooperating on a five-year Wind-Energy Program, the objective of which is to provide the technology for cost competitive wind-driven electric-power generation. The fiveyear program provides for development of large scale (100--3000 kW) systems and advancing technology via supporting research and technology. General Electric under contract to NASA-Lewis (NAS 3-19403) is involved in one aspect of this effort. This contract covers conceptual design, parametric analyses and preliminary design of Wind Generator Systems (WGS) for electric utility applications. In conceptual design, various approaches were investigated and trade-offs conducted to determine the most cost effective designs. Parametric analyses have been conducted to optimize the design and determine the cost sensitivity of the design to the parameters over the range of powers considered. Preliminary design will define system detail and provide more accurate performance and cost analyses.

6

The RD-7000 prototype turbine designed by E.L. Salter is described.

298. The Salter RD-7000 wind turbine. Mother Earth News, No. 32: 104, March 1975.

8, 12b

Described is Edmund L. Salter's turbine, being developed by Wind Power Systems, Inc. of San Diego. The turbine can produce 7,000 watts of 120-volt current in a 25-28 mph wind and a maximum of 1000 watts at 32 mph. The unit should provide enough electricity to run a single family home in any location with a minimum average yearly wind velocity of 8 mph.

3, 8, 9

This paper describes a vertical-axis wind turbine developed by Bristol to provide power for an automatic weather station on a Beaufort Sea ice island. The vertical-axis layout was selected since it meets the operational requirements for compact shipment, east of assembly, ruggedness, and high reliability in a harsh environment. The 8.7 foot diameter Bristol windmill is designed to start in a 10 mph wind, deliver one kilowatt of mechanical power from a 25 mph wind, and structurally withstand winds up to 100 mph. The turbine shaft is direct-coupled to a unique form of alternator that has negligible starting torque, and achieves optimum operation in the 100-200 rpm range. The windmill is mounted in a special support frame that permits installation on essentially unprepared sites with a minimum of assembly tools and labor, and using a very simple foundation.

A jet-age, "super-windmill" that can produce five times more electric power than existing wind-energy systems has been invented by Pasquale M. Sforza, at Polytecnic Institute of New York.

306. Sforza, P.M. Vortex augmentor concepts for wind energy conversion. In: Workshop on Wind Energy Conversion Systems, 2d, Wash., June 9-11, 1975. McLean, Va., Mitre Corp., 1975. NSF-RA-N-75-050, p. 433-442.

Suitably designed aerodynamic surfaces are used to generate tornado-like vortical concentration of the natural wind.

These surfaces are configured in such a way as to direct the aerodynamic vortices to an appropriately designed rotor system for the purpose of transforming the energy of the wind to shaft work. Such a system constitutes the Vortex Augmentor Concept (VAC). An illustration of the VAC is given. A triangular, or delta, aerodynamic surface at an angle of attack to the wind will generate vortices by leading edge separation of the flow. The contribution of the vortices to the total lift coefficient on such a delta surface is shown.

3, 5, 10

This paper represents a summary of a continuing study of high solidity ratio cross-flow rotors in general, and the Savonius rotor in particular. At present the problem is approached from both the theoretical as well as the experimental viewpoints. An analytical model is being developed which will account for the variations of forces with the angle of rotation. The experimental study concentrates on geometric relationships of the rotor elements and on optimizing the blade configuration. The effect of various performance enhancing devices such as shrouds is also being examined.

3, 6

It is shown that wind power system optimization can be achieved by consideration of the four quantities of average annual energy extracted, wind statistics, efficiency of conversion of wind energy to shaft rotation energy and the cost characteristics of the wind interaction elements (blades), the electric generator and the remaining system components. The problem reduces to the determination of two dimensionless parameters as a function of the wind statistics. These parameters determine the optimum blade diameter and the generator size. Example wind statistics and an example optimization problem are given.

313. Smith, R.T. and C.E. Burton. Effect of wind harmonic and gust torques on induction generators. Part 1. ASME Paper 75-WA/Pet-4, 1975.

5. 14

This paper presents a method of direct simulation of induction generator performance for calculation of responses to applied shaft torques arising from harmonics caused by tower shadow, wind variations, and other disturbances to a wind-powered turbine. Wind-gust induced torques are also applied to the induction generator, inertia model. It is shown that typical values of machine parameters and wind data result in stable operation of the generator. The approach can easily be extended to include refinements and detailed representations of the mechanical system.

3, 6, 7

Considerable attention is now being given to investigate wind energy as a supplemental source to meet the growing energy demands. NASA is conducting proof-of-concept experiments and is currently designing a 100 kw system. Large wind generating stations (WGS) of the sizes of 1000 kw to 10,000 kw are contemplated, although most of the wind power plants of the past were of small sizes (say less than 10 kw), pumping water or generating electricity in conjunction with battery storage. This paper discusses some electric generation schemes for large wind power plants (of capacities of 1000 kw or more) which may be suitable for interconnection with a power grid.

316. Some small innovators heat homes by sun, light them by wind. Wall St. J., March 18, 1975, p. 1.

4, 8

For a small group of architects, engineers, and innovators, energy independence is not just a political platitude but a reality. Their homes are outfitted with various devices to produce and preserve energy. All employ equipment to capture heat from the sun, and some use windmill generators to provide electricity. Homemade heat is stored in large water tanks, in rocks under the floor, or in concrete walls. These efforts are privately funded since federal research money is not directed toward energy conservation at the family level.

-6

Since World War II Denmark has developed a 90% dependence on oil from the Middle East. The country has practically no nonrenewable energy sources. A plan based on potential renewable energy resources of Denmark through which solar and wind energy would supply the nation's needs by the year 2050 is outlined. Solar and wind energy systems and requirements are

described. The project is economically feasible according to estimates of the cost of various alternatives during the 25 year depreciation period adopted. However, initial cost per energy unit produced is higher than that for most alternatives, so action due to purely private initiative is not expected.

5

The objective of the one year program is to explore the feasibility of the Composite Bearingless Rotor (CBR) for use as a wind turbine and to evaluate several automatic control

concepts designed to improve efficiency and cost effectiveness. The program consists of the design of a full-scale wind turbine, the design and fabrication of a dynamically scaled model, wind tunnel experiments, and analytical studies. To date, the design work has been completed, the model wind turbine support tower has been fabricated and assembled with a generator. The model blades and other hardware are under construction. This interim progress report contains descriptions of the full scale and model designs, a review of the performance characteristics expected of the wind turbine, and an outline of the remaining tasks of the program. Appendices are included to provide detailed information on some of the design characteristics of the model wind turbine.

6,8

The question of utilizing the wind and sun to provide the energy required by an average home for space heating, air conditioning, and a hot water supply was considered. Energy requirements were compared with the daily availability of wind and solar energy and the storage needed to reconcile the two was determined. Preliminary design procedures are shown for wind and solar energy collection and systems storage. Initial design procedures are also shown for an accompanying heating and cooling system. Although wind and solar energy are free, nondepleting and non-polluting, the high initial cost of the required hardware causes them to be economically noncompetitive with more conventional fuels. Specifically, this system was estimated to have an annual cost in 1975 of around 2-1/2 times that of a home heated by natural gas and about 13 percent higher than an all electric home. However, this cost was estimated to drop by at least one third by 1985.

8, 15, 17

A wind turbine driven generator for the recharging of batteries utilized as the power source for various vehicles, and particularly an automotive electrically driven vehicle is described. Wind driven vanes of particular design are mounted to rotate about a vertical shaft disposed in or on the roof of the vehicle, the vanes being completely enclosed within a suitable housing of either rectangular or circular configuration. The wind driven vanes rotate while the vehicle is under way, or, if air currents are prevalent, even while the vehicle is not in motion, thus to drive a suitably mounted generator for more or less continuous recharge of the battery system. The generator is mounted within the hub around which the vanes rotate, and comprises a stationary stator, and rotating rotor.

328. Storable, renewable hydrogen power--key to unlocking energy from the sun, wind, tides. Pop. Sci. 206(3): 88-91, March 1975.

6

In the hydrogen economy, hydrogen would be the common element making possible generation, storage, and reuse of all other forms of energy in the most efficient, least polluting way. Thermochemical and direct thermal dissociation of hydrogen using nuclear reactors is described. Heat from solar concentrations could produce hydrogen thermochemically. Some hydrogen storage difficulties are discussed.

329. Strickland, J.H. Darrieus turbine: a performance prediction model using multiple streamtubes. Sandia Labs., Albuquerque, N. M. NTIS, SAND-75-0431, October 1975. 38 p.

5, 9

A multiple streamtube performance prediction model for the Darrieus turbine is presented. This model is shown to predict the performance of small-scale rotors, for which test data is available, much more accurately than the single streamtube model. The model is capable of predicting the overall rotor

power output and the distribution of aerodynamic forces along the rotor blades. The model can be used to study the effects of rotor geometry variations such as blade solidity, blade taper, and variations in rotor height-to-diameter ratios. In addition, spacial variations in freestream velocity such as that produced by atmospheric wind shear can be easily incorporated into the model.

337. Swanson, R.K. and R.T. Smith. Operational, cost, and technical study of large windpower systems integrated with an existing electric utility. Progress Report, covering the period May 1, 1975 through October 31, 1975. San Antonio, Tex., Southwest Research Institute. NTIS, COO-2621-1, 1975. 30 p.

6, 13

The progress during the period 1 May 1975 to 31 October 1975 on a study of the windpower potential in the Texas Panhandle is presented with particular reference to the integration of wind-generated electrical power into an existing electric utility system. Using data from 17 wind stations in the region, it has been calculated that the specific energy output of the region can be upwards of 0.65 kwh per rated kw per hour, averaged over a yearly period. The analysis utilizes realistic wind generation system performance at three different rated wind speeds: 8, 10.7 and 13.4 m/s. Four different tower heights are assumed: 30, 46, 61 and 76 m.

338. Swanson, R.K., R.T. Smith and C. C. Johnson. Operational, cost and technical study of large windpower systems integrated with existing public utilities. In: Workshop on Wind Energy Conversion Systems, 2d, Wash., June 9-11, 1975. McLean, Va., Mitre Corp., 1975. NSF-RA-N-75-050, p. 92-97.

3, 6

The potential, the promising deployment schemes, the cost goals, and the research problems inherent in the large scale implementation of wind energy conversion systems in the Texas Panhandle are analyzed. The methodology to be developed during the program is expected to be easily transferable to other utility systems of interest.

339. Sweeney, T.E. Princeton windmill program. Princeton University, Dept. of Aerospace and Mechanical Sciences, January 1975. 29 p.

4

A non-technical description is provided of the history, present status, and future goals of the Princeton Windmill Program. Two windmills are discussed: the Sailwing windmill, which was the first windmill built at Princeton in 1966; and the autorotating vane wind machine, which also receives some priority in the Princeton program. A method to compute the electric power output of a modern windmill is presented. Problems with using wind power are discussed. Designing a windmill to withstand maximum winds can be accomplished by building a braking system; by providing blade pitch control; or by providing blade twist control. New technology, using constant frequency alternators, may eliminate the need for gearing, which has been used to convert the rotary motion of the windmill. to production of power. In considering energy storage, the investment in storage is directly related to the constancy of winds in the area that the windmill is located. It is pointed out that this paper can not answer all the questions concerning wind power because much more research needs to be done.

340. Sweeney, T.E. Sailwing windmill technology. In: Workshop on Wind Energy Conversion Systems, 2d, Wash., June 9-11, 1975. McLean, Va., Mitre Corp., 1975. NSF-RA-N-75-050, p. 224-228.

3, 5

The major objective of the Princeton Windmill Program is easily stated. This is to understand the aerodynamics of a windmilling rotor and the effect of geometry upon the efficiency of such a device. Basically the chore has been to determine the optimum blade platform, blade twist and pitch angle. All work (other than small scale) has utilized the Princeton Sailwing largely becuase it is most easily changed in twist. It is also most simple and inexpensive to construct. A parallel program, utilizing small scale wind tunnel models, has enabled the pursuit of a second objective of determining the effect of center bodies upon the efficiency of a windmilling rotor.

3, 7

Design problems associated with large wind turbine generator systems are discussed. The development schedule in the U.S. for large wind turbine generator system is presented.

346. Thomas, R.L., et al. Plans and status of the NASA-Lewis Research Center wind energy project. NTIS, N75-21795, NASA-TM-X-71701, 1975. 31 p.

4, 6

Wind energy is investigated as a source of energy. The wind energy program that is managed by the NASA-Lewis Research Center is described. The Lewis Research Center's Wind Power Office, its organization, plans, and status are discussed. Major elements of the wind power project included are an experimental 100 kW wind-turbine generator; first generation industry-built and user-operated wind turbine generators; and supporting research and technology tasks.

4, 6

Because of the recent National concern over the future availability of energy supplies, the Federal Government has initiated a program to investigate alternative energy sources. Among the alternatives under consideration is the utilization of wind energy. A major phase of the wind energy program is the development of reliable wind turbines for supplying cost-competitive electrical energy. This paper discusses the pre-liminary results of two projects in this phase of the program. First an experimental 100 kW wind turbine design and its status are reviewed. Also discussed are the results of two parallel design studies for determining the configurations and power levels for wind turbines with minimum energy costs. These studies show wind energy costs of 7 to 1.5 cents/kWh for wind turbines produced in quantities of 100 to 1000 a year and located at sites having average winds of 12 to 18 mph.

348. Thomas, R.L., T. Sholes and J.E. Sholes. Preliminary results of the large experimental wind turbine phase of the National Wind Energy Program. Presented at Frontiers of Technology Conference, Stillwater, Okla., October 1-2, 1975. NTIS, N75-32594, 1975. 25 p.

3, 6

The preliminary results of two projects in the development phase of reliable wind turbines designed to supply cost-competitive electrical energy were discussed. An experimental 100 kW wind turbine design and its status are first reviewed. The results of two parallel design studies for determining the configurations and power levels for wind turbines with minimum energy costs are also discussed. These studies predict wind energy costs of 1.5 to 7 cents per kW-h for wind turbines produced in quantities of 100 to 1000 per year and located at sites having average winds of 12 to 18 mph.

3, 6

In small scale applications of wind energy the general rule is that the windmill site is determined by the location of the user and is not selected because it is a particularly windy place. With small windmills siting is a matter of determining whether or not there is sufficient wind at a given place to economically justify installation of a windmill. A method is needed to determine wind energy based on a simple and inexpensive technique of measurement and analysis. Such a method is proposed here that requires a few months measurement of average wind speed and very little data analysis. Expenditure in equipment and time would be small.

3, 6

Plans for the construction and operation of a solar heating and cooling system in conjunction with an office building being constructed at Langley Research Center, are discussed. Supporting research and technology includes: testing of solar collectors with a solar simulator, outdoor testing of collectors, property measurements of selective and nonselective coatings for solar collectors, and a solar model-systems test loop. The areas of a wind energy program that are being conducted include: design and operation of a 100-kW experimental wind generator, industry-designed and user-operated wind generators in the range of 50 to 3000 kW, and supporting research and technology for large wind energy systems. An overview of these activities is provided.

9

The South-Rangi "eggbeater" wind turbine is described.

363. Videan, D. Rotors in reverse. Shell Aviat. News, No. 431: 12-15, 1975.

5

In an application of helicopter rotor technology to wind power, a two bladed rotor of the teetering type is employed. There is no mechanism for keeping the rotor headed into wind, for the simple reason that it is designed to trail down wind. The blades are attached to the steel hub by means of a patented torsion link which gives a high degree of stiffness to the rotor both in the flapping and the drag planes, and furthermore imparts a low and controllable stiffness about the blade pitch axis. By this method, mechanical bearings and pitch change mechanisms are eliminated, giving the rotor infinite life with no maintenance. In operation, the rotor will start to turn in a light breeze and will achieve its operating speed of 645 revolutions per minute very quickly. Should the speed of the rotor increase owing either to a decrease in the load or an increase in the wind velocity, the self-governing characteristic comes into action. To transmit the power downwards from the rotor and hub at the top of the pylon, use is made of an automotive right-angled bevel gearbox. Power for a private house and direct heat conversion for a greenhouse are only two of a number of possible uses.

4

In this overview the authors show how the varied technologies for exploiting solar energy compare to one another. They feel that a good understanding of the physical advantages and limitations of different options is necessary to provide a solar R and D program with a rational basis. With a few examples they attempt to dispel the notion that solar energy is inherently pollution free. Compared to other energy technologies capital costs of solar energy are high, but the era of cheap fossil fuels is over and there is little likelihood that we are entering an era of cheap nuclear energy. Moreover, the authors feel the resource holds very great promise, especially in the forms of wind power and photosynthetic energy, for the energy-hungry developing nations, where conditions for exploiting the resource are often favorable and per capita energy consumption is low.

3, 5, 9

Aerodynamic performance and structural requirements will be studied theoretically and experimentally, and initial cost estimates obtained, for two wind machine concepts. The first, a revision of the vertical axis panemone, utilizes high-lift, variable angle-of-attack, circulation-controlled airfoils; and the second, a wind energy concentrator, uses a vertical airfoil to form a strong wing tip vortex harnessed by a relatively small, highspeed turbine downstream of the wing tip.

368. Walters, R.E., et al. Innovative wind machines. Report for 1 March - 31 August 1975. NSF/RA/N-75/223. NTIS, PB252617, September 1975. 160 p.

5, 9

This report describes theoretical and experimental research concerning the evaluation of two concepts for wind (energy conversion) machines. The first concept is that of a vortex concentrator: a high-lift vertical airfoil in the ambient wind generates a trailing vortex which has its energy harnessed by a relatively small high-speed turbine located just downstream of the wing tip. The device concentrates wind energy so that for a given size turbine the potential power output is greatly

increased. Work summarized in this report includes a partial review of available papers on the subject of wing trailing vortices, and some calculations concerning the anticipated output of such a device. Future theoretical and experimental efforts on this project are also discussed. The second concept described is that of a vertical axis panemone device with circulation controlled airfoils for the blades. A preliminary theoretical analysis utilizing strip theory has shown the effect of different design features on its operation, and has led to the design of a test model. The configuration, instrumentation, and control systems of the test model are discussed. Also contained is an outline for a more exact flow theory, which properly takes into account the unsteady aerodynamics involved.

Since 1973, Sandia Laboratories has been studying wind turbines and in particular Darrieus-type vertical-axis wind turbines (VAWT) for use in remote areas and as a fuel saver for electrical power grid application. The VAWT being investigated at Sandia employs curved blades which minimize bending stresses. The tension-only stresses in the blades provide a variety of manufactured methods to be considered. Mathematical procedures that are being developed for structural analysis are discussed.

373. Weingarten, L.I. and R.E. Nickell. Nonlinear stress analysis of vertical-axis wind turbine blades. ASME Paper 75-DET-35, 1975. 4 p. Also J. Eng. Ind. 97(4): 1234-1237, November 1975.

5, 9

A Darrieus-type vertical-axis wind turbine has been proposed as an alternate to conventional horizontal axis, propeller-type machines. An advantage is that the blades will be primarily in tension, thus making for a more efficient design. In connection with its vertical-axis wind turbine program, Sandia Laboratories has developed the "troposkien" (Greek for turning rope) shape for the blade design. The prototype blade shape is similar to that of the troposkien, but more easily manufactured. The effect on the stress distribution of this alternate blade shape is investigated.

5

Possible probability density functions and the corresponding integrals (probability distributions) describing the frequency and duration of near surface wind speeds (V) are the "Planck," Incomplete Gamma, Weibull, and another we call the TWF, functions. These are compared, using synthetic and actual wind data as inputs in computed fits to the integral functions. The TWF may be a useful quick approximation for duration curves (%>V vs V), being based on one constant and the mean speed, \overline{V} ; it is

 $\% \ge V^{\approx}100 \text{ e}^{-a(V/\overline{V})^2}$

where a is about 0.70 to 0.80.

3, 5

A new type of wind energy system is described. Data from wind tunnel tests of a small model are presented and compared with several rough analyses. It is found that one of the analyses gives a good agreement with the data on shaft power output. Applying the analyses to larger systems one finds that for the same sized turbine and the same wind speed, power outputs of this design may be 100 to 1000 times that of the conventional design. It appears that the new system can be developed to achieve multimegawatt unit capacities.

3, 5

Changes in wind direction result in transient weathercocking oscillations of conventional horizontal axis wind energy converters. This reuslts in substantial bending fatigue loadings of the individual blades and vibration of the system. The structural dynamic problem of minimizing the maximum cyclic bending stress in the windmill blades is formulated and solved as an optimal control problem where the natural frequency and

fraction of critical damping are determined to minimize an integral square cyclic stress penalty function over a very long time interval. It is found that the optimum fraction of critical damping for the weathercocking oscillation varies between .55 and .65 as a variety of windmill design parameters are varied. The technique developed for optimizing the dynamics of the weathercocking oscillation is seen to apply to a variety of windpower dynamical problems.

Workshop on Wind Energy Conversion Systems, 2d, Wash., June 9-11,
1975. McLean, Va., Mitre Corp., 1975. NSF-RA-N-75-050, p. 461-464.
3, 6, 15

In April 1975, AAI Corporation received a contract from NSF to study a concept for converting wind energy to methane. The basic approach consists of using off-shore wind to obtain hydrogen through the electrolysis of seawater. Carbon dioxide is obtained from carbonate deposits. These gases are combined to form methane. The present effort includes analysis of the processes involved, identification of the equipment and resource requirements, and an assessment of the probable cost of methane produced by this process.

400. Young, R.B., et al. Production of methane using offshore wind energy. Executive summary. NSF/RA-N-75/295A. NTIS, PB 252308, November 1975. 35 p.

6, 15

This study has assessed the potential of the electrical generation by wind energy of hydrogen, converting it to methane, and introducing it into the present natural gas pipelines. This study is limited by NSF direction to the basic objectives of defining the electrochemical process, the theoretical feasibility, and the estimated cost of producing methane gas from wind energy using calcium carbonate from underwater sands. Two primary site locations were used; Nantucket Shoals off the coast of Massachusetts and Cape Hatteras shoal water areas. The study does not include any wind energy design optimized for the electrolysis process, or the special design requirements for offshore wind power.

401. Young, R.B., et al. Production of methane using offshore wind energy. Final Report. NSF/RA/N-75/295. NTIS, PB 252307, November 1975. 79 p. Also ERDA/NSF/933-75/T1, November 1975. 131 p.

6, 15

This report describes the work accomplished during a program to investigate the feasibility of converting wind energy to methane gas. The basic approach consists of using off-shore winds to drive generators which supply electricity to electrolysis cells, Electrolysis of distilled sea water produces hydrogen. Carbon dioxide is derived from underwater carbonate deposits. These gases are combined to form methane. The methane gas produced by the process can be used in existing natural gasburning equipment, thus conserving a valuable capital investment.

3,8

A residential wind-driven power system, using hydrogen for storage is described. The advantages of the system are that it is self-contained, and utilizes off-the-shelf components. The system is based on minimum wind velocity of 10 km/h, which represents the average wind speeds in about 50% of the conterminous states.

404. Zimmer, R.P., et al. Benefit-cost methodology study with example application of the use of wind generators. Georgia Institute of Technology, Atlanta. Engineering Experiment Station. NASA-CR-134864. NTIS, N75-31571, July 1975. 411 p.

6

An example application for cost-benefit methodology is presented for the use of wind generators. The approach adopted for the example application consisted of the following activities: (1) surveying of the available wind data and wind power system information, (2) developing models which quantitatively described wind distributions, wind power systems, and costbenefit differences between conventional systems and wind power systems, and (3) applying the cost-benefit methodology to compare a conventional electrical energy generation system with systems which included wind power generators. Wind speed distribution data were obtained from sites throughout the contiguous United States and were used to compute plant factor contours shown on an annual and seasonal basis. Plant factor values (ratio of average output power to rated power) are found to be as high as 0.6 (on an annual average basis) in portions of the central U.S. and in sections of the New England coastal area. Two types of wind power systems were selected for the application of the cost-benefit methodology. A cost-benefit model was designed and implemented on a computer to establish a practical tool for studying the relative costs and benefits of wind power systems under a variety of conditions and to efficiently and effectively perform associated sensitivity analyses.

3, 11

The technology is discussed for storing energy in a form that will allow it to be recovered economically as electrical energy. One of the goals for energy storage R and D applied to WECS is to make the combined WECS/energy storage system economical as an independent base-load power supply for a wide range of circumstances. One approach that would make such a goal more accessible in the near term would be to recover only a portion of the stored energy--only is much as necessary--in electrical form, with the balance used or stored.

407. Browning, J.A. Windmills. U.S. Patent 3,952,723. February 14, 1975.

5, 17

A system for extracting useful energy from the wind is described which consist of a windmill, a closed circuit containing a liquid, pump means driven by the windmill to place the liquid under pressure in the circuit; and a flow control impedance to permit a predetermined constant volumetric flow of the liquid in the circuit per unit of time and across which the pressure drops to yield heat.

5, 17

A buoyant wing is tethered to a line an appreciable distance above the surface where the winds are at higher speed than at ground level. The other end of the line(s) is attached, for example, to an electrical generator, and provision is made for adjusting the position of the wing so that when a series of wings are utilized together with an electrical generator, one wing may be retracted while at least one other wing which is positioned to catch the wind is drawn away from the generator.

412. Solar energy resources. In: Magnitude and deployment schedule of energy resources. Proceedings. Conference on the Magnitude and Deployment Schedule of Energy Resources, Portland, Oregon, July 21, 1975, p. 9-58.

3, 6

ERDA responded to Congressional solar legislation by developing a detailed program described in a "Definition Report, the National Solar Energy Research, Development and Demonstration Program" (ERDA 49) on eight different applications of solar energy. Contributions of new energy sources of wind, photovoltaic, thermal-electric, and ocean thermal gradient are given in addition to hydroelectric expansion for 1985 to 2000. Applications of solar heating and cooling, agricultural and industrial applications, solar electric capacity, wind energy, photovoltaic systems, ocean thermal systems, and fuels from biomass are briefly discussed. Solar energy implications for the long term are summarized with specific implications indicated for the Northwest. Five subgroup papers are included:

Space Heating and Cooling, by Arnold Cohen; Electric Power Generation, by L.L. Vant-Hull; Hydroelectric Power Generation, by Frederick H. Warren; Wind Energy Systems, by W.H. Hurlebaus; and Ocean Thermal Energy Conversion, by E. Lee Leventhal. A Review of Solar Energy Resources was presented by Dwain F. Spencer.

5, 9

It is presupposed that vertical axis wind energy machines will be superior to horizontal axis machines on a power output/cost basis and the design of a new wind energy machine is presented. The design employs conical cones with sharp lips and smooth surfaces to premote maximum drag and minimize skin friction. The cones are mounted on a vertical axis in such a way as to assist torque development. Storing wind energy as compressed air is thought to be optimal and reasons are:

(1) the efficiency of compression is fairly high compared to the conversion of mechanical energy to electrical energy in storage batteries; (2) the release of stored energy through an air motor has high efficiency; and (3) design, construction, and maintenance of an all-mechanical system is usually simpler than for a mechanical to electrical conversion system.

The interest and activity in the windpower field around the world and the opinions of two U.K. scientists, A. Bruckner (City Univ.), and A.E. Stodhart (ERA) are presented. Dr. Bruckner's "buffer lake" concept study was made in Ulster where he believes a system build around Lough Neagh could provide 25 percent of Ulster's energy requirements. He calls for a two year programme to construct aero-generators based on existing designs.

54. Bacher, K. Putting the sun to work: a history and directory of currently available solar energy applications. NTIS, PB238189, 1974. 30 p.

4

A brief history of solar thermal energy is provided and a directory is presented of current economically and technically feasible applications. Heliothermal systems for water and space heating are at the present time more practical for short-term private and commercial uses than helioelectric and heliochemical systems. Basic background information on the use and construction of solar equipment is followed by a listing of company names, addresses, prices, and specifications. Information is provided on hot water heaters, collectors, swimming pool heaters, total home systems, glazing systems for solar control, wind power, and solar cells. A bibliography of 20 books and articles on the experimental applications of solar energy is included.

55. Back to the windmill to generate power. Bus. Week No. 2330: 140, 142, May 11, 1974.

4,6

If any aspect of the energy shortage is considered humorous, it is the idea of erecting hundreds of giant windmills_across the landscape to do their age-old job of converting the wind into power. But to a growing number of people, windmills are not such an absurd idea after all. Companies are now spending their own money to develop a new generation of windmills that will come to market as early as this year.

56. Becker, I. Energy research in Providence. Nation 218(9): 262-264, March 2, 1974.

8

The Research and Design Institute plans to turn an abandoned 19th century mill in Providence, R.I., into a prototypical electric energy conservation station and use it as head-quarters. About 60% of the building's electricity will be generated from solar collectors, solar cells, a wind-powered generator, and a water turbine. A nuclear device may run the aircraft signals on the chimney.

57. Bergey, K.H. Wind power potential for the United States. Aware, No. 49: 2-5, October 1974.

6

Large-scale wind power generating systems can be built for about \$200 per installed kw. This compares with today's costs of \$200-\$350 for conventional fuel plans and \$500 for nuclear plants. Assuming a 25 year pay back of capital along with a 25% load factor, 10% interest on debt, and a conservative allowance for operating costs, a typical unit will produce electricity at an average of 2.5/kwh, which is competitive in some parts of the country today. If wind power is introduced into multi-regional power grids as base load capacity, the emergency fill-in and peaking can be accomplished by existing fossil fuel units. If the wind energy system is broad enough, the need for energy storage can be eliminated.

et Nucleaires, April 1974, p. 1-45. Translation: Kanner Associates, Redwood City, Cal. NTIS, N75-13384, December 1974. 61 p.

6

Systematic measurement of the wind power distribution in France has shown that the design of wind generators involves two basic problems: the irregularity of the energy supply and the mechanical strength of the assembly. Since these problems have largely been solved for generators less than 10 kW, the main body of this discussion deals with practical tests on one average-power and two high-power generators. Other variants tested in France and other countries are described in less detail. Further development of average-power generators with an output on the order of 100 kW is recommended.

62. Booda, L.L. Ocean based solar-to-hydrogen energy conversion concept. Sea Technol. 15(2): 21-24, February 1974.

4

The lengthy paper "Ocean Based Solar-To-Hydrogen Energy Conversion Marco System," by William J.D. Escher and Lee A. Hanson is condensed and interpreted. Solar energy would be used to produce hydrogen as an energy form in a wholly ocean-based complex. Hydrogen is an excellent energy form since it has high energy conversion efficiency, and is plentiful, non-polluting, naturally recycled, easily transported, and storeable. The advantages of an oceanic operation include its virtually unlimited area, enormous thermal sink, immediate source of feedstock water, excellent logistics, low friction bearing surface, and the availability of the ocean thermal gradient method of energy conversion. Platform technology, and the five methods of solar conversion under study (photosynthesis, direct thermal, photovoltaic, OTG, and wind) are discussed.

3, 4, 6

Much of the environmental damage from the use of energy lies in those systems that provide energy for the consumer. If these systems were to function more efficiently coupled with more efficient use by consumers, both energy production and environmental damage would be reduced. The use, potential use, advantages, and disadvantages of coal, oi!, nuclear fission, hydroelectric, geothermal, oil shale, and coal gasification are surveyed. Fusion, solar, geothermal, ocean thermal, wind, tidal, and advanced chemical energy systems are all potential energy sources of the future that would cause minimum environmental damage.

2, 4

Included in this book is a section on wind energy.

80. Davis, A.J. and R.P. Schubert. Alternative natural energy sources in building design. Blacksburg, Va., Passive Energy Systems, 1974. 252 p.

2, 8

Information needed to design a building using alternative natural energy sources is presented in this book. In the first chapter the energy consumed in buildings is studied, considering current technological solutions to energy problems, and practical alternatives to present technology. Chapter Two

examines the effect of climate on building design. Chapter Three, "Energy Conservation," covers these topics: life cycle costs; conservation through the use of materials; the exclusion or inclusion of natural environment; windows; the collection, distribution, and utilization of waste heat; lighting systems; and heat transmission coefficients. Natural methods of cooling and ventilation are reviewed in Chapter Four. Chapters Five through Eight discuss the use of these alternative energy sources: water power, wind power, solar energy, and organic fuels. Integrated systems, using more than one alternative energy source, are described in Chapter Nine.

4, 6

The NASA energy-related R&D programs discussed are intended to complement government-wide plans and programs now being developed and implemented. NASA's 1974 energy-related R&D comprises work in various technical fields in which technology developed for space and aeronautics has useful applications to energy needs and problems on earth. The projects include: work in solar energy utilization; wind energy systems; energy conversion, transmission and storage; transportation systems; and energy and environmental conservation. NASA projects directed to the near-term use of solar energy include a demonstration test of a residential solar heating and cooling unit and a technology program to advance the state of the art of the components and subsystems for solar heating and cooling systems. Work on solar energy utilization that could be significant in the future includes technical and economical studies of some of the components of space-based systems in which solar energy would be collected and converted to electricity in space and transmitted to earth by microwave beams.

This report gives an excellent summary of our present energy situation. It is well documented, with plenty of facts and

figures. The most interesting part, however, is an examination of three possible energy futures which could result from today's decisions. The first, which assumes that present trends continue, strains our resources to the utmost. The second uses conservation and high efficiency technology to reduce demand. In the third, energy growth is reduced to zero through changes in our way of life.

4, 6

Discussed are methods of utilizing solar, water, wind and geothermal energy. Several suggestions are described of their possible realization.

96. Glaser, P.E. An overview of solar energy applications. In:
NEREM 74; Northeast Electronics Research and Engineering Meeting,
Boston, October 28-31, 1974. Record. Part. 1, p. 45-50. Newton,
Mass., Institute of Electrical and Electronics Engineers, Inc.,
1974.

3, 6

The paper reviews briefly some of the main approaches under study and development for harnessing the sun's energy. This includes solar heating and cooling systems, renewable gas and oil fuels, solar heat engine power plants, wind energy, ocean thermal gradients, direct energy conversion using solar cells, and solar energy conversion in space for use on earth. It is pointed out that although a solar heating and cooling system is still more expensive to install than a fossil fuel system, the total costs during the operational life of the two systems are expected to be comparable in view of the spiralling prices of fossil fuels.

97. Glaser, P.E. Solar power options. Symposium on Solar Energy Utilization and Panel Discussion on Solar Energy Programs and Progress, Washington, D.C., 1974. M.P. Thekaekara, ed., Washington, National Science Foundation, November 1974, p. 75-87.

3, 6, 7

Solar power potential is discussed vs. future needs. with particular attention to large-scale solar energy conversion to power by using wind, ocean thermal gradients, solar-powered heat engines, and photovoltaic energy conversion on earth and in space. The past development and the state of the art of this technology are reviewed with a projection into the future. Cost projections are given on the basis of available data. The prospects of solar energy applications are believed to be bright but slow, with significant advances over the next few decades.

98. Glaser, P.E. Tomorrow solar energy. Ind. At. Spat. 18(1): 26-30, 1974.

4, 6, 7

The worldwide concern with increasing energy consumption and the resulting undesirable effects on the environment have led to a reassessment of the potential of solar energy to meet future energy demands. Solar energy represents an inexhaustible energy source which is usefully converted and has the potential to meet a significant portion of the world's future energy requirements. The technology underlying solar energy applications is known, although substantial developments, particularly to achieve mass production and resulting cost reductions will be required. Sclar energy for heating and cooling of buildings shows promise of wide-scale application over the next decade and represents not only a major means for energy conservation but also a potentially significant market for industry. Several options for the large scale use of solar energy for production of electricity, including solar thermal conversion, the direct conversion of solar energy by the photovoltaic process and the utilization of wind power and the temperature difference of sun-warmed oceans waters, if successfully developed would provide society with a significant energy alternative for the future.

Henry and Retta Clews built a windmill complex for their home in the Maine woods a few years ago, and people like William Heronemus are thinking in terms of how to use the wind to provide energy for large sections of the country. Heronemus foresees a vast network of windmills floating off the New England coast used to electrolyze seawater into oxygen and hydrogen. Large and small wind energy schemes by individuals and research organizations are discussed. Information on sources of small wind generators in the U.S. is included.

3, 6, 7

4 6

The background of wind energy as an energy source in industrialized countries is reviewed and discussed, particularly with reference to recent R&D developments in the USA. Problems associated with the unpredictable fluctuating character of wind energy and the various possible proved and proposed energy storage media and methods are discussed. The production, collection, transport and use of wind-energy-generated synthetic fuels are discussed. Con preration is given to the economic integration of networks and wind energy generators into conventional electrical energy distribution systems.

107. Heronemus, W.E. Oceanic and atmospheric energy sources. Presented at the Solar Energy Lecture 6, Washington, D.C., March - May 1974: Sponsored by IEEE, Washington Academy of Sciences and Washington Society of Engineers. NTIS, N75-24101, April 18, 1974. 59 p.

3, 4, 6

Solar energy processes are discussed in terms of decreasing consumption of fossil fuels and utilization of renewable energy sources. Emphasis is placed on the windpower process and the ocean thermal differences process which are based on natural collection of solar energy.

108. Heronemus, W.E. A survey of possible use of windpower in Thailand and the Philippines. NTIS, PB245609, November 1974. 143 p.

6

This work was performed in an attempt to answer the question: 'Could windpower be used by the peasant farmer in Thailand or the Philippines to improve the quality of his life.' It was found that windpower was being used to a very limited extent in Thailand to move water, thus relieving either a backbreaking manual labor task, or a very expensive out-of-pocket expenditure for fuel for engine driven pumps. No evidence of existing wind pumping could be found in the Philippines.

109. Heronemus, W.E. Using two renewables. Oceanus 17: 20-27, Summer 1974.

6

The technical and economic feasibility of extracting energy from winds over the oceans and from the thermal differences in the oceans is discussed. A concept for a large wind power electric generating system has been analyzed. The wind power system could service the entire New England electricity market by 1990. The system can produce 360 billion kwh using both electricity in cable and pipeline hydrogen gas energy transmission at a cost well below that of conventional power. Discussed is an ocean thermal differences power plant, which could produce electricity or hydrogen gas at a cost that would allow either product to be transmitted from the gulf stream to almost any point in the U.S. and sold at a competitive price.

110. Heronemus, W.E. Windpower--look backward, then move forward confidently. In: Energy development; Proceedings of the Energy Sources Conferences, Anaheim, Cal., July 14-19, 1974. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 82-88. (Updates entry 1974:33)

3, 6, 8

This is a discussion of the potential of wind power utilization, and review of some wind power electricity systems for use in rural areas. Wind power has failed the test of economics when pitted against heat engines for the generation of electricity in the recent past. Now with rising costs of fossil fuels, wind power could be economic.

Oregon State University, Report No. PUD 74-2A, August 1974. Second
Progress Report (Part I). Corvallis, Oregon, Oregon State University,
1974. 84 p.

6

The research conducted during the second year of the project has been a continuation of that of the first year, along with the development of a new center of activity. The collection and analysis of wind data from various sources, including the wind instruments established in the course of the present research project, has proceeded and a number of conclusions have been drawn from the data analysis. Substantial progress has been made in the wind tunnel simulations of wind flow patterns over a model of a coastal headland. A limited program of pilot balloon observations has been continued in the gorge section of the Columbia River Valley to gain more conclusive information on the severity of atmospheric turbulence in that portion of the valley. The work done in these areas is described in this portion of the report, Part I. The new focus of activity is in the analysis of the structural components of aerogenerators. This program is described in Part II of the Second Progress Report, by R.W. Thresher.

113. Hicks, N. Energy crisis impels many to study and erect windmills as power source. New York Times, May 20, 1974, p. 33.

6,8

Wind energy is certainly not being considered as the answer to America's voracious energy needs. But for efficiency and economy it is being investigated as one of several alternative sources in what most experts believe will be a needed energy mix to light homes for the next few decades. NSF and NASA are spending \$865,000 in the next two years to test an experimental 100 kw wind generator at the Lewis Research Center in Sandusky, Ohio.

117. How to cut fat out of the home energy budget. Am. Gas Assoc. Monthly 56(9): 16-20, September 1974.

4

Four ways of reducing the amount of energy used to heat the average American home are: (1) lessen the amount of heat required by lowering the temperature 6°F. The fuel bill can be cut about 20%; (2) keep the heating plant working at top efficiency; (3) retain heat in the house as much as possible through improved insulation; and (4) reduce the amount of cold outside air that enters and must be heated through better caulking and weatherstripping around doors and windows. By decreasing the amount of hot water used and by improving insulation on hot water pipes, the energy bill can also be substantially cut. Alternative sources of energy are also discussed.

118. Hughes, W.L., et al. Basic information on the economic generation of energy in commercial quantities from wind. Stillwater, Oklahoma, Oklahoma State University, College of Engineering, May 1974. 50 p.

If conventional fuels become less available or available at prices comparable to oil at \$8.00 to \$10.00 a barrel or higher,

wind power is expected to become economically competitive for certain applications. Energy from wind can probably be harnessed through simple systems at acceptable capital costs. Wind is not considered the solution to the energy crisis. Because of the intermittency of wind availability, and, therefore, the need for huge storage systems, wind will not replace conventional central power stations. However, electric power from wind could be pumped directly into existing electric transmission line grids. Wind as a fuel supplement for electric utilities is thought to be both economically and technically feasible in the short term. Rather than concentrating on one or two energy sources, a broad energy research policy, which includes wind and solar energy, is recommended. A bibliography of energy research at Oklahoma State University as well as resumes and recent publications of five staff members are included in this document.

119. Hull, A. and L. Pitt. New NOAA Laboratory for Environmental Assessment. Env. Data Serv., May 1974, p. 8-10.

4

Specific objectives of the new NOAA Laboratory for Environmental Assessment are to (1) model the environmental impact on: grain production in major crop regions of the world; energy distribution/demand for electric power, natural gas, fuel oil, and other conventional energy sources; production/yield of fish in oceans and coastal waters; energy production from solar radiation, tides, winds, and geothermal sources; (2) systematically assess large scale climate/weather changes and interpret their impact on energy demand, major grain-producing areas, and fish production; (3) develop new applications of historical data bases to environmental problems; and (4) utilize climatic assessments in the planning and siting of refineries, nuclear and other power and industrial plants to help reduce man-caused accidents.

120. The hydrogen economy--state of the art. Presented at 9th World Energy Conference, Detroit, September 22-27, 1974, p. 5.1-18.

3, 4

The present state of the art of the hydrogen economy is presented. The majority of references are taken from presentations of the Hydrogen Economy Miami Energy Conference held at Miami Beach in March 18-20, 1974. The conference provided a forum for discussions of all aspects of hydrogen technology, which could offer the world an alternative to the fossil fuel economy. Much work is necessary before a fully implemented hydrogen economy is economically and technically feasible. The basic assumption is that the environmental and societal benefits of implementing a full hydrogen economy will be worth the time and effort, and the certain amount of risk involved. Utilization of hydrogen energy in transportation (automotive

and aviation), as an appliance fuel, in electrical energy systems, and in other capacities is discussed.

- 123. Johansson, M. Exploiting wind power for the production of electricity. Translation from the Danish Report TR-152, date unknown. Translation: Kanner Associates, Redwood City, Cal. NTIS, N75-13385, December 1974. 55 p.

The economic, energy-economic, and environmental issues involved in any prospective exploitation of wind power intended to cover a minor part (10%) of Denmark's consumption of electricity are discussed. The chief basis for the calculations involved is the 200 kW experimental windmill built at Gedser in 1956-57, which ceased to produce electricity in 1967. However, in exploring the ramifications of making Denmark partially dependent on wind energy power, estimates are made on the basis of projected larger series of mills of the Gedser type. Windmill projects abroad, such as Vattenfall, NSF and NASA, are also discussed, as is Denmark's dependence on power from Sweden and Germany.

130. Lerza, C., et al. How to kick the fossil fuel habit. Env. Action 5(18): 3-11, February 2, 1974.

4

Alternative energy sources to fossil fuels are discussed. The technological potential, economic feasibility, and environmental aspects of solar, wind, geothermal, tidal, thermal sea, fission, fusion, and organic energies are explained in simple language. Pursuit of shale oil and production of synthetic natural gas are also described.

131. Lindsley, E.F. Wind power: how new technology is harnessing an age-old energy source. Pop. Sci. 205(1): 54-9, July 1974.

The largest and most costly wind power project to date is NASA/NSF's Mod-Zero 125 foot diameter windmill which is expected to produce 100 kw. A preliminary schematic is shown. The project is in the basic systems analysis phase, where various configurations are first run through a computer to see how they'll perform. Earlier wind power projects started first with the mechanics—and were doomed to failure. The systems approach put men on the moon; it could put the wind to work, too.

132. Love, S. The overconnected society. Futurist 8(6): 293-295, December 1974.

4

Society today is so overconnected that a disturbance in any are may threaten the whole system. To regain stability, people should seek to disconnect themselves—at least to some degree—from the world's heavily centralized systems. The clues to dynamic stability in natural ecosystems are explained. Future communities built around solar and wind power, and complexes of city rooftop food production are described.

133. McKee, J. Rewinding alternators. Alt. Sources Energy, No. 16, 22, December 1974.

12a

The author's experiments adapting an automobile alternator for wind generator use are discussed.

134. MacKillop, A. Low energy area systems. Ecologist 4(8): 298-300, October 1974.

4

The concept of decentralized energy systems is explained. National-scale grids, especially for supplying high-grade electricity, will become more and more difficult to maintain on economic ground. Domestic and local-area scale methods for servicing energy need; will become more important. Greatest use of new energy sources with least environmental damage calls for decentralized supply systems. Wind energy systems are briefly discussed.

136. Magoveny, G.S. and E.J. Forgo. U.S. Patent 3,938,907. June 24, 1974.

A horizontal multidirectional windmill is described which comprises a fixed housing and a rotor, the housing being constituted by upper and lower horizontally disposed members and a plurality of vertically disposed vanes extending between the members. The rotor is constituted by upper and lower horizontally disposed members lying in the planes of the housing members. A vertical axle is secured to the rotor members. A vertical axle is secured to the rotor members. Buckets are mounted between the rotor members and extend inwardly from the periphery thereof. Each bucket has a flexible vertically disposed surface portion and supports for the inner and outer edges of the portions. The distance between the supports is varied automatically as a function of rotational speed of the rotor.

140. Martin, J. Energy from the wind, tomorrow? Ing. Tech. 291: 25-32, December 1974. (In French)

This is a descriptive article about the use of, and possible use of windmills as prime movers in electrical power generation. The total amount of wind energy available has been put at about 2.5×10^{15} kWh per annum over all the world. In Fr. e it represents an average of 800 kWh/m^2 of exposed surface and per annum, but can reach 4000 kW/m^2 per annum in some regions such as the Breton or Roussillon coasts. Numerous types of windmills are described with the aid of diagrams and notes on their characteristics. Reference is made to electricity storage, e.g., in secondary batteries and other chemical means, thermal storage, etc.

1, 6

A review of the history of wind utilization is presented. Wind machines that are in use or have been considered are categorized as small when the power output is up to 2 kW; medium, up to 100 kW; and large, when output is over 100 kW. The largest wind machine that ever operated was the 1250-kW Smith-Putnam wind turbine; the largest factory-produced machine today is a 6-kW model. A 100-kW test unit is being erected near Sandusky, Ohio by NASA to be operational in 1975. Environmental and engineering aspects, application areas, and geographical regions of greatest promise are discussed. To fully utilize the intermittent wind energy, an interruptible load, an energy storage system, or a standby source able to respond on demand is required. Examples of these alternatives are: interruptible load (pumping water for livestock or irrigation, driving refrigeration compressor for large-thermal-capacity coldstorage plant); energy-storage system of electrochemical storage batteries, flywheels, or pumping water for later generation of electric power through a hydraulic turbine; or a standby source of hydroelectric power dam, diesel generator, gas or steam turbine. Using wind-generated electricity to electrolyze hydrogen is interruptible load if the hydrogen is used for

cooking fuel; it is an energy storage system if the hydrogen is stored to be reconverted to electricity with a fuel cell or an engine generator set. A 5-kW wind-hydro scheme is analyzed for Amarillo, Texas in Appendix A. It is concluded that the system is expensive and cumbersome, requires a large reservoir and a lot of equipment for providing only a small amount of firm power, but provides reliable electric power with zero fuel consumption and minimal maintenance.

4, 6

This report contains a number of working papers and monographs written in non-scientific language for the general public describing the state-of-the-art and possibilities of several alternatives, including wind, for helping in the near- and long-term energy crisis.

146. Morse, F.H. Solar energy as a national energy resource. Presented at the 9th World Energy Conference, Detroit, September 22-27, 1974, p. 3.1-11.

3, 4

The U.S. Solar Energy Panel assessed the potential of solar energy as a national energy resource and found three areas where solar energy could supply significant amounts of the U.S. future energy needs: energy for heating and cooling of buildings, production of fuels, and generation of electrical power. With adequate R&D support, by the year 2020 solar energy could provide at least 35% of the heating and cooling of future buildings, greater than 30% of the methane and hydrogen needed in the U.S., and greater than 20% of the electrical power needs of the U.S. All of this could be done with minimal effect on the environment and substantial savings of nonrenewable fuels. Various solar energy applications are described, and the goals, objectives, and status of the R&D programs for each of these applications is summarized.

147. The Mother Earth News handbook of homemade power. By the Staff of the Mother Earth News. New York, Bantam Books, 1974. 374 p. 2, 4, 8, 12a

This book is packed with information about alternative energy systems, including windpower, which you can put to work right

now. Emphasis is on homebuilt small scale systems. Six articles on windpower are included.

6

General information on wind energy and a summary of current information on wind energy conversion systems are presented. The data from 15 National Weather Services staitons in Texas (1959-1972) and 7 neighboring stations (1964-1973) are analyzed for average energy by month and year, wind speed histograms, wind velocity and power duration curves, and probability of calm periods. Contour maps for energy at 23 ft height and 300 ft (estimated) and probability contours for wind speeds are plotted. Estimations of power possible uses and number of units to be built, estimations of costs, and storage are discussed for wind energy conversion systems. The overall conclusion is that the state should support a program to advance the utilization of wind energy. Recommendations are made for policies, procedures, specific research, and a proof of concept experiment.

4

The Princeton sailwing windmill is discussed.

151. Other technical concepts are exciting but their roads to power are long. Coal Age 79(4): 106-110, April 1974.

6

Space heating, followed by solar-derived electricity, will be the first widespread use of solar energy. Solar climate control technology, solar generation of electricity, and photovoltaic conversion are described. The concept of MHD is of obvious interest because it has potential to boost thermal efficiency of fossil-fueled power plants by as much as 50% over their best present performances. MHD, which bypasses the need to transform fuel first into mechanical energy for driving turbines, is briefly explained. The Federal government

has a small but definite commitment to wind research; NASA is now testing a twin-bladed unit and a large wind machine is being examined at the Lewis Research Center near Cleveland. Unfortunately, governmental expenditures are too low to yield enough information on wind power. Solid waste energy--attractive even though it probably will not account for more than 2% of the nations total energy generation--is a clean, environmentally sound method for urban waste disposal. Synthetic fuel and direct use of waste are briefly discussed.

A unique momentum interchange device for extraction of energy from the wind is described in this paper. It is shown that the maximum possible energy extraction with this tracked-vehicle airfoil device is greater than that for a conventional windmill. A comprehensive mathematical model is developed for the device, and this model is programmed for solution on a digital computer. This program is written so that wind spectrum data for any geographic location can be used to determine the monthly energy output for that location. Results from this program indicate that this device could make significant contributions to electrical power requirements.

6

The Research Applications Directorate of the National Science Foundation intends to provide approximately \$3,000,000 for research on advanced systems, subsystems and associated problem areas related to advancing the capability of extracting useful energy from the wind. Proposals are being sought in six categories: wind energy mission analysis; applications of wind energy systems; wind characteristics; subsystems and components research and technology; advanced or innovative system concepts; and advanced farm and rural use systems. Information on research categories and requirements for submitting proposals are described.

6

Because of the energy conversion and storage research under way at Oklahoma State University since 1961, several components needed to engineer a continuous-duty energy system operating on replenishable solar energy have been developed to the prototype stage and are being tested. These components are presented and discussed, and how they fit into the solar energy system envisioned for the long-term and immediate future is considered. A simplified economic analysis of solar systems is presented, and the calculated generation costs are compared with those of conventional fuel burning systems for difference fuel costs, load factors, and interest rates. One result of the study is that wind energy systems are found to be competitive with conventional systems.

164. Ramakumar, R., H.J. Allison and W.L. Hughes. Solar energy conversion and storage systems for the future. Energy Sources Conference, Anaheim, Cal., 1974. Proceedings. New York, IEEE, 1974, p. 12-20.

3, 6, 11

The possible utilization of solar energy in its various manifestations such as heat, winds, tides, and ocean thermal gradients is reviewed. Methods of solar energy collection, conversion and utilization are examined, along with the solar energy potential. Special attention is given to various systems for meeting the needs of solar energy storage. The systems considered include: (1) thermal energy storage using hot water or hot rocks; (2) potential energy storage by pumping water to a higher elevation, by compressing air or springs; (3) chemical energy storage using hydorgen or secondary batteries; (4) kinetic energy storage as in flywheels; and (5) energy storage in electromagnetic fields using capacitors or superconducting magnets. It is argued that solar energy must play a significant role in solving the energy problem of the world.

165. Ramakumar, R., W.L. Hughes and H.J. Allison. Economic and technical aspects of wind generation systems. International Conference on Systems, Man and Cybernetics. Proceedings. Dallas, Texas, October 2-4, 1974, p. 88-92. New York, IEEE, 1974.

3, 6

Wind energy systems have the potential to provide a viable alternative to fossil fuels to satisfy the ever increasing

energy appetite of the world. A simplified economic analysis of wind energy systems of the type being developed at Oklahoma State University is presented and the calculated generation costs in mils per kWh are compared with those of conventional fuel-burning systems for different fuel costs, load factors and interest rates. The results show that certain aspects of wind energy conversion can, at present, generate energy at costs competitive with conventional systems and that more favorable conditions can be expected in the future as fossil fuels become scarce and fuel costs further go up as predicted.

6

Wind power maps that are primarily useful in determining where wind power projects could be most beneficial are included. Atlanta, Phoenix, or Los Angeles might not be competitive. Array fields in the Texas panhandle or Wyoming are remote from the major energy markets and close to supplies of competitive fossil fuels.

169. Rittelmann, P.R. Using solar energy in residential housing. Constr. Specifier 27(7) 20-25, 27, 29-32, July 1974.

8

The author describes a solar demonstration project house that shows the integration of mechanical systems with contemporary and functional architectural design—a design that responds to the severe energy conservation requirements of a solar system. Mechanical systems include a solar thermal collection system, a photovoltaic conservation system, a wind-driven electrical generation system, and an aerobic composter for organic wastes.

170. Rodgers, W. Research & corruption--the Exxon-Nixxon axis. Nation 218(1): 11-16, Jeruary 5, 1974.

4

Taking place under cover of the energy panic is an incestuous merger of economic and political forces represented by the Exxon-Nixxon axis, beneath which remains of an open market are being interred. R&D in wind, solar, and geothermal energy have not been established because Nixon and industrial advisory councils have eliminated worthwhile proposals that failed to offer optimum opportunities to the oil industry.

171. Salieva, R.B. Generalizations of composite studies involving combined use of wind and solar energy. Appl. Solar Energy 10(5-6): 39-42, 1974.

6,8

Sample calculations were made using the composite method for the situation of water supply to pastures and electrical power supply to radio relay stations; results of these calculations are presented. Wind and solar installations were assumed to operate simultaneously and to have a common electrical accumulator; this accumulator supplies power when neither of the installations is functioning. The advantages of combined utilization of wind-solar energy are demonstrated, particularly in the case of relatively small-scale consumers spread out over an extensive, transportationally rigorous terrain.

172. Salieva, R.B. Principles of a composite study involving combined use of solar and wind energy. Appl. Solar Energy 10(5-6): 35-38, 1974.

6

A theoretical comparison of the productivity of wind and solar power installations, as determined from variations in wind speed and solar radiation intensity, is given. The productivities are represented as regular stochastic processes. The complementary nature of the annual chronological variation patterns of wind and solar energy fluxes suggests combined use of these sources.

- 174. Scala, S.M. and K. Sittel. Considerations regarding a utilization of solar energy. V.D.I. Ber. 224: 93-110, 1974. (In German)

The characteristic data regarding solar energy are considered, giving attention to solar radiation intensity at the boundary

of the terrestrial atmosphere and at the surface of the earth. Questions of spectral distribution are examined along with aspects of radiation absorption, the latitude dependence of radiation, and temporal variations in radiation intensity. Systems for the utilization of solar energy are discussed, taking into account the current state of development of the available utilization methods and approaches for overcoming existing technical problems. Attention is given to the utilization of solar energy in buildings, the generation of electric power from solar energy, and the use of wind energy.

175. Schultz, W.C. Wind power plant. U.S. Patent 3,930,750. April 8, 1974.

9, 17

A power plant of the windmill type is described comprising: a supporting structure, a propeller unit mounted on the supporting structure for rotation about a vertical axis and including a hub, a plurality of vanes affixed to the hub, each of the vanes having a shell of a generally parabolic cross-section defining a leading edge with a symmetrical air foil configuration and further defining an open trailing edge, and a zig-zag shaped webbing member mounted within the shell to define a series of essentially triangular individual cells extending the length of the shell and exposed to the open trailing edge.

176. Seaborg, G. Finding a new approach to energetics—fast. Sat. Rev. World 2(7): 44-47, December 14, 1974.

4

The foundation of a coherent and realistic national energy policy must be based on equal doses of energy conservation and the development of additional sources. Large reductions in energy use are possible, as high as half of the current 4.5%/yr growth rate. The long-term outlook for solar, geothermal, fusion, and wind energy is good. In the short term, only coal and nuclear energy can make large contributions to domestic energy supplies. Eventually a recycle society, in which virtually all materials will be reused indefinitely, will be necessary.

183. Shupe, J.W. Natural energy systems for Hawaii--and the world.
U.N. Non-Government Organization Conference, Nairobi, March 1974.
4 p.

3, 4, 6

The economy of Hawaii is particularly vulnerable to dislocations in the global energy market. This is a travesty, since there are few places in the world so generously endowed with natural energy: geothermal, solar radiation, ocean temperature differential, wind, waves, and ocean currents. Included in the bills recommended for passage in the 1974 state legislature is an act to establish the Hawaii Natural Energy Institute at the University of Hawaii. The Institute would communicate with research organizations throughout the world to hasten replacement of fossil fuel and nuclear fission power plants by non-polluting renewable natural energy systems. Natural energy systems are briefly explained.

184. Smith, F.G.W. Power from the oceans. Sea Frontiers 20(2): 87-99, March-April 1974.

4

The solar energy cycle heating the ocean surface can be tapped through: wind; hydroelectric power from the water vapor in the form of rain; waves; and thermal ocean currents. Each of these power sources is described and illustrated with simplified drawings. The combination of these energy sources may provide the answer to the search for an unlimited source of clean energy. Geothermal energy is also briefly described.

185. Smith, G.E. Environmental outlines 13. The autonomous house. Dev. Forum. 2(5): 10, June 1974.

4

An autonomous house is largely independent of electricity, fossil fuel, food and sewage disposal. Such a project in the U.K. uses solar heat, batteries for electric storage, and aerobic and anaerobic decomposition for waste disposal. Energy collection, conservation, and storage; water collection and storage; and organic nutrient conservation are described.

Some basic theoretical and practical considerations for the use of wind power as an energy source are discussed. Estimates of available wind energy are given for Des Moines, Iowa from 1973 weather data. The effect of wind velocity measurement interval and transducer response speed on estimating wind power is also considered. Tables, curves, and plate illustrate use.

189. Solar energy and advanced concepts. Washington, D.C. USAEC. NTIS, TID-26752, November 11, 1974. 87 p.

4

The solar energy R and D for FY1975 is presented and an addendum is provided for additional information. The program scope and major components for solar energy, wind energy, and advanced

concepts are described. A survey is given on on-going and planned activities for heating and cooling of buildings, solar thermal conversion, photovoltaic conversion, photochemical conversion, bioconversion, ocean thermal conversion, wind energy conversion, and advanced concepts. A summary of the budget breakdown by Agency for each activity is given. Additional data are provided on the R and D programs, with emphasis on the role of ERDA in the solar energy program.

190. Solar energy research and development. Joint Committee on Atomic Energy. Hearings. 93d Congress, 2d Session, May 7-8, 1974. Hearing Transcript. 850 p.

4, 6

Hearings were held to consider two bills, S. 2819 and S. 3234, that would establish an office of solar energy research. The first bill introduced, S. 2819, would authorize a five-year \$600 million program of solar energy research within AEC. The present status and prospects for solar energy utilization and technology by the government and industry in the U.S. and throughout the world are investigated. The second bill, S. 3234, would concentrate solar energy research within ERDA, if and when that office is established. Witnesses included: congressmen; officials from NASA, AEC, NBS, ANL, and NSF; and representatives from Sandia Labs., the General Electric Corp., the Ford Foundation Energy Policy Project, the Arthur D. Little Co., the Mitre Corp., and other private firms. Statements and studies by NSF, the Mitre Corp., UNESCO, NASA, NSF/NASA, and the Lawrence Livermore Lab. are transcribed.

191. Spaulding, J. Solar energy now. Sierra Club Bull. 59(5): 4-9, May 1974.

4,6

The NSF's \$13 million research program for solar energy has begun. Trials of solar heating in schools in Maryland, Massachusetts, Minnesota, and Virginia have started. RCA and NASA propose incorporating solar heating and cooling into buildings. Burgeoning government programs are the most obvious sign that the economic climate for solar energy is improving. Lack of codes, standards, practices, manufacturers, designers, and builders skilled in solar energy must be overcome before solar energy is used for heating on a large scale. Some solar energy techniques are explained.

2,4

This is an idea book which ranges more widely than most, even getting into mental energy. No one topic is covered in much detail.

195. Texas energy resources, final draft. Texas Governor's Energy Advisory Council, Austin, Texas, 1974. 31 p.

4, 6

A summary of the energy resources including lignite, coal, geothermal energy, uranium ores, and petroleum and the potentiality of solar, solid waste, and wind energy is presented. It is indicated that Texas has about 146 billion barrels of oil-in-place. As of January 1, 1973, Texas had 94.9 trillion cu ft remaining reserve of natural gas that is being used faster than new finds are made. It is estimated that Texas has over 6 billion tons of bituminous coal resources and that there are about 20 billion tons of lignite within surface minable depths and over 100 billion tons of deep basin lignite Three areas for potential geothermal resources are the Rio Grande Rift System, the Trans-Pecos Hot Rocks, and the Gulf Coast Geothermal Sands. The solid waste generation rates for agricultural and municipal-industrial sources are estimated. Generation of electrical energy from wind is of great potential in the Texas Panhandle. Texas qualifies as a potential area for the utilization of solar energy according to the isopleths of mean daily direct solar radiation. Texas has significant quantities of uranium, and more than six nuclear power plants are in the planning stage for the state.

196. Thomas, R.L. Utilization of solar energy to help meet our nation's energy needs. Energy Crisis Symposium, Albuquerque, N.M., May 3, 1973. Socorro, N.M., New Mexico Bureau of Mines and Mineral Resources, 1974.

197. Thomas, R.L. Wind energy conversion. In: Energy, Environment, Productivity; Proceedings of the First Symposium on RANN: Research Applied to National Needs, Washington, D.C., November 18-20, 1973. Washington, D.C., G.P.O., 1974, p. 39-41. (See also entry 1973: 29)

Wind generators are technically feasible as illustrated by the description of several moderate sized machines that have been built and tested in the past. Some reasons why wind machines have not been used more freely are listed, and possible solutions to the problems are advanced. Aspects of research programs aimed at wind power as an energy source are listed, and the part of the NSF Solar Energy Program aimed at wind conversion is discussed. The planned experiment to be carried out in Puerto Rico in 1975 as a part of the NSF program is described briefly. Some conclusions relevant to the use of wind energy as a source to help meet the energy needs are drawn.

3, 4, 6

Wind turbine systems for generating electrical power have been tested in many countries. Representative examples of turbines which have produced from 100 to 1250 kW are described. advantages of wind energy consist of its being a nondepleting, nonpolluting, and free fuel source. Its disadvantages relate to the variability of wind and the high installation cost per kilowatt of capacity of wind turbines when compared to other methods of electric-power generation. High fuel costs and potential resource scarcity have led to a five-year joint NASA-NSF program to study wind energy. The program will study wind energy conversion and storage systems with respect to cost effectiveness, and will attempt to estimate national wind-energy potential and develop techniques for generator site selection. The studies concern a small-systems (50-250 kW) project, a megawatt-systems (500-3000 kW) project, supporting research and technology, and energy storage. Preliminary economic analyses indicate that wind-energy conversion can be competitive in high-average-wind areas.

205. Vermeulen, H. The economics of using wind power for electricity supply in the Netherlands and for water supply on Curacao. Translated from the Netherlands reports/TW-555 and GCV-R-128, date unknown. Translation: Kanner Associates, Redwood City, California. NTIS, N75-10587, October 1974. 64 p.

It is shown to be economically feasible to harness the wind for electricity supply in the Netherlands in terms of power and production costs. Different wind power plants are discussed in detail. An abridged account of a Danish proposal to harness wind power, and calculation of the efficiency Danish aeromotor are included. Comparisons are made with the power need situation in Curacao, and it is determined that a similar wind power conversion capability recommended for the Netherlands is feasible for the West Indies as well.

206. Vertical axis wind turbine assembly. Albuquerque, N.M., Sandia Labs., August 15, 1974.

5

Drawings are given for a vertical axis turbine designed to harness the wind to create electric power. Details of the alternator mount, air foil, and strut are included.

5

Electric generation is a relatively new role for windmills. Wind turns a propeller attached to a shaft that rotates and, either directly or through a system of gears and couplings, spins the rotor of a power generator. The generator feeds electric current into a transmission line or storage unit for eventual consumption. Ideally, a windmill extracts 59.3% of an airstream's energy. This is the theoretical maximum, but modern devices generally obtain only 70% of that, with some exceptions. Windmills are expensive to build and their power yield, like the wind that fuels them, is often intermittent.

208. Von Arx, W.S. Energy: natural limits and abundances. Am. Geophys. Union EOS Trans. 55(9): 828-832, September 1974.

4

The power available from "natural" systems, including hydroelectricity, solar and geothermal energy, wind, thermal sea differentials, and photosynthesis, is evaluated. These power sources are discussed in terms of loops in the uses of materials, food, and energy. Energy management will not only present an engineering challenge in the future, but will also require fundamental readjustment of economic and political decisionmaking processes.

209. Von Arx, W.S. Energy: Natural limits and abundances. Oceanus 17: 2-12, Summer 1974.

4

The energy of the sunshine reaching the earth is some 1017 watts. The present power demand of world civilization is close to 1013

watts. The heat production from human use of power disturbs the solar-terrestrial heat balance by only 0.01%, seemingly a tolerable level. Were power production to be increased to 1014 (0.1% of the heat balance) or 1015 watts by adding heat to the solar-terrestrial balance, climate could be significantly altered. Wind energy, thermal sea power, hydroelectric power, photosynthesis, and solid waste energy from organic sewage are discussed as ways to produce more power without adversely influencing the earth's heat balance.

210. Voss, A., et al. Other primary energy resources. V.D.I. Ber. 224: 117-125, 1974. (In German)

Discussed is a way to use the temperature difference between the water at the surface of the sea and the water at a greater depth as a basis to supply power. It is pointed out that in general a utilization of the indicated energy resources will require the solution of problems related to the transportation of energy to the power consumer locations. It is concluded that the energy resources examined will in the near future not provide a solution to the current energy crisis.

4

222. Wind power. Public Interest Report, 1974. 2 p.

6

Self-renewing, nonpolluting, abundant wind energy is capable of producing harnessable power that could contribute significantly to future energy needs. The basic pursuit now is to design windmills that are efficient and that operate at low cost. Some advances toward harnessing wind energy are briefly discussed.

223. Wind power: how new technology is harnessing an age-old energy source. Pop. Sci. 205(1): 54-61, July 1974.

4, 6

The major stumbling block to wind power utilization is costproducing a wind generator that does not cost more per kwh than a coal-steam or nuclear plant. Three trends are noted: single site, power production with battery storage (1-6 kw outputs); multimode commercial power combining electrolysis of water to make hydrogen and possibly fuel cells, or a turbine to convert back to electricity or mechanical power; and megawattsize wind turbines feeding ac directly to the main power bus. Several systems are described.

224. Wolf, M. Solar energy utilization by physical methods. Science 184(4134); 382-386, April 19, 1974.

Wind power, ocean thermal gradient power, solar heat, and solar-to-electric power conversion are considered as means of solar energy utilization by physical methods. An evaluation is made of total solar energy delivery on the projected U.S. energy economy. It is estimated that the potential sales in photovoltaic arrays alone can exceed \$400 million by 1980 to meet the projected capacity buildup.

6

228. Davidson, B. Sites for wind power installations. World Meteorological Organization. WMO Tech. Note No. 63, 1974.

6

This is a comprehensive overview of siting techniques and information, considering all aspects of siting. The paper is aimed at large installations and assumes that the availability of wind power is the major factor in determining the location of a wind power installation. He concludes that sites must be analyzed individually and that no rules of thumb with respect to topographic influences on wind or to wind profiles may be applied out of hand. This paper synthesizes the work of other research and field work and is not based solely on the author's research in the field.

3, 4

The Proceedings contain thirty-six technical papers on solar energy for U.S. building applications areas; namely, solar collectors, energy storage, domestic hot water heating, energy conservation and insolation, solar air-conditioning, and systems for solar heating and cooling. Some foreign activities are also reviewed. Each technical paper is a report on: Proposed research, on-going research, proposed systems, or operating systems. Questions and answers from the discussion periods are included, as in an agenda and list of attendees.

Translation: Kanner Associates, Redwood City, Cal. NTIS, N75-19821, April 1975. 253 p.

2, 5, 6

A brief history of windmills is given. Various models are described, with discussions of their pros and cons, especially in regard to number of blades and method of orientation to the wind. Systems for transmission of power from the wind motor to a pump, generator, or other type of equipment are described. A method for computing the tension and compression stresses on the wind motor pylon is given and the construction of pylons and water tanks is discussed. Foundation and anchoring systems are described, as are several methods for assembling and raising the wind motor on its pylon. Systems using wind motors to draw and elevate water by means of pumps and systems using wind motors in conjunction with generators, storage batteries, etc., to generate electricity are described. Efficiency tables and comparative cost price tables are provided for each of these applications.

4, 6

The goal of the Solar Energy Program is to develop and demonstrate economically competitive and environmentally acceptable solar energy systems at the earliest practical time. For each of the six subprograms, (1) heating and cooling of buildings, (2) solar-thermal conversion, (3) wind energy conversion, (4) ocean thermal conversion, (5) bioconversion, and (6) photovoltaic conversion, the objective is to develop proof-of-concept experiments and demonstration projects that will allow industry and user agencies to begin aggressive commercialization of each of these technologies, thus assuring its widespread application. Funding for the five-year program is distributed among the six subprograms to permit the earliest proof-of-concept experimentation to be carried out. This will

1973

i_

strol allow program management to concentrate at an early date on those technologies that show the most promise toward providing the Nation's energy requirements. The objectives that will have been accomplished by 1979 in each of the six subprograms national blace bare specifically delineated - Each of the six subprograms is analyzed under the following headings: (4) subprogram summary, (2) status of technology, (3) rationale for federal involvement and institutional arrangements for implementation, (4) criteria ion tana 🦠 and priorities, (5) alternative R and D programs, and (6) 4. 15. implementation. Finally, in an appendix, research project titles and submitting organization of the proposals considered moitswittenishby the panel are listed. The same of the same

4, 6

Fossil fuels now supply over 95 percent of the U.S. commercial energy, and, even with a maximum effort to develop alternatives, the bulk of our cumulative requirements between now and the end of the century will have to be met from oil, gas, and coal resources. Nuclear, geothermal, and most other alternative forms of energy are restricted to a few specific uses, such as the generation of electricity. Consequently, fossil fuels cannot be replaced in many uses even after we have developed practical technologies to produce energy from other sources.

1

Critical experiments to prove the technical feasibility and socioeconomic desirability of specific applications or techniques for the widespread utilization of solar energy are

described. The following experimental areas are covered: heating and cooling of buildings, process heat, solar-thermal-electric energy, photovoltaics, ocean thermal power, wind energy, organic materials, and common applications. Each experiment is described, and costs for two levels of funding are estimated: a moderate risk "minimum program," and a low risk, "accelerated program."

6

Seven major solar energy applications are analyzed according to the costs and benefits expected to accrue from their implementation. Three applications—heating and cooling of buildings, wind energy systems, and utilization of organic materials—appear most capable of achieving commercial application within a few years. The other four-process heat, solar thermal systems, photovoltaics, and ocean thermal gradient systems—need continued federal support with different funding levels and extending in varying lengths of time beyond the initial NSF five-year program for solar energy systems.

5

At the higher forward speeds desired in the next generation of helicopters, regions of separated flow exist within the rotor disk. The influence of these growing regions begins to reduce significantly rotor lift-drag capability beyond an advance ratio of 0.4. As advance ratio increases, such factors as compressibility, reverse flow, three-dimensional flow, and blade stall, increase both rotor torque and blade flapping motion. To provide a suitable aerodynamic theory with which to calculate this degradation in performance, the theory must include the effects of unsteady aerodynamics, three-dimensional flow, and blade aeroelasticity. This paper illustrates the improvement to aerodynamic theory achieved after incorporating these above effects. Test and theory correlation is shown in the regions of flight associated with the next generation of turbine power helicopters. A performance theory is demonstrated that is accurate, even when the rotor is heavily stalled. Figure 1 correlates this theory with recently acquired 16-ft diam rotor data at an advance ratio of 0.4.

3, 11

The development of an energy storage system using electrolysis of water to produce hydrogen and oxygen has led to an investigation of the use of unconventional energy sources in assisting developing countries. A family of power systems is proposed to convert the stored gases into electrical, mechanical, and thermal energy forms. Computer simulation models provide for both the component design requirements and for a detailed economic analysis to allow for optimization of the system design.

Time constants of Robinson, Papillon, and Ailleret anemometers are considered as well as the Best-Romani type. Variation among these suggest that standards be established for presenting wind power data. World-wide wind power potential is discussed, a standard anemometer height above 20 meters is suggested, and projections with respect to the direction of wind power development in Europe and in developing countries are offered.

This paper assumes the site can be selected and is not predetermined by the load center. Discusses field procedures and statistical procedure for comparing sites. Three sites in Spain were instrumented and statistically compared. The author suggests that site analysis is in its exploratory stage and that a mixture of subjective evaluation and rigorous scientific method must of necessity be used in site selection.

3, 6

This paper analyzes methods used in compiling statistics for use in studies of wind power utilization from the data furnished by meteorological services and the results obtained from specific wind prospecting networks. Pertinent results based on all available data are given in relationship to mainland Spain, and the most important wind basins are outlined and described. A general study of the winds prevailing in the region which embraces the Canary Islands and the coastline of the Sahara Desert is included and includes results from forty stations in this area and subsequent analyses of the wind.

3, 6

Starting in 1953, Frenkiel undertook the study of wind power potential in Israel. He instrumented two types of peaks: 1) a mountain ridge athwart the prevailing wind direction with a steep leeward side; 2) an isolated peak in a valley in the general direction of prevailing winds. He concludes that criteria for a good wind power site emerges from his investigations, namely that the mean wind vertical gradient for the height interval from 10 to 40 m above the ground be: 1) less than five percent for optimal sites; 2) five to ten percent for very good sites; 3) ten to fifteen percent for good sites; 4) a mean power law exponent of no greater than .14 for fair sites. Further, he concludes that the slope of the hill determines this mean wind vertical gradient and relates to the above conditions as follows: 1) results from slopes of 1 in 3 1/2; 2) results from smooth, regular slopes of about 1 in 6; 3) results from smooth regular shallow slopes of about 1 in 10, or fairly rough but regular slopes of about 1 in 6; 4) results from a variety of topographic conditions such as low-level coastal sites, smooth aerodynamically very shallow slopes of about 1 in 20, very rough aerodynamically but regular steep slopes of about 1 in 6, and very steep slopes with gradual slope gradient within a radius of about 50 m from the hilltop. These statements of Frenkiel's are rare in the literature of topographic affects on wind power sites.

The errors in cup anemometers due to their non-linearity of indication and the influence of atmospheric turbulence is discussed. Windmill anemometers not affected by turbulence are described and the over-estimation of wind speed by both cup and windmill type anemometers is considered. Site selection for wind measurement is considered as well as instrumentation technique. The presentation is constructed to point up the difficulties in comparing wind data taken with different equipment and in changing equipment at an existing station.

This paper reviews the various types of anemometers and examines their suitability for different kinds of wind measurement. An outline scheme is given for the investigation of wind flow over an area. Comments are made on the installation of anemometers. The use which can be made of existing wind data is considered in relation to the wind measurements actually carried out. Two specially developed wind speed recorders are illustrated and described. A method is shown for comparing the value of one site with another in terms of specific output. Mention is made of several methods of recording extreme wind speeds for design purposes.

 Report of the Wind Power Committee. Translation into English from Dan. Elvaer Foren., Copenhagen, 1962. Translation: Kanner Associates, Redwood City, California. NTIS, N75-15154, January 1975. 117 p.

Wind-generated electricity was studied at an experimental mill and at wind measuring stations which consisted of a measuring cylinder mounted on a steel mast at elevations of 25 and 50 m. The mill is evaluated in terms of its cost and performance and is compared to other experimental mills in these terms. A system of economic models is presented which compares the costs for wind- and steam-generated electricity, with the conclusion that a wind power plant such as the one studied is unable to compete with a steam power plant. Wind power is held to be useful as a replacement for imported fuel and as a power reserve. Supplementary material on effect calculations and performance characteristics is also provided.

22. Problemas del aprovechamiento de la energia edlica en la Republica Argentina. Rev. Electrotec. 38(1): 1-20, January 1962. (In Spanish) 4, 6

The historical development of the windmill is sketched and photographs of modern types are shown. The problems of design, of storage of energy, regulation, interconnection with networks, effects on wind velocities, are discussed, and the special importance wind power stations might have as introducing electric power in regions beyond the extensions of a network is considered. The characteristics of wind over the area of the Republic are described and illustrated by maps. An intensive study of the question is advocated.

6

Wind power is discussed as a source of energy, past, present and future. A brief summary of the history and development of windmills is presented. Tables of average wind velocity are included for different zones in the U.S.S.R. compiled from meteorological stations over a period of years. It is shown that the development of highly efficient wind power theory and engineering has led to the development of highly efficient wind-driven motors which use up to 42% of wind energy. The agricultural uses of wind-driven motors are also discussed. The matching of piston and centrifugal use of millstones with wind-driven motors are included. The use of free and unlimited wind energy is concluded to be efficient, particularly in agricultural and rural areas.

39. Singer, I.A. and M.E. Smith. Relation of gustiness to other meteorological parameters. J. Meteorol. 10: 122, April 1953.

6

Two years of data have been processed to show relationships between wind gustiness and other meteorological parameters. The gustiness classification used at Brookhaven National Laboratory is defined by the range and appearance of the horizontal wind direction trace. The seasonal and diurnal variations are presented. Gustiness is closely related to lapse rate and solar radiation, while its association with wind speed and Sutton's index of turbulence is not as distinct.

5

A form of wind turbine is described, using a 3-bladed propeller with a hollow helix. Various sizes have been made; two described are of 8.5 and 55 m respectively, the latter having a peripheral speed of 800 Km/h. For electrical drive, methods have been devised to maintain the speed constant at 750 r.p.m., but many drives are direct, such as for pumping, etc. One form comprises a d.c. generator which electrolyses water; the resulting hydrogen is used for driving other engines. The oxygen is sold for other purposes. Several such installations are in use and are claimed to give entire satisfaction.

After having characterized main air currents this paper defines, in accordance with recent researches, the internal structure of winds. A mathematical theory on air displacements based on the work of Fortant is suggested. Conditions under which wind power can be utilized and wind motors and their theory are also discussed.

An experimental station has been constructed by the Oxford Institute of Agricultural Engineering for the purpose of studying the application of wind power. The chief difficulty is the intermittent and variable nature of the wind. Estimation of efficiency also introduces considerable difficulty, "propeller" and "turbine" types of prime mover indicating widely different results. The propeller type of motor has the advantage that it operates with lower wind speeds than other types. This allows the use of smaller batteries or reserve plant. Experimental work at Oxford and Göttingen has indicated a cost in pf. per kWh as given by the expression $6.65.10^6/v^3h$, where v is the wind velocity in metres per sec and h the number of hours per annum during which the wind is blowing.

This new improved type of windmill resembles an airplane propeller and is the result of windmill research adopted from aeronautics. The article describes wind tunnel and other tests, empirical coefficients for relating effects of widely ranging winds with steady wind conditions, and study of available energy in wind and selection of a suitable windmill diameter.

	Don't development of sometiments to the last to	

Rapid development of aerodynamics, brought about by airplane practice, has been responsible for a radically different wind turbine recently designed and built. The main characteristic of the windmill is a 4-vane propeller similar to airplane type. The first of these mills has been erected on a tall, slender tower constructed of reinforced concrete and gives a wheel of 19-sq. m. surface average output of 10 kw. A switchboard with 4 relays makes the entire plant fully automatic.

- Betz, A. Efficiency of wind motors. Z. Gesamte Turbinenwesen 17: 307-9, September 20, 1920. (In German)

The area-efficiency may be taken as the ratio of nf of the useful output of the windmill at the shaft to the kinetic energy which flows per sec. through a plane equal in area (F) to that of the windmill and assumed to be placed normally to the direction of the wind. If the wind velocity be v, and ρ the density of the air, then the energy flowing through that area per sec. is $E=1/2\rho Fv^3$. Then the area-efficiency $nf=2L/\rho Fv^3$, where L is the useful work delivered by the wheel at the shaft. If v^2 is the velocity of the wind at the rear of the mill, the author shows that the maximum of work is done at the wheel when $v^1=v/3$, so that $L_{max}=8\rho Fv^3/27$ and $nF_{max}=2L_{max}/(\rho Fv^3)=16/27$ is the upper theoretical limit of efficiency of the wheel.

INDEX

BROAD SUBJECT OR TYPE OF MATERIAL

Each reference in this bibliography has been assigned one or more broad subject or type of material category numbers according to the list below. These category numbers appear on or beneath the last line of the basic citation, to the right of each entry. In this Index all references for each category have been accumulated under the category number. For each reference the year and item number are given. Note: This index covers both the basic volume (1975) and the first supplement (1977).

INTRODUCTION TO THE SECOND SUPPLEMENT

Something new has been added! This Second Supplement to ENERGY FROM THE WIND, which contains 1942 new references, was produced by computer, as the first phase of a project which will eventually put the retrospective file (Basic Volume and First Supplement) as well as all future supplements on computer.

A computer-produced ENERGY FROM THE WIND offers many advantages over the previously manually produced bibliography. The main ones for you, the user, are:

- (1) More and better indexes. A much more detailed subject thesaurus has been developed and used to provide subject indexing in greater depth than the previous "Broad Subject or Type of Material Index." In addition to the subject and author indexes, two new indexes have been included for report number and conference proceedings.
- (2) Customized searches. The computer system used to produce ENERGY FROM THE WIND has a search component which allows the running of custom literature searches tailored to the requestor's needs. Keywords can be combined using the Boolean "and" or "or" to produce specialized lists on narrower aspects of wind energy. Any part of the reference can be searched, although combining descriptors from the subject index would be the recommended way to proceed for most topics. Some sample searches are:

All references on "design - small scale" and ("developing countries" or "remote areas)

All references from the Brace Research Institute

All references to "Patents" on "vertical axis" turbines from 1976 to date

A "SEARCH REQUEST FORM" has been included following this introduction for use in requesting a custom search from the ENERGY FROM THE WIND data base.

For information on the search capability, feedback on the new format and indexes, or to provide information on new references or corrections to entries, please contact:

Barbara L. Burke, Associate Professor Colorado State University Engineering Research Center Fort Collins, Colorado 80523

Computerization of ENERGY FROM THE WIND was possible through a contract with the Department of Energy, Wind Systems Branch, to whom we express appreciation.

SEARCH REQUEST FORM

Energy from the Wind - Annotated Bibliography

The computer system used to produce ENERGY FROM THE WIND has a search component which allows the running of custom literature searches tailored to the requestor's needs. Keywords can be combined using the Boolean "and" or "or" to produce specialized lists on narrower aspects of wind energy. Any part of the reference can be searched, for actual assigned descriptors, or for free terms.

SAMPLE SEARCHES:

- 1. All references on "design small scale" and ("developing countries" or "remote areas").
- 2. All references from the Brace Research Institute.
- 3. All references to "Patents" on "vertical axis" turbines from 1976 to date.

SUBJECT OF SEARCH: State subject of search in sentence form, using descriptors from subject index when appropriate: List additional descriptors, free terms, synonyms relevant to the subject: List any additional requirements, such as years to be covered, type of materials, etc. Send request and prepayment* to: Name Barbara L. Burke Engineering Research Center Colorado State University Fort Collins, Colorado 80523

*Prepayment of \$5.00 is required to cover computer costs, handling, and mailing. An additional fee may be assessed for unusually large or complex searches.

Phone

BIBLIOGRAPHY

The bibliography is organized by year, in entry number order. So that the Second Supplement may be merged with the Basic Volume and First Supplement if desired, entry numbers in the Second Supplement are assigned to follow consecutively those entry numbers used in the first two volumes. Therefore in most years entry numbers do not begin with "l", but with a number to immediately follow the last entry number used for that year in the First Supplement.

The Second Supplement may be merged with the first two volumes, or left separate. The indexes in the Second Supplement are for that supplement only, so if the three volumes are merged, the old indexes must be retained and used with the indexes for the Second Supplement. By 1981, when the retrospective file has been added to the computer data base, cumulative indexes will be produced for all volumes.

79-0001 ACCESS CATALOG UPDATE.
WIND POWER DIG. NO. 15: 52-55, SPRING 1979.

79-002 AKINS R E
FULL-SCALE PERFORMANCE EVALUATION OF WIND TURBINES.
ASCE CONVENTION + EXPOSITION, BOSTON, APRIL 2-6, 1979. PREPRINT 3530.

THE ACCURATE ASSESSMENT OF WIND POWER AS AN ALTERNATIVE SOURCE REQUIRES AN UNDERSTANDING OF BOTH THE WIND RESOURCE AND HOW A PARTICULAR WIND TURBINE PERFORMS IN THIS ENVIRONMENT. THE INABILITY OF ANALYSTS TO INCORPORATE UNSTEADY EFFECTS OF ATMOSPHERIC TURBULENCE ON WIND TURBINE PERFORMANCE INTRODUCES UNCERTAINTY INTO PERFORMANCE PREDICTIONS. IN ORDER TO VERIFY THESE PREDICTIONS FIELD-TESTING OF FULL-SCALE PROTOTYPE WIND TURBINES HAS BEEN UNDERTAKEN BY BOTH THE FEDERAL GOVERNMENT AS A PART OF THE STIMULATION OF THE WIND-POWER INDUSTRY AND BY PRIVATE INDUSTRY AS A PART OF THEIR DEVELOPMENT PROGRAMS. THE RESULTS OF SUCH TESTING MUST BE PRESENTED IN A FORMAT WHICH IS USEFUL TO BOTH A TECHNICAL AUDIENCE AND TO POTENTIAL USERS OF WIND POWER, IN EITHER THE PUBLIC OR PRIVATE SECTOR. A STRAIGHTFORWARD TECHNIQUE TERMED [THE METHOD OF BINS[HAS BEEN DEVELOPED FOR USE IN DETERMINING THE MEAN PERFORMANCE OF WIND TURBINES IN A FIELD ENVIRONMENT. THIS TECHNIQUE IS BRIEFLY OUTLINED AND EXAMPLES OF RESULTS OBTAINED ARE PRESENTED. AN APPROACH IS PROPOSED WHICH ALLOWS THE UTILIZATION OF THESE PERFORMANCE DATA ALONG WITH A DESCRIPTION OF WIND CHARACTERISTICS TO PREDICT THE ANNUAL ENERGY PRODUCED BY A WIND TURBINE AT A PARTICULAR LOCATION.

79-003 AULD H E, LODDE P F
A STUDY OF FOUNDATION/ANCHOR REQUIREMENTS FOR PROTOTYPE VERTICAL-AXIS WIND TURBINES.
NTIS, FEBRUARY 1979. 94 P.
SAND-78-7046

THE FOUNDATION/ANCHOR REQUIREMENTS FOR A RANGE OF VERTICAL AXIS WIND TURBINES WERE IDENTIFIED. FOUNDATION AND ANCHOR SYSTEMS MEETING THESE REQUIREMENTS WERE DESIGNED AND EVALUATED ON THE BASIS OF THEIR DEPLOYABILITY AND COST-EFFECTIVENESS. OPTIMUM FOUNDATION/ANCHOR SYSTEMS FOR EACH COMBINATION OF TURBINE SIZE AND SOIL CONDITION, AS WELL AS A COMPLETE DETAILED DESIGN FOR A VAWT SYSTEM SITED AT ROCKY FLATS, COLORADO, ARE PRESENTED.

79-0004 BERGESON L
SAIL POWER FOR THE WORLD'S CARGO SHIPS.
TECHNOL. REV. 81(5): 22-36, MARCH-APRIL 1979.

THROUGH THE END OF THE LAST CENTURY, SAILING SHIPS CARRIED A SIGNIFICANT PORTION OF THE WORLD'S TRANS-OCEAN CARGOES. BUT BY THE CLOSE OF WORLD WAR I, THEY HAD BEEN VIRTUALLY DRIVEN FROM THE SEAS BY STEAM SHIPS THAT USED LOW-COST FOSSIL FUELS FOR STEADY POWER AND THEREBY KEPT RELIABLY ON SCHEDULE. RECENT FORECASTS OF WORLD ENERGY CONSUMPTION AND COSTS INDICATE THAT THE PRICE OF MARINE BUNKER OIL, WHICH IS ABOUT \$15 PER BARREL AS OF THIS WRITING, MAY DOUBLE OR TRIPLE WITHIN THE NEXT DECADE. SUCH PROJECTIONS ARE OF ENORMOUS CONCERN TO OPERATORS OF THE CARGO SHIPS NOW PLYING THE SEAS; EXPENDITURES FOR FUEL MAKE UP 20 TO 30 PER CENT OF THE TOTAL COST OF OPERATING A MODERN VESSEL. IN THIS CONTEXT IT IS POSSIBLE TO IDENTIFY THE BENEFITS OF EVEN A PARTIAL SWITCH OF THE WORLD'S COMMERCIAL FLEET BACK TO SAIL POWER. SAILS CONSTITUTE AN ELEGANT AND TECHNICALLY FEASIBLE SOLAR ENERGY CONVERSION SYSTEM THAT REMAINS UNEXPLOITED BY ENERGY PLANNERS AND INDUSTRY.

79-0005 BONDI H
ENERGY R AND D IN THE UNITED KINGDOM.
ATOM NO. 268: 40-41, FEBRUARY 1979.

A DISCUSSION ON NUCLEAR ENERGY, NUCLEAR RESOURCES, AND ENERGY R AND D IN THE UK ARE PRESENTED. WAVE, GEOTHERMAL AND WIND ENERGY ARE BRIEFLY COMMENTED ON.

79-0006 BONTIUS G H
IMPLICATIONS OF LARGE SCALE USE OF WIND ENERGY FOR PUBLIC POWER SUPPLY.
ENERGIESPECTRUM 3(4): 98-104, APRIL 1979.

THIS PAPER DISCUSSES THE IMPLICATIONS OF USING WIND DRIVEN GENERATORS TO

INCREASE THE SUPPLY OF ELECTRIC POWER. WIND POWER IS LIKELY TO ACCOUNT FOR ABOUT 3 PERCENT OF THE TOTAL ENERGY PRODUCTION, OR 15 PERCENT OF THE TOTAL PRODUCTION OF ELECTRIC POWER, IN 5000 STATIONS OF 1 MW EACH. LIKELY LOCATIONS AND COSTS ARE DISCUSSED.

79-0007 BOWLES D F, ROLLINS J P, HAWKS R J
PARAMETRIC PERFORMANCE ANALYSIS OF A DARRIEUS WIND TURBINE SYSTEM.
J. ENERGY 3(3): 140-144, MAY-JUNE 1979.

A STEADY-STATE COMPUTER SIMULATION WAS USED TO EVALUATE THE PERFORMANCE OF A SMALL DARRIEUS ROTOR AEROTURBINE LOADED BY SEVERAL DIFFERENT ENERGY CONVERSION DEVICES. FOR CONSTANT SPEED OPERATION IT WAS FOUND THAT THE GENERATOR SIZE MUST BE CAREFULLY MATCHED TO LOCAL WIND CONDITIONS. OVERALL SYSTEM PERFORMANCE CAN BE IMPROVED IF A VARIABLE SPEED LOAD IS USED OR IF VARIABLE ROTOR SPEED CAN BE PROVIDED FOR A CONSTANT SPEED LOAD. FOR A RANGE OF GENERATOR SIZES THE TOTAL POWER OUTPUT VARIES ONLY SLIGHTLY WITH GENERATOR CAPACITY.

79-0008 BRAUNSTEIN L A
WIND ENERGY: THE LONG ROAD TO COMMERCIALIZATION.
ENERGY 4(1): 10-11, WINTER 1979.

THIS ARTICLE REPORTS PRESENT ACTIVITY IN WIND GENERATORS THROUGHOUT THE UNITED STATES. MUCH OF THE ACTIVITY IS SPONSORED BY THE DEPARTMENT OF ENERGY (DOE), BUT A NUMBER OF LARGE AND SMALL INDUSTRIAL FIRMS ARE ALSO WORKING WITHOUT DOE FUNDING. BOTH SMALL AND LARGE WIND MACHINES USING HORIZONTAL OR VERTICAL AXIS ARE UNDER DEVELOPMENT AND TEST. DOE-SPONSORED MOD-1 WIND TURBINE, WITH A SET OF 200-FOOT STEEL ROTOR BLADES, IS EXPECTED TO BE COMPLETED BY THE SPRING OF 1979 NEAR BOONE, N.C. IT WILL SUPPLY 2,000 KILOWATTS (TWO MEGAWATTS) OF POWER TO THE LOCAL ELECTRICAL COOPERATIVE, AT 10 OR 11 CENTS PER KWHR. THE COST ENERGY WITH TODAY'S SMALL WIND MACHINES IS ABOUT 15 CENTS PER KWHR. THE COST OF ORDER TO BECOME ECONOMICALLY COMPETITIVE, DOE PROGRAM MANAGERS SAY, WINISYSTEMS MUST BE ABLE TO PROVIDE ENERGY AT A VERY LOW COST: TWO TO THREE CENTS PER KWHR. THIS ENERGY COST WOULD MAKE WIND POWER COMPETITIVE WITH THE COST OF FUEL IN CONVENTIONAL POWER GENERATING FACILITIES; IT WOULD LEAVE ROOM FOR THE ADDITIONAL COST OF POWER TRANSMISSION AND DISTRIBUTION (FOR LARGE SYSTEMS), OR UTILITY SURCHARGES (FOR SMALL SYSTEMS). UTIL SURCHARGES MIGHT BE ADDED TO A WIND SYSTEM OWNER'S BILL TO RECOUP THE COST OF PROVIDING STANDBY SERVICE. UTILITIES THAT DO NOT USE SURCHARGES WOULD BE SUBSIDIZING USE OF WIND SYSTEMS BY SPREADING STANDBY SERVICE COST AMONG THEIR CUSTOMERS. WIND ENERGY IS APPROACHING ECONOMIC COMPETITIVENESS WITH DIESEL-GENERATED POWER (AT NINE TO 21 CENTS PER KWHR), AND APPEARS CAPABLE OF ACHIEVING COMPETITIVE COST GOALS EARLIER THAN SOME OTHER SOLAR TECHNOLOGIES, SUCH AS PHOTOVOLTAICS (CURRENTLY AT 60-80 CENTS PER KWHR), OR SOLAR THERMAL POWER SYSTEMS (AT 40 TO 50 CENTS PER KWHR).

79-0009 BRAUSER B O, BRAUSER S O
WIND DRIVEN ELECTRIC POWER PLANT.
U.S. PATENT NO. 4,134,708, JANUARY 16, 1979.

THIS PATENT IS FOR A WIND TURBINE APPARATUS COMPRISING A VERTICALLY RISING EXOSKELETAL FRAME HAVING AT LEAST TWO VERTICALLY SPACED SETS OF RADIALLY CONVERGING RIBS, MEANS DEFINING AN AXIAL OPENING CONNECTING SAID RIBS, A VERTICAL DRIVE SHAFT DISPOSED IN SAID AXIAL OPENING, A COLLAR CONCENTRICALLY DISPOSED AROUND SAID SHAFT WITHIN SAID AXIAL OPENING, MEANS FOR ROTATABLY SUPPORTING SAID SHAFT AND SAID COLLAR WITHIN SAID AXIAL OPENING; A WIND SHIELD CARRIED BY SAID COLLAR, AND A ROTOR CARRIED BY SAID SHAFT BETWEEN SAID VERTICALLY SPACED SETS OF RADIALLY CONVERGING RIBS.

79-0010 THE CALIFORNIA WIND PROGRAM.
WIND POWER DIG. NO. 15: 6-11, SPRING 1979.

THE WIND ENERGY PROGRAM OF THE CALIFORNIA ENERGY COMMISSION IS DESCRIBED. THE GOALS OF THE PROGRAM ARE (1) TO DEMONSTRATE THE TECHNICAL VIABILITY AND POTENTIAL ECONOMIC ATTRACTIVENESS OF WIND-ELECTRIC CONVERSION SYSTEMS; (2) TO PROVIDE [HANDS ON[OPERATIONAL EXPERIENCE FOR AN ELECTRIC UTILITY OR A COMMERCIAL OR INDUSTRIAL USER OF ELECTRICITY; AND (3) TO PROVIDE PUBLIC VISIBILITY FOR WIND ENERGY.

79-0011 CARPENTER K, WHEELER C, SULLIVAN M

CULTURAL RESOURCE SURVEY AND EVALUATION OF SYSTEM VERIFICATION UNIT SITES, TRANSMISSION LINE AND ACCESS ROAD RIGHTS-OF-WAY; WIND ENERGY PROJECTS, ALBANY AND CARBON COUNTIES, WYOMING. NTIS, JANUARY 1979. 37 P. PB-292384

BETWEEN OCTOBER 27 AND OCTOBER 29, 1978, TWO ARCHEOLOGISTS AND A PALEONTOLOGIST AFFILIATED WITH WESTERN CULTURAL RESOURCE MANAGEMENT OF BOULDER, COLORADO, SURVEYED AN AREA AROUND MEDICINE BOW, WYOMING TO LOCATE AND EVALUATE ANY CULTURAL RESOURCES THAT MIGHT BE AFFECTED BY THE BUREAU OF RECLAMATION'S PROPOSED WIND ENERGY PROJECT. ALTHOUGH NO PALEONTOLOGICAL OR HISTORICAL SITES OR REMAINS WERE LOCATED, TWO ARCHEOLOGICAL SITES AND FIFTEEN (15) LOCI OF ISOLATED ARCHEOLOGICAL ARTIFACTS WERE DISCOVERED. SINCE BOTH SITES WERE LOCATED ALONG THE PROPOSED TRANSMISSION LINE RIGHT-OF-WAY FROM ALTERNATE "SITE C" TO THE EXISTING TRANSMISSION LINE ALONG WYOMING HIGHWAY 487, AND NOT ON ANY OF THE SYSTEM VERIFICATION UNIT LOCATIONS, IT IS RECOMMENDED THAT DIRECT SITE IMPACT DURING TRANSMISSION LINE CONSTRUCTION BE AVOIDED. CONSTRUCTION ON ANY OF THE ALTERNATE SYSTEM VERIFICATION UNIT LOCATIONS WILL NOT ADVERSELY AFFECT ANY CULTURAL RESOURCES, EITHER HISTORIC OR ARCHEOLOGICAL.

WIND POWER DIG. NO. 16: 8-13, SUMMER 1979.

THIS ARTICLE IS ON DESIGNING AND USING LOW-PRESSURE WATER SYSTEMS.

79-0013 CARTER J
USING WATER-PUMPING WINDMILLS. PART II.
WIND POWER DIG. NO. 15: 44-50, SPRING 1979.

79-0014 CHEN J M, TSUE C K
VORTEX GENERATOR AFFECTED BY THE TOWER ASPECT RATIO.
J. IND. AERODYN. 4(2): 101-112, MARCH 1979.

A MATHEMATICAL ANALYSIS OF A VORTEX WHICH IS GENERATED BY A LARGE HOLLOW TOWER IS PRESENTED. THE TOWER ASPECT RATIO (HEIGHT/DIAMETER) IS CONSIDERED, AND IT IS SHOWN THAT THE LOWEST PRESSURE DROP CAN BE OBTAINED FROM THIS TORNADO-TYPE WIND ENERGY SYSTEM WHEN THE ASPECT RATIO IS BETWEEN 3 AND 5.

79-0015 CLIFF W C
WIND DIRECTION CHANGE CRITERIA FOR WIND TURBINE DESIGN.
NTIS, JANUARY 1979. 22 F.
PNL-2531

IN MANY CASES, THE WIND TURDINE DESIGN ENGINEER NEEDS TO KNOW WIND CHARACTERISTICS THAT ENGULF ALL OR PART OF THE TURBINE ROTOR SYSTEM BECAUSE A SPATIAL-FILTERING EFFECT, DEPENDING ON THE SIZE OF THE WIND TURBINE ROTOR SYSTEM, MUST BE ACCOUNTED FOR IN ORDER TO PROVIDE WIND CHARACTERISTIC DESIGN INPUTS. ONE SUCH INPUT IS THE WIND DIRECTION CHANGE WHICH OCCURS OVER TIME. THE DIRECTION CHANGE, WHICH IS ALSO AVERAGED OVER THE SWEPT AREA OF A ROTOR SYSTEM, IS LESS SEVERE THAN THE MAXIMUM DIRECTION CHANGE OCCURRING AT A POINT WITHIN THE SWEPT AREA. THAT IS, WITHIN THE SWEPT AREA OF THE ROTOR, AREAS OF DIRECTION CHANGE GREATER THAN THE AVERAGE DIRECTION CHANGE AS WELL AS AREAS OF LESSER CHANGE OCCUR SIMULTANEOUSLY. THIS PAPER PRESENTS FORMULAS FOR ESTIMATING THE DIRECTION CHANGE ENCOUNTERED OVER THE SWEPT AREA OF THE ROTOR SYSTEM. THE FORMULAS ARE GENERIC AND MAY BE USED FOR ANY SIZE OF WIND TURBINE SYSTEM OPERATING IN STRONG WIND CONDITIONS. A METER-KILOGRAM-SECOND (MKS) SYSTEM OF UNITS IS USED IN THIS REPORT.

79-0016 COIT L
WIND ENERGY: LEGAL ISSUES AND INSTITUTIONAL BARRIERS.
NTIS, JUNE 1979. 28 P.
SERI/TR-62-241

THE IDEA OF HARNESSING THE WIND'S ENERGY IS NOT A NEW ONE. PRIOR TO WORLD WAR II, OVER SIX MILLION SMALL WINDMILLS WERE BUILT IN THE UNITED STATES. UNFORTUNATELY, THE DEVELOPMENT OF CHEAPER FOSSIL FUELS DURING THE POSTWAR INDUSTRIAL BOOM RESULTED IN THE LARGE-SCALE ABANDONMENT OF WIND GENERATION DEVICES. SUDDENLY, HOWEVER, WITH THE PRICE OF FOSSIL

FUELS RISING ALMOST DAILY, WIND ENERGY HAS ONCE AGAIN BECOME AN ATTRACTIVE ENERGY ALTERNATIVE. BEFORE THE POTENTIAL OF WIND ENERGY CAN BE REALIZED, LARGE-SCALE COMMERCIALIZATION WILL HAVE TO OCCUR. STANDING IN THE WAY OF COMMERCIAL DEVELOPMENT ARE VARIOUS INSTITUTIONAL AND LEGAL BARRIERS. THESE INCLUDE(I) POSSIBLE CONFLICTS WITH EXISTING ZONING AND OTHER LAND-USE PLANNING SCHEMES, (2) THE QUESTION OF GUARANTEEING ACCESS TO THE WIND (3) POSSIBLE TORT AND ENVIRONMENTAL ISSUES RAISED BY WECS OPERATION, AND (4) THE CRITICAL PROBLEM OF CREATING FINANCIAL INCENTIVES. THIS PAPER DISCUSSES THE IMPLICATIONS OF EACH OF THESE ISSUES AND SUGGESTS SOLUTIONS WHERE PRACTICABLE.

79-0020 DERRINGTON J A

MARINE STRUCTURES FOR ENERGY CONVERSION.

INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 152-155.

THIS PAPER DISCUSSES THE PROBLEMS INVOLVED IN THE USE OF MASSIVE OFFSHORE ENGINEERING STRUCTURES DESIGNED TO EXPLOIT EITHER RESERVES OF COAL, OIL, AND GAS FROM BELOW THE SEABED OR THE SO-CALLED BENIGN ENERGY SOURCES RESULTING FROM THE NATURALLY OCCURRING SOLAR, LUNAR OR WIND FORCES. FOR ALL SUCH STRUCTURES, EXPOSED THROUGHOUT THEIR USEFUL LIFE TO THE SEVERE ENVIRONMENTAL EFFECTS OFFSHORE, THE NATURAL CONSTRUCTION MATERIAL IS EITHER REINFORCED OR PRESTRESSED CONCRETE. THE CONSTRUCTIONAL PROCEDURES DISCUSSED INCLUDE THE USE OF CONCRETE CAISSON STRUCTURES, FLOATED INTO THE PLACE AND BALLASTED DOWN ONTO THE SEABED OR ALTERNATIVELY MOORED IN A PERMANENTLY FLOATING MODE, AND THE USE OF METHODS BASED ON CONSTRUCTION INSHORE AND INTEGRATION OF EXTENSIVE MECHANICAL AND ELECTRICAL EQUIPMENT IN SHELTERED WATERS, BEFORE TOWING TO THEIR OFFSHORE LOCATIONS.

79-0021 DESHMUKH R G, RAMAKUMAR R
PROBABILITY MODELS FOR WIND-ELECTRIC CONVERSION SYSTEMS AND THEIR
APPLICATION TO RELIABILITY STUDIES.
IEEE POWER ENG. SOC., WINTER MEETING, PREPRINT, NEW YORK, FEBRUARY 4-9,
1979. NEW YORK, IEEE, PAP. A79036-5, 1979. 8 P.

AS THE PENETRATION OF WIND-ELECTRIC CONVERSION SYSTEMS (WECS) INTO COMMERCIAL UTILITY GRIDS INCREASES, THEIR INFLUENCE ON THE OVERALL SYSTEM RELIABILITY ASSUMES IMPORTANCE. THIS PAPER DISCUSSES THE DEVELOPMENT OF A PROBABILISTIC APPROACH FOR MODELING THE LOSS OF WIND GENERATION CAPACITY DUE TO THE INHERENT VARIABILITY OF THE WIND INPUT. IT IS BASED ON READILY AVAILABILE PARAMETERS SUCH AS THE MEAN AND/OR VARIANCE OF THE WIND SPEED. THE MODEL IS THEN APPLIED TO STUDY THE WIND GENERATION AVAILABILITY AND THE RELIABILITY OF WECS OPERATING IN PARALLEL WITH CONVENTIONAL GENERATORS SUPPLYING A COMMON LOAD. THE RESULTS OBTAINED ARE DISCUSSED AND SOME CONCLUSIONS ARE DRAWN REGARDING THE RELIABILITY OF WIND-ASSISTED UTILITY SYSTEMS.

79-0022 DIXON J C
LOAD MATCHING EFFECTS ON WIND ENERGY CONVERTER PERFORMANCE.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 418-421.

INVESTIGATED ARE THE CAUSES OF THE LOW EFFICIENCY OF WIND PUMPS AND OUTLINED ARE AREAS FOR DEVELOPMENT. IT IS SUGGESTED THAT THE LOW EFFICIENCY IS LARGELY THE RESULT OF POOR LOAD MATCHING OF THE TYPICAL RECIPROCATING PUMP. IMPROVEMENT OF THIS LOAD MATCHING OFFERS MUCH MORE POTENTIAL FOR IMPROVEMENT IN PERFORMANCE THAN AERODYNAMIC REFINEMENT OF THE ROTOR.

79-0027 FARMER E D, NEWMAN V G, ASHMOLE P H
THE INTEGRATION OF A COMPLEX OF WIND-DRIVEN GENERATORS INTO A POWER
SYSTEM.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 385-389.

TECHNICAL AND ECONOMIC PROBLEMS, RELATING TO DYNAMICAL RESPONSE, SYSTEM OPERATION AND PLANNING, THAT WOULD REQUIRE EVALUATION IF A SUBSTANTIAL COMPLEX OF WIND-DRIVEN GENERATORS WERE TO BE INTEGRATED INTO A POWER SYSTEM ARE IDENTIFIED. AN ARRAY OF MACHINES IS CONSIDERED WITH A TOTAL OUTPUT IN A RANGE BETWEEN SEVERAL HUNDRED AND A FEW THOUSAND MEGAWATTS. ALTHOUGH THE DECISIVE QUESTIONS WOULD RELATE TO CAPITAL COST, STRUCTURAL INTEGRATY AND AMENITY, THE ECONOMIC VALUE OF THE DERIVED ENERGY WOULD BE SIGNIFICANTLY INFLUENCED BY THE OPERATIONAL REQUIREMENTS OF INCREASED SPARE CAPACITY AND PLANT FLEXIBILITY. THE OPERATIONAL PROBLEMS WOULD DERIVE FROM TWO PRINCIPAL CAUSES, NAMELY, THE VARIABLE AND UNCERTAIN NATURE OF THE WIND AND THE REMOTENESS OF SUITABLE GENERATION SITES FROM THE MAIN CENTRES OF DEMAND.

79-0028 FIELD EVALUATION INITIATED. WIND POWER DIG. NO. 15: 21, SPRING 1979.

79-0029 FIGARD R L, SCHETZ J A
STUDIES OF THE AERODYNAMIC PERFORMANCE OF A 10 KW HORIZONTAL-AXIS
WINDMILL.
J. ENERGY 3(1): 3-7, JANUARY-FEBRUARY, 1979.

THE AERODYNAMIC PERFORMANCE OF A MODERN, HIGH-TIP SPEED, THREE-BLADED WINDMILL RATED AT 10KW AT 30 MPH WAS STUDIED BY THREE METHODS. FIRST, THE RESULTS OF FIELD TESTS OF THE ACTUAL DEVICE WITH BOTH A RESISTIVE AND A BATTERY-CHARGING ELECTRIC LOAD ARE REPORTED. SECOND, THE PREDICTIONS OF A SIMPLE BLADE-ELEMENT ANALYSIS ARE PRESENTED AND COMPARED WITH THE FIELD DATA. AERODYNAMIC BLADE SECTION COEFFICIENTS OF AN ACTUAL BLADE SECTION WERE MEASURED IN A WIND TUNNEL AND USED AS INPUT IN THE ANALYSIS. THIRD, WIND TUNNEL TEST RESULTS FOR A 1/5TH SCALE MODEL ARE GIVEN. REYNOLDS NUMBER SIMULATION FROM MODEL TO PROTOTYPE IS CONSIDERED IN DETAIL. THE RESULTS OF ALL THREE EFFORTS ARE COMPARED, AND GOOD AGREEMENT IS SHOWN.

79-0030 FITZPATRICK E R
CONCENTRATED ALTERNATOR DESIGN.
ALTERN. SOURCES ENERGY NO. 38: 18-19, JULY/AUGUST 1979.

THIS WINDING DESIGN WILL SHOW YOU HOW TO OBTAIN THE GREATEST OUTPUT FOR A GIVEN NUMBER OF STATOR TURNS, FIELD FLUX, AND SPEED. THIS DESIGN HAS MANY ADVANTAGES: 1. EASY TO OBTAIN A SUITABLE FRAME; 2. SIMPLE TO REWIND;

3. HIGH OUTPUT AT LOW RPM; 4. SIMPLE MACHINE-SHOP WORK; AND 5. THREE-PHASE PRINCIPLE FOR HIGH EFFICIENCY.

UTILITY OPERATIONAL EXPERIENCE ON THE NASA/DOE MOD/OA 200-KW WIND TURBINE.
NTIS, 1979. 30 P.
NASA-TM-79084, N79-20494, DOE/NASA/1004-79/1

THE MOD-OA 200 WIND TURBINE WAS DESIGNED AND FABRICATED AS PART OF THE FEDERAL WIND ENERGY PROGRAM. EARLY WIND TURBINE OPERATION AND PERFORMANCE DATA WERE OBTAINED WHILE GAINING INITIAL EXPERIENCE IN THE OPERATION OF LARGE, HORIZONTAL AXIS WIND TURBINES IN TYPICAL UTILITY ENVIRONMENTS. THE MOD-OA WIND TURBINE WAS TURNED OVER TO THE TOWN OF CLAYTON LIGHT AND WATER PLANT, CLAYTON, NM, FOR UTILITY OPERATION AND ON DECEMBER 31, 1978, THE MACHINE HAD COMPLETED TEN MONTHS OF UTILITY OPERATION. THE MACHINE IS DESCRIBED AND THE RECENT OPERATIONAL EXPERIENCE AT CLAYTON, NM IS DOCUMENTED.

79-0037 GUSTAVSON M R
LIMITS TO WIND POWER UTILIZATION.
SCIENCE 204(4388): 13-17, APRIL 6, 1979.

AS WIND ENERGY RECEIVES INCREASING ATTENTION IT IS IMPORTANT TO UNDERSTAND THE NONECONOMIC FACTORS LIMITING THE TOTAL POWER THAT CAN BE EXTRACTED FROM THE WIND. THESE FACTORS ARE EXAMINED HERE WITH A MACROSCOPIC APPROACH. POSSIBLE LEVELS FOR THE CONTINENTAL UNITED STATES ARE DEFINED. SOME GENERAL CONCLUSIONS ARE REACHED REGARDING THE SITES THAT WOULD HAVE TO BE UTILIZED TO ACHIEVE THESE LEVELS. EVEN WITHIN THESE LIMITS, WIND ENERGY IS SEEN TO OFFER A POTENTIAL FAR LARGER THAN

MANY OTHER SELF-RENEWING ENERGY SOURCES.

79-0038 HANLON J VISITING WINDMILLS IN WALES. NEW SCI. 76(1075): 216-218, OCTOBER 27, 1979.

EXHIBITS AT THE CENTRE FOR ALTERNATIVE TECHNOLOGY IN WALES INCLUDE: AN ENTIRE LOW ENERGY HOUSE, A SOLAR COLLECTOR, THREE WINDMILLS, FISH CULTURE, ORGANIC GARDENS, AND A DO-IT-YOURSELF COMPOST BIN.

79-0039 HANSEN A C
EFFECTS OF TURBULENCE ON WIND TURBINE PERFORMANCE.
ASCE CONVENTION + EXPOSITION, BOSTON, APRIL 2-6, 1979. PREPRINT 3537.

SMALL WIND TURBINE GENERATOR TESTING AND DESIGN HAVE TRADITIONALLY NEGLECTED UNSTEADINESS IN THE WIND WHENEVER POSSIBLE. PRIMARILY FOR SIMPLIFICATION, STEADY-STATE CONDITIONS HAVE BEEN SOUGHT IN TESTING AND DESIGN ANALYSES HAVE ASSUMED STEADY OR QUASI-STEADY WIND CONDITIONS. THOUGH THIS PATTERN HAS BEEN CHANGING IN THE PAST FEW YEARS TOWARDS RECOGNITION OF THE NEED TO PROPERLY TREAT TURBULENCE EFFECTS, MUCH EFFORT REMAINS IN IDENTIFYING NEEDS AND METHODS IN BOTH TESTING AND DESIGN. SMALL WIND ENERGY CONVERSION SYSTEM (SWECS) RESEARCH ACTIVITIES MANAGED BY ROCKWELL INTERNATIONAL FOR THE DEPARTMENT OF ENERGY ARE ACTIVELY SEEKING TO DETERMINE THE EFFECTS AND IMPORTANCE OF TURBULENCE ON SYSTEM PERFORMANCE AND COSTS. THE PURPOSE OF THIS PAPER IS TO DESCRIBE EFFORTS UNDERWAY AND PRELIMINARY FINDINGS OF THE STUDY OF TURBULENCE EFFECTS. MORE SPECIFICALLY, THE PAPER WILL DESCRIBE RANDOM DATA ANALYSIS METHODS IN USE AT THE WIND SYSTEMS TEST CENTER AND THE EFFECTS OF TURBULENCE ON STRUCTURAL DESIGN IN NINE SUBCONTRACTED PROTOTYPE DEVELOPMENTS.

79-0040 HARLEY R G, BEN-DOV E
WIND ENERGY CONVERSION AND HYDROGEN PRODUCTION A FEASIBILITY STUDY FOR
SOUTH AFRICA.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 273-276.

THIS PAPER DESCRIBES A FEASIBILITY STUDY INTO THE USE IN SOUTH AFRICA OF THREE DIFFERENT WIND ENERGY CONVERSION (WEC) SCHEMES: WEC GENERATES AC POWER AND IS SYNCHRONIZED TO AN ELECTRIC UTILITY GRID WHICH HAS ENERGY STORAGE CAPACITY SUCH AS PUMPED WATER STORAGE FOR EXAMPLE; A SCHEME SIMILAR TO SCHEME 1, BUT THE GRID HAS NO STORAGE CAPACITY; WEC GENERATED DC POWER IS USED IN AN ELECTROLYSIS MODE TO GENERATE HYDROGEN.

79-0041 HIGH KW WIND POWER PUT TO TEST. ENG-NEWS REC. 203(3): 17, JULY 19, 1979.

THIS NEWS ARTICLE DESCRIBES THE 2,000 KW TURBINE CONSTRUCTED BY GE FOR DOE IN BOONE, N.C. ALSO MENTIONED IS A PLANNED 3,000 KW TURBINE TO BE BUILT IN SWEDEN.

INTERNATIONAL CONFERENCE ON FUTURE FRERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1974.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979.

THE FOLLOWING TOPICS WERE DEALT WITH: RENEWABLE ENERGY RESOURCES; ENERGY STORAGE; WAVE POWER GENERATION; WIND POWER SYSTEMS; WIND TURBINES; FLUIDISED BED COMBUSTION; SOLAR POWER SYSTEMS; TIDAL POWER SYSTEMS; COMPRESSED AIR STORAGE; SECONDARY CELLS; MAGNETOHYDRODYNAMIC GENERATION; COMBINED CYCLE POWER PLANTS; AND ENERGY ECONOMICS. 62 PAPERS WERE PRESENTED, ALL OF WHICH ARE PUBLISHED IN FULL IN THE PRESENT PROCEEDINGS.

79-0053 JOHNSON G T EVALUATION OF SCHEMES FOR ESTIMATING SURFACE-WIND STRENGTH. ATMOS. ENVIRON. 13(4): 437-442, 1979.

THREE METHODS OF ESTIMATING LOCAL SURFACE-WIND STRENGTH ON THE BASIS OF REMOTE MEASUREMENTS ARE COMPARED AGAINST ACTUAL MEASUREMENTS AT UP TO 12 PLACES IN THE SYDNEY REGION. THE METHODS INVOLVE (I) ASSUMING A UNIFORM WIND IN THE REGION (EQUAL TO THAT AT OBSERVATORY HILL), (2) SCALAR INTERPOLATION BETWEEN VALUES MEASURED BY THE NEAREST INSTRUMENTS, OR (3) VECTOR INTERPOLATION. FOR EACH METHOD, ADDITIONAL CLIMATOLOGICAL INFORMATION IS THEN PROVIDED IN TERMS OF LINACRE'S CONCEPT OF THE "WINDINESS RATIO", THE LOCAL WIND STRENGTH AS A FRACTION OF THAT AT A REFERENCE STATION. COMPARISONS FOR EACH HOUR OF FOUR SELECTED DAYS SHOW THAT THE ESTIMATES OF EACH METHOD ARE IMPROVED BY USING THIS INFORMATION. THIS SUGGESTS THAT THE WINDINESS CONCEPT MAY BE USEFUL IN SPECIFYING WIND FIELDS, ESPECIALLY IN COMPLICATED TOPOGRAPHY.

79-0054 KABAKER G
THE FUTURE OF OUR ENERGY SUPPLY.
ELEKTROTECH. Z. 100(7-8): 344-345, APRIL 1979. (IN GERMAN)

THE ARTICLE SUMMARISES, FROM THE W. GERMAN POINT OF VIEW, THE NOW COMMONLY HELD OPINION THAT NUCLEAR ENERGY IS THE ONLY PRACTICABLY AVAILABLE LARGE-SCALE ENERGY RESOURCE FOR THE MORE OR LESS IMMEDIATE FUTURE. GASIFICATION OF COAL WILL BECOME IMPORTANT BY THE YEAR 2000. OF ALTERNATIVE SOURCES ONLY METHANE PRODUCTION FROM WASTE AND WIND POWER SEEM LIKELY TO BE OF ANY USE TO W. GERMANY. SOME FIGURES ON ENERGY DENSITY IN VARIOUS ENERGY STORAGE MEDIA ARE GIVEN.

79-0055 KAHN E
RELIABILITY OF DISTRIBUTED WIND GENERATORS.
ELECTR. POWER SYST. RES. 2(1): 1-14, MARCH 1979.

THIS PAPER EXPLORES THE DATA AND MODELS NECESSARY TO EVALUATE THE RELIABILITY OF WIND GENERATORS THAT ARE GEOGRAPHICALLY DISTRIBUTED IN A UTILITY SYSTEM. A CASE STUDY IS CONDUCTED USING CALIFORNIA DATA. RESULTS ON CAPACITY CREDIT ARE FOUND TO DEPEND UPON THE SIZE OF THE REGION, THE RELIABILITY OF THE WIND REGIME, THE EXISTING POWER SYSTEM GENERATOR MIX, AND THE PENETRATION OF THE WIND GENERATORS.

79-0056 KATZENBERG R
WHERE ARE THE DALLAS COWGIRLS WHEN WE NEED THEM?
WIND POWER DIG. NO. 16: 5-7, SUMMER 1979.

THE TECHNOLOGY AND POTENTIAL ARE PROVEN. WHAT WIND ENERGY NEEDS IS A "CHEERLEADER"; SOMEONE, PREFERABLY FROM DOE, WHO WILL STAND UP AND SPEAK FOR IT AS A GOOD BET FOR A COST-EFFECTIVE, NEAR-TERM, LARGE SCALE ENERGY SOURCE.

79-0057 KAZA K R V, JANETZKE D C, SULLIVAN T L
EVALUATION OF MOSTAS COMPUTER CODE FOR PREDICTING DYNAMIC LOADS IN TWO
BLADED WIND TURBINES.
NTIS, 1979. 21 P.
NASA-TM-79101, DOE/NASA/1028-72/2. N79-21549

CALCULATED DYNAMIC BLADE LOADS WERE COMPARED WITH MEASURED LOADS OVER A

RANGE OF YAW STIFFNESSES OF THE DOE/NASA MOD-O WIND TURBINE TO EVALUATE THE PERFORMANCE OF TWO VERSIONS OF THE MOSTAS COMPUTER CODE. THE FIRST VERSION USES A TIME-AVERAGED COEFFICIENT APPROXIMATION IN CONJUNCTION WITH A MULTI-BLADE COORDINATE TRANSFORMATION FOR TWO BLADED ROTORS TO SOLVE THE EQUATIONS OF MOTION BY STANDARD EIGENANALYSIS. THE SECOND VERSION ACCOUNTS FOR PERIODIC COEFFICIENTS WHILE SOLVING THE EQUATIONS BY A TIME HISTORY INTEGRATION. A HYPOTHETICAL THREE-DEGREE OF FREEDOM DYNAMIC MODEL WAS INVESTIGATED. THE EXACT EQUATIONS OF MOTION OF THIS MODEL WERE SOLVED USING THE FLOQUET-LIPUNOV METHOD. THE EQUATIONS WITH TIME-AVERAGED COEFFICIENTS WERE SOLVED BY STANDARD EIGENANALYSIS.

79-0058 KETNER K
WIND CHARGERS: SMALL CAN BE BEAUTIFUL.
ALTERN. SOURCES ENERGY NO. 38: 24-29, JULY/AUGUST 1979.

THE AUTHOR PROVIDES SUGGESTIONS FOR THE "WIND-POWER ROOKIE" WHO IS TRYING TO REJUVENATE ONE OF THE OLDER SMALL WIND MACHINES SO COMMON IN THE 30'S AND 40'S.

79-0059 KNOX J B
LLL WIND ENERGY STUDIES (OAHU).
NTIS, JANUARY 1979. 21 P.
CONF-781239-1, UCRL-82171

THE ROLE IN THE NATIONAL WIND ENERGY PROGRAM ASSIGNED TO LLL IS THE DEVELOPMENT AND VERIFICATION OF A SITE SCREENING METHODOLOGY FOR WIND ENERGY RESOURCES. THE SITE SCREENING METHODOLOGY AND THE OAHU STUDIES OF THE PAST THREE YEARS INCLUDE: (A) 3-DIMENSIONAL, DIAGNOSTIC FLOW SIMULATION OVER COMPLEX TERRAIN, (B) MODERN STATISTICAL TECHNIQUES OF PATTERN RECOGNITION ADAPTED TO REGIONAL WIND FIELDS, AND (C) REMOTE SENSING OF ATMOSPHERIC WIND FIELD BY LASER SCINTILLATION. BY APRIL 1979, THE LLL TEAM WILL PROVIDE THE DOE WITH A SUITABLE SITE SCREENING METHODOLOGY FOR WIND ENERGY, AND A SIGNIFICANT DATA BASE OF TWO YEARS DURATION FOR THE ISLAND OF OAHU INCLUDING SPECIAL WIND STATIONS ON THE KAENA AND KAHUKU SUBAREAS, AND EIGHT STATIONS SELECTED FROM THE UNIVERSITY OF HAWAII STUDIES. SOME OF THE SIGNIFICANT RESULTS OF THESE STUDIES ARE PRESENTED.

79-0060 LEONARD T M
A USER'S MANUAL FOR THE COMPUTER CODE PAREP.
ALBUQUERQUE, N.M., SANDIA LABORATORIES, APRIL 1979. 56 P.
SAND-79-0431

THIS REPORT DISCUSSES PAREP (PARAMETRIC REPRESENTATION), A COMPUTER CODE THAT USES NUMERICAL AND EMPIRICAL DATA TO ESTIMATE THE AERODYNAMIC PERFORMANCE OF DARRIEUS-TYPE VERTICAL AXIS WIND TURBINES. BOTH PROGRAM THEORY AND USAGE ARE DESCRIBED FOR THE CODE. SAMPLE RUNS AND PROGRAM LISTINGS ARE PROVIDED.

79-0061 LET 10,000 WINDMILLS TURN. SWEDEN NOW 13(3): 33, 1979.

A REPORT BY THE NATIONAL SWEDISH BOARD FOR ENERGY SOURCE DEVELOPMENT IS DESCRIBED. THE REPORT IS ON A PROJECT WHICH USES WINDMILLS TO PROVIDE POWER TO BETWEEN 20,000 AND 40,000 ONE-AND ROW-FAMILY DWELLINGS IN SWEDEN LOCATED OUTSIDE DENSELY POPULATED AREAS IN REGIONS HAVING WINDY CONDITIONS.

79-0062 LIEBLEIN S, ROSS R S, FERTIS D G
EVALUATION OF URETHANE FOR FEASIBILITY OF USE IN WIND TURBINE BLADE DESIGN.
NTIS, APRIL 1979. 156 P.
NASA-CR-159530, DOE/NASA/7653-79/1, N79-20497/OST

A PRELIMINARY EVALUATION WAS CONDUCTED OF THE USE OF CAST URETHANE AS A POSSIBLE MATERIAL FOR LOW-COST BLADES FOR WIND TURBINES. SPECIMEN TEST DATA ARE PRESENTED FOR ULTIMATE TENSILE STRENGTH, ELASTIC MODULUS, FLEXURAL STRAIN, CREEP, AND FATIGUE PROPERTIES OF A NUMBER OF URETHANE FORMULATIONS. DATA ARE ALSO INCLUDED FOR A LARGE-SCALE URETHANE BLADE SECTION COMPOSED OF CAST SYMMETRICAL HALF-PROFILES TESTED AS A CANTILEVER BEAM. BASED ON THESE RESULTS, AN ANALYSIS WAS CONDUCTED OF A FULL-SCALE BLADE DESIGN OF CAST URETHANE THAT MEETS THE DESIGN SPECIFICATIONS OF THE ROTOR BLADES FOR THE NASA/DOE EXPERIMENTAL 100-KW MOD-O WIND TURBINE.

BECAUSE OF THE LOW VALUE OF ELASTIC MODULUS FOR URETHANE (AROUND 457,000 PSI), THE DESIGN LOADS WOULD HAVE TO BE CARRIED BY METAL REINFORCEMENT. CONSIDERATIONS FOR FUTURE EVALUATION ARE NOTED.

79-0063 LITTLER J G F, THOMAS R B
WIND POWER FOR DOMESTIC USE IN THE UNITED KINGDOM.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 313-316.

DISCUSSED IS THE CAMBRIDGE AUTARKIC HOUSING PROJECT ON THE SERVICING OF DWELLINGS WITH LITTLE OR NO NETWORK ENERGY. THE INVESTIGATION HAS REVEALED THE GREAT EXPENSE OF PROVIDING ALL HOUSEHOLD ELECTRICITY WITHOUT RELIANCE ON THE NATIONAL GRID, IN THE CASE OF EITHER ONE HOUSE OR EVEN A GROUP OF HOUSES; HOWEVER, THE COST OF USING WIND POWER FOR SPACE AND WATER HEATING IS CONSIDERABLY LESS. IN ADDITION TO DESCRIBING THE WIND TURBINE TO BE USED AT CAMBRIDGE, THE APPROACH USED IN OPTIMISING THE DIVISION OF EXPENDITURE OF THERMAL STORAGE AND WIND TURBINE SIZE WHEN CONSIDERING THE USE OF WIND POWER FOR SPACE AND WATER HEATING IS SUMMARISED.

79-0G64 MCCONNELL R D
GIROMILL OVERVIEW.
WASHINGTON, D.C., GOV'T. PRINT. OFFICE, 1979. 12 P.
SERI/TP-35-263

THE GIROMILL IS A VERTICAL AXIS WIND TURBINE HAVING STRAIGHT AIRFOILS WHOSE ANGLES OF ATTACK ARE CONTROLLED SO AS TO MAXIMIZE WIND ENERGY CONVERSION. EACH AIRFOIL IS ROCKED DURING A REVOLUTION IN ORDER TO MAINTAIN A CONSTANT POSITIVE ANGLE OF ATTACK OVER ONE HALF REVOLUTION AND A CONSTANT NEGATIVE VALUE OVER THE OTHER HALF REVOLUTION. MCDONNELL AIRCRAFT COMPANY COMPLETED A FEASIBILITY STUDY OF THE GIROMILL IN 1976. THEIR INITIAL WORK WAS FOLLOWED BY MODEL TESTS IN A WIND TUNNEL IN 1976 AND 1977. PRESENTLY THE PUMP DIVISION OF VALLEY INDUSTRIES, INC., IS COOPERATING WITH MCDONNELL AIRCRAFT TO DESIGN, BUILD, AND DELIVER A 40-KW (8.9-M/S) GIROMILL FOR THE U.S. DEPARTMENT OF ENERGY. DELIVERY TO ROCKY FLATS IS SCHEDULED FOR THE END OF 1979. IN ADDITION TO DESCRIBING THE ABOVE WORK, THIS PAPER PRESENTS AN EVALUATION OF THE GIROMILL CONCEPT IN TERMS OF SOME WIND ENERGY RULES-OF-THUMB.

79-0065 MCDERMOTT J
NYC'S ENERGY TASK FORCE.

79-0066 MCGILL S
WIND-POWERED DAIRYING.
FURROW 84(7): 14-15, SEPTEMBER/OCTOBER 1979.

TWO IDEAS THAT COULD SAVE ON ENERGY COSTS AT SOME DAIRY FARMS ARE: (1) USE WIND POWER TO HELP COOL THE MILK AND WARM THE WASH WATER. LET IT GENERATE SUPPLEMENTAL ELECTRIC POWER THAT CAN BE HOOKED INTO EXISTING ELECTRIC CIRCUITS. (2) MAKE USE OF WASTE HEAT FROM THE COOLER'S CONDENSER. ENGINEERS AND DAIRY SCIENTISTS ARE TESTING THESE IDEAS IN THE 120-COW DAIRY AT COLORADO STATE UNIVERSITY.

79-0067 MARIER D
WHAT'S AVAILABLE IN WIND EQUIPMENT.
ALTERN. SOURCES ENERGY NO. 38: 3-8, JULY/AUGUST 1979.

THIS ARTICLE IS A GUIDE TO AVAILABLE EQUIPMENT IN THE WIND ENERGY FIELD, AND DEALS SPECIFICALLY WITH SYNCHRONOUS INVERTERS, INDUCTION GENERATORS, AND SEVERAL COMPANIES: ENERTECH, WIND ENGINEERING, DYNERGY, ASTRAL-WILCON. INCLUDED IS AN EXTENSIVE LIST OF COMMERCIALLY AVAILABLE WIND MACHINES GIVING THE FOLLOWING INFORMATION FOR EACH: SIZE (RATED KW), ROTOR DIAMETER (FEET), NUMBER OF BLADES, RATED SPEED (MPH) AND CUT-IN SPEED (MPH). ALSO INCLUDED IS A LIST OF MANUFACTURERS WITH ADDRESSES.

79-0068 MARSH W D, SCHACHLE C, SCHEFFLER R L, DUNNING R L
WIND ENERGY AND UTILITIES, EXCERPTS FROM THE PROCEEDINGS OF THE NATIONAL
AWEA MEETING, AMARILLO, TEXAS.
WIND POWER DIG. NO. 16: 30-36, SUMMER 1979.

EXCERPTS ARE PRESENTED FROM THREE PAPERS: (1) WIND POWER IN ELECTRIC UTILITIES, BY W.D. MARSH; (2) SOUTHERN CALIFORNIA EDISON'S 3 MW WIND

79-0069 MENSFORTH T
WINDPOWER GENERATION ON A LARGE SCALE.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 268-272.

A GENERAL DESCRIPTION OF A 10 MW WINDMILL IS PRESENTED, PARTICULAR ATTENTION BEING PAID TO THE ROTOR DESIGN. THE INFLUENCE OF WIND-HEIGHT PROFILES IS DISCUSSED, CONSIDERING VARIOUS TYPES OF SITES, OPTIMAL GROUND CLEARANCE AND ACCURACY OF PERFORMANCE ESTIMATES.

79-0070 MOD-1 TURBINE ON-LINE. WIND POWER DIG. NO. 16: 15, SUMMER 1979.

COMPLETION OF THE 200 FOCT DIAMETER MCC-1 TURBINE INSTALLED NEAR BOONE, N.C., IS REPORTED.

79-0071 MGORE D J
DEPLETION OF AVAILABLE WIND POWER BY A LARGE NETWORK OF WIND GENERATORS.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 302-305.

A ROUGH EMPIRICAL TECHNIQUE IS DEVELOPED TO DETERMINE THE MAGNITUDE OF THE DEPLETION OF THE HUB LEVEL WIND BY THE SHADOWING EFFECT OF UPSTREAM GENERATORS. THE PROBLEMS OF FETCHES OF ORDER TENS OF KILOMETRES IS TACKLED FIRST AND THEN THE PROBLEM OF DEPLETION OVER A DISTANCE SUCH THAT THE MEAN RATE OF POWER EXTRACTION IS NOT SERIOUSLY AFFECTED BY THE UPSTREAM GENERATORS.

79-0072 MUSGROVE P J
OFFSHORE WIND ENERGY SYSTEM FOR THE UK.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 309-312.

THIS PAPER CONSIDERS SOME OF THE MORE IMPORTANT FACTORS AFFECTING THE DESIGN OF OFFSHORE WIND ENERGY SYSTEMS. IT IS CONCLUDED THAT THE POWER DENSITIES IN OFFSHORE WINDS ARE ATTRACTIVELY HIGH, OF THE ORDER 300 KW PER LINEAR METRE (PERPENDICULAR TO THE WIND DIRECTION) OR 1500 W PER SQUARE METRE OF ROTOR SWEPT AREA. SINCE MODERN WIND TURBINES ARE EFFICIENT ENERGY CONCENTRATORS THEY HAVE A VERY SHORT ENERGY RECOVERY PERIOD-ONLY ONE YEAR. THE ECONOMICS OF OFFSHORE OPERATION STRONGLY FAVORS THE USE OF LARGE WIND TURBINES, ABOUT 100 M DIAMETER, AND A LOW RATED WIND SPEED IS ALSO ADVANTAGEOUS. A TYPICAL OFFSHORE WIND ENERGY SYSTEM MIGHT THEREFORE COMPRISE A 10*10 ARRAY OF 100 M DIAMETER WIND TURBINES, TO GIVE A CLUSTER RATING OF 600 MW AND A PLANT FACTOR (AVERAGE OUTPUT RELATIVE TO RATED OUTPUT) OF ABOUT 40 PERCENT.

79-0073 NELSON L L
WIND AND WATER: PARTNERS IN POWER.
RECLAMATION ERA 64(3): 1-7, 1979.

A PROJECT IN WYOMING TO INTEGRATE WIND ENERGY WITH HYDROELECTRIC POWER IS DESCRIBED.

79-0074 NEUSTADTER H E
THE USE OF WIND DATA WITH AN OPERATIONAL WIND TURBINE IN A RESEARCH AND
DEVELOPMENT ENVIRONMENT.
NTIS, 1979. 13 P.
NASA-TM-73832

THE NEED TO MEASURE AND COLLECT WIND DATA PERSISTS WELL AFTER A WIND TURBINE IS INITIALLY MADE OPERATIONAL. THIS IS PARTICULARLY THE CASE IN AN R+D PROGRAM SUCH AS THE WIND ENERGY PROJECT BEING CONDUCTED BY LEWIS RESEARCH CENTER FOR THE DEPARTMENT OF ENERGY. THIS REPORT PRESENTS THE STATUS OF OUR USE OF WIND INFORMATION IN FOUR AREAS, NAMELY: OPERATIONAL CONTROL, DESIGN VERFICATION, POWER PERFORMANCE ANALYSIS, AND LIFETIME ESTIMATION. ATTENTION IS ALSO GIVEN TO SOME OF THE IDENTIFIED, BUT AS YET UNMET, WIND INFORMATIONAL NEEDS AND THE STEPS WE PLAN TO TAKE TO MEET THESE NEEDS.

79-0075 NEW ENERGY SAVER HARNESSES WIND.

AGRIC. RES. 27(7): 3-4, JANUARY 1979.

A DARRIEUS TURBINE IS DESCRIBED WHICH IS USED IN A "WIND-ASSISTED SYSTEM" FOR IRRIGATION PUMPING. AT LOW SPEEDS AN ELECTRIC MOTOR SUPPLIES ALL POWER TO THE PUMP. WHEN WIND SPEED EXCREDS 13 MPH (20.8 KILOMETERS PER HOUR) THE WIND TURBINE SUPPLIES MECHANICAL POWER TO THE PUMP THEREBY REDUCING THE ELECTRICITY COST.

- 79-0076 'NEW STORAGE SYSTEM UNDER DEVELOPMENT. WIND POWER DIG. 16: 17, SUMMER 1979.

 DESIGN AND CONSTRUCTION OF THE ALDBOROUGH AEROGENERATOR.
 INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 306-308.

DESCRIBED IS THE ALDBOROUGH HORIZONTAL AXIS MACHINE WHICH IS THE LARGEST AEROGENERATOR OPERATING IN THE UK IN 1978. IT HAS BEEN CONSTRUCTED WITH THE KNOWLEDGE AND EXPERIENCE OF THE WORK CARRIED OUT IN THE FIFTIES.

- 79-0078 NORTHWEST SEEN HAVING FAVORABLE WEC POTENTIAL. SOL. ENERGY INTELL. REP. 5(3): 27, JANUARY 15, 1979.
- 79-0079 OOI P T, DAVID R A
 INDUCTION GENERATOR/SYNCHRONOUS CONDENSER SYSTEM FOR WIND TURBINE POWER.
 INST. ELECTR. ENG. PROC. 126(1): 69-74, JANUARY 1979.

A NOVEL WIND-TURBINE-DRIVEN ELECTRIC POWER SYSTEM FOR ISOLATED COMMUNITIES IS DESCRIBED. THE SYSTEM CONPONENTS CONSIST OF AN INDUCTION GENERATOR AND A SYNCHRONOUS CONDENSER. THE SYNCHRONOUS CONDENSER SUPPLIES THE MAGNETISATION CURRENT TO THE INDUCTION GENERATOR. BESIDES SUPPLYING THE LOAD POWER, THE INDUCTION GENERATOR FEEDS THE SYNCHRONOUS CONDENSER WITH REAL POWER TO REPLENISH WINDAGE, FRICTION AND I/SUP 2/R LOSSES TO SUSTAIN IT AT SYNCHRONOUS SPEED. THE THEORY OF OPERATION IS GIVEN AND PREDICTIONS BASED ON IT ARE EXPERIMENTALLY VERIFIED. THE CONTROLLERS REQUIRED TO MAINTAIN REGULATED VOLTAGE AND FREQUENCY IN SPITE OF LOAD AND WIND VELOCITY CHANGES ARE INVESTIGATED. SLIP-ENERGY RECOVERY IS INVOLVED, AND PRELIMINARY TEST RESULTS ARE PRESENTED.

79-0080 OSSENBRUGEN P J, PREGENT G P, MEEKER L D OFFSHORE WIND POWER POTENTIAL. AMER. SOC. CIV. ENG. ENERGY DIV. J. 105(EY1): 81-92, JANUARY 1979.

THE OFFSHORE REGION HAS BEEN CITED AS A LOCATION TO CONSTRUCT WIND ENERGY CONVERSION SYSTEMS BECAUSE THIS REGION OFFERS REDUCED SURFACE DRAG; THEREFORE, HIGHER WIND SPEEDS AND GREATER WIND POWER MAY BE HARNESSED THAN ON LAND. A RESULT OF A STATISTICAL ANALYSIS OF WIND SPEED RECORDS FOR THE GULF OF MAINE REGION SHOWS THAT SIX SEASONAL WIND GROUPS CAN BE IDENTIFIED AND THAT THE GAMMA DISTRIBUTION ADEQUATELY DESCRIBES THE WIND SPEED FREQUENCY. THE RESULTS SHOW THAT FOR SIX MONTHS OF THE YEAR HIGHER WIND SPEEDS CAN BE OBTAINED OFFSHORE THAN INLAND. THE USE OF THE GAMMA DISTRIBUTION OF WIND SPEED FOR OPERATIONAL CHARACTERISTICS OF WIND TURBINES SHOW THERE IS QUESTIONABLE GAIN IN OPERATING A TURBINE IN AN OFFSHORE ENVIRONMENT. HISTORICAL WIND SPEED RECORDS OF THE BOSTON LOGAN AIRPORT, THE BOSTON LIGHTSHIP, AND DATA COLLECTED ON BOARD SHIPS THAT TRAVERSED THE GULF OF MAINE REGION WERE USED IN THE STUDY.

 A LOW-COST WATER PUMPING WINDMILL USING A SAIL TYPE SAVONIUS ROTOR.
 NTIS, JANUARY 1979. 110 P.
 79/FM/2, PB-294413

A WATER PUMPING WINDMILL WHICH CAN BE BUILT LARGELY USING MATERIALS AND SKILLS AVAILABLE IN RURAL AREAS HAS BEEN DESIGNED AND FABRICATED. THE WINDMILL USES A SAVONIUS ROTOR AND INCORPORATES A NOVEL SAIL TYPE CONSTRUCTION. THE PUMP IS OF POSITIVE DISPLACEMENT TYPE USING THE CASING OF A PNEUMATIC TIRE FOR THE PUMPING CHAMBER. TWO PROTOTYPES HAVE BEEN CONSTRUCTED AND THESE HAVE INDICATED A REASONABLE PERFORMANCE AND RELIABILITY.

79-G088 RAMLER J R, DONOVAN R M
WIND TURBINES FOR ELECTRIC UTILITIES: DEVELOPMENT STATUS AND ECONOMICS.
NTIS, 1979. 19 P.
EOE/NASA/1028-79/23, NASA-TM-79170

THE TECHNOLOGY AND FCONOMICS OF THE LARGE, HORIZONTAL-AXIS WIND TURBINES CURRENTLY IN THE FEDERAL WIND ENERGY PROGRAM ARE PRESENTED. WIND TURBINE TECHNOLOGY ADVANCEMENTS MADE IN THE LAST SEVERAL YEARS ARE DISCUSSED. IT IS SHOWN THAT, BASED ON CURRENT PROJECTIONS OF THE COSTS OF THESE MACHINES WHEN PRODUCED IN QUANTITY, THEY SHOULD BE ATTRACTIVE FOR UTILITY APPLICATION. THE COST OF ELECTRICITY (COE) PRODUCED AT THE BUSBAR IS SHOWN TO BE A STRONG FUNCTION OF THE MEAN WIND SPEED AT THE INSTALLATION SITE. THE BREAKEVEN COE AS A "FUEL SAVER" IS DISCUSSED AND THE COE RANGE THAT WOULD BE GENERALLY ATTRACTIVE TO UTILITIES IS INDICATED.

79-0089 REDDOCH T W, KLEIN J W
NO ILL WINDS FOR NEW MEXICO UTILITY.
IEEE SPECTRUM 16(3): 57-61, MARCH 1979.

PERFORMANCE OF A WIND GENERATOR IN A COMMON POWER SYSTEM IS EXAMINED AFTER MORE THAN A YEAR OF WORK. IT IS FOUND THAT THE GENERATOR SUPPLIES UP TO 200 KW OF OUTPUT POWER, NEARLY 15 PERCENT OF TOTAL POWER LOAD OF ELECTRIC UTILITY SYSTEM. A STUDY CONCLUDED THAT UNDESIRABLE INTERACTIONS BETWEEN DIESEL GENERATORS AND THE WIND-TURBINE'S CONTROL SYSTEM CAN BE AVOIDED IF WIND-TURBINE POWER FLUCTUATIONS CAUSED BY GUSTING STAY WITHIN THE REGULATING CAPABILITY OF THE DIESELS.

79-0090 REED J W
ANALYSIS OF THE POTENTIAL OF WIND ENERGY CONVERSION SYSTEMS.
NTIS, 1979. 24 P.
CONF-790114-1, SAND-78-2099C

THIS PRESENTATION (A) REVIEWS THE FLOW OF SOLAR ENERGY AND WIND, (B) DESCRIBES THE TIME AND SPACE DISTRIBUTION OF USEFUL WIND POWER, (C) CONSIDERS SOME OF THE MODERN MACHINERY THAT HAS BEEN CONCEIVED TO CAPTURE WIND ENERGY, (D) POINTS OUT SOME LIMITATIONS TO PRACTICAL WIND ENERGY EXTRACTION AND USE, AND (E) SUMMARIZES AVAILABLE AND PROJECTED WIND POWER HARDWARE SYSTEMS. IN KEEPING WITH A STATED CENTRAL THEME OF THIS CONFERENCE, MAJOR CONSTRAINTS TO WIND ENERGY EXPLOITATION WILL BE HIGHLIGHTED.

79-0091 REED J W
SOME VARIABILITY STATISTICS OF AVAILABLE WIND POWER.
ALBUQUERQUE, N.M., SANDIA LABORATORIES, MARCH 1979. 51 P.
SAND-78-1735

THE LONG-TERM VARIABILITY OF AVAILABLE WIND POWER HAS BEEN STUDIED IN TEN-YEAR RECORDS OF HOURLY WIND SPEED OBSERVATIONS AT FIFTEEN SELECTED WEATHER STATIONS. MONTH BY MONTH AND YEAR BY YEAR SUMS OF WIND POWER OCCURRENCES WERE USED TO GENERATE AVERAGE, STANDARD DEVIATION, AND AUTOCORRELATION STATISTICS. THE AMPLITUDE OF THE ANNUAL CYCLE IN AVAILABLE WIND POWER WAS AT LEAST 70 PERCENT OF THE AVERAGE AT ALL LOCATIONS. LONG TERM INTEGRATED POWER PRODUCTION SHOWED MAXIMA AND MINIMA THAT DIFFERED BY 36 - 91 PERCENT FROM AVERAGE ANNUAL PRODUCTION.

79-0092 REED J W
WIND POWER CLIMATOLOGY OF THE UNITED STATES. SUPPLEMENT.
NTIS, APRIL 1979. 98 P.
SAND-78-1620

THIS SUPPLEMENT EXTENDS THE SUMMARIES IN THE EARLIER "WIND POWER CLIMATOLOGY OF THE UNITED STATES" TO INCLUDE MONTHLY AND ANNUAL AVERAGE WIND SPEEDS. STATION HISTORIES THAT ALLOW ADJUSTMENT FOR LOCAL AIR DENSITY, BASED ON STATION PRESSURE-ALTITUDE AND THE ANNUAL TEMPERATURE CYCLE, HAVE BEEN OBTAINED FROM THE NATIONAL CLIMATIC CENTER. THE LOGS OF ANEMOMETER EXPOSURES HAVE BEEN USED TO ADJUST BOTH WIND SPEEDS AND WIND POWERS TO STANDARD HEIGHT, 10 M ABOVE GROUND. EXTRAPOLATIONS FOR SPEED AND POWER AT 20- AND 50-M HEIGHTS HAVE ALSO BEEN PROVIDED. DATA ADJUSTMENTS TO 10-M HEIGHTS HAVE NOT SIGNIFICANTLY CHANGED THE ORIGINAL "ISODYN" CONTOUR MAPS EXCEPT IN THE NORTHEAST AND NORTHWEST COASTAL AREAS.

LARGE HORIZONTAL AXIS WIND TURBINE DEVELOPMENT.
NTIS, 1979. 14 P.
DOE/NASA/1059-79/2, NASA-TM-79174

ONE FACET OF THE FEDERAL WIND ENERGY PROGRAM, LARGE HORIZONTAL AXIS WIND TURBINE DEVELOPMENT, IS BEING MANAGED BY THE NASA LEWIS RESEARCH CENTER. THESE ACTIVITIES CONSIST OF SEVERAL ONGOING WIND SYSTEM DEVELOPMENTS ORIENTED PRIMARILY TOWARD UTILITY APPLICATION. IN ADDITION, A

COMPREHENSIVE TECHNOLOGY PROGRAM SUPPORTING THE WIND TURBINE PROJECTS IS BEING CONDUCTED. THIS PAPER PRESENTS AN OVERVIEW OF THE NASA ACTIVITIES. TIRST-GENERATION-TECHNOLOGY LARGE WIND TURBINES (MOD-OA AND MOD-1) HAVE BLEN DESIGNED AND ARE IN OPERATION AT SELECTED UTILITY SITES.

SEC OD-GENERATION MACHINES (MOD-2) ARE SCHEDULED TO BEGIN OPERATIONS ON UTILITY SITES IN 1980. THESE SECOND GENERATION MACHINES ARE ESTIMATED TO GENERATE ELECTRICITY AT LESS THAN 4 CENTS/KWH WHEN MANUFACTURED AT MODEST PRODUCTION RATES. HOWEVER, TO MAKE A SIGNIFICANT ENERGY IMPACT, COSTS OF 2 TO 3 CENTS/KWH MUST BE ACHIEVED. THE FEDERAL PROGRAM WILL CONTIN'E TO FUND THE DEVELOPMENT BY INDUSTRY OF WIND TURBINES WHICH CAN MEET THE COST GOA.S OF 2 TO 3 CENTS/KWH. LOWER COSTS WILL BE ACHIEVED THROUGH THE INCORPORATION OF NEW TECHNOLOGY AND INNOVATIVE SYSTEM DESIGN TO REDUCE WEIGHT AND INCREASE ENERGY CAPTURE. THE NATIONAL CHALLENGE, HOWEVER, IS ASSOCIATED WITH ACCEPTANCE BY THE UTILITIES OF WIND TURBINES AS PART OF THEIR ENERGY GENERATING CAPABILITY AND THE CREATION OF A COMPITATIVE INDUSTRY TO PRODUCE WIND TURBINES EFFICIENTLY. THE PRINCIPALS - GOVERNMENT, INDUSTRY, AND THE UTILITIES - ARE CURRENTLY INVOLVED IN MEETING THIS CHALLENGE.

- 79-0104 SHULTIS J K, POCH L A, ECKHOFF N D

 OPTIMUM SELECTION OF A WIND TURBINE GENERATOR SYSTEM.

 J. ENERGY 3(3): 145-150, MAY-JUNE 1979.

A METHOD IS DESCRIBED FOR THE SELECTION OF THE OPTIMUM SIZE (I.E., RATED POWER AND SPEED) FOR A WIND TURBINE GENERATING SYSTEM (WTGS) SUCH THAT, FOR GIVEN WIND SPEED CONDITIONS AND FOR GIVEN DEMAND POWER REQUIREMENTS, THE ANNUAL ECONOMIC SAVINGS ARE MAXIMIZED BY USING THE WTGS COMPARED TO PURCHASING ALL POWER FROM A UTILITY. NO STORAGE OF EXCESS GENERATED ELECTRICITY IS CONSIDERED AND ANY DEMAND IN EXCESS OF THAT GENERATED BY THE WTGS IS ASSUMED TO BE SUPPLIED BY THE UTILITY GRID. THE ECONOMIC SAVING REALIZED WITH THE OPTIMUM SIZED WTGS IS EXAMINED FOR VARIOUS PROBLEM VARIABLES SUCH AS THE DEGREE OF VARIABILITY IN THE WIND SPEED AND IN THE DEMAND LOAD THROUGHOUT THE DAY AND FROM SEASON TO SEASON.

79-0105 SMALL WIND SYSTEMS 1979. SWECS REPRESENTATIVES MEET IN BOULDER. WIND POWER DIG. NO. 15: 25-35, SPRING 1979.

THE "SMALL WIND TURBINE SYSTEMS 1979" WORKSHOP HELD IN BOULDER, FEBRUARY 27 - MARCH 1, 1979, IS COVERED. A NUMBER OF SMALL MACHINES NOW BEING TESTED OR NOW UNDER DEVELOPMENT BY CONTRACT TO ROCKY FLATS WERE THE MAIN FEATURE OF THE WORKSHOP, AND ARE DESCRIBED IN THIS REPORT.

79-0106 SOLAR DIRECTORY AVAILABLE.
WIND POW'N DIG. NO. 16: 16, SUMMER 1979.

PREDICTION AND MEASUREMENT OF AEROGENERATOR PERFORMANCE.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 - FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 298-301.

THIS PAPER PRESENTS THE RESULTS OF SOME PRELIMINARY FIELD MEASUREMENTS MADE ON THE 30 KW ALDBOROUGH AEROGENERATOR IN MARCH 1978 WHICH HAVE BEEN CARRIED OUT BY THE CEGB WITH THE AIM TO QUANTIFY THE TECHNICAL AND ECONOMIC PROBLEMS OF LARGE SCALE WIND GENERATION AS A POSSIBLE ALTERNATIVE SOURCE OF POWER.

79-0109 SWIFT-HOOK D T, TAYLOR R H
DIRECTIONAL ARRAYS OF WINDMILLS.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 290-293.

THIS PAPER DEALS WITH THE PROBLEMS OF CLUSTERING, I.E. OF OPTIMISING THE POSITIONS AND SPACING BETWEEN INDIVIDUAL AEROGENERATORS IN A LARGE ARRAY. IT IS SUGGESTED THAT DIRECTIONAL ARRAYS APPEAR TO HAVE CONSIDERABLE ADVANTAGES OVER ISOTROPIC ARRAYS WITH RESPECT TO ENERGY DENSITY (PERHAPS 2.7 TIMES) AND POWER DENSITY (PERHAPS 4 TIMES). THEIR MAIN DISADVANTAGE (A GENERATION COST PENALTY OF 50 PERCENT OR MORE) MAY BE PARTLY OFF-SET BY REDUCED POWER MARSHALLING AND TRANSMISSION COSTS AND THEIR USE MAY BE DICTATED BY THE LIMITED POWER AVAILABLE FROM THE ATMOSPHERIC BOUNDARY LAYER.

79-0110 TAX CREDITS FOR WIND POWERED SYSTEMS.
ALTERN. SOURCES ENERGY NO. 38: 16-17, JULY/AUGUST 1979.

A HELPFUL TABLE IS PROVIDED GIVING TAX INCENTIVES, RESIDENTIAL USE, FOR WIND POWER APPLICATIONS IN TWENTY-THREE STATES.

ESTIMATING WECS COSTS.
WIND POWER DIG. NO. 15: 16-18, SPRING 1979.

TABLES ARE PROVIDED TO HELP ESTIMATE THE AVERAGE COST OF ELECTRICITY FROM A WIND TURBINE DURING ITS WORKING LIFE, CONSIDERING INSTALLED COST, DOWN PAYMENT, OPERATING LIFE, LENGTH OF LOAN, INTEREST RATE, OPERATING + MAINTENANCE COSTS, AND INFLATION.

79-0112 A 200-KW WIND TURBINE GENERATOR CONCEPTUAL DESIGN STUDY. NTIS, JANUARY 1979. 111 P. NASA-TM-79032, DOE/NASA/1028-79/1, N79-17333

A CGNCEPTUAL DESIGN STUDY WAS CONDUCTED TO DEFINE A 200 KW WIND TURBINE POWER SYSTEM CONFIGURATION FOR REMOTE APPLICATIONS. THE GOAL WAS TO ATTAIN AN ENERGY COST OF 1 TO 2 CENTS PER KILOWATT-HOUR AT A 14-MPH SITE (MEAN AVERAGE WIND VELOCITY AT AN ALTITUDE OF 30 FT.) THE COSTS OF THE CLAYTON, NEW MEXICO, MOD-O (200-KW) WERE USED TO IDENTIFY THE COMPONENTS, SUBSYSTEMS, AND OTHER FACTORS THAT WERE HIGH IN COST AND THUS CONDIDATES FOR COST REDUCTION. EFFORTS DEVOTED TO DEVELOPING COMPONENT AND SUBSYSTEM CONCEPTS AND IDEAS RESULTED IN A MACHINE CONCEPT THAT IS CONSIDERABLY SIMPLER, LIGHTER IN WEIGHT, AND LOWER IN COST THAN THE PRESENT MOD-OA WIND TURBINES. IN THIS REPORT ARE DESCRIBED THE VARIOUS INNOVATIONS THAT CONTRIBUTED TO THE LOWER COST AND LIGHTER WEIGHT DESIGN AS WELL AS THE METHOD USED TO CALCULATE THE COST OF ENERGY.

79-0113 U.S. WIND POWER ASSOCIATES INK CALIFORNIA WIND CONTRACT. WIND POWER DIG. NO. 16: 17, SUMMER 1979.

U.S. WIND POWER ASSOCIATES HAS SIGNED A CONTRACT WITH THE CALIFORNIA DEPARTMENT OF WATER RESOURCES TO SELL WIND-GENERATED ELECTRICITY FROM THE NATION'S FIRST "WIND FARM". THE PROPOSED PROJECT IS DESCRIBED.

79-0114 UTILITIES EYE WIND-POWERED MACHINE.
MECH. ENG. 101(1): 46. JANUARY 1979.

A REVIEW OF THE MPI-200 WIND ENERGY CONVERSIOM SYSTEM, PRODUCED BY WTG ENERGY SYSTEMS, INC., AND LOCATED ON CUTTYHUNK ISLAND, MASSACHUSETTS, IS PRESENTED.

THE DESIGN CONSTRUCTION AND PROVING OF A LOW COST 5 KW WIND POWERED
TURBINE FOR ISOLATED APPLICATIONS.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 39 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 277-281.

DISCUSSED IS THE DEVELOPMENT OF THE MAXIMILL WIND POWERED TURBINE DESIGNED WITH DARRIEUS AND SAVONIUS TYPE ROTORS ON A VERTICAL AXIS DRIVE SHAFT TO GIVE UP TO 5 KW OF ELECTRICAL OUTPUT. DESIGN ADVANCEMENTS, PARTICULARLY IN RESPECT OF THE AEROFOILS AND BEARINGS ARE DESCRIBED, WITH LOW COST AND RELIABLE OUTPUT AS THE FOREMOST CONSIDERATION.

79-0116 WEIS P
THE STATUS OF INFORMATION FOR CONSUMERS OF SMALL WIND ENERGY SYSTEMS.
NTIS, FEBRUARY 1979. 17 P.
SERI/TP-51-158

ALTHOUGH COMPETITION FROM CHEAP FUELS HAS LIMITED THEIR WIDESPREAD USE, WIND ENERGY SYSTEMS ARE A SOLAR TECHNOLOGY THAT HAS PERFORMED SUCCESSFULLY FOR DECADES. RENEWED INTEREST IN THIS SOLAR TECHNOLOGY IN BOTH THE PUBLIC AND PRIVATE SECTOR HAS PRODUCED A WIDE VARIETY OF DESIGNS SUITABLE FOR MANY APPLICATIONS. THIS PAPER SUMMARIZES PAST RESEARCH EFFORTS, EXISTING INFORMATION SOURCES, AND ONGOING WORK TO IMPROVE DATA NECESSARY FOR POTENTIAL CONSUMERS OF SMALL WIND ENERGY CONVERSION SYSTEMS.

79-0117 WILLMER A C
THE AERODYNAMIC DESIGN AND TESTING OF A VERTICAL AXIS WINDMILL.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 I-EBRUARY 1, 1979. LONDON, IEE, 1979. P. 286-289.

IN SETTING OUT TO DESIGN A LARGE WINDMILL, IT WAS APPARENT THAT THE EXISTING AERODYNAMIC THEORIES FOR VERTICAL AXIS WINDMILLS WERE IN VARIOUS RESPECTS INADEQUATE. IT WAS THEREFORE DECIDED TO UNDERTAKE SOME WIND TUNNEL TESTS AT AN EARLY STAGE, USING THE RESULTS TO REFINE A MATHEMATICAL MODEL FOR THE DESIGN OF LARGE WINDMILLS. THESE TESTS AND THE DERIVATION OF THE MATHEMATICAL MODEL ARE DESCRIBED.

79-0118 WILSON D. J. ZALAY A. D. BRASHEARS M. R. CRAVEN C. E. SHRIDER K. R. JORDAN A. J. FULL-SCALE WAKE FLOW MEASUREMENTS WITH A MOBILE LASER DOPPLER VELOCIMETER.

J. AIRCR. 16(3): 155-161, MARCH 1979.

WAKE FLOW MEASUREMENTS WERE CONDUCTED WITH A MOBILE LASER DOPPLER VELOCIMETER (LDV). THE MEASUREMENTS INCLUDED SURVEYS OF AIRCRAFT WAKE VORTICES BEHIND A B-747 AIRCRAFT, AIRCRAFT CARRIER WAKE MEASUREMENTS FROM ABOARD THE U. S. S. NIMITZ, AND TOWER WAKE MEASUREMENTS FOR A 10G-KW WIND TURBINE. RESULTS OF THESE TESTS DEMONSTRATED THAT A MOBILE GROUND-BASED LDV IS A VERSATILE AND USEFUL TOOL FOR THE MEASUREMENT OF FULL-SCALE-THREE-DIMENSIONAL WAKE FLOWS. THE POTENTIAL IS DEMONSTRATED FOR UTILIZATION OF THIS SYSTEM 10 STUDY COMPLEX WAKES FOR A VARIETY OF APPLICATIONS.

79-0119 WIND ENERGY BUDGET SHOWS DOE UNDERRATES THE RESOURCE. SOL. EN. INTELL. REP. 5(4): 35, JANUARY 22, 1979.

DOE FUNDING INCREASES ARE SEEN AS INADEQUATE FOR FULL DEVELOPMENT OF WIND ENERGY RESOURCES IN 1979 AND 1980.

79-0120 WIND POWER FOR CITY DWELLERS. WIND POWER DIG. NO. 16: 18-28, SUMMER 1979.

THE DESIGN + INSTALLATION OF AN URBAN WINDMILL IN NEW YORK CITY IS DESCRIBED.

79-0121 WIND SLIDE-SHOW PLANNED.
WIND FOWER DIG. NO. 16: 14, SUMMER 1979.

A SLIDE-SHOW IS PLANNED BY SERI TO COVER THE HISTORY, CURRENT RESEARCH, AND POTENTIAL OF WIND ENERGY SYSTEMS.

79-0122 WIND-WHEEL ELECTRIC-POWER GENERATOR. MECH. ENG. 101(1): 46, JANUARY 1979.

THIS WIND-WHEEL ELECTRIC POWER GENERATOR MAXIMIZES USE OF AVAILABLE WIND, USING A NUMBER OF DUCTS. WIND CURRENTS CAPTURED BY DUCTS ARE DIRECTED AGAINST WHEEL BLADES. SYSTEM ROTATES AROUND ITS SUPPORTING COLUMN TO FACE THE PREVAILING WINDS.

AERODYNAMIC PERFORMANCE OF THE 17-METRE-DIAMETER DARRIEUS WIND TURBINE.
NTIS, JANUARY 1979. 65 P.

A TWO-BLADED 17-METRE DARRIEUS VERTICAL-AXIS WIND TURBINE WAS FIELD-TESTED AT THE GANDIA LABORATORIES WIND-TURBINE SITE. PERFORMANCE RESULTS FOR SEVEN CONSTANT OPERATING SPEEDS ARE PRESENTED ALONG WITH A DISCUSSION OF THE TRENDS. PREDICTED PERFORMANCE AND EXPERIMENTAL TEST DATA FOR TWO CONSTANT SPEEDS ARE ALSO COMPARED.

79-0126 WORTHINGTON P J
MATERIALS FOR WINDMILL BLADES.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P. 294-297.

THIS PAPER DISCUSSES MATERIAL PROPERTY REQUIREMENTS AND DESIGN ASPECTS OF THE BLADES FOR LARGE WINDMILLS, CAPABLE OF GENERATING MORE THAN 1 MW OF POWER. IT IS CONCLUDED THAT COMPOSITE MATERIALS OFFER A NUMBER OF ATTRACTIONS AS WINDMILL BLADE MATERIAL. TITANIUM ALLOY ALSO HAS SOME ATTRACTIVE PROPERTIES. FOR LONG TERM OPERATION MORE WORK IS REQUIRED TO DETERMINE THE EFFECT OF TIME AND ENVIRONMENT ON MATERIAL PROPERTY BEHAVIOUR.

79-0127 WYMAN P R, PEACHEY C J
TIDAL CURRENT ENERGY CONVERSION.
INTERNATIONAL CONFERENCE ON FUTURE ENERGY CONCEPTS, LONDON, JANUARY 30 FEBRUARY 1, 1979. LONDON, IEE, 1979. P.164-166.

THE CONCEPT CONSIDERED IS THE EXTRACTION OF ENERGY FROM TIDAL CURRENTS BY MEANS OF IMMERSED ROTORS. THE ANALOGY WITH WINDMILLS CAN BE DRAWN, WITH THE DIFFERENCE THAT THE TIDAL CURRENTS ARE PREDOMINANTLY BIDIRECTIONAL, SO AN AXIAL FLOW ROTOR WHICH COULD ACCEPT REVERSAL COULD BE PRE-ALIGNED, AND THE CROSS-FLOW ROTOR (DARRIEUS TYPE) WOULD THUS LOSE ONE OF ITS IMPORTANT ADVANTAGES. THE ADVANTAGES OF "TIDE MILLS" COMPARED WITH A TIDAL BARRAGE ARE LOWER CAPITAL EXPENDITURE, AND SMALLER ENVIRONMENTAL IMPACT.

 WIND CHARACTERISTICS AT THE VAWT TEST FACILITY.
 NTIS, 1978. 45P.
 SAND-78-0760

A LIMITED PROGRAM OF FIELD MEASUREMENTS WAS UNDERTAKIN IN ORDER TO DEFINE THE WIND CHARACTERISTICS OF THE DOE/SANDIA VERTICAL AXIS WIND TURBINE TEST FACILITY. BECAUSE MICROMETEOROLOGICAL CONDITIONS UNDER WHICH A PARTICULAR WIND TURBINE IS TESTED MAY HAVE AN EFFECT ON THE PERFORMANCE OF THAT TURBINE, IT IS IMPORTANT THAT THESE CONDITIONS BE PROPERLY DOCUMENTED. THE MEAN VELOCITY PROFILE, LONGITUDINAL AND LATERAL TURBULENCE INTENSITIES, LONGITUDINAL VELOCITY SPECTRA, AND CROSSCORRELATIONS BETWEEN THE VELOCITIES AT SELECT LOCATIONS WERE MEASURED FOR A REPRESENTATIVE SAMPLE OF INCIDENT WINDS. THESE MEASUREMENTS ARE SUMMARIZED IN A FORM WHICH SHOULD FACILITATE COMPARISON WITH OTHER SITES.

78-0003 AKINS R E
PERFORMANCE EVALUATION OF WIND ENERGY CONVERSION SYSTEMS USING THE METHOD
OF BINS-CURRENT STATUS.
NTIS, MARCH 1978. 24P.
SAND-77-1375

A DETAILED DESCRIPTION OF THE METHOD OF BINS, A TECHNIQUE OF DATA COLLECTION AND REDUCTION FOR FIELD PERFORMANCE EVALUATION OF WIND ENERGY CONVERSION SYSTEMS (WECS), IS PROVIDED. THE METHOD OF BINS IS A STRAIGHTFORWARD YET USEFUL APPROACH TO THE COMPLEX PROBLEM OF RELATING THE RESPONSE OF A WECS TO A VARIABLE WIND FIELD. EXAMPLES OF TYPICAL RESULTS OBTAINED USING THE METHOD OF BINS ARE PRESENTED. METHODS OF DETERMINING THAT THE MEASURE OF PERFORMANCE OF A WECS OBTAINED IS CORRECT ARE OUTLINED. AREAS IN WHICH FURTHER MODIFICATIONS TO THE TECHNIQUE MAY BE APPROPRIATE ARE ALSO DISCUSSED.

78-0004 ALTERNATE ENERGY SYSTEMS SEMINAR, PASADENA, CALIFORNIA, 30 MARCH, 1978. PROCEEDINGS.

NTIS, 1978. 184P.
ALTERNATE ENERGY SYSTEMS SEMINAR, PASADENA, CALIFORNIA, 30 MARCH, 1978. N78-27522, NASA-CR-157255

THE ALTERNATIVE ENERGY SYSTEMS SEMINAR WAS HELD ON MARCH 30, 1978, AND WAS SPONSORED JOINTLY BY THE SOUTHWEST DISTRICT OFFICE OF THE U.S. DEPARTMENT OF ENERGY AND JPL. THE SEMINAR WAS AN EXPERIMENT IN INFORMATION EXCHANGE WITH THE AIM OF PRESENTING, IN A SINGLE DAY, STATUS AND PROSPECTS FOR A NUMBER OF ADVANCED ENERGY SYSTEMS TO A DIVERSE, LARGELY NONTECHNICAL AUDIENCE, AND TO SOLICIT POST-SEMINAR RESPONSES FROM THAT AUDIENCE AS TO THE SEMINAR'S USEFULNESS. THE MAJOR SYSTEMS PRESENTED ARE: (1) SOLAR PHOTOVOLTAIC (2) GEOTHERMAL (3) COGENERATION POWER (4) SOLAR THERMAL (5) SOLAR HEATING AND COOLING (6) WIND ENERGY, AND (7) SYSTEMS CONSIDERATIONS.

78-0005 ALEXANDER A J, HOLOWNIA B P
WIND TUNNEL TESTS ON A SAVONIUS ROTOR.
J. IND. AERODYN. 3:343-351, 1978.

TESTS HAVE BEEN MADE IN A WIND TUNNEL ON A NUMBER OF SAVONIUS ROTOR CONFIGURATIONS IN WIND SPEEDS OF 6-9 M/S. THE VARIABLES TESTED WERE BLADE ASPECT RATIO, BLADE OVERLAP AND GAP AND THE EFFECTS OF ADDING END EXTENSIONS, END PLATES AND SHIELDING. FOR LOW ASPECT RATIOS (APPROX.1) WITH NO ADDITIONS THE EFFICIENCY WAS LOW (APPROX.0.065) BUT FOR HIGHER ASPECT RATIOS (APPROX.5) WITH OPTIMUM BLADE CONFIGURATION AND SHIELDING A MAXIMUM VALUE OF EFFICIENCY OF 0.25 WAS OBTAINED. TESTS WITH THREE AND FOUR BLADED CONFIGURATIONS GAVE APPRECIABLY LOWER VALUES OF EFFICIENCY. A SPECIAL STUDY WAS MADE OF WIND TUNNEL CORRECTIONS FOR BLOCKAGE RATIOS UP TO 0.3.

78-0006 ANDREWS J S
FATIGUE LOAD SPECTRA FOR UPWIND AND DOWNWIND ROTORS.
WIND TURBINE STRUCTURAL DYNAMICS. WIND TURBINE STRUCTURAL DYNAMICS
CONFERENCE, CLEVELAND, NOVEMBER 15, 1977. PROCEEDINGS. NTIS, 1978.

P.219-225. CONF-771148

THE EFFECT OF BOTH ALTERNATING AND MEAN LOAD ON THE FATIGUE LIFE OF AN UPWIND AND DOWNWIND MOD-2 WIND TURBINE SYSTEM IS PRESENTED. IT WAS SHOWN THAT THE FATIGUE DAMAGE VARIES AS THE PRODUCT OF THE STRESS RANGE CUBED AND THE MAXIMUM STRESS. HENCE, THE ALTERNATING FLAPWISE LOAD CAUSED BY TOWER SHADOW AND WIND GRADIENT IS AN IMPORTANT FACTOR IN DETERMINING ROTOR BLADE LIFE.

78-0007 /PPLIED RESEARCH ON ENERGY STORAGE AND CONVERSION FOR PHOTOVOLTAIC AND FIDE ENERGY SYSTEMS. VOLUME 1. STUDY SUMMARY AND CONCEPT SCREENING. FIDAL REPORT. MILS, JANUARY 1978. 227P. FCF/T22221-01/1

THIS STUDY WAS DIRECTED AT A REVIEW OF STORAGE TECHNOLOGIES, AND PARTICULARLY THOSE WHICH MIGHT BE BEST SUITED FOR USE IN CONJUNCTION WITH WIND AND PHOTOVOLTAICS. THE POTENTIAL "WORTH" ADDED BY INCORPORATING STORAGE WAS EXTENSIVELY ANALYZED FOR BOTH WIND AND PHOTOVOLTAICS. ENERGY STORAGE CONCEPTS STUDIED INCLUDE (1) ABOVE GROUND PUMPED HYDRO STORAGE, (2) UNDERGROUND PUMPED HYDRO STORAGE, (3) THERMAL STORAGE-OIL, (4) HERMAL STORAGE-STEAM, (5) UNDERGROUND COMPRESSED AIR STORAGE, (6) NEUMATIC STORAGE, (7) LEAD-ACID BATTERIES, (8) ADVANCED BATTERIES, (9) VNERTIAL STORAGE (FLYWHEEL), (10) HYDROGEN GENERATION AND STORAGE, AND 11) SUPERCONDUCTING MAGNETIC ENERGY STORAGE. THE INVESTIGATIONS FRORMED AND THE MAJOR RESULTS, CONCLUSIONS, AND RECOMMENDATIONS ARE

78-0008 APPLIED RESEARCH ON ENERGY STORAGE AND CONVERSION FOR PHOTOVOLTAIC AND MIN MERGY SYSTEMS. VOLUME III. WIND CONVERSION SYSTEMS WITH ENERGY STOP. FINAL REPORT.

NTIS: NUARY 1978. 330P.
HCP/T22221-01/3

THE VARIABILITY OF ENERGY OUTPUT INHERENT IN WIND ENERGY CONVERSION SYSTEMS (WECS) HAS LED TO THE INVESTIGATION OF ENERGY STORAGE AS A MEANS OF MANAGING THE AVAILABLE ENERGY WHEN IMMEDIATE, DIRECT USE IS NOT POSSIBLE OR DESIRABLE. THIS PORTION OF THE GENERAL ELECTRIC STUDY WAS DIRECTED AT AN EVALUATION OF THOSE ENERGY STORAGE TECHNOLOGIES DEEMED BEST SUITED FOR USE IN CONJUNCTION WITH A WIND ENERGY CONVERSION SYSTEM IN UTILITY, RESIDENTIAL AND INTERMEDIATE APPLICATIONS. BREAK-EVEN COST GOALS ARE DEVELOPED FOR SEVERAL STORAGE TECHNOLOGIES IN EACH APPLICATION. THESE BREAK-EVEN COSTS ARE THEN COMPARED WITH COST PROJECTIONS PRESENTED IN VOLUME I OF THIS REPORT TO SHOW TECHNOLOGIES AND TIME FRAMES OF POTENTIAL ECONOMIC VIABILITY: THE REPORT SUMMARIZES THE INVESTIGATIONS PERFORMED AND PRESENTS THE RESULTS, CONCLUSIONS AND RECOMMENDATIONS PERTAINING TO USE OF ENERGY STORAGE WITH WIND ENERGY CONVERSION SYSTEMS.

78-0009 ASHLEY H
SOME CONTRIBUTIONS TO AERODYNAMIC THEORY FOR VERTICAL-AXIS WIND TURBINES.
J. ENERGY 2(2): 113-119, MARCH-APRIL 1978.

A REVIEW AND MODEST EXTENSIONS ARE DESCRIBED OF QUASISTEADY AERODYNAMIC THEORY FOR PERFORMANCE PREDICTION ON DARRIEUS-TYPE TURBINES. RESULTS ARE GIVEN FOR BOTH PARALLEL-AXIS AND CURVED-BLADE CONFIGURATIONS. BLADE STALL AND VARIABLE INFLOW ARE NEGLECTED; IT IS HYPOTHESIZED THAT UNSTEADY EFFECTS SUPPORT THE FORMER APPROXIMATION DOWN TO LOWER VALUES OF TIP-SPEED RATIO THAN HITHERTO BELIEVED. BOTH PROFILE AND INDUCED DRAG ARE INCLUDED, AND THEIR INFLUENCES ON POWER AND DOWNWIND FORCE ARE EXPRESSED IN TERMS OF ELLIPTIC INTEGRALS. COMPARISONS ARE PRESENTED WITH POWER DATA FROM THE SANDIA 2-M TURBINE. FINALLY, A LINEARIZED ANALYSIS OF UNSTEADY FLOW EFFECTS ON PERFORMANCE IS SUMMARIZED. CALCULATIONS SUGGEST THAT THEY MAY BE LARGER THAN MIGHT BE EXPECTED IN VIEW OF THE LOW OPERATING REDUCED FREQUENCIES OF THESE MACHINES.

USE OF ASYMPTOTIC METHODS IN VIBRATION ANALYSIS.
WIND TURBINE STRUCTURAL DYNAMICS. WIND TURBINE STRUCTURAL DYNAMICS
CONFERENCE, CLEVELAND, NOVEMBER 15, 1977. PROCEEDINGS. NTIS, 1978.
P.39-52.
CONF-771148

TWO SUBJECTS ARE DISCUSSED, WHICH ARE BELIEVED RELEVANT TO THE STRUCTURAL ANALYSIS OF VERTICAL-AXIS WIND TURBINES. THE FIRST INVOLVES THE DERIVATION OF DYNAMIC DIFFERENTIAL EQUATIONS, SUITABLE FOR STUDYING THE VIBRATIONS OF ROTATING, CURVED, SLENDER STRUCTURES. THE HAMILTONIAN PROCEDURE IS ADVOCATED FOR THIS PURPOSE. VARIOUS REDUCTIONS OF THE FULL SYSTEM ARE DISPLAYED, WHICH GOVERN THE VIBRATING TROPOSKIEN WHEN VARIOUS ORDER-OF-MAGNITUDE RESTRICTIONS ARE PLACED ON IMPORTANT PARAMETERS. THE FINAL SECTION DISCUSSES THE POSSIBLE ADVANTAGES OF THE WKB ASYMPTOTIC METHOD FOR SULVING THESE CLASSES OF PROBLEMS. A SPECIAL CASE OF THIS METHOD IS USED ILLUSTRATIVELY TO CALCULATE EIGENVALUES AND EIGENFUNCTIONS FOR A "FLAT" TURBINE BLADE WITH SMALL FLEXURAL STIFFNESS.

78-0011 ASTLEY R J, BOWEN A J, LINDLEY D, PEARSE J
THE EFFECT OF SOME HILL SHAPES ON THE ATMOSPHERIC BOUNDARY LAYER NEAR THE
GROUND.
SYMPOSIUM ON METEOROLOGY AND ENERGY, WELLINGTON, NEW ZEALAND, OCTOBER
11-12, 1977. PROCEEDINGS. WELLINGTON, NEW ZEALAND
METEOROLOGICAL SERVICE, MAY 25, 1978. P.93-108.

THE MODIFICATIONS TO THE VELOCITY-HEIGHT PROFILE AND THE TURBULENCE CHARACTERISTICS OF THE SURFACE WIND FLOW BY A SERIES OF TWO-DIMENSIONAL FORWARD-FACING ESCARPMENTS AND A SMOOTH SYMMETRICAL HILL ARE REPORTED. THESE TESTS ARE PART OF AN INVESTIGATION OF THE EFFECTS OF UNEVEN TERRAIN ON THE ATMOSPHERIC BOUNDARY-LAYER TO ASSIST IN THE PREDICTION OF STRUCTURAL WIND LOADING AND IN THE OPTIMUM SITING OF WIND TURBINES ON EXPOSED SITES. MODEL TEST RESULTS AND A LIMITED NUMBER OF FIELD RESULTS ARE PRESENTED AND COMPARED WITH THOSE OBTAINED FROM A FINITE-ELEMENT THEORETICAL SOLUTION USING A FROZEN VORTICITY ASSUMPTION. THE COMPUTED RESULTS COMPARE WELL WITH THE MEASURED DATA FROM THE MODEL AND FIELD TESTS.

78-0018 CHENEY M C, SPIERINGS P A M
WIND TURBINE WITH AUTOMATIC PITCH AND YAW CONTROL.
U.S. PATENT NO. 4,083,651, APRIL 11, 1978. 12P.

A WIND TURBINE IS DESCRIBED WHICH HAS A FLEXIBLE CENTRAL BEAM MEMBER SUPPORTING AERODYNAMIC BLADES AT OPPOSITE ENDS THEREOF AND FABRICATED OF UNI-DIRECTIONAL HIGH TENSILE STRENGTH MATERIAL BONDED TOGETHER INTO BEAM FORM SO THAT THE BEAM IS LIGHTWEIGHT. THE MATERIAL HAS HIGH TENSILE STRENGTH TO CARRY THE BLADE CENTRIFUGAL LOADS, LOW SHEAR MODULUS TO PERMIT TORSIONAL TWISTING THEREOF FOR TURBINE SPEED CONTROL PURPOSES, AND ADEQUATE BENDING STIFFNESS TO PERMIT OUT-OF-PLANE DEFLECTION THEREOF FOR TURBINE YARD CONTROL PURPOSES. A SELECTIVELY OFF-SET WEIGHTED PENDULUM MEMBER IS PIVOTALLY CONNECTED TO THE TURBINE AND CONNECTED TO THE BEAM OR BLADES SO AS TO CAUSE TORSIONAL TWISTING THEREOF IN RESPONSE TO CENTRIFUGAL LOADING OF THE PENDULUM MEMBER FOR TURBINE SPEED CONTROL PURPOSES.

78-0019 BIG WIND TURBINE STARTS UP IN N.M. SOLAR OUTLOOK, JANUARY 23, 1978. P.8.

A 200 KW WIND TURBINE BUILT BY NASA IN CLAYTON, N.M. IS DESCRIBED. THE TURBINE SHOULD GENERATE ENOUGH ELECTRIC POWER TO SUPPLY THE NEEDS OF 60 HOMES WHEN WINDS ARE 19 MILES AN HOUR OR MORE.

78-0020 BIG WINDS IN CA.
WIND POWER DIG. NO. 12:26-27, SPRING-SUMMER 1978.

MEASUREMENT OF CALIFORNIA WINDS TO ASSESS POTENTIAL FOR WIND POWER IS DISCUSSED.

78-0021 BINGHAM C E, JAYADEV T S
CORRELATION OF SOLAR AND WIND RESOURCES FOR HYBRID SYSTEMS APPLICATIONSAMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, INC.
PROCEEDINGS OF THE 1978 ANNUAL MEETING, DENVER, AUGUST 28-31, 1978.
NEWARK, DELAWARE, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY
SOCIETY, 1978. VOL. 2.2, P. 729-735.

SOLAR RADIATION AND WIND RESOURCE DATA ARE USED TO CORRELATE POWER AVAILABLE FROM EACH SOURCE. FOUR LOCATIONS: BISMARCK, NORTH DAKOTA, DODGE CITY, KANSAS, ALBUQUERQUE, NEW MEXICO, AND SANTA MARIA, CALIFORNIA, ARE STUDIED. THE CORRELATION OF WINL AND SOLAR POWER IS EXAMINED ON AN HOURLY, DAILY, AND MONTHLY TIME FRAME. ON THE BASIS OF THE CORRELATIONS, EVIDENCE OF THE COMPLEMENTARY NATURE OF WIND AND SOLAR RESOURCES IS SEEN IN THREE OF THE FOUR SITES. SIMPLE SYSTEM MODELS ARE USED TO CONVERT ENERGY AVAILABLE TO ENERGY OUTPUT. THIS PRELIMINARY ANALYSIS SHOWS THAT BOTH THE ENERGY AVAILABLE AND ELECTRICAL POWER OUTPUT FROM SOLAR AND WIND SOURCES ARE MOST COMPLEMENTARY ON A DAILY BASIS.

TID-28533/1, TID-28533/2

EACH OF THE SEVEN SOLAR ENERGY TECHNOLOGIES IS ASSESSED: PHOTOVELTAIC DEVICES, SOLAR THERMAL POWER SYSTEMS, WIND ENERGY SYSTEMS, SOLAR MEATING AND COOLING SYSTEMS, AGRICULTURAL AND INDUSTRIAL HEAT PROCESSES, BIOMASS CONVERSION TECHNOLOGIES, AND OCEAN THERMAL ENERGY CONVERSION SYSTEMS. A BRIEF TECHNICAL OVERVIEW OF STORAGE FOR SOLAR ELECTRIC TECHNOLOGIES IS PRESENTED AND SOME PRINCIPLES ARE DISCUSSED CONCERNING HOW DIFFERENT LEVELS OF SUCCESS ON ELECTRICAL STORAGE CAN AFFECT THE COMMERCIAL VIABILITY OF SOLAR ELECTRIC OPTIONS. THE SOLAR MARKET PENETRATION MODEL THAT WAS DEVELOPED AND APPLIED AS AN ANALYTICAL TOOL IN THE STUDY IS DESCRIBED. THE SEVEN SECTIONS TREATING THE SOLAR ENERGY TECHNOLOGIES CONTAIN DISCUSSIONS IN EACH OF SIX SUBJECT AREAS: DESCRIPTION OF THE TECHNOLOGY; ECONOMIC PROJECTIONS; THE POTENTIAL CONTRIBUTION OF THE TECHNOLOGY IN DIFFERENT MARKETPLACES; ENVIRONMENTAL CONSIDERATIONS; INTERNATIONAL POTENTIAL; AND THE PRESENT AND POSSIBLE FUTURE EMPHASIS WITHIN THE RD AND D PROGRAM.

DETERMINATION OF OPTIMUM ARRAYS OF WIND ENERGY CONVERSION DEVICES.
J. ENERGY 2(3): 155-159, MAY-JUNE 1978.

THIS PAPER DISCUSSES THE USE OF LARGE-SCALE WIND ENERGY CONVERSION SYSTEMS CONSISTING OF ARRAYS OF INDIVIDUAL WIND MACHINES. THE ARRAYS HAVE BEEN ANALYZED IN SOME DETAIL WITH THE AID OF A ROUGH BOUNDARY-LAYER VELOCITY PROFILE MODEL. THE ANALYSIS INDICATES INTERMACHINE SPACINGS THAT WILL PROVIDE FOR MAXIMUM OUTPUT FROM EITHER THE TOTAL ARRAY OR INDIVIDUAL MACHINES WITHIN THE ARRAY. THESE ARRANGEMENTS ARE NOT COINCIDENT. USING THE RESULTS OBTAINED DETAILED OPTIMIZATION AND ECONOMIC ANALYSES MAY BE MADE FOR LER _-SCALE WIND SYSTEMS.

METEOROLOGICAL INFORMATION REQUIRED FOR THE DETAILED OPERATION OF A LARGE
WIND-TURBINE PLANT.
SYMPOSIUM ON METEOROLOGY AND ENERGY, WELLINGTON, NEW ZEALAND, OCTOBER
11-12, 1977. PROCEEDINGS. WELLINGTON, NEW ZEALAND, NEW ZEALAND
METEOROLOGICAL SERVICE, MAY 25, 1978. P. 33-42.

THE SPECTRUM OF WINDSPEED PRESENTED BY VAN DER HOVEN IS A CONVENIENT STARTING POINT FOR COMMENTING ON WINDSPEED INFORMATION RELEVANT TO WIND ENERGY CONVERSION SYSTEMS. THE REQUIREMENTS FOR ASSESSING THE PRIMARY POTENTIAL OF THE RESOURCE AND FOR DETERMINING ITS ROLE IN CONTRIBUTING TO AN ELECTRICAL GRID ARE DIFFERENT TO THOSE FOR ACTUALLY DESIGNING SUCCESSFUL HARDWARE. THE FORMER REQUIREMENTS CAN LARGELY BE MET BY ANALYSING EXISTING METEOROLOGICAL RECORDS, OR RECORDS STILL TO BE TAKEN BY EXTENDING THE COVERAGE OF CONVENTIONAL METEOROLOGICAL STATIONS. THE LATTER REQUIREMENTS INVOLVE WINDSPEED INFORMATION TYPICAL OF PERIODS OF SEVERAL MINUTES DOWN TO FRACTIONS OF A SECOND.

COMPARISON OF BLADE LOADS OF FIXED AND FREE YAWING WIND TURBINES.
WIND TURBINE STRUCTURAL DYNAMICS. WIND TURBINE STRUCTURAL DYNAMICS
CONFERENCE, CLEVELAND, NOVEMBER 15, 1977. PROCEEDINGS. NTIS, 1978, P.
237-242.
CONF-771148

THE UTRC SELF REGULATING COMPOSITE BEARLINGLESS WIND TURBINE UTILIZES AN AUTOMATIC PITCH CONTROL CONCEPT AND A COMPLETELY UNRESTRAINED YAWING DEGREE OF FREEDOM. AERODYNAMIC MOMENTS CAUSED BY SKEWED FLOW PROVIDE THE CONTROL TO ALIGN THE WIND TURBINE WITH THE WIND. MODEL TESTS HAVE DEMONSTRATED THE FEASIBILITY OF THE CONCEPT AND ANALYTICAL STUDIES HAVE SHOWN THE FREE SYSTEM TO EXPERIENCE LOWER BLADE LOADS COMPARED TO THE FIXED SYSTEM.

78-0040 CHEREMISINOFF N P FUNDAMENTALS OF WIND ENERGY. ANN ARBOR, MICH., ANN ARBOR SCIENCE PUBL., 1978. 175P.

THIS BOOK IS PRESENTED AS AN OVERVIEW OF THE FOTENTIALS OF WIND AS AN ENERGY SOURCE. IT IS INTENDED AS A DOCUMENTARY OFFERING A LOOK AT THE PAST AS WELL AS AT THE PRESENT AND FUTURE POSSIBILITIES.

WIND ENERGY IN NEW ZEALAND.
SYMPOSIUM ON METFOROLOGY AND ENERGY, WELLINGTON, NEW ZEALAND, OCTOBER
11-12, 1977. PROCEEDINGS. WELLINGTON, NEW ZEALAND, NEW ZEALAND
METEOROLOGICAL SERVICE, MAY 25, 1978. P. 15-32.

THE NEW ZEALAND METEOROLOGICAL SERVICE HAS A LARGE ARCHIVE OF WIND DATA. ANALYSIS OF SOME OF THIS DATA AS PART OF THE WIND ENERGY RESOURCE SURVEY OF NEW ZEALAND GIVES AN INITIAL INDICATION OF THE WIND ENERGY RESOURCE NEW ZEALAND POSSESSES. THE ANALYSES BEING UNDERTAKEN ARE OUTLINED. THE DATA BASE IS BEING EXTENDED WITH OBSERVATIONS BEING MADE BY THIS PROJECT. A DESCRIPTION OF THY PROGRAMME AND A REVIEW OF THE LONG TERM PROSPECTS FOR WIND ENERGY UTIL. JATION IN NEW ZEALAND ARE PRESENTED.

78-0042 CHEVALIER H L, MILBURN R T
A NEW WIND ENERGY CONVERSION DEVICE.
TEX. ENG. EXP. STA. BULL. NO. 78-1: 11-18, JANUARY 1978.

AN EXPERIMENTAL AND THEORETICAL INVESTIGATION OF A HORIZONTAL-AXIS WIND ENERGY CONVERSION DEVICE UTILIZING STRAIGHT BLADES AS THE FORCE-PRODUCING SURFACES WAS CONDUCTED. THE INHERENT ADVANTAGES OF THE DEVICE OVER OTHER SYSTEMS SUCH AS THE SELF-STARTING CHARACTERISTICS, THE ABILITY TO OPERATE OVER A WIDE RANGE OF TIP SPEED RATIOS, AND THE ADAPTABILITY TO LARGE-SCALE APPLICATIONS MAKE THE HORIZONTAL-AXIS WIND TURBINE A DESIRABLE CONCEPT FOR THE CONVERSION OF WIND ENERGY. A THEORETICAL PERFORMANCE PREDICTION MODEL BASED ON MOMENTUM THEORY WAS ALSO DEVELOPED AND APPLIED TO THE WIND TURBINE. THE THEORY PREDICTED THE PERFORMANCE OF THE TURBINE WELL; HOWEVER, FURTHER REFINEMENTS IN THE THEORY WOULD REDUCE SIGNIFICANTLY THE DIFFERENCE BETWEEN THE THEORETICAL PREDICTIONS AND THE EXPERIMENTAL DATA.

78-0043 CHILCOTT R E, SMYTH V G
ENERGY CONVERSION PERFORMANCE PARAMETERS FOR WIND TURBINES.
SYMPOSIUM ON METEOROLOGY AND ENERGY, WELLINGTON, NEW ZEALAND, OCTOBER
11-12, 1977. PROCEEDINGS. WELLINGTON, NEW ZEALAND
METEO₽OLOGICAL SERVICE, MAY 25, 1978. P.133-170.

THE ENERGY CONVERSION PERFORMANCE OF AN ORIENTING WIND TURBINE IN VARIOUS WEIBULL WIND REGIMES HAS BEEN DETERMINED AND IS PRESENTED IN PARAMETRIC FORM. THE ANALYTICAL RESULTS ARE COMPARED WITH PERFORMANCE PREDICTIONS BASED ON LONG TERM WIND RECORDS FOR CHRISTCHURCH INTERNATIONAL AIRPORT. THE ENERGY CONVERSION PERFORMANCE OF A FIXED ORIENTATION BIAXIAL WIND TURBINE IN WIND REGIMES WITH AXISYMMETRIC DIRECTIONAL CHARACTERISTICS HAS BEEN ANALYSED. UNDER THE ASSUMED CONDITIONS, BY ALIGNING THE BIAXIAL WIND TURBINE WITH THE PREVAILING WIND DIRECTION, THE ENERGY CONVERTED IS TYPICALLY ABOUT 75% OF THAT CONVERTED BY A FULLY ORIENTING WIND TURBINE. ESTIMATES OF THE ENERGY CONVERSION PERFORMANCE OF A FIXED ORIENTATION BIAXIAL WIND TURBINE IN THE CHRISTCHURCH AIRPORT WIND REGIME INDICATE THAT FOR MAXIMUM CAPACITY FACTOR THE ORIENTATION ANGLE SHOULD BE ABOUT 50 DEGREES EAST OF NORTH. THIS ORIENTATION GIVES GOOD EXPOSURE TO NORTHEAST AND SOUTHWEST WINDS. THE RESULTS ARE INTENDED TO ALLOW THE OPTIMISATION OF LONG TERM ENERGY CONVERSION PERFORMANCE OF WIND TURBINES IN ISOTROPIC AND DIRECTIONAL WIND REGIMES. FOR EXAMPLE THE CHRISTCHURCH AIRPORT CASE STUDY INDICATES THAT FOR MAXIMUM ENERGY CONVERSION EFFICIENCY LOCAL AEROGENERATORS SHOULD BE RATED AT ABOUT TWICE THE AVERAGE WIND SPEED OBTAINED BY EXCLUDING CALMS.

78-0046 CLIFF W C, JUSTUS C C, ELDERKIN C E SIMULATION OF THE HOURLY WIND SPEEDS FOR RANDOMLY DISPERSED SITES. NTIS, MAY 1978. 46P. PNL-2523

A TECHNIQUE IS PRESENTED WHICH SIMULATES THE HOURLY WIND SPEEDS AT ANY NUMBER OF DISPERSED SITES WITHIN A REGION. THE REQUIRED INPUT FOR THE SIMULATION IS AN HOURLY WIND SPEED RECORD FROM A SINGLE "REPRESENTATIVE SITE" AND AN ESTIMATION OF THE SIZE OF THE REGION IN WHICH THE SITES WILL BE LOCATED. THIS TECHNIQUE IS NOT INTENDED FOR USE AT ANY SPECIFIC LOCATION BUT RATHER INTENDED TO BE USED FOR GENERIC MISSION ANALYSIS TYPE A "REPRESENTATIVE SITE" FOR THIS STUDY IS A SITE WHICH HAS AN ANNUAL MEAN WIND SPEED REPRESENTATIVE OF THE ANNUAL MEAN WIND SPEED AT ALL SITES UNDER CONSIDERATION. WITH THIS INFORMATION, A PROBABILITY DENSITY DISTRIBUTION FOR THE WIND SPEED AVERAGED OVER ALL THE SITES WITHIN THE REGION IS CONSTRUCTED. THE TIME HISTORY OF THE HOURLY MEAN WIND SPEEDS FROM THE REPRESENTATIVE SITE IS THEN USED WITH A FREQUENCY-MATCHING TECHNIQUE TO ESTABLISH THE HOURLY SEQUENCE OF REGIONAL AVERAGE WIND SPEEDS (REGIONAL AVERAGE BEING THE AVERAGE WIND SPEED FROM A VERY LARGE NUMBER OF POTENTIAL SITES WITHIN A REGION). A MONTE CARLO TECHNIQUE IS THEN USED TO DEVELOP THE HOURLY MEAN WIND SPEEDS AT ANY NUMBER OF DESIRED SITES, WHICH ARE ASSUMED TO BE RANDOMLY DISTRIBUTED THROUGHOUT THE AREA. THESE SIMULATED WIND HISTORIES MAY THEN BE USED TO SIMULATE THE HOURLY TIME HISTORY OF THE POWER OUTPUT OF A NETWORK OF WIND TURBINES LOCATED AT THESE RANDOM SITES, BY ASSUMING THE DESIRED NUMBER AND SIZE OF WIND TURBINES TO BE PLACED AT EACH SITE. USING THE SIMULATED WIND SPEED AT EACH SITE IN CONJUNCTION WITH THE WIND TURBINE'S OPERATING CHARACTERISTICS, THE HOURLY POWER FOR EACH SITE IS CALCULATED AND THE CALCULATED POWER FOR ALL SITES IS THEN SUMMED TO YIELD THE TOTAL POWER PRODUCED BY THE WIND TURBINES FOR THAT HOUR. THE POWER PRODUCED AT EACH CONSECUTIVE HOUR IS COMPUTED IN THE SAME MANNER, YIELDING A SIMULATED TIME HISTORY OF THE POWER PRODUCED BY THE WIND TURBINES.

78-0047 CLIFF W C, FICHTL G H
WIND VELOCITY-CHANGE (GUST RISE) CRITERIA FOR WIND TURBINE DESIGN.
NTIS, JULY 1978. 31 P.
PNL-2526

THIS PAPER DERIVES A CLOSED-FORM EQUATION FOR ROOT MEAN SQUARE (RMS) VALUE OF VELOCITY CHANGE (GUST RISE) THAT OCCURS OVER THE SWEPT AREA OF WIND TURBINE ROTOR SYSTEMS AND AN EQUATION FOR RMS VALUE OF VELOCITY CHANGE THAT OCCURS AT A SINGLE POINT IN SPACE. THESE FORMULAS CONFIRM THE INTUITIVE ASSUMPTION THAT A LARGE SYSTEM WILL ENCOUNTER A LESS SEVERE ENVIRONMENT THAN A SMALL SYSTEM WHEN BOTH ARE PLACED AT THE SAME THAT IS, BECAUSE OF A SPATIAL-AVERAGING EFFECT THE WIND CHARACTERISTICS THAT ENGULF A LARGE SYSTEM ARE LESS SEVERE THAN THOSE FOR A SMALL SYSTEM. ASSUMING A NORMAL PROBABILITY DENSITY FUNCTION FOR THE VELOCITY DIFFERENCES, AN EQUATION IS GIVEN FOR CALCULATING THE EXPECTED NUMBER OF VELOCITY DIFFERENCES THAT WILL OCCUR IN 1 HR AND WILL BE LARGER THAN AN ARBITRARY VALUE. A FORMULA IS PRESENTED THAT GIVES THE EXPECTED NUMBER OF VELOCITY DIFFERENCES LARGER THAN AN ARBITRARY VALUE THAT WILL BE ENCOUNTERED DURING THE DESIGN LIFE OF A WIND TURBINE. IN ADDITION, A METHOD FOR CALCULATING THE LARGEST VELOCITY DIFFERENCE EXPECTED DURING THE LIFE OF A TURBINE AND A FORMULA FOR ESTIMATING THE RISK OF EXCEEDING A GIVEN VELOCITY DIFFERENCE DURING THE LIFE OF THE STRUCTURE ARE GIVEN. THE EQUATIONS PRESENTED ARE BASED UPON GENERAL ATMOSPHERIC BOUNDARY-LAYER CONDITIONS AND DO NOT INCLUDE INFORMATION REGARDING EVENTS SUCH AS TORNADOS, HURRICANES, ETC.

FLOW FIELD ANALYSIS.
WIND TURBINE STRUCTURAL DYNAMICS. WIND TURBINE STRUCTURAL DYNAMICS
CONFERENCE, CLEVELAND, NOVEMBER 15, 1977. PROCEEDINGS. NTIS, 1978. P.
71-76.
CONF-771148

THE AVERAGE MEAN WIND SPEED INTEGRATED OVER A DISK IS SHOWN TO BE EXTREMELY CLOSE TO THE MEAN VALUE OF WIND SPEED WHICH WOULD BE MEASURED AT THE CENTER OF A DISK FOR MOST GEOMETRIES IN WHICH A WECS (WIND ENERGY CONVERSION SYSTEM) WOULD OPERATE. FIELD TEST RESULTS ARE PRESENTED WHICH COMPARE INSTANTANEOUS RECORDS OF WIND SPEED INTEGRATED OVER A DISK WITH THE WIND SPEED MEASURED AT THE CENTER OF THE DISK. THE WIND FIELD THAT A ROTATING ELEMENT WOULD EXPERIENCE IS PRESENTED WHICH HAS BEEN SYNTHESIZED FROM THE OUTPUTS OF AN ARRAY OF ANEMOMETERS.

STATISTICAL ANALYSIS OF WIND POWER SITING REQUIREMENTS.
AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, INC.
PROCEEDINGS OF THE 1978 ANNUAL MEETING, DENVER, AUGUST 28-31, 1978.
NEWARK, DELAWARE, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, 1978. VOL. 2.2, P. 741-745.

WIND RECORDS PRIMARILY FROM THE NATIONAL CLIMATIC CENTER ARE USED TO DEVELOP STATISTICAL MODELS FOR WIND POWER SITING. BROADLY GENERAL RESULTS INDICATE THAT ONE YEAR IS SUFFICIENT TO PREDICT THE LONG TERM MEAN SPEED FOR EACH SEASON WITHIN AN ACCURACY OF 10% WITH A CONFIDENCE OF ABOUT 90%. SIMILAR STATISTICS FOR THE SEASONAL MEAN POWER REQUIRE SIGNIFICANTLY MORE DATA COLLECTION. THE HOURLY VARIANCE DUE TO THE DIURNAL CYCLE IS COMPARED TO THE TOTAL INHERENT HOURLY VARIANCE, AND THE FORMER IS FOUND TO CONTRIBUTE ONLY ABOUT TEN PERCENT. AN ANALYSIS OF THE ANNUAL CYCLE SHOWS THE RELATIVELY HOMOGENEOUS NATURE OF THE CYCLE WITHIN A GIVEN REGION. AUTOCORRELATION ANALYSIS OF THE RECORDS PRODUCE AN EXPONENTIAL-TYPE FUNCTION WITH TWO TO THREE EQUIVALENT INDEPENDENT HOURLY READINGS PER DAY. HIGH CROSS-CORRELATION VALUES ARE DETERMINED BETWEEN SITES IN RELATIVELY SMOOTH TERRAIN FOR SEPARATIONS UP TO 100 KM.

ELECTRIC UTILITIES COMPRISE THE LARGEST POTENTIAL MARKET FOR WIND MACHINES IN THE MEGAWATT POWER RANGE. AMONG THE TOPICS INCLUDED IN THIS PAPER ARE THE PROBLEMS UTILITIES ENCOUNTER USING WIND POWER, ECONOMIC CONSIDERATIONS, AND CONSIDERATION OF FAVORABLE LOCATIONS.

78-0059 DAWBER K R
WINTER WIND ENERGY RESOURCES.
SYMPOSIUM ON METEOROLOGY AND ENERGY, WELLINGTON, NEW ZEALAND, OCTOBER
11-12, 1977. PROCEEDINGS. WELLINGTON, NEW ZEALAND, NEW ZEALAND
METEOROLOGICAL SERVICE, MAY 25, 1978. P.85-92.

ELECTRICITY SUPPLY AUTHORITIES IN NEW ZEALAND HAVE MORE DIFFICULTY IN MEETING LOAD DEMANDS IN LATE WINTER AND EARLY SPRING THAN AT OTHER TIMES IN THE YEAR. THUS AEROGENERATION ON A LARGE SCALE WILL BE OF MOST VALUE IF IT CAN PROVIDE A RELIABLE SOURCE DURING THIS PERIOD. OF COURSE IT IS UNREALISTIC TO EXPECT TO BE ABLE TO PROVIDE A FULL-TIME BASE LOAD FROM THE AREA COVERED BY THE OTAGO SURVEY, MEASURING APPROXIMATELY 150 KM BY 100 KM, BUT WHEN SIMILAR STUDIES BECOME AVAILABLE FROM OTHER PARTS OF NEW ZEALAND THEN THE ABILITY OF WIND ENERGY TO PROVIDE WINTER BASE LOAD CAN BE ASSESSED. SIX SPECIAL ASPECTS US WINTER WINDS IN OTAGO ARE EXAMINED IN THIS REPORT.

FIXED PITCH WIND TURBINES.
WIND TURBINE STRUCTURAL DYNAMICS. WIND TURBINE STRUCTURAL DYNAMICS
CONFERENCE, CLEVELAND, NOVEMBER 15, 1977. PROCEEDINGS. NTIS, 1978. P.
243-254.
CONF-771148

WIND TURBINES DESIGNED FOR FIXED PITCH OPERATION OFFER POTENTIAL REDUCTIONS IN THE COST OF THE MACHINE BY ELIMINATING MANY COSTLY COMPONENTS. STUDIES HAVE SHOWN THAT A ROTOR CAN BE DESIGNED WHICH PRODUCES THE SAME ENERGY ANNUALLY AS MOD-O BUT WHICH REGULATES ITS POWER AUTOMATICALLY BY PROGESSIVELY STALLING THE BLADES AS WIND SPEED INCREASES. EFFECTS OF BLADE TWIST, TAPER, ROOT CUTOUT, AND AIRFOIL SHAPE ON PERFORMANCE ARE DISCUSSED. UNFORTUNATELY, FIXED PITCH ROTORS ARE NOT SELF-STARTING WHEN THE PITCH IS SET TO MAXIMIZE ENERGY PRODUCTION PER YEAR. VARIOUS STARTING TECHNIQUES ARE DISCUSSED.

78-0076 FERTIS D G, ROSS R S
RESEARCH OF LOW COST WIND GENERATOR ROTORS.
WIND TURBINE STRUCTURAL DYNAMICS. WIND TURBINE STRUCTURAL DYNAMICS
CONFERENCE, CLEVELAND, NOVEMBER 15, 1977. PROCEEDINGS. NTIS, 1978. P.
257-260.
CONF-771148

THIS FEASIBILITY PROGRAM DETERMINED THAT IT WOULD BE POSSIBLE TO SIGNIFICANTLY REDUCE THE COST OF MANUFACTURING WIND GENERATOR ROTORS BY MAKING THEM OF CAST URETHANE. GOODYEAR DEVELOPED SEVERAL HIGH MODULUS URETHANES WHICH WERE STRUCTURALLY TESTED AT THE UNIVERSITY OF AKRON. A SECTION OF ROTOR WAS ALSO CAST AND TESTED SHOWING THE EXCELLENT AERODYNAMICS SURFACE WHICH RESULTS. A DESIGN ANALYSIS INDICATED THAT A COST REDUCTION OF ALMOST TEN TO ONE CAN BE ACHIEVED WITH A SMALL WEIGHT INCREASE TO ACHIEVE THE SAME STRUCTURAL INTEGRITY AS EXPECTED OF CURRENT ROTOR SYSTEMS.

78-0077 FIGARD R L, SCHETZ J Z
EXPERIMENTAL AND ANALYTICAL STUDIES OF THE AERODYNAMIC PERFORMANCE OF WINDMILLS.
NEW YORK, AIAA, PAPER NO. 78-277, 1978. 7P.

THE AERODYNAMIC PERFORMANCE OF A MODERN, HIGH TIP SPEED, THREE-BLADED WINDMILL RATED AT 10kW AT 30 MPH WAS STUDIED BY THREE METHODS. FIRST, THE RESULTS OF FIELD TESTS OF THE ACTUAL DEVICE WITH BOTH A RESISTIVE AND A BATTERY-CHARGING ELECTRIC LOAD ARE REPORTED. SECOND, THE PREDICTIONS OF A SIMPLE BLADE-ELEMENT ANALYSIS ARE PRESENTED AND COMPARED WITH THE FIELD DATA. AERODYNAMIC BLADE SECTION COEFFICIENTS OF AN ACTUAL BLADE SECTION WERE MEASURED IN A WIND TUNNEL AND USED AS INPUT IN THE ANALYSIS. THIRD, WIND TUNNEL TEST RESULTS FOR A 1/5TH SCALE MODEL ARE GIVEN. REYNOLDS NUMBER SIMULATION FROM MODEL TO PROTOTYPE IS CONSIDERED IN DETAIL. FINALLY, THE RESULTS OF ALL THREE EFFORTS ARE COMPARED.

78-0078 FLAY R G J, LINDLEY D, BOWEN A J
FIELD MEASUREMENTS OF THE ATMOSPHERIC BOUNDARY LAYER NEAR THE GROUND.
SYMPOSIUM ON METEOROLOGY AND ENERGY, WELLINGTON, NEW ZEALAND, OCTOBER
11-12, 1977. PROCEEDINGS. WELLINGTON, NEW ZEALAND, NEW ZEALAND
METEOROLOGICAL SERVICE, MAY 25, 1978. P.109-132.

ACCURATE FIELD MEASUREMENTS OF THE TURBULENCE CHARACTERISTICS AND WIND SPEED PROFILES NEAR THE GROUND ARE ESSENTIAL FOR THE OPTIMUM SITING OF WIND TURBINES AND IN THE INVESTIGATION OF THEIR PERFORMANCE AT A TEST SITE. A FIELD LABORATORY UNIT APPROPRIATE FOR THIS APPLICATION HAS BEEN DEVELOPED BY THE UNIVERSITY OF CANTERBURY MECHANICAL ENGINEERING DEPARTMENT FOR THE PURPOSE OF RECORDING TURBULENCE DATA FROM THE ATMOSPHERIC BOUNDARY LAYER. WIND VELOCITY COUNTS AT SCAN RATES OF 7.5 HZ

AND ABOVE CAN BE OBTAINED FROM UP TO TWELVE ORTHOGONAL ARRAYS OF FAST RESPONSE PROPELLER ANEMOMETERS AND RECORDED ON MAGNETIC TAPE FOR LAYER ANALYSIS. THE TECHNIQUES EMPLOYED IN THE HANDLING AND SUBSEQUENT PROCESSING OF THE DATA ARE DESCRIBED AND SOME RESULTS FROM PRELIMINARY MEASUREMENTS IN THE FIRST TWENTY METRES OF A RURAL BOUNDARY LAYER ARE DISCUSSED.

78-0079 RANGI R S., SOUTH P
OVERSPEED SPOILERS FOR VERTICAL AXIS WIND TURBINES.
U.S. PATENT NO. 4.082.479, APRIL 4. 1978. 4P.

AN OVERSPEED SPOILER IS DESCRIBED FOR VERTICAL AXIS WIND TURBINES OF THE TYPE HAVING STRAIGHT OR CURVED AIRFOIL BLADES ATTACHED TO A VERTICAL SHAFT FORMED BY A RELATIVELY THIN FLAT BLADE SHAPED SPOILER ELEMENT HINGE MOUNTED ON THE TRAILING EDGE, LEADING EDGE, OR AT A CENTRAL POSITION OF A PORTION OF THE AIRFOIL SECTION. THE ELEMENT HAS TWO PORTIONS ONE OF WHICH IS HELD FLUSH OR AGAINST A SURFACE BY SPRING MEANS WITH A SURFACE OF THE BLADE TOWARDS THE TURBINE ROTOR AXIS AND THE OTHER LIES SUBSTANTIALLY PARALLEL TO THE CHORDLINE OF THE AIRFOIL. THE WEIGHT AND CONFIGURATION OF THE ELEMENT IS SUCH THAT AT A PREDETERMINED TURBINE ROTOR SPEED THE ELEMENT ROTATES AGAINST THE SPRING FORCE BECAUSE OF CENTRIFUGAL ACTION AND TAKES UP A POSITION GENERALLY TRANSVERSE TO THE AIR FLOW DIRECTION SUCH AS TO CAUSE MUCH INCREASED DRAG AND CONTROL OVERSPEEDING OF THE ROTOR.

78-0080 GEMINI SYNCHRONOUS INVERTER SYSTEMS.
MUKWONAGO, WISC., WINDWORKS, INC., 1978. 12P.

THIS BROCHURE COVERS HOW TO CONVERT DC TO AC POWER AND FEED IT BACK INTO YOUR UTILITY'S ELECTRIC GRID, USING WIND TURBINES, SOLAR CELLS, SOLAR THERMAL ELECTRIC SYSTEMS AND SMALL HYDRO-DAMS.

DRIVE TRAIN DYNAMIC ANALYSIS.
WIND TURBINE STRUCTURAL DYNAMICS. WIND TURBINE STRUCTURAL DYNAMICS
CONFERENCE, CLEVELAND, NOVEMBER 15, 1977. PROCEEDINGS. NTIS, 1978. P.
157-166.
CONF-771148

A METHOD FOR PARAMETRIC VARIATIONS IN DRIVE TRAIN DYNAMIC ANALYSIS IS DESCRIBED. THE METHOD MODELS THE INDIVIDUAL COMPONENTS OF A DRIVE SYSTEM, FORMS THE APPROPRIATE SYSTEM INTERFACE COORDINATES AND CALCULATES THE SYSTEM DYNAMIC RESPONSE AT PARTICULAR FREQUENCIES. APPLICATION OF THE METHOD FOR PREDICTION OF THE DYNAMIC RESPONSE CHARACTERISTICS OF A HELICOPTER TRANSMISSION AND A COMPARISON OF RESULTS WITH TEST DATA IS ALSO INCLUDED.

78-0082 GILBERT L J
TRANSIENT RESPONSE TO THREE-PHASE FAULTS ON A WIND TURBINE GENERATOR.
NTIS, JUNE 1978. 146P.
NASA-TM-78902, E-9638, N78-26542

IN ORDER TO OBTAIN A MEASURE OF ITS RESPONSES TO SHORT CIRCUITS A LARGE HORIZONTAL AXIS WIND TURBINE GENERATOR WAS MODELED AND ITS PERFORMANCE WAS SIMULATED ON A DIGITAL COMPUTER. SIMULATION OF SHORT CIRCUIT FAULTS ON THE SYNCHRONOUS ALTERNATOR OF A WIND TURBINE GENERATOR, WITHOUT RESORT TO THE CLASSICAL ASSUMPTIONS GENERALLY MADE FOR THAT ANALYSIS, INDICATES THAT MAXIMUM CLEARING TIMES FOR THE SYSTEM TIED TO AN INFINITE BUS ARE LONGER THAN THE TYPICAL CLEARING TIMES FOR EQUIVALENT CAPACITY CONVENTIONAL MACHINES. ALSO, MAXIMUM CLEARING TIMES ARE INDEPENDENT OF TOWER SHADOW AND WIND SHEAR. VARIATION OF CIRCUIT CONDITIONS PRODUCE THE MODIFICATIONS IN THE TRANSIENT RESPONSE PREDICTED BY ANALYSIS.

DESIGN AND OPERATING EXPERIENCE ON THE U.S. DEPARTMENT OF ENERGY
EXPERIMENTAL MOD-O 100KW WIND TURBINE.
NTIS, 1978. 16P.
N78-26552, NASA-TM-78915

THE MOD-O 100KW EXPERIMENTAL WIND TURBINE WAS DESIGNED AND FABRICATED BY NASA, AS PART OF THE FEDERAL WIND ENERGY PROGRAM, TO ASSESS TECHNOLOGY REQUIREMENTS AND ENGINEERING PROBLEMS OF LARGE WIND TURBINES. THE MACHINE BECAME OPERATIONAL IN OCTOBER 1975 AND HAS DEMONSTRATED SUCCESSFUL OPERATION IN ALL OF ITS DESIGN MODES. DURING THE COURSE OF ITS OPERATIONS THE MACHINE HAS GENERATED A WEALTH OF EXPERIMENTAL DATA AND HAS SERVED AS A PROTOTYPE DEVELOPMENTAL TEST BED FOR THE MOD-OA OPERATIONAL WIND TURBINES WHICH ARE CURRENTLY USED ON UTILITY NETWORKS. THIS PAPER DESCRIBES THE MECHANICAL AND CONTROL SYSTEMS AS THEY EVOLVED IN OPERATIONAL TESTS AND DESCRIBES SOME OF THE EXPERIENCE WITH VARIOUS SYSTEMS IN THE DOWNWIND ROTOR CONFIGURATION.

78-0086 GOLD H

78-0088 GRUNBAUM R
ALTERNATIVE ENERGY SOURCES IN THE USSR.
AMBIO 7(2): 49-55, 1978.

ALTERNATIVE ENERGY SOURCES ARE FILLING IMPORTANT GAPS IN THE SOVIET UNION'S ENERGY PROFILE. THE RUSSIAN VIEW IS THAT RENEWABLE ENERGY SOURCES CAN HAVE A SIGNIFICANT IMPACT IN MEETING LOCAL ENERGY DEMANDS, ESPECIALLY IN REGIONS WHERE MORE CONVENTIONAL FORMS ARE TOO EXPENSIVE OR INCONVENIENT. DESPITE THE DIFFICULTY IN OBTAINING RELIABLE INFORMATION, THE AUTHOR, AS AN OUTSIDE OBSERVER, PRESENTS AN OVERALL PICTURE OF THE SOVIET ALTERNATIVE ENERGY PROGRAM. THE COUNTRY IS RAPIDLY DEVELOPING WIND FOWER AGGREGATES RANGING FROM A FEW KILOWATTS UP TO ONE HUNDRED KILOWATTS FOR DEPLOYMENT IN THE THINLY POPULATED REGIONS OF SIBERIA, THE FAR NORTH AND THE FAR EAST. SOME OF THESE AGGREGATES WILL BE USED TO PUMP WATER FOR GRAZING ANIMALS. SOLAR ENERGY IS BEING UTILIZED TO DESALINATE GROUNDWATER AND SEAWATER. SOLAR PANELS ARE WARMING HOUSES IN THE UZBEK REPUBLIC AND INEXPENSIVE PORTABLE SOLAR WATER HEATERS HAVE BEEN PRODUCED IN TASHKENT. POWER PLANTS USING TIDAL AND GEOTHERMAL ENERGY ARE BEING BUILT, MAINLY IN AREAS WHERE FOSSIL FUEL PLANTS ARE PROHIBITIVELY EXPENSIVE.

ROCKY FLATS, COLORADO, ROCKWELL INTERNATIONAL, 3 APRIL 1978. 125P.

THIS REPORT DESCRIBES IN DETAIL WIND ENERGY CONVERSION SYSTEMS (WECS) COMMERCIALLY AVAILABLE IN THE U.S. THE TERMS USED TO DESCRIBE THESE WIND SYSTEMS ARE DEFINED AND THEIR SIGNIFICANCE DISCUSSED. LISTS OF MANUFACTURERS AND DISTRIBUTERS, SUBSYSTEM COMPONENTS AND SUPPLIERS, AND REFERENCES ARE PROVIDED.

78-0090 GUIDE TO SOLAR ENERGY PROGRAMS. NTIS, MARCH 1978. 72P. DOE/ET-0036/1

THE MISSION AND OBJECTIVES OF THE U.S. DEPARTMENT OF ENERGY (DOE) ARE OUTLINED. AN OVERVIEW OF DOE'S SOLAR ENERGY PROGRAMS IS GIVEN, INCLUDING: (1) THE SOLAR THERMAL POWER SYSTEMS PROGRAM; (2) THE PHOTOVOLTAIC SYSTEMS PROGRAM; (3) THE FUELS FROM BIOMASS PROGRAM; (4) THE OCEAN THERMAL SYSTEMS PROGRAM, AND (5) THE WIND ENERGY SYSTEMS PROGRAM. ALSO, THE ENVIRONMENTAL AND RESOURCE ASSESSMENT PROGRAM AND THE SATELLITE POWER SYSTEM PROGRAM ARE DESCRIBED. SOLAR ENERGY PROGRAMS NOW FUNCTIONING UNDER THE DIVISION OF CONSERVATION AND SOLAR APPLICATIONS ARE DESCRIBED, INCLUDING THE SOLAR TECHNOLOGY TRANSFER PROGRAM AND THE THERMAL APPLICATIONS PROGRAM. METHODS OF PROCUREMENT AND GUIDES FOR PROPOSAL PREPARATION AND SOURCES OF SOLAR ENERGY INFORMATION AND ACTIVITIES SUPPORTING THE SOLAR ENERGY PROGRAM ARE DISCUSSED.

78-0091 GUIDE TO SOLAR ENERGY PROGRAMS-NTIS, REVISED JUNE 1978. 76P. DOE/ET-0036/1

THE MISSION AND OBJECTIVES OF THE U.S. DEPARTMENT OF ENERGY (DOE) ARE OUTLINED. REGIONAL WIND ENERGY DEVELOPMENT.
SOLAR 78 NORTHWEST CONFERENCE, PORTLAND, OREGON, JULY 16-18, 1978.
GOLDEN, COLORADO, SOLAR ENERGY RESEARCH INSTITUTE, 1978. 199.

REGIONAL WIND ENERGY DEVELOPMENT IS REVIEWED WITH EMPHASIS ON WIND RESOURCES AND APPLICATIONS IN THE WESTERN UNITED STATES. THE CONCLUSIONS OF EXISTING MAJOR STUDIES ARE NOTED TO INDICATE THE IMPORTANCE OF WIND ENERGY AS A MAJOR ENERGY SOURCE, ITS RELATIVE PLACE AMONG THE OTHER SOLAR TECHNOLOGIES AND EXPECTED SOCIAL BENEFITS. PROBLEMS OF WIND RESOURCE ASSESSMENT OF SPECIAL IMPORTANCE TO THE WEST ARE DESCRIBED AND PREVIOUS

WORK ON WIND ENERGY, HYDRO-ELECTRIC POWER, AND WATER RESOURCES ARE SUMMARIZED. ROLES OF THE REGIONAL SOLAR CENTERS AND THE NATIONAL SOLAR ENERGY RESEARCH INSTITUTE ARE DISCUSSED AND POSSIBLE AREAS OF INTERACTION IN THE WESTERN REGION ARE INDICATED. FURTHER ACTIVITIES IN THE DEVELOPMENT OF WIND ENERGY TECHNOLOGY AND ITS UTILIZATION ARE ALSO DESCRIBED.

78-0095 HARDY D M
WIND ENERGY ACTIVITIES AT THE SOLAR ENERGY RESEARCH INSTITUTE.
AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, INC.
PROCEEDINGS OF THE 1978 ANNUAL MEETING, DENVER, AUGUST 28-31, 1978.
NEWARK, DELAWARE, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY
SOCIETY, 1978. VOL. 2.2, P. 713-718.

WIND ENERGY PROJECT ACTIVITIES AT THE SOLAR ENERGY RESEARCH INSTITUTE ARE COLLECTIVELY REVIEWED. OVERALL OBJECTIVES OF EACH MAJOR ACTIVITY AREA ARE DISCUSSED IN RELATION TO THE BROADER OBJECTIVES OF THE INSTITUTE IN FURTHERING WIND ENERGY UTILIZATION. ALSO DISCUSSED IS SERI'S ROLE IN SUPPORTING THE NATIONAL DEPARTMENT OF ENERGY PROGRAM INTERACTIONS WITH THE PRIVATE SECTOR IN WIND ENERGY DEVELOPMENT, AND EFFORTS TO PROMOTE INFORMATION TRANSFER THROUGHOUT THE WIND ENERGY COMMUNITY. OPPORTUNITIES FOR COOPERATIVE PROJECTS WITH UNIVERSITIES; WITH NATIONAL LABORATORIES AND OTHER RESEARCH CENTERS; AND WITH EXISTING OR FUTURE BUSINESS, MANUFACTURING, AND INDUSTRIAL CAPABILITIES ARE ALSO INDICATED.

CHARACTERISATION OF WIND ENERGY SITES.
SYMPOSIUM ON METEOROLOGY AND ENERGY, WELLINGTON, NEW ZEALAND, OCTOBER
11-12, 1977. PROCEEDINGS. WELLINGTON, NEW ZEALAND, NEW ZEALAND
METEOROLOGICAL SERVICE, MAY 25, 1978. P. 57-68.

THE OTAGO UNIVERSITY PHYSICS DEPARTMENT, AS PART OF ITS INVOLVEMENT IN A NATIONAL SURVEY OF WIND ENERGY RESOURCES, HAS LOGGED A LARGE QUANTITY (APPROXIMATELY 10 LOGGER-YEARS) OF WIND SPEED DATA ON MAGNETIC TAPE FROM A SELECTION OF OTAGO SITES. THE BLOCKS OF DATA ARE CONTINUOUS AND UP TO 30 DAYS IN LENGTH. THE RECORDING FORMAT ALLOWS DIGITISATION WITH A TIME RESOLUTION CHOSEN WHEN THE TAPE IS READ OUT. TIME RESOLUTIONS OF 28 SECONDS AND 112 SECONDS HAVE OFTEN BEEN USED, TO GIVE CONVENIENT SPEED RESOLUTIONS OF 0.1 OR 0.2 MS-1 (DEPENDING ON THE VARIETY OF LOGGER). HOWEVER, RESOLUTION DOWN TO A FEW SECONDS IS ATTAINABLE. ACCESS TO COMPUTING FACILITIES IS AVAILABLE DIRECTLY (PDP 11) OR VIA PUNCHED PAPER TAPE. THIS PAPER DESCRIBES SOME OF THE ANALYSIS CARRIED OUT TO DATE ON THIS DATA TO EXTRACT STATISTICAL INFORMATION RELEVANT TO WIND POWER GENERATION.

78-0110 HWANG H H, MOZEICO H V, GUO T EMPLOYING STATIC EXCITATION CONTROL AND TIE LINE REACTANCE TO STABILIZE WIND TURBINE GENERATORS.
NTIS, APRIL 1978. 74P.
N78-20603

THIS STUDY PRESENTS AN ANALYTICAL REPRESENTATION OF A WIND TURBINE GENERATOR WHICH EMPLOYS BLADE PITCH ANGLE FEEDBACK CONTROL. A MATHEMATICAL MODEL IS FORMULATED. WITH THE FUNCTIONING MOD-O WIND TURBINE SERVING AS A PRACTICAL CASE STUDY, RESULTS OF COMPUTER SIMULATIONS OF THE MODEL AS APPLIED TO THE PROBLEM OF DYNAMIC STABILITY AT RATED LOAD ARE PRESENTED. THE EFFECT OF THE TOWER SHADOW IS INCLUDED IN THE INPUT TO THE SYSTEM. DIFFERENT CONFIGURATIONS OF THE DRIVE TRAIN, AND OPTIMAL VALUES OF THE TIE LINE IN REACTANCE ARE USED IN THE SIMULATIONS. COMPUTER RESULTS REVEAL THAT A STATIC EXCITATION CONTROL SYSTEM COUPLED WITH THE OPTIMAL VALUES OF THE TIE LINE REACTANCE WILL EFFECTIVELY REDUCE OSCILLATIONS OF THE POWER OUTPUT, WITHOUT THE USE OF A SLIP CLUTCH.

SYNCHRONIZATION OF THE ERDA-NASA 100 KW WIND TURBINE GENERATOR WITH LARGE
UTILITY NETWORKS.
NTIS, 1978. 16P.
NASA-TM-X-73613, CONF-770384-1

THIS PAPER WAS PRESENTED AT THE CONTROL OF POWER SYSTEMS CONFERENCE AND EXPOSITION SPONSORED BY THE INSTITUTE OF ELECTRICAL AND ELECTRONICS ENGINEERS, COLLEGE STATION, TEXAS, MARCH 14-16, 1977. THE SYNCHRONIZING OF A WIND TURBINE GENERATOR AGAINST AN INFINITE BUS UNDER RANDOM CONDITIONS IS STUDIED FOR THE FIRST TIME. WITH A DIGITAL COMPUTER, COMPLETE SOLUTIONS FOR ROTOR SPEED, GENERATOR POWER ANGLE, ELECTROMAGNETIC TORQUE, WIND TURBINE TORQUE, WIND TURBINE BLADE PITCH ANGLE, AND ARMATURE CURRENT ARE OBTAINED AND PRESENTED BY GRAPHS. EXPERIMENTS HAVE BEEN RECENTLY PERFORMED ON THE ERDA-NASA 100 KW WIND TURBINE. EXPERIMENTAL RESULTS MATCHED COMPUTER STUDY RESULTS VERY CLOSELY AND CONFIRMED THAT THE SYNCHRONIZATION CAN BE ACCOMPLISHED BY MEANS OF THE EXISTING SPEED CONTROL SYSTEM AND AN AUTOMATIC SYNCHRONIZER.

CONF-771148

STRUCTURAL DYNAMIC ANALYTICAL TESTING TECHNIQUES CAN BE A TOOL TO DETERMINE THE SOURCE OF STRUCTURAL DYNAMIC PROBLEMS AND THE SOLUTION TO THESE PROBLEMS. ANALYTICAL TESTING TECHNIQUES ARE BASED UPON NEW AND UNIQUE DYNAMIC TESTING METHODS AND ANALYSIS OF TEST RESULTS. THUS, THESE METHODS APPLY PRIMARILY TO CONSTRUCTED WIND TURBINE SYSTEMS. THIS PAPER GIVES A SUMMARY OF THESE METHODS.

78-0125 JUSTUS C G
WIND ENERGY STATISTICS FOR LARGE ARRAYS OF WIND TURBINES (NEW ENGLAND AND CENTRAL U. S. REGIONS).
SOLAR ENERGY 20: 379-386, 1978.

THE PERFORMANCE CHARACTERISTICS HAVE BEEN SIMULATED FOR LARGE DISPERSED ARRAYS OF 500-1500 kw wind turbines producing power and feeding it directly into the new england or central u.s. utility distribution grids. These studies, based on design power performance curves, indicate that in good wind environments the 500 kw generators can average (on an annual basis) up to 240 kw mean power output, and the 1500 kw generators can average up to 350 kw mean power output. Higher mean power output (averaging up to 470 kw) is indicated, however from a hypothetical 1125 kw rated power unit designed to operate at wind speeds near those observed throughout the study area, rather than the higher design operating wind speed of the 1500 kw unit. The beneficial effect of operating large disperse arrays of wind turbines is that available power output can be increased -- if winds are not blowing over one part of the array, chances are they will over some other part of the array. These studies indicate that wind power availability levels of 200 kw per 1125 kw generator were 77-93 percent, depending on season. Reasonably steady high wind power in winter and high afternoon peak wind power in summer (corresponding to peak air conditioning load) means that significant peak load displacement can be achieved without the use of storage.

78-0126 JUSTUS C G, HARGRAVES W R
WIND ENERGY STATISTICS FOR LARGE ARRAYS OF WIND TURBINES (GREAT LAKES AND
PACIFIC COAST REGIONS). ANNUAL PROGRESS REPORT, MAY 1, 1976 - APRIL 30,
1977.
NTIS, JANUARY 1978. 124P.
RL0/2439-77/2

THIS REPORT EXAMINES ARRAYS OF SIMULATED 0.5 MW, 1.5 MW, AND 2.0 MW WIND TURBINES IN THE GREAT LAKES AND PACIFIC COAST REGIONS. THE PARAMETERS ANALYZED ARE: BASIC WIND STATISTICS, TIME AND SPATIAL CORRELATIONS, MEAN WIND POWER OUTPUT, WIND POWER FREQUENCY (AVAILABILITY WITHOUT STORAGE), AND RUN DURATION OF WIND SPEED AND ARRAY POWER (PROBABILITIES OF WIND AND POWER LULLS OF VARIOUS DURATION, WITHOUT STORAGE). ALSO INCLUDED ARE EVALUATION OF DIURNAL AS WELL AS SEASONAL VARIATIONS OF WIND AND WIND POWER, INCLUSION OF DENSITY, WIND SHEAR, WIND GUSTS, AND OTHER FACTORS IN THE MODEL POWER OUTPUT CURVE SIMULATION, STUDY OF THE POSSIBLE RELATION BETWEEN WIND SPEED AND DEGREE DAYS (KNOWN TO AFFECT A PORTION OF UTILITY DEMAND) AND DEVELOPMENT AND VERIFICATION OF SIMPLIFIED ARRAY SIMULATION MODEL.

78-0127 JUSTUS C G, MIKHAIL A
GENERIC POWER PERFORMANCE ESTIMATES FOR WIND TURBINES.
AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, INC.
PROCEEDINGS OF THE 1978 ANNUAL MEETING, DENVER, AUGUST 28-31, 1978.
NEWARK, DELAWARE, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, 1978. VOL 2.2, P. 719-723.

THE OUTPUT POWER CURVES FOR A VERY WIDE RANGE OF WIND TURBINE DESIGNS CAN BE REPRESENTED BY TWO SIMPLE EXPRESSIONS -- ONE FOR CONSTANT RPM MACHINES, ONE FOR VARIABLE RPM MACHINES. A SET OF WIND TURBINES COVERING A WIDE RANGE OF DESIGN PARAMETER VALUES HAVE BEEN RUN THROUGH REFERENCE WIND DISTRIBUTIONS TO EVALUATE MEAN POWER OUTPUT.

DOE/SANDIA DARRIEUS PROGRAM STATUS.
NTIS, 1978. 2P.
SAND-78-0851C

AS A DEPARTMENT OF ENERGY LABORATORY, SANDIA IS EXPLORING THE CAPABILITIES OF THE VERTICAL-AXIS WIND TURBINE (VAWT) AS AN ALTERNATIVE ENERGY SOURCE. INVESTIGATION OF THIS WIND SYSTEM TAKES SEVERAL PATHS. DETAILED COMPUTER MODELING AND ANALYSIS, CONDUCTED ALONG WITH ACTUAL DESIGN AND OPERATION OF PROTOTYPE TURBINES, WILL SEEK TO ESTABLISH THE MECHANICAL PRACTICALITY. OTHER RESEARCH IS AIMED AT DEFINING THE POTENTIAL APPLICATIONS, ECONOMICS, AND BEST GEOGRAPHIC LOCATIONS FOR THE VAWT SYSTEMS.

RELIABILITY OF WINDPOWER FROM DISPERSED SITES: A PRELIMINARY ASSESSMENT.
NTIS, APRIL 1978. 47P.
LBL-6889

THE RELIABILITY BENEFIT OF GEOGRAPHICALLY DISPERSED WIND TURBINE GENERATORS IS ANALYZED. ELECTRICITY PRODUCED FROM WIND MACHINES EXPERIENCES WIDE FLUCTUATIONS OF OUTPUT AT A GIVEN SITE. YET THE VALUE OF ELECTRICITY IS A FUNCTION OF ITS RELIABILITY. PRICING SCHEDULES HAVE TRADITIONALLY VALUED FIRM POWER, THAT IS, RELIABLY AVAILABLE POWER, MUCH MORE HIGHLY THAN "DUMP POWER"; THAT IS, POWER WHICH IS AVAILABLE INTERMITTENTLY ON AN "IF AND WHEN" BASIS. THE CONVENTIONAL WISDOM ON WIND POWER SUGGESTS THAT IT IS UNREALISTIC TO EXPECT THAT WIND GENERATION WILL BE SUFFICIENTLY RELIABLE TO DISPLACE CONVENTIONAL CAPACITY. WHILE SUCH CONCLUSIONS MAY BE VALID FOR ANALYSIS OF INDIVIDUAL SITES, THE MAIN THESIS OF THIS PAPER IS THAT GEOGRAPHICAL DISPERSAL IMPROVES AGGREGATE RELIABILITY.

WIND WHEEL ELECTRIC POWER GENERATOR. PATENT APPLICATION.
NTIS, FEBRUARY 24, 1978. 16P.
N78-22469, PAT-APPL-SN-880-726/6A

AN ELECTRIC GENERATOR DRIVEN BY THE WIND IS DESCRIBED. PRIMARY AND AUXILIARY FUNNEL-TYPE, VENTURI DUCTS ARE MOUNTED UPON A HOUSING FOR CAPTURING WIND CURRENTS AND CONDUCTING THE CURRENTS TO A BLADED WHEEL CONNECTED TO GENERATOR APPARATUS. ADDITIONAL AIR FLOWS ARE ALSO CONDUCTED ONTO THE BLADED WHEEL, ROTATING THE WHEEL. THE AUXILIARY DUCTS ARE DISPOSED AT AN ACUTE ANGLE WITH RESPECT TO THE LONGITUDINAL AXIS OF THE HOUSING, AND TOGETHER WITH THE ROTATABILITY OF THE HOUSING AND THE DUCTS, PERMITS CAPTURE OF WIND CURRENTS WITHIN A VARIABLE DIRECTIONAL

- 78-0143 LARSEN R
 WHIRRING WINDMILLS PROMISE POWER.
 IRR. AGE 12(5): 47,50, FEBRUARY 1978.

WIND TURBINES ARE BEING DEVELOPED FOR RURAL POWER APPLICATIONS IN THE 10 TO 200 kW POWER RANGE. A WIND TURBINE HAVING A RADIUS OF 11.3 METERS AT THE MIDDLE AND STANDING 16.8 M HIGH PRODUCES A POWER RATING OF 40 kW AT 11.2 M/SEC WIND SPEEDS AT A TEST FACILITY OF THE USDA SOUTHWEST GREAT PLAINS RESEARCH CENTER AT BUSHLAND, TEXAS. THE TURBINE DELIVERS POWER THROUGH AN 18:1 SPEED INCREASER, A RIGHT-ANGLE DRIVE, AND AN OVER-RUNNING CLUTCH TO A VERTICAL TURBINE PUMP. A WIND-SPEED SENSOR CONTROLS THE STARTER MOTOR AND BRAKE, WHILE AN ELECTRIC MOTOR SUPPLEMENTS WIND POWER. THE SYSTEM CAN PUMP APPROXIMATELY 47 LITERS/SECOND AGAINST A TOTAL DYNAMIC HEAD OF 80 METERS. DOE MAINTAINS A SIMILAR TEST FACILITY AT ROCKY FLATS, COL., IN WHICH A TURBINE MOUNTED ON A 40-FOOT TOWER AND HAVING A 3-BLADE, 12-FOOT ROTOR PRODUCES A POWER RATING OF 2000 WATTS AT A WIND SPEED OF 25 MPH. A SECOND FACILITY, IN THE CONTRACT STAGE, WILL HOUSE A 2.5 MEGAWATT ELECTRICAL GENERATING SYSTEM. THE SYSTEM, WHICH WILL HAVE A 300-FOOT ROTOR, IS DESIGNED FOR A SITE HAVING A MEAN ANNUAL WIND SPEED OF 14 MPH. IT WILL ECLIPSE GENERAL ELECTRIC'S BOONE, NORTH CAROLINA FACILITY, WHICH CURRENTLY GENERATES 2 MEGAWATTS OF POWER AT 24 MPH WIND SPEEDS. ENERGY OFFICIALS FEEL THAT WIND POWER MAY OFFER AN ECONOMICAL ALTERNATIVE ENERGY RESOURCE IF SYSTEM COSTS CAN BE REDUCED AND STORAGE BATTERY PROBLEMS CAN BE SOLVED.

EXPERIMENTAL DATA AND THEORETICAL ANALYSIS OF AN OPERATING 100 KW WIND
TURBINE.
NTIS, JANUARY 1978. 19P.
N78-19642, NASA-TM-73883, DOE/NASA/1028-78/15

VARIOUS STUDIES HAVE INDICATED THAT WIND ENERGY HAS THE POTENTIAL TO MAKE SIGNIFICANT CONTRIBUTIONS TO THE NATION'S ENERGY NEEDS. THE LEVEL OF CONTRIBUTION DEPENDS ON THE INITIAL AND OPERATING COSTS OF THE MACHINES WHICH CAN CONVERT WIND ENERGY TO ELECTRICITY OR OTHER FORMS OF ENERGY USEFUL TO THE PUBLIC. PART OF THE COOPERATIVE EFFORT BETWEEN NASA AND THE ENERGY RESEARCH AND DEVELOPMENT AGENCY (ERDA) HAS BEEN THE DESIGN AND THE ERECTION OF AN EXPERIMENTAL WIND TURBINE BY THE NASA-LEWIS RESEARCH CENTER. THIS 100 KW TURBINE, DESIGNATED THE MOD-O, IS LOCATED AT THE NASA PLUM BROOK SITE NEAR SANDUSKY, OHIO. EXPERIMENTAL TEST DATA HAVE BEEN CORRELATED WITH ANALYSES OF TURBINE LOADS AND COMPLETE SYSTEM BEHAVIOR OF THE ERDA-NASA 100 KW MOD-O WIND TURBINE GENERATOR OVER A BROAD RANGE OF STEADY STATE CONDITIONS, AS WELL AS DURING TRANSIENT CONDITIONS. THE DEFICIT IN THE AMBIENT WIND FIELD DUE TO THE UPWIND TOWER TURBINE SUPPORT STRUCTURE WAS FOUND TO BE VERY SIGNIFICANT IN EXCITING HIGHER HARMONIC LOADS ASSOCIATED WITH THE FLAPPING RESPONSE OF THE BLADE IN BENDING.

 APPARATUS FOR EXTRACTING ENERGY FROM WINDS AT SIGNIFICANT HEIGHT ABOVE
 THE SURFACE.
 U.S. PATENT NO. 4,076,190, FEBRUARY 28, 1978. 6P.

A BUOYANT SAIL OR WING TETHERED TO A LINE AN APPRECIABLE DISTANCE ABOVE THE SURFACE WHERE THE WINDS ARE AT HIGHER SPEED THAN AT GROUND LEVEL IS PROVIDED WITH WIND VELOCITY GRADIENT SENSING MEMBERS TO GUIDE MOVEMENT OF THE BUOYANT SAIL TO THE ELEVATION OF GREATEST WIND VELOCITY, THE OTHER END OF THE LINE IS ATTACHED TO AN ELECTRIC GENERATOR. A SERIES OF SAILS ARE UTILIZED WITH ONE BEING RETRACTED WHILE AT LEAST ONE OTHER SAIL IS POSITIONED TO CATCH THE WIND AWAY FROM THE GENERATOR. THE WINGS MAY HAVE DIVIDERS TO INCREASE THE AMOUNT OF FLOW DISRUPTION OF THE WIND AND INCREASE THE DRAG COEFFICIENT AND HENCE THE AMOUNT OF ENERGY EXTRACTED, AND A PULLEY SYSTEM MAY BE UTILIZED IN LIEU OF A SINGLE PASS TETHER LINE.

78-0150 LOTH J L
WIND POWER LIMITATIONS ASSOCIATED WITH VORTICES.
J. ENERGY 2(4): 216-222, JULY-AUGUST 1978.

THE TOTAL PRESSURE DISSIPATION INSIDE VORTICES DUE TO VISCOUS SHEAR HAS BEEN ANALYZED. THE REDUCED LEVEL OF THE TOTAL PRESSURE FLUX OF THE FLOW INSIDE A VORTEX HAS AN ADVERSE EFFECT ON ALL VORTEX-INGESTING WIND MACHINES. THE BETZ LIMIT OF WIND TURBINES INGESTING THE VORTEX GENERATED BY AN AIRFOIL HAS BEEN COMPUTED AND IS NONDIMENSIONALIZED USING THE AREA OF THE VORTEX GENERATOR. THE VACUUM-PUMPING ABILITY OF VORTICES IS ALSO LIMITED. THE BETZ-TYPE LIMIT FOR WIND EXHAUSTING INTO THE CORE OF A VORTEX HAS BEEN COMPUTED FOR BOTH WINGTIP AND TORNADO-TOWER-TYPE VORTEX GENERATORS. THE ENERGY REQUIRED TO ELIMINATE A TORNADO HAS BEEN COMPUTED.

78-0153 MCNEESE W C WIND MOTOR. U.S. PATENT NO. 4,080,100, MARCH 21, 1978. 8P.

A WIND MOTOR IS DESCRIBED WHICH HAS A DOUBLE SET OF ROTOR BLADES OF SPECIAL CONFIGURATION MOUNTED BETWEEN A CENTRAL HUB AND AN OUTER RIM. THE FRONT ROTOR HAS AN EXTENDING SHROUD PROTRUDING WELL IN FRONT OF THE BLADES FOR CAPTURING THE PREVAILING WIND. THE CENTER OF THE ROTOR IS SOLID WITH THE BLADES AT THE CENTER BEING CONFIGURED SO AS TO BE SUBSTANTIALLY AT RIGHT ANGLES TO THE WIND FLOW AND THUS FORM A SUBSTANTIALLY SOLID AREA AT THE CENTER OF THE ROTOR. THE SPECIALLY CONFIGURED BLADES ANGLE AWAY FROM THE CENTER HUB WITH A BACKWARD TILT OF APPROXIMATE 10 DEGS. ALSO, THE BLADES TWIST SO THAT THE PORTION ATTACHED TO THE RIM OR SHROUD OF THE DEVICE PRESENT AN AIR FOIL EFFECT WITH TIP STRUCTURE FOR THE LEADING EDGE BEING APPROXIMATELY 45 DEGS. FROM THE AXIS WHILE THE TRAILING EDGE IS SIMILARLY AT APPROXIMATELY A 45 DEG. ANGLE IN THE OPPOSITE PLANE. THE SECOND ROTOR STRUCTURE HAS SIMILARLY CONFIGURED BLADE STRUCTURE WITH ONE EMBODIMENT OF THE DEVICE PROVIDING THE SECOND ROTOR ON THE SAME SHAFT AS THE FIRST ROTOR, WHILE ANOTHER EMBODIMENT HAS THE SECOND ROTOR MOUNTED ON ANOTHER TUBULAR MEMBER FROM THE SHAFT ON WHICH THE FIRST ROTOR IS MOUNTED AND ALSO PROVIDED FOR ROTATION COUNTER IN DIRECTION TO THE ROTATION OF THE FIRST ROTOR.

REGIONS OF THE CONTINENTAL UNITED STATES SUSCEPTIBLE TO EOLIAN ACTION.
SPECIAL REPORT.
NTIS, MAY 1978. 15P.
RLO-2343-78/2

WITHIN THE 48 CONTERMINOUS UNITED STATES, APPROXIMATELY ONE THIRD OF THE SURFACE AREA (32%) IS SUFFICIENTLY ARID TO ALLOW DEVELOPMENT OF EOLIAN LANDFORMS. THROUGHOUT THESE BROAD ARID REGIONS, THE STRONGEST WIND REGIMES LEAVE THEIR RECORD IN EOLIAN LANDFORMS. SOME EOLIAN LANDFORMS OCCUR IN SMALL ISOLATED PATCHES; OTHERS COVER VAST STRETCHES OF THE WIND-SWEPT SURFACE. WHEREVER THEY OCCUR, EOLIAN LANDFORMS CAN BE INTERPRETED AS A LONGTERM CLIMATIIC RECORD. IN ARID AREAS WHERE EOLIAN LANDFORMS ARE ABSENT, ONLY TWO EXPLANATIONS ARE POSSIBLE: 1) EITHER THE SURFACE IS TOO RESISTANT TO PERMIT WIND EROSION OR 2) THE WINDS ARE NOT SUFFICIENTLY STRONG TO INFLUENCE THE SURFACE MORPHOLOGY. ONLY BROAD REGIONS OF CONTINUOUS ROCK OUTCROP, WATER, OR AREAS OF HIGH PRECIPITATION AND LUSH VEGETATION DEFY THE EROSIVE ACTION OF HIGH WINDS. MOST AREAS ARE AT LEAST PARTIALLY SUSCEPTIBLE TO EOLIAN ACTION AND WILL DEVELOP EOLIAN LANDFORMS IF THE WINDS ARE SUFFICIENTLY STRONG AND PERSISTENT. CONSEQUENTLY, THE IDENTIFICATION AND INTERPRETATION OF EOLIAN LANDFORMS IS A VERY USEFUL TOOL FOR WIND ENERGY ASSESSMENTS IN THE WESTERN UNITED STATES. IN EASTERN UNITED STATES, THERE ARE ONLY A FEW SCATTERED AREAS OF ARID LAND LARGE ENOUGH TO PROVIDE DATA ADEQUATE FOR A REGIONAL ASSESSMENT. HOWEVER MANY SMALL PATCHES OF BARREN LAND, WHICH HERE NOT IDENTIFIED IN THIS BRIEF SURVEY, MAY PROVIDE INFORMATION FOR LOCAL SURVEYS OR ANCILLARY INPUT TO REGIONAL WIND ENERGY ASSESSMENTS.

ALTERNATIVE ENERGY SOURCES FOR FEDERAL AVIATION ADMINISTRATION
FACILITIES. FINAL REPORT. MAY 1976 - JANUARY 1978.
NTIS, AUGUST 1978. 121P.
FAA-NA-77-17, FAA/RD-78-87

A LITERATURE AND INDUSTRY/GOVERNMENT SEARCH WAS MADE ON ALTERNATIVE ENERGY SOURCES. THIS ENERGY INVESTIGATION EFFORT CONCENTRATED ON PHOTOVOLTAICS, WIND, FUEL CELLS AND THERMOELECTRIC/THERMIONIC GENERATORS THAT WOULD PRODUCE ELECTRICAL ENERGY AND APPEARED FEASIBLE FOR USE AT FEDERAL AVIATION ADMINISTRATION (FAA) FACILITIES. AS AN AID TO IDENTIFY POTENTIAL FAA FACILITIES WHERE IT MIGHT BE FEASIBLE TO USE AN ALTERNATIVE ENERGY SYSTEM, TWO QUESTIONNAIRES WERE DEVELOPED AND DISTRIBUTED WITH THE INTENT THAT A "URTHER IN-DEPTH INVESTIGATION INTO A FEW SELECTED SITES WOULD FOLLOW. DATA FROM THESE QUESTIONNAIRES WERE RECEIVED AND TABULATED. AS A RESULT OF THIS INVESTIGATION, IT WAS RECOMMENDED THAT THE FAA PROCEED TO ESTABLISH ALTERNATIVE ENERGY DEMONSTRATION SITES IN ORDER TO CAIN EXPERIENCE IN THE DESIGN, IMPLEMENTATION, AND OPERATION OF SUCH SYSTEMS. IN ADDITION IT WAS RECOMMENDED THAT DUE TO THE CONSTANTLY CHANGING AND FAST ADVANCING NATURE OF ENERGY CONVERSION SYSTEMS, THE FAA SHOULD EXPEND SOME LEVEL OF EFFORT IN CONTINUING THE LITERATURE/INDUSTRY/GOVERNMENT SEARCH INITIATED UNDER THIS PROJECT IN ORDER TO REMAIN CURRENT ON THE SUBJECT. ALSO THE FAA SHOULD ESTABLISH A CENTRALIZED DATA COLLECTION AND TABULATION POINT FOR ENERGY REQUIREMENTS/CONSUMPTION/COST DATA ON A FACILITY BASIS.

109-116.
CONF-771148

A STATIC LOAD TEST WAS PERFORMED ON THE SPARE MOD-O WINDTURBINE BLADE TO DEFINE LOAD TRANSFER AT THE ROOT END OF THE BLADE, AND TO VALIDATE STRESS ANALYSIS OF THIS PARTICULAR TYPE OF BLADE CONSTRUCTION (FRAME AND STRINGER). ANALYSIS OF THE LOAD TRANSFER FROM THE AIRFOIL SKIN TO THE SHANK TUBE PREDICTED A STEP CHANGE IN SPANWISE STRESS IN THE AIRFOIL SKIN AT STATION 81.5 INCHES (STA 81.5). FOR FLATWISE BENDING A 40 PERCENT REDUCTION IN SPANWISE STRESS WAS PREDICTED, AND FOR EDGEWISE BENDING A 6 PERCENT REDUCTION. EXPERIMENTAL RESULTS VERIFIED THE 40 PERCENT REDUCTION FOR FLATWISE BENDING, BUT INDICATED ABOUT A 30 PERCENT REDUCTION FOR EDGEWISE BENDING.

WIND TURBINE STRUCTURAL DYNAMICS CONFERENCE, CLEVELAND, NOVEMBER 15, 1977.
N78-19616, NASA-CP-2034, DOE-CONF-771148

A WORKSHOP ON WIND TURBINE STRUCTURAL DYNAMICS WAS HELD TO REVIEW AND DOCUMENT CURRENT UNITED STATES WORK ON THE DYNAMIC BEHAVIOR OF LARGER WIND TURBINES, PRIMARILY OF THE HORIZONTAL-AXIS TYPE, AND TO IDENTIFY AND DISCUSS OTHER WIND TURBINE CONFIGURATIONS THAT MAY HAVE LOWER COST AND WEIGHT. INFORMATION WAS EXCHANGED ON THE FOLLOWING TOPICS: (1) METHODS FOR CALCULATING DYNAMIC LOADS; (2) AEROELASTICITY STABILITY; (3) WIND LOADS, BOTH STEADY AND TRANSIENT; (4) CRITICAL DESIGN CONDITIONS; (5) DRIVE TRAIN DYNAMICS; AND (6) BEHAVIOR OF OPERATING WIND TURBINES.

SAFETY ASPECTS OF WIND ENERGY CONVERSION SYSTEMS: A REVIEW AND BIBLIOGRAPHY.
NTIS, AUGUST 1978. 25P.
ORNL/ICES-4

EFFORTS ARE BEING MADE TO HARNESS THE POWER OF THE WINDS FOR THE GENERATION OF ELECTRICITY AND OTHER FORMS OF ENERGY. THE WIND ENERGY CONVERSION (WEC) SYSTEMS THAT ARE THE PRODUCTS OF THESE EFFORTS ARE REVIEWED FROM THE SAFETY VIEWPOINT. ROTOR FAILURES, TOWER INTEGRITY, HAZARDS TO AVIATION, AND PUBLIC ACCESS TO SITES ARE REVIEWED AS PUBLIC SAFETY CONSIDERATIONS. OCCUPATIONAL SAFETY CONSIDERATIONS ARE ALSO REVIEWED. THE CONCLUSIONS REACHED INDICATE THAT NO UNUSUAL HAZARD POTENTIAL IS PRESENTED BY WEC SYSTEMS. THE BIBLIOGRAPHY INCLUDES ARTICLES AND REPORTS ON VARIOUS ASPECTS OF WEC SYSTEMS DEVELOPMENT, DESIGN, AND OPERATION WHICH RELATE TO SAFETY EITHER DIRECTLY OR INDIRECTLY. REPORTS ADDRESSING SOME OF THE ENVIRONMENTAL AND LEGAL ASPECTS ARE ALSO INCLUDED. THIS REPORT IS ONE OF A SERIES PREPARED BY THE INFORMATION CENTER FOR ENERGY SAFETY (ICES) AT THE OAK RIDGE NATIONAL LABORATORY.

 DEVICE FOR EXTRACTING ENERGY, FRESH WATER, AND POLLUTION FROM MOIST AIR.
 U.S. PATENT NO. 4,080,186, MARCH 21, 1978. 6P.

A DEVICE IS DESCRIBED WHICH EXTRACTS USEFUL ENERGY AND FRESH WATER FROM MOIST AIR, WITH AN ASSOCIATED REMOVAL OF POLLUTANT PARTICLES ENTRAINED IN THE EXTRACTED WATER. THE DEVICE COMPRISES AN ENCLOSURE WITH A TALL STACK AND AN EXTENDED BASE WHICH HAS MEANS FOR THE CREATION AND UTILIZATION OF A CONTAINED TORNADO WHICH IS POWERED BY THE ENERGY RELEASE ASSOCIATED WITH THE RAPID CONDENSATION OF WATER FROM THE INCOMING MOIST AIR.

ON THE USE OF POWER LAWS FOR ESTIMATES OF WIND POWER POTENTIAL.
J. APPL. METEOROL. 17(3): 390-394, MARCH 1978.

THE EVALUATION OF WIND POWER POTENTIAL AT A PROPOSED AEROGENERATOR SITE BY EXTRAPOLATION FROM MEASURED WINDS AT A REFERENCE LEVEL IS INVESTIGATED. IT IS SHOWN THAT THE TOTAL WIND POWER DENSITY IS NOT PARTICULARLY SENSITIVE TO THE SELECTION OF ROUGHNESS LENGTH OR POWER LAW EXPONENT; OVER THE ENTIRE LIKELY RANGE OF THESE PARAMETERS THE WIND POWER IN THE MEAN FLOW AT TYPICAL AEROGENERATOR HUB HEIGHTS IS WITHIN 1.4-4 TIMES THE POWER AT A REFERENCE HEIGHT OF ABOUT 10 M. IN LIEU OF IN SITU PROFILE MEASUREMENTS, IT IS SUGGESTED THAT A POWER LAW EXPONENT OF 1/7 IS ADEQUATE FOR REALISTIC BUT CONSERVATIVE ESTIMATES OF THE AVAILABLE WIND POWER EXCEPT AT EXTREMELY ROUGH SITES WHERE THE ESTIMATES MAY ONLY BE CONSERVATIVE.

ALTHOUGH THIS STUDY FOCUSES ON VARIOUS COMBINATIONS OF WINDPOWER AND PUMPED STORAGE IN BOONEVILLE POWER ADMINISTRATION TERRITORY, THE INTERPRETATION OF DATA MAKE IT A MODEL FOR OTHER WIND REGIONS TO EMULATE. OF PARTICULAR INTEREST ARE EQUATIONS THAT ALLOW THE CALCULATION OF THE NUMBER OF LARGE WIND GENERATORS THAT A GIVEN HYDRO-STORAGE CAPACITY, IN DAMS OR PUMPED STORAGE, CAN ACCOMODATE IN ORDER TO SMOOTH (I.E. LOAD-LEVEL) THEIR VARIABLE OUTPUT. ALSO, PNW WIND DATA IS ANALYZED TO SHOW THE INTERACTION OF A NUMBER OF WIND FASHS WORKING TOGETHER TO PRODUCE POWER.

 POWER TRAIN ANALYSIS FOR THE DOE/NASA 100-KW WIND TURBINE GENERATOR.
 NTIS, OCTOBER 1978. 58P.
 NASA-TM-78997, DOE/NASA/1028-78/19, N79-16355

PROGRESS IN EXPLAINING VARIATIONS OF POWER EXPERIENCED IN THE ON-LINE OPERATION OF A 100-kw experimental wind turbine-generator is reported. Data are presented that show the oscillations tend to be characteristic of a wind-driven synchronous generator because of low torsional damping in the power train, resonances of its large structure, and excitation by unsteady and nonuniform wind flow. The report includes a dynamic analysis of the drive-train torsion, the generator, passive driveline damping, and active pitch control as well as correlation with experimental recordings. Experimental measurements of the system transfer function were made by disturbing the blade pitch angle. They compared well with the model dynamics up through the frequency of the first mode. Oscillations of power were experienced near the first-mode frequency and are explained as resulting from the first-mode resonance amplifying disturbances from, for example, blade asymmetries. Control of power about a set point used proportional-plus-integral feedback to the pitch actuator, and control gains were formulated for reducing disturbances up to frequencies less than the first-mode. A fluid coupling installed in the high-speed shaft is one solution demonstrated for reducing the first-mode resonant amplification. A predicted second-mode resonance at 3.5 hertz in the power train was not observed experimentally. A small effect of tower motion within the power train dynamics (an interaction not modelled) was observed experimentally. Experimentally. A small effect of tower motion within the power train dynamics (an interaction is suspected to be the impact of local turbulences not modelled. A wind feed-forward control scheme was employed, but failed to attenuate wind-speed-change effects as well as predicted. Because the anemometer measurement of wind speed in the control was not well correlated with the wind speed at the rotor.

AN INTERVIEW WITH RICK KATZENBERG, AMERICAN WIND ENERGY ASSOCIATION PRESIDENT, IS PRESENTED.

78-0182 RAMSDELL J V
ESTIMATES OF THE NUMBER OF LARGE AMPLITUDE GUSTS.
NTIS, MARCH 1978. 55P.
PNL-2508

THE PURPOSE OF THIS REPORT IS TO PRESENT PRELIMINARY ESTIMATES OF THE NUMBER OF OCCURRENCES OF LARGE AMPLITUDE GUSTS FOR USE IN THE DESIGN OF WIND ENERGY CONVERSION SYSTEMS. EXISTING TURBULENCE INFORMATION HAS BEEN COMBINED WITH AN ASSUMED WIND SPEED DISTRIBUTION TO ARRIVE AT THE ESTIMATES. THE NUMBER OF LARGE AMPLITUDE GUSTS PER YEAR IS TREATED AS A

FUNCTION OF THE ANNUAL MEAN WIND SPEED AND TERRAIN ROUGHNESS. THIS TREATMENT IS BASED UPON THE ASSUMPTIONS THAT THE ATMOSPHERE HAS NEUTRAL STABILITY DURING HIGH WINDS AND THAT THE GUSTINESS IS INDUCED BY FLOW OVER SURFACE ROUGHNESS ELEMENTS. LARGE GUSTS DURING THUNDERSTORMS AND OTHER SEVERE WEATHER PHENOMENA ARE NOT TREATED. THE RESULTS OF THE STUDY ARE PRESENTED IN TABULAR FORM AS A FUNCTION OF GUST AMPLITUDE AND HOURLY AVERAGE WIND SPEED. TABLES OF ESTIMATES ARE GIVEN FOR TERRAIN VARYING IN ROUGHNESS FROM OPEN WATER TO HIGH MOUNTAINS, AND FOR ANNUAL MEAN WIND SPEEDS BETWEEN 4 AND 12 MS-1. POSITIVE AND NEGATIVE GUSTS ARE TREATED SEPARATELY.

78-0183 REDDOCH T W
GENERATOR COSTS FOR WIND POWER APPLICATION.
NTIS, APRIL 1978. 18P.
TID-28678

THIS ANALYSIS HAS ATTEMPTED TO EVALUATE THE COSTS OF THE THREE CONVENTIONAL MEANS OF ELECTROMECHANICAL ENERGY CONVERSION. IN GENERAL, THE LEAST EXPENSIVE FORM OF GENERATION APPEARS TO BE THE INDUCTION GENERATOR, WHILE THE MOST EXPENSIVE IS THE D.C. GENERATOR. ALL COSTING IS BASED ON TRADITIONAL MATERIALS AVAILABLE FROM COMMERCIAL OUTLETS BASED ON 1977 PRICES FOR 10 UNITS. SINCE MOST SMALL POWER GENERATION SYSTEMS REQUIRE D.C. AND THE SYNCHRONOUS GENERATOR PROVIDES ITS OWN SOURCES OF REACTIVE POWER, THE SYNCHRONOUS GENERATOR IS THE MOST PCPULAR ON THE MARKET. FROM THE SUMMARY CURVES IT IS CLEAR THAT THE D.C. SYSTEM IS NOT COMPETITIVE IN THE A.C. PRODUCTION MODE. THE INDUCTION GENERATOR SYSTEM SHOWS SOME EDGE OVER THE SYNCHRONOUS SYSTEM IN COSTS, HOWEVER AS MACHINE SIZE INCREASES THE DIFFERENCE IS LESS. ON A WEIGHT BASIS THE INDUCTION SYSTEM IS THE LEAST, THE D.C. SYSTEM IS THE HEAVIEST. THE WEIGHT DIFFERENCE BETWEEN SYSTEMS IS NOT SIGNIFICANT.

78-0184 REED J W
WIND SPEED DISTRIBUTION CHANGES WITH HEIGHT AT SELECTED WEATHER STATIONS.
NTIS, AUGUST 1978. 54P.
SAND-76-0714

TEN-YEAR RECORDS OF HOURLY WIND SPEED OBSERVATIONS AT 15 SELECTED WEATHER STATIONS HAVE BEEN SMOOTHED TO CORRECT FOR OBSERVER BIAS. RECORDS WERE ADJUSTED TO A CONSTANT, FINAL ANEMOMETER HEIGHT OVER LEVEL AIRFIELD TERRAIN AT NINE STATIONS WHERE THE ANEMOMETER WAS MOVED DURING THE PERIOD OF RECORD. THE ANEMOMETER ADJUSTMENT SCHEME IS DESCRIBED FOR EACH LOCATION, SINCE THE ANEMOMETER EXPOSURE CHANGE AND DATE OF CHANGE WERE UNIQUE FOR EACH LOCATION. FINALLY, WIND SPEED DISTRIBUTION CURVES AND TABLES OF SYNTHESIZED TIME SERIES AT FINAL ANEMOMETER HEIGHT AND AT 10 M, 20 M, AND 50 M ABOVE GROUND HAVE BEEN PREPARED. THESE HOMOGENIZED SERIES SHOULD BE USEFUL FOR VARIOUS ANALYSES OF WIND POWER SYSTEMS.

TORQUE RIPPLE IN A VERTICAL AXIS WIND TURBINE.
NTIS, APRIL 1978. 45P.
SAND-78-0577

TORQUE RIPPLE IS A NAME GIVEN TO TIME VARIATIONS IN TORQUE WHICH ARE PROPAGATED THROUGH THE DRIVE TRAIN OF WIND ENERGY CONVERSION SYSTEMS. THIS PAPER COVERS AN ANALYTICAL AND EXPERIMENTAL INVESTIGATION OF TORQUE RIPPLE IN A DARRIEUS VERTICAL AXIS WIND TURBINE. AN ANALYTICAL MODEL OF THE TURBINE IS DESCRIBED AND NUMERICAL RESULTS FROM A SOLUTION TO THE EQUATIONS OF THIS MODEL ARE COMPARED TO EXPERIMENTAL RESULTS OBTAINED FROM THE EXISTING DOE/SANDIA 17 METER VERTICAL AXIS WIND TURBINE.

DISCUSSIONS ON THE SOURCES OF TORQUE RIPPLE, THEORETICAL AND EXPERIMENTAL CORRELATION, AND MEANS OF SUPPRESSING ITS MAGNITUDE ARE INCLUDED.

AS PART OF THE NATIONAL WIND ENERGY PROGRAM UNDER THE DIRECTION OF THE DEPARTMENT OF ENERGY, THE NASA-LEWIS RESEARCH CENTER HAS DESIGNED AND SUILT, AND IS NOW OPERATING, A LARGE WIND TURBINE AT CLAYTON, NEW MEXICO. DESIGNATED THE MOD-OA-1, THIS IS THE FIRST OF THREE IDENTICAL 200 KW WIND TURBINES TO BE OPERATED ON ELECTRIC UTILITY NETWORKS. THIS MACHINE WAS INSTALLED AT CLAYTON, NEW MEXICO, IN NOVEMBER 1977. THIS PAPER PRESENTS A COMPARISION BETWEEN ITS PREDICTED AND MEASURED POWER VERSUS WIND SPEED PERFORMANCE.

 WAKE CHARACTERISTICS OF A TOWER FOR THE DOE/NASA MOD-1 WIND TURBINE.
 NTIS, APRIL 1978. 74P.
 NASA-TM-78853, N78-23558, DOE/NASA/1028-78/17

A 1/40TH-SCALE MODEL OF A TOWER CONCEPT DESIGNED FOR THE DOE-NASA-MOD-1 WIND POWER TURBINE WAS TESTED IN A LOW-SPEED WIND TUNNEL. WAKE WIND SPEED PROFILES WERE MEASURED, AND FROM THESE WERE DETERMINED LOCAL VALUES OF WAKE MINIMUM VELOCITY RATIO, AVERAGE VELOCITY RATIO, AND WIDTH OVER A RANGE OF TOWER ELEVATIONS AND WIND APPROACH ANGLES. COMPARISON WITH RESULTS FROM TWO OTHER ALL-TUBULAR MODELS (MOD-0 AND EIGHT-LEG DESIGNS) TESTED EARLIER IN THE SAME TUNNEL INDICATED THAT WAKE WIDTH AND FLOW BLOCKAGE AT THE ROTOR PLANE OF ROTATION WERE SLIGHTLY LARGER FOR THE MOD-1 TOWER THAN FOR THE OTHER TWO MODELS. THE DIFFEXENCES IN WAKE CHARACTERISTICS WERE ATTRIBUTED TO DIFFERENCES IN TOWER GEOMETRY AND MEMBER DIMENSIONS.

WIND TUNNEL PERFORMANCE DATA FOR TWO- AND THREE-BUCKET SAVONIUS ROTORS.
J. ENERGY 2(3): 160-164, MAY-JUNE 1978.

FIFTEEN CONFIGURATIONS OF A SAVONIUS ROTOR WIND TURBINE WERE TESTED IN THE VOUGHT CORPORATION SYSTEMS DIVISION 4.9- X 6.1-M LOW SPEED WIND TUNNEL TO DETERMINE AERODYNAMIC PERFORMANCE. PARAMETERS CONSIDERED WERE NUMBER OF BUCKETS, NOMINAL FREESTREAM VELOCITY, REYNOLDS NUMBER PER METER, ROTOR HEIGHT, ROTOR DIAMETER, AND BUCKET OVERLAP. THE MEASURED TEST VARIABLES WERE TORQUE, ROTATIONAL SPEED, AND TUNNEL CONDITIONS. IT IS CONCLUDED THAT INCREASING REYNOLDS NUMBER AND/OR ASPECT RATIO IMPROVES PERFORMANCE. THE RECOMMENDED CONFIGURATION CONSISTS OF TWO SETS OF TWO-BUCKET ROTORS, ROTATED 90 DEGS. APART, WITH EACH ROTOR HAVING A DIMENSIONLESS GAP WIDTH OF 0.1-0.15.

EXPERIMENTAL INVESTIGATION OF A CLASS OF RESISTANCE-TYPE,
DIRECTION-INDEPENDENT WIND TURBINES.
ENERGY 3(1): 23-30, FEBRUARY 1978.

THE RESISTANCE-TYPE, DIRECTION-INDEPENDENT WIND TURBINE IS SUITABLE FOR THE GENERATION OF POWER ON A SMALL SCALE IN DEVELOPING COUNTRIES. SO FAR, ALL WORK ON THIS CLASS OF WIND TURBINE SEEMS TO BE RESTRICTED TO THE SAVONIUS ROTOR. THE FINDINGS OF AN EXPERIMENTAL INVESTIGATION OF AN ENTIRE CLASS OF WIND TURBINES, WHICH INCLUDES THE CONVENTIONAL SAVONIUS ROTOR, ARE PRESENTED. THE INFLUENCE OF FOUR ROTOR-GEOMETRY PARAMETERS (I.E., NUMBER OF BLADES, BLADE ANGLE, BLADE LOCATION AND ANGLE OF SETTING OF THE BLADE) IS STUDIED AND DISCUSSED ON THE BASIS OF TWO PERFORMANCE CRITERIA (I.E., TURBINE EFFICIENCY AND PERFORMANCE ON THE BASIS OF BLADE AREA). THE EXISTENCE OF OPTIMUM, DESIGN PARAMETERS IS ESTABLISHED AND THE POSSIBILITY OF IMPROVING SUBSTANTIALLY ON THE PERFORMANCE OF THE SAVONIUS ROTOR IS DEMONSTRATED. SOME POSSIBLE APPLICATIONS OF THE PRESENT CLASS OF TURBINES ARE BRIEFLY COMMENTED ON.

CONFERENCE, CLEVELAND, NOVEMBER 15, 1977. PROCEEDINGS. NTIS, 1978. P.
1-13.
CONF-771148

THE DEVELOPMENT OF AT LEAST SEVEN CODES BY NASA AND ITS CONTRACTORS IS DESCRIBED. AS MIGHT BE EXPECTED IN AN AREA OF NEW TECHNOLOGY, THESE CODES DIFFER CONSIDERABLY IN APPROACH AND TECHNIQUE. BECAUSE OF THE GENERALLY COMPLICATED NATURE OF ANY STRUCTURAL DYNAMICS ANALYSIS, A DETAILED COMPARISON OF SEVEN COMPUTER CODES IS EXTREMELY DIFFICULT.

THEREFORE, THE OBJECTIVES OF THIS STUDY HAVE BEEN LIMITED TO THE FOLLOWING: TO PRESENT A BRIEF OVERVIEW OF EACH CODE AND IDENTIFY SOURCES FOR FURTHER DETAILED INFORMATION, AND TO COMPARE THE PERFORMANCE OF EACH CODE AGAINST TWO SETS OF TEST DATA MEASURED ON THE 100 KW MOD-O WIND TURBINE, AN EXPERIMENTAL MACHINE IN OPERATION AT NASA'S PLUM BROOK STATION NEAR SANDUSKY, OHIO. COMPARISON ON THE BASIS OF CYCLIC LOADS, PEAK LOADS. AND HARMONIC CONTENTS WAS SELECTED.

CCNF-771148

THREE LARGE (1500 KW) HORIZONTAL ROTOR CONFIGURATIONS WERE ANALYZED TO DETERMINE THE EFFECTS ON DYNAMIC LOADS OF UPWARD AND DOWNWIND ROTOR LOCATIONS, CONED AND RADIAL BLADE POSITIONS, AND TILTED AND HORIZONTAL ROTOR AXIS POSITIONS. LOADS WERE CALCULATED FOR A RANGE OF WIND VELOCITIES AT THREE LOCATIONS IN THE STRUCTURE: THE BLADE SHANK, THE HUB SHAFT, AND THE YAW DRIVE. BLADE AXIS CONING AND ROTOR AXIS TILT WERE FOUND TO HAVE MINOR EFFECTS ON LOADS. HOWEVER, LOCATING THE ROTOR UPWIND OF THE TOWER SIGNIFICANTLY REDUCED LOADS AT ALL LOCATIONS ANALYZED.

THIS REPORT WAS PREPARED BY BURNS AND ROE, INC. TO SERVE AS A GUIDE FOR THE U.S. AIR FORCE IN SELECTING TYPES OF ENERGY CONVERSION SYSTEMS TO MEET THEIR FUTURE GROUND POWER REQUIREMENTS. THE ELECTRIC POWER REQUIREMENTS INCLUDED IN THIS REPORT RANGE FROM 10 KILOWATTS TO 50 MEGAWATTS. TWENTY-ONE TYPES OF SYSTEMS, CONVENTIONAL AS WELL AS ADVANCED, ARE CONSIDERED. THESE INCLUDE 19 TYPES OF ENERGY CONVERSION SYSTEMS WHICH UTILIZE EITHER CHEMICAL FUEL, NUCLEAR FUEL, SOLAR ENERGY OR WIND ENERGY AND TWO TYPES OF ENERGY STORAGE SYSTEMS WHICH UTILIZE ELECTRIC POWER FOR RECHARGING. EACH SYSTEM IS CHARACTERIZED IN TERMS OF A SET OF ECONOMIC, PHYSICAL AND PERFORMANCE PARAMETERS INCLUDING ACQUISITION COSTS, LIFE CYCLE COSTS, SIZE, EFFICIENCY AND ENVIRONMENTAL CONSTRAINTS. A TOTAL OF EIGHTEEN SUCH PARAMETERS ARE PRESENTED FOR EACH TYPE OF SYSTEM FOR SEVERAL SETS OF REQUIREMENTS. THE REQUIREMENTS ARE DEFINED IN TERMS OF ELECTRIC POWER LEVEL, FREQUENCY AND DURATION OF OPERATION CORRESPONDING TO TYPICAL U.S. AIR FORCE GROUND APPLICATIONS.

SIMPLIFIED MODELING FOR WIND TURBINE MODAL ANALYSIS USING NASTRAN.
WIND TURBINE STRUCTURAL DYNAMICS. WIND TURBINE STRUCTURAL DYNAMICS
CONFERENCE, CLEVELAND, NOVEMBER 15, 1977. PROCEEDINGS. NTIS, 1978. P.
31-37.
CONF-771148

A SIMPLIFIED FINITE ELEMENT MODEL OF THE MOD-O WIND TURBINE TOWER IS DESCRIBED. USE OF THIS MODEL GREATLY REDUCES THE COMPUTER TIME REQUIRED FOR MODAL ANALYSIS. THE MODEL PROVIDES GOOD ACCURACY IN PREDICTING TOWER FREQUENCIES AND MODE SHAPES AS LONG AS THE TOWER BENDING MODE SHAPE RESEMBLES THE FIRST BENDING MODE SHAPE OF A CANTILEVER BEAM. SEVERAL APPLICATIONS WHERE THE SIMPLIFIED MODEL WAS USED FOR MODAL ANALYSIS ARE DESCRIBED.

78-0224 TAKLE E S, BROWN J M, DAVIS W M
CHARACTERISTICS OF WIND AND WIND ENERGY IN IOWA.
IOWA STATE J. RES. 52(3): 313-339, FEBRUARY 1978.

A HYBRID WEIBULL DISTRIBUTION IS FOUND TO CHARACTERIZE SATISFACTORILY IOWA WIND-SPEED DATA FROM AN INSTRUMENTED TOWER AND FROM THE NATIONAL CLIMATIC CENTER. AVERAGE WIND SPEED (ALSO AVAILABLE WIND ENERGY) IS LEAST IN JULY AND AUGUST, INCREASES GENERALLY THROUGH THE FALL AND WINTER TO A MAXIMUM IN APRIL, THENCE DECREASES TO THE SUMMER MINIMUM. ANNUAL TOTALS OF WIND POWER CAN DIFFER BY 20 PERCENT IN ADJACENT YEARS. A POWER-LAW RELATIONSHIP IS USED TO CHARACTERIZE WIND VARIATION WITH HEIGHT, WITH THE INCREASE WITH HEIGHT BEING GREATEST (LEAST) DURING NIGHTTIME (DAYLIGHT) HOURS WHEN WIND SPEEDS ARE LEAST (GREATEST). ANNUAL AVERAGE WIND SPEEDS ARE SLIGHTLY HIGHER IN WESTERN AND NORTHWESTERN SECTIONS OF IOWA THAN ELSEWHERE. A WIND-POWER ROSE INDICATES THAT MOST WIND POWER IS ASSOCIATED WITH WINDS FROM THE SE THROUGH SW AND WNW THROUGH NNW. POWER OUTPUT CHARACTERISTICS OF A 100 KW AND A 6 KW GENERATOR ARE COMBINED WITH WIND-SPEED DISTRIBUTIONS TO MODEL ENERGY PRODUCTION OF THESE MACHINES IN IOWA.

78-0225 TAMANINI R J WINDMILL WITH RADIAL VANES. U.S. PATENT NO. 4,086,026, APRIL 1978. 4P.

AN ELONGATED CYLINDRICAL BODY IS PROVIDED FOR A GREATER LENGTH THAN ITS DIAMETER AND INCLUDING A CYLINDRICAL SIDE WALL. THE BODY IS OPEN AT ITS OPPOSITE ENDS AND JOURNALED FOR ROTATION ABOUT AN AXIS GENERALLY COINCIDING WITH THE CENTER AXIS OF THE BODY. THE BODY INCLUDES A PLURALITY OF CIRCUMFERENTIALLY SPACED LONGITUDINALLY EXTENDING SLOTS SIMILARLY SLIGHTLY INCLINED RELATIVE TO RADIAL PLANES OF THE BODY PASSING THROUGH THE SLOTS. ONE SET OF CORRESPONDING EDGE PORTIONS OF THE CYLINDRICAL SIDE WALL DEFINING CORRESPONDING LONGITUDINAL EDGES OF THE SLOTS INCLUDE INTEGRAL OUTWARDLY PROJECTING SUBSTANTIALLY RECTANGULAR VANES EXTENDING ALONG THE SLOTS AND THE VANES COMPRISE OUTWARDLY DEFLECTED INTEGRAL POSITIONS OF THE CYLINDRICAL SIDE WALL OF THE BODY.

78-0227 TEWARI S K
ECONOMICS OF WIND ENERGY USE FOR IRRIGATION IN INDIA.
SCIENCE 202(4367): 481-486, NOVEMBER 3, 1978.

THE PRODUCTION OF ENERGY FROM WINDMILLS DESIGNED SPECIFICALLY TO OPERATE IN THE LOW WIND VELOCITIES THAT USUALLY PREVAIL IN INDIA DURING THE MAIN IRRIGATION SEASON IS ESTIMATED TO BE REASONABLY ECONOMICAL FOR IRRIGATING SMALL FARMS FROM OPEN WELLS. THE ECONOMICS WOULD IMPROVE IF IRRIGATION WAS PRACTICED ALL YEAR ROUND, EVEN IN THE HOT SUMMER SEASON. THE CALCULATIONS MADE HERE ARE EXPECTED TO BE VALID FOR THE WINDIER 10

PERCENT OF THE LOCATIONS IDENTIFIED FROM AVAILABLE WIND SPEED RECORDS. OTHER, WINDIER LOCATIONS ARE EXPECTED TO BE IDENTIFIED WHEN MORE WIND SPEED DATA ARE COLLECTED IN THE FUTURE. GOVERNMENTAL POLICIES ALONG LINES SIMILAR TO THOSE FOR RURAL ELECTRIFICATION MAY BE NEEDED TO SUPPORT RESEARCH AND DEVELOPMENT EFFORTS TO OPTIMIZE THE DESIGNS OF WINDMILLS AND TO PROMOTE THEIR USE IN RURAL AREAS.

- 78-0235 THE 200-KILOWATT WIND TURBINE PROJECT. NTIS, JANUARY 1978. 17P. N78-29583, NASA-TM-7975?

THE THREE 200 KILOWATT WIND TURBINES DESCRIBED COMPOSE THE FIRST OF THREE SEPARATE SYSTEMS. PROPOSED WIND TURBINES OF THE TWO OTHER SYSTEMS, ALTHOUGH SIMILAR IN DESIGN, ARE LARGER IN BOTH PHYSICAL SIZE AND RATED POWER GENERATION. THE OVERALL OBJECTIVE OF THE PROJECT IS TO OBTAIN EARLY OPERATION AND PERFORMANCE DATA WHILE GAINING INITIAL EXPERIENCE IN THE OPERATION OF LARGE, HORIZONTAL-AXIS WIND TURBINES IN TYPICAL UTILITY ENVIRONMENTS. SEVERAL OF THE KEY ISSUES ADDRESSED INCLUDE THE FOLLOWING: (1) IMPACT OF THE VARIABLE POWER OUTPUT (DUE TO VARYING WIND SPEEDS) ON

THE UTILITY GRID (2) COMPATIBILITY WITH UTILITY REQUIREMENTS (VOLTAGE AND FREQUENCY CONTROL OF GENERATED POWER) (3) DEMONSTRATION OF UNATTENDED, FAIL-SAFE OPERATION (4) RELIABILITY OF THE WIND TURBINE SYSTEM (5) REQUIRED MAINTENANCE AND (6) INITIAL PUBLIC REACTION AND ACCEPTANCE.

ENVIRONMENTAL READINESS DOCUMENTS ARE PREPARED PERIODICALLY TO REVIEW AND EVALUATE THE ENVIRONMENTAL STATUS OF ANY ENERGY TECHNOLOGY DURING THE SEVERAL PHASES OF DEVELOPMENT OF THAT TECHNOLOGY. THIS ENVIRONMENTAL READINESS DOCUMENT WAS PREPARED TO ASSIST THE DOE COMMERCIALIZATION TASK FORCE ON LARGE AND SMALL WIND SYSTEMS TO EVALUATE THE COMMERCIAL READINESS OF THIS TECHNOLOGY WITH RESPECT TO ENVIRONMENTAL ISSUES. AN EFFORT HAS BEEN MADE TO IDENTIFY POTENTIAL ENVIRONMENTAL PROBLEMS THAT MAY BE ENCOUNTERED BASED UPON CURRENT KNOWLEDGE, PROPOSED AND POSSIBLE NEW ENVIRONMENTAL REGULATIONS, AND THE UNCERTAINTIES INHERENT IN PLANNED ENVIRONMENTAL RESEARCH.

78-0242 VERHOLEK M G
A MEASUREMENT PROGRAM TO CHARACTERIZE THE WIND AT A POTENTIAL WECK SITE.
NTIS, MARCH 1978. 25P.
PNL-2516

HAVING IDENTIFIED A POTENTIAL WIND TURBINE INSTALLATION SITE, THE INSTALLATION DECISION PROCESS INVOLVES TWO OPTIONS: A) DETERMINING IF THE SITE IS SUITABLE FOR THE INTENDED MACHINE DESIGN, OR B) DETERMINING AN APPROPRIATE MACHINE FOR THE INTENDED SITE. EITHER OPTION REQUIRES THAT CNSITE WIND CHARACTERISTICS BE COMPARED TO MACHINE CHARACTERISTICS TO DETERMINE THE PROPER SITE-MACHINE MATCH. THIS PAPER DESCRIBES AN ONSITE METECROLOGICAL MEASUREMENT PROGRAM TO CHARACTERIZE THE WIND AT A POTENTIAL WIND TURBINE INSTALLATION SITE. THE BASIC INFORMATIONAL REQUIREMENTS HAVE BEEN POSTULATED, THE ANALYSIS DESCRIBED, AND AN APPROPRIATE MEASUREMENT PROGRAM HAS BEEN DEVISED. THIS PHASE OF SITING MEASUREMENTS PROVIDES THE INFORMATION FOR THE FINAL INSTALLATION DECISION PROCESS - WHICH WECS TO PUT AT WHICH SITE.

78-0243 VERHOLEK M G
PRELIMINARY RESULTS OF A FIELD EXPERIMENT TO CHARACTERIZE WIND FLOW THROUGH A VERTICAL PLANE.
NTIS, APRIL 1978. 42P.
PNL-2518

THE TURBULENT STRUCTURE IN THE WIND FLOW THROUGH A SIMULATED DISC OF ROTATION OF A LARGE, HORIZONTAL-AXIS WIND TURBINE BLADE. THE WIND FLOW IMPINGING ON THE HYPOTHETICAL TURBINE BLADE WAS SIMULATED BY A NINE-ELEMENT CIRCULAR ARRAY OF THREE COMPONENT ANEMOMETERS IN A SINGLE VERTICAL PLANE. THE WIND DATA WERE ANALYZED AS: A SINGLE POINT, BUT HEIGHT MEASUREMENT (AT THE CENTER OF THE ARRAY); AN ARITHMETIC AVERAGE OF ALL SENSORS; AND A SYNTHESIS OF THE DATA RECORDS ASSUMED TO REPRESENT MEASUREMENT LOCATIONS ON A HYPOTHETICAL, ROTATING TURBINE BLADE. THE EFFECTS OF AREAL AVERAGING WERE EXAMINED BY ARITHMETICALLY AVERAGING OPPOSING DATA POINTS REPRESENTING THE AIR FLOW PAST THE ROTATING BLADE. WIND FLOW THROUGH HYPOTHETICAL, ROTATING TURBINE BLADES WAS SIMULATED BY SAMPLING THE ANEMOMETER RECORDS IN A SEQUENCE AROUND THE ARRAY AS IF A SENSOR WERE ON A TURBINE BLADE ROTATING IN THE PLANE OF THE ARRAY. THE SYNTHESIZED WIND RECORDS WERE USED TO SIMULATE THE FLOW INTO A SOFT FLEXIBLE BLADE LOADED BY THE ACTUAL NONUNIFORM WIND FIELD, AND A STIFF, NON-FLEXIBLE BLADE THAT AVERAGED THE FLOW OVER THE ENTIRE ROTOR. DIFFERENCES IN THE ANALYTICAL RESULTS OBTAINED IN THIS STUDY ILLUSTRATE SOME OF THE DIFFERENCES THAT CAN RESULT FROM USING VARIOUS ATMOSPHERIC FLOW FIELD ASSUMPTIONS WHEN DESIGNING WIND TURBINES. THIS STUDY DOES NOT ATTEMPT TO DETERMINE THE APPLICABILITY OF GIVEN ASSUMPTIONS; DIFFERENCES ARE POINTED OUT TO AID DESIGNERS IN DECIDING WHICH ASSUMPTIONS ARE MOST APPROPRIATE.

78-0244 VERHOLEK M G
REMOTE WIND MEASUREMENTS WITH A NEW MICROPROCESSOR-BASED ACCUMULATOR DEVICE.
NTIS, APRIL 1978. 21P.
PNL-2515

WIND MEASUREMENTS USING MICROPROCESSOR-BASED INSTRUMENTS ARE AN INEXPENSIVE WAY TO OBTAIN STATISTICAL SUMMARIES OF BASIC WIND DATA FOR THE WIND TURBINE SITING DECISION PROCESS. THE MEASUREMENTS PROVIDE DATA FOR STATISTICAL SUMMARIES OF JOINT FREQUENCY DISTRIBUTIONS OF SPEED AND DIRECTION, WIND POWER ESTIMATES, SEASONAL AND DIURNAL VARIATIONS, TURBULENCE CHARACTERISTICS (OPTIONAL), AND RUN DURATION OR PERSISTENCE (OPTIONAL). THE INSTRUMENT HAS THE DESIRABLE QUALITIES OF BEING INEXPENSIVE, SIMPLE, VERSATILE, RUGGED AND PORTABLE.

78-0245 WTG'S CUTTYHAWK WINDMILL BEGINS UNATTENDED FULL OPERATION. SOL. ENERGY INTELL. REP. 4(43): 334, OCTOBER 30, 1978.

THE 200-KW THREE-BLADED TURBINE DEVELOPED BY WTG ENERGY SYSTEMS INC., FOR CUTTYHAWK ISLAND OFF MARTHA'S VINEYARD IS DISCUSSED.

78-0246 WADE J E, HEWSON E W
TREES AS AN INDICATOR OF WIND POWER POTENTIAL.
AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, INC.
PROCEEDINGS OF THE 1978 ANNUAL MEETING, DENVER, AUGUST 28-31, 1978.
MEWARK, DELAWARE, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, 1978. VOL. 2.2, P. 753-756.

A TECHNIQUE HAS BEEN DEVELOPED TO SPEED THE PROCESS OF SELECTING SITES WITH GOOD WIND POWER POTENTIAL IN MOUNTAINOUS TERRAIN. THIS TECHNIQUE CALLED "BIOLOGICAL WIND PROSPECTING" USES TREE DEFORMATION AS AN INDICATOR OF THE PREVAILING WIND DIRECTION AND ANNUAL MEAN WIND SPEED. DURING THE FIRST TWO YEARS OF THE STUDY FIVE INDICES OF WIND EFFECTS ON CONIFEROUS TREES WERE DEVELOPED. THREE INDICES HAVE BEEN CALIBRATED WITH RESPECT TO THE ANNUAL MEAN WIND SPEED. WIND DATA AND MEASUREMENTS OF TREE DEFORMATION HAVE BEEN COLLECTED FOR MORE THAN A YEAR AT 24 LOCATIONS IN THE PACIFIC NORTHWEST. THE RESULTS INDICATE THAT THE ANNUAL MEAN WIND SPEED CAN BE PREDICTED WITH AN ACCURACY OF PLUS OR MINUS 17 PERCENT.

78-0247 JUSTUS C G, HARGRAVES W R, MIKHAIL A, GRABER D
METHODS FOR ESTIMATING WIND SPEED FREQUENCY DISTRIBUTIONS.
J. APPL. METEOROL. 17(3): 350-353, MARCH 1978.

THE WEIBULL FUNCTION IS DISCUSSED FOR REPRESENTATION OF THE WIND SPEED FREQUENCY DISTRIBUTION. METHODS ARE PRESENTED FOR ESTIMATING THE TWO WEIBULL PARAMETERS (SCALE FACTOR C AND SHAPE FACTOR K) FROM SIMPLE WIND STATISTICS. COMPARISON IS MADE WITH A RECENTLY PROPOSED METHOD BASED ON THE "SQUARE-ROOT-NORMAL" DISTRIBUTION WITH MEAN WIND SPEED AND FASTEST MILE DATA AS INPUT STATISTICS. THE WEIBULL DISTRIBUTION IS SHOWN TO GIVE SMALLER ROOT-MEAN-SQUARE ERRORS THAN THE SQUARE-ROOT-NORMAL DISTRIBUTION

WHEN FITTING ACTUAL DISTRIBUTIONS OF OBSERVED WIND SPEED. ANOTHER ADVANTAGE OF THE WEIBULL DISTRIBUTION IS THE AVAILABLE METHODOLOGY FOR PROJECTING TO ANOTHER HEIGHT THE OBSERVED WEIBULL DISTRIBUTION PARAMETERS AT ANEMOMETER HEIGHT.

78-0248 WEGLEY H L, ORGILL M M, DRAKE R L
A SITING HANDBOOK FOR SMALL WIND ENERGY CONVERSION SYSTEMS.
NTIS, MAY 1978. 118P.
PNL-2521

THIS HANDBOOK WAS WRITTEN TO SERVE AS A SITING GUIDE FOR INDIVIDUALS WISHING TO INSTALL SMALL WIND ENERGY CONVERSION SYSTEMS (WECS). SMALL WECS ARE DEFINED HERE AS SYSTEMS CONSISTING OF ONE OR TWO MACHINES, EACH HAVING A RATED CAPACITY OF LESS THAN 100 KILOWATTS. TO UNDERSTAND AND APPLY THE SITING PRINCIPLES DISCUSSED, THE USER NEEDS NO TECHNICAL BACKGROUND IN METEOROLOGY OR ENGINEERING; HE NEEDS ONLY A KNOWLEDGE OF BASIC ARITHMETIC AND THE ABILITY TO UNDERSTAND SIMPLE GRAPHS AND TABLES. ACCORDING TO MANUFACTURERS OF SMALL WECS, THE GREATEST CAUSE OF DISSATISFACTION AMONG OWNERS HAS BEEN IMPROPER SITING. A POTENTIAL OWNER OF A SMALL WECS SHOULD REALIZE THAT A RELATIVELY SMALL INVESTMENT TO LOCATE THE BEST AVAILABLE SITE CAN EASILY YIELD SAVINGS OF SEVERAL THOUSAND DOLLARS OVER THE LIFETIME OF THE SYSTEM.

78-0249 SHURTLEFF W W
SOLAR ENERGY SYSTEM TESTING: SOME EXPERIENCES WITH MINICOMPUTERS.
NTIS, 1978. 8P.
SAND-78-0879C

THIS PAPER IS FROM SEMINAR ON TESTING SOLAR ENERGY MATERIALS AND SYSTEMS, WASH., D.C., MAY 22, 1978. FOR THE PAST FEW YEARS, SANDIA LABORATORIES HAS BEEN INVOLVED WITH TESTING DIFFERENT COMPONENTS AND SYSTEMS ASSOCIATED WITH SOLAR (AND WIND) ENERGY STUDIES. SANDIA NOW HAS FIVE MINICOMPUTER BASED CONTROLLERS WHICH AID IN DATA ACQUISITION AND CONTROL OF SUCH PROJECTS AS THE SOLAR TOTAL ENERGY PROJECT, PHOTOVOLTAIC TEST PROJECT, SOLAR COLLECTOR PROJECT, SOLAR THERMAL TEST FACILITY (POWER TOWER), AND THE VERTICAL AXIS WIND TURBINE. THE EXPERIENCES ASSOCIATED WITH THESE PROJECTS HAVE GIVEN SOME INSIGHT INTO DEVELOPING A "PHILOSOPHY OF APPLICATION" OF MINICOMPUTERS OR MICROPROCESSORS TO THIS TYPE OF TESTING. IN THIS PAPER, SUCH IDEAS AS VERSATILITY OF HARDWARE AND SOFTWARE AND "DISTRIBUTED" SYSTEMS ARE EXPLAINED WITH THE PURPOSE OF OUTLINING THIS PHILOSOPHY.

78-0250 WHO OWNS WINDMILLS.
WINDLETTER, P. 3, FEBRUARY 1978.

78-0251 WILSON R E EFFECT OF HUB FAIRINGS ON WIND TURBINE ROTOR PERFORMANCE. J. FLUIDS ENG. 100(1): 120-122, MARCH 1978.

HUB FAIRINGS OR SPINNERS ARE FREQUENTLY SUGGESTED FOR WIND TURBINES FOR REASONS OF AESTHETICS OR PERFORMANCE. WHILE HUB FAIRINGS RARELY, IF EVER, DECREASE THE APPEARANCE OF A WIND TURBINE, THE EFFECTS OF A NOSE FAIRING MAY ACTUALLY DECREASE RATHER THAN INCREASE WIND TURBINE ROTOR PERFORMANCE. ANALYSIS OF HUB FAIRINGS EFFECTS ON WIND TURBINE PERFORMANCE IS PRESENTED.

HARNESSING THE WIND.
IEEE SPECTRUM 15(3): 42-47, MARCH 1978.

VARIOUS TYPES OF WIND TURBINES ARE COMPARED. ECONOMIC ASPECTS OF WIND TURBINES ARE CONSIDERED. SPECIAL ATTENTION IS GIVEN TO THE TORNADO-TYPE WIND TURBINE.

78-0262 YEN J T
TORNADO TYPE WIND TURBINE.
U.S. PATENT NO. 4,070,131, JANUARY 24, 1978. 8P.

ATMOSPHERIC WIND IS ADMITTED TANGENTIALLY INTO A VERTICALLY EXTENDING STRUCTURE AND DIRECTED AGAINST THE INTERIOR CURVED SURFACE OF THE STRUCTURE TO PRODUCE VORTEX FLOW. THE STRUCTURE IS OPEN ENDED AND SPACED FROM GROUND OR CONNECTED TO A RAM-AIR SUBTERRANEAN TUNNEL. THE VORTEX FLOW AND CORRESPONDING LOW PRESSURE CORE DRAWS AMBIENT AND/OR RAM-AIR INTO THE BOTTOM OF THE STRUCTURE TO DRIVE A HORIZONTAL TURBINE.

78-0263 WIND TURBINE GENERATOR SYSTEM, BLOCK ISLAND, RHODE ISLAND. FINAL ENVIRONMENTAL IMPACT STATEMENT.
NTIS, JULY 1978. 153P.
DOE/EIS-0006

INFORMATION ON THE ENVIRONMENTAL IMPACTS OF A MOD-OA WIND TURBINE ON BLOCK ISLAND, RHODE ISLAND IS PRESENTED CONCERNING DESCRIPTION OF THE PROPOSED ACTION; CHARACTERISTICS OF THE EXISTING ENVIRONMENT; POTENTIAL ENVIRONMENTAL IMPACTS; UNAVOIDABLE ADVERSE ENVIRONMENTAL IMPACTS; ALTERNATIVES; RELATIONSHIP BETWEEN SHORT-TERM AND LONG-TERM PRODUCTIVITY; RELATIONSHIP OF THE PROPOSED ACTION TO LAND USE PLANS, POLICIES, AND

٦

CONTROLS; IRREVERSIBLE AND IRRETRIEVABLE COMMITMENT OF RESOURCES; AND ENVIRONMENTAL TRADE-OFF ANALYSIS.

78-0264 WENDELL L L, WEGLEY H L, VERHOLEK M G
REPORT FROM A WORKING GROUP MEETING ON WIND FORECASTS FOR WECS OPERATION.
NTIS, MARCH 1978. 33P.
PNL-2513

THE OBJECTIVE OF THE FEDERAL WIND ENERGY PROGRAM (FWEP) IS TO ACCELERATE THE DEVELOPMENT OF RELIABLE AND ECONOMICALLY VIABLE WIND ENERGY CONVERSION SYSTEMS (WECS) FOR COMMERCIAL USE. AS PART OF THE FWEP THE WIND CHARACTERISTICS PROGRAM ELEMENT (WCPE) AIDS IN ACCOMPLISHING THIS OBJECTIVE IN VARIOUS WAYS. ONE WAY IS THE DESCRIPTION OF THE DAY TO DAY VARIABILITY OF WIND ENERGY IN TERMS OF PREDICTIBILITY FOR WECS OPERATIONS. IF UTILITIES THAT USE WECS ARE TO USE THEM EFFECTIVELY ON A DAY TO DAY BASIS, THEY MUST HAVE RELIABLE FORECASTS OF WIND POWER. TO THIS END, A WORKING-GROUP DISCUSSION TO IDENTIFY THE SPECIFIC WIND FORECASTING NEEDS AND THE CURRENT SHORT TERM WIND FORECASTING CAPABILITIES WAS HELD AT PACIFIC NORTHWEST LABORATORY (PNL) IN RICHLAND, WASHINGTON, ON DECEMBER 15, 1977. PRIOR TO THE MEETING, AN ATTEMPT WAS MADE TO ASCERTAIN THE INTEREST IN AND THE NEED FOR WIND FORECASTING FOR WECS IN THE DISPATCHING AND/OR SCHEDULING OF WIND-ENERGY GENERATION IN THE UTILITY SYSTEM. RELEVANT INFORMATION FROM DISPATCHERS WAS GATHERED THROUGH TELEPHONE INTERVIEWS AND WAS PRESENTED DURING THE WORKING-GROUP DISCUSSION BY GARY VERHOLEK (PNL). ALTHOUGH THE UTILITY COMPANY DISPATCHERS WERE INVITED TO THE MEETING, ONLY ONE DISPATCHER ATTENDED THE WORKING-GROUP DISCUSSION. THE MEETING OPENED WITH SEVERAL PRESENTATIONS ON ASPECTS OF WIND FORECASTING AND WECS OPERATIONS. THE IDEAS PRESENTED WERE THEN DISCUSSED. AT THE MEETING'S CLOSE, RECOMMENDATIONS WERE FORMED. THIS REPORT REFLECTS THE MEETING'S ORGANIZATION, WITH THE ADDITION OF CONCLUSIONS AND RECOMMENDATIONS DEVELOPED BY PNL AFTER THE MEETING.

WIND POWER DIG. NO. 14: P. 59-63 OF THE 1979 WIND ACCESS CATALOG, WINTER
1978.

SINCE THE POWER IN THE WIND IS PROPORTIONAL TO THE CUBE OF THE WIND SPEED, IT IS CRUCIAL TO THE ECONOMIC VIABILITY OF WIND POWER THAT WIND SYSTEMS BE LOCATED IN AREAS WITH PERSISTENT. STRONG WINDS. THE METHODOLOGY PRESENTED IN THIS PAPER IS SUGGESTED AS A COST EFFECTIVE APPROACH TO SITE SELECTION AND EVALUATION.

78-0277 THE WIND ENERGY PRIMER. AN INTRODUCTION TO THE USE OF WIND ENERGY SYSTEMS.
WIND POWER DIG. NO. 14: P. 2-9 OF THE 1979 WIND ACCESS CATALOG, WINTER 1978.

THIS PRIMER IS IN THE 1979 WIND ACCESS CATALOG. IT IS A GENERAL INTRODUCTION TO THE SUBJECT OF WIND ENERGY AND HOW WIND ENERGY CAN BE HARNESSED TO PROVIDE POWER FOR HOMES, FARMS AND COMMUNITY-SCALE PROJECTS.

 WIND DRIVEN ELECTRIC POWER GENERATOR.
 U.S. PATENT NO. 4,036,916, JULY 19, 1977. 10P.

A WIND DRIVEN ELECTRIC POWER GENERATOR IS DESCRIBED WHICH HAS A SHROUD ARRANGED IN A PATH OF FLUID FLOW. WITHIN THE SHROUD IS DISPOSED A STATIONARY SHAFT SUPPORTING A WIND GENERATOR ASSEMBLY. THE SHROUD CAN BE THE VEIL OF A CONVENTIONAL COOLING TOWER, WITH THE WIND GENERATOR ASSEMBLY INCLUDING A ROTOR CONNECTED TO AN ELECTRIC GENERATOR ARRANGED FOR CONVERTING ROTARY MOTION OF THE ROTOR TO ELECTRICAL ENERGY, THUS SAVING SOME OF THE ENERGY CREATED BY THE NATURAL DRAFT PASSING UP THE VEIL OF THE COOLING TOWER. SPACE FRAME BOX TRUSSES PROVIDED WITH AIRFOILS PROVIDE LIGHTWEIGHT ARMS FOR THE ROTOR, WITH THE ROTOR BEING ARRANGED ANYWHERE IN THE SHROUD. WHEN A HYPERBOLIC COOLING TOWER VEIL IS USED AS THE SHROUD, THE ROTOR WILL USUALLY BE POSITIONED IN THE THROAT OF THE VEIL.

77-0011 ALLISON W D
MULTIVANE WINDMILL.
U.S. PATENT NO. 4,065,225, DECEMBER 27, 1977. 6P.

A WINDMILL IS DESCRIBED WHICH HAS A PLURALITY OF PAIRS OF DIAMETRICALLY OPPOSED VANES MOUNTED FOR ROTATION ABOUT A HORIZONTAL AXIS IN ALIGNMENT WITH THE WIND. THE PAIRS OF VANES ARE SUPPORTED IN UNIFORMLY SPACED RELATIONSHIP TO EACH OTHER AXIALLY OF THE AXIS OF ROTATION AND EACH SUCCESSIVE PAIR IS INDEXED CIRCUMFERENTIALLY IN THE DIRECTION OF ROTATION RELATIVE TO THE PRIOR PAIR. THE VANES ARE AUTOMATICALLY MOVED TO A LESS EFFICIENT POSITION AS THE SPEED OF THE WIND INCREASES TO LIMIT THE MAXIMUM SPEED OF THE WINDMILL.

77-0012 ANDERSON T D, BOWER H I, DELENE J G, FULLER L C, KAPLAN S I, WILSON J V SUMMARY REPORT: AN EXPLORATORY STUDY OF COST TARGETS FOR SOLAR ELECTRIC POWER PLANTS.

NTIS, MARCH 1977. 34P.

ORNL/TM-5787

A PRELIMINARY EVALUATION WAS MADE OF THE ECONOMIC GOALS THAT NEED TO BE ACHIEVED IN THE SOLAR-ELECTRIC R AND D AND DEMONSTRATION PROGRAMS SO THAT SOLAR CAN BECOME A VIABLE COMPONENT OF OUR NATIONAL ELECTRIC ENERGY PRODUCTION SYSTEM. SOLAR ELECTRIC TECHNOLOGIES CONSIDERED ARE: SOLAR THERMAL CONVERSION, SOLAR PHOTOVOLTAIC, WIND ENERGY CONVERSION, AND OCEAN THERMAL. TARGET COSTS WERE DEVELOPED FOR SELECTED APPLICATIONS OF SOLAR BY COMPARISON WITH KNOWN MEANS OF ACCOMPLISHING THE SAME END RESULTS. THE KNOWN TECHNOLOGIES WERE ASSUMED TO BE FOSSIL AND NUCLEAR ENERGY SOURCES.

77-0013 BAILEY D Z
LARGE-SPAN TENSIONED HYDRO (AERO) FOILS FOR POWER GENERATION ANCHORED
ACROSS A STREAM, CURRENT, OR WIND.
MAR. TECHNOL. SOC. J. 11(5/6): 22-29, 1977.

LARGE-SPAN RIBBON FOIL SYSTEMS FOR THE EXTRACTION OF KINETIC ENERGY FROM THE WINDS AND OCEAN CURRENTS ARE ARRANGED IN THE FORM OF HORIZONTAL ROTARY SYSTEMS. THE CARDINAL FEATURE OF THESE SYSTEMS IS THE STRUCTURAL EFFICIENCY GAINED BY VIRTUE OF RIBBON FOILS WHICH ARE SUBJECT TO PURELY TENSILE LOADS. HENCE, THE MAIN STRUCTURAL ELEMENT OF THE FOILS IS PROVIDED BY CABLES. THE NECESSARILY LARGE TENSILE LOADS ARE APPLIED TO THE CABLES BY PLACING MASSIVE CONCRETE ANCHORAGES AT OPPOSING POINTS ACROSS A STREAM, AND THUS THE EARTH BECOMES THE COMPRESSION MEMBER. BASED ON A SIMPLIFIED FLOW MODEL PERFORMANCE CALCULATIONS INDICATE THAT, IN PRINCIPLE, POWER PRODUCTION CAN BE INCREASED OVER THAT OF CONVENTIONAL SYSTEMS BY SEVERAL ORDERS OF MAGNITUDE, AND IT IS THIS POWER POTENTIAL WHICH MAKES THESE SYSTEMS ATTRACTIVE.

77-0014 APPLIED RESEARCH ON ENERGY STORAGE AND CONVERSION FOR PHOTOVOLTAIC AND WIND ENERGY SYSTEMS. VOL. III. WIND CONVERSION SYSTEMS WITH ENERGY STORAGE. FINAL REPORT.

NTIS, SEPTEMBER 27, 1977. 330P.
TID-28287/3

THE PRINCIPAL OBJECTIVES OF THE STUDY WITH RESPECT TO WIND ENERGY CONVERSION SYSTEMS (WECS) AND THEIR USE OF ENERGY STORAGE WERE: THE ASSESSMENT OF SELECTED CANDIDATE STORAGE CONCEPTS; AND EVALUATION OF THE EFFECTS OF SELECTED PARAMETERS ON THE ATTRACTIVENESS AND WORTH OF ENERGY STORAGE UTILIZATION. THE SCOPE OF INVESTIGATIONS INCLUDED BOTH UTILITY AND NON-UTILITY APPLICATIONS. IN ADDITION TO ESTABLISHING COST GOALS FOR STORAGE, THE IMPACT OF CHARGING STORAGE FROM MULTIPLE SOURCES, AS WELL AS FROM WIND SYSTEMS ALONE, WAS INCLUDED, ALONG WITH THE EFFECTS OF WIND FORECASTING AND TRANSIENT SMOOTHING OF THE WIND SYSTEM OUTPUT.

 SOME CONTRIBUTIONS TO AERODYNAMIC THEORY FOR VERTICAL AXIS WIND TURBINES.
 INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH. PROCEEDINGS.
 LA GRANGE PARK, ILL., AMERICAN NUCLEAR SOCIETY, 1977. VOL. 2, P.
 1624-1632.

A REVIEW AND MODEST EXTENSIONS OF QUASI-STEADY AERODYNAMIC THEORY FOR PERFORMANCE PREDICTION ON DARRIEUS-TYPE TURBINES ARE PRESENTED. RESULTS ARE GIVEN FOR BOTH PARALLEL-AXIS AND CURVED-BLADE CONFIGURATIONS. BLADE STALL AND VARIABLE INFLOW ARE NEGLECTED; IT IS HYPOTHESIZED THAT UNSTEADY EFFECTS SUPPORT THE FORMER APPROXIMATION DOWN TO LOWER VALUES OF TIP-SPEED RATIO THAN HITHERTO BELIEVED. BOTH PROFILE AND INDUCED DRAG ARE INCLUDED, AND THEIR INFLUENCES ON POWER AND DOWNWIND FORCE ARE EXPRESSED IN TERMS OF ELLIPTIC INTEGRALS. COMPARISONS ARE PRESENTED WITH POWER DATA FROM THE SANDIA 2-METER TURBINE. THREE VALUES OF PROFILE DRAG COEFFICIENT ARE EMPLOYED, AND IT IS ARGUED THAT NUMBERS IN THE RANGE DRAG COEFFICIENT RANGE OF 0.015-0.017 ARE MOST APPROPRIATE TO THE EXAMPLE CHOSEN. A LINEARIZED ANALYSIS OF UNSTEADY-FLOW EFFECTS ON PERFORMANCE IS SUMMARIZED. CALCULATIONS SUGGEST THAT THEY MAY BE LARGER THAN MIGHT BE EXPECTED IN VIEW OF THE LOW OPERATING REDUCED FREQUENCIES OF THESE MACHINES.

77-0017 AUER P L, BOS P B, ROBERTS V W, GOUGH W C
UNCONVENTIONAL ENERGY RESOURCES.
WORLD ENERGY RESOURCES, 1985-2020. EXECUTIVE SUMMARIES OF REPORTS ON
RESOURCES, CONSERVATION, AND DEMAND TO THE CONSERVATION COMMISSION OF THE
WORLD ENERGY CONFERENCE. NEW YORK, IPC SCIENCE AND TECHNOLOGY PRESS,
1977. P. 135-179.

THIS REPORT IS CONCERNED WITH THE FOLLOWING UNCONVENTIONAL ENERGY SOURCES: SOLAR (WHICH INCLUDES ENERGY DERIVED DIRECTLY FROM SUNLIGHT AS WELL AS INDIRECTLY IN THE FORM OF WIND, WAVES, TIDES, OCEAN THERMAL GRADIENTS, OR AS FUEL FROM BIOMASS AND OTHER PHOTOCHEMICAL REACTION PRODUCTS), GEOTHERMAL, AND FUSION. THESE POTENTIAL SOURCES OF COMMERCIAL ENERGY SUPPLIES REPRESENT EITHER RENEWABLE OR VIRTUALLY INEXHAUSTIBLE RESOURCES AND ARE NOT NOW IN WIDESPREAD COMMERCIAL USE. THE REPORT IS CONSIDERED A COMPLEMENT TO A REPORT ON NUCLEAR FUSION SINCE THEY ARE ALL PROSPECTIVE LONG-TERM ENERGY SUPPLIES. EACH OF THE PRINCIPAL TECHNOLOGIES AND SYSTEMS THAT ARE CURRENTLY BEING CONSIDERED AS MEANS FOR UTILIZING SOLAR, GEOTHERMAL, AND FUSION RESOURCES ARE DISCUSSED. INSOFAR AS POSSIBLE, THEIR POTENTIAL CONTRIBUTIONS TO COMMERCIAL ENERGY SUPPLIES ARE DISCUSSED. THE ROLE OF THESE UNCONVENTIONAL RESOURCES MAY BE EXPECTED TO VARY NOT ONLY AS A FUNCTION OF WHICH CATEGORY IS UNDER CONSIDERATION, BUT ALSO GEOGRAPHICALLY VARY.

77-0018 ARCHIBALD P B, KNOX J B
ANALYSIS OF THE WINDS OF SITE 300 AS A SOURCE OF POWER.
NTIS, APRIL 19, 1977. 15P.
UCRL-51469 (ADD.)

SITE 300 IS A STRATEGICALLY LOCATED AREA LYING EAST OF THE LAWRENCE LIVERMORE LABORATORY AT LIVERMORE, CALIFORNIA. IN A PREVIOUS REPORT, WIND SPEED AND DIRECTION FOR THE PERIOD OCTOBER 1972 TO SEPTEMBER 1973 ARE SUMMARIZED. THE PRESENT REPORT SUMMARIZES AN ADDITIONAL YEAR OF MEASUREMENTS. A COMPARISON OF THE MEASUREMENTS SHOWS THAT THE ANNUAL AVERAGE WIND SPEEDS FOR THE 2 YEARS IS ESSENTIALLY THE SAME; HOWEVER, THE MONTHLY AVERAGES DIFFER. THESE ADDITIONAL MEASUREMENTS CONFIRM THE OBSERVATION THAT THE SPRING AND SUMMER WINDS OF THIS REGION HAVE THE GREATEST POTENTIAL FOR WIND POWER DEVELOPMENT.

77-0019 BAIN D
AN ASSESSMENT OF THE RESIDENTIAL WIND POWER MARKET; EXCERPTS FROM THE LOCKHEED STUDY.
WIND POWER DIG. NO. 10: 34-47, FALL 1977.

IN EARLY 1975, THE LOCKHEED-CALIFORNIA COMPANY WAS AWARDED THE WIND ENERGY MISSION ANALYSIS (WEMA) CONTRACT BY ERDA. THE OBJECTIVES OF THIS \$484,000 STUDY WERE TO ASSESS THE NATIONAL POTENTIAL OF WIND ENERGY CONVERSION SYSTEMS (WECS), IDENTIFY THE SIZES AND APPLICATIONS OF WECS THAT HAVE THE HIGHEST PROBABILITY OF IMPLEMENTATION, AND ESTABLISH THE PERFORMANCE, COST AND OPERATIONAL REQUIREMENTS OF WIND TURBINE GENERATORS (WTGS). THE IMPACT ON NATIONAL RESOURCES AND THE AVAILABILITY OF SUITABLE SITES WERE SOME OF THE OTHER STUDY GOALS. IN APRIL 1976, THE STUDY WAS COMPLETED AND RESULTED IN AN 850 PAGE FINAL REPORT, OVER 1,000 PAGES OF PROCESSED WIND DATA, AND A 287-PAGE APPENDIX VOLUME. THIS ARTICLE CONTAINS EXCERPTS FROM THAT REPORT.

77-0020 BAIN D

WIND TOWER HEIGHT ECONOMICS.

ALTERN. SOURCES ENERGY NO. 29: 21-23, DECEMBER 1977.

MEASURING THE WIND CONDITIONS AT A PROSPECTIVE SITE CAN BE A COMPLICATED PROCESS. MOST INDIVIDUALS ARE NOT ABLE TO TAKE ALL OF THE MEASUREMENTS KNOWN TO BE IMPORTANT. ONE OF THE MOST DIFFICULT PARAMETERS TO MEASURE IS THE FACTOR, ALPHA, OR HOW MUCH WIND CAN BE EXPECTED ALOFT. A COMPUTER MODEL AND FINANCIAL ANALYSIS WERE COMBINED TO SEE HOW RELEVANT ALPHA IS TO THE SMALL WIND GENERATOR USER. THE RESULTS OBTAINED SHOW THAT, FOR LEAST COST OF DELIVERED ELECTRICAL POWER, DETERMINATION OF A SITE'S ALPHA BY MEASUREMENT IS NOT NECESSARY TO ESTABLISH OPTIMUM TOWER HEIGHT.

77-0021 BAKER R W, HENNESSEY J P ESTIMATING WIND POWER POTENTIAL. POWER ENG. 81(3): 56-57, MARCH 1977.

TESTS OF THE WIDGER METHOD AT FOUR PACIFIC NORTHWEST LOCATIONS SHOW THAT ACCURATELY ESTIMATING THE SHAPE OF WIND SPEED DISTRIBUTION IS CRITICAL, AND THAT AN EMPIRICAL METHOD OF WIND SPEED MEASUREMENT MAY NOT BE USABLE AT GOOD WIND POWER SITES.

77-0022 BOWEN A J
A REVIEW OF CURRENT RESEARCH RELEVANT TO THE OPTIMUM SITING OF WIND POWER INSTALLATIONS IN HILLY TERRAIN.
CHRIST CHURCH, NEW ZEALAND, UNIVERSITY OF CANTERBURY, MECHANICAL ENGINEERING DEPARTMENT, MAY 1977. 30P.

EXISTING INFORMATION THAT COULD ASSIST IN THE OPTIMUM SITING OF WIND POWER INSTALLATIONS IN HILLY TERRAIN IS WELL SCATTERED AND IT IS ONLY RECENTLY THAT SIGNIFICANT RESEARCH PROGRESS HAS BEEN MADE. IN AN ATTEMPT TO COLLATE THE RECENT ACTIVITIES IN THIS FIELD, THIS REPORT REVIEWS THE PROGRESS OF CURRENT RESEARCH INTO THE TOPOGRAPHICAL EFFECTS ON THE WIND FLOW CLOSE TO THE GROUND, FOLLOWING A SERIES OF VISITS TO THE ORGANISATIONS INVOLVED. THE RELEVANT PROJECTS THAT ARE UNDERWAY AT EACH LOCATION ARE DESCRIBED AND MAJOR CONCLUSIONS FROM THEIR RECENT WORK ARE SUMMARIZED BRIEFLY, WITH REFERENCES GIVEN IF MORE DETAILED INFORMATION IS REQUIRED.

77-0023 BARNETT K M
THE NEW MEXICO WIND ENERGY RESOURCE.
TECHNICAL COMPLETION REPORT. LAS CRUCES, NEW MEXICO ENERGY INSTITUTE,
NOVEMBER 1977.
NMEI-7, PB-295842

WIND IS A VALUABLE NATURAL RESOURCE IN NEW MEXICO. LIKE OIL, GAS, COAL, URANIUM, SOLAR RADIATION AND UNDERGROUND HEAT, IT CAN PROVIDE ENERGY. NEW MEXICO HAS MORE WIND ENERGY THAN MANY OTHER STATES. THIS REPORT IS INTENDED TO ENCOURAGE FARMERS, RANCHERS AND HOME OWNERS TO USE MORE WIND ENERGY. IT PRESENTS NEW MEXICO WIND INFORMATION AND THE EFFECTS OF SEASONS, TERRAIN AND EQUIPMENT HEIGHT ON WIND ENERGY. STEPS IN PLANNING AND INSTALLING COMMON WIND ENERGY SYSTEMS ARE REVIEWED AND DIAGRAMMED. PRESENT WIND USE PATTERNS IN NEW MEXICO AND THE RESEARCH IN THE U.S. TO INCREASE USE ARE ALSO REVIEWED.

COMPUTER AIDED AEROGENERATOR ANALYSIS AND PERFORMANCE.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. A4.53-A4.74.

THEORETICAL AND EXPERIMENTAL STUDIES HAVE BEEN MADE TO DETERMINE THE PERFORMANCE OF BOTH HORIZONTAL AND VERTICAL SHAFT AEROGENERATORS AND ALSO TO PREDICT THEIR PERFORMANCE IN A TURBULENT APPROACHING AIRFLOW.

COMPUTER PROGRAMS HAVE BEEN WRITTEN, BASED ON THE THEORY OF RANKIE-FROUDE AND THE BLADE ELEMENT THEORY, WHICH CALCULATES THE AEROGENERATOR PERFORMANCE FROM THE BLADE GEOMETRY, AEROFOIL CHARACTERISTICS AND WIND CONDITIONS. THE DIFFICULTY WITH MOST PERFORMANCE CALCULATIONS, IN THE PAST, HAS BEEN THE ESTIMATION OF THE INFLOW FACTORS. HOWEVER, IN THE COMPUTER PROGRAMS DEVELOPED AT THE UNIVERSITY OF WESTERN ONTARIO, THIS IS OVERCOME BY AN ITERATIVE TECHNIQUE. AT PRESENT LITTLE INFORMATION IS AVAILABLE ON INFLOW FACTORS FOR VERTICAL SHAFT WINDMILLS OF THE DARRIEUS ROTOR TYPE. A SMALL SCALE MODEL OF A STRAIGHT BLADED VERTICAL AXIS WINDMILL WAS DESIGNED, FABRICATED AND TESTED IN A LOW SPEED WIND TUNNEL. SEVERAL AEROFOIL CROSS SECTIONAL SHAPES WERE USED FOR BLADES. STUDIES HAVE BEEN MADE TO DETERMINE THE EFFECT OF WIND SHEAR AND TURBULENCE STRUCTURE ON THE PERFORMANCE OF A HORIZONTAL SHAFT WINDMILL. PRESENT TENTATIVE RESULTS INDICATE THAT THE PERFORMANCE IS CHANGED, AND IN GENERAL DECREASED, DUE TO THE TURBULENCE. THE FLUCTUATING DRAG IS IMPORTANT FOR STRUCTURAL DESIGN REASONS.

77-0025 EAXTER A C LOW COST WINDMILL ROTOR. INTERNATIONAL SYMPOSIUM ON WIF

INTERNATIONAL SYMPOSIUM ON WIND EMERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9, 1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS RESEARCH ASSOCIATION, 1977. P. C8.101-C8.108.

THE ROTOR IS OF THE VERTICAL AXIS TYPE DEVELOPED IN CANADA BY THE NATIONAL RESEARCH COUNCIL, OTTAWA. THE NEW DESIGN REPLACES THE RIGID AEROFOIL SECTION OF THAT DESIGN WITH A FABRIC SLEEVE ENCLOSING STEEL LEADING AND TRAILING EDGES. THE FABRIC IS TENSIONED AND THE BLADE IS THEN FORMED INTO A CATENARY SHAPE TO MINIMIZE THE BLADE STRESSES DUE TO CENTRIPETAL ACTION. MODEL TESTS HAVE BEEN CARRIED OUT TO INVESTIGATE THE NEW DESIGN. A RIGID AEROFOIL IS COMPARED WITH ONE BLADE FORMED BY STRETCHING PARACHUTE FABRIC BETWEEN TWO RODS HELD APART BY SPRINGS AND WITH ANOTHER BLADE FORMED BY STRETCHING A LATEX RUBBER FILM OVER THE RODS. THE PAPER DISCUSSES THE PROMISE OF THE DESIGN, THE EFFECTS OF NON-UNIFORM TENSION IN THE FABRIC, THE EFFECT OF THE CENTRIPETAL FIELD ON THE FABRIC AND THE EFFECT OF NON-UNIFORM WIND VELOCITY ON THE BEHAVIOR OF A VERTICAL AXIS WINDMILL.

77-0026 BAUMGARTNER F W, MURPHY J M
WIND DRIVEN POWER GENERATOR.
U.S. PATENT NO. 4,012,163, MARCH 15, 1977. 6P.

A TURBINE TYPE POWER GENERATOR INCLUDES A ROTOR HAVING A VERTICAL SHAFT TO DRIVE A LOAD WHICH MAY BE AN ELECTRIC GENERATOR OR MECHANICAL GEAR TRAIN OR OTHER DEVICE FOR USING OR TRANSMITTING POWER. GENERALLY VERTICALLY EXTENDING BLADES ARE SECURED AT THEIR ENDS TO THE ROTOR SHAFT AND ARE SET AT AN ANGLE TO THE RELATIVE WIND TO BE DRIVEN THEREBY. THE ROTOR IS SURROUNDED BY WIND CONTROLLING SHIELD MEANS THROUGH WHICH THE AIR FLOW PASSES TO CONTACT THE BLADES IN THE PROPER DIRECTION FOR CAUSING ROTATION. THE FREE FLOW AIR INLET AREA IS SUBSTANTIALLY LESS THAN THE MAXIMUM PROJECTED AREA OF THE SHIELD MEANS NORMAL TO THE RELATIVE WIND SO THAT THE TOTAL WIND TRAPPED MUST FLOW THROUGH A REDUCED AREA WITH A CONSEQUENT INCREASE IN VELOCITY TO IMPART MORE ENERGY TO THE ROTOR BLADES.

77-0027 BEAK J
WIND POWERED FLUID COMPRESSOR.
U.S. PATENT NO. 4,008,006, FEBRUARY 15, 1977. 10P.

A WIND MACHINE COMPRISING A FIXED OR CONTROLLED PITCH BLADE ASSEMBLY DRIVES A VARIABLE DISPLACEMENT OR VARIABLE CLEARANCE FLUID COMPRESSOR. MEANS WHICH MAY BE MECHANICAL, HYDRAULIC, PNEUMATIC OR ELECTRICAL INTERCONNECT THE BLADE ASSEMBLY AND THE COMPRESSOR TO VARY THE FLUID DISPLACEMENT OR CLEARANCE VOLUME OF THE COMPRESSOR AS A FUNCTION OF THE DRAG OR LIFT FORCES OF THE WIND ON THE BLADE ASSEMBLY.

77-0028 BEGEMANN S H A, JANSEN P
RELATIVE COST-PERFORMANCE OF VARIOUS SOLAR-BASED POWER SUPPLY PACKAGES.
ACTA ELECTR. 20(2): 197-204, 1977.

THE DEVELOPMENT OR IMPROVEMENT OF VARIOUS SOLAR-BASED SYSTEMS TO PRODUCE ELECTRICITY IS CREATING MANY NEW POSSIBILITIES TO PROVIDE POWER IN PLACES WHERE AN ELECTRIC UTILITY DISTRIBUTION SYSTEM IS LACKING. THE EXTENT TO WHICH SOLAR-BASED SYSTEMS WILL BE USED DEPENDS ON THE OVERALL COST-PERFORMANCE OF THESE NEW SYSTEMS COMPARED TO THE CONVENTIONAL SYSTEMS. SEVERAL OF THE MORE PROMISING CONTINUOUS AND AUTONOMOUS SOLAR-BASED POWER SUPPLY SYSTEMS FOR APPLICATIONS REQUIRING DAILY AVAILABILITY OF A GIVEN (SMALL) NUMBER OF KWH'S HAVE BEEN COMPUTER SIMULATED FOR SIX DIFFERENT CLIMATIC REGIONS. THE COST-PERFORMANCE OF THESE SYSTEMS WAS CALCULATED FOR THE DIFFERENT CLIMATES FOR THE NEXT TEN YEARS, TAKING INTO ACCOUNT AN EXPECTED PRICE DECREASE OF PHOTOVOLTAIC CELLS, TO DETERMINE ITS EFFECT ON THE RELATIVE COST-PERFORMANCE OF THE VARIOUS SYSTEMS. THE SYSTEMS CHOSEN CONSISTED OF BATTERIES (STORAGE SYSTEM) AND ONE (SIMPLE SYSTEM) OR MORE (OF HYBRID SYSTEM) OF THE FOLLOWING GENERATING COMPONENTS: PHOTOVOLTAIC CELLS, WIND GENERATORS AND CONVENTIONAL GENERATOR. THE RESULTS SHOW THE IMPORTANCE OF CHOOSING THE RIGHT GENERATING COMPONENT(S) FOR A PARTICULAR CLIMATE AND THE SIGNIFICANT IMPROVEMENT IN COST-PERFORMANCE WHEN TWO OR MORE DIFFERENT GENERATING COMPONENTS ARE COMBINED IN A HYBRID SYSTEM.

77-0029 BELL G C
SOLAR THERMAL POWER GENERATION. A BIBLIOGRAPHY WITH ABSTRACTS.
ALBUQUERQUE, N.M., NEW MEXICO UNIVERSITY, TECHNOLOGY APPLICATION CENTER,
JULY 1977. 55P.

THE BIBLIOGRAPHY CONTAINS 148 REFERENCES TO INFORMATION ON ENERGY OVERVIEWS, SOLAR OVERVIEWS, ECONOMICS AND LAW, THERMAL POWER, THERMIONIC AND THERMOELECTRIC, OCEAN THERMAL DIFFERENTIAL, WIND CONVERSION, BIOCONVERSION, RESIDENTIAL, AND OTHER (HYDROGEN PRODUCTION, LARGE-SCALE PHOTOVOLTAIC, ETC.).

77-0030 BENIM T E
PERFORMANCE MEASUREMENT OF A TEN KILOWATT HORIZONTAL AXIS WIND TURBINE.
M.S. THESIS. BLACKSBURG, VIRGINIA, VIRGINIA POLYTECHNIC INSTITUTE AND
STATE UNIVERSITY, SEPTEMBER 1977. 103P.

A SYSTEM TO MEASURE THE PERFORMANCE OF A 10 KW HORIZONTAL AXIS WIND TURBINE WAS DESIGNED AND WAS EMPLOYED TO TEST AN ELECTRO WVG-120G WIND GENERATOR. PARAMETERS MEASURED WERE WIND SPEED, VOLTAGE, CURRENT, AND FREQUENCY. OUTPUT POWER AND TIP SPEED RATIO WERE CALCULATED FROM THE MEASURED PARAMETERS. A SYSTEM TO AUTOMATICALLY CALCULATE INSTANTANEOUS POWER AND TO INTEGRATE POWER WAS DEVELOPED. AN IMPROVED DIGITAL ANEMOMETER ODOMETER WAS DESIGNED AND BUILT. TESTS WERE PERFORMED WITH THE WINDMILL POWERING A RESISTIVE HEATING LOAD AS WELL AS CHARGING A BATTERY.

77-0031 BERENY J A
SURVEY OF THE EMERGING SOLAR ENERGY INDUSTRY.
SAN MATEO, CALIFORNIA, SOLAR ENERGY INFORMATION SERVICES, 1977. 416P.

THE SIX MAJOR SUBDIVISIONS OF SOLAR TECHNOLOGY ARE REVIEWED IN CONSIDERABLE DEPTH: I.E., HEATING AND COOLING; SOLAR THERMAL ELECTRIC; PHOTOVOLTAICS; WIND ENERGY; OCEAN THERMAL; AND BIOCONVERSION. THE CATALYTIC ROLE OF THE FEDERAL GOVERNMENT IN SPURRING THE DEVELOPMENT OF SOLAR TECHNOLOGY IS TRACED, AND A COMPREHENSIVE ANALYSIS OF ALL STATE GOVERNMENT SOLAR-ORIENTED LEGISLATION IS INCLUDED. THE IMPACT OF SOLAR TECHNOLOGY ON THE UTILITY INDUSTRY IS EXAMINED; ALL MAJOR "SOLAR" PROJECTS OF THE ELECTRIC UTILITIES ARE LISTED AND SOME OF THE MAJOR DEMONSTRATION PROJECTS ARE DISCUSSED IN DETAIL. THE RESEARCH ACTIVITIES OF UNIVERSITIES, NONPROFIT ORGANIZATIONS AND GOVERNMENT LABORATORIES ARE IDENTIFIED BY TECHNICAL AREA. ALL LEADING COMPANIES (BOTH PUBLICLY AND PRIVATELY OWNED -- INCLUDING A NUMBER OF THE "FORTUNE 500") WHICH ARE NOW ACTIVE IN THE FIELD ARE LISTED IN THE TWO DIRECTORIES THAT HAVE BEEN INCORPORATED AS PART OF THE SURVEY. CONSENSUS MARKET FORECASTS ARE PRESENTED AND COMMENTED UPON. THE LONG-RANGE FINANCIAL IMPLICATIONS OF "BREAKTHROUGHS" IN CERTAIN TECHNOLOGIES ARE POINTED OUT.

77-9032 BERTELSMEIER G
CLOSED WIND TURBINE WITH A CONICALLY ADJUSTABLE WIND TUNNEL FOR THE

GENERATION OF CURRENT AND DIRECT ENERGY.
GERMAN (FRG) PATENT NO. 2,539,058/A/, MARCH 10, 1977. 7P. (IN GERMAN)

THE INVENTION REFERS TO A CLOSED WIND TURBINE WITH A CONICALLY ADJUSTABLE WIND TUNNEL FOR THE GENERATION OF ELECTRIC AND/OR MECHANICAL POWER. THE DEVICE IS CHARACTERIZED BY A WIND WHEEL EQUIPPED WITH COVERS AND A WIND CATCHING DEVICE, WHICH IS INSTALLED WITHIN THE FRAME CONSTRUCTION IN A REVOLVING POSITION IN A CLOSED CASE.

77-0033 BLACKWELL B F, BANAS J F, REUTER R C, SULLIVAN W N ENGINEERING DEVELOPMENT STATUS OF THE DARRIEUS WIND TURBINE. NTIS, MARCH 1977. 67P. SAND-76-0650

THE AERODYNAMIC, STRUCTURAL, AND SYSTEM CONSIDERATIONS REQUIRED FOR THE ENGINEERING DEVELOPMENT OF THE DARRIEUS TURBINE ARE DESCRIBED. PARTICULAR EMPHASIS IS GIVEN TO THE NECESSITY FOR CLOSE INTERACTION OF THESE THREE AREAS AND THEIR EFFECTS ON ENERGY COSTS. CURRENTLY AVAILABLE EXPERIMENTAL DATA AND ANALYTICAL METHODS ARE DISCUSSED, TOGETHER WITH SPECIFIC RESULTS AND TRENDS OBTAINED TO DATE.

77-0034 BLACKWELL B F, SHELDAHL R E SELECTED WIND TUNNEL TEST RESULTS FOR THE DARRIEUS WIND TURBINE. J. ENERGY 1(6): 382-386, NOVEMBER-DECEMBER 1977.

FIVE BLADE CONFIGURATIONS OF A 2-M-DIAMETER DARRIEUS WIND TURBINE HAVE BEEN TESTED IN THE VOUGHT CORPORATION 4.6- X 6.1-M (15- X 20-FT) LOW-SPEED WIND TUNNEL. ROTOR SOLIDITY, REYNOLDS NUMBER, AND FREESTREAM VELOCITIES WERE TESTED. THE PARAMETERS MEASURED WERE ROTOR TORQUE, ROTOR ROTATIONAL SPEED, AND TUNNEL CONDITIONS. DATA ARE PRESENTED IN THE FORM OF POWER COEFFICIENT AS A FUNCTION OF TIP-SPEED RATIO ALONG WITH COMPARATIVE RESULTS FROM AN ANALYTICAL MODEL.

77-0035 BLACKWELL B F, SHELDAHL R E, FELTZ L V
WIND TUNNEL PERFORMANCE DATA FOR TWO- AND THREE-BUCKET SAVONIUS ROTORS.
NTIS, JULY 1977. 107P.
SAND-76-0131

FIFTEEN CONFIGURATIONS OF A SAVONIUS ROTOR WIND TURBINE WERE TESTED IN THE VOUGHT CORPORATION SYSTEMS DIVISION 4.9- X 6.1-M LOW SPEED WIND TUNNEL TO DETERMINE AERODYNAMIC PERFORMANCE. THE MEASURED TEST VARIABLES WERE TORQUE, ROTATIONAL SPEED, AND TUNNEL CONDITIONS. THE DATA PRESENTED ARE IN THE FORM OF POWER AND TORQUE COEFFICIENTS AS A FUNCTION OF SPEED RATIO (OR ANGULAR POSITION FOR STATIC STARTING TORQUES). IT IS CONCLUDED THAT INCREASING REYNOLDS NUMBER AND/OR ASPECT RATIO IMPROVES PERFORMANCE. THE RECOMMENDED CONFIGURATION CONSISTS OF TWO SETS OF TWO-BUCKET ROTORS, ROTATED 90 DEGREES APART, WITH EACH ROTOR HAVING A DIMENSIONLESS GAP WIDTH OF 0.1 TO 0.15.

77-0036 BLACKWELL B F, REIS G E
BLADE SHAPE FOR TROPOSKEIN TYPE OF VERTICAL-AXIS WIND TURBINE.
NTIS, MARCH 1977. 27P.
SLA-74-0154

THE EQUATIONS DERIVED TO DEFINE A TROPOSKEIN (THE SHAPE A COMPLETELY FLEXIBLE CABLE ASSUMES WHEN IT IS SPUN AT A CONSTANT ANGULAR VELOCITY ABOUT A VERTICAL AXIS TO WHICH ITS TWO ENDS ARE ATTACHED) ARE DESCRIBED. THE IMPLICATIONS OF THE SOLUTIONS ON THE DESIGN OF A VERTICAL-AXIS WIND TURBINE ARE DISCUSSED FOR CASES WHERE GRAVITY IS NEGLECTED.

77-0037 BLANTON J C
DESIGN OF A WINDPOWERED COOLING SYSTEM FOR AN APPLE STORAGE FACILITY.
M.S. THESIS. BLACKSBURG, VIRGINIA, VIRGINIA POLYTECHNIC INSTITUTE AND
STATE UNIVERSITY, AUGUST 1977. 57P.

A STUDY WAS UNDERTAKEN TO DETERMINE THE PROBLEMS INVOLVED IN APPLYING WIND-PRODUCED ELECTRIC ENERGY TOWARD THE NEEDS OF AN APPLE STORAGE FACILITY, AND TO DESIGN AN APPROPRIATE ENERGY SYSTEM. FRUIT REQUIREMENTS, WIND GENERATOR CHARACTERISTICS, AND ENERGY STORAGE ARE DISCUSSED. DETAILED DESIGN OF A COOLING SYSTEM WAS PERFORMED, INCLUDING DESIGN CALCULATIONS AND EQUIPMENT SPECIFICATIONS. THE EXPECTED COOLING LOADS FOR THE BUILDING WERE CALCULATED AND A VAPOR COMPRESSION REFRIGERATION CONDENSING UNIT WAS SELECTED. AN ENERGY STORAGE DEVICE

UTILIZING THE LATENT HEAT OF FUSION OF ICE WAS DESIGNED AND CALCULATIONS WERE PERFORMED TO DETERMINE ITS ENERGY CAPACITY AND HEAT TRANSFER CHARACTERISTICS. THE REQUIREMENTS OF THE AIR DISTRIBUTION SYSTEM ARE DISCUSSED, AND THE PRESSURE DROP CALCULATIONS ARE SHOWN IN CONNECTION WITH THE CIRCULATING FAN SELECTION. THE OVERALL SYSTEM OPERATION IS DISCUSSED, INCLUDING CONTROL SYSTEM REQUIREMENTS.

PROGRAMME OF MEASUREMENTS OF THE DUTCH EXPERIMENTAL WIND PLANT WITH
VERTICAL AXIS.
ENERGIE VOM WIND. PROCEEDINGS. CONFERENCE ON WIND POWER WITH
EXHIBITION, BREMEN, GERMANY, F.R., JUNE 7-8, 1977. MUNCHEN, DGS, 1977.
P. 125-132. (IN GERMAN)

THE REPORT GIVES INFORMATION ON THE DESIGN CRITERIA OF THE EXPERIMENTAL DARRIEUS ROTOR, WHICH WAS BUILT IN 1976 BY FOKKER VFW FOR THE DUTC. RESEARCH PROGRAMME ON WIND ENERGY.

77-0039 BOSSEL U
COUPLING OF THE USE OF SOLAR AND WIND ENERGY.
ENERGIE VOM WIND. PROCEEDINGS. CONFERENCE ON WIND POWER WITH
EXHIBITION, BREMEN, GERMANY, F.R., JUNE 7-8, 1977. MUNCHEN, DGS, 1977.
P. 275-303. (IN GERMAN)

WIND ENERGY REPRESENTS AN INDIRECT FORM OF SOLAR ENERGY. AS A HIGH VALUE FORM OF MECHANICAL ENERGY, IT REPRESENTS A VALUABLE ADDITION TO DIRECT SOLAR ENERGY, WHICH IN THE THERMODYNAMIC SENSE HAS A LOW VALUE. THE FOLLOWING PAPER INVESTIGATES HOW FAR A COUPLING OF THE USE OF SOLAR AND WIND ENERGY IS POSSIBLE, WHAT ARE THE STARTING POINTS FOR THEIR COMPLEMENTARY USE, AND WHAT ONE CAN EXPECT IN THE SPECIAL CASE OF SPACE HEATING.

77-0040 BOURQUARDEZ G
WIND DRIVEN POWER SYSTEM.
U.S. PATENT NO. 4,050,246, SEPTEMBER 27, 1977. 10P.

A WIND DRIVEN POWER PLANT IS DESCRIBED WHICH HAS A VERTICAL AXIS ROTOR WHICH IS RIGIDLY CONNECTED TO A CENTER BODY IN TURN CONNECTED TO A ROTATING BASE. THE BASE IS SUPPORTED ON A FIXED PYLON BY MEANS OF A MECHANICAL, OR PREFERABLY FLUIDIC BEARING. THE ROTOR BLADES ARE STRONGLY BOWED, SOFT IN TORSION AND PROVIDED, NEAR THEIR TIP REGION, WITH AUTOMATIC PITCH PILOTING MEANS.

77-0041 BOCCI A J
NEW SERIES OF AEROFOIL SECTIONS SUITABLE FOR AIRCRAFT PROPELLERS.
AERONAUT. Q. 28(1): 59-73, FEBRUARY 1977.

THE SECTIONS COMBINE ADVANCED SUPERCRITICAL FLOW CHARACTERISTICS WITH GOOD LOW-SPEED PERFORMANCE AND ARE ALSO DIRECTLY APPLICABLE TO OTHER ROTATING AERODYNAMIC MACHINERY, SUCH AS LOW-SOLIDITY DUCTED FANS, WINDMILLS. ETC.

77-0042 BLACKWELL B F
STATUS OF THE ERDA/SANDIA 17-METRE DARRIEUS TURBINE DESIGN.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. C6.81 TO C6.86.

77-0043 BLEGAA S, JOSEPHSEN L, MEYER N I, SORENSEN B ALTERNATIVE DANISH ENERGY PLANNING. ENERGY POL. 5(2): 87-94, JUNE 1977.

IN THE SPRING OF 1976 THE DANISH GOVERNMENT PUBLISHED AN ENERGY PLAN FOR DENMARK FOR THE PERIOD UP TO 1995. AN ESSENTIAL PART OF THIS PLAN WAS THE INTRODUCTION OF FIVE NUCLEAR POWER PLANTS IN THE DANISH SUPPLY SYSTEM. AN ALTERNATIVE ENERGY PLAN WHICH EXCLUDED NUCLEAR POWER WAS LATER PUBLISHED BY A GROUP OF DANISH SCIENTISTS. IT INCLUDES A RELATIVELY EXTENDED APPLICATION OF SOLAR AND WIND ENERGY, AND ALSO EMPHASISES THE USE OF DECENTRALISED FOSSIL FUEL PLANTS WITH COMBINED POWER PRODUCTION AND DISTRICT HEATING. THE MAIN FEATURES AND DATA OF THE ALTERNATIVE DANISH ENERGY PLAN ARE EXAMINED AND COMPARED WITH THE OFFICIAL GOVERNMENT PLAN.

77-0044 AMERICAN POWER CONFERENCE 1976.
APCH. ENERGIEWIRTSCH. 31(1): 19-32, JANUARY 1977. (IN GERMAN)

A REPORT IS GIVEN OF SOME LECTURES HELD AT A MEETING WHICH DEALT WITH PUMPED STORAGE PLANTS AND OTHER STORAGE TECHNIQUES. OTHER TOPICS ARE WIND-ENERGY CONVERSION AND SITING PROBLEMS.

- 77-0045 BURR N
 THE WIND OF CHANGE IN POWER PRODUCTION: DEVELOPING THE NEW.

FEASIBILITY INVESTIGATION OF THE GIROMILL FOR GENERATION OF ELECTRICAL POWER. VOLUME II. TECHNICAL DISCUSSION. FINAL REPORT, APRIL 1975 - APRIL 1976.
NTIS, JANUARY 1977. 73P. C00/2617-76/1/2

THIS ONE YEAR STUDY CONCENTRATED ON DETERMINING THE FEASIBILITY OF THE GIROMILL FOR THE COST EFFECTIVE PRODUCTION OF ELECTRICAL ENERGY.
TWENTY-ONE DIFFERENT GIROMILL CONFIGURATIONS COVERING THREE SIZES OF GIROMILL SYSTEMS (120, 500, AND 1500 KW) WERE ANALYZED, VARYING SUCH PARAMETERS AS ROTOR SOLIDITY, ROTOR ASPECT RATIO, RATED WIND VELOCITY, AND NUMBER OF ROTOR BLADES. THE GIROMILL SYSTEM ANALYSIS EMPLOYED THE SAME GROUND RULES BEING USED FOR CONVENTIONAL WINDMILL ANALYSES TO FACILITATE COMPARISONS BETWEEN THESE SYSTEMS. THE RESULTS INDICATE THAT A GIROMILL IS A VERY EFFICIENT DEVICE, AND COUPLED WITH ITS RELATIVELY SIMPLE CONSTRUCTION APPEARS QUITE COST EFFECTIVE WHEN COMPARED TO CONVENTIONAL WINDMILLS.

77-0049 BUDENHOLZER R A, LAVAN Z
PUTTING ALTERNATIVE SOURCES OF ENERGY INTO PERSPECTIVE.
CIV. ENG. 47(1): 70-72, JANUARY 1977.

THE FUTURE OUTLOOK FOR NUCLEAR POWER; HYDROELECTRIC POWER; TIDAL POWER; OIL SHALE AND TAR SANDS; SYNTHETIC FUELS; GEOTHERMAL ENERGY; OCEAN THERMAL GRADIENT POWER; WIND POWER; AND SOLAR ENERGY ARE SURVEYED. THERE IS ENOUGH MODERATELY PRICED URANIUM AVAILABLE TO PROVIDE ALL U.S. ELECTRIC POWER REQUIREMENTS FOR ABOUT 100 YEARS. WITH THE BREEDER REACTOR, THIS COULD BE EXTENDED TO OVER 6000 YEARS. THE U.S. WILL HAVE TO RELY MAINLY ON THE FOSSIL AND NUCLEAR SOURCES WELL INTO THE 21ST CENTURY. THE FOSSIL COMPONENT WILL COME MOSTLY FROM COAL, WITH SOME SHALE OIL. ERDA ESTIMATES THAT BY THE YEAR 2000, 33% OF ALL HOUSES WILL USE SOME SOLAR HEATING, BUT THE BREEDER REACTOR WILL GRADUALLY PROVIDE A GREATER LOAD OF THE TOTAL ENERGY SUPPLY.

77-0050 BUICK T R, DOHERTY M A, MCMULLAN J T , MORGAN R, MURRAY R B ON THE ENERGY PATTERN FACTOR IN WIND MEASUREMENTS. INT. J. ENERGY RES. 1(2): 127-133, APRIL-JUNE 1977.

IT IS WELL KNOWN THAT THE POWER PRESENT IN A STEADY WIND OF SPEED V IS PROPORTIONAL TO THE CUBE OF THE SPEED. IT IS EQUALLY WELL KNOWN, ALTHOUGH RATHER LESS GENERALLY REALIZED, THAT, IN ESTIMATING THE AVERAGE POWER OVER A PERIOD OF TIME IN A GIVEN LOCATION, IT IS NOT ENOUGH TO MEASURE THE AVERAGE WIND SPEED AND TO CUBE IT TO YIELD THE CUBE OF THE AVERAGE, SINCE THE QUANTITY ACTUALLY REQUIRED IS THE AVERAGE OF THE CUBE, AND THESE ARE NOT IDENTICAL. MEASUREMENTS OF ENERGY PATTERN FACTOR WERE MADE USING A CONTINUOUS ANALOG TECHNIQUE, RATHER THAN BY THE MORE USUAL SAMPLING PROCEDURE. THE VALUES OBTAINED WERE SIGNIFICANTLY LARGER THAN THE USUALLY ACCEPTED FIGURE. THE DISCREPANCY IS ATTRIBUTED PARTLY TO THE

METHOD OF MEASUREMENT, AND PARTLY TO THE USE OF RATHER MORE TYPICAL WIND SPEEDS.

WIND TURBINE "FIRST" CLAIMED BY THE INDIAN NATIONAL AERONAUTICAL
LABORATORY AT BANGALORE.
ENGINEER 244: 13, FEBRUARY 24, 1977.

THE INDIAN NATIONAL AERONAUTICAL LABORATORY AT BANGALORE HAS BUILT WHAT IT BELIEVES TO BE THE FIRST FULL-SCALE STRAIGHT BLADED DARRIEUS-TYPE WIND TURBINE. USING SAVONIUS STARTER BUCKETS IT GIVES ABOUT 1 KW SHAFT POWER AT 80 REV/MIN IN WINDS OF ABOUT 25 KM/H.

77-0054 BUTLER T W
ENERGY CONVERSION SYSTEM.
U.S. PATENT NO. 4,004,427, JANUARY 25, 1977. 14P.

AN ENERGY CONVERSION SYSTEM IS ASSOCIATED WITH AN EDIFICE FOR CONVERTING NATURAL ENERGY TO USABLE ENERGY. THE EDIFICE HAS A GENERALLY VERTICAL OUTWARDLY FACING SIDE SURFACE, AND THE SYSTEM INCLUDES RADIATION COLLECTING MEANS DEFINING A PLURALITY OF RADIATION RECEIVING SURFACES ADJACENT TO BUT SPACED FROM THE EDIFICE SIDE SURFACE. THUS, A FLOW-WAY IS DEFINED BETWEEN THE RADIATION RECEIVING SURFACES AND THE SIDE SURFACE OF THE EDIFICE. EACH OF THE RADIATION RECEIVING SURFACES FACES GENERALLY UPWARDLY AND HAS A PLURALITY OF HOLLOWS. THE SYSTEM FURTHER COMPRISES A ROTOR ROTATABLY MOUNTED ON THE EDIFICE ABOVE THE RADIATION RECEIVING SURFACES AND DUCTING APPARATUS FOR DIRECTING A GASEOUS MEDIUM, SUCH AS AIR, FROM THE FLOWWAY TO THE ROTOR TO ROTATE THE LATTER. THE ROTATION OF THE ROTOR IN TURN DRIVES AT LEAST A PART OF A SUITABLE ENERGY-USING FIRST OPERATOR MEANS. THE SYSTEM MAY ALSO COMPRISE WIND DRIVEN MEANS COMPRISING BRACED WEB MEMBERS OPERATIVELY CONNECTED TO A SECOND OPERATOR MEANS.

77-0055 C-TURBINE TESTED.
WIND POWER DIG. 1(8): 22, SPRING 1977.

PINSON ENERGY CORPORATION HAS BEGUN RESEARCHING THE USE OF THEIR CYCLOTURBINE WITH A COMPRESSED AIR POWER PRODUCTION SYSTEM. THE RESEARCH WILL BE DONE IN COLLABORATION WITH THE NEW ALCHEMY INSTITUTE, AND IS SPECIFICALLY AIMED TOWARD SUPPLYING ENERGY FOR A SOLAR GREENHOUSE.

77-0056 CADWALLADER E A, WILLIAMSON W R, WESTBERG J E
THE APPLICATION OF WIND ENERGY SYSTEMS TO DESALINATION.
NTIS, APRIL 1977. 68P.
PB-276174

THE IMPACT OF RAPIDLY INCREASING FUEL COSTS HAS ALL BUT MADE SALINE WATER CONVERSION UNECONOMICAL. HOWEVER THE APPLICATION OF WIND ENERGY SYSTEMS TO MEMBRANE PROCESSES FOR BRACKISH WATER CONVERSION OFFERS AN ECONOMICAL SOLUTION. COMMERCIALLY AVAILABLE WIND TURBINES AND THOSE UNDER DEVELOPMENT APPEAR PROMISING FOR PRODUCING ELECTRICAL ENERGY AT COSTS RANGING FROM FIVE CENTS DOWN TO 1.8 CENTS PER KILOWATT HOUR. IT IS STILL POSSIBLE TO REACH COSTS FOR DESALTING BRACKISH WATER AT LESS THAN \$1.00 PER THOUSAND GALLONS WITH LARGE WIND ENERGY DESALINATION SYSTEMS. THE COUPLING OF WIND ENERGY TURBINES TO ELECTRODIALYSIS AND REVERSE OSMOSIS ALSO OFFERS TECHNOLOGICAL ADVANTAGES, SUCH AS VARIABLE FLUID FLOWS IN THE DESALINATION PROCESSES FOR MAXIMUM ECONOMIC PRODUCTION OF POTABLE WATER.

RESEARCH AND DEVELOPMENT EFFORTS IN THIS DIRECTION ARE INDICATED.

77-0057 CALIFORNIA ELECTRICITY GENERATION METHODS ASSESSMENT PROJECT. FINAL REPORT.
REDONDO BEACH, CALIFORNIA, TRW ENERGY SYSTEMS MANAGEMENT DIV., JANUARY 30, 1977. 390P.

INFORMATION IS PROVIDED ON CURRENT AND FORECASTED ECONOMIC COSTS OF DIFFERENT METHODS OF ELECTRICITY GENERATION NEEDED TO MEET BASE-, INTERMEDIATE-, AND PEAK-LOAD DEMAND REQUIREMENTS IN CALIFORNIA. ADDITION, THE RELIABILITY, FUEL REQUIREMENTS, OTHER RESOURCE REQUIREMENTS, AND ENVIRONMENTAL IMPACTS OF THE DIFFERENT METHODS OF GENERATING ELECTRICITY ARE ASSESSED. INFORMATION FOR THIS REPORT WAS OBTAINED BY REVIEWING AND SUMMARIZING MAJOR STUDIES ON ELECTRICITY CENERATION THAT HAVE BEEN CONDUCTED IN RECENT YEARS. ONE PORTION OF THIS REVIEW IS THE EVALUATION OF THE METHODS AND ASSUMPTIONS USED IN THESE MAJOR STUDIES. WHERE MAJOR ESTIMATES AND PROJECTIONS DIFFER SUBSTANTIALLY, REASONS FOR SUCH DIFFERENCES ARE IDENTIFIED. INSTANCES, FURTHER RESEARCH NEEDS AND ADDITIONAL SOURCES OF ESTIMATES AND FORECASTS ARE IDENTIFIED. THE METHODS REVIEWED IN DIFFERENT CATEGORIES PRESENTLY AVAILABLE METHODS - NUCLEAR POWER, CONVENTIONAL COAL AND OIL POWER, GAS TURBINE AND COMBINED-CYCLE UNITS, GEOTHERMAL, HYDROELECTRIC, AND PUMPED STORAGE; POTENTIAL FUTURE METHODS - SOLAR THERMAL, HYDROTHERMAL AND HOT ROCK CONVERSION, ADVANCED COAL-FIRED POWER PLANTS, FUEL CELLS, WIND ENERGY CONVERSION, SOLAR PHOTOVOLTAIC, AND OCEAN THERMAL CONVERSION; CLEAN FUEL OPTIONS - NAPHTHA, SYNTHETIC GAS FROM NAPHTHA, LOW-SULFUR FUEL OIL, METHANOL, AND HYDROGEN; AND PEAK-LOAD TECHNOLOGIES - BATTERIES, FUEL CELLS, FLYWHEELS, COMPRESSED AIR.
ADDITIONAL INFORMATION IS INCLUDED IN APPENDIX A ON A COST-VARIANCE
ANALYSIS OF ELECTRIC POWER FROM CONVENTIONAL PLANTS; APPENDIX B, NUCLEAR
FUEL-CYCLE COSTS, 1975; APPENDIX C, DETAIL OF COAL COST EVALUATION; AND
APPENDIX D, CORRESPONDENCE AND ADDITIONAL COMMENTS PERTINENT TO THE REPORT.

ON SOME ENERGY PROJECTS AT THE UNIVERSITY OF COLORADO.
J. ENERGY DEV. 2(2): 332-334, SPRING 1977.

TWO ENERGY PROGRAMS AT THE UNIVERSITY OF COLORADO INVOLVE MOUNTAIN WIND TESTING AND A SOLAR HEATING SYSTEM FOR A SENIOR CITIZEN'S CENTER. A WIND TURBINE, DESIGNED TO WORK BEST AT 20 MPH BUT ABLE TO WITHSTAND 150-MPH WINDS, WILL BE INSTALLED ON A 12,300-FOOT RIDGE NEAR BOULDER TO RECORD AND ASSESS THE POTENTIAL USE OF STRONG WINDS. A MICROPROCESSOR KEEPING TRACK OF WIND CHANGES WILL ADJUST THE WINDMILL BLADES ACCORDINGLY. THE COMPUTER WILL ALSO MAKE ADJUSTMENT FOR TEMPERATURE CHANGES AND WILL SEARCH ITS OWN RECORDS FOR PREVIOUS ADJUSTMENT DATA. THE DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT IS COOPERATING IN THE SOLAR PROJECT FOR THE CENTER. SEVERE WIND CONDITIONS IN BOULDER WILL REQUIRE SPECIALLY DESIGNED SOLAR PANELS AND SUPPORTS. HEAT WILL BE AVAILABLE EITHER DIRECTLY OR FROM THE 5000-GALLON STORAGE TANK, WITH A BACKUP GAS HEATING SYSTEM. RETROFITTING DECISIONS WILL BENEFIT FROM THE INFORMATION GATHERED IN DESIGNING THIS PROJECT.

 THE EFFECT OF GENERALIZED WIND CHARACTERISTICS ON ANNUAL POWER ESTIMATES
 FROM WIND TURBINE GENERATORS.
 NTIS, OCTOBER 1977. 57P.
 PNL-2436

A TECHNIQUE IS PRESENTED FOR ESTIMATING THE AVERAGE POWER OUTPUT OF A WIND TURBINE USING, AS THE WIND CHARACTERISTIC INPUT, ONLY THE MEAN ANNUAL WIND MAGNITUDE. HOURLY WIND SPEEDS ARE ASSUMED TO HAVE A RAYLEIGH FREQUENCY DISTRIBUTION WHICH REQUIRES A SINGLE PARAMETER INPUT (E.G., THE MEAN VALUE, VARIANCE OR HIGHER MOMENT VALUES). BASED UPON A GENERAL SHAPE, FOR THE WIND SPEED VERSUS MACHINE OUTPUT, A GENERIC SET OF CURVES IS DEVELOPED TO ESTIMATE THE AVERAGE POWER OUTPUT OF WIND TURBINES. ALSO, ESTIMATES OF THE PERCENT OF TIME THE WIND TURBINE WOULD NOT PRODUCE POWER (PERCENT DOWN TIME) AND THE PERCENT OF TIME THE WIND TURBINE WOULD BE OPERATING AT ITS RATED POWER ARE PRESENTED.

STATISTICAL ANALYSIS PROCEDURES AND PROBABILITY MODELS THAT ARE APPLICABLE TO WIND ENERGY CONVERSION SITES IN GENERAL ARE DEVELOPED. SPECIAL COMPUTER ALGORITHMS ARE USED TO STUDY VARIANCES, FIT PROBABILITY DISTRIBUTIONS, ANALYZE RUN DURATION, AND DETERMINE CORRELATION STRUCTURE IN THE WIND. A TOTAL OF 20 ONE-HOUR OR THREE-HOUR RECORDS ARE ANALYZED FROM SITES IN NEW ZEALAND, ILLINOIS, MONTANA, KANSAS, WYOMING, AND TEXAS IN DEVELOPING AND TESTING THE MODELS.

77-0078 COROTIS R B, SIGL A B, COHEN M P
VARIANCE ANALYSIS OF WIND CHARACTERISTICS FOR ENERGY CONVERSION.
J. APPL. METEOROL. 16(11): 1149-1157, NOVEMBER 1977.

VARIANCE ANALYSIS OF HOURLY WIND DATA IS UTILIZED TO ASSIST IN WIND CHARACTERISTIC ASSESSMENT FOR DIRECT ENERGY CONVERSION SYSTEMS. FEASIBILITY OF LARGE-SCALE WIND ENERGY UTILIZATION, AS WELL AS SITING, SIZING AND OPERATING POLICY, DEPEND ON THE VARIABILITY OF THE WIND. SEVERAL MIDWESTERN SITES ARE USED TO ILLUSTRATE A TEMPORAL STUDY OF VARIANCE SOURCES THAT LEADS TO THE EVALUATION OF EQUIVALENT INDEPENDENT HOURS. FOR THE SITES CONSIDERED THESE VARY FROM TWO TO THREE PER DAY. THIS INFORMATION IS UTILIZED TO DETERMINE DURATION OF SURVEY REQUIREMENTS FOR STATED CONFIDENCE LEVELS AND DESIRED ACCURACY. REASONABLY RELIABLE AND ACCURATE ESTIMATES OF THE MEAN SEASONAL WIND CAN BE OBTAINED IN ONE OR TWO YEARS FOR THE SITES ANALYZED. AUTOCORRELATION AND CROSS-CORRELATION ANALYSIS CONFIRMS THE EXISTENCE OF SIGNIFICANT CORRELATION IN THE WIND AT A SINGLE SITE FOR A PERIOD OF 8-12 H AND BETWEEN SITES FOR SIMILAR TIME LAGS AND SEPARATIONS UP TO 100 KM OR MORE. MEANINGFUL PREDICTION OF VARIATION FROM THE MEAN APPEARS POSSIBLE IN THESE CASES. THE DIURNAL CYCLE EFFECT IS SEEN TO DEPEND SIGNIFICANTLY ON SEASON AND ELEVATION.

EVALUATING A COMBINED WIND POWER/ENERGY STORAGE SYSTEM.
POWER ENG. 81(5): 48-51, MAY 1977.

A COMPUTER MODEL IS DESCRIBED WHICH WAS DEVELOPED TO OPTIMIZE THE AMOUNT OF STORAGE AND GENERATING CAPACITY OF A COMBINATION WIND-DRIVEN GENERATOR PLUS STORAGE SYSTEM FOR A PARTICULAR LOCATION. THIS OPTIMIZED SYSTEM WILL HAVE THE LOWEST ENERGY COST WHILE STILL MEETING THE PREDETERMINED AVAILABILITY CRITERIA, WHICH WAS 80% FOR THIS STUDY. THE MODEL DETERMINES THE LOWEST COST CASE AT EACH CAPACITY FACTOR. A MAJOR RESULT OF THIS STUDY IS THE SUGGESTION THAT THE COMBINED WIND-DRIVEN GENERATOR/STORAGE SYSTEM IS CAPABLE OF PRODUCING RELIABLE, ALBEIT COSTLY, POWER AT ALL CAPACITY FACTORS WITH A REASONABLE AVAILABILITY. THE STUDY ALSO SUGGESTS THAT SITES WITH AVERAGE WIND SPEED IN EXCESS OF 15 MPH MAY BE REQUIRED FOR ECONOMIC VIABILITY OF THIS SYSTEM.

EFFECTS OF INITIAL PRODUCTION QUANTITY AND INCENTIVES ON THE COST OF WIND ENERGY.
BURBANK, CALIFORNIA, LOCKHEED-CALIFORNIA CO., JANUARY 3, 1977. 9P.

THIS PAPER WAS GIVEN AT THE AAAS CONFERENCE IN DENVER, FEBRUARY 20, 1977. THE EFFECT OF INITIAL PRODUCTION QUANTITY ON THE SELLING PRICE OF A 2-MW WIND TURBINE GENERATOR IS DETERMINED. TO THIS IS ADDED THE EFFECT OF LOAN INTEREST RATES, TAXES, AND OTHER ANNUAL OPERATING EXPENSES. THE COST OF ELECTRICAL ENERGY GENERATED IS DETERMINED AND COMPARED TO THE COST OF FUEL FOR PRIVATE UTILITIES AND TO THE COST OF BUYING ENERGY WHOLESALE FOR PUBLIC UTILITIES. FROM THIS COMPARISON, THE INITIAL PRODUCTION QUANTITIES OF WIND TURBINE GENERATORS IS DETERMINED WHICH WOULD BRING COST OF WIND ENERGY DOWN TO A COMPETITIVE LEVEL. THE DATA PRESENTED ALSO SHOWS THE EFFECT ON INITIAL PRODUCTION QUANTITY REQUIRED OF INTRODUCING INCENTIVES SUCH AS GUARANTEED LOANS. THE EFFECT OF ANNUAL AVERAGE WINDSPEED AT THE SITE IS ASSESSED IN TERMS OF INITIAL PRODUCTION QUANTITY REQUIRED. IT IS CONCLUDED THAT WITHOUT INCENTIVES, AND WITH WIND SITES HAVING 7 M/S ANNUAL AVERAGE WINDSPEED, THE INITIAL PRODUCTION QUANTITY IS 260 UNITS TO BRING THE COST OF WIND ENERGY DOWN TO THE PRESENT PRICE OF OIL (2.6 CENTS/KWH) FOR PRIVATE UTILITIES AND DOWN TO 1.5 CENTS/KWH FOR PUBLIC UTILITIES. WITH GUARANTEED LOANS PROVIDED AS AN INCENTIVE, THE INITIAL PRODUCTION QUANTITY REQUIRED TO 95 UNITS. IF SITES WITH 8 M/S ANNUAL AVERAGE WINDSPEED ARE USED, AND GUARANTEED LOANS ARE MADE AVAILABLE, THE INITIAL PRODUCTION QUANTITY REQUIRED TO MEET THE COMPETITIVE COST CRITERIA OF PUBLIC AND PRIVATE UTILITIES IS REDUCED TO 65 UNITS. FEDERAL POWER AGENCIES COULD MEET THE PRESENT COST OF OIL WITH ENERGY FROM WIND TURBINE GENERATORS WITH AN INITIAL PRODUCTION ORDER OF 40 UNITS.

A NON-AEROSPACE APPLICATION OF PLANS: PRELIMINARY STRUCTURAL DESIGN OF WIND TURBINE DIFFUSER.
NTIS, MARCH 1977. 88P.
RM-629, N77-31604

A BASELINE DESIGN FOR A LIGHTWEIGHT DIFFUSER, ITS CALCULATED WEIGHT, AND THE METHOD EMPLOYED TO CALCULATE THE SPECIFIC SIZES IN THE DESIGN ARE DESCRIBED. FORMULAS ARE PRESENTED THAT PERMIT THE STRAIGHTFORWARD ASSESSMENT OF THE EFFECT ON THE DIFFUSER WEIGHT, AND THE RELATED COST OF POWER GENERATION, OF CHANGES IN DIMENSIONS, MATERIAL, OR ALLOWABLE DEFLECTIONS. IT WAS ESTABLISHED THAT FOR A SCALE VARIATION IN THE OVER-ALL SIZE OF THE DIFFUSER, THE COST OF POWER GENERATION ATTRIBUTABLE TO THE DIFFUSER VARIES LINEARLY WITH THE DIFFUSER FRONT RADIUS. IT WAS ALSO ESTABLISHED THAT AS COMPARED TO USING ALUMINUM, THE COST WOULD ACTUALLY GO UP WITH STANDARD STRENGTH STEEL BUT DOWN WITH HIGHER STRENGTH STEEL. ALLOWING THE STRUCTURE TO BE MORE FLEXIBLE CANNOT YIELD A REDUCTION IN COST UNLESS A CHANGE IN MATERIAL PROPERTIES IS ALLOWED.

ANALYTICAL PERFORMANCE AND ECONOMIC EVALUATION OF RESIDENTIAL WIND AND
SOLAR HEATING SYSTEMS.
AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, PROCEEDINGS
OF THE ANNUAL MEETING. VOL.1. ORLANDO, FLORIDA. JUNE 6-9, 1977. CAPE
CANAVERAL, FLORIDA, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY
SOCIETY, 1977. SECT. 24. P. 20-24.

A PERFORMANCE AND COST MODEL FOR A VARIETY OF WIND SPACE AND WATER HEATING SYSTEMS FOR SINGLE FAMILY RESIDENCES IS PRESENTED. IN ADDITION TO WIND POWERED SYSTEMS, COMBINED WIND AND SOLAR SYSTEMS ARE MODELED AND COMPARED TO CONVENTIONAL AND SOLAR ONLY HEATING SYSTEMS. ANALYTICAL RESULTS ARE PRESENTED FOR A SITE IN AMHERST, MASSACHUSETTS. SYSTEM CAPITAL ECONOMIC DETAILS INCLUDE AN ITEMIZED COST BREAKDOWN OF THE WIND HEATING SYSTEM COMPONENTS. THE RESULTS DEMONSTRATE THAT WIND POWERED SYSTEMS ARE PRESENTLY COMPETITIVE WITH ELECTRIC BASED HEATING SYSTEMS AND WILL BE COMPETITIVE WITH OIL OR GAS SYSTEMS IN THE FUTURE.

77-0091 DARVISHIAN A
HIGHER EFFICIENCY WIND MOTOR WITH RECEPTORS OF DIMINISHED DRAG
CHARACTERISTICS.
U.S. PATENT NO. 4,015,911, APRIL 5, 1977. 8P.

A WIND MOTOR FOR THE CONVERSION OF WIND POWER TO MECHANICAL OR ELECTRICAL POWER OR OTHER FORM THEREOF IS DESCRIBED WHICH INCLUDES A PLURALITY OF WIND RECEPTORS, WHICH HAVE OPENINGS THEREIN FOR THE PASSAGE OF AIR THERETHROUGH DURING OPERATION OF THE WIND MOTOR, ESPECIALLY WHEN THE RECEPTORS ARE MOVING AGAINST THE WIND, SO AS TO DIMINISH AIR RESISTANCE (DRAG) OPPOSING SUCH MOVEMENT, THEREBY INCREASING THE EFFICIENCY OF THE WIND MOTOR.

77-0092 DAS S C, LINSCOTT B S
APPROXIMATE METHOD FOR CALCULATING FREE VIBRATIONS OF A LARGE WIND TURBINE TOWER STRUCTURE.
NTIS, DECEMBER 1977. 42P.
NASA-TM-73754

A SET OF ORDINARY DIFFERENTIAL EQUATIONS ARE DERIVED FOR A SIMPLIFIED STRUCTURAL DYNAMIC LUMPED-MASS MODEL OF A TYPICAL LARGE-WIND-TURBINE TOWER STRUCTURE. DUNKERLEY'S EQUATION IS USED TO ARRIVE AT A SOLUTION FOR THE FUNDAMENTAL NATURAL FREQUENCIES OF THE TOWER IN BENDING AND TORSION. THE ERDA-NASA 100-KW WIND TURBINE TOWER STRUCTURE IS MODELED, AND THE FUNDAMENTAL FREQUENCIES ARE DETERMINED BY THE SIMPLIFIED METHOD DESCRIBED. THE APPROXIMATE FUNDAMENTAL NATURAL FREQUENCIES FOR THE TOWER AGREE WITHIN 18 PERCENT WITH TEST DATA AND PREDICTIONS ANALYZED BY MEANS OF NASTRAN.

77-0094 DAVIS B L, ECKHERN M W
WIND FABRIC DIAGRAMS AND THEIR APPLICATION TO WIND ENERGY ANALYSIS.
J. APPL. METEOROL. 16(5): 522-531, MAY 1977.

BY MEANS OF THE LAMBERT PROJECTION, WIND VECTOR DATA MAY BE PLOTTED ONTO A FREQUENCY MAP. THE RESULTING DIAGRAM PORTRAYS THE "WIND FABRIC" FOR THE DATA SAMPLE OF A SINGLE STATION OR FOR GROUPS OF STATIONS. THE AREA-TRUE DISTRIBUTION OF WIND VECTORS IS THUS GIVEN IN GREAT DETAIL AND ALLOWS SEVERAL STANDARD TESTS FOR HOMOGENEITY AND ANOMALY SIGNIFICANCE. BY USING A "SWINGING PLATE" DEVICE THE WIND ENERGY DENSITY AND WIND POWER CAN BE CALCULATED FOR ANY VELOCITY-COMPASS HEADING SECTOR OF THE DIAGRAM DESIRED AND ALLOWS FOR A UNIVERSAL SCALING OF THE VELOCITY VARIABLE OF THE DIAGRAM.

77-0095 DAVITIAN H
USE OF WIND POWER BY ELECTRIC UTILITIES.

AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, PROCEEDINGS OF THE ANNUAL MEETING. VOL. 1. ORLANDO, FLORIDA, JUNE 6-19, 1977. CAPE CANAVERAL, FLORIDA, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, 1977. SECTION 19. P. 1-5.

TWO CHARACTERISTICS OF WIND MACHINES ARE PARTICULARLY PROBLEMATICAL FROM A UTILITY PERSPECTIVE: VARIATIONS IN OUTPUT AND THE SMALL SIZE OF THE MACHINES. CURRENTLY AVAILABLE ESTIMATES FOR THE COSTS OF PRODUCING AND INSTALLING MACHINES ARE IN THE RANGE OF \$500 TO \$700/KW FOR THE 100TH MACHINE PRODUCED. THE VALUE OF WIND MACHINES TO UTILITIES WILL BE IN THIS RANGE IN SOME PARTS OF THE U.S., GIVEN EXPECTED INCREASES IN FUEL COSTS. THIS PRELIMINARY ANALYSIS OF THE ECONOMICS OF WIND POWER INDICATES A PROMISING POTENTIAL FOR REGIONS OF THE U.S. WITH HIGH WIND POWER AVAILABILITY AND HIGH FUEL COSTS.

77-0096 DAVITIAN H
THE ROLE OF WIND POWER IN ELECTRIC UTILITIES.
NTIS, SEPTEMBER 1977. 15P.
BNL-50736

CURRENT ESTIMATES SUGGEST THAT THE COST OF WIND GENERATED POWER IS LIKELY TO BE COMPETITIVE WITH CONVENTIONALLY GENERATED POWER IN THE NEAR FUTURE IN REGIONS OF THE UNITED STATES WITH FAVORABLE WINDS AND HIGH COSTS FOR CONVENTIONALLY GENERATED ELECTRICITY. THESE PRELIMINARY ESTIMATES INDICATE COSTS OF \$500-700 PER INSTALLED KW FOR MASS PRODUCED WIND TURBINES. THIS ASSESSMENT REGARDING COMPETITIVENESS INCLUDES THE EFFECTS OF THE REDUCED RELIABILITY OF WIND POWER COMPARED TO CONVENTIONAL SOURCES. UTILITIES EMPLOYING WIND POWER ARE LIKELY TO PURCHASE MORE PEAKING CAPACITY AND LESS BASELOAD CAPACITY THAN THEY WOULD HAVE OTHERWISE TO PROVIDE THE LOWEST COST RESERVE POWER. THIS RESERVE POWER IS NEEDED MAINLY WHEN WIND OUTAGES COINCIDE WITH PEAK LOADS. THE MONETARY SAVINGS ASSOCIATED WITH THIS SHIFT CONTRIBUTE SUBSTANTIALLY TO THE VALUE OF WIND ENERGY TO A UTILITY.

77-0097 DESIGN STUDY OF WIND TURBINES 50 kW TO 3000 KW FOR ELECTRIC UTILITY APPLICATIONS. EXECUTIVE SUMMARY.
NTIS, JULY 1977. 94P.
NASA-CR-134936

THIS REPORT PRESENTS A SUMMARY OF THE RESULTS OF A PROGRAM TO DEVELOP PRELIMINARY DESIGNS OF LOW POWER (50-500 KW) AND HIGH POWER (500-3000 KW) WIND GENERATOR SYSTEMS (WGS) FOR ELECTRIC UTILITY APPLICATIONS. THESE DESIGNS PROVIDE THE BASES FOR DETAIL DESIGN, FABRICATION, AND EXPERIMENTAL DEMONSTRATION TESTING OF THESE UNITS AT SELECTED UTILITY SITES. THE PROGRAM INCLUDED FOUR TASKS: A CONCEPTUAL DESIGN TASK; AN OPTIMAZATION TASK; A PRELIMINARY DESIGN TASK; AND A UTILITY REQUIREMENTS EVALUATION TASK.

77-0098 DEVINE W D
ENERGY ANALYSIS OF A WIND ENERGY CONVERSION SYSTEM FOR FUEL DISPLACEMENT.
NTIS, FEBRUARY 1977. 55P.
ORAU/IEA(M)-77-2

ENERGY CONVERSION MACHINES WHICH UTILIZE RENEWABLE SUPPLIES OF ENERGY AS FUEL MAY DELIVER CONSIDERABLY MORE ENERGY TO ULTIMATE USERS THAN 15 CONSUMED DURING MANUFACTURE, DEPLOYMENT, AND OPERATION OF THE MACHINE. AN INPUT/OUTPUT APPROACH IS EMPLOYED TO ESTIMATE THE ENERGY EMBODIED IN A 1,500 kW(E) HORIZONTAL-AXIS WIND ELECTRIC GENERATING STATION USED TO DISPLACE FOSSIL FUEL IN AN ELECTRIC UTILITY SYSTEM. FIVE RATIOS COMPARING DELIVERED ELECTRICAL ENERGY TO THE ENERGY REQUIREMENT OF THE WIND MACHINE ARE DISPLAYED. THE RESULTS INDICATE THAT THE SYSTEM CONSIDERED COULD BE A LARGE NET PRODUCER OF ENERGY AND SHOULD DISPLACE A QUANTITY OF FOSSIL ENERGY EQUIVALENT TO THAT EMBODIED IN THE MACHINE IN CONSIDERABLY LESS THAN ONE YEAR.

77-0100 DIGGS R E
HIGH POWER WIND TURBINE WITH KINETIC ACCUMULATOR.
U.S. PATENT NO. 4,035,658, JULY 12, 1977. 10P.

A HIGH POWER WIND TURBINE WITH KINETIC ACCUMULATOR IS DISCLOSED. THE INVENTION INCLUDES A CIRCULAR WALL, A WALL TURBINE MOVABLY MOUNTED TO THE CIRCULAR WALL SO THAT IT CAN BE MOVED TO FACE THE WIND, A NON-LINEAR GENERATOR CONNECTED TO THE WIND TURBINE TO GENERATE ELECTRICAL POWER, A FLY WHEEL, AND A DRIVE WHEEL DISPOSED IN CONTACT WITH THE FLY WHEEL TO DRIVE THE FLY WHEEL. A REVERSIBLE NON-LINEAR MOTOR IS CONNECTED TO THE DRIVE WHEEL TO DRIVE THE DRIVE WHEEL OR TO BE DRIVEN BY THE DRIVE WHEEL. THE NON-LINEAR GENERATOR IS CONNECTED TO THE REVERSIBLE MOTOR TO ROTATE THE DRIVE WHEEL TO ROTATE THE FLY WHEEL WHEN THE NON-LINEAR GENERATOR GENERATOR GENERATES EXCESS ELECTRICAL POWER. THE FLY WHEEL ROTATES THE DRIVE WHEEL TO DRIVE THE REVERSIBLE MOTOR TO GENERATE ELECTRICAL POWER WHEN THE NON-LINEAR GENERATOR DOES NOT GENERATE SUFFICIENT ELECTRICAL POWER.

LIGHTNING PROTECTION FOR THE VERTICAL-AXIS WIND TURBINE.
NTIS, OCTOBER 1977. 26P.
SAND-77-1241

THIS REPORT CONTAINS THE RESULTS OF LIGHTNING PROTECTION STUDIES FOR VERTICAL AXIS WIND TURBINES. THE METHODOLOGY IS ESTABLISHED FOR DETERMINING THE CHANCES FOR A LIGHTNING STRIKE AT A VAWT SITE. PROPOSED DESIGNS FOR LIGHTNING PROTECTION SYSTEMS ARE DESCRIBED. THESE DESIGNS INCLUDE AN INSULATOR DESIGN, A BRUSH BY-PASS DESIGN, A CONE OF PROTECTION, LIGHTNING ELIMINATION DEVICE, AND A CONCENTRIC TOWER PROTECTION SYSTEM. THE WORK ALSO DESCRIBES AN EFFECTIVE GROUNDING SYSTEM.

77-0102 DODD 4 M, STEWART R E D, VARNADO S G, ARONSON E A, CHANG G C
ASSESSMENT OF MECHANICAL ENERGY STORAGE FOR SOLAR SYSTEMS.
INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH, PROCEEDINGS.
LA GRANGE PARK, ILLINOIS, AMERICAN NUCLEAR SOCIETY, 1977. VOL.2, P.
1174-1180.

THE PRIMARY OBJECTIVE OF THIS STUDY IS TO ASSESS THE RELATIVE MERITS OF VARIOUS MECHANICAL ENERGY STORAGE SYSTEMS WHEN USED IN CONJUNCTION WITH SOLAR AND WIND SOURCES. THIS INITIAL STUDY CONSIDERED FLYWHEEL, PNEUMATIC (COMPRESSED AIR) AND UNDERGROUND PUMPED HYDRO STORAGE CONCEPTS. BOTH THERMAL AND PHOTOVOLTAIC COLLECTORS UTILIZING STATIONARY FLAT PLATE THROUGH TOTAL TRACKING FOCUSED SYSTEMS WERE INCLUDED. FOR WIND COLLECTION, A HORIZONTAL AXIS WIND TURBINE WAS MODELED. ELECTRICAL LOAD DEMANDS FROM SINGLE RESIDENCES THROUGH UTILITY GRIDS WERE INCLUDED. ALTERNATIVE SYSTEMS WERE RANKED ACCORDING TO LEVELIZED, BUSBAR ENERGY COST CALCULATIONS, AND THE AMOUNT OF DISPLACED CONVENTIONALLY GENERATED ELECTRICITY ALSO SERVED AS A BENEFIT MEASURE.

77-0103 DORAN J C, BATES J A, LIDDELL P J, FOX T D
ACCURACY OF WIND POWER ESTIMATES.
NTIS, OCTOBER 1, 1977. 22P.
PNL-2442

SEVERAL ASPECTS OF POWER ESTIMATION TECHNIQUES FOR WIND ENERGY CONVERSION SYSTEMS ARE STUDIED. THE SAMPLING RATE AT WHICH THE DATA ARE COLLECTED, RANGING FROM ONCE EVERY 2 MINUTES TO ONCE EVERY 3 HOURS, DOES NOT APPEAR TO SIGNIFICANTLY AFFECT THE AVERAGE POWER FOR RECORDING PERIODS OF ONE SEASON. INCREASED AVERAGING TIMES PRODUCE SMALL UNDERESTIMATES (10 PERCENT) OF AVAILABLE POWER. THE RAYLEIGH AND WEIBULL DISTRIBUTIONS BOTH GIVE POOR ESTIMATES OF POWER FOR LOW MEAN WIND SPEED SITUATIONS; WITH THE FORMER BEING SIGNIFICANTLY WORSE. AT HIGHER WIND SPEED BOTH GIVE GOOD ESTIMATES, AND THE RAYLEIGH DISTRIBUTION IS CONSIDERABLY SIMPLER IN FORMAT AND APPLICATION. A HEIGHT EXTRAPOLATION SCHEME FOR WEIBULL PARAMETERS IS ALSO INVESTIGATED. RESULTS ARE SATISFACTORY FOR POWER ESTIMATES OF ENSEMBLES OF MACHINES, BUT THE SCATTER OF VALUES ABOUT THE MEAN MAKES THE METHOD INAPPROPRIATE FOR INDIVIDUAL CASES.

77-0104 DORNER H
WIND ENERGY CONVERSION: UNITS WITH HORIZONTAL/AXIS.
ENERGIE VOM WIND. PROCEEDINGS. CONFERENCE ON/WIND POWER WITH
EXHIBITION, BREMEN, GERMANY, F.R., JUNE 7-8, 1977. MUNCHEN, DGS, 1977.
P.81-97. (IN GERMAN)

A GENERAL SURVEY IS PRESENTED ON THE PROBLEMS OF HORIZONTAL AXIS WIND ENERGY CONVERTERS (HA-WEK). DESIGNS ARE CONCENTRATED ON PLANT FOR PRODUCING ELECTRICAL POWER. ONLY THE FUNDAMENTAL PROBLEMS OF

INDIVIDUALLY FUNCTIONING SYSTEMS AND POSSIBLE VARIATIONS OF ARRANGEMENT FOR TOTAL PLANT ARE CONSIDERED. THE ADVANTAGE OF THE HORIZONTAL AXIS WIND ENERGY CONVERTER COMPARED TO OTHER SYSTEMS IS SHOWN IN AN EXTENSIVE COMPARISON.

77-0105 DROZD D
THE THEORY OF HIGH-SPEED WINDMILLS. PART 1.
WIND POWER D.G. NO. 10: 28-33, FALL 1977.

THIS IS THE FIRST OF A SERIES OF ARTICLES ABOUT THE THEORY OF HIGH SPEED WINDMILLS, I.E., THOSE WHOSE TIP SPEED RATIO, THE RATIO BETWEEN THE SPEED OF THE BLADE TIPS AND THE WIND VELOCITY. IS FOUR OR GREATER.

77-0106 DUBEY M
CONVERSION AND STORAGE OF WIND ENERGY AS NITROGENOUS FERTILIZER.
INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH, PROCEEDINGS.
LA GRANGE PARK, ILLINOIS, AMERICAN NUCLEAR SOCIETY, 1977. VOL. 2,
P. 525-532.

THE USE OF WIND ENERGY, AIR, AND WATER TO PRODUCE AMMONIA FOR USE AS A NITROGENOUS FERTILIZER IS DISCUSSED. A STUDY SHOWS THAT IT IS TECHNOLOGICALLY FEASIBLE TO REDUCE THE SCALE OF AN AMMONIA PROCESSING PLANT TO PRODUCE A TINY FRACTION OF THE OUTPUT RATES OF A FULL SCALE COMMERCIAL PLANT. SUCH A SYSTEM CAN BE ADEQUATELY POWERED BY A WIND TURBINE DRIVING AN ELECTROLYSIS CELL TO PRODUCE THE REQUIRED HYDROGEN FEEDSTOCK. THE PROCESS IS DESCRIBED, AND SEVERAL FACTORS, SUCH AS ENERGY STORAGE, PRODUCT STORAGE, AND ENERGY BALANCE AND COMPONENT MATCHING, ARE CONSIDERED. THE ECONOMICS OF THE SYSTEM ARE ANALYZED, AND IT IS THOUGHT THAT THE COST OF THE PRODUCED FERTILIZER WILL BE COMPETITIVE IF NATURAL GAS PRICES CONTINUE TO RISE.

77-0107 DUCHON C E
MEASUREMENT AND ANALYSIS OF WIND FLOW IN COMPLEX TERRAIN WITH APPLICATION
TO SITING OF WECS. FINAL REPORT.
NTIS, MAY 1977, 74P.
DOE/NSF-00619/75/1

MEASUREMENTS OF WIND SPEED AND DIRECTION WERE MADE AT A HEIGHT OF ABOUT 8 M AT THREE LOCATIONS ALONG A TRANSECT THROUGH A DIVIDE-STREAMBED SYSTEM IN CENTRAL OKLAHOMA. STATION SPACING WAS ON THE ORDER OF 140 M AND THE VERTICAL DISTANCE FROM STREAMBED TO DIVIDE WAS ABOUT 20 M. THE RESULTS SHOW THAT FOR FLOW ACROSS THE DIVIDE AXIS AND FOR FLOW DOWN THE STREAMBED THE HIGHER THE WIND SPEED THE GREATER THE MAGNITUDE OF WIND SPEED REDUCTION AT A GIVEN LOCATION DOWN THE SLOPE. THE DECREASE IS APPROXIMATELY LINEARILY RELATED TO THE WIND SPEED AT THE DIVIDE. THE RELATIONSHIP BETWEEN THE RATIO OF WIND SPEED DOWN THE SLOPE TO THE DIVIDE SPEED AND THE DISTANCE DOWN THE SLOPE IS ALSO APPROXIMATELY LINEAR. FOR FLOW UP THE STREAMBED AND PARALLEL TO IT MEASUREMENTS INDICATE A SLIGHTLY HIGHER SPEED AT MID-SLOPE THAN AT THE STREAMBED OR DIVIDE. A METHOD WAS DEVISED FOR ESTIMATING THE ANNUAL DISTRIBUTION OF AVAILABLE WIND ENERGY WITH DIRECTION AT THE THREE FIELD STATIONS AND OKLAHOMA CITY, 50 KM AWAY. IT IS BASED ON A SHORT PERIOD OF SIMULTANEOUS WIND MEASUREMENTS AT BOTH SITES AND WIND CLIMATOLOGY AT OKLAHOMA CITY. AS EXPECTED THE AVAILABLE ENERGY FOR ALL STATIONS WAS GREATEST FOR THE SOUTHERLY WIND DIRECTION AND LEAST FOR THE EASTERLY DIRECTION. OVER ALL DIRECTIONS THE AVAILABLE WIND ENERGY WAS GREATEST AT THE DIVIDE LOCATION AND THE LEAST AT THE STREAMBED.

REINFORCED-CONCRETE TOWERS FOR THE PRODUCTION OF GASEOUS HYDROGEN AND
OXYGEN BY DECOMPOSITION OF WATER USING DIRECT CURRENT, ELECTROLYSIS.
GERMAN (FRG) PATENT NO. 2,532,676/A/, FEBRUARY 10, 1977. 5P. (IN
GERMAN)

A TOWER EQUIPPED WITH WIND WHEELS IS PROPOSED FOR THE ELECTROLYTICAL DECOMPOSITION OF WATER. IN ORDER TO ENSURE CONTINUOUS OPERATION, THE HEIGHT OF THE TOWER SHOULD BE > 70 M, I.E. BE IN THE WHIRL ZONE OF EARTH. THE ELECTRIC CURRENT NECESSARY IS GENERATED BY THE WIND WHEELS VIA GENERATORS. THE TOWER IS VERTICALLY SEPARATED IN THE CENTER AND OCCLUDED BY A CANT COPE. BOTH CHAMBERS ARE FILLED WITH ELECTROLYTES, AND EQUIPPED WITH AN ANODE AND A CATHODE. THE GASES PRODUCED OUST THE ELECTROLYTE INTO A STORAGE TANK AND ARE SUCKED OFF IN INTERVALS. FURTHER CLAIMS DESCRIBE THE CONFIGURATION OF THE TOWER, THE DUCTS, AND VALVES.

LOW COST RECORDER FOR A WIND ENERGY SURVEY.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS, CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. X20-X21.

AN OBSERVATIONAL PROGRAM FOR A WIND ENERGY SURVEY IS BEING CARRIED OUT IN SEVERAL AREAS OF NEW ZEALAND. THE INSTRUMENTATION REQUIRED, EXCLUDING THE ANEMOMETER ASSEMBLY, WAS DEVELOPED LOCALLY. WIND-RUN, OR MEAN WIND SPEED, IS OBTAINED BY COUNTING ONE PULSE PER REVOLUTION OF THE ANEMOMETER ON A MODIFIED POCKET CALCULATOR. MEAN WIND SPEEDS ARE RECORDED ELECTRONICALLY ON STANDARD TWO-CHANNEL REEL-TO-REEL OR CASSETTE TAPE DECKS. A FREQUENCY PROPORTIONAL TO THE WIND SPEED IS RECORDED ON CHANNEL ONE AND A CLOCK PULSE TRAIN ON CHANNEL TWO. MEAN WIND SPEEDS OVER TIME INTERVALS AS SHORT AS THREE TO FIVE SECONDS OR AS LONG AS ONE MONTH CAN BE RETRIEVED.

ANNUAL REPORT OF THE WIND CHARACTERISTICS PROGRAM ELEMENT FOR THE PERIOD APRIL 1976 THROUGH JUNE 1977.
NTIS, JULY 1977. 129P.
BNWL/WIND-10

THE WIND CHARACTERISTICS PROGRAM ELEMENT (WCPE) IS A SERVICE ELEMENT TO PROVIDE METEOROLOGICAL INFORMATION TO OTHER PARTS OF THE WIND ENERGY CONVERSION PROGRAM. IN THIS ROLE, THE WCPE HAS AS ITS GENERAL OBJECTIVE ACCELERATION OF THE DEVELOPMENT, COMMERCIALIZATION AND UTILIZATION OF RELIABLE AND ECONOMICALLY VIABLE WIND ENERGY CONVERSION SYSTEMS (WECS). TO ACCOMPLISH THIS OBJECTIVE, FOUR TECHNICAL PROGRAM AREAS HAVE BEEN ESTABLISHED WITHIN THE WCPE. THESE ARE: WIND CHARACTERISTICS FOR WECS DESIGN AND PERFORMANCE EVALUATION; WIND CHARACTERISTICS FOR WECS SITE SELECTION; WIND CHARACTERISTICS FOR WECS PRESITING EVALUATION; AND WIND CHARACTERISTICS FOR WECS PLANNING AND OPERATIONS. THIS REPORT DISCUSSES WORK UNDERTAKEN IN THE FIRST THREE OF THE PROGRAM AREAS.

77-0123 ENERGY LAB'S DIVERSE SEARCH LOOKS TO SUN, WIND AND ATOMS. ENG. NEWS-REC. 198(15): 108-111, APRIL 14, 1977.

SANDIA LABORATORIES INVOLVEMENT IN THE SEARCH FOR VIABLE ENERGY ALTERNATIVES IS A POTPOURRI OF SOLAR, FISSION, FUSION, FOSSIL, AND SYNTHETIC FUELS RESEARCH. THOUGH ITS MAJOR CONCERN IS STILL DEFENSE RELATED, SANDIA BEGAN AN INTENSIVE ENERGY RESEARCH PROGRAM IN 1963. THE LABORATORIES' ASSETS, WORTH \$353 MILLION, ARE OWNED BY ERDA, AND INCLUDE AN ENERGY BUDGET FOR 1977 TOTALING \$85 MILLION. OF SPECIAL NOTE AMONG ITS MANY PROJECTS IS A 5 MW THERMAL TEST FACILITY, CONSISTING OF 300 SUN-TRACKING REFLECTORS, THAT IS SLATED TO BECOME THE WORLD'S LARGEST SOLAR POWER PLANT. NUCLEAR AND FOSSIL FUEL RESEARCH ARE ALSO DETAILED.

77-0124 ENERGY RATE INITIATIVES. STUDY OF THE INTERFACE BETWEEN SOLAR AND WIND ENERGY SYSTEMS AND ELECTRIC UTILITIES.
NTIS, MARCH 1977. 106P.
PB-265607

THE IMPLEMENTATION OF ALTERNATIVE UTILITY RATE STRUCTURE AS REQUIRED BY THE ENERGY CONSERVATION AND PRODUCTION ACT COULD EASILY IMPACT THE ECONOMICS OF FUTURE SOLAR HEATING AND COOLING SYSTEMS FOR BUILDINGS (SHACOB). IT IS EXPECTED THAT SUCH VARIATIONS IN SHACOB ECONOMICS MAY AFFECT THE DESIGN OF THESE SYSTEMS AND THEIR FATE OF MARKET PENETRATION AND ULTIMATELY IMPACT THE BACKUP ENERGY LOAD THAT THEY PLACE ON THE UTILITIES. THIS REPORT DISCUSSES THE PROBLEM IN TERMS OF SEVEN KEY ISSUES, AND SUGGESTS SEVEN POSSIBLE ACTIONS GOVERNMENT AND REGULATORY BODIES MAY WISH TO CONSIDER.

77-0125 ENERGY: WHO'S DOING WHAT.
ARLINGTON, VIRGINIA, NATIONAL RECREATION AND PARK ASSOCIATION, JANUARY
1977. 47P.

APPROXIMATELY 200 U.S. CITIZEN GROUPS, COMPANIES, AND NON-PROFIT AGENCIES THAT ARE INVOLVED IN SOME TYPE OF ENERGY WORK ARE LISTED. THE LIST WAS COMPILED AS A SERVICE TO INTERPRETERS AND NATURALISTS IN PARKS AROUND THE NATION PARTICIPATING IN AN EXPERIMENTAL EFFORT TO ENCOURAGE THE USE OF ENERGY CONSERVATION THEMES IN PARK PROGRAMS (THE PARK PROJECT ON ENERGY INTERPRETATION). THE ORGANIZATIONS INCLUDED WERE SELECTED BECAUSE THEY HAVE PROGRAMS OR FACILITIES THAT MAY BE OF EDUCATIONAL VALUE TO CITIZENS. THEY EMBRACE A VARIETY OF POLITICAL AND PHILOSOPHICAL SOLUTIONS TO ENERGY PROBLEMS. FOR EXAMPLE, PRO-NUCLEAR AS WELL AS ANTI-NUCLEAR GROUPS, AND HIGH-TECHNOLOGY-ORIENTED CORPORATIONS AND LOW-TECHNOLOGY, SELF-SUFFICIENT APPROACHES ARE INCLUDED. THE COMPILATION IS ARRANGED ALPHABETICALLY, BY STATE, ALTHOUGH ALL STATES ARE NOT REPRESENTED.

 GRUMMAN'S JIM YEN MAY MAKE WIND POWER PROFITABLE.
 NEW ENG. 6(3): 19-23, MARCH 1977.

A GRUMMAN LIGINEER HAS INVENTED A WIND MACHINE THAT CREATES A TORNADO-LIKE WIND FLOW WITH THE POTENTIAL TO PRODUCE WIND PRESSURE ENERGY THAT IS ABOUT 3000 TIMES GREATER THAN THE KINETIC ENERGY TAPPED BY A WINDMILL. THE DESIGN CALLS FOR A TOWER WITH VANES THAT OPEN AND CLOSE. WHEN WINDS ENTER THE TOWER, THEY GAIN SPEED AND FORM A VORTEX; THE AIR THEN RUSHES INTO A TURBINE THAT DRIVES A GENERATOR. RESULTS OF EXPERIMENTS WITH A TOY MODEL OF THIS CONTRAPTION HAVE SHOWN THAT ENGINEER JIM YEN'S TORNADO MACHINE PRODUCES 10 TIMES MORE ENERGY THAN A CONVENTIONAL WINDMI'L DOES.

77-0128 ESCOBAR I, IBACACHE M E
CONTRIBUTION TO THE ANALYSIS OF THE DEVELOPMENT OF UNCONVENTIONAL ENERGY
SOURCES IN LATIN AMERICA. TRANSLATION OF SPANISH REPORT.
NTIS, APRIL 1977. 32P.
ERDA-TR-298

THE ENERGY DEMAND FOR LATIN AMERICA WILL BE SATISFIED BY THE END OF THE PRESENT CENTURY MAINLY THROUGH UTILIZATION OF ITS CONVENTIONAL HYDRAULIC AND FOSSIL RESOURCES. NUCLEAR ENERGY WILL EXPERIENCE A GREAT DEVELOPMENT

IN ARGENTINA, BRAZIL, AND MEXICO IN THE COMING 20 YEARS. THE ELECTRONUCLEAR ALTERNATIVE IN OTHER LATIN AMERICAN COUNTRIES WILL BE CONSIDERABLE DEPENDING ON THE DEGREE OF INDUSTRIALIZATION, GEOGRAPHICAL LOCATION AND THE POSSIBILITIES FOR INTERCONNECTING NETWORKS FOR TRANSMISSION AND DISTRIBUTION OF ELECTRICAL ENERGY IN THE COUNTRY CONSIDERED AND DEPENDING ON REDUCTION IN DESIGN SCALE AND SAVINGS MADE IN NUCLEAR REACTORS PRESENTLY IN USE (DROPPING DOWN TO CAPACITIES OF ABOUT 150 MW PER PLANT). THE DEVELOPMENT OF WIND ENERGY, THERMAL GRADIENT OF THE OCEAN, SOLAR ENERGY, PHOTOVOLTAIC CELLS, PROCESSES OF PHOTOSYNTHESIS, MHD ENERGY, GEOTHERMAL ENERGY, AND TIDAL POWER AS ENERGY SOURCES IS DISCUSSED.

77-0129 EVANS A L, REID R L, HENDRICKS R C
FEASIBILITY STUDY OF A COMBINED WIND-SOLAR SYSTEM FOR SPACE AND DOMESTIC HOT WATER HEATING.
AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, PROCEEDINGS OF THE ANNUAL MEETING. VOL. 1. ORLANDO, FLORIDA, JUNE 6-19, 1977. CAPE CANAVERAL, FLORIDA, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, 1977. SECT. 19. P.41-45.

IN THIS STUDY, A COMBINED WIND-SOLAR SYSTEM WAS SIMULATED WHERE THE ELECTRICAL ENERGY PRODUCED BY THE WIND GENERATOR WAS STORED THERMALLY IN THE WATER STORAGE TANK OF THE SOLAR SYSTEM. AN EXAMINATION OF WIND AND SOLAR DATA FOR CLEVELAND, OHIO SHOWED THE SYSTEM TO BE PARTICULARLY ATTRACTIVE FOR THIS LOCATION. A COMPUTER SIMULATION WAS RUN OVER A YEAR PERIOD USING A MODIFIED VERSION OF TRNSYS. TRNSYS HAD PREVIOUSLY BEEN MODIFIED TO INCLUDE A WIND GENERATOR SUBROUTINE. THE ECONOMIC ANALYSIS SHOWED THAT A COMBINED WIND-SOLAR SYSTEM WITH HOME-ASSEMBLED WIND GENERATORS WILL BE ECONOMICAL.

77-0130 HIRST P, REES D H
THE REGULATION, STORAGE, AND CONVERSION OF WIND PRODUCED ELECTRICAL
ENERGY AT THE LEVEL OF A FEW HUNDRED WATTS.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. F4-41 TO F4-48.

WIND PRODUCED ELECTRICAL ENERGY IS HIGHLY VARIABLE IN BOTH MAGNITUDE AND DURATION IN BOTH THE SHORT TERM--MINUTES, AND THE LONG TERM--HOURS AND DAYS. AS THE COST OF THE WIND TURBINE AND ITS SUPPORTING STRUCTURE IS VERY HIGH FOR THE POWER PRODUCED (COMPARED WITH OTHER PRIME SOURCES) IT IS DESIRABLE TO EXTRACT THE MAXIMUM PRACTICAL POWER FROM A FLUCTUATING WIND SPEED. NORMALLY POWER MUST BE EXTRACTED OVER A WIDE RANGE OF WIND SPEEDS, AND A LOAD BE APPLIED TO THE WIND TURBINE, APPROPRIATE TO THAT SPEED, TO OPERATE IT NEAR OPTIMUM EFFICIENCY. IT IS NECESSARY THAT ATTENTION BE PAID TO THE BEHAVIOUR WITH HIGH WIND SPEEDS TO PREVENT DAMAGE TO THE WIND TURBINE, ITS SUPPORT, OR THE POWER HANDLING EQUIPMENT. IN MANY CASES POWER IS REQUIRED AT A RATE WHICH BEARS NO RELATION TO WIND CONDITIONS AND STORAGE MUST BE PROVIDED. THIS PAPER DESCRIBES THE PROVISION OF A STEADY ELECTRICAL SUPPLY OF EITHER 50V, DC, OR 240V. 50HZ A.C., AT POWER LEVELS OF AROUND 100W. (THOUGH THESE FIGURES MAY BE VARIED), FROM WIND AS A PRIME SOURCE. THE TYPE OF APPLICATION ENVISAGED IS THE POWERING OF COMMUNICATIONS REPEATERS, NAVIGATIONAL AIDS, ETC.

77-0131 FEDERAL WIND ENERGY PROGRAM. SUMMARY REPORT. JANUARY 1, 1977. WASHINGTON, D.C., U.S. GOVT. PRINTING OFFICE, 1977. ERDA-77-32

TO ACCELERATE THE DEVELOPMENT, COMMERCIALIZATION AND UTILIZATION OF RELIABLE AND ECONOMICALLY VIABLE WIND ENERGY SYSTEMS: THIS IS THE OBJECTIVE OF THE FEDERAL WIND ENERGY PROGRAM, MANAGED BY THE WIND SYSTEMS BRANCH (WBS) OF THE ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION'S DIVISION OF SOLAR ENERGY. TO ACHIEVE THIS OBJECTIVE FOR BOTH SMALL AND LARGE WIND SYSTEMS INVOLVES ADVANCING THE TECHNOLOGY, DEVELOPING A SOUND INDUSTRIAL TECHNOLOGY BASE AND ADDRESSING THE NONTECHNOLOGICAL ISSUES WHICH COULD DETER THE USE OF WIND ENERGY. THIS SUMMARY REPORT OUTLINES THE PROJECTS BEING SUPPORTED BY THE PROGRAM THROUGH FY 76 TOWARD THE ACHIEVEMENT OF THESE GOALS. IT ALSO OUTLINES THE PROGRAM'S GENERAL ORGANIZATION AND THE PROGRAM ELEMENTS WHICH MAKE IT WORK.

77-0132 FEKETE G I SELF-CONTAINED 5,000 KW CAPACITY WIND ENERGY CONVERSION SYSTEM WITH STORAGE.

INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9, 1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS RESEARCH ASSOCIATION, 1977. P. F2.13-F2.29.

THE USE OF WIND ENERGY AS THE SOLE SOURCE OF GENERATING 5,000 KW-S OF CONTINUOUS ELECTRICAL POWER IS CONSIDERED FOR THE MAGDALEN ISLANDS. THE SYSTEM IS TO BE SELF-CONTAINED AND IT IS REQUIRED THAT IT CAN BE BUILT WITHIN THE NEXT FEW YEARS USING, BY THEN, KNOWN TECHNOLOGY. THE WIND ENVIRONMENT OF THE MAGDALEN ISLANDS IS FOUND TO BE IDEAL FOR WIND ENERGY CONVERSION SYSTEMS. PERFORMANCE CALCULATIONS ARE CARRIED OUT FOR TWO SYSTEMS WHICH ARE TECHNICALLY FEASIBLE. A CONSTANT LOAD DEMAND COMBINED WITH THE VARIATION IN THE AVAILABLE WIND ENERGY LEADS TO LARGE VARIATION IN THE GENERATOR LOAD FACTOR, AND TO EXTENSIVE STORAGE CAPACITY REQUIREMENTS. THE CAPITAL COST OF THE TWO SYSTEMS AND THE COST OF ELECTRICITY ARE ESTABLISHED TO FIRST ORDER.

77-0133 FERBER R, O'ROURKE D
ESTIMATION OF NUMBER OF INDIVIDUALS OWNING WIND ENERGY CONVERSION
SYSTEMS. PROGRESS REPORT, SEPTEMBER 1, 1977 - NOVEMBER 30, 1977.
NTIS, DECEMBER 1977. 4P.
C00/4549-1

THE PURPOSE OF THIS STUDY IS TO LOCATE AND INTERVIEW A SAMPLE OF INDIVIDUALS OWNING WIND ENERGY CONVERSION SYSTEMS (WECS) AND TO OBTAIN INFORMATION ABOUT THEIR USE AND EXPERIENCES WITH SETTING UP AND OPERATING THESE SYSTEMS. SINCE NO LISTS OF SUCH INDIVIDUALS ARE CURRENTLY AVAILABLE, A MAJOR TASK OF THIS STUDY WILL INVOLVE COMPILING SUCH A LIST, WHICH IS BEING DONE BY A VARIETY OF TECHNIQUES, INCLUDING THUS FAR SENDING LETTERS TO A LARGE RANGE OF INDIVIDUALS AND COMPANIES, REQUESTING THE NAMES OF ANY PERSONS WHO MAY OWN A WECS.

77-0136 FLAY R G J, LINDLEY D, BOWEN A J
FIELD MEASUREMENT OF THE ATMOSPHERIC BOUNDARY LAYER NEAR THE GROUND.
CHRISTCHURCH, NEW ZEALAND, UNIVERSITY OF CANTERBURY, 1977. 23P.

ACCURATE FIELD MEASUREMENTS OF THE TURBULENCE CHARACTERISTICS AND WIND SPEED PROFILES NEAR THE GROUND ARE ESSENTIAL FOR THE OPTIMUM SITING OF WIND TURBINES AND IN THE INVESTIGATION OF THEIR PERFORMANCE AT A TEST SITE. A FIELD LABORATORY UNIT APPROPRIATE FOR THIS APPLICATION HAS BEEN DEVELOPED BY THE UNIVERSITY OF CANTERBURY MECHANICAL ENGINEERING DEPARTMENT FOR THE PURPOSE OF RECORDING TURBULENCE DATA FROM THE ATMOSPHERIC BOUNDARY LAYER. WIND VELOCITY COUNTS AT SCAN RATES OF 7.5 HZ AND ABOVE CAN BE OBTAINED FROM UP TO TWELVE ORTHOGONAL ARRAYS OF FAST RESPONSE PROPELLER ANEMOMETERS AND RECORDED ON MAGNETIC TAPE FOR LATER ANALYSIS. THE TECHNIQUES EMPLOYED IN THE HANDLING AND SUBSEQUENT PROCESSING OF THE DATA ARE DESCRIBED AND SOME RESULTS FROM PRELIMINARY MEASUREMENTS IN THE FIRST TWENTY METRES OF A RURAL BOUNDARY LAYER ARE DISCUSSED.

MATHEMATICAL MODELLING OF TOPGRAPHIC EFFECTS ON WIND.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. A3.39-A3.52.

IT IS GENERALLY RECOGNIZED THAT ECONOMIC OPERATION OF LARGE-SCALE WIND ENERGY INSTALLATIONS MUST BE PRECEDED BY A COMPREHENSIVE STUDY TO SELECT OPTIMUM WIND ENERGY SITES. THE SURVEY MUST CONSIDER HOW SITES CAN BE EXPECTED TO DIFFER FROM EACH OTHER WITH RESPECT TO THEIR MULTI-YEAR WIND

CHARACTERISTICS. A NEW STEP TO OVERCOME SERIOUS DEFICIENCIES IN WIND CHARACTERESTICS ASSESSMENT PROCEDURES IS DESCRIBED. THIS STEP EMPLOYS MATHEMATICAL MODEL-BASED METEOROLOGICAL PREDICTION TOOLS. WITH THEM CLIMATOLOGICAL DATA FROM WEATHER STATIONS IN THE REGION ARE USED TO INFER CLIMATOLOGICAL DATA AT THE UNMEASURED LOCATIONS WITHIN THE REGION. METEOROLOGICAL PHENOMENA ARE CONSIDERED WHICH TAKE PLACE IN REGIONS COMPARABLE TO THE DISTANCE BETWEEN SYNOPTIC WEATHER STATIONS (APPROXIMATELY 200 KM) AND IN THE IMMEDIATE VIC. TY OF THE WINDMILL SITE (APPROXIMATELY 1 KM). COMPUTER CODES WERE DEVELOPED FOR EACH OF THESE REGIMES, AND CALCULATIONS OF WIND FLOW OVER COMPLEX TERRAIN HAVE BEEN PERFORMED. RESULTS OF SOME OF THESE WIND CALCULATIONS ARE PRESENTED, ILLUSTRATING THE EFFECTS OF TERRAIN ON WIND ENERGY POTENTIAL.

77-0139 FRERIS L L
PERFORMANCE-OPTIMISED WIND ENERGY CONVERSION SYSTEM FOR SPACE HEATING.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS, CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. X60-X62.

THE OBJECTIVE OF THIS PROJECT IS TO SET UP AND DEMONSTRATE A SMALL SIZE WIND ENERGY CONVERSION SYSTEM THAT IS CHEAP TO MANUFACTURE AND CAN PROVIDE ENERGY AT COMPETITIVE COST IN COMPARISION TO OTHER FUELS. FOR THE ECONOMICS TO BE FAVORABLE, IT IS NECESSARY TO SATISFY THE FOLLOWING CONDITIONS: (1) THE ENERGY CONVERTED SHOULD BE UTILIZED IN SUCH A WAY THAT THE MINIMUM COMPLICATION AND COST IS INCURRED, (2) A CHEAP ENERGY STORAGE DEVICE IS USED, (3) THE WINDMILL ROTOR SHOULD OPERATE AT MAXIMUM CONVERSION EFFICIENCY IRRESPECTIVE OF WIND SPEED CHANGES AND THE LEVEL OF UTILIZATION OF ITS OUTPUT SHOULD BE AS HIGH AS POSSIBLE. THE ABOVE CONDITIONS ARE SATISFIED IF THE WIND ENERGY IS WHOLLY UTILIZED FOR THE SPACE HEATING OF BUILDINGS AND GREENHOUSES. IN A HOUSEHOLD, SPACE AND IN A HOUSEHOLD, SPACE AND: WATER HEATING REPRESENT ABOUT 80 PERCENT OF THE YEARLY ENERGY DEMAND, SPACE HEATING IN NORTHERN CLIMATES BEING NECESSARY FOR TEN MONTHS OF THE YEAR AND WATER HEATING DEMAND BEING CONTINUOUS. WITH THE WINDMILL COUPLED TO AN ALTERNATOR THE OUTPUT OF WHICH IS USED DIRECTLY TO GENERATE HEAT IN A DISSIPATIVE LOAD, IMMEDIATE USE IS MADE OF THE AVAILABLE WIND ENERGY. WITH SUCH AN APPLICATION THERE IS NO NEED TO CONTROL THE FREQUENCY OF THE ALTERNATOR. THIS SIMPLIFIES THE ELECTRICAL SYSTEM AND PERMITS THE USE OF SIMPLER CONTROLLERS TO MAXIMIZE THE POWER EXTRACTED FROM THE WIND.

ECONOMICS OF A VERTICAL-AXIS WIND TURBINE.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. D1.1-D1.6.

SOME ECONOMIC ASPECTS OF THE VERTICAL-AXIS WIND TURBINE (DARRIEUS TYPE) ARE CONSIDERED. A SUMMARY OF THE VARIOUS KINDS OF APPLICATION IS PRESENTED. THE COMPONENTS OF THE TURBINE CONSIST OF CONVENTIONAL AND NEW DEVELOPED ONES. THE MANUFACTURING PROCESSES OF THE ROTOR BLADES AND THE ROTATING TOWER DEPEND ON THE SIZE OF THE UNIT TO A FAR EXTENT. IT IS PROVED BY A COST ESTIMATE THAT THE MANUFACTURING COSTS ARE HIGHLY INFLUENCED BY LABOR COST. SPLITTING UP OF THE TOTAL UNIT IN INDIVIDUAL COMPONENTS FACILITATES A LESS COMPLEX MANUFACTURE OF ALL COMPONENTS WITH HIGH LABOR RATE IN DEVELOPING COUNTRIES. BASED ON THE PRESENT STAGE OF TECHNICAL DEVELOPMENT, MANUFACTURING COSTS OF THE VERTICAL-AXIS TURBINE ARE TO BE EXPECTED IN THE SAME ORDER OF MAGNITUDE AS THE COMMERCIALLY AVAILABLE WIND TURBINE WITH HORIZONTAL-AXIS (10 KW). IN A POWER-RANGE ABOVE 20 KW IT CAN BE ASSUMED THAT THE DARRIEUS ROTOR WILL BE LESS ECONOMICAL.

- 77-0146 GILBERT B L, OMAN R A, FOREMAN K M
 FLUID DYNAMICS OF DIFFUSER AUGUMENTED WIND TURBINES.
 INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH, PROCEEDINGS.
 LA GRANGE PARK, ILLINOIS, AMERICAN NUCLEAR SOCIETY, 1977. VOL.2, P.
 1651-1659.

THE DIFFUSER AUGUMENTED WIND TURBINE (DAWT) IS ONE OF THE ADVANCED CONCEPTS BEING INVESTIGATED TO IMPROVE THE ECONOMICS OF WIND ENERGY CONVERSION SYSTEMS (WECS). APPLICATION OF MODERN BOUNDARY LAYER CONTROL TECHNIQUES HAS REDUCED THE SURFACE AREA REQUIREMENTS OF AN EFFICIENT DIFFUSER BY AN ORDER OF MAGNITUDE. MANY PARAMETERS THAT EFFECT THE PERFORMANCE OF THE DIFFUSER SYSTEM HAVE BEEN EXAMINED IN SMALL SCALE WIND TUNNEL TESTS WITH A FAMILY OF COMPACT DIFFUSERS, USING SCREENS AND CENTERBODIES TO SIMULATE THE PRESENCE OF A TURBINE. FLOW FIELD SURVEYS, OVERALL PERFORMANCE, THE EFFECT OF GROUND PROXIMITY, AND THE PROSPECTS FOR FURTHER IMPROVEMENT ARE DESCRIBED. THE BASELINE CONFIGURATION IS A CONICAL, 60 DEG INCLUDED ANGLE DIFFUSER WITH AN AREA RATIO OF 2.78 CONTROLLED BY TWO TANGENTIAL INJECTION SLOTS. THIS FIRST GENERATION DAWT CAN PROVIDE TWICE THE POWER OF A CONVENTIONAL WECS WITH THE SAME TURBINE DIAMETER AND WIND. ECONOMIC ESTIMATES SHOW THAT THIS DAWT CAN BE AS MUCH AS 50 PERCENT CHEAPER THAN CONVENTIONAL WECS FOR THE SAME RATED POWER.

DESIGN, FABRICATION, AND TEST OF A COMPOSITE MATERIAL WIND TURBINE ROTOR
BLADE.
NTIS, NOVEMBER 1977. 186P.
NASA-CR-135389

THE AERODYNAMIC AND STRUCTURAL DESIGN, FABRICATION, AND TEST OF A 60-FOOT (18.3-METER)- LONG FILAMENT WOUND, COMPOSITE MATERIAL, WIND TURBINE ROTOR BLADE ARE DESCRIBED. THE BLADE WAS DESIGNED FOR USE WITH THE DEPARTMENT OF ENERGY/NASA MOD-O 100 KILOWATT EXPERIMENTAL WIND TURBINE LOCATED IN SANDUSKY, OHIO.

77-0160 GRIFFITHS R T
THE EFFECT OF AEROFOIL CHARACTERISTICS ON WINDMILL PERFORMANCE.
AERONAUT. J. 81: 322-326, JULY 1977.

AN OUTLINE OF THE GENERAL DESIGN PROCEDURE FOR A MODERN HIGH SPEED WINDMILL IS PRESENTED ALONG WITH A REVIEW OF HOW THE AERODYNAMIC CHARACTERISTICS OF THE BLADE SECTION AFFECT THE POWER OUTPUT. THE ACTUAL WINDMILL PERFORMANCE IS EVALUATED WITH REGARD TO THE INTERFERENCE FACTORS, AND THE BASIC MOMENTUM CONSIDERATIONS. IT IS SHOWN THAT AIRFOIL CHARACTERISTICS HAVE SMALL EFFECTS ON PLANFORM SHAPE AND TWIST, BUT LARGE EFFECTS ON PERFORMANCE. SPECIFICALLY, IT IS CONCLUDED THAT THE MAXIMUM EFFICIENCY INCREASES RAPIDLY WITH A LIFT/DRAG RATIO OF UP TO APPROXIMATELY R = 30, THEREAFTER INCREASING LESS QUICKLY, AND THAT THE TIP SPEED RATIO ALSO DEPENDS ON THE CHARACTERISTIC OF THE AIRFOIL USED.

77-0161 GRIMMER D P, KOLSTAD C D
AN INEXPENSIVE METHOD FOR CONSTRUCTING DARRIEUS BLADES.
ALTERN. SOURCES ENERGY NO. 29: 14-20, DECEMBER 1977.

INEXPENSIVE WIND-POWER, PARTICULARLY FOR SMALL-SCALE APPLICATIONS, FROM VERTICAL-AXIS DARRIEUS WIND TURBINES HAS BEEN HAMPERED BY HIGH BLADE COSTS. THIS PAPER DISCUSSES A LOW COST BLADE DESIGN WHICH IS SIMPLE ENOUGH FOR CONSTRUCTION BY THE HOME CRAFTSMAN OR SMALL MANUFACTURER. MATERIALS COSTS ARE ESTIMATED AT \$74 FOR A SINGLE 15 FOOT BLADE (1977 COSTS). CONSTRUCTION TECHNIQUES AS WELL AS DESIGNS ARE DISCUSSED.

77-0162 GROSSMAN R. DANEKER G
JOBS + ENERGY.
ENVIRONMENTALISTS FOR FULL EMPLOYMENT REPORT, SPRING 1977. 21P.

HISTORICALLY, INDUSTRY HAS SOUGHT TO SUBSTITUTE ENERGY-INTENSIVE ECONOMIES FOR HUMAN LABOR. IT HAS SUCCEEDED IN REPLACING HUMAN LABOR WITH ENERGY PURCHASES AT VERY LOW RATES FROM AN EXPANDING ENERGY INDUSTRY, WHICH HAS BEEN ACCUMULATING AN EVER-SPIRALING WEALTH OF PROFITS. INSTEAD, ENERGY SHOULD BE USED TO SERVE THE PEOPLE. ENERGY SUFFICIENCY, ECONOMIC PROSPERITY AND JOBS SHOULD BE PURSUED THROUGH A

PROGRAM WITH VARIOUS SAFE, ENERGY-EFFICIENT TECHNOLOGIES. ALTERNATIVE TECHNOLOGIES, SUCH AS SOLAR AND WIND ENERGY AND BIOMASS CONVERSION, CAN ACCOMPLISH THE DUAL GOAL OF PROVIDING BOTH ENERGY AND JOBS. A STRONG INPUT OF NEW LABOR WILL BE NEEDED TO DESIGN, MANUFACTURE, INSTALL, AND MAINTAIN SOLAR AND OTHER ALTERNATIVE EQUIPMENT.

INCLUDED ARE THE HIGHLIGHTS OF THE QUARTER; REVIEW OF THE STATUS OF GENERAL DESIGN EFFORTS IN THE AREAS OF AERODYNAMICS, STRUCTURES, AND TESTING.

77-0164 HAACK B N
AN EXAMINATION OF SMALL WIND ELECTRIC SYSTEMS IN MICHIGAN. PH.D.
THESIS.
ANN ARBOR, UNIVERSITY MICROFILMS, ORDER NUMBER 77-18048, 1977. 223P.

THE USE OF SMALL WIND POWERED GENERATORS FOR SUPPLYING ELECTRICITY TO INDIVIDUAL HOUSEHOLDS IN MICHIGAN IS EXAMINED. SMALL WIND ELECTRIC SYSTEMS ARE NOT CURRENTLY ECONOMICALLY COMPETITIVE WITH ELECTRICITY FROM UTILITY COMPANIES. INCREASING COSTS OF ELECTRICITY FROM UTILITY COMPANIES, GOVERNMENTAL SUBSIDIES FOR INDIVIDUALS INSTALLING WIND ELECTRIC SYSTEMS, OR DECREASED CAPITAL COSTS OF THESE SYSTEMS AS A RESULT OF LARGE VOLUME PRODUCTION MAY GREATLY INCREASE THE ECONOMIC COMPETITIVENESS OF SMALL WIND ELECTRIC SYSTEMS. THE NET ENERGY ANALYSES OF SMALL WIND ELECTRIC SYSTEMS CONCLUDED THAT THESE SYSTEMS ARE ENERGETICALLY COMPETITIVE WITH EXISTING UTILITY COMPANY'S SYSTEMS. DIRECT ENVIRONMENTAL IMPACTS FROM THE NORMAL OR ABNORMAL OPERATION OF SMALL WIND ELECTRIC SYSTEMS APPEAR TO BE SLIGHT BUT INDIRECT ENVIRONMENTAL IMPACTS, E.G., INCURRED DURING ACQUISITION OF MATERIALS FOR CONSTRUCTION, MAY BE CONSIDERABLE.

77-0165 HAM N D
AEROELASTIC ANALYSIS OF THE TROPOSKIEN WIND TURBINE.
NTIS, APRIL 1977. 28P.
SAND-77-0026

THE TESTING OF TROPOSKIEN-TYPE WIND TURBINES HAS INDICATED THAT UNDER CERTAIN CONDITIONS SERIOUS VIBRATIONS OF THE BLADES CAN OCCUR, INVOLVING FLATWISE BENDING, TORSION, AND CHORDWISE BENDING. IT IS THE PURPOSE OF THIS REPORT TO PERFORM AN AEROELASTIC ANALSYIS OF THE STABILITY OF THE COUPLED BENDING AND TORSIONAL MOTION OF SUCH BLADES WITH A VIEW TO DETERMINING THE CAUSE OF THESE VIBRATIONS AS A MEANS OF SUPPRESSING THEM. THE EMPHASIS OF THE ANALYSIS IS ON OBTAINING PHYSICAL UNDERSTANDING RATHER THAN EXACT NUMERICAL RESULTS. THE EFFECT OF EXTREME VARIATION OF THE CHORDWISE LOCATION OF THE SECTION CENTER OF GRAVITY OF TROPOSKIEN-TYPE ROTOR BLADES WAS FOUND TO BE NEGLIGIBLE WITH REGARD TO BLADE FLUTTER. THIS CONCLUSION IMPLIES THAT CHORDWISE MASS BALANCING OF THE BLADES IS NOT REQUIRED, WITH CONSEQUENT LARGE REDUCTIONS IN BLADE DESIGN AND MANUFACTURING REQUIREMENTS, AND THEREFORE IN BLADE COST.

77-0166 HAMMOND A L
SOFT TECHNOLOGY ENERGY DEBATE: LIMITS TO GROWTH REVISITED?
SCIENCE 196(4293): 959-961, MAY 27, 1977.

CONGRESSIONAL INQUIRIES, OFFICAL STUDIES BY ERDA, AND IMPASSIONED REBUTTALS BY MUCH OF THE ENERGY ESTABLISHMENT ARE REACTIONS TO THE THESIS OF AMORY LOVINS, A PHYSICIST TURNED ENVIRONMENTAL ADVOCATE FOR FOE. LOVINS BELIEVES THAT THE U.S. ALREADY CAN ACCOMPLISH A TOTAL CONVERSION TO SOFT TECHNOLOGY TO PROVIDE THE COUNTRY'S ENERGY NEEDS. THE ANALYSIS ADVOCATES THE USE OF SOLAR HEATING AND COOLING, WIND AND HYDROELECTRICITY, AND FUELS FROM RENEWABLE BIOLOGICAL MATERIALS. THE CONTROVERSIAL ASPECTS OF LOVINS' WORK HOLDS THAT WIND MILLS, HYDROELECTRICITY, BIOMASS, AND OTHER RENEWABLE RESOURCES ARE ALREADY SUFFICIENT TO MAKE THE SWITCH. ESTABLISHED ENERGY ORGANIZATIONS, SUCH AS ERDA, HAVE SPENT MUCH TIME PICKING APART LOVINS' ATTEMPT TO JUSTIFY THIS

77-0167 HAND A J HOME ENERGY HOW-TO. NEW YORK, HARPER + ROW, 1977, 268P.

THIS IS A COMPLETE GUIDE TO SAVING AND PRODUCING HOME ENERGY. WAYS ARE SUMMARIZED TO CUT HOME OPERATING COSTS; CONSERVE FOSSIL FUELS; REDUCE POLLUTION; AND HEAT, COOL, AND POWER THE HOME. THE BOOK IS DIVIDED INTO TWO PARTS. PART I DEALS WITH WAYS TO CONSERVE ENERGY. PART II CONCENTRATES ON WAYS TO HARNESS THE ENERGIES OF SUN, WIND, WATER, AND BIOFUELS--AND HEAT WITH WOOD. PART I BEGINS WITH THOUGHTS ON ELIMINATING WASTE. MEANS ARE DESCRIBED TO KEEP WARM AND COOL AIR WHERE YOU WANT THEM. PRACTICAL CONCERNS INCLUDE INSULATION, CAULKING, WEATHERSTRIPPING, WINDOWS, DOORS, LANDSCAPING, AND HOUSE DESIGN. THE AUTHOR EXPLAINS HOW TO EVALUATE MATERIALS, COST, AND PAYBACK TIMES, AND PROVIDES CLEARLY ILLUSTRATED STEP-BY-STEP INSTRUCTIONS FOR HANDLING NEARLY ALL OF THE TASKS YOURSELF. MAINTENANCE OF FURNACES AND AIR CONDITIONING SYSTEMS IS DESCRIBED. PART II TELLS HOW TO PRODUCE ENERGY WITH SOLAR COLLECTORS, WIND AND WATER GENERATORS, BIOFUEL PLANTS, AND WOODBURNERS. THE AUTHOR EXPLAINS THE PRINCIPLES OF THE BEST HOT-AIR AND HOT-WATER SYSTEMS, AND THEN TELLS HOW TO DETERMINE WHICH WOULD WORK WELL. OVER 200 FASY-TO-FOLLOW ILLUSTRATIONS AND THE LATEST IN METHODS AND MATERIALS ARE INCLUDED.

77-0168 TILTING WINDMILL AT READING. ELECTR. POWER 23(9): 685, SEPTEMBER 1977.

A PROTOTYPE VARIABLE GEOMETRY VERTICAL AXIS WINDMILL DEVELOPED BY P. J. MUSGROVE AT THE UNIVERSITY OF READING IS DESCRIBED.

77-0169 HANNERVALL L, VON ZWEYBERGK S
LOW EFFICIENCY OF WIND POWER.
TEK. TIDSKR. 107(13): 27-28, 32-33, SEPTEMBER 9, 1977. (IN SWEDISH)

EXPERIMENTAL SMALL-SCALE WIND POWER PLANTS IN SWEDEN ARE DESCRIBED AND THEIR OPERATIONAL EXPERIENCE IS EVALUATED. THE DATA OBTAINED GIVE NO REASON TO AN EXAGGERATED OPTIMISM AS TO THE WIND POWER PLANT EFFICIENCY; THE INSTALLATION COSTS ARE HIGH AND THE ENERGY PRODUCTION IS LOW. PROBABILITIES FOR AN ECONOMICAL ENERGY PRODUCTION WITH SMALL-SCALE WIND POWER PLANTS ARE SHOWN TO BE SMALL.

77-0170 HARDER E L
SPECIFIC OUTPUT OF WINDMILLS: A DISCOVERY.
IEEE PROC. 65(11): 1623-1625, NOVEMBER 1977.

BECAUSE THE WIND VARIES WIDELY FROM POINT TO POINT ON THE EARTH IT HAS GENERALLY BEEN ASSUMED THAT THE SPECIFIC OUTPUT OF A WIND TURBINE GENERATOR, THE KILOWATTHOURS GENERATED IN A YEAR PER KILOWATT OF RATING, COULD ONLY BE DETERMINED FROM THE PARTICULAR WIND PATTERN INVOLVED. HOWEVER, IT WAS DISCOVERED EMPIRICALLY THAT THE SPECIFIC OUTPUT OF WINDMILLS IS PRACTICALLY INDEPENDENT OF THEIR LOCATION ON THE EARTH, OR OF THE MEAN ANNUAL WIND VELOCITY. IT DEPENDS INSTEAD ON THE RATIO OF THE RATED SPEED V/SUB R/, THE WIND SPEED AT WHICH FULL RATING IS REALIZED, TO THE MEAN ANNUAL WIND VELOCITY V/SUB M/. THIS IS DEMONSTRATED BY DATA FROM MANY DESIGNS AND WIND-POWER SITES. THE RESULTING CURVE OF SPECIFIC OUTPUT VERSUS V/SUB R//V/SUB M/, TOGETHER WITH THE FUNDAMENTAL FORMULA FOR POWER EXTRACTED FROM THE WIND BY A WINDMILL CONSTITUTES A USEFUL APPROXIMATE DESIGN AND OPTIMIZING METHOD.

77-0171 HARDY D M
WIND ENERGY ASSESSMENT.
NTIS, JUNE 1977. P 18-25.
UCRL-52000-77-6

AS PART OF THE FEDERAL WIND ENERGY PROGRAM, WORK ON THE ISLAND OF OAHU, HAWAII, TO DEVELOP GENERAL METHODS OF ASSESSING WIND ENERGY IS REPORTED; THIS WILL BE SUITABLE FOR OTHER MOUNTAINOUS REGIONS OF THE U.S., INCLUDING THE PACIFIC COAST, ROCKY MOUNTAIN, AND NEW ENGLAND AREAS. COMPUTER SIMULATIONS AND METEOROLOGICAL MEASUREMENTS HAVE BEEN MADE TO STUDY HOW WIND ENERGY VARIES IN TIME AND FROM PLACE TO PLACE. ROUGH, MOUNTAINOUS COUNTRY - LIKE OAHU - CAN CAUSE ENORMOUS LOCAL VARIATIONS IN WIND ENERGY. HOWEVER, SEVERAL SUBAREAS OF HIGH WIND-ENERGY POTENTIAL

HAVE BEEN IDENTIFIED, AND WORK IS BEING FOCUSED ON ONE THAT APPEARS ESPECIALLY SUITABLE FOR WIND-POWER DEVELOPMENT.

77-0172 HARDY D M
NUMERICAL AND MEASUREMENT METHODS OF WIND ENERGY ASSESSMENT.
NTIS, AUGUST 1977. 29P. ALSO NTIS, AUGUST 1977. 19P. REV.
UCRE-79896, UCRL-79896 (REV.1)

THIS PAPER WAS GIVEN AT THE 3D. BIENNIAL WIND ENERGY CONVERSION SYSTEMS CONFERENCE, WASHINGTON D.C., SEPTEMBER 19, 1977. THE LAWRENCE LIVERMORE LABORATORY (LLL) IS ENGAGED IN A QUANTITATIVE STUDY OF WIND ENERGY - ITS MAGNITUDE AND ITS VARIATIONS - AS PART OF THE FEDERAL WIND ENERGY PROGRAM. ATTENTION IS GIVEN TO HILLY OR MOUNTAINOUS REGIONS, WHERE TERRAIN STRONGLY EFFECTS THE NEAR-SURFACE AIR-FLOW. MANY PARTS OF THE NATION CAN BE CLASSED AS MOUNTAINOUS, INCLUDING THE PACIFIC COAST, ROCKY MOUNTAIN AND NEW ENGLAND REGIONS. COMPLEX TERRAIN RESULTS IN DRAMATIC INCREASES OR DECREASES IN WIND SPEED THAT MAKE WIND ENERGY ASSESSMENT IN THESE AREAS ESPECIALLY DIFFICULT. THE COMPLETE METHODOLOGY IS SYSTEMATIC AND SHOULD PROVE USEFUL IN ALL MOUNTAINOUS REGIONS IN PROVIDING A COST-EFFECTIVE DOCUMENTAILON OF THE WIND RESOURCE.

77-0173 HYDRAULIC WIND TURBINE PATENTED. WIND POWER DIG. 1(9): 21-22, SUMMER 1977.

A SYSTEM IS DESCRIBED FOR DERIVING USEFUL ENERGY FROM A WINDMILL IN WHICH A LIQUID PUMP IS DRIVEN BY THE WINDMILL. USEFUL ENERGY IS OBTAINED BY EITHER A FLUID DRIVEN GENERATOR OR A FRICTION HEATER. THE OUTPUT OF THE PUMP AND THE SPEED OF THE WINDMILL ARE CONTROLLED BY A CONSTANT VOLUME VALVE IN THE FLUID CIRCUIT.

77-0174 HARDY D M
WIND STUDIES IN COMPLEX TERRAIN.
NTIS, MAY 1977. 39P.
UCRL-79430

THIS PAPER WAS PRESENTED AT THE AMERICAN WIND ENERGY ASSOCIATION MEETING IN BOULDER, COLORADO, MAY 13, 1977. THE DEVELOPMENT AND APPLICATION OF GENERAL METHODS OF WIND ENERGY ASSESSMENT FOR HILLY OR MOUNTAINOUS AREAS IS DESCRIBED. THE ISLAND OF OAHU, HAWAII IS BEING USED AS AN INITIAL STUDY AREA TO DEVELOP PROCEDURES USEFUL THERE AND IN OTHER MOUNTAINOUS REGIONS. NUMERICAL MODEL CALCULATIONS AND FIELD MEASUREMENTS ARE EMPLOYED IN STUDYING THE SPATIAL AND TEMPORAL VARIATIONS OF WIND ENERGY. FIELD MEASUREMENT AND MODEL RESULTS SHOW VERY SIGNIFICAN, WIND ENERGY SPATIAL VARIATIONS OCCUR AS A RESULT OF COMPLEX TERRAIN. APPLICATIONS OF THE METHODOLOGY IN IDENTIFYING LOCATIONS OF WIND ENHANCEMENT WITH MULTI-MEGAWATT POWER COLLECTION POTENTIAL ARE DESCRIBED.

77-0175 HARDY D M, WALTON J J
WIND ENERGY ASSESSMENT.
GOLDEN, COLORADO, SOLAR ENERGY RESEARCH INSTITUTE, 1977. 29P.

THIS PAPER WAS PRESENTED AT THE MIAMI INTERNATIONAL CONFERENCE ON ALTERNATIVE ENERGY SOURCES, DECEMBER 5-7, 1977. MAJOR ASPECTS OF WIND ENERGY ASSESSMENT ARE DISCUSSED. REPRESENTATIVE EXAMPLES OF MODERN WIND TURBINE GENERATORS ARE BRIEFLY DESCRIBED IN TERMS OF SIZE, POWER, GENERAL DESIGN, AND OPERATING CHARACTERISTICS. SPATIAL AND TEMPORAL SCALES OF WIND VARIATIONS AND METEOROLOGICAL DATA REQUIREMENTS ARE DISCUSSED. METEOROLOGICAL CONDITIONS IN SEVERAL COASTAL AND MOUNTAINOUS AREAS WITH HIGH WIND ENERGY DENSITIES ARE SUMMARIZED. METHODS USED TO MAP WIND ENERGY VARIATIONS OVER THE ISLAND OF OAHU, HAWAII, ARE PRESENTED AS AN EXAMPLE OF WIND ENERGY ASSESSMENT IN COMPLEX TERRAIN. THE STUDY IS PRESENTLY DOCUMENTING WIND RESOURCES BY MEANS OF COORDINATED FIELD DATA COLLECTION AND NUMERICAL MODELING EFFORTS. A NUMERICAL WINDFIELD MODEL IS USED TO CALCULATE THREE-DIMENSIONAL VELOCITIES OVER THE ISLAND. DATA ARE COLLECTED FROM REMOTE FIELD MEASUREMENT STATIONS LOCATED TO IMPROVE MODEL INPUT DATA AND TO PROVIDE LOCAL WIND ENERGY MEASUREMENTS. A STATISTICAL ANALYSIS OF WIND OBSERVATIONS IS USED TO DETERMINE PREDOMINANT WIND PATTERNS. FIELD MEASUREMENT AND NUMERICAL MODEL RESULTS OBTAINED FOR OAHU, HAWAII, ARE GIVEN TO ILLUSTRATE HOW THIS GENERAL METHODOLOGY MIGHT BE APPLIED TO OTHER MOUNTAINOUS OR HILLY REGIONS.

77-0182 HENNESSEY J P
SOME ASPECTS OF WIND POWER STATISTICS.
J. APPL. METEOROL. 16(2): 119-128, FEBRUARY 1977.

SOME OF THE PROBLEMS OF WIND POWER STATISTICS ARE EXAMINED. THE EXACT RELATIONSHIP BETWEEN THE MEAN WIND SPEED AND THE MEAN OF THE CUBE OF THE WIND SPEED IS DISCUSSED. THE WEIBULL PROBABILITY DENSITY FUNCTION, A GOOD MODEL FOR WIND SPEED DISTRIBUTIONS, LEADS TO A WEIBULL MODEL FOR DISTRIBUTION OF THE CUBE OF THE WIND SPEED. THIS MODEL FACILITATES THE COMPUTATION OF THE MEAN AND THE STANDARD DEVIATION OF THE TOTAL WIND POWER DENSITY. HE USABLE WIND POWER DENSITY, AND THE WIND POWER DENSITY DURING THE HOURS WHEN AN AEROGENERATOR IS OPERATING. THE WEIBULL MODEL IS APPLIED TO DATA FROM THREE OREGON WIND POWER SITES LOCATED IN RUGGED TERRAIN. IT IS CONCLUDED THAT THE MEAN AND STANDARD DEVIATION OF THE

WIND SPEED ARE THE MINIMUM STATISTICS NECESSARY FOR WIND POWER ESTIMATES, THAT THE WEIBULL MODEL FOR THE WIND POWER DENSITY HAS MANY COMPUTATIONAL ADVANTAGES, AND THAT THE EXISTING WIND POWER STUDIES BASED SOLELY ON THE TOTAL MEAN WIND POWER DENSITY OMIT MUCH VALUABLE INFORMATION ABOUT THE WIND POWER POTENTIAL OF A SITE.

77-0183 HERRERA G, WEINER H, NELSON D

AN ASSESSMENT OF WIND-POWERED GENERATORS FOR NAVIGATIONAL AIDS.
INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH, PROCLEDINGS.
LA GRANGE PARK, ILLINOIS, AMERICAN NUCLEAR SOCIETY, 1977. VOL. 2, P.
1660-1667.

THIS STUDY EXAMINES ALTERNATIVE POWER SYSTEMS INCLUDING AN ASSESSMENT OF WIND-POWERED GENERATORS FOR USE ON NAVIGATIONAL AIDS. DATA FROM A TOTAL OF TWENTY-THREE SITES ON THE EAST, GULF AND WEST COASTS OF THE UNITED STATES WERE EVALUATED FOR THE ANNUAL WIND VELOCITY DISTRIBUTION. WIND ENERGY DATA FROM THE U.S. NAVAL WEATHER SERVICE COMMAND WERE PROCESSED AND ANALYZED WITH THE AID OF A COMPUTER PROGRAM DEVELOPED AT JPL. COMMERCIALLY AVAILABLE WIND-POWERED GENERATORS WERE ASSESSED TO DETERMINE EXISTING SYSTEMS APPLICABLE FOR MARINE USE. COMPARISONS WERE MADE WITH RESPECT TO INITIAL COST AND LIFETIME, BETWEEN WIND-POWERED GENERATORS AND OTHER POWER SYSTEMS APPLICABLE TO MINOR NAVIGATIONAL AIDS. SERVICE, OPERATION AND MAINTENANCE COSTS WERE NOT INCLUDED IN THIS STUDY. THE POWER SYSTEMS ANALYZED AND EVALUATED WERE: (1) WIND-POWERED GENERATORS, (2) SOLAR PHOTOVOLTAIC ARRAYS, (3) WIND-POWERED GENERATORS AND SOLAR PHOTOVOLTAIC ARRAYS, (3) WIND-POWERED GENERATORS AND SOLAR PHOTOVOLTAIC ARRAYS, (3) WIND-POWERED GENERATORS AND SOLAR PHOTOVOLTAIC ARRAYS IN COMBINATION, (4) ZINC-AIR PRIMARY BATTERIES, AND (5) A WAVE-MOTION POWERED GENERATOR. POWER SYSTEMS CORRESPONDING TO LIGHTHOUSE APPLICATIONS WERE EVALUATED BUT HAVE NOT BEEN INCLUDED IN THIS PAPER DUE TO SPACE LIMITATIONS.

EXECUTIVE SUMMARY ON RESEARCH ON WIND POWER POTENTIAL IN SELECTED AREAS
OF OREGON. FINAL REPORT.
OREGON STATE UNIVERSITY, REPORT NUMBER PUD77-5, JUNE 1977. 31P.

THE RESULTS OF A FIVE YEAR RESEARCH STUDY ARE SUMMARIZED AND THE FIFTH YEAR RESULTS DESCRIBED IN DETAIL. CONCLUSIONS ARE (1) SUFFICIENT WIND POWER IS AVAILABLE IN THE NORTHWEST; (2) THE YECHNOLOGY EXISTS; (3) THE ENVIRONMENTAL IMPACTS ARE MINIMAL IF GENERATORS ARE PLACED IN REMOTE AREAS; (4) WIND POWER PLUS HYDROPOWER CAN BE DEVELOPED MORE CHEAPLY THAN A COMBINATION OF HYDRO AND OIL OR GAS; AND (5) WIND POWER, OF ALL THE ALTERNATE ENERGY SOURCES, HAS THE GREATEST POTENTIAL AS A NEAR TERM SOURCE OF ENERGY.

SOME WINDPOWER DEVELOPMENTS IN KENYA.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. X75-X76.

RELIABLE WIND RESOURCES IN KENYA ARE TO BE FOUND MAINLY IN TWO AREAS, NAMELY THE FLAT, ARID NORTH EASTERN REGION AND IN THE WEST AROUND LAKE VICTORIA. IT HAS BEEN FOUND THAT THE WINDS IN THESE AREAS ARE MORE USEFUL THAN WAS FORMERLY THOUGHT. THE REASON FOR THIS IS THAT PREVIOUS WIND DATA IN THESE AREAS WAS SPARSE AND CONSISTED MAINLY OF DAY-TIME BEAUFORT ESTIMATES. IN AREAS WHERE LARGE TREES ARE ABSENT THIS LED TO AN UNDERESTIMATION OF WIND VELOCITY AND COMPLETELY IGNORED NIGHT WINDS, WHICH PARTICULARLY IN THE NORTH-EAST CAN BE VERY STRONG. CONVENTIONAL WATER-PUMPING MILLS OF THE MULTI-BLADE TYPE HAVE BEEN USED IN KENYA IN THE PAST BUT MAINLY IN THE HIGH-POTENTIAL FARMING AREAS WHERE THE WIND WAS NOT PARTICULARLY RELIABLE. WITH VERY FEW EXCEPTIONS THEY WERE NOT EMPLOYED IN THOSE AREAS OF GREATEST WIND POTENTIAL. ATTENTION IS NOW BEING GIVEN, HOWEVER, TO THE USE OF WINDPUMPS FOR SMALL SCALE IRRIGATION AND IN THE RANCHING AREAS FOR WATERING CATTLE. A THIRD COMMON APPLICATION IS SEEN AS PUMPING WATER FROM AN EARTH DAM OR WELL THROUGH A SAND FILTER FOR HUMAN CONSUMPTION.

 NCAT: APPROPRIATE TECHNOLOGY WITH A MISSION.
 SCIENCE 195(4281): 857-859, MARCH 4, 1977.

APPROPRIATE TECHNOLOGY IS GETTING A SMALL BUT SIGNIFICANT BOOST FROM THE FEDERAL GOVERNMENT, WHICH HAS AWARDED \$3 MILLION TO A NEW NATIONAL CENTER FOR APPROPRIATE TECHNOLOGY IN BUTTE, MONTANA. THE MONEY COMES FROM THE COMMUNITY SERVICES ADMINISTRATION, THE AGENCY WITH THE LEFTOVERS OF THE OLD OFFICE OF ECONOMIC OPPORTUNITY. THE PEOPLE BEHIND THE CENTER COME FROM A BACKGROUND OF COMMUNITY ACTIVISM AND BELIEVE THE TIME HAS COME TO BRING APPROPRIATE TECHNOLOGY WHERE IT IS MOST NEEDED. THE BEST AVAILABLE EXAMPLE OF WHAT THE CENTER HOPES TO STIMULATE IS A WINDMILL AND SOLAR COLLECTION SYSTEM ON A DILAPIDATED BUILDING IN A POOR SECTION OF NEW YORK CITY.

77-0195 HOLGATE M J
CROSS FLOW WIND TURBINE.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. B2.29-B2.38.

A THEORETICAL ANALYSIS IS PRESENTED OF THE OPERATION OF A TYPE OF CROSS FLOW TURBINE THAT DEPENDS FOR ITS ACTION ON ANGULAR MOMENTUM CONVERSION RATHER THAN AERODYNAMIC LIFT. EXPERIMENTAL RESULTS CONFIRM THE THEORETICAL PREDICTIONS TO A SATISFACTORY DEGREE. THESE ARE THAT WHILE THE TURBINE DOES DEVELOP A STARTING TORQUE AND HAS A STABLE TORQUE-SPEED CHARACTERISTIC, IT RUNS AT LOW VELOCITY RATIO AND HAS A LOW EFFICIENCY OF ENERGY CONVERSION.

77-0196 HOLMES J G, BALUSS J E, MIHLMESTER P E, MILLER S G, SUPER T L, THOMASANIAN J B ENVIRONMENTAL AND SAFETY IMPLICATIONS OF SOLAR TECHNOLOGIES. AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY. ANNUAL MEETING 1977. PROCEEDINGS. VOL. 1. CAPE CANAVERAL, FLORIDA, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, 1977. P. 285-289.

A SUMMARY OF AN EIGHT-VOLUME SERIES OF ENVIRONMENTAL REVIEWS (ERDA 77-47/1-8) PREPARED FOR THE ENVIRONMENTAL AND RESOURCE ASSESSMENTS BRANCH OF ERDA'S DIVISION OF SOLAR ENERGY BY ENERGY AND ENVIRONMENTAL ANALYSIS, INC., OF ARLINGTON, VIRGINIA IS PRESENTED. THE SERIES ANALYZED THE WIDE RANGE OF ENVIRONMENTAL IMPACTS EXPECTED TO OCCUR THROUGH THE IMPLEMENTATION OF THE EIGHT SOLAR TECHNOLOGIES CURRENTLY BEING FUNDED BY ERDA: HEATING/COOLING, SOLAR THERMAL ELECTRIC, TOTAL ENERGY SYSTEMS, INDUSTRIAL/AGRICULTURAL APPLICATIONS, PHOTOVOLTAICS, WIND, OCEAN THERMAL ENERGY CONVERSION, AND FUELS FROM BIOMASS.

A CONTRIBUTION TO THE AERODYNAMIC THEORY OF THE VERTICAL AXIS WIND TURBINE.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9, 1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS RESEARCH ASSOCIATION, 1977. P. C4-55 TO C4-72.

AN ANALYSIS IS MADE OF THE FLOW IN THE HORIZONTAL PLANE OF SYMMETRY OF A FAST RUNNING VERTICAL-AXIS WIND TURBINE HAVING A GREAT NUMBER OF STRAIGHT, VERY NARROW BLADES AND A HIGH HEIGHT-DIAMETER RATIO. THE ANALYSIS IS RIGOROUSLY VALID FOR ONLY VERY LIGHTLY LOADED TURBINES IN INCOMPRESSIBLE NONVISCOUS FLOW, BUT APPROXIMATIONS FOR HEAVIER LOADING

AND CORRECTIONS FOR VISCOUS EFFECTS ARE DERIVED. IT IS FOUND THAT HALF OF THE FLOW RETARDATION CAUSED BY THE TURBINE TAKES PLACE WITHIN THE TURBINE ITSELF. THUS BLADE INCIDENCE AND AERODYNAMIC LOAD ON THE BLADES ARE MUCH HIGHER ON THE WINDWARD THAN ON THE LEEWARD SIDE OF THE TURBINE. THE MAXIMUM VALUE OF THE POWER COEFFICIENT IN NON-VISCOUS FLOW FOR THIS TYPE OF TURBINE IS 92% OF THE THEORETICAL MAXIMUM FOR AN IDEAL WIND TURBINE.

ENERGY FOR THE VILLAGES OF AFRICA: RECOMMENDATIONS FOR AFRICAN
GOVERNMENTS AND OUTSIDE DONORS.
WASHINGTON, D.C., OVERSEAS DEVELOPMENT COUNCIL, FEBRUARY 25, 1977. 145P.

THE SUBJECT OF VILLAGE SOURCE ENERGY FOR THE VILLAGES AND FARMS OF SUB-SAHARAN AFRICA IS EXAMINED, AND A COURSE OF ACTION FOR AFRICAN POLICYMAKERS AND OUTSIDE DONORS IS RECOMMENDED. VILLAGE SOURCE ENERGY INCLUDES THOSE FORMS OF PRIMARY ENERGY FOUND IN THE VILLAGES AND FARMS (SUN, WIND, FLOWING WATER, ANIMAL AND CROP WASTE, AND WOOD). THE FIRS QUESTION FOR AFRICANS TO RESOLVE IS WHETHER VILLAGE SOURCE ENERGY IS A THE FIRST FEASIBLE APPROACH - OR WHETHER RURAL AFRICANS MUST WAIT THE DECADES THAT WILL ELAPSE BEFORE A POWER GRID BRINGS THEM RELIABLE CENTRALLY GENERATED THIS PAPER OUTLINES A COURSE OF ACTION FOR DEVELOPING THE INFORMATION NEEDED FOR AFRICANS TO MAKE TWO DECISIONS: (1) WHETHER VILLAGE-SOURCE ENERGY WARRANTS USE ON A WIDE SCALE AND, IF SO, (2) WHAT SYSTEM TO USE TO MATCH ENERGY HARDWARE WITH VILLAGE NEEDS AND TO INSTALL IT IN VILLAGES TOGETHER WITH A SUPPORT SYSTEM THAT WILL MAINTAIN IT, PROVIDE REPAIRS AND SPARE PARTS, AND GENERALLY KEEP IT OPERATING. COURSE OF ACTION CONSISTS OF THREE PARTS. 1. AFRICAN GOVERNMENTS PERHAPS WORKING WITH OUTSIDE DONORS, SHOULD CONDUCT CERTAIN RESEARCH CALLED "SOFTWARE." 2. CREATE OR STRENGTHEN ENERGY-RELATED INSTITUTIONS. 3. IN THE FIELD OF HARDWARE RESEARCH, THREE THINGS ARE CALLED FOR: (A INDUSTRIALIZED COUNTRIES' DOMESTIC ENERGY AND RESEARCH PROGRAMS SHOULD DEVOTE MORE ATTENTION TO SMALL-SCALE RENEWABLE ENERGY; (B) AID PROGRAMS SHOULD STRENGTHEN THEIR HELP TO AFRICAN RESEARCH ON HARDWARE BOTH TO APPLY AND ADAPT ENERGY TECHNOLOGIES DEVELOPED ELSEWHERE AND TO DEVELOP INDIGENOUS TECHNOLOGIES; AND (C) AID PROGRAMS SHOULD PROVIDE MORE HELP TO AFRICAN INSTITUTIONS TO DESIGN AND BUILD CHEAP, RELIABLE TOOLS, IMPLEMENTS AND APPLIANCES THAT CAN BE USED BY HAND OR POWERED BY VILLAGE SOURCE ENERGY TO PERFORM VILLAGE TASKS.

THIS BIBLIOGRAPHY SUPERCEDES EARLIER ONES BY THE SAME AUTHOR. THE FEASIBILITY, USE, AND ENGINEERING ASPECTS OF WIND POWER AND WINDMILLS ARE DISCUSSED IN THESE CITATIONS OF FEDERALLY-FUNDED RESEARCH REPORTS. ABSTRACTS PRIMARILY COVER THE USE OF WIND POWER FOR ELECTRIC POWER GENERATION AND WIND TURBINE DESIGN AND PERFORMANCE. GENERAL STUDIES DEALING WITH COMPARATIVE ANALYSES OF WIND POWER AND ALTERNATIVE ENERGY SOURCES ARE INCLUDED, AS ARE ENERGY STORAGE DEVICES WHICH CAN BE USED IN THESE SYSTEMS.

77-0203 HUTTER U
OPTIMUM WIND-ENERGY CONVERSION SYSTEMS.
ANN. REV. FLUID MECH. 9: 399-419, 1977.

INFORMATION ON OPTIMUM CHARACTERISTICS OF WIND TURBINES IS PRESENTED CONCERNING THE ADVANTAGES OF HIGH SPECIFIC SPEED, LIMITATIONS FOR SPECIFIC SPEED, ROTOR CHARACTERISTICS AT STALL STATE, THE ROTOR'S DISC-VELOCITY COEFFICIENT, VORTEX-STATE PROBLEMS, THE NEAR CRITICAL OPERATING ROTOR (NCR), REFINEMENTS SIMPLIFICATIONS, AND OPTIMUM RATED POWER.

77-0204 HUTTER U
CHANCES OF WIND POWER.
MITTEILUNGSBL. DTSCH. GES. SONNENENERG. 2(3): 3-8, MAY 1977. (IN GERMAN)

THE ARTICLE PRESENTS A SURVEY OF THE POSSIBILITIES TO USE WIND POWER IN WESTERN EUROPE, IN PARTICULAR IN THE FRG. THE WIND POWER POTENTIAL OF THE FRG AMOUNTS TO 220 TWH/A, WHICH REPRESENTS ABOUT 70% OF THE ELECTRIC POWER USED IN 1973. ON A MEDIUM-TERM BASIS (I.E. UNTIL 1990), WIND POWER PLANTS COULD MEAN A NOTICEABLE RELIEF FOR PUBLIC UTILITIES. CONCEPTS OF WIND POWER PLANTS ARE DISCUSSED. IN THIS CONTEXT, A COMPROMISE BETWEEN PLANT CAPACITY AND WIND AVAILABILITY IS TO BE CONSIDERED. FINALLY, THE COSTS OF PLANTS OF THIS KIND ARE DISCUSSED.

77-0205 HUTTER U
WIND POWER.
NTIS, 1977. 4P.
AED-CONF-77-139-004

THIS PAPER WAS GIVEN AT THE ENERGY POLICIES FORUM, STUTTGART, WEST GERMANY, MAY 9, 1977. A SURVEY IS PRESENTED OF THE POSSIBILITIES TO UTILIZE WIND POWER. IN THE FRG, WIND POWER PLANTS COULD MEET ABOUT 70% OF THE ELECTRICITY DEMAND (APPROXIMATELY 200 TWH ON THE BASIS OF FIGURES OF 1973). INTERCONNECTED OPERATION BETWEEN WIND POWER CONVERTERS AND SOLAR ENERGY COLLECTORS FOR SUPPLYING REMOTE PROPERTIES OR VILLAGES SEEMS PARTICULARLY PROMISING.

77-0206 HUTTER U POSSIBILITIES OF AND FUTURE FOR THE USE OF WIND ENERGY.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN,
GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977. P.
1-15. (IN GERMAN)

THE POSSIBILITIES OF AND FUTURE FOR THE USE OF WIND ENERGY IN WEST GERMANY ARE DISCUSSED, BASED ON METEROLOGICAL DATA. TAKING INTO ACCOUNT VARIOUS TECHNICAL AND ECONOMIC FACTORS IT IS PROPOSED TO INSTALL WIND-POWERED CONVERTERS IN THE 2 MW TO 5 MW CLASS AT ABOUT 5 TIMES DIAMETRAL SPACING ALONG EXISTING REGIONAL ROADS.

77-0207 HWANG H H, GILBERT L J
RANDOM SYNCHRONIZATION OF THE ERDA-NASA 100 KW WIND TURBINE GENERATORS
WITH LARGE UTILITY NETWORKS.
NTIS, JULY 1977. 17P.
NASA-TM-X-73613, N77-19580

THE PROBLEM OF SYNCHRONIZING A WIND TURBINE GENERATOR AGAINST AN INFINITE BUS UNDER RANDOM CONDITIONS IS STUDIED FOR THE FIRST TIME. WITH A DIGITAL COMPUTER, COMPLETE SOLUTIONS FOR ROTOR SPEED, GENERATOR POWER ANGLE, ELECTROMAGNETIC TORQUE, WIND TURBINE TORQUE, WIND TURBINE BLADE PITCH ANGLE, AND ARMATURE CURRENT ARE OBTAINED AND PRESENTED BY GRAPHS. EXPERIMENTS HAVE BEEN RECENTLY PERFORMED ON THE ERDA-NASA 100 KW WIND

TURBINE. EXPERIMENTAL RESULTS MATCHED COMPUTER STUDY RESULTS VERY CLOSELY AND CONFIRMED THAT THE RANDOM SYNCHRONIZATION CAN BE ACCOMPLISHED BY MEANS OF THE EXISTING SPEED CONTROL SYSTEM AND THE AUTOMATIC SYNCHRONIZER.

77-0208 IGNATIUS N
GUIDE TO DEMONSTRATIONS OF ENERGY CONSERVATION, SOLAR ENERGY AND OTHER
NEW TECHNOLOGIES: ENERGY EXTENSION SERVICE.
NTIS, SEPTEMBER 1977. 307P.
T1D-28044

THIS GUIDE WAS COMPILED BY THE ENERGY EXTENSION SERVICE (EES) FOR USE BY STATE EES PLANNERS. IT IS INTENDED TO FACILITATE VIEWING OF SOLAR, CONSERVATION, AND OTHER ENERGY TECHNOLOGIES AT WORK. THE DEMONSTRATIONS LISTED IN THIS GUIDE HAVE GENERALLY BEEN LIMITED TO THOSE MOST APPLICABLE TO INDIVIDUAL HOMEOWNERS, SMALL BUSINESSES, SCHOOLS, AND FARMS. IN A FEW STATES, HOWEVER, MUNICIPAL SYSTEMS HAVE ALSO BEEN INCLUDED. MANY OF THESE PROJECTS HAVE RECEIVED FEDERAL FUNDING. THE MAJORITY OF PROJECTS DEMONSTRATE SOME FORM OF SOLAR ENERGY. IN ADDITION TO SOLAR HEATING AND COOLING FOR HOMES AND COMMERCIAL BUILDINGS, A NUMBER OF EXAMPLES OF FARM APPLICATIONS SUCH AS SOLAR CROP DRYING ARE LISTED, AS WELL AS DEMONSTRATIONS OF WIND ENERGY, BIOMASS, PHOTOVOLTAICS, ETC. SINCE ALL SUCCESSFUL SOLAR HEATING AND COOLING SYSTEMS INCORPORATE SENSIBLE ENERGY-CONSERVING DESIGN, EACH SOLAR HEATING AND/OR COOLING PROJECT IS AT THE SAME TIME AN ENERGY-CONSERVATION PROJECT. WHEN THESE CONSERVATION DESIGNS ARE OF SPECIAL INTEREST OR INVENTIVENESS, THIS HAS BEEN NOTED. IN A FEW CASES, PROJECTS DEMONSTRATE ONLY CONSERVATION MEASURES, SUCH AS THE CONSTRUCTION OF BUILDINGS UNDERGROUND.

77-0209 IGRA 0
COMPACT SHROUDS FOR WIND TURBINES.
ENERGY CONVERS. 16(4): 149-157, 1977.

AS PART OF A LARGE PROJECT AIMED AT FINDING THE OPTIMAL CONFIGURATION FOR AN AEROGENERATOR TO EXPLOIT WIND POWER, AN INVESTIGATION WAS LAUNCHED TO FIND THE MOST COMPACT SHROUD POSSIBLE. THE DOMINANT CONTRIBUTOR TO THE SHROUD LENGTH IS THE STRUCTURE DOWNSTREAM OF THE TURBINE (THE DIFFUSER). THIS COMPONENT HAS AN EVER INCREASING CROSS-SECTION AS ONE PROGRESSES DOWNSTREAM. HOWEVER, FAST RATE OF AREA DIVERGENCE WILL CAUSE FLOW SEPARATION AND THE SIGNIFICANT REDUCTION IN OUTPUT POWER ASSOCIATED WITH IT. IT IS THE PURPOSE OF THE PRESENT PAPER TO DEMONSTRATE WAYS TO OVERCOME THIS DIFFICULTY. THIS CAN BE ACHIEVED EITHER BY PROPER DIVERSION AND INTRODUCTION OF THE SHROUD'S EXTERNAL FLOW INTO THE DIFFUSER'S INNER BOUNDARY LAYER OR, ALTERNATIVELY, BY THE USAGE OF A RING-FLAP.

77-0210 IGRA O
SHROUDED AEROGENERATOR.
ENERGY 2(4): 429-439, DECEMBER 1977.

EXPERIMENTAL STUDIES HAVE BEEN PERFORMED ON A SHROUDED AEROGENERATOR. THE DEVICE TESTED WILL PRODUCE ABOUT TWICE THE OUTPUT POWER OBTAINABLE FROM AN IDEAL WIND TURBINE WORKING UNDER THE SAME FREESTREAM CONDITIONS BUT WITHOUT A DUCT. THE AEROGENERATOR DOES NOT REQUIRE A DRIVING MECHANISM THAT WILL KEEP IT PARALLEL TO THE FREE-STREAM DIRECTION. A SIMPLE, TWO STAGE TURBINE WITH FIXED BLADE GEOMETRY WILL PROVIDE THE EXPECTED POWER OUTPUT OVER A FAIRLY WIDE RANGE OF FREE-STREAM VELOCITIES AND ROTATIONAL SPEEDS.

 ASPECTS OF SURFACE WIND BEHAVIOUR.
 WIND ENG. 1(1): 1-4, 1977.

THIS PAPER OUTLINES THE CURRENT UNDERSTANDING OF SOME OF THE PROBLEMS FACING THE ENGINEER IN CHOOSING A DESIGN WIND SPEED FOR A PARTICULAR SITE. FOR THE MOST PART THE COMPLEXITY OF THESE PROBLEMS DEFIES ANALYTIC TREATMENT OR COMPREHENSIVE MEASUREMENTS, BUT THERE ARE NOW SUFFICIENT STUDIES OF THE SIMPLER CASES TO MAKE THIS REVIEW WORTHWHILE. MOST OF THE RELEVANT MATERIAL HAS APPEARED SINCE 1970. THE BASIC MEAN WIND PROFILE ADOPTED IS THE LOG-LAW, SINCE IT CAN BE DERIVED FROM THE EQUATIONS OF MOTION UNDER IDEAL (BUT RATHER RESTRICTIVE) CONDITIONS. ALTHOUGH THESE CONDITIONS ARE RARELY MET IN PRACTICE, IT IS SHOWN THAT THE LOG-LAW FORMULATION NEVERTHELESS DESCRIBES A VERY USEFUL REFERENCE STATE OF THE WIND NEAR THE GROUND. THE EFFECTS OF CHANGES IN SURFACE ROUGHNESS AND VARIATIONS IN SURFACE SLOPE ARE DERIVED AS PERTURBATIONS TO THIS IDEAL STATE. TWO METHODS OF DESCRIBING EXTREME WIND GUSTS ARE ALSO DISCUSSED.

77-0216 JACOBS M
FEEDBACK.
WIND POWER DIG. 1(9): 5, SUMMER 1977.

THIS IS A SHARP REBUTTAL TO INFORMATION CONTAINED IN AN EARLIER ARTICLE IN WPD (1, #8, P. 6, SPRING 1977) ABOUT MARTIN JOPP'S WINDPLANT.

 CONF-770112

THE OVERALL PURPOSE OF THE PROGRAM, AS ORIGINALLY CONCEIVED, WAS TO OBTAIN SYSTEM-ORIENTED EVALUATIONS OF SELECTED CANDIDATE ENERGY STORAGE CONCEPTS FOR USE IN CONJUNCTION WITH PHOTOVOLTAIC AND WIND ENERGY CONVERSION SYSTEMS. INCLUDED ARE: (1) REVIEW OF ADDITIONAL CANDIDATE ENERGY STORAGE CONCEPTS (11 TOTAL); (2) EVALUATION OF THE INFLUENCE OF SELECTED PARAMETERS SUCH AS GENERATING SYSTEM OUTPUT, STORAGE CAPACITY, LOCATION AND EFFICIENCY ON ENERGY STORAGE COST GOALS; (3) EVALUATION OF THE EFFECT OF MULTIPLE-SOURCE STORAGE SYSTEM CHARGING ON THE WORTH OF PHOTOVOLTAIC AND WIND ENERGY SYSTEMS; AND (4) DETERMINATION OF THE VALUE OF TRANSIENT PHOTOVOLTAIC AND WIND ENERGY SYSTEM OUTPUT SMOOTHING USING ENERGY STORAGE TECHNIQUES.

UNCONVENTIONAL ENERGY SOURCES. STUDY MODULE. (FINAL).
NTIS, 1977. 278P.
PB-268301

THIS REPORT REVIEWS AVAILABLE LITERATURE AND CURRENT STATE-OF-THE-ART ON UNCONVENTIONAL ENERGY SOURCES: GEOTHERMAL, BIOMASS, OCEAN, WIND, SOLAR. IT ESTIMATES QUANTITIES OF ENERGY AVAILABLE TO THE PACIFIC NORTHWEST (OREGON, WASHINGTON, IDAHO) AND THE COSTS OF RECOVERING AND UTILIZING ENERGY FROM THESE SOURCES. THE SUMMARY CONTAINS PROJECTIONS OF THE CONTRIBUTION OF UNCONVENTIONAL SOURCES TO NORTHWEST ENERGY NEEDS. AN ANNOTATED BIBLIOGRAPHY IS INCLUDED.

 WISE-WIND, DESIGNING FOR JOBS.
 WIND POWER DIG. 1(9): 24-26, SUMMER 1977.

THE GEDSER WINDMILL, BUILT IN 1957 IN GERMANY, IS DESCRIBED AS AN EFFICIENT MACHINE WHICH COULD BE BUILT ECONOMICALLY, CREATING JOBS AS WELL AS AN ENERGY PRODUCING DEVICE.

77-0225 JONES B W, MORETTI P M
ECONOMIC ANALYSIS OF WIND GENERATION AND ENERGY STORAGE FOR ELECTRIC
UTILITY SYSTEMS.
ANNUAL CONFERENCE ON ENERGY, 3D, UNIVERSITY OF MISSOURI, ROLLA, OCTOBER
13, 1976. PROCEEDINGS. NORTH HOLLYWOOD, WESTERN PERIODICAL CO., 1977.
P. 255-263.

IF WIND GENERATORS ARE BEING EVALUATED AS PART OF A LARGER ELECTRIC UTILITY GENERATION SYSTEM, THE ECONOMIC ANALYSIS SHOULD CONSIDER ALL OF THEIR EFFECTS UPON THE MAKE-UP AND OPERATION OF THE REST OF THE SYSTEM. THE INTRODUCTION OF WIND GENERATORS CHANGES THE CHARACTERISTICS OF THE EFFECTIVE LOAD SEEN BY THE REST OF THE SYSTEM AND CONSEQUENTLY SHIFTS THE OPTIMAL MIX OF BASE, SWINGING, AND PEAKING CAPACITY AND THEIR OPERATION. STORAGE SYSTEMS USED IN CONJUNCTION WITH WIND GENERATORS MUST ALSO BE EVALUATED. THE STORAGE CAN ALSO BE EVALUATED BY DETERMINING ITS EFFECT UPON LOAD CHARACTERISTICS. IT IS SHOWN THAT THE STORAGE EVALUATION AND WIND-GENERATION EVALUATION CAN BE SEPARATED IN MOST CASES.

77-0226 MAGNIEN M
UTILIZING ALTERNATIVE ENERGY SOURCES IN FRANCE.
J. ENERGY RES. 1: 55-67, JANUARY - MARCH 1977.

THE RELATIVE MERITS OF VARIOUS ALTERNATIVE-ENERGY SOURCES ARE DISCUSSED WITH PARTICULAR REFERENCE TO THEIR SUITABILITY IN THE FRENCH CONTEXT. THE CASE IS PRESENTED FOR DECENTRALIZED SOLAR POWER AS AGAINST CENTRALIZED SOLAR-POWER PRODUCTION, AND SOME TEST INSTALLATIONS IN FRANCE ARE DESCRIBED. THE POTENTIAL FOR GEOTHERMAL POWER IS EXAMINED, AND IT IS SHOWN THAT THE RESOURCE IS ESSENTIALLY NONRENEWABLE. A HISTORY OF WIND GENERATION IN FRANCE IS PRESENTED, AND POWER EXTRACTION FROM THE SEAS IS DISCUSSED, WITH PARTICULAR REFERENCE TO THE RANCE TIDAL-POWER SCHEME. WHILE THE PUBLIC ROMANCE WITH ALTERNATIVE-ENERGY SCHEMES IS ACCEPTED, IT IS POINTED OUT THAT THIS MAY ONLY LAST FOR AS LONG AS THEIR IMPLEMENTATION IS ON A SMALL SCALE.

SEGMENTED AND SELF-ADJUSTING WIND TURBINE ROTORS.
INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH, PROCEEDINGS.
LA GRANGE PARK, ILLINOIS, AMERICAN NUCLEAR SOCIETY, 1977. VOL. 2, P.
1676-1683.

AN EXPLORATION HAS BEEN MADE OF THE CONCEPT OF AEROELASTICALLY SELF-ADJUSTING ROTOR BLADES DESIGNED WITH TWO GOALS IN MIND: ONE, TO KEEP (AT CONSTANT ROTOR RPM) THE ROTOR TORQUE OUTPUT ESSENTIALLY CONSTANT AUTOMATICALLY OVER A LARGE RANGE OF WIND SPEEDS; TWO, TO HAVE THE UNSTEADY AERODYNAMIC FORCES ACT AS DAMPING FORCES (RATHER THAN AS FLUTTER-PRODUCING FORCES). PRACTICAL CONSIDERATIONS LEAD TO A SEGMENTED BLADE DESIGN. THE PRELIMINARY RESULTS CONCERNING BOTH PERFORMANCE AND STABILITY OF SUCH BLADES ARE ENCOURAGING.

THE POTENTIAL FOR POWER PRODUCTION BY LARGE DISPERSED ARRAYS OF WIND TURBINES.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9, 1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS RESEARCH ASSOCIATION, 1977. P. A2.23-A2.38

THE PERFORMANCE CHARACTERISTICS HAVE BEEN SIMULATED FOR LARGE DISPERSED ARRAYS OF 500 KW - 1500 KW WIND TURBINES PRODUCING POWER AND FEEDING IT DIRECTLY INTO NEW ENGLAND (U.S.) UTILITY DISTRIBUTION GRID. THESE STUDIES SHOW THAT IN MODERATE-TO-GOOD WIND ENVIRONMENTS THE 500 KW GENERATORS CAN AVERAGE (ON AN ANNUAL BASIS) 190 TO 240 KW MEAN POWER OUTPUT, AND THE 1500 KW GENERATORS (WHICH MUST HAVE HIGHER WINDS TO OPERATE AT FULL CAPACITY) CAN AVERAGE 240 TO 340 KW MEAN POWER OUTPUT. THE BENEFICIAL EFFECT OF OPERATING LARGE DISPERSE ARRAYS OF WIND TURBINES IS THAT RELIABLE POWER OUTPUT CAN BE INCREASED - IF WINDS ARE NOT BLOWING OVER ONE PART OF THE ARRAY, CHANCES ARE THEY WILL OVER SOME OTHER PART OF THE ARRAY. THESE STUDIES INDICATE THAT 100 KW PER 500 KW GENERATOR CAN BE ACHIEVED WITH ABOUT 70% TO 85% RELIABILITY (DEPENDING ON SEASON) WITH NO STORAGE INVOLVED, BY SPREADING THE WIND TURBINES OVER A DISPERSÉ GRID ABOUT 500 KM SIZE. THE 1500 KW UNITS PRODUCE 100 KW EACH WITH ABOUT 55% TO 75% RELIABILITY FOR THE SAME SIZE ARRAY. RELIABILITY LEVELS OF 200 KW PER 500 KW GENERATOR WERE SIMILARLY FOUND TO BE 45% TO 65%, DEPENDING ON THE SEASON, WITH 200 KW PER 1500 KW GENERATOR HAVING 40% TO 60% RELIABILITY. THE ARRAY STUDIES ALSO SHOW THE LEVELS OF RELIABILITY WHICH CAN BE ACHIEVED WITH STORAGE OF VARIOUS DESIGN DURATION. A STORAGE TIME OF 24 TO 48 HOURS WOULD INCREASE THE 200 KW PER GENERATOR POWER OUTPUT TO ABOUT 95% RELIABILITY. REASONABLY STEADY HIGH WIND POWER IN WINTER AND HIGH AFTERNOON PEAK WIND POWER IN SUMMER (CORRESPONDING TO PEAK AIR CONDITIONING LOAD) MEANS HOWEVER, THAT SIGNIFICANT PEAK LOAD DISPLACEMENT CAN BE ACHIEVED WITHOUT USE OF STORAGE.

FOUR PROBABILITY DENSITIES (LOG-NORMAL, GAMMA, WEIBULL, AND RAYLEIGH) AND
THEIR APPLICATION TO MODELLING AVERAGE HOURLY WIND SPEED.
AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, PROCEEDINGS
OF THE ANNUAL MEETING. VOL. 1. ORLANDO, FLORIDA, JUNE 6-19, 1977. CAPE
CANAVERAL, FLORIDA, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY
SOCIETY, 1977. SECT. 19, P. 6-10.

FOUR PROBABILITY DENSITY FUNCTIONS (THE LOG-NORMAL, THE GAMMA, THE WEIBULL, AND THE RAYLEIGH) AND PROCEDURES FOR ESTIMATING THE PARAMATERS OF EACH DENSITY FUNCTION ARE DESCRIBED. THE MODELS ARE THEN USED TO DESCRIBE AVERAGE HOURLY WIND SPEED FOR SELECTED MONTHS AT MT. TOM, HOLYOKE, MASSACHUSETTS. CHI-SQUARE GOODNESS OF FIT TESTS ARE THEN CONDUCTED TO DETERMINE THE APPROPRIATENESS OF EACH MODEL. THE RESULTS INDICATE THAT THE GAMMA AND THE WEIBULL DENSITY FUNCTIONS ARE MORE APPROPRIATE MODELS FOR THE DESCRIPTION OF AVERAGE HOURLY WIND SPEED.

AEROELASTIC PROBLEMS FOR WIND ENERGY CONVERTERS.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN,
GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977. P.
133-164. (IN GERMAN)

A SURVEY IS PRESENTED ON THE AEROELASTIC RELATIONSHIP IN WIND ENERGY CONVERTERS. THE DESIGN IS CONCENTRATED ON UNITS WITH HORIZONTAL AXES. THE BASIC DYNAMIC CONDITIONS ARE EXPLAINED. SUBSEQUENTLY THE NATURAL FREQUENCIES OF OSCILLATION ARE CONSIDERED WHICH PLAY AN IMPORTANT PART IN AEROELASTIC PROCESSES. ONE MUST DISTINGUISH BETWEEN PROBLEMS OF STABILITY AND OF DYNAMIC RESPONSE. THE IMPORTANCE OF AEROELASTIC INVESTIGATION IS UNDERLINED BY EXPERIENCE IN OPERATING WIND ENERGY CONVERTERS AND EXAMPLES OF CALCULATION.

77-0236 KINDEREN W J G J DER, MEEL J J E A VAN, SMULDERS P T EFFECTS OF WIND FLUCTUATIONS ON WINDMILL BEHAVIOUR. WIND ENG. 1(2): 126-240, 1977.

A SYSTEM-ANALYTICAL APPROACH IS PROPOSED TO DESCRIBE THE OUTPUT, I.E., POWER AND FORCES, OF A WIND MACHINE FOR THE STOCHASTIC INPUT SIGNAL, THE WIND. A SIMPLE MODEL IS PRESENTED TO DESCRIBE THE FLUCTUATIONS OF WIND SPEED AND DIRECTION BY MEANS OF AVERAGE WIND SPEED AND WIND DIRECTION, THEIR VARIANCES AND TIME CONSTANTS. THESE INPUT SIGNALS ARE USED TO CALCULATE THE INFLUENCE OF WIND FLUCTUATIONS ON WINDMILL PERFORMANCE, INCLUDING THE EFFECTS OF NONUNIFORMITY OF THE FLOW IN THE ROTOR PLANE, ROTOR INERTIA AND YAWING OF THE ROTOR HEAT. EXPERIMENTAL RESULTS FOR A SMALL 2-BLADED WINDGENERATOR (DIAMETER ABOUT 4 M) ARE REPORTED.

77-0237 KLING A
VARIABLE SPEED WIND TURBINES FOR HIGH WIND ENERGY CONVERSIONS.
WIND ENG. 1(2): 141-149, 1977.

THIS STUDY COMPARES VARIABLE SPEED AND CONSTANT SPEED ROTOR GENERATOR SYSTEMS, AND SHOWS THAT UNDER CERTAIN CONDITIONS THE FORMER MAY EXTRACT MORE THAN TWICE AS MUCH USEFUL ENERGY AS THE LATTER. ALSO SUGGESTED ARE A ROTOR CONFIGURATION HAVING LESS VIBRATIONAL PROBLEMS THAN THE PROPELLER AND A HIGH FREQUENCY GENERATOR SPECIALLY ADAPTABLE TO VARIABLE SPEED SYSTEMS.

77-0238 KLING A
WIND POWER PLANT.
GERMAN (FRG) PATENT NO. 2,524,360/A/, JANUARY 13, 1977. 37P. (IN GERMAN)

THE WIND POWER PLANT DESCRIBED HAS AT LEAST ONE ROTOR WHICH IS COUPLED TO AN ELECTRICITY GENERATOR. THE SYSTEMS ARE FIXED TO A SUSPENDED BODY SO THAT IT IS POSSIBLE TO SET UP THE WIND POWER PLANT AT GREATER HEIGHT WHERE ONE CAN EXPECT STRONGER AND MORE UNIFORM WINDS. THE ANCHORING ON THE GROUND OR ON A FLOATING BODY IS DONE BY MOORING CABLES WHICH CAN SIMULTANEOUSLY HAVE THE FUNCTION OF AN ELECTRIC CABLE. THE WHOLE SYSTEM CAN BE STEERED BY FINS. THE ROTOR SYSTEM ITSELF CONSISTS OF AT LEAST ONE PAIR OF CONTRAROTATING, MOMENTUM BALANCED ROTORS.

 CONTROL SYSTEM FOR WIND POWERED GENERATORS.
 NTIS, MAY 1977. 15P.
 SAND-77-0287

IN A SYSTEM OF WIND-POWERED GENERATORS, A RELIABLE YET INEXPENSIVE

CONTROL SYSTEM IS DESIRABLE. SUCH A SYSTEM WOULD BE COMPLETELY AUTOMATIC SO IT COULD BE LEFT UNATTENDED FOR LONG PERIODS. IT WOULD RESPOND TO ELECTRICAL REPRESENTATIONS OF DATA SUCH AS BEARING TEMPERATURE, VIBRATION, WIND VELOCITY, TURBINE VELOCITY, TORQUE, OR ANY OTHER PERTINENT DATA. IT WOULD RESPOND BY STARTING OR STOPPING THE TURBINE, CONTROLLING THE LOADING, OR SUUNDING AN ALARM. A MICROPROCESSOR-BASED CONTROLLER CAPABLE OF THESE FUNCTIONS IS DESCRIBED.

77-0241 LANEVILLE A
STUDY OF THE FEASIBILITY OF EXPLOITING THE GALLOPING PHENOMENON AS ENERGY
SOURCE.
CAN. SOC. MECH. ENG. TRANS. 4(1): 23-26, 1976-1977. (IN FRENCH)

AEROELASTIC GALLOPING, OR VIBRATIONS OF AN AERODYNAMICALLY UNSTABLE PRISM, IS EXPLORED AS A POTENTIALLY USEFUL CONVERSION MECHANISM FOR EXPLOITING WIND ENERGY. VIBRATIONS ASSOCIATED WITH SHEDDING OF VORTICES ARE ASSUMED PRESENT. THE SHED VORTICES GENERATE OSCILLATIONS OF THE GALLOPING PRISM ONLY WHEN THE STROUHAL FREQUENCY CORRESPONDS TO THE PRISM NATURAL FREQUENCY (AT A SINGLE WIND VELOCITY). THE EFFICIENCY OF THE MECHANISM IS FOUND QUESTIONABLE FOR THE APPLICATION IN MIND. THE ORIENTATION OF THE PRISM IN A WIND FIELD CONSTANTLY CHANGING IN DIRECTION, TURBULENCE SPECTRA, AND CONVERSION OF THE CONSTANT FREQUENCY GENERATED TO 60 HZ BY AN APPROPRIATE SET OF MASSES AND SPRINGS, ARE CONSIDERED.

WIMD POWER SYSTEMS. A SELECT BIBLIOGRAPHY.
NTIS, JANUARY 1977. 58P.
N78-14627

THE LIST INCLUDES 331 REPORTS, ARTICLES, CONFERENCE PAPERS, AND OTHER DOCUMENTS CONCERNING WIND ENERGY POLICY, CONVERSION, TECHNOLOGY, AND TRANSFER. A SUBJECT INDEX IS INCLUDED.

77-0243 LAPIN E E ECONOMIC COMPETITIVENESS OF WINDMILLS. ENERGY CONVERS. 16(4): 213-220, 1977.

THE CONDITIONS UNDER WHICH WINDMILLS BECOME COMPETITIVE WITH THE GENERATION OF ELECTRIC POWER FROM FOSSIL FUELS ARE EXAMINED. THE INFLUENCE OF COST OF CONSTRUCTION, FINANCING ARRANGEMENTS, AND THE FUTURE COST OF FUELS IS SHOWN. ENERGY STORAGE AND NETWORK ARRANGEMENTS FOR MILLS ARE CONSIDERED BRIEFLY, AS ARE ALTERNATE USES FOR MILLS, E.G., THE UTILIZATION OF MILL OUTPUT DIRECTLY FOR HEATING OR FOR THE PRODUCTION OF A FUEL.

77-0244 LINSCOTT B S, GLASGOW J, ANDERSON W D, DONHAM R E EXPERIMENTAL DATA AND THEORETICAL ANALYSIS OF AN OPERATING 100 KW WIND TURBINE.

NTIS, 1977. 22P.
DOE/NASA/1028-78/15

EXPERIMENTAL TEST DATA HAVE BEEN CORRELATED WITH ANALYSES OF TURBINE LOADS AND COMPLETE SYSTEM BEHAVIOR OF THE ERDA--NASA 100 KW MOD-O WIND TURBINE GENERATOR OVER A BROAD RANGE OF STEADY STATE CONDITIONS, AS WELL AS DURING TRANSIENT CONDITIONS. THE DEFICIT IN THE AMBIENT WIND FIELD DUE TO THE UPWIND TOWER TURBINE SUPPORT STRUCTURE WAS FOUND TO BE VERY SIGNIFICANT IN EXCITING HIGHER HARMONIC LOADS ASSOCIATED WITH THE FLAPPING RESPONSE OF THE BLADE IN BENDING.

77-0245 LEHNER G
POSSIBILITIES OF OPENING UP NEW NON-NUCLEAR AND NON-FOSSIL ENERGY
SOURCES.
TECH. MITT. 70(6/7): 349-354, JUNE 1977. (IN GERMAN)

AS POSSIBLE NONNUCLEAR AND NONFOSSIL NEW ENERGY SOURCES ONE CAN DISCUSS THREE ESSENTIALLY DIFFERENT OPTIONS: TIDAL ENERGY, GEOTHERMAL ENERGY, AND SOLAR ENERGY. THE WORD SOLAR ENERGY IS USED HERE IN A BROAD SENSE INCLUDING THE DIRECT USE OF SOLAR RADIATION AND THE INDIRECT USE OF SECONDARY ENERGIES DERIVED FROM SOLAR RADIATION. A DISCUSSION OF THE NATURAL ENERGY RESOURCES OF THE EARTH LEADS TO AN EVALUATION OF THE FUTURE POSSIBILITIES FOR THE DIFFERENT OPTIONS. THE POTENTIAL OF TIDAL ENERGY IS VERY SMALL. GEOTHERMAL ENERGY HAS A MUCH LARGER POTENTIAL, BUT

ONLY IF ONE CONSIDERS THE HEAT STORED IN "HOT DRY ROCKS". THE TECHNOLOGY FOR ITS USE IS NOT YET AVAILABLE. IT MAY MEET ECONOMIC AND ENVIRONMENTAL DIFFICULTIES. THUS THE FUTURE IMPORTANCE OF GEOTHERMAL ENERGY IS NOT CLEAR NOW. SOLAR ENERGY FINALLY HAS AN EXTREMELY LARGE POTENTIAL. TECHNOLOGIES FOR SEVERAL METHODS OF ITS MORE OR LESS DIRECT USE ARE AVAILABLE. THE MAIN PROBLEMS ARE ECONOMIC ONES. IN THE LONG RUN SOLAR ENERGY SHOULD BE ABLE TO CONTRIBUTE SIGNIFICANTLY TO THE SOLUTION OF THE ENERGY PROBLEM IF THE ECONOMIC PROBLEMS CAN BE SOLVED. IN THE SHORT RUN AN APPRECIABLE CONTRIBUTION IS, HOWEVER, NOT TO BE EXPECTED.

77-0246 LEWIS R I, WILLIAMS J E, ABDELGHAFFAR M A
A THEORY AND EXPERIMENTAL INVESTIGATION OF DUCTED WIND TURBINES.
WIND ENG. 1(2): 104-125, 1977.

PRACTICAL WIND TURBINE DESIGNS ARE EXAMINED AND COMPARED, WITH THE OBJECT OF SELECTING THE ONE BEST SUITED TO DOMESTIC USE IN LOW-LEVEL TECHNOLOGY. ATTENTION IS FOCUSED IN THIS PAPER ON DUCTED (OPEN) WIND TURBINES. WIND TURBINE (WT) ICLAL EFFICIENCY (DUCTED OR UNSHROUDED), TOTAL WIND THRUST ON THE SYSTEM, DESIGN OF A THEORETICAL WT DUCT, DIFFUSER DESIGN AND TURBINE DESIGN (BLADING AND IMPELLER) ARE DESCRIBED. RESULTS SHOW THAT A GAIN IN POWER OUTPUT CAN BE OBTAINED FROM A WT OF SPECIFIED DIAMETER BY USING A SUITABLY SHAPED DUCT. THE OPTIMUM DIFFUSER AREA RATIO IS FOUND TO BE ROUGHLY 10% LARGER THAN THE THEORETICALLY PREDICTED VALUE. POWER OUTPUT IS MAXIMIZED WHEN SOME STALL EXISTS AT THE DIFFUSER OUTLET.

77-0247 LILLEY G M
THE AERODYNAMIC EFFICIENCY OF WINDMILLS.
AERONAUT. Q. 29(1): 1-17, FEBRUARY 1978.

THE PAPER REPRODUCES THE RESULTS OF AN EARLIER REPORT ON THE VORTEX THOURY OF WINDMILLS AND FOLLOWS THAT THEORY THROUGH TO ESTABLISH THE AERUDYNAMIC DESIGN PROCEDURE FOR A HORIZONTAL AXIS WINDMILL. THE RESULTS ARE SHOWN TO DIFFER CONSIDERABLY FROM THOSE GIVEN IN A RECENT PAPER BY GRIFFITH AND THE DIFFERENCES ARE EXPLAINED. THE MAIN CONCLUSION IS THAT, WHEN FULL ALLOWANCE IS MADE FOR THE DRAG OF THE BLADES, HUB AND TIP LOSSES, AND LOSSES DUE TO INTERFERENCE WITH THE SUPPORT TOWER, THE POWER OUTPUT COEFFICIENT OR EFFICIENCY OF A HORIZONTAL AXIS WINDMILL CANNOT EXCEED 30 TO 35 PER CENT, AS COMPARED TO AN IDEAL EFFICIENCY OF 59 PER CENT.

77-0248 LIMAYE D R
OZARKS REGION ENERGY ALTERNATIVES STUDY. WORKING PAPER XIII.
NONCONVENTIONAL ENERGY SOURCES.
LITTLE ROCK, ARKANSAS, REGIONAL COMMISSION, 1977. 18P.

THE OZARKS REGION ENERGY ALTERNATIVES STUDY FOCUSED ON POLICY OPTIONS AT THE STATE AND REGIONAL LEVELS FOR THE PERIOD 1977 TO 1985. SINCE IT IS UNLIKELY THAT NONCONVENTIONAL ENERGY SOURCES WOULD MAKE SIGNIFICANT CONTRIBUTIONS TO THE STATE OR REGIONAL TOTAL ENERGY SUPPLY, THE STUDY DID NOT DEVOTE A LARGE AMOUNT OF RESOURCES TO THE EVALUATION OF POTENTIAL NONCONVENTIONAL ENERGY SOURCES. NEVERTHELESS, NONCONVENTIONAL ENERGY SOURCES ARE IMPORTANT FROM A POLICY PERSPECTIVE BECAUSE OF THEIR POTENTIAL CONTRIBUTIONS AT A LOCAL LEVEL AND THEIR POTENTIAL FOR THE 1985 TO 2000 TIME FRAME. SINCE SOME POLICY DECISIONS MAY BE FACED NOW TO ACHIEVE A SIGNIFICANT CONTRIBUTION FROM NONCONVENTIONAL ENERGY SOURCES, AN IDENTIFICATION OF THOSE SOURCES WITH PROMISING POTENTIAL WAS MADE. A BRIEF DISCUSSION OF SOLAR, GEOTHERMAL, WIND, AND BIOMASS APPEARS IN THIS PAPER.

77-0249 LINDLEY C A
WIND MACHINES FOR THE CALIFORNIA AQUEDUCT. VOL. 2, FINAL REPORT.
NTIS, FEBRUARY 1977. 204P.
SAN/1101-76/2

A STUDY WAS MADE OF THE FEASIBILITY OF USING WIND MACHINES TO PROVIDE PART OF THE ENERGY REQUIRED TO PUMP WATER IN THE CALIFORNIA AQUEDUCT. THE NEED FOR ADDITIONAL PUMPING POWER FOR THE AQUEDUCT WILL BE ESPECIALLY FELT IN 1983 WHEN EXISTING ARRANGEMENTS WHICH ASSURE DELIVERIES OF LOW-COST ENERGY FROM FOUR CALIFORNIA UTILITIES TERMINATE. THE DEVELOPMENT AND PRODUCTION SCHEDULE FOR THE ERDA/NASA 1500 KW WIND MACHINE DESIGN AS NOW UNDERSTOOD COULD SUPPORT THE INSTALLATION OF A WIND ENERGY SYSTEM TO MEET A SIGNIFICANT PORTION OF THE AQUEDUCT NEEDS BY THAT DATE IF FEW DELAYS ARE ENCOUNTERED. THIS APPLICATION OF WIND ENERGY WAS

FOUND TO BE TECHNICALLY FEASIBLE, BUT WOULD INVOLVE SOME OPERATIONAL PROBLEMS. THE AQUEDUCT APPLICATION MAY BE ATTRACTIVE FOR AN EARLY WIND ENERGY PILOT OR DEMONSTRATION PROJECT BECAUSE OF THE NEAR-TERM ABILITY OF THE AQUEDUCT TO ADAPT ITS DEMAND TO THE VARIABILITY OF THE BIND.

77-Q250 LINDLEY C A
WIND MACHINES FOR THE CALIFORNIA AQUEDUCT. VOL 1. EXECUTIVE SUMMARY.
NTIS, MARCH 1977. 22P.
SAN/1101-76/1

THIS REPORT IS AN EXAMINATION OF THE APPLICABILITY OF WIND SYSTEMS TO MEET PART OF THE PUMPING NEEDS OF THE CALIFORNIA AQUEDUCT, A 684-MILE LONG WATER SYSTEM THAT DELIVERS WATER FROM THE MOUNTAINS IN NORTHERN CALIFORNIA TO ARID AREAS OF SOUTHERN CALIFORNIA. RESEARCHERS FOUND THE LOCATION OF THE MAJOR PUMPING LOAD TO BE IN THE MOUNTAINOUS REGIONS WHERE THE TOPOGRAPHY NATURALLY LENDS ITSELF TO POTENTIAL WIND RESOURCES. USING ERDA/NASA DESIGN STUDIES FOR A 1500 KW WIND TURBINE IT WAS FOUND THAT WIND ENERGY COULD BE SUPPLIED TO THE AQUEDUCT AT THE SANDBERG CA STATION FOR A COST OF 1.3 TO 1.7 CENTS PER KWH, APPROXIMATELY EQUAL TO COAL AND NUCLEAR-FUELED BASELOAD PLANTS. IT IS ANTICIPATED THAT ADDITIONAL, FAVORABLE SITES FOR WECS WILL BE DETERMINED AT A LATER DATE. NO SIGNIFICANT ENVIRONMENTAL IMPACT BY WECS IS ANTICIPATED.

EXPERIMENTAL DATA AND THEORETICAL ANALYSIS OF AN OPERATING 100 KW WIND
TURBINE.
INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH, PROCEEDINGS.
LA GRANGE PARK, ILLINOIS, AMERICAN NUCLEAR SOCIETY, 1977. VOL. 2, P.
1633-1650.

PART OF THE COOPERATIVE EFFORT BETWEEN NASA AND ERDA HAS BEEN THE DESIGN AND THE ERECTION OF AN EXPERIMENTAL WIND TURBINE BY THE NASA-LEWIS RESEARCH CENTER. THIS 100 KW TURBINE, DESIGNATED THE MOD-O, IS LOCATED AT THE NASA PLUM BROOK SITE NEAR SANDUSKY, OHIO. EXPERIMENTAL TEST DATA HAVE BEEN CORRELATED WITH ANALYSES OF TURBINE LOADS AND COMPLETE SYSTEM BEHAVIOR OF THE 100 KW MOD-O WIND TURBINE GENERATOR OVER A BROAD RANGE OF STEADY STATE CONDITIONS, AS WELL AS DURING TRANSIENT CONDITIONS. THE DEFICIT IN THE AMBIENT WIND FIELD DUE TO THE UPWIND TOWER TURBINE SUPPORT

STRUCTURE WAS FOUND TO BE VERY SIGNIFICANT IN EXCITING HIGHER HARMONIC LOADS ASSOCIATED WITH THE FLAPPING RESPONSE OF THE BLADE IN BENDING.

77-0255 LISSAMAN P B S
GENERAL PERFORMANCE THEORY FOR CROSSWIND AXIS TURBINES.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. C2.21-C2.38

PRINCIPLES OF ENERGY EXTRACTION BY WIND MACHINES ARE REVIEWED, IT IS SHOWN THAT USUALLY THE BETZ LIMIT APPLIES. HOWEVER, POWER COEFFICIENTS (BASED ON FRONTAL SWEPT AREA) EXCEEDING THE BETZ LIMIT ARE POSSIBLE WITH AUGMENTATION SYSTEMS PRODUCING A DUCT-LIKE FLOW. THE INVISCID THEORY WITH THE VISCOUS CORRECTION IS COMPARED WITH EXPERIMENT; FOR LOW C THE CORRELATION IS EXCELLENT FOR A WIDE CLASS OF ROTORS. FOR HIGH C DEVICE, ALTHOUGH THE LIMITED CORRELATION IS GOOD, THE DATA COVER TOO RESTRICTED A RANGE FOR DEFINITIVE VALIDATION. WIND TUNNEL DATA FOR HIGH C REQUIRE CORRECTIONS FOR BOTH DRAG AND LIFT WALL CONSTRAINTS; THE LATTER HAS APPARENTLY BEEN IGNORED TO DATE. THE ANALYSES PROVIDE AN ENGINEERING RASIS FOR PERFORMANCE ESTIMATION OF CROSS-WIND MACHINES, WITH SUFFICIENT STRUCTURE FOR OPTIMIZATION OF BLADE DESIGN. THE CONSEQUENCES OF NEGLECTING UNSTEADY TERMS ARE DISCUSSED, WITH SUGGESTIONS FOR IMPROVED HIGH C ANALYSIS.

 LARGE SCALE WIND ENERGY CONVERSION SYSTEM (WECS) DESIGN AND INSTALLATION
 AS AFFECTED BY SITE WIND ENERGY CHARACTERISTICS, GROUPING ARRANGEMENT AND
 SOCIAL ACCEPTANCE.
 INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
 1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
 RESEARCH ASSOCIATION, 1977. P. A1-1 TO A1-22.

THE SWEDISH WIND ENERGY PROSPECTING PROGRAM INCLUDES SPECIAL FEATURES OF DETERMINING SITE WIND CHARACTERISTICS AND DESIGN OF WECS GROUP STATIONS, WHICH ARE DESCRIBED BRIEFLY, SUCH AS APPLICATIONS OF NORMALIZED WDP - WIND DURATION PROFILES, WHP - WIND HEIGHT PROFILES AND HOW THESE ARE AFFECTED BY SITE LOCATION AND TERRAIN ROUGHNESS. A SET OF WEC - WIND ENERGY CLASSES (1-4) IS INTRODUCED AS AN AID IN TERRITORIAL WIND ENERGY SURVEYS. A SURVEY OF SWEDEN'S WEPA - WIND ENERGY PRODUCING AREAS - WITH ASSOCIATED DISTRIBUTION OVER WEC - 2-4 IS PRESENTED. IN ORDER TO DETERMINE THE CORRESPONDING WIND ENERGY PRODUCTION CAPACITY, THE PROBLEM OF OPTIMIZING WECS GROUP STATION DESIGN FOR COST EFFECTIVE ENERGY PRODUCTION PER LAND USUAGE MUST BE SOLVED. THIS PRELIMINARY STUDY INDICATES THAT THE LIKELY MAGNITUDE OF COST EFFECTIVE, SOCIALLY ACCEPTABLE (NON-CRITICAL) INSTALLATIONS OF LARGE SCALE WECS IN SWEDEN WILL RANGE FROM 5 000 - 10 000 MW, PRODUCING 15-25 TWH OF ELECTRIC ENERGY PER YEAR, IN THE 1990'S, UTILIZING ONLY 0,2 - 0,5% OF THE COUNTRY'S LAND AREA. FINALLY, ASPECTS OF TECHNOLOGY ASSESSMENT AS AN AID IN SELECTING VIABLE WECS SYSTEM ALTERNATIVES FOR THE FUTURE AND IN PRESENTING THESE TO THE DECISION MAKERS ARE DISCUSSED.

 WVU WIND ENERGY CONCENTRATORS.
 INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
 1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
 RESEARCH ASSOCIATION, 1977. P. E2.17-E2.30.

THREE WIND TURBINE CONFIGURATIONS WHOSE PERFORMANCE IS NOT RESTRICTED BY THE BETZ LIMIT ARE DESCRIBED. ALL ARE PLACED PARTIALLY OR ENTIRELY INSIDE A REGION OF LOW PRESSURE AND HIGH VELOCITY. IT IS THE CONFIGURATION OF THE TURBINE OR ITS ASSOCIATED NONROTATING DEVICE WHICH CREATES A LOW PRESSURE REGION AROUND THE TURBINE. THIS CAUSES A CONCENTRATION OF THE WIND ENERGY BY ACCELERATING IT TO HIGHER THAN FREE STREAM VELOCITIES. THREE TYPES OF CONCENTRATORS ARE DESCRIBED: THE CYLINDRICAL OBSTRUCTION, THE CYLINDRICAL DARRIEUS ROTOR, AND THE WING TIP VORTEX TYPE. THE VENTURI OR SHROUDED WIND TURBINE IS NOT INCLUDED.

 WIND ENERGY FOR THE DEVELOPING COUNTRIES.
 INGENIEUR 89(2): 233-239, MARCH 24, 1977. (IN DUTCH)

THE ECONOMIC PROGRESS OF MANY THIRD WORLD COUNTRIES DEPENDS ON THEIR AGRICULTURAL DEVELOPMENT, NOW HIT BY THE OIL CRISIS. WIND ENERGY IS THUS OF GREAT POTENTIAL IMPORTANCE. APPLICATIONS CAN BE DIVIDED INTO TWO GROUPS; POWER LESS THAN 1 KW, WATER PUMPING AND SMALL SCALE LIGHTING; AND POWER 1-10 KW DRIVING MACHINERY, GENERATING ELECTRICITY AND GRINDING GRAIN. THE DUTCH R + D PROGRAMME, "WIND ENERGY IN THE DEVELOPING COUNTRIES", EMBRACES R AND D INTO WIND ENERGY SYSTEMS UP TO THE PROTOTYPE STAGE; THE HANDING OVER OF INFORMATION; AND THE ESTABLISHMENT AND GUIDANCE OF NATIONAL PROJECTS.

AERODYNAMIC PERFORMANCE THEORY FOR THE DARRIEUS WIND TURBINE.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. X46-X53.

THE BLADE ELEMENT AND MOMENTUM THEORIES ARE EMPLOYED TO PREDICT THE FORM OF THE INDUCED VELOCITY DISTRIBUTION OVER THE VERTICAL HEIGHT OF THE TURBINE. THE AEROFOIL DATA FOR A WIDE RANGE OF REYNOLDS NUMBERS HAS BEEN USED AND THEREFORE THE CHANGES IN RELATIVE WIND VELOCITY FROM POINT TO POINT ON THE BLADES ARE ACCOUNTED FOR.

77-0271 SHEPHERD D G
WHAT PRICE WIND POWER.
AWARE, P. 11-15, MAY 1977.

BASIC CONSIDERATIONS IN ADAPTING WIND POWER SYSTEMS FOR DIFFERENT USES AND LOCATIONS ARE DISCUSSED. THE ROLE OF SUCH FACTORS AS AVERAGE WIND VELOCITY AND WIND VARIATION IN THE SELECTION OF A WIND SYSTEM DESIGN IS EXAMINED. THE ADVANTAGES AND DISADVANTAGES OF DIFFERENT TYPES OF WIND POWER SYSTEMS, INCLUDING LIFT OR DRAG TYPES AND HORIZONTAL OR VERTICAL AXIS TYPES, ARE DISCUSSED AND COMPARED. WIND CONCENTRATION DEVICES ARE ERIEFLY DESCRIBED. APPLICATIONS OF SMALL WIND ENERGY SYSTEMS ARE DISCUSSED, AND PROPOSALS FOR LARGE-SCALE WIND-BASED POWER SYSTEMS ARE CONSIDERED.

LOCATING AREAS OF HIGH WIND ENERGY POTENTIAL BY REMOTE OBSERVATION OF
EOLIAN GEOMORPHOLOGY AND TOPOGRAPHY.
NTIS 1977. 23P.
RL0/2343-5

THE PURPOSE OF RESEARCH UNDER ERDA CONTRACT EY-76-S-06-2343 IS TO DEVELOP AN EFFICIENT PROCEDURE FOR INFERRING WIND CHARACTERISTICS THROUGH INTERPRETATION OF EOLIAN LANDFORMS. AN AREA IN CENTRAL WYOMING WAS CHOSEN AS THE TEST SITE. THE SITE CONTAINS MANY WELL-DEVELOPED EOLIAN LANDFORMS AND IS NOTED FOR ITS HIGH WINDS. WHILE SOME MEMBERS OF THE RESEARCH TEAM INTERPRETED SATELLITE IMAGERY AND AERIAL PHOTOS AND GATHERED FIELD DATA IN REGIONS OF DUNES AND BLOWOUTS, OTHERS COMPILED ALL AVAILABLE CLIMATIC INFORMATION AND COLLECTED ADDITIONAL DATA VIA LOW-ALTITUDE FLIGHTS WITH A SPECIALLY INSTRUMENTED AIRCRAFT. OBSERVED CHARACTERISTICS OF EOLIAN FEATURES WERE THEN CORRELATED WITH THE WIND DATA. CAUSE-AND-EFFECT INTERRELATIONSHIPS WERE IDENTIFIED AND THEORETICAL MODELS WERE TESTED AS POSSIBLE EXPLANATIONS TO THE OBSERVED RELATIONSHIPS. RELATIONSHIPS WHICH PROVED USEFUL IN THE WYOMING TEST

AREA WERE THEN APPLIED JVER A BROADER REGION AND IN OTHER AREAS OF THE COUNTRY TO TEST FOR REGIONAL APPLICABILITY OF EACH PREDICTOR.

LEGAL INSTITUTIONAL IMPLICATIONS OF WIND ENERGY CONVERSION SYSTEMS
(WECS). EXECUTIVE SUMMARY REPORT.
NTIS, SEPTEMBER 1977. 39P.
PB-273006

THE LEGAL ISSUES PRESENTED BY WIND ENERGY CONVERSION SYSTEMS (WECS) UTILIZATION ARE OFTEN CLOSELY RELATED TO ITS STRUCTURAL AND TECHNOLOGICAL FEATURES, AS WELL AS TO ITS ECONOMIC AND SOCIAL IMPLICATIONS. SOME INFORMATION ABOUT WIND SYSTEMS, THEIR LIKELY APPLICATIONS AND PROBLEMS, ARE BRIEFLY STATED. THE FEATURES OF THE EXISTING LEGAL STRUCTURE WHICH MAY FACILITATE THE IMPLEMENTATION OF SUCH SYSTEMS ARE NOTED. THE AUTHORS SUMMARIZE THE WAYS IN WHICH THE LEGAL SITUATION VARIES WITH PARTICULAR APPLICATIONS AND WHICH APPLICATIONS POSE THE GREATEST LEGAL DIFFICULTIES. THE COMPLEX SUBJECT OF OFFSHORE WIND SYSTEMS IS DISCUSSED.

77-0276 MAYO L H
LEGAL-INSTITUTIONAL IMPLICATIONS OF WIND ENRGY CONVERSION SYSTEMS. FINAL
REPORT.
NTIS, SEPTEMBER 1977. 332P.
NSF/RA-77-0204

A STATEMENT OF THE PRINCIPAL OVERALL CONCLUSIONS OF THE REPORT IS PRESENTED. BECAUSE OF THE INTERPLAY BETWEEN TECHNICAL, ECONOMIC, SOCIAL, AND LEGAL FACTORS, SOME INFORMATION ABOUT WIND SYSTEMS, THEIR LIKELY APPLICATIONS, AND THE PROBLEMS RAISED THEREBY IS PRESENTED. THE MOST SIGNIFICANT LEGAL OBSTACLES TO THE UTILIZATION OF LAND-BASED WECS ARE DESCRIBED. THE FEATURES OF THE EXISTING LEGAL STRUCTURE WHICH MAY FACILITATE THE IMPLEMENTATION OF SUCH SYSTEMS ARE DISCUSSED. THE WAYS IN WHICH THE LEGAL SITUATION VARIES WITH PARTICULAR APPLICATIONS, AND WHICH APPLICATIONS POSE THE GREATEST AND FEWEST LEGAL DIFFICULTIES ARE SUMMARIZED. A SEPARATE SECTION IS DEVOTED TO THE COMPLEX SUBJECT OF OFFSHORE WIND SYSTEMS.

77-0277 MAYO L H
LEGAL-INSTITUTIONAL ARRANGEMENTS FACILITATING OFFSHORE WIND ENERGY
CONVERSION SYSTEMS (WECS) UTILIZATION, FINAL REPORT.
NTIS, SEPTEMBER 1977. 93P.
DOE/NSF/19137-77/3

CONCERN FOR THE CONTINUING SUFFICIENCY OF ENERGY SUPPLIES IN THE U.S. HAS TENDED TO DIRECT INCREASING ATTENTION TO UNCONVENTIONAL SOURCES OF SUPPLY, INCLUDING WIND ENERGY. SOME OF THE MORE STRIKING PROPOSALS FOR THE UTILIZATION OF WIND ENERGY RELATE TO OFFSHORE CONFIGURATIONS. THIS PAPER EXAMINES LEGAL-INSTITUTIONAL ARRANGEMENTS FOR FACILITATING THE UTILIZATION OF OFFSHORE WIND ENERGY CONVERSION SYSTEMS (WECS) BY POSITING THREE PROGRAM ALTERNATIVES AND ANALYZING THE INSTITUTIONAL SUPPORT REQUIRED FOR THE IMPLEMENTATION OF EACH.

77-0278 MELARAGNO M
WINDPOWER.
ENGINEERING 217(1): 38-39, JANUARY 1977.

A 100 KW WIND GENERATOR HAS BEEN BUILT AND INSTALLED AT THE PLUM BROOK STATION NEAR SANDUSKY, OHIO, BY THE NASA LEWIS LAB., AS PART OF A U.S. PROGRAM TO DEVELOP WIND ENERGY SYSTEMS. THE GENERAL ELECTRIC CO. AND KAMAN AEROSPACE CORP. HAVE COMPLETED STUDIES FOR SELECTING APPROPRIATE WIND GENERATOR SYSTEMS. WIND ENERGY COULD PROVIDE ONLY A RELATIVELY

SMALL PERCENTAGE OF THE TOTAL AMOUNT OF ENERGY NEEDED IN COUNTRIES WITH HIGH ENERGY DEMAND, SUCH AS THE U.S. HOWEVER, IT COULD BE A MAJOR RESOURCE FOR OTHER COUNTRIES WITH SMALLER NEEDS AND DIFFERENT ECONOMIC STRUCTURE. THE THEORETICAL AMOUNT OF KINETIC ENERGY PER UNIT OF TIME CONTAINED IN A COLUMN OF AIR STRIKING A WIND TURBINE IS CALCULATED. THE HISTORY OF AMERICAN RESEARCH INTO WIND POWER IS SURVEYED.

RESULTS OF GERMAN WIND ENERGY STUDIES.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN,
GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977. P.
47-69. (IN GERMAN)

THE RESULTS ARE PRESENTED OF AN INVESTIGATION OF THE POSSIBILITY OF UTILIZING WIND ENERGY IN WEST GERMANY. THE INVESTIGATION IS BASED ON THE FOLLOWING CATEGORIES: PHYSICAL BASIS AND THEORETICAL POTENTIAL OF WIND ENERGY, WIND ENERGY PLANT AND THEORETICALLY/TECHNICALLY FEASIBLE POTENTIAL, ASPECTS OF UTILIZATION AND ECONOMIC POTENTIAL, RECOMMENDATIONS FOR RESEARCH AND DEVELOPMENT WORK.

77-0281 MERONEY R N, SANDBORN V A, BOUWMEESTER R, RIDER M
WIND TUNNEL SIMULATION OF THE INFLUENCE OF TWO DIMENSIONAL RIDGES ON WIND
SPEED AND TURBULENCE.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. A6.89-A6.104.

THE OBJECTIVE OF THIS RESEARCH WAS TO INCREASE TECHNICAL CAPACITY TO LOCATE FAVORABLE WIND SYSTEM SITES, REDUCE UNCERTAINTY IN THE PREDICTION OR VALIDATION OF THE CHARACTERISTICS OF SITES, AND THUS ASSIST IN THE SIZING AND PERFORMANCE PREDICTION OF WIND SYSTEMS. THE RESEARCH INCLUDED EVALUATION OF LOW SPEED AERODYNAMICS OVER TERRAIN AND BOUNDARY FLOW CONDITIONS OVER RIDGES BY MEANS OF MODELLING AND ANALYTIC TECHNIQUES. PAST EXPERIENCE WITH LARGE POWER MILLS INDICATES THAT PERHAPS THE SINGLE MOST IMPORTANT FACTOR CONTROLLING SUCCESS OR FAILURE OF THESE SYSTEMS IS SITE SELECTION. MEASUREMENTS HAVE BEEN COMPLETED OVER TRIANGULAR AND SINUSOIDAL SHAPE HILLS OF WIND SPEED, STATIC PRESSURE VARIATION, TURBULENCE INTENSITY, WALL SHEAR, AND WIND JEFLECTION. HILL ASPECT RATIOS STUDIED RANGE FROM 1/2 TO 1/6 WITH SOME DATA AVAILABLE AT 1/20. MEASUREMENTS OF WIND OVERSPEED, STREAMLINE PATTERNS, AND TURBULENCE CHANGES OVER THE TOPOGRAPHY ARE COMPARED WITH RESULTS FROM BOUNDARY LAYER THEORY AND RAPID DISTORTION THEORIES. LARGE OVERSPEED EFFECTS OVER THE HILLS ARE FOUND FOR THE SHEAR LAYERS INVESTIGATED.

77-0282 MERONEY R N
RURAL ENERGY NEEDS COULD AGAIN BE MET BY WIND.
ENERGY SOURCES 77/78, DENVER, COLORADO, ENERCOM, 1977. P. 131-135.

A GREAT DEAL OF DEVELOPMENT NEEDS TO BE DONE ON THE DESIGN OF SMALL TO MEDIUM SCALE MACHINES FOR RURAL USE; THE DESIGN OF SIMPLE YET RELIABLE TOWERS; AND THE MATCHING OF WIND MACHINE PERFORMANCE TO THE REQUIREMENTS OF SPECIFIC APPLICATIONS. PROGRAMS HAVE BEEN DEVELOPED BY GOVERNMENT AGENCIES TO EXPLOIT WIND MACHINES IN RURAL AND REMOTE AREAS. THE PROGRAMS WILL HOPEFULLY GUIDE AND ACCELERATE THE RE-USE OF THE ANCIENT ART OF MANUFACTURING POWER FROM THE WIND.

77-0283 MERRIAM M F
WIND ENERGY USE IN THE UNITED STATES TO THE YEAR 2000.
WASHINGTON, D.C., FEDERAL ENERGY ADMINISTRATION, OCTOBER 1977. 58P.

THE OBJECT OF THIS STUDY IS TO DEVELOP A SET OF PROJECTIONS FOR THE USE OF WIND ENERGY IN THE UNITED STATES DURING THE YEARS 1985, 1990, AND 2000. THESE PROJECTIONS ARE TO BE USED, ALONG WITH OTHER STUDIES, IN DELINEATING THE POLICY OPTIONS AVAILABLE TO THE UNITED STATES AS IT ENDEAVORS TO AVOID ENERGY IMBALANCES IN THE NEXT QUARTER CENTURY.

UNCERTAINTIES IN PREDICTING THE FUTURE USE OF WIND ENERGY IN THE UNITED STATES ARE LARGE, AND THE RELIABILITY OF PREDICTIONS IS LOW. TO SAY WHAT CAN BE DONE (GIVEN THE RIGHT GOVERNMENT ACTIONS AND OVERLOOKING COST PROBLEMS) IS RELATIVELY EASY, BUT TO SAY WHAT WILL OCCUR IS ANOTHER MATTER.

77-0284 MERRIAM M F
WIND ENERGY FOR HUMAN NEEDS.
TECHNOL. REV. 79(3): 28-39, JANUARY 1977.

FOLLOWING A DESCRIPTION OF ANCIENT WINDMILLS, THE PAPER PRESENTS AN ECONOMIC AND TECHNOLOGICAL OUTLOOK INTO WIND ENERGY EXTRACTION POSSIBILITIES. THE DIFFICULTIES IN THE UTILIZATION OF THE WIND ENERGY, LIKE THE LOW AIR DENSITY AND THE IMPOSSIBILITY OF EFFECTIVE CHANNELIZATION OF THE AIR STREAM, ARE POINTED OUT AND THE PHYSICS AND TECHNOLOGY OF WIND MACHINES ARE DISCUSSED TOGETHER WITH THE THEORY, WHICH SHOWS THAT THE WINDPOWER IS PROPORTIONAL TO THE CUBE OF THE VELOCITY OF THE WIND. THE POSSIBILITY OF SUPPORTING THE WINDMILLS IN THE AIR STREAM IS PROPOSED AND THE WIDDLY USED VERTICAL-AXIS WINDMILLS ARE DESCRIBED TOGETHER WITH THE LARGE WIND GENERATORS FOR ELECTRIC POWER INCLUDING THE SMITH-PUTMAN WIND TURBINE WITH A TWO-BLADE PROPELLER DRIVING A 1,250 KW SYNCHRONOUS GENERATOR, AND 175 FT. DIAMETER. THE URGENT NEEDS FOR POWER WINDMILLS, AND A SYSTEMATIC SEARCH FOR GOOD SITES WHERE THE WINDMILLS WILL BE COST-EFFECTIVE, ARE STRESSED. THE POSSIBILITY OF OBTAINING 3CO-350 MILLION MEGAWATT-HOURS PER YEAR, FROM WELL-ENGINEERED WIND GENERATORS, IS PREDICTED.

77-0285 MERRITT B T
AN ASYNCHRONOUS AC/DC/AC LINK FOR WIND POWER APPLICATION. PH.D. THESIS.
ANN ARBOR, UNIVERSITY MICROFILMS, ORDER NO. 77-17842, 1977. 311P.

IT IS PROVEN THAT AN ASYNCHRONOUS AC/DC/AC ELECTRIC LINK IS A PRACTICAL WAY OF CONVERTING THE KINETIC ENERGY IN THE WIND TO ELECTRICAL ENERGY. THE AC/DC/AC LINK TERMED A WIND ENERGY CONVERSION SYSTEM (WECS) CONSISTS OF A WIND DRIVEN POLYPHASE ALTERNATOR, RECTIFIER, INDUCTOR, AND AN INVERTER TIED TO THE EXISTING UTILITY GRID. THE LABORATORY INVESTIGATIONS STUDIED VARIOUS ALTERNATOR TYPES, TYPES OF INVERTERS, AND TYPES OF INVERTER CONTROL. BASED ON THESE LABORATORY TESTS, A WECS CONSISTING OF A MODIFIED COMMERCIAL AEROGENERATOR, A THREE PHASE, SIX PULSE BRIDGE RECTIFIER, A BUS STABILIZER, AND A SINGLE PHASE, FOUR PULSE, BRIDGE INVERTER WAS DESIGNED, BUILT AND INSTALLED.

77-0286 METZ W D
WIND ENERGY - LARGE AND SMALL SYSTEMS COMPETING.
SCIENCE 197: 971-973, SEPTEMBER I, 1977.

WINDPOWER, WHICH IS AVAILABLE ON AN ANNUAL BASIS IN AMOUNTS COMPARABLE TO THE AVERAGE ENERGY FLUX OF SUNLIGHT IN MANY AREAS, OFFERS ONE OF THE MOST INEXPENSIVE MEANS OF PRODUCING ENERGY. THE POSSIBILITIES ARE INVESTIGATED FOR UTILIZING FEATURES AVAILABLE IN MANY WINDY REGIONS, SUCH AS HYDROELECTRIC SYSTEMS, CAPABLE OF PRODUCING ENERGY STORAGE BY HOLDING BACK WATER WHILE THE WIND IS BLOWING, AND UNDERGROUND GAS FORMATIONS, SUITABLE FOR COMPRESSED AIR STORAGE. POSSIBLE INTERFERENCE WITH TELEVISION RECEPTION CONSTITUTES ONE OF THE MAJOR OBJECTIONS TO WIND INSTALLATIONS, AS TELEVISION'S SYNCHRONIZATION SPEED, 30 CYCLES PER SECOND, IS NEAR THE ROTATION SPEED OF LARGE WIND SYSTEMS. THE USE OF FIBER-GLASS BLADES IS SUGGESTED AS A PARTIAL REMEDY FOR THE PROBLEM. SEVERAL EXISTING WIND MACHINE PROGRAMS ARE DISCUSSED WITH REGARD TO CONSTRUCTION, COST EVALUATION, EFFECTIVENESS, AND STORAGE CAPACITIES. IT IS CONCLUDED THAT BOTH LARGE AND SMALL WIND SYSTEMS HAVE THE POTENTIAL TO COMPETE WITH CONVENTIONAL ELECTRIC SYSTEMS.

BALANCING POWER SUPPLY FROM WIND ENERGY CONVERTING SYSTEMS.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. F1-1 TO F1-12.

THE RANDOM POWER FLUCTUATION OF A WIND ENERGY CONVERTER CAN BE DECREASED BY ELECTRICAL CONNECTION OF SEVERAL WECS LOCATED AT LARGE DISPERSED SITES. IT IS SHOWN THE EFFECT ON ZERO OUTPUT TIME PER YEAR, THE VARIATION OF STORAGE CAPACITY AND THE INFLUENCE OF THE WEC COMPOUND ON SMALLER MEAN POWER FLUCTUATIONS COMPARED WITH STORAGE CAPACITIES OF THE SAME SMOOTHING EFFECT. IN ADDITION, IT IS INVESTIGATED, IN WHICH WAY MEAN POWER FLUCTUATION VARIES IF MOMENTARY DEMAND IS CHOSEN FOR REFERENCE.

77-0292 MOLLY J P
BALANCING POWER SUPPLY FROM WIND ENERGY CONVERTING SYSTEMS.
WIND ENG. 1(1): 57-66, 1977.

THE RANDOM POWER FLUCTUATION OF A WIND ENERGY CONVERTER CAN BE DECREASED BY THE ELECTRICAL CONNECTION OF SEVERAL WECS LOCATED AT LARGE DISPERSED SITES. IT IS SHOWN THAT SUCH A COMBINATION REDUCES THE ZERO OUTPUT TIME PER YEAR AND LEADS TO SMALLER MEAN POWER FLUCTUATIONS THAN THOSE OF A SINGLE WEC WITH AN EQUIVALENT STORAGE SYSTEM. IN ADDITION, THE WAY IN WHICH MEAN POWER FLUCTUATION VARIES IF MOMENTARY DEMAND IS CHOSEN FOR REFERENCE IS INVESTIGATED.

77-0293 MOLLY J P
POSSIBILITY OF DEMAND-ORIENTED GENERATION FROM WIND ENERGY.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN,
GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977. P.
223-250. (IN GERMAN)

THE ENERGY YIELD OF A POWER STATION CONSISTING OF A WIND ENERGY CONVERTER AND STORE IS CONSIDERABLY AFFECTED BY THE CHOICE OF SPECIFIC CHARACTERISTICS OF BOTH COMPONENTS. BOUNDARY CONDITIONS OF THE OPTIMISATION PROCESS INCLUDE SITE, CONSUMER CHARACTERISTICS AND A MINIMUM REQUIREMENT OF SECURITY OF SUPPLY. IF THE COSTS OF THE POWER STATION COMPONENTS ARE KNOWN, THEN TAKING INTO ACCOUNT THE BOUNDARY CONDITIONS, THE WIND POWER STATION SHOWING THE MOST FAVOURABLE COSTS CAN BE DETERMINED. THE CONDITIONS AND THE METHOD OF CALCULATING THE OPTIMUM ROTOR SPEED, THE BEST SPECIFIC ROTOR SURFACE OUTPUT AND THE STORAGE CAPACITY REQUIRED FOR A CERTAIN SECURITY OF SUPPLY ARE SHOWN IN THE PAPER.

THIS HANDBOOK IS AVAILABLE FREE ON REQUEST. IT CONTAINS INFORMATION SPECIFIC TO MONTANA ON SOLAR, WIND, BIOGAS, SMALL-SCALE HYDROPOWER, WIND AND GEOTHERMAL ENERGY. IT ALSO CONTAINS A REFERENCE SECTION LISTING BOOKS, PERIODICALS, PEOPLE, AS WELL AS OTHER GOOD SOURCES OF INFORMATION.

77-0295 MORAN K E
ROTOR FOR WIND-DRIVEN MACHINE.
U.S. PATENT NO. 4,025,233, MAY 24, 1977. 6P.

IN THE ROTOR OF A WINDMILL ELECTRIC GENERATOR, BLADES ARE SECURED TO A HUB BY MEANS OF INDIVIDUAL TAB-RECEIVING SLOTS AND A COMMON "KNOCK-OFF" HUBCAP, THIS MOUNTING MEANS PROVIDING FOR RAPID ASSEMBLY AND DISASSEMBLY. THE MOUNTING STRUCTURE ITSELF ESTABLISHES A PREDETERMINED PITCH AT THE BLADE ROOT, THUS PERMITTING THE ADVANTAGES OF AN OPTIMUM TWISTED BLADE TO BE OBTAINED WITHOUT THE NEED FOR AN EXCESSIVELY COMPLEX BLADE CONFIGURATION. THE RESULT IS A COMPACT GENERATOR UNIT THAT CAN BE USED EASILY IN REMOTE AREAS AND STOWED WITH CAMPING EQUIPMENT.

77-0295 MORAN W A
GIROMILL WIND TUNNEL TEST AND ANALYSIS. FINAL REPORT FOR THE PERIOD JUNE
1976 - OCTOBER 1977. VOLUME I, EXECUTIVE SUMMARY. VOLUME II, TECHNICAL
DISCUSSION.
NTIS, OCTOBER 1977. VOLUME I, 19P. VOLUME II, 96P.
C00/2617-4/1, C00/2617-4/2

A WIND TUNNEL TEST OF A GIROMILL ROTOR WAS CONDUCTED. THE OBJECTIVE OF THIS TEST WAS TO SUBSTANTIATE THE PERFORMANCE COMPUTED BY THE LARSEN CYCLOGIRO VORTEX THEORY. ADDITIONAL OBJECTIVES WERE TO OBTAIN PERFORMANCE COMPARISON DATA BETWEEN THE GIROMILL, A SINUSOIDAL BLADE MODULATION GIROMILL, A DARRIEUS ROTOR, AND A MODIFIED DARRIEUS ROTOR THAT FLIPS THE BLADES A FEW DEGREES. A THREE BLADED GIROMILL ROTOR HAVING A DIAMETER OF 2.13 M (7 FT) AND A SPAN OF 1.52 M (5 FT) WAS TESTED IN THE MCDONNEL AIRCRAFT COMPANY 15 X 20 FT. MINI SPEED WIND TUNNEL. MODULATIONS WERE ACCOMPLISHED THROUGH USE OF A CAM AND PUSH ROD REPLACEABLE CAMS PROVIDED THE DESIRED BLADE MODULATION AT ARRANGEMENT. THE VARIOUS OPERATING POINTS. VARIOUS OPERATING CONDITIONS WERE ACHIEVED BY ADJUSTING THE ROTOR RPM AND TUNNEL SPEED. A TOTAL OF 36 DATA RUNS WERE CONDUCTED AT THREE NOMINAL ROTOR RPM VALUES; 80 AND 100 RPM WERE USED FOR THE GIROMILL TEST MUDE, AND 120 RPM FOR THE DARRIEUS TEST MODE. A TORQUE METER MEASURED THE ROTOR TORQUE AND TOGETHER WITH THE MEASURED RPM PROVIDED THE ROTOR POWER. THE RESULTS SHOW THAT THE GIROMILL HAS GOOD PERFORMANCE, EQUAL TO OR MUCH BETTER THAN THAT PREDICTED BY THEORY, AND OUTPERFORMS THE OTHER TYPES OF VERTICAL AXIS WIND TURBINES TESTED. CONTINUED USE OF THE THEORETICALLY COMPUTED PERFORMANCE APPEARS WARRANTED.

77-0297 MORASH R T
EXACT 60 CYCLE POWER GENERATION AT ANY SPEED.
INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH, PROCEEDINGS.
LA GRANGE PARK, ILLINOIS, AMERICAN NUCLEAR SOCIETY, 1977. VOL. 1, P.
498-504.

A NEW ELECTRICAL POWER GENERATOR PRODUCES ANY EXACT FREQUENCY, AT ANY SHAFT RPM. THE SPEED CAN VARY OVER A WIDE RANGE WITHOUT AFFECTING THE OUTPUT FREQUENCY OR VOLTAGE. THIS CAPABILITY HAS BEEN DEVELOPED ON OPERATING UNITS FOR PRECISE FREQUENCY CONVERTERS AND FLYWHEEL ENERGY STORAGE UNITS IN UNINTERRUPTABLE POWER SYSTEMS. OTHER USEFUL

APPLICATIONS ARE: 6C CYCLE POWER DIRECTLY FROM A VARYING SPEED WINDMILL SHAFT; AUXILIARY POWER TAKE-OFF FROM A MOBILE UNIT VARIABLE SPEED PRIME MOVER; UP-RATING DIESEL-GENERATOR SETS BY ALLOWING THE DIESEL TO RUN AT OPTIMUM DESIGN SPEEDS; ENERGY CONSERVATION IN ON-SITE OR SMALL POWER SYSTEMS BY USING VARIABLE SPEED TO MATCH LOAD REQUIREMENT; PRECISE POWER FOR PORTABLE OR REMOTE LOCATIONS SUCH AS GEODETIC SURVEY WORK OR VIDEO APPLICATIONS, UNUSUAL FREQUENCY REQUIREMENTS, AND SIMPLE PARALLEL OPERATION OF NUMEROUS GENERATORS PRODUCING IDENTICAL FREQUENCY. A TYPICAL UNIT IS DESCRIBED. UNITS FROM KILOWATT TO MEGAWATT SIZES CAN BE BUILT.

77-0298 MOTHER PUTS UP A 2-KW WINDPLANT IN TWO HOURS.
MOTHER EARTH NEWS NO. 43: 86-87, JANUARY - FEBRUARY 1977.

THE INSTALLATION OF A 2-KW DUNLITE ON A 50-FOOT TOWER IN TWO HOURS IS DESCRIBED.

77-0299 MURPHY J M, BAUMGARTNER F W
WIND POWERED DRIVE AGGREGATE.
GERMAN (FRG) PATENT NO. 2,639,886/A/, MARCH 10, 1977. 15P. (IN GERMAN)

THE PATENT APPLICATION CONCERNS A WIND DRIVE AGGREGATE WITH VERTICAL ROTATION AXIS. THE DRUM-SHAPED ROTOR CARRIES A NUMBER OF VERTICALLY POSITIONED PARTS ON ITS CIRCUMFERENCE, WHICH HAVE A WING-SHAPED PROFILE IN THEIR HORIZONTAL CROSS-SECTION, THE CHORD OF WHICH FORMS AN ANGLE OF ATTACK WITH THE TANGENT ON THE PERIPHERY. THE ROTOR IS SURROUNDED BY AN EQUALLY CYLINDRICAL STATOR LIKE A CAGE WHICH HAS SEVERAL VERTICAL ROD-SHAPED PARTS OF SUITABLE CROSS-SECTION. BY THESE MEANS THE SPEED OF THE RADIALLY ENTERING WIND CURRENT IS INCREASED ON CONTACT WITH THE ROTOR WING AND MOVES IT DIAGONALLY TO THE AIR CURRENT, SO THAT THE ROTOR IS SET IN MOTION. IN ANOTHER DESIGN, THE ROTOR AND THE STATOR ARE OF SPHERICAL DESIGN, ALSO WITH VERTICAL AXIS.

77-0300 MUSGROVE P J
ENERGY FROM THE WIND. POTENTIAL FOR POWER.
NTIS, JANUARY 1977. P. 4.1-4.9.
CONF-770155

AN ASSESSMENT IS MADE OF THE AMOUNT OF POWER/ENERGY IN THE WIND WITH EMPHASIS ON CALCULATIONS FOR THE UNITED KINGDOM. WINDMILLS MUST BE DEPLOYED OVER A GIVEN AREA IN A PATTERN THAT TAKES ACCOUNT OF THE DISTRIBUTION OF DIRECTIONS FROM WHICH THE WIND CAN BE EXPECTED. IN THE U.K., ONE SUCH ARRAY CAN BE PROVIDED IN THE WESTERN ISLES. THE AUTHOR RECOMMENDS DEPLOYING SUCH AN ARRAY IN THE SHALLOW WATERS OF THE SOUTHERN NORTH SEA. HE CONCLUDES THAT DEPLOYING SUCH AN ARRAY IN THE SHALLOW OFFSHORE REGION WOULD HAVE THE POTENTIAL FOR PROVIDING A VERY SIGNIFICANT PART OF THE TOTAL ELECTRICITY REQUIREMENTS. HE ALSO CONCLUDES THAT SUCH A WIND-POWER SYSTEM APPEARS COMPETITIVE WITH NUCLEAR POWER SYSTEMS.

77-0301 MUSGROVE P J
THE VARIABLE GEOMETRY VERTICAL AXIS WINDMILL.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION. 1977. P. C7-87 TO C7-100.

THE DARRIEUS VERTICAL AXIS WINDMILL DEVELOPED IN RECENT YEARS BY RANGI, SOUTH AND TEMPLIN AT THE N.R.C., OTTAWA, HAS BEEN SHOWN TO HAVE AN EFFICIENCY COMPARABLE WITH THE BEST CONVENTIONAL, HORIZONTAL-AXIS. VERTICAL AXIS WINDMILLS DO NOT REQUIRE ORIENTATION INTO THE WIND AND THEIR LOAD CAN BE LOCATED AT GROUND LEVEL, DIRECTLY BENEATH THE ROTATING VERTICAL AXIS OF THE MACHINE. NRC CALCULATIONS INDICATE THAT THESE FEATURES LEAD TO AN OVERALL WINDMILL DESIGN THAT IS SIGNIFICANTLY LIGHTER AND CHEAPER THAN CONVENTIONAL WINDMILLS. TO AVOID EXCESSIVE BLADE STRESSES THE DARRIEUS/NRC WINDMILL HAS TROPOSKIEN SHAPED BLADES, FITTED WITH AIR BRAKES, BUT THESE ARE DIFFICULT AND EXPENSIVE TO MAKE. ALSO THE TOWER HEIGHT OF THIS WINDMILL IS APPRECIABLY GREATER THAN THAT OF CONVENTIONAL WINDMILLS. THE VARIABLE GEOMETRY VERTICAL AXIS WINDMILL (VGVAW), RECENTLY DEVELOPED AT READING UNIVERSITY, USES STRAIGHT BLADES WHICH ARE HINGED TO A HORIZONTAL CROSS-ARM. IN LOW WIND SPEEDS THE BLADES REMAIN UPRIGHT, GIVING MAXIMUM EFFICIENCY WHEN IT IS MOST NEEDED. IN HIGH WIND SPEEDS CENTRIFUGAL FORCES, REACTED BY A CENTRAL SPRING WHICH IS ATTACHED VIA TIE-WIRES TO THE BLADES, MAKE THE BLADES INCLINE OUTWARDS. THE BLADE INCLINATION PROGRESSIVELY INCREASES WITH INCREASING

WIND SPEED; THIS PREVENTS EXCESSIVE BLADE STRESSES, REGARDLESS OF THE WIND SPEED, AND LIMITS THE MAXIMUM POWER OUTPUT TO A SMALL MULTIPLE OF THE AVERAGE POWER OUTPUT. THESE FEATURES FURTHER SIMPLIFY THE VERTICAL AXIS WINDMILL DESIGN AND SHOULD LEAD TO A FURTHER REDUCTION IN COST. THIS PAPER DESCRIBES IN SOME DETAIL THE DESIGN OF THE VGVAW AND INDICATES HOW ITS PREDICTED PERFORMANCE VARIES WITH WIND SPEED AND LOAD. A 3 METRE DIAMETER PROTOTYPE VGVAW HAS RECENTLY BEEN CONSTRUCTED AT READING, AND INITIAL OBSERVATIONS OF ITS PERFORMANCE ARE REFORTED.

77-0302 MUSGROVE P J
THE VARIABLE GEOMETRY WINDMILL.
WIND POWER DIG. 1(8): 27-29, SPRING 1977.

THE DARRIEUS ROTOR, VERTICAL AXIS DESIGN HAS INTRIGUED RESEARCHERS AND DESIGNERS FOR DECADES EVEN THOUGH IT HAS EXHIBITED AN INABILITY TO SELF-START UNDER MOST WIND CONDITIONS. IN THIS ARTICLE THE AUTHOR DESCRIBES HIS WORK TO OVERCOME THE SELF-STARTING AND OTHER AERODYNAMIC PROBLEMS USUALLY ASSOCIATED WITH THE DARRIEUS DESIGN. HIS CHOICE OF A STRAIGHT-BLADE CONFIGURATION PARALLELS THE THINKING OF HERMAN DREES, DESIGNER OF THE CYCLOTURBINE.

77-0303 MUSGROVE P J
WIND POWER ENGINE.
GERMAN (FRG) PATENT NO. 2,632,697/A/, FEBRUARY 10, 1977. 17P. (IN GERMAN)

THE DEVICE IS A WIND-POWER ENGINE WITH VERTICAL AXIS AND WITH ONE OR SEVERAL WINGS WITH AIRFOIL PROFILE FIXED ON A FRAME WHICH IS PIVOTED AT THE VERTICAL AXIS. EACH WING FORMS AT LEAST ON ONE PART OF ITS LENGTH AN ANGLE OF INCLINATION WITH THE VERTICAL. THE ANGLE INCREASES UNDER THE INFLUENCE OF THE CENTRIFUGAL FORCE WHEN THE RPM EXCEED A NORMAL OPERATION RANGE. THIS METHOD HELPS TO REDUCE MECHANICAL LOADS OCCURRING WITH HIGH WIND SPEEDS WITHOUT REQUIRING A COMPLICATED CONSTRUCTION.

77-0304 NATHAN G K, RAJASOORIA G P D
STUDY ON THE USE OF WINDMILLS IN SINGAPORE.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. A5.75-A5.88.

THE PURPOSE OF THIS STUDY IS TO INVESTIGATE THE PROSPECT OF USING WIND POWER IN THE NUMEROUS ISLANDS IN THE REGION OF SINGAPORE AND TO DESIGN A SUITABLE WINDMILL. THE WIND DATA FURNISHED BY THE METEOROLOGICAL SERVICES OF SINGAPORE FOR THE MAINLAND AND THE PORT OF SINGAPORE AUTHORITY FOR THE OFF-SHORE ISLANDS ARE ANALYZED. THE ANALYSIS OF WIND DATA IS BASED ON HOURLY MEAN SPEED AND A STATISTICAL ANALYSIS OF THE DATA IS REPORTED. ALSO, OVERALL ESTIMATE OF THE TOTAL AND THE DISTRIBUTION PATTERN OF AVAILABLE ENERGY IS MADE. A NEW CONCEPT IS PROPOSED TO DESIGN WINDMILLS AND EXPERIMENTAL STUDIES HAVE BEEN CONDUCTED IN THE WIND TUNNEL TO VERIFY THE EFFECTIVENESS OF THE DESIGN METHOD. ALSO, THE FEASIBILITY OF APPROXIMATING THE "IDEAL" BLADE DESIGN BY FLEXIBLE "SAILWING" TYPE BLADE IS INVESTIGATED. RESULTS OF THE STUDIES ARE REPORTED.

77-0305 NELSON V, GILMORE E, BARIEAU R E
MODEL OF WIND IRRIGATION PUMPING SYSTEMS.
WIND TECHNOL. J. 1(2): 17-23, SUMMER 1977.

TWO WIND POWERED IRRIGATION SYSTEMS, ROTARY PUMP AND AIRLIFT PUMP, WERE INVESTIGATED BY CALCULATING THE TIME CORRELATION OF WIND ENERGY AND WATER PUMPED. THE ANNUAL EFFICIENCIES OF THE ROTARY AND AIRLIFT SYSTEMS WERE 24% AND 6%, RESPECTIVELY. THE COST-BENEFIT ANALYSIS OF THE ROTARY SYSTEM INDICATES A THIRTEEN YEAR PAYOUT. A POSSIBLE SOLUTION TO THE TECHNICAL AND ECONOMICAL PROBLEMS OF WIND IRRIGATION SYSTEMS IS TO OPERATE WIND UNIT CONNECTED IN PARALLEL WITH AN ELECTRIC MOTOR OR INTERNAL COMBUSTION ENGINE.

J. B. BUCHANAN'S COLLECTION OF RESTORED OLD WINDMILLS IS DESCRIBED.

77-0307 NEW MEXICO UTILITY WILL TEST 200-KW WIND TURBINE UNIT: EXPERIMENTAL

POWER WINDMILL WILL BE BUILT ON CLAYTON MUNICIPAL SYSTEM. PUBLIC POWER 35(1): 23. 1977.

A 200-KILOWATT WIND TURBINE UNIT WILL BE TESTED AT CLAYTON, NEW MEXICO, AS AN ERDA DEMONSTRATION PROGRAM OF A DUAL-FUEL UNIT FOR POWER GENERATION. BETWEEN 5 AND 15 PERCENT OF LOCAL POWER IS EXPECTED TO BE SUPPLIED ON A WINDY DAY. MODIFICATIONS WERE MADE IN THE SANDUSKY, OHIO, PROTOTYPE TO MAKE IT STRONGER AND THE BLADE DESIGN MORE EFFICIENT. A MAXIMUM OF 200 KW WILL BE PRODUCED, ENOUGH TO SERVE 60 FAMILIES. NEW FEATURES IN THE DESIGN WILL ALLOW THE UNIT TO RESPOND TO CHANGING WIND SPEEDS AND DIRECTION. TWIN ALUMINUM BLADES WILL MAINTAIN A CONSTANT ROTOR SPEED OF 40 REVOLUTIONS PER MINUTE. AFTER TESTS AT THE CLAYTON SITE, FOUR MORE SITES WILL BE SELECTED FOR SIMILAR AND LARGER INSTALLATIONS. POSSIBLE LOCATIONS ARE LISTED ALONG WITH THE NAME OF THE ADMINISTERING UTILITY.

77-0308 NEWMAN B G
SPACING OF WIND TURBINES IN LARGE ARRAYS.
ENERGY CONVERS. 16(4): 169-171, 1977.

THE EFFECT OF SPACING ON THE POWER OUTPOT OF WIND TURBINES IN LARGE ARRAYS HAS BEEN DETERMINED THEORETICALLY. FOLLOWING TEMPLIN, THE EFFECT IS ASSESSED BY DETERMINING THE INCREASE IN ROUGHNESS OF THE EARTH'S BOUNDARY LAYER DUE TO THE DRAG OF THE TURBINES. THE THICKNESS OF THE BOUNDARY LAYER IS ASSUMED TO CHANGE IN PROPORTION TO THE SQUARE ROOT OF THE SKIN FRICTION, WHICH IS APPROPRIATE FOR A TURBULENT EKMAN LAYER, AND DIFFERS FROM THE ASSUMPTIONS MADE BY TEMPLIN. THE LOSS OF POWER FOR BOTH FLAT-OPEN COUNTRY AND ROUGH-WOODED COUNTRY IS DETERMINED AS A FUNCTION OF THE AREA DENSITY OF THE TURBINES, AND IT IS FOUND THAT QUITE LARGE SPACINGS ARE REQUIRED TO AVOID A SIGNIFICANT LOSS OF POWER.

CONCEPTS ON THE INTERMEDIATE STORAGE OF WIND-GENERATED SECONDARY ENERGY.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN,
GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977. P.
251-274. (IN GERMAN)

THE STORAGE OF WIND ENERGY IS SUBSTANTIALLY INDENTICAL TO THE PROBLEM OF ELECTRICITY STORAGE. POSSIBILITIES OF STORAGE FOR THIS SECONDARY ENERGY CARRIER ARE LISTED. THE ADDITIONAL BOUNDARY CONDITIONS ASSOCIATED WITH THE USE OF WIND ENERGY LEAD TO PARTICULARLY CLOSE COUPLING OF WIND POWER PLANT AND STORAGE SYSTEM. THIS IS ILLUSTRATED BY EXAMPLES. FOR ONE OR SEVERAL LARGE UNITS, STORAGE CONCEPTS ARE INTRODUCED WHICH PERMIT THE OPERATION OF PEAK LOAD POWER STATION WITH 300 MW OUTPUT. OF THE STORAGE POSSIBILITIES IN QUESTION, INCLUDING HYDRAULIC PUMPED STORAGE, COMPRESSED AIR STORAGE, FLYWHEEL STORAGE AND THE PRODUCTION OF HYDROGEN, FLYWHEEL STORAGE IS PARTICULARLY ATTRACTIVE ON CONDITION THAT AN APPROXIMATION TO THE THEORETICAL STORAGE CHARACTERISTICS IS POSSIBLE, WHICH IS REALIZED WITH SOLID SOLUTIONS TO THE FLYWHEEL PROBLEM.

 INVESTIGATION OF DIFFUSER-AUGMENTED WIND TURBINES. PART I. EXECUTIVE
 SUMMARY.
 NTIS, JANUARY 1977. 21P.
 C00/2616-2 (PART 1)

THE DIFFUSER AUGMENTED WIND TURBINE (DAWT) IS ONE OF THE ADVANCED CONCEPTS BEING INVESTIGATED TO IMPROVE THE ECONOMICS OF WIND ENERGY CONVERSION. THE PROJECT IS AIMED AT INCREASING THE OUTPUT AND REDUCING THE COST, THE OFF-DUTY TIME, AND THE TECHNICAL RISK OF WIND ENERGY CONVERSION SYSTEMS (WECS). THE DAWT APPEARS TO BE BEST SUITED TO LARGE WECS FOR COMMERCIAL POWER PRODUCTION BECAUSE IT PERMITS A SIGNIFICANT INCREASE IN THE UNIT POWER OUTPUT WITHOUT EXTENDING THE SIZE OF ROTATING MACHINERY INTO THE RANGE WHERE ROTOR DYNAMICS CAUSE EXCESSIVE COSTS.

77-0317 OMAN R A, FOREMAN K M, GILBERT B L INVESTIGATION OF DIFFUSER-AUGMENTED WIND TURBINES. PART II. TECHNICAL REPORT. NTIS, JANUARY 1977. 105P. C00/2616-2 (PART II)

INFORMATION ON DIFFUSER-AUGMENTED WIND TURBINES IS PRESENTED CONCERNING THE DEVELOPMENT OF EFFICIENT AND COMPACT DIFFUSERS, ECONOMIC ANALYSIS, AND ANALYSICAL DEMONSTRATION OF TWO-STAGE CONSTANT SPEED ROTOR CONCEPTS.

NEW TYPE OF WIND TURBINE -- THE INVENTION OF A VIENNESE ENGINEER. THE FAN PRINCIPLE GIVES SEVERAL TIMES THE PREVIOUS USEFUL OUTPUT. ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN, GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977. P. 228. (IN GERMAN)

THE CONSTRUCTION OF A NEW TYPE OF WIND TURBINE IS DESCRIBED, WHICH HAS TWO HORIZONTALLY POSITIONED PROPELLERS. THE PROPELLERS ARE AT AN ANGLE TO EACH OTHER AND OPERATE ON THE "FAN" PRINCIPLE, FOR WHICH A PATENT HAS BEEN APPLIED. THIS PRODUCES APPRECIABLY HIGHER OUTPUTS THAN WITH PREVIOUS WIND TURBINES. AT A WIND SPEED OF 15 METRES/SEC, AN OUTPUT OF 55.4 KW WAS ACHIEVED. THIS WIND TURBINE WAS INTRODUCED BY MEANS OF A DEMONSTRATION MODEL.

EFFECTS OF LARGE INTERCONNECTED WIND GENERATORS ON THE ELECTRIC POWER
SYSTEM. PH.D. THESIS.
ANN ARBOR, MICHIGAN, UNIVERSITY MICROFILMS, ORDER NO. 78-05966, 1977.
135P.

WHEN ONE CONSIDERS THE DIRECT INTERFACING OF WIND GENERATOR SYSTEMS (WGSS) WITH THE ELECTRIC POWER SYSTEM, THERE IS AN INTEREST IN WGS DYNAMICS AND COMPATIBILITY WITH THE POWER SYSTEM. TWO GENERAL EFFECTS THAT MAY OCCUR AS A RESULT OF THE PRESENCE OF MANY LARGE WGSS IN THE SYSTEM WERE CONSIDERED. THE FIRST FFFECT DEALS WITH THE POSSIBILITY OF CONTRIBUTING TO DYNAMIC INSTABILITY IN THE LARGE INTERCONNECTED POWER SYSTEM. A MODAL ANALYSIS OF A SET OF WGSS ON A RADIAL LINE WAS USED TO EXAMINE THIS POSSIBILITY. THE EFFECT OF CERTAIN COMPONENTS, PARAMETERS, AND CONDITIONS ON THE EIGENVALUES WAS STUDIED. THE SECOND EFFECT DEALS WITH A LOAD TRACKING CONSTRAINT IN AUTOMATIC GENERATION CONTROL AS AFFECTED BY THE POWER SPECTRUM OF THE WIND. A FREQUENCY RESPONSE ANALYSIS WAS USED TO DETERMINE THE FREQUENCY CONTENT OF THE WGS OUTPUT.

DEVELOPMENT STATUS AND ENVIRONMENTAL HAZARDS OF SEVERAL CANDIDATE
ADVANCED ENERGY SYSTEMS. FINAL REPORT DECEMBER 1975 - FEBRUARY 1976.
NTIS, JUNE 1977. 111P.
PB-272759

THE REPORT GIVES A REVIEW OF THE DEVELOPMENT STATUS OF SEVERAL ADVANCED ENERGY CONCEPTS AND DISCUSSES THE PRIMARY ENVIRONMENTAL HAZARDS OF EACH SYSTEM. SYSTEMS REVIEWED INCLUDE POTENTIAL NEW SOURCES OF ENERGY AND IMPROVED ENERGY CONVERSION. EACH SYSTEM IS EVALUATED WITH RESPECT TO ITS DEVELOPMENT STATUS, AND ESTIMATES MADE AS TO WHEN EACH WILL BEGIN TO CONTRIBUTE SIGNIFICANTLY TO U.S. ENERGY NEEDS. APPRAISALS WERE MADE OF THE ENVIRONMENTAL IMPACT OF EACH SYSTEM INCLUDING ASSESSMENT OF THE ADEQUACY OF POLLUTION CONTROL TECHNOLOGY AND POTENTIAL GROSS ECOLOGICAL IMPACT. CONSIDERING BOTH THE EXPECTED ENVIRONMENTAL IMPACT AND PERIOD OF TECHNOLOGY BREAK THROUGH/COMMERCIALIZATION, THE FOLLOWING ORDER OF R AND D PRIORITIES ON THE CANDIDATE ENERGY SYSTEMS HAS BEEN DEVELOPED: HIGH TEMPERATURE TURBINES, OCEAN THERMAL GRADIENTS, WINDMILLS, MAGNETOHYDRODYNAMICS, METAL VAPOR (POTASSIUM) RANKINE TOPPING CYCLES, HYDROGEN FUEL CELLS, THERMIONICS, ELECTROGASDYNAMICS, AND THERMOELECTRIC CONVERSION.

77-0332 PENNY M M, BOURGEOIS S V, CAIN W C
DEVELOPMENT STATUS AND ENVIRONMENTAL HAZARDS OF SEVERAL CANDIDATE
ADVANCED ENERGY SYSTEMS.

INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH, PROCEEDINGS. LA GRANGE PARK, ILLINOIS, AMERICAN NUCLEAR SOCIETY, 1977. VOL. 1, P. 646-654.

A REVIEW OF THE DEVELOPMENT STATUS AND ANTICIPATED PRIMARY ENVIRONMENTAL HAZARDS OF NINE ADVANCED ENERGY SYSTEMS IS PRESENTED. A SUMMARY OF FEDERALLY-FUNDED R AND D FOR THESE ENERGY SYSTEMS IS ALSO PRESENTED. EACH OF THESE ENERGY SYSTEMS HAS A NEGLIGIBLE OR MILD DIRECT ENVIRONMENTAL IMPACT WHEN COMPARED WITH CONVENTIONAL FOSSIL FUEL AND NUCLEAR SYSTEMS. INDIRECT IMPACTS FOR SOME OF THE ENERGY SYSTEMS COULD BE SEVERE, HOWEVER, AND THESE SYSTEMS NEED FURTHER STUDY TO QUANTIFY THEIR IMPACTS. CONSIDERING BOTH EXPECTED ENVIRONMENTAL IMPACT AND PERIOD OF TECHNOLOGY BREAKTHROUGH/COMMERCIALIZATION, THE SYSTEMS ARE RANKED IN ORDER OF DECREASING RESEARCH PRIORITY AS FOLLOWS: HIGH TEMPERATURE TURBINES, OCEAN THERMAL GRADIENTS, WINDMILLS, MAGNETOHYDRODYNAMICS, METAL VAPOR RANKINE TOPPING CYCLES, HYDROGEN FUEL CELLS, THERMIONICS, ELECTROGASDYNAMICS AND THERMOELECTRIC CONVERSION.

77-0333 PUBLIC REACTIONS TO WIND ENERGY DEVICES. FINAL REPORT. NTIS, OCTOBER 1977. 215P. NSF/RA-77-0026

THIS STUDY WAS UNDERTAKEN BY THE SURVEY RESEARCH LABORATORY OF THE UNIVERSITY OF ILLINOIS TO EXPLORE REACTIONS OF THE GENERAL PUBLIC TOWARD DIFFERENT TYPES OF WIND ENERGY DEVICES FOR GENERATING ELECTRIC ENERGY. MORE SPECIFICALLY, THE OBJECTIVES OF THE STUDY WERE TWOFOLD: TO PROVIDE SUBSTANTIVE INFORMATION ON PUBLIC ACCEPTANCE OF DIFFERENT TYPES OF WIND TO PROVIDE ENERGY DEVICES IN DIFFERENT SETTINGS; AND TO FURNISH A METHODOLOGICAL BASE FOR MORE INTENSIVE STUDIES OF PUBLIC ACCEPTANCE OF SUCH DEVICES. THE STUDY WAS CARRIED OUT BY CONDUCTING PERSONAL INTERVIEWS WITH STATISTICAL RANDOM SAMPLES OF ADULTS IN SIX DIFFERENT PARTS OF THE COUNTRY, WITH PRIMARY EMPHASIS ON RURAL AND SMALLER URBAN AREAS. LOCATIONS SELECTED WERE WESTERN MICHIGAN, SOUTHEASTERN WYOMING, WESTERN WASHINGTON, EASTERN RHODE ISLAND, THE CHÍCAGO AREA, AND THE SANDY HOOK UNIT OF THE GATEWAY NATIONAL RECREATION AREA IN NEW JERSEY. INTERVIEWED WERE QUESTIONED ON A NUMBER OF TOPICS, INCLUDING THEIR ATTITUDES TOWARD SOURCES OF ENERGY, THEIR KNOWLEDGE OF WIND ENERGY DEVICES, AND THEIR OPINIONS ON PAYING EXTRA FOR POLLUTION-FREE SOURCES OF IN ADDITION, THEY WERE SHOWN SLIDES OF DIFFERENT WIND ENERGY MACHINES IN VARIOUS SETTINGS AND WERE ASKED TO INDICATE THEIR PREFERENCES FROM AN AESTHETIC POINT OF VIEW.

77-0334 POWE R E
WIND ENERGY CONVERSION SYSTEM BASED ON THE TRACKED VEHICLE AIRFOIL
CONCEPT.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. B3.39-B3.54.

A UNIQUE MOMENTUM INTERCHANGE DEVICE FOR EXTRACTION OF ENERGY FROM THE WIND IS DESCRIBED. IT IS SHOWN THAT THE MAXIMUM POSSIBLE ENERGY EXTRACTION WITH THIS TRACKED-VEHICLE AIRFOIL DEVICE IS GREATER THAN THAT FOR A CONVENTIONAL WINDMILL. A COMPREHENSIVE MATHEMATICAL MODEL IS DEVELOPED FOR THE DEVICE, AND THIS MODEL IS PROGRAMMED FOR SOLUTION ON A DIGITAL COMPUTER. THIS PROGRAM IS WRITTEN SO THAT WIND SPECTRUM DATA FOR ANY GEOGRAPHIC LOCATION CAN BE USED TO DETERMINE THE MONTHLY ENERGY OUTPUT FOR THAT LOCATION. RESULTS FROM THIS PROGRAM INDICATE THAT THIS DEVICE COULD MAKE SIGNIFICANT CONTRIBUTIONS TO ELECTRICAL POWER REQUIREMENTS. FOR EXAMPLE, A SYSTEM 8 KM LONG AND CONSISTING OF AIRFOILS 12 METERS IN LENGTH WITH A 3 METER CHORD COULD SUPPLY THE ELECTRICAL ENERGY NEEDS OF ABOUT 15,000 PEOPLE. THESE RESULTS ARE PRESENTED IN A FORM WHICH INDICATES THE EFFECT OF CHANGING VARIOUS DESIGN PARAMETERS. IN ADDITION, COMPARISONS OF THE ENERGY OUTPUT OF THE TRACKED-VEHICLE AIRFOIL SYSTEM WITH TYPICAL WINDMILLS ARE MADE.

77-0335 PRELIMINARY OFFICE REPORT. ROMERO OVERLOOK. WIND ENERGY SURVEY. SACRAMENTO, CALIFORNIA, CALIFORNIA DEPARTMENT OF WATER RESOURCES, DECEMBER 1977. 91P.

THE WIND MEASUREMENTS RECORDED FOR THREE YEARS AT THE ROMERC OVERLOOK NEAR THE SAN LUIS RESERVOIR WERE EVALUATED TO DETERMINE THE WIND ENERGY POTENTIAL OF THE AREA. THE EVALUATION SHOWED THAT DURING THESE THREE YEARS THE OVERALL AVERAGE WIND VELOCITY WAS 5.9 METERS PER SECOND (13.3)

MPH) WITH MAXIMUM WIND VELOCITIES OCCURRING DURING THE SUMMER MONTHS. ALSO, THE MEASUREMENTS INDICATE THAT A WIND TURBINE-GENERATOR SYSTEM ASSUMED TO BE DESIGNED TO DELIVER FULL RATED POWER AT 11.2 M/S (25 MPH) WIND COULD OPERATE AT AN AVERAGE ANNUAL OUTPUT OF 30 PERCENT OF ITS RATED CAPACITY. THE PACHECO PASS ABOVE THE SAN LUIS RESERVOIR WAS SELECTED AS A POTENTIAL SITE FOR DEVELOPING A WIND ENERGY SYSTEM. RECOMMENDATION WAS MADE THAT FURTHER WIND MEASUREMENTS BE MADE AT PACHECO PASS TO DETERMINE THE WIND ENERGY POTENTIAL AND THE CRITERIA FOR OPTIMIZING A WIND TURBINE SYSTEM FOR THE AREA.

77-0336 PRENIS J
ENERGYBOOK 2: MORE NATURAL SOURCES AND BACKYARD APPLICATIONS.
PHILADELPHIA, RUNNING PRESS, 1977. 125P.

THIS IS A CONTINUATION OF ENERGYBOOK, PROVIDING A SURVEY OF SOME ALTERNATIVES TO CONVENTIONAL SOURCES OF ENERGY. IT IS DESIGNED FOR BOTH THE CASUAL READER AND THE SERIOUS PRACTITIONER, SCIENCE STUDENTS, AND BACKYARD TINKERERS. USING A FORMAT SIMILAR TO THAT OF THE WHOLE EARTH CATALOG, IT PROVIDES A SURVEY OF PRESENT APPLICATIONS; FUTURE POSSIBILITIES; A REVIEW OF SCIENTIFIC AND TECHNICAL VOCABULARY, CONCEPTS, AND DATA; AND A SAMPLING OF EXPLORATIONS IN LOW TECHNOLOGY. THE SECTION ON SOLAR ENERGY INCLUDES USEFUL INFORMATION ON FLAT PLATE AND PLASTIC PIPE COLLECTORS, AND AN EXCELLENT SURVEY OF SOLAR-HOUSE DESIGN. LESS CONVENTIONAL ENERGY SOURCES, SUCH AS METHANE GENERATORS, METHANE AS AN AUTO FUEL, OCEAN KELP FARMING, AND TRASH POWER, ARE TREATED BRIEFLY. A GLOSSARY OF TERMS IS INCLUDED, ALTHOUGH UNFORTUNATELY NOT ALL OF THE SCIENTIFIC TERMS ARE CORRECTLY DEFINED. THE BRIEF BIBLIOGRAPHY COVERS ONLY PRACTICAL APPLICATIONS.

77-0337 PREUSS R D, SUCIU E O, MORINO L
TWO GENERAL METHODS FOR THE UNSTEADY AERODYNAMIC ANALYSIS OF
HORIZONTAL-AXIS WINDMILLS.
INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH, PROCEEDINGS.
LA GRANGE PARK, ILLINOIS, AMERICAN NUCLEAR SOCIETY, 1977. VOL.2, P.
1618-1623.

THE PROBLEM OF A HORIZONTAL-AXIS WINDMILL EMBEDDED IN INCOMPRESSIBLE, INVISCID FLOW IS CONSIDERED. THE VORTICITY FIELD PRESENT IN THE UNDISTURBED FLOW IS ASSUMED TO BE UNPERTURBED BY THE PRESENCE OF THE WINDMILL, ENABLING THE USE OF A POTENTIAL FORMULATION. TWO INTEGRAL EQUATION METHODS (FOR FINITE THICKNESS AND ZERO THICKNESS BLADES) ARE PRESENTED. BOTH METHODS ARE FORMULATED IN A FRAME OF REFERENCE RIGIDLY ROTATING AT CONSTANT ANGULAR VELOCITY RELATIVE TO THE GROUND. FULLY UNSTEADY TRANSIENT ANALYSIS IS PERFORMED BY NUMERICAL SOLUTION OF THE EQUATIONS AT DISCRETE TIME STEPS WHILE A SIMPLER OSCILLATORY UNSTEADY ANALYSIS IS PERFORMED BY EXPRESSING THE POTENTIAL AND ITS NORMAL DERIVATIVE AS COMPLEX SERIES IN TIME. THE WAKE, TREATED AS A DOUBLET LAYER, IS OF PRESCRIBED GEOMETRY. NUMERICAL RESULTS ARE PRESENTED SHOWING A GOOD COMPARISON OF THE METHODS.

77-0338 QAZI A Q
TRANSIENT BEHAVIOR OF WIND DRIVEN SYNCHRONOUS MACHINES. PH.D. THESISSTILLWATER, OKLAHOMA, OKLAHOMA STATE UNIVERISTY. ANN ARBOR, MICHIGAN,
UNIVERSITY MICROFILMS, 1977. 156P. U.M. ORDER NO. 78-11064.

THE TRANSIENT BEHAVIOR OF WIND DRIVEN SYNCHRONOUS MACHINES UNDER CONDITIONS OF WIND GUSTS AND FAULTS FOR VARIOUS SYSTEM CONFIGURATIONS WERE INVESTIGATED AND DESIGN RECOMMENDATIONS FROM THE VIEW POINT OF ELECTRICAL STABILITY AND ENERGY DELIVERED TO THE UTILITY GRID WERE MADE. THIS TASK WAS PERFORMED IN THE FOLLOWING STEPS: (1) FORMULATE THE MATHEMATICAL MODEL FOR EACH IDENTIFIED AND SELECTED SYSTEM CONFIGURATION, (2) SOLVE THE SETS OF NON-LINEAR DIFFERENTIAL EQUATIONS BY EMPLOYING AN APPROPRIATE NUMERICAL TECHNIQUE AND DIGITAL SIMULATION, (3) PRESENT THE RESULTS IN THE FORM OF CURVES, (4) INTERPRET THESE CURVES, (5) DRAW SOME USEFUL CONCLUSIONS AND (6) SUGGEST AREAS FOR FUTURE RESEARCH WORK.

77-0339 QAZI A Q, RAMAKUMAR R
BEHAVIOR OF WIND DRIVEN SYNCHRONOUS GENERATORS UNDER WIND GUSTS.
CONTROL OF POWER SYSTEMS CONFERENCE AND EXPOSITION, COLLEGE STATION,
TEXAS A + M UNIVERSITY, MARCH 14-16, 1977. CONFERENCE RECORD. NEW YORK,
IEEE, NO. 77CH1168-4REG5, 1977. P.20-25.

THIS PAPER PRESENTS THE RESULTS OF A COMPUTER SIMULATION CONDUCTED FOR AN

AEROTURBINE-DRIVE SYNCHRONOUS GENERATOR OPERATING IN PARALLEL WITH A LARGE UTILITY GRID. COUPLED NONLINEAR DIFFERENTIAL EQUATIONS DESCRIBING THE DYNAMIC BEHAVIOR OF SUCH A SYSTEM ARE SOLVED NUMERICALLY BY EMPLOYING FOURTH ORDER RUNGE-KUTTA TECHNIQUE. THE SIMULATION TAKES INTO ACCOUNT INSTANTANEOUS VARIATIONS IN THE COEFFICIENT OF PERFORMANCE OF THE AEROTURBINE DUE TO CHANGES IN THE TIP SPEED TO WIND SPEED RATIO. INFLUENCE OF PARAMETERS SUCH AS SYSTEM INERTIA, DAMPING COEFFICIENT, EXTERNAL REACTANCE, MACHINE REACTANCE AND GENERATOR EXCITATION ARE EXAMINED UNDER CONDITIONS OF SHORT AND LONG DURATION WIND GUSTS BY SIMULATING A GENERATOR TORQUE ANGLE, AS A FUNCTION OF TIME.

77-0340 RANN: RESEARCH APPLIED TO NATIONAL NEEDS. WIND ENERGY CONVERSION RESEARCH.
NTIS, MARCH 1977. 23P.
PB-271942

THE NSF/RANN WIND ENERGY RESEARCH REPORTS LISTED IN THIS BULLETIN ARE AVAILABLE FOR READING BY THE GENERAL PUBLIC. FOURTEEN REPORTS, LISTED SEPARATELY, ARE INDICATED BY RANN NUMBER, TITLE, PERFORMING ORGANIZATION, AUTHOR, DATE, GRANT NUMBER, ABSTRACT, DESCRIPTORS, AND AVAILABILITY. ALSO INCLUDED IN THIS BULLETIN IS A LIST OF 14 SANDIA LABORATORY REPORTS WHICH ADDRESS PRIMARILY THE DARRIEUS VERTICAL AXIS SYSTEM AND WIND DATA. AUTHOR, TITLE, REPORT NUMBER, DATE, LENGTH, AND PRICE ARE INDICATED FOR EACH. NINE OTHER SOLAR ENERGY PUBLICATIONS WITH WIND ENERGY SECTIONS ALSO ARE INDICATED BY TITLE, PERFORMING ORGANIZATION, GRANT NUMBER, DATE AND AVAILABILITY.

77-0341 RAHMER B A
ALTERNATIVE ENERGY: MAJOR NEW EFFORTS AT DEVELOPMENT.
PET. ECON. 44(2): 56-57, FEBRUARY 1977.

ELROPEAN COUNTRIES HAVE SO FAR BEEN RATHER MORE CONSERVATIVE IN THEIR APPROACH TOWARDS ALTERNATIVE ENERGY DEVELOPMENT THAN THE U.S. AND JAPAN HAVE. CONSTRUCTION OF FLAT PLATE SOLAR COLLECTORS FOR WATER AND SPACE HEATING HAS BECOME A GROWTH INDUSTRY. WIND POWER RESEARCH HAS BEEN MAINLY A U.S. PREROGATIVE, BUT THE U.K. COULD PROVIDE MORE THAN ONE-FIFTH OF ITS ELECTRICITY REQUIREMENTS BY DEPLOYING MILLS OVER JUST 2% OF THE AREA OF THE SOUTHERN NORTH SEA. WAVE POWER IS BEING STUDIED WITH GOVERNMENTAL SUPPORT IN THE U.K., WHERE CONDITIONS ARE FAVORABLE OFF THE NORTHWESTERN COAST. EXPLOITATION OF GEOTHERMAL ENERGY IS PROGRESSING TENTATIVELY, AND ENERGY OF THE TIDES REPRESENTS A COMPARATIVELY SMALL, IF USEFUL, ADDITIONAL POWER RESERVE.

77-0342 RAILLY J W
A POSSIBLE SATURATION CRITERION FOR WIND ENERGY EXTRACTION.
WIND ENG. 1(1): 23-35, 1977.

TWO HYPOTHESES ARE ADVANCED FOR PREDICTING THE POSSIBLE POWER OUTPUT FROM A DISTRIBUTION OF WIND TURBINES OVER A LARGE GROUND AREA. WHEN THE TURBINE HEIGHT IS SMALL COMPARED WITH THE HEIGHT OF THE PLANETARY BOUNDARY LAYER, THE ROLE OF SHEAR STRESS IN DETERMINING THE POWER LEVEL IS DEMONSTRATED AND THE MODIFICATION TO THE WIND STRUCTURE IS PREDICTED. ON THIS BASIS, REALISTIC VALUES OF THE RATIO OF DISK AREA TO GROUND AREA ARE CALCULATED. THE IMPORTANCE OF THE STABILITY OF THE PBL AS IT EFFECTS THE POWER LEVEL IS DEMONSTRATED.

77-0343 SMEDMAN-HOEGSTROEM A S, HOEGSTROEUM U
PRACTICAL METHOD FOR DETERMINING WIND FREQUENCY DISTRIBUTIONS FOR THE
LOWEST 200 METERS FROM ROUTINE METEOROLOGICAL DATA.
NTIS, 1977. 27P.
UUIM-47

A METHOD IS DESCRIBED FOR DETERMINING WIND SPEED FREQUENCY DISTRIBUTIONS AT ANY HEIGHT UP TO CA. 200 M ABOVE GROUND FOR A METEOROLOGICAL STATION WHERE WIND SPEED AND DIRECTION ARE MEASURED AT A LOW REFERENCE LEVEL (USUALLY 10 M) AND WHICH REPORTS ROUTINE METEOROLOGICAL DATA AT LEAST ONCE EVERY 3D HOUR. THE ROUGHNESS CHARACTERISTICS OF THE TERRAIN SURROUNDING THE STATION MUST BE KNOWN IN DETAIL, BECAUSE THE MODEL CALCULATES THE RATE OF GROWTH OF INTERNAL BOUNDARY LAYERS RESULTING FROM DISCONTINUITIES IN ROUGHNESS AS WELL AS THE SHAPE OF THE WIND PROFILE IN THE VARIOUS LAYERS. THE RATE OF GROWTH OF THE INTERNAL BOUNDARY LAYERS HAS BEEN DETERMINED FROM A WORK BY PASQUILL (1972). THE SHAPE CHARACTERISTICS OF THE PROFILE ARE DETERMINED AS A FUNCTION OF ROUGHNESS

LENGTH AND OF STABILITY BY THE AID OF MEASUREMENTS FROM THREE SWEDISH 100 M HIGH MASTS. THE METHOD IS SUCCESSFULLY TESTED AGAINST AN INDEPENDENT SET OF DATA FROM A 100 M MAST. ALSO GIVEN ARE SOME RESULTS FROM APPLICATION OF THE METHOD TO SWEDISH DATA. THE METHOD HAS BEEN DEVELOPED FOR RURAL CONDITIONS AND 1S NOT VALID FOR URBAN CONDITIONS.

77-0349 REED J W
ENERGY STORAGE NEEDS FOR WIND POWER SYSTEMS.
NTIS, 1977. 20P.
SAND-76-9058

WIND VARIES ON ALL TIME SCALES, BUT HOURLY AND LONGER TERM OSCILLATIONS ARE MOST IMPORTANT TO ECONOMICAL WIND ENERGY EXTRACTION SCHEMES. PERIODIC VARIATIONS IN AVAILABLE WIND ENERGY, OF DIURNAL, SYNOPTIC, ANNUAL, AND LARGER SCALES, ARE NOT OFTEN CORRELATED WITH DEMAND SO THAT SOME FORM OF ENERGY STORAGE IS NEEDED. MOST CURRENT ERDA-SPONSORED RESEARCH IN WIND ENERGY ASSUMES CONNECTION TO AN EXISTING POWER NETWORK AND RESOURCE STORAGE IN THE FORM OF SAVED FOSSIL FUELS. LONG TERM HOURLY WIND OBSERVATIONS AT SEVERAL REPRESENTATIVE U.S. LOCATIONS HAVE BEEN USED TO SHOW THAT A TOTALLY INDEPENDENT AND PERFECTLY RELIABLE WIND ENERGY SYSTEM WOULD REQUIRE AN IMPRACTICALLY LARGE STORAGE CAPACITY, PRIMARILY TO COVER YEAR-TO-YEAR AND ANNUAL CYCLES OF AVAILABLE WIND ENERGY. AS RELIABILITY IS ALLOWED TO DECREASE, A CONSIDERABLE REDUCTION IN STORAGE CAPACITY IS POSSIBLE. THIS IS DEMONSTRATED BY STATISTICAL RESULTS FOR SEVERAL CLIMATIC REGIMES.

77-0350 REED J W
NEW DETAILS ON WIND POWER CLIMATOLOGY.
NTIS, 1977. 26P.
SAND-77-6960

THE NATIONAL ISODYN MAP OF AVERAGE AVAILABLE WIND POWER WAS USED TO HELP SELECT FIFTEEN STATIONS, REPRESENTATIVE OF INTERESTING WIND POWER CLIMATIC REGIMES, FOR DETAILED ANALYSES OF TEN-YEAR RECORDS OF HOURLY WIND SPEED OBSERVATIONS. THESE LONG TIME SERIES HAVE BEEN CORRECTED FOR OBSERVER BIAS, HOMOGENIZED TO CONSTANT ANEMOMETER EXPOSURES, AND EXTRAPOLATED TO SELECT HEIGHTS 10M, 20M, AND 50M ABOVE FLAT TERRAIN. VARIOUS ANALYSES HAVE SHOWN THAT CORRECTION GENERALLY GAVE RESULTS IN EXCELLENT AGREEMENT WITH THE NATIONAL ISODYN CONTOURS, TURBINE CUT-IN AND CUT-OFF SPEED SELECTIONS WERE NOT CRITICAL TO POWER RECOVERY EFFICIENCY, TURBINE RATED SPEED NEEDS TO BE TAILORED TO THE REGIONAL WIND CLIMATE,

STAND-ALONE SYSTEMS REQUIRE HUGE STORAGE FILTERS TO SMOOTH ANNUAL AND INTER-ANNUAL VARIATIONS IN SUPPLY, AND MODEST STORAGE WILL EFFECTIVELY FILTER PERIODICITIES OF A FEW DAYS IN BOTH SUPPLY AND DEMAND.

77-0351 REED J W
METEOROLOGICAL STUDIES FOR WIND POWER: A PROGRESS REPORT.
NTIS, AUGUST 5, 1977. 13P.
SAND-77-1255

THIS PAPER WAS PRESENTED AT THE THIRD BIENNIAL WIND ENERGY CONVERSION SYSTEMS CONFERENCE, WASHINGTON D.C., SEPTEMBER 19, 1977. TEN-YEAR TIME SERIES OF HOURLY WIND SPEED OBSERVATIONS AT FIFTEEN SELECTED STATIONS HAVE BEEN USED TO GENERATE TIME SERIES OF AVAILABLE WIND POWER. THESE HAVE BEEN RUN THROUGH COMPUTER-SIMULATED TURBINE SYSTEMS TO STUDY LONG TERM, PARTICULARLY ANNUAL AND LONGER, VARIATIONS IN POTENTIAL SUPPLY. THESE VARIATIONS WERE SO LARGE THAT STAND-ALONE GENERATING SYSTEMS WOULD REQUIRE HUGE, UNECONOMICAL STORAGE CAPACITIES TO PROVIDE RELIABLE SERVICE.

77-0353 REPORT ON THE WESTERN ENERGY EXPANSION STUDY. WASHINGTON, D.C., BUREAU OF RECLAMATION, FEBRUARY 1977.

THIS REPORT CONTAINS THE RESULTS OF AN ASSESSMENT BY THE BUREAU OF RECLAMATION OF OPPORTUNITIES TO RESPOND TO URGENT NEEDS FOR ADDITIONAL ELECTRICAL POWER AND ENERGY IN THE WEST WHICH CAN MAKE AN EFFECTIVE CONTRIBUTION TO CONSERVATION OF DWINDLING OIL AND NATURAL GAS RESOURCES. THE WEES WAS CONDUCTED TO IDENTIFY AND EVALUATE OPPORTUNITIES FOR INCREASED ELECTRICAL POWER AND ENERGY GENERATION IN THE 17 WESTERN STATES WHICH WARRANT FURTHER, MORE DETAILED STUDY IN THE IMMEDIATE FUTURE. FOCUS OF THE STUDY WAS PRIMARILY ON DEVELOPMENT OF HYDROELECTRIC POWER, INCLUDING PUMPED STORAGE, AT BOTH HEW SITES AND EXISTING FACILITIES. OTHER OPPORTUNITIES RELATE TO DEVELOPMENT OF ELECTRICAL ENERGY USING SOLAR (DIRECT RADIATION AND WIND) AND GEOTHERMAL RESOURCES. IN ADDITION TO DEVELOPMENTAL OPPORTUNITIES, SEVERAL MATTERS OF A POLICY NATURE ARE DISCUSSED AND EVALUATED.

TIE-DOWN CABLE SELECTION AND INITIAL TENSIONING FOR THE SANDIA 17 METER

VERTICAL AXIS WIND TURBINE. NTIS, FEBRUARY 1977. 18P. SAND-76-0616

THE RATIONALE USED FOR SELECTION OF TIE-DOWN CABLES FOR THE SANDIA 17-METER TURBINE IS PRESENTED, DISCUSSED AND IMPLEMENTED. THE EFFECT OF INITIAL CABLE TENSION ON THE RESPONSE OF THE TIE-DOWN SYSTEM IS EVALUATED AND DISCUSSED IN TERMS OF RESULTING SAG, BLADE INTERFERENCE AND RESPONSE LINEARITY.

77-0357 ROGERS P
WIND ROTOR IMPROVES HYPERBOLIC COOLING TOWER EFFICIENCY.
POWER ENG. 81(3): 48-50, MARCH 1977.

A RECENTLY DEVELOPED SYSTEM FOR IMPROVING THE EFFICIENCY OF A HYPERBOLIC COOLING TOWER USES A WIND ROTOR WHICH HAS BEEN INSTALLED ON THE JUTSIDE OF THE STRUCTURE TO PRODUCE A FORCED UPDRAFT AROUND THE INSIDE PERIMETER OF THE COOLING TOWER. THIS UPDRAFT ELIMINATES THE POSSIBLE DOWNDRAFT AND, IN GENERAL, INCREASES AIR FLOW. THE INCREASED EFFICIENCY PERMITS A CLOSER APPROACH, AND/OR ALLOWS A SMALLER SIZED TOWER TO BE USED BECAUSE THE EFFECT OF THE PERIPHERAL JETS IS SIMILAR TO THE MECHANICAL INDUCED-DRAFT TYPE OF COOLING TOWER.

77-0358 RIEDER W G
WIND POWERED ARTIFICIAL AERATION OF NORTHERN PRAIRIE LAKES. RESEARCH
REPORT.
NTIS, DECEMBER 1977. 121P.
PB-281562

MOST NORTHERN PRAIRIE LAKES SUFFER FROM REOCCURRING OXYGEN DEPLETION. AND, ALTHOUGH ARTIFICIAL AERATION SEEMS TO HELP, OPERATING COSTS ARE BECOMING HIGH BECAUSE OF INCREASING ENERGY COSTS. AN ALTERNATE SOURCE OF COMPRESSED AIR FOR OPERATING THE AERATION SYSTEMS IS WIND-POWERED COMPRESSORS. A DETAILED ASSESSMENT OF THE FEASIBILITY OF THIS APPROACH IN NORTH DAKOTA SETTINGS WAS COMPLETED. A LARGE NUMBER OF WIND-TURBINE METHODOLOGY FOR MATCHING AND COMPRESSOR COMBINATIONS WAS INVESTIGATED. COMMERCIAL COMPRESSORS TO VARIOUS WIND TURBINES AND PREDICTING OUTPUT RATES BASED ON WIND SPECTRUM INPUTS WAS DEVELOPED AND VERIFIED. GEAR-UP RATIOS EXIST FOR MAXIMUM AIR JUTPUT RATES. A SMALL EXPERIMENTAL WIND-POWERED COMPRESSED-AIR SYSTEM WAS BUILT AND OPERATED SUCCESSFULLY AT A NON-LAKE SITE. ECONOMIC ANALYSES WERE COMPLETED. FINDINGS INDICATE THAT THE USE OF WIND TO POWER SMALL COMPRESSORS (LESS THAN ABOUT 15 SCFM) FOR ARTIFICIAL AERATION IN NORTH DAKOTA IS TECHNICALLY AND ECONOMICALLY FEASIBLE WITHIN CERTAIN CONSTRAINTS. RECOMMENDATIONS INCLUDE PROCEEDING INTO PROTOTYPE SYSTEM INSTALLATIONS AT LAKE SITES IN NORTH DAKOTA FOR PERFORMANCE AND COST MONITORING OVER SEVERAL YEARS.

77-0359 ROTH R
METEOROLOGY AND UTILIZATION OF WIND ENERGY.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN,
GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977. P.
71-79. (IN GERMAN)

ECONOMIC UTILIZATION OF WIND ENERGY BY WECS (WIND ENERGY CONVERTING SYSTEMS) PRESUPPOSES AS EXACT A KNOWLEDGE OF THE WIND FIELD AS POSSIBLE. THE TASK OF PROVIDING THIS BELONGS TO THE SUBJECT OF METEOROLOGY. THE REQUIRED INFORMATION IS EXPLAINED AND THE PRESENT DAY STATE OF KNOWLEDGE IS DISCUSSED. THIS APPLIES ABOVE ALL TO LARGE PLANT (GREATER THAN 1 MW (ELEC) RATED OUTPUT) AS GREAT METEOROLOGICAL PROBLEMS OCCUR HERE.

MATERIALS AND PROCESSING APPROACHES TO COST COMPETITIVE WIND TURBINE
ROTOR BLADES.
SAMPE Q. 8(2): 13-21, JANUARY 1977.

A STUDY WAS MADE OF MATERIALS AND PROCESSES USING METALLICS AND COMPOSITES OR COMBINATION OF BOTH FOR THE FABRICATION OF LOW COST WIND TURBINE BLADES. AS A RESULT OF THESE STUDIES THE FILAMENT WINDING PROCESS WAS SELECTED AS OFFERING THE POTENTIAL FOR LOW COST FABRICATION WHILE REQUIRING THE MINIMUM COMPROMISES IN AERODYNAMIC SHAPE, OPTIMUM STRUCTURE, AND WEIGHT. THE PROCESS IS DESCRIBED WHICH IS COMPATIBLE WITH EXISTING WINDING FACILITIES AND EQUIPMENT AND WHICH RESULTS IN NEAR OPTIMUM STRUCTURAL FIBER ORIENTATION. FIBERGLASS MATERIAL IS USED WITH A

RESIN SYSTEM APPROPRIATE FOR THE PROCESS AND REQUIRING MINIMUM CURING TIME AND EQUIPMENT.

77-0361 RYLE M
ECONOMICS OF ALTERNATIVE ENERGY SOURCES.
NATURE 267(5607): 111-117, MAY 12, 1977.

AN IMPORTANT PART OF THE OIL AND NATURAL GAS AT PRESENT CONSUMED IN THE UK IS USED FOR THE HEATING OF BUILDINGS, A DEMAND WHICH SHOWS LARGE DIURNAL, DAY-TO-DAY AND ANNUAL FLUCTUATIONS. THE REPLACEMENT OF THIS ENERGY BY NUCLEAR-GENERATED ELECTRICITY, AS AT PRESENT ENVISAGED, WOULD REQUIRE THE CONSTRUCTION OF SOME 250 GW OR ADDITIONAL CAPACITY BY THE END OF THE CENTURY, A PROGRAMME WHICH DOES NOT SEEM FEASIBLE. BY INCORPORATING RELATIVELY CHEAP, SHORT TERM STORAGE IN THE FORM OF LOW-GRADE HEAT, THE GENERATING CAPACITY REQUIRED TO FULFIL PEAK DEMAND COULD BE REDUCED BY MORE THAN 50%. AS SOON AS SUCH STORAGE IS PROVIDED, HOWEVER, OTHER SOURCES OF ENERGY BECOME VIABLE AND ATTRACTIVE ALTERNATIVES, AND THE UK IS WELL SITUATED TO MAKE USE OF WIND, WAVE, AND TIDAL POWER.

77-0362 SAAB-SCANIA HEADS SWEDISH WIND PROGRAM. WIND POWER DIG. NO. 10: 22, FALL 1977.

A SWEDISH PROJECT ON LARGE-SCALE WIND TURBINE DESIGN IS DESCRIBED.

77-0363 SALIEVA R B
SIMULATION ALGORITHMS AND THEIR REALIZATION BY DIGITAL COMPUTER FOR
CALCULATION OF WIND- AND SOLAR-PLANT STORAGE-SERVICE CAPACITY.
GELIOTEKHNIKA, NO. 2: 75-83, 1977. TRANSLATION: APPL. SOLAR ENERGY
13(2): 53-58, 1977.

A METHOD OF CALCULATING THE CAPACITY OF STORAGE DEVICES IS DISCUSSED. THE MATHEMATICAL MODEL IS BASED ON A STATISTICAL MODEL. FOR DIGITAL-COMPUTER MODELING, APPROPRIATE SIMULATION ALGORITHMS HAVE BEEN WRITTEN THAT MAKE IT POSSIBLE TO DETERMINE STORAGE-DEVICE CAPACITY, TOTAL THROUGHPUT, DISPOSAL OF IDLE UNUSED OUTPUT, ENERGY DEFICIT, AND OTHER CHARACTERISTICS.

77-0364 SANDBORN V A
ATMOSPHERIC BOUNDARY LAYER MODELING FOR WIND POWER SITES.
FORT COLLINS, COLORADO, COLORADO STATE UNIVERSITY, COLLEGE OF ENGINEERING, CEP77-78VAS25, 1977.

THIS DISCUSSION COVERS MAINLY THE EVALUATION OF WIND POWER SITES DETERMINED FROM WIND TUNNEL EXPERIMENTS.

77-0365 SANDBORN V A
PLACEMENT OF WIND-POWER SYSTEMS.
FORT COLLINS, COLORADO, COLORADO STATE UNIVERSITY, COLLEGE OF ENGINEERING, CEP77-78VAS14, 1977. 13P.

A BRIEF REVIEW OF THE EFFECT OF WIND SPEED-VARIATION OVER RIDGES, ISOLATED MOUNTAINS AND HILLS IS GIVEN. FROM WIND-TUNNEL TESTS IT IS FOUND THAT LONG RIDGES WITH SHARP CRESTS PRODUCE THE MOST SPEEDUP OF THE WIND. FLATTOPPED AND STEEP OR BLUFF RIDGES DO NOT PRODUCE AS LARGE AN INCREASE IN WIND SPEED. WIND POWER SITES DOWNWIND OF HILLS, BUILDINGS AND TOWERS SHOULD BE AVOIDED.

77-0366 SANDBORN V A
SITES FOR WIND-POWER INSTALLATION.
FORT COLLINS, COLORADO, COLORADO STATE UNIVERSITY, COLLEGE OF ENGINEERING, CEP77-78VAS15, 1977. 7P.

AN EXPERIMENTAL STUDY OF AIR FLOW OVER TWO-DIMENSIONAL RIDGES HAS BEEN MADE IN AN ATMOSPHERIC SIMULATION WIND TUNNEL. THE RESULTS INDICATE THAT SHARP OR ROUND CRESTED RIDGES ARE PREFERRED TO FLAT TOPPED RIDGES AS A MEANS OF INCREASING LOCAL WIND SPEED. THE FLOW OVER THE SHARP CRESTED RIDGES CAN BE PREDICTED REASONABLY ACCURATELY WITH INVISCID FLOW RELATIONS. THE UPSTREAM REGION OF THE SHARP CRESTED RIDGE DOES NOT AMPLIFY THE APPROACH TURBULENCE.

77-0367 SARIN R K, NAIR K
SOLAR ELECTRIC-ENERGY MARKET PENETRATION.

AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, PROCEEDINGS OF THE ANNUAL MEETING. VOL. 1. ORLANDO, FLORIDA, JUNE 6-19, 1977. CAPE CANAVERAL, FLORIDA, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, 1977. SECT. 19. P. 20-24.

A BAYESIAN APPROACH WAS EMPLOYED TO FORECAST THE SOLAR ELECTRIC MARKET PENETRATION BY THE YEARS 1990 AND 2000. THE STUDY IDENTIFIED A MULTITUDE OF FACTORS, INCLUDING RELATIVE COST OF COMPETITIVE ENERGY SYSTEMS, GOVERNMENT INCENTIVES, FUTURE ENVIRONMENTAL REGULATIONS, AND NEW TECHNOLOGIES, THAT WOULD AFFECT THE SOLAR MARKET SHARE. THE JUDGMENTS OF SEVERAL EXPERTS FROM UTILITY COMPANIES, GOVERNMENT AGENCIES, AND RESEARCH LABORATORIES WERE UTILIZED IN A SYSTEMATIC MANNER TO QUANTIFY THE PROBABILITY DISTRIBUTIONS OF FUTURE SOLAR MARKET SHARE AS A FUNCTION OF THE VARIOUS FACTORS. THE LIKELIHOOD OF THE OCCURRENCE OF THESE FACTORS WAS ALSO ASSESSED, AND THE SOLAR MARKET SHARE WAS FORECASTED FOR THE MOST-LIKELY FUTURE SCENARIOS.

77-0368 SAVINO J M
BRIEF SUMMARY OF THE ATTEMPTS TO DEVELOP LARGE WIND-ELECTRIC GENERATING
SYSTEMS IN THE U.S.
NTIS, 1977. 18P.
DOE/NASA/1004-77/7

INTEREST IN DEVELOPING LARGE WIND-ELECTRIC GENERATING SYSTEMS IN THE UNITED STATES WAS STIMULATED PRIMARILY BY ONE MAN, PALMER C. PUTNAM. HE WAS RESPONSIBLE FOR THE CONSTRUCTION OF THE LARGEST WIND-POWER SYSTEM EVER BUILT - THE 1250 KILOWATT SMITH-PUTNAM WIND-ELECTRIC PLANT. THE EXISTENCE OF THIS SYSTEM PROMPTED THE U.S. FEDERAL POWER COMMISSION TO INVESTIGATE THE POTENTIAL OF USING THE WINDS AS A SOURCE OF ENERGY. ALSO, IN 1933 PRIOR TO PUTNAM'S EFFORT, THERE WAS AN ABORTIVE ATTEMPT BY J D MADARAS TO DEVELOP A WIND SYSTEM BASED ON THE MAGNUS EFFECT. THESE THREE PROJECTS COMPRISE THE ONLY SERIOUS EFFORTS IN AMERICA TO DEVELOP LARGE WIND DRIVEN PLANTS. IN THIS PAPER THE HISTORY OF EACH PROJECT IS BRIEFLY DESCRIBED. ALSO DISCUSSED ARE SOME OF THE REASONS WHY WIND ENERGY WAS NOT SERIOUSLY CONSIDERED AS A MAJOR SOURCE OF ENERGY FOR THE U.S.

77-0369 SCHMIDT-KUESTER W J, WAGNER H F
DEVELOPMENT OF NEW TECHNOLOGIES FOR ENERGY PRODUCTION IN THE FEDERAL
REPUBLIC OF GERMANY.
BRENNST.-WARME-KRAFT 29(9): 377-383, SEPTEMBER 1977. (IN GERMAN)

IN THE INTRODUCTION, THIS SURVEY OF THE DEVELOPMENT OF NEW ENERGY TECHNOLOGIES EMPHASIZES THE IMPORTANCE OF THE NUCLEAR ENERGY IN VIEW OF ITS SHORT-TERM AVAILABILITY. THEN THE RELEVANT DEVELOPMENTS FOR THE MEDIUM- AND LONG-TERM AVAILABILITY FOR COVERING THE ENERGY DEMAND ARE PRESENTED, AND ESPECIALLY THE THERMAL APPLICATION OF SOLAR ENERGY IS DEALT WITH. R AND D WORK FOR THE ELECTRICAL USE OF WIND AND WAVE ENERGY, OF SEA CURRENTS AND HYDRO POWER, AND OTHERS ARE DESCRIBED. IN THE AREA OF DEVELOPING THE RATIONAL USE OF ENERGY, THE AUTHORS REFER PARTICULARLY TO THE PRACTICAL TECHNIQUES OF APPLICATION IN HOUSEHOLDS AND OTHER SMALL USERS, AS WELL AS TO THE POWER AND HEATING COUPLING IN CONNECTION WITH DISTRICT HEATING. A SURVEY OF THE PRESENT STAGE AND ACTIVITIES IN RESPECT OF DEVELOPMENT OF CONTROLLED NUCLEAR FUSION CONCLUDES THE ARTICLE.

77-0370 SELZER H, COHRT C
METHOD OF OPERATION AND CHARACTERISTICS OF DARRIEUS ROTORS.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN,
GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977.
P.111-124. (IN GERMAN)

SOME OF THE PROBLEMS ARE DESCRIBED WHICH ARE CONNECTED WITH THE WIND ROTOR WITH VERTICAL AXIS (DARRIEUS-ROTOR). THE ADVANTAGE OF THIS ROTOR COMPARED WITH UNITS WITH HORIZONTAL AXES LIES IN THE FACT THAT THEY ARE INDEPENDENT OF THE WIND DIRECTIONS. THE FOLLOWING ASPECTS ARE CONSIDERED: LOAD FACTOR, BEHAVIOUR ON STARTING, METHOD OF CONSTRUCTION, ENERGY CONVERSION, OUTPUT OF WIND ENERGY AND DURATION OF UTILIZATION, EXAMPLES OF DESIGN.

77-0371 SENIOR T B A, SENGUPTA D L, FERRIS J E
TV AND FM INTERFERENCE BY WINDMILLS. FINAL REPORT, JANUARY 1, 1976 DECEMBER 21, 1976.

NTIS, FEBRUARY 1977. 159P. C00/2846-76/1

THIS REPORT DESCRIBES A PRELIMINARY BUT WIDE RANGING INVESTIGATION OF THE EFFECTS OF A HORIZONTAL AXIS WINDMILL ON THE RECEPTION OF TV AND FM SIGNALS IN ITS VICINITY. IT IS SHOWN THAT THE ROTATING BLADES PRODUCE A TIME VARYING AMPLITUDE MODULATION OF THE OTTAL SIGNAL RECEIVED, AND THAT FOR AN ANTENNA SO LOCATED AS TO PICK UP THE SPECULAR OR FORWARD SCATTERING OFF THE BLADES, THE MODULATION CAN PRODUCE SEVERE DISTORTION OF THE VIDEO PORTION OF A TV SIGNAL REPRODUCTION. THE DISTORTION IS WORST AT THE HIGHER FREQUENCIES, AND THEREFORE POSES MORE OF A PROBLEM AT UHF THAN VHF. NO INTERFERENCE TO THE AUDIO SIGNAL NOR TO ANY FM TRANSMISSION HAS BEEN OBSERVED. BASED ON LABORATORY STUDIES AS WELL AS FIELD TESTS, A MODULATION LEVEL HAS BEEN ESTABLISHED AT WHICH THE VIDEO INTERFERENCE IS JUDGED SEVERE OR OBJECTIONABLE, AND THIS THRESHOLD OF INTERFERENCE IS SUBSTANTIALLY INDEPENDENT OF THE PRIMARY FIELD STRENGTH. A THEORY HAS BEEN DEVELOPED TO COMPUTE THE INTERFERENCE ZONE ABOUT A WINDMILL FOR ANY GIVEN TV TRANSMITTER, AND THE RESULTS ARE IN GOOD AGREEMENT WITH THOSE OBTAINED FROM FIELD TESTS USING THE OPERATIONAL WINDMILL AT THE NASA PLUM BROOK FACILITY.

POTENTIAL AERODYNAMIC ANALYSIS OF HORIZONTAL-AXIS WINDMILLS.
AMERICAN INSTITUTE OF AERONAUTICS AND ASTRONAUTICS, AEROSPACE SCIENCES MEETING, 15TH, LOS ANGELES. CALIFORNIA, JANUARY 24-26, 1977. PAPER 77-132. 11P.

THE PROBLEM OF A HORIZONTAL-AXIS WINDMILL IN STEADY, INCOMPRESSIBLE, POTENTIAL FLOW IS CONSIDERED. THE PROBLEM IS FORMULATED IN A FRAME OF RIGIDLY CONNECTED WITH THE ROTOR. TWO DIFFERENT INTEGRAL THE FINITE-THICKNESS INTEGRAL EQUATION RELATES EQUATIONS ARE PRESENTED. THE VALUES OF THE POTENTIAL ON THE SURFACE OF THE WINDMILL TO THE VALUES OF THE NORMAL DERIVATIVE, WHICH ARE KNOWN FROM THE BOUNDARY CONDITIONS. THE WAKE IS TREATED AS A DOUBLET LAYER OF PRESCRIBED HELICOIDAL GEOMETRY. IN ORDER TO SOLVE THE INTEGRAL EQUATION, THE WINDMILL SURFACE IS DIVIDED INTO SMALL QUADRILATERAL SURFACE ELEMENTS. THE VALUES OF THE POTENTIAL AND ITS NORMAL DERIVATIVE WITHIN EACH ELEMENT ARE ASSUMED TO BE CONSTANT AND EQUAL TO THE VALUES AT THE CENTROID OF THE ELEMENT. THIS YIELDS A SET OF LINEAR ALGEBRAIC EQUATIONS IN THE UNKNOWN VALUES OF THE POTENTIAL. THE ZERO-THICKNESS INTEGRAL EQUATION AND THE CORRESPONDING NUMERICAL FORMULATION ARE OBTAINED AS THE LIMIT OF THE FINITE-THICKNESS ONE. NUMERICAL RESULTS ARE PRESENTED. DATA SUMMARY: PERTURBATION VELOCITY POTENTIAL DIFFERENCE DISTRIBUTIONS ARE PLOTTED FOR ONE-BLADE WINDMILLS FOR DIFFERENT RADIAL DISTANCES IN THE RANGE 0-70; VARIABLES ARE PERTURBATION VELOCITY POTENTIAL DIFFERENCE, RADIAL DISTANCE, POWER COEFFICIENT, AND BLADE ANGULAR VELOCITY-ROTOR RADIUS/FIXED FRAME WIND VELOCITY RATIO; SIX FIGURES INCLUDE NUMERIC DATA.

77-0378 SOLAR PROGRAM ASSESSMENT; ENVIRONMENTAL FACTORS, WIND ENERGY CONVERSION. NTIS, MARCH 1977. 42P. ERDA-77-47/6

THE PURPOSE OF THIS REPORT IS TO PRESENT AND PRIORITIZE THE MAJOR ENVIRONMENTAL ISSUES ASSOCIATED WITH THE FURTHER DEVELOPMENT OF WIND ELECTRIC CONVERSION (WEC) SYSTEMS, ONE OF THE EIGHT FEDERALLY-FUNDED SOLAR TECHNOLOGIES. TO PROVIDE A BACKGROUND FOR THIS ENVIRONMENTAL ANALYSIS, THE BASIC CONCEPTS OF THE TECHNOLOGY ARE REVIEWED, AS ARE ITS RESOURCE REQUIREMENTS. THE POTENTIAL EFFECTS OF THIS NEW TECHNOLOGY ON THE FULL RANGE OF ENVIRONMENTAL CONCERNS (I.E., AIR AND WATER QUALITY, BIOSYSTEMS, SAFETY, SOCIAL/INSTITUTIONAL STRUCTURES, ETC.) ARE THEN DISCUSSED IN TERMS OF BOTH THEIR RELATIVE SIGNIFICANCE AND POSSIBLE SOLUTIONS. ALTHOUGH THE DEVELOPMENT OF WEC WILL IN SOME WAYS CONTRIBUTE TO ENVIRONMENTAL PROBLEMS COMMON TO ANY CONSTRUCTION PROJECT OR ENERGY PRODUCING TECHNOLOGY, ONLY THOSE IMPACTS UNIQUE TO THE SOLAR/WIND PORTION OF THE TECHNOLOGY WILL BE DISCUSSED IN DEPTH.

77-0379 SOLAR ENERGY: UNSUNG POTENTIAL FOR WIND AND BIOMASS. SCIENCE 200(4342): 636-637, MAY 12, 1978.

A BRIEF REVIEW OF DOE-SPONSORED RESEARCH IN SOLAR ENERGY IS GIVEN.

77-0380 SORENSEN B
DIRECT AND INDIRECT ECONOMICS OF WIND ENERGY SYSTEMS RELATIVE TO FUEL
BASED SYSTEMS.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P.D2-7 TO D2-14.

IT IS SHOWN THAT THE ADDITION OF AN ENERGY STORAGE SYSTEM OF MODEST CAPACITY, TO A WIND ENERGY GENERATOR, PROVIDES A TOTAL WIND ENERGY ELECTRICITY GENERATING SYSTEM AS DEPENDABLE AS CURRENT ALTERNATIVE MEANS OF PRODUCING ELECTRICITY. IT IS FURTHER SHOWN, BASED ON PROJECTIONS OF THE MASS PRODUCTION COSTS OF WIND ENERGY GENERATORS AND ENERGY STORAGE SYSTEMS, THAT SUCH COMBINED SYSTEMS, AS WELL AS FUEL SAVING GENERATORS WITHOUT STORAGE, APPEAR ECONOMICALLY COMPETITIVE TO THE ALTERNATIVES, PROVIDED THE COMPARISON IS MADE OVER THE ENTIRE LIFE CYCLE OF THE SYSTEMS. FINALLY, A NUMBER OF ECONOMICALLY LESS TANGIBLE ASPECTS ARE TOUCHED UPON, ALL OF WHICH SEEM TO FAVOR THE USE OF FUEL-LESS ENERGY SYSTEMS.

77-0382 SOULES C
WIND DRIVEN PRIME MOVER.
U.S. PATENT NO. 4,004,861, JANUARY 25, 1977. 4P.

A WIND DRIVEN PRIME MOVER IS DESCRIBED WHICH IS DRIVEN BY A PLURALITY OF ARCUATELY SHAPED WIND VANES PIVOTALLY MOUNTED ON A ROTATABLE TURNTABLE. THE WIND VANES ARE PIVOTALLY MOUNTED ON THE TURNTABLE WITH THEIR PIVOT AXLE DISPOSED IN A VERTICAL PLANE. THE PIVOTS ARE POSITIONED ADJACENT THE PERIPHERY OF THE TURNTABLE, WITH THE PIVOTS BEING SPACED EQUI-DISTANT FROM EACH OTHER AND EQUI-DISTANT FROM THE AXIS OF ROTATION OF THE TURNTABLE. THE BOTTOMS OF THE VANES ARE ARCUATELY SHAPED, WITH THE LENGTH OF THE ARC BEING SLIGHTLY LONGER THAN THE SPACE BETWEEN THE PIVOTS SO THAT THERE IS AN OVERLAP BETWEEN ADJACENT VANES. THE CONVEX SURFACE OF THE VANES FACE OUTWARDLY TO PROVIDE A CONCAVE INNER SURFACE.

77-0383 SPERA D A, JANETZKE D C, RICHARDS T R
DYNAMIC BLADE LOADING IN THE ERDA/NASA 100KW AND 200KW WIND TURBINES.
NTIS, 1977. 14P.
N77-31599, ERDA/NASA/1004-77/2

DYNAMIC BLADE LOADS, INCLUDING AERODYNAMIC, GRAVITATIONAL, AND INERTIAL EFFECTS, ARE PRESENTED FOR TWO LARGE HORIZONTAL-AXIS WIND TURBINES: THE ERDA-NASA 100 KW MOD-O AND 200 KW MOD-OA WIND POWER SYSTEMS. CALCULATED AND MEASURED LOADS ARE COMPARED FOR AN EXPERIMENTAL MOD-O MACHINE IN OPERATION. PREDICTED BLADE LOADS ARE ALSO GIVEN FOR THE HIGHER POWER MOD-OA WIND TURBINE NOW BEING ASSEMBLED FOR OPERATION AS PART OF A MUNICIPAL POWER PLANT. TWO MAJOR STRUCTURAL MODIFICATIONS HAVE BEEN MADE TO THE MOD-O WIND TURBINE FOR THE PURPOSE OF REDUCING BLADE LOADS. A STAIRWAY WITHIN THE TRUSS TOWER WAS REMOVED TO REDUCE THE IMPULSIVE AERODYNAMIC LOADING CAUSED BY THE TOWER WAKE ON THE DOWNWIND ROTOR BLADES. ALSO, THE TORSIONAL STIFFNESS OF THE YAW DRIVE MECHANISM CONNECTING THE TURBINE NACELLE TO THE TOWER WAS DOUBLED TO REDUCE ROTOR-TOWER INTERACTION LOADS. MEASURED REDUCTIONS IN LOAD OBTAINED BY MEANS OF THESE TWO MODIFICATIONS EQUALED OR EXCEEDED PREDICTIONS.

77-0384 SPERA D A
COMPARISON OF COMPUTER CODES FOR CALCULATING DYNAMIC LOADS IN WIND
TURBINES.
NTIS, 1977. 40P.
DOE/NASA/1028-78/16, NASA-TM-73773, CONF-770921-7

SEVEN COMPUTER CODES FOR ANALYZING PERFORMANCE AND LOADS IN LARGE, HORIZONTAL-AXIS WIND TURBINES WERE USED TO CALCULATE BLADE BENDING MOMENT LOADS FOR TWO OPERATIONAL CONDITIONS OF THE 100 KW MOD-O WIND TURBINE. RESULTS ARE COMPARED WITH TEST DATA ON THE BASIS OF CYCLIC LOADS, PEAK LOADS, AND HARMONIC CONTENTS. FOUR OF THE SEVEN CODES INCLUDE ROTOR-TOWER INTERACTION AND THREE ARE LIMITED TO ROTOR ANALYSIS. WITH A FEW EXCEPTIONS, ALL CALCULATED LOADS WERE WITHIN 25 PERCENT OF NOMINAL TEST DATA.

77-0385 SPERA D A, JANETZKE D C
EFFECTS OF ROTOR LOCATION, CONING, AND TILT ON CRITICAL LOADS IN LARGE
WIND TURBINES.
WIND TECHNOL. J. 1(20): 5-10, SUMMER 1977.

THREE LARGE (1500 KW) HORIZONTAL ROTOR CONFIGURATIONS WERE ANALYZED TO DETERMINE THE EFFECTS ON DYNAMIC LOADS OF UPWIND AND DOWNWIND ROTOR LOCATIONS, CONED AND RADIAL BLADE POSITIONS, AND TILTED AND HORIZONTAL ROTOR AXIS POSITIONS. LOADS WERE CALCULATED FOR A RANGE OF WIND VELOCITIES AT THREE LOCATIONS IN THE STRUCTURE: THE BLADE SHANK, THE HUB SHAFT, AND THE YAW DRIVE. BLADE AXIS CONING AND ROTOR AXIS TILT WERE FOUND TO HAVE LITTLE EFFECT ON LOADS. HOWEVER, LOCATING THE ROTOR UPWIND OF THE TOWER SIGNIFICANTLY REDUCED LOADS AT ALL LOCATIONS ANALYZED.

77-0386 SPURGEON D SUPPORT FOR ALTERNATIVES. NATURE 266(5598): 110-111, MARCH 10, 1977.

TIDAL ENERGY FROM THE BAY OF FUNDY, BIOMASS FROM CROP RESIDUES, AND WIND AND SOLAR POWER ARE BEING ASSESSED BY CANADIAN SCIENTISTS AS POSSIBLE SOURCES OF RENEWABLE ENERGY. BY 1990, TIDAL ENERGY FROM THE BAY OF FUNDY

COULD DISPLACE ABOUT 4000 GWH OF OIL-FIRED ELECTRICITY GENERATION AND 500 GWH OF COAL-FIRED ELECTRICITY GENERATION. THIS WOULD MEAN AN ANNUAL SAVINGS OF SOME 6 MILLION BBL OF OIL AND 300,000 TONS OF COAL. THE SCHEME HAS CONSIDERABLE APPEAL FOR NOVA SCOTIANS, WHO HAVE BEEN HIT HARD BY RECENT OIL INCREASES. IN OTHER AREAS OF RESEARCH, BIOMASS HOLDS A COMBINED ENERGY POTENTIAL FOR SUPPLYING 18.92 PERCENT OF CANADA'S NATIONAL ENERGY REQUIREMENT.

77-0387 STAMPA U
WIND ENERGY TECHNIQUES ONCE AND NOW.
MITTEILUNGSBL. DTSCH. GES. SONNENERG. 2(3): 12-15, MAY 1977. (IN GERMAN)

THE ARTICLE IS ARRANGED IN TWO PARTS. THE FIRST PART DEALS WITH THE HISTORY OF THE WINDMILLS. VARIOUS TYPES OF WINDMILLS ARE DESCRIBED. THE SECOND PART IS CONCERNED WITH MODERN WIND POWER PLANTS. THE ADVANTAGES AND DISADVANTAGES OF THE VARIOUS SYSTEMS ARE DISCUSSED. FINALLY, ECONOMIC ASPECTS OF WIND POWER PLANTS ARE DEALT WITH.

77-0388 STANLEY D
THE ARUSHA WINDMILL: A CONSTRUCTION MANUAL.
STANFORD, CALIFORNIA, VOLUNTEERS IN ASIA, DECEMBER 1977. 58P.

THIS IS A MANUAL FOR THE CONSTRUCTION AND MAINTENANCE OF AN INNOVATIVE DEEP-BOREHOLE, WATER-PUMPING WINDMILL. THE WINDMILL IS MADE OF STANDARD WATER PIPE AND GALVANIZED SHEET METAL; IT CAN BE MADE AND REPAIRED IN ANY SMALL METAL-WORKING SHOP. COST OF THE COMPLETED WINDMILL IN TANZANIA IS ESTIMATED AT \$275, INCLUDING ABOUT \$150-175 IN MATERIALS. THIS COMPARES VERY FAVORABLY WITH THE \$4000 PRICE TAG OF AN IMPORTED AMERICAN WINDMILL OF COMPARABLE CAPACITY. RECOMMENDED FOR CIRCUMSTANCES OF DEEP WELLS WHERE A LOW-COST BUT DURABLE WINDMILL IS PRACTICAL. NOT RECOMMENDED FOR TYPHOON OR HURRICANE REGIONS.

TWENTY-SIX PAPERS ON WIND POWER AVAILABILITY AND WIND TURBINE SYSTEMS ARE INCLUDED.

77-0390 STOLT S, KIRLAN R L
EMPIRICAL AND THEORETICAL STATISTICS OF WINDCHARGER HOME HEATING
POTENTIAL.
WIND TECHNOL. J. 1(2): 21-25, FALL 1977.

APPLICATION OF WIND ENERGY TO HOME HEATING HAS DRAWN CONSIDERABLE INTEREST RECENTLY AND SEVERAL WINDCHARGERS ARE CURRENTLY AVAILABLE AT A SMALL FRACTION OF THE AVERAGE COST OF A NEW HOME. THE PERFORMANCE AND ECONOMICS OF ONE OF THESE IS STUDIED BY USING WEATHER AND HOME HEATING STATISTICS AT TWO GEOGRAPHICAL LOCATIONS. IT IS SHOWN THAT FOR THE EXAMPLE CHOSEN, WIND ENTRGY IS NOT QUITE ECONOMICAL. DUE TO THE COOLING EFFECT OF THE WIND, A STATISTICAL CORRELATION BETWEEN POWER AVAILABILITY AND POWER DEMAND WAS SOUGHT. HOWEVER, THIS WAS NOT SHOWN TO BE THE CASE. THE IMPLICATION IS THAT HEAT STORAGE CAPABILITY IS NECESSARY FOR HIGH EFFICIENCY.

77-0391 STRICKLAND J H
PERFORMANCE PREDICTION MODEL FOR THE DARRIEUS TURCINE.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P.C3.39-C3.54.

AN ANALYTICAL PERFORMANCE PREDICTION MODEL IS DESCRIBED FOR THE DARRIEUS TURBINE. THIS MODEL IS SHOWN TO PREDICT THE PERFORMANCE OF SMALL SCALE ROTORS, FOR WHICH TEST DATA IS AVAILABLE, WITH REASONABLE ACCURACY. IT DISPLAYS A MARKED IMPROVEMENT OVER OLDER METHODS IN WHICH THE "INDUCED VELOCITY" THROUGH THE ROTOR IS CONSIDERED TO BE CONSTANT. THE MODEL IS CAPABLE OF PREDICTING THE OVERALL ROTOR POWER OUTPUT AND THE DISTRIBUTION

OF AERODYNAMIC FORCES ALONG THE ROTOR BLADES. THE MODEL CAN BE USED TO STUDY THE EFFECTS OF ROTOR GEOMETRY VARIATIONS SUCH AS BLADE SOLIDARITY, BLADE TAPER, AND VARIATIONS IN ROTOR HEIGHT TO DIAMETER RATIOS. IN ADDITION, SPACIAL VARIATIONS IN FREESTREAM VELOCITY SUCH AS THAT PRODUCED BY ATMOSPHERIC WIND SHEAR CAN BE HANDLED BY THE MODEL. THIS MODEL SHOULD BE PARTICULARLY USEFUL IN THE DESIGN AND OPTIMIZATION OF LARGE SCALE ROTORS FOR WHICH TEST DATA IS NOT AVAILABLE. SCALE EFFECTS CAN BE PREDICTED BASED UPON HIGH REYNOLDS NUMBER AIRFOIL DATA.

77-0392 SULLIVAN T L, CAHILL T P, GRIFFEE D G, GEWEHR H W
WIND TURBINE GENERATOR ROTOR BLADE CONCEPTS WITH LOW COST POTENTIAL.
NTIS, DECEMBER 1977. 40P.
DOE/NASA/1028-77/13, CONF-780502-1

THIS PAPER WAS PRESENTED AT THE 23RD NATIONAL SAMPE SYMPOSIUM, ANAHEIM, CALIFORNIA, MAY 2, 1978. FOUR PROCESSES FOR PRODUCING BLADES ARE EXAMINED. TWO USE FILAMENT WINDING TECHNIQUES AND TWO INVOLVE FILLING A MOLD OR FORM TO PRODUCE ALL OR PART OF A BLADE. THE PROCESSES ARE DESCRIBED AND A COMPARISION IS MADE OF COSTS, MATERIAL PROPERTIES, DESIGNS AND FREE VIBRATION CHARACTERISTICS. CONCLUSIONS ARE MADE REGARDING THE FEASIBILITY OF EACH PROCESS TO PRODUCE LOW COST, STRUCTURALLY ADEQUATE BLADES.

77-0393 SULLIVAN T L, MILLER D R, SPERA D A
DRIVE TRAIN NORMAL MODES ANALYSIS FOR THE ERDA/NASA 100 KILOWATT WIND
TURBINE GENERATOR.
NTIS, JULY 1977. 32P.
N77-30611, EkDA/NASA/1028-77/1

NATURAL FREQUENCIES AS A FUNCTION OF POWER WERE DETERMINED USING A FINITE ELEMENT MODEL. OPERATING CONDITIONS INVESTIGATED WERE OPERATION WITH A RESISTIVE ELECTRICAL LOAD AND OPERATION SYNCHRONIZED TO AN ELECTRICAL UTILITY GRID. THE INFLUENCE OF CERTAIN DRIVE TRAIN COMPONENTS ON FREQUENCIES AND MODE SHAPES IS SHOWN. AN APPROXIMATE METHOD FOR OBTAINING DRIVE TRAIN NATURAL FREQUENCIES IS PRESENTED.

77-0394 SULLIVAN W N
PRELIMINARY BLADE STRAIN GAGE DATA ON THE SANDIA 17 METER VERTICAL AXIS
WIND TURBINE.
NTIS, 1977. 20P.
SAND-77-1176

RESULTS ARE SUMMARIZED FROM BLADE STRAIN MEASUREMENTS MADE DURING THE INITIAL OPERATING PERIOD OF THE SANDIA 17 METER VERTICAL AXIS WIND TURBINE. THE MEASUREMENTS INDICATE THAT THE BLADE STRUCTURE IS OPERATING ADEQUATELY, WITHOUT ANY APPARENT FATIGUE, LIFE CONSUMPTION OR EXCESSIVE VIBRATION. THE TEST RESULTS COVER A RANGE OF TURBINE SPEEDS (FROM 29.6-59.3 RPM) AND WIND SPEEDS (FROM NEGLIGIBLE TO 50MPH.)

77-0395 SUMMARY OF CURRENT COST ESTIMATES OF LARGE WIND ENERGY SYSTEMS.
NTIS, FEBRUARY 1977. 64P.
DSE/2521-1

THE FEDERAL WIND ENERGY PROGRAM HAS, OVER THE PAST TWO YEARS, SUBSTANTIALLY EXTENDED THE STATE OF KNOWLEDGE ABOUT THE COSTS AND PERFORMANCE OF LARGE WIND ENERGY CONVERSION SYSTEMS (WECS). MUCH OF THIS PROGRESS HAS BEEN ACHIEVED AS A RESULT OF A SERIES OF ERDA-SPONSORED STUDIES DEALING WITH THE SYSTEM DESIGN, MISSION ANALYSIS, AND REGIONAL APPLICABILITY OF WECS. THIS REPORT REVIEWS THESE STUDIES, SUMMARIZES THE MOST PERTINENT RESULTS, AND PROVIDES A VIEW OF THE CURRENT STATUS AND UNCERTAINTIES SURROUNDING THE ECONOMICS OF GENERATING ENERGY FROM THE WIND FOR ELECTRIC UTILITY APPLICATIONS.

77-0396 SUMMARY OF INTERNATIONAL ENERGY RESEARCH AND DEVELOPMENT ACTIVITIES, 1974-1976.
NTIS, NOVEMBER 1977.
HCP/U2639

THIS DIRECTORY INCLUDES INFORMATION COVERING 3017 ONGOING AND RECENTLY COMPLETED ENERGY RESEARCH PROJECTS CONDUCTED IN CANADA, ITALY, THE FEDERAL REPUBLIC OF GERMANY, FRANCE, THE NETHERLANDS, THE UNITED KINGDOM, DENMARK, SWEDEN, ISRAEL, AND 18 OTHER COUNTRIES. THIS INFORMATION WAS REGISTERED WITH THE SMITHSONIAN SCIENCE INFORMATION EXCHANGE (SSIE) BY

SUPPORTING ORGANIZATIONS IN THE NINE COUNTRIES LISTED AND BY INTERNATIONAL ORGANIZATIONS SUCH AS THE INTERNATIONAL ATOMIC ENERGY AGENCY.

77-0397 SURVEY OF HISTORICAL AND CURRENT SITE SELECTION TECHNIQUES FOR THE PLACEMENT OF SMALL WIND ENERGY CONVERSION SYSTEMS.
NTIS, DECEMBER 1977. 80P.
BNWL/WIND-09

INDIVIDUALS AND GROUPS WHO PURCHASE AND INSTALL WIND ENERGY CONVERSION SYSTEMS (WECS) FOR EITHER GENERATION OF ELECTRICITY OR PUMPING WATER HAVE TO GO THROUGH A PROCESS BY WHICH A SPECIFIC LOCATION IS SELECTED FOR EACH WECS. THE PURPOSE OF THIS STUDY WAS TO IDENTIFY AND DOCUMENT METHODS AND PRACTICES USED IN SITING OF WECS. THE STUDY COVERS THE PERIOD FROM EARLY 1900S TO THE PRESENT DAY.

77-0398 SWAMY N V C, FRITZSCHE A A
AERODYNAMIC STUDIES ON VERTICAL-AXIS WIND TURBINE.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P.C5.73-C5.80.

SOME STUDIES ON DARRIEUS TYPE ROTORS UNDERTAKEN AT DORNIER SYSTEM, FRIEDRICHSHAFEN, GERMANY AND I.I.T., MADRAS ARE DESCRIBED. AS A FIRST STEP, THE ACTUAL SHAPE OF THE ROTOR BLADES IN A CENTRIFUGAL FORCE FIELD IS COMPARED WITH A QUADRATIC PARABOLA AND A CATENARY FOR DIFFERENT ROTOR HEIGHT-DIAMETER RATIOS. THE OPTIMUM RATIO OF ARC LENGTH AND SWEPT AREA IS CONSIDERED. FOR A QUADRATIC PARABOLA, THE CONTRIBUTION TO THE TORQUE FROM THE VARIOUS SEGMENTS OF THE ROTOR HAS BEEN DETERMINED. IT IS FOUND THAT THE CENTRAL 60 PERCENT OF THE ROTOR CONTRIBUTES MORE THAN 95 PERCENT OF THE TOTAL TORQUE. A COMPARISON WITH A CORRESPONDING CYLINDRICAL ROTOR SHOWS THAT THE LATTER OF IDENTICAL MAXIMUM DIAMETER GENERATES ABOUT 2 TO 3 TIMES AS MUCH TORQUE AS THE BEND ROTOR. PRELIMINARY CALCULATIONS SHOW THAT USING A SMALL SEGMENT OF THE CENTRAL PART OF THE ROTOR AS A SPOILER REGULATES THE CIRCUMFERENTIAL SPEED OF THE ROTOR AT HIGH WIND SPEEDS. FURTHER STUDIES IN THIS DIRECTION ARE UNDER PROGRESS.

77-0399 SWIFT A H P
COMPUTER-AIDED DESIGN OF A CONTINUOUS DUTY ENERGY SYSTEM.
ANNUAL CONFERENCE ON ENERGY, 3RD, UNIVERSITY OF MISSOURI, ROLLA, OCTOBER
13, 1976. PROCEEDINGS. NORTH HOLLYWOOD, WESTERN PERIODICAL COMPANY,
1977. P.81-90.

IN MANY AREAS OF THE UNITED STATES, THE AVERAGE MONTHLY SOLAR AND WIND ENERGY DENSITY PROFILES COMPLEMENT EACH OTHER, WHICH SUGGESTS UTILIZATION OF A POWER SYSTEM THAT EMPLOYS BOTH SOLAR AND WIND ENERGY. THE PROBLEMS OF IDENTIFYING THESE AREAS FROM WEATHER DATA, AND DEVELOPING A COMPUTER-AIDED METHOD FOR THE DESIGN OF SUCH COMBINED SOLAR AND WIND SYSTEMS ARE STUDIED. THE ECONOMICS OF COMBINED SYSTEMS AS CUMPARED TO SOLAR OR WIND ONLY SYSTEMS IS EXAMINED.

77-0400 TAYLOR F J, PRIES T H, HUANG C H
OPTIMAL WIND VELOCITY ESTIMATION.
AUTOMATICA 13(1): 3-10, JANUARY 1977.

A NEW APPROACH TO REMOTE WIND VELOCITY SENSING IS PROPOSED, DEVELOPED AND TESTED. WIND ESTIMATES WERE OBTAINED FROM THE SPECTRAL SIGNATURE OF AN OPTICAL SIGNAL SOURCE. THE SIGNAL WAS DERIVED FROM THE RANDOM SCATTERING OF A LASER BEAM IN THE LOWER ATMOSPHERE. A QUASI-SUPERVISED LEARNING MACHINE, USING A MINIMAL VARIANCE LINEAR ESTIMATOR, WAS USED TO PRODUCE THE WIND VELOCITY ESTIMATE. NEW STOPPING RULES, USED TO GUARANTEE THE CONVERGENCE OF THE LEARNING PROCESS, WERE ALSO DEVELOPED. FIELD EXPERIMENTATION INDICATES THAT THE NEW SYSTEM WILL PERFORM WELL, EVEN UNDER EXTREME CATICAL NONLINEAR CONDITIONS DUE TO SEVERE TURBULENCE.

77-0401 TECHNICAL AND MANAGEMENT SUPPORT FOR THE DEVELOPMENT OF WIND SYSTEMS FOR FARM, REMOTE AND RURAL USE.
ROCKY FLATS, COLORADO, ROCKWELL INTERNATIONAL, OCTOBER 1977. 123P.

THIS ANNUAL REPORT DETAILS PROGRESS DURING FY1977, THE FIRST FULL YEAR OF THE ROCKY FLATS PROGRAM ENTITLED "TECHNICAL AND MANAGEMENT SUPPORT FOR THE DEVELOPMENT OF WIND SYSTEMS FOR FARM, REMOTE AND RURAL USE". THE PRIMARY GOAL IS TO STIMULATE THE MANUFACTURE AND SALE OF SMALL WIND

ENERGY CONVERSION SYSTEMS (SWECS) BY PRIVATE SECTOR INDUSTRY TO INCREASE USE OF SWECS BY THE GENERAL PUBLIC. THIS GOAL WILL BE MET BY REDUCING THE COST OF ENERGY PRODUCED BY WIND TURBINE GENERATORS (WTG'S). ENERGY COSTS CAN BE REDUCED BY DECREASING SYSTEM CAPITAL COST, BY IMPROVING PERFORMANCE AND/OR BY IMPROVING SYSTEM RELIABILITY AND LIFETIME.

77-0402 TEMPLIN R J, SOUTH P
SOME DESIGN ASPECTS OF HIGH-SPEED VERTICAL-AXIS WIND TURBINES.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P.Cl.1-cl.20.

THE AERODYNAMIC, MECHANICAL AND ECONOMIC REASONS ARE DISCUSSED FOR THE CHOICE OF THE VARIOUS DESIGN PARAMETERS (ROTOR HEIGHT TO DIAMETER RATIO, SOLIDITY, NUMBER OF BLADES, ETC.) FOR HIGH-SPEED VERTICAL-AXIS WIND TURBINES FROM KILOWATT TO MEGAWATT SIZES. IT IS SHOWN THAT VERY LARGE TURBINES ARE THEORETICALLY FEASIBLE. VARIOUS METHODS TO PREVENT GVERSPEEDING, TO IMPROVE THE STARTING CHARACTERISTICS, AND TO ALLEVIATE THE EFFECTS OF CYCLIC TORQUE AND DRAG LOADS ARE DESCRIBED. THE OPERATION OF THE TURBINE AT CONSTANT EFFICIENCY IS COMPARED WITH OPERATION AT CONSTANT SPEED TO SHOW THAT AS LONG AS THE ROTOR SPEED IS PROPERLY SELECTED THE CONSTANT, SPEED MODE PRODUCES NEARLY AS MUCH AVERAGE POWER AS THE CONSTANT EFFICIENCY MODE. FINALLY, THE ECONOMICS OF A LARGE TURBINE FEEDING ELECTRICAL ENERGY INTO AN EXISTING THERMAL SYSTEM ARE CONSIDERED TO SHOW THAT UNDER THE RIGHT CIRCUMSTANCES THE USE OF WIND ENERGY MAKES CONSIDERABLE FINANCIAL SAVINGS POSSIBLE.

77-0403 TEWARI S K
WIND POWER FOR INDIA.
SUNWORLD NO. 4: 7-9, MAY 1977.

THE TECHNICAL AND ECONOMIC FEASIBILITY OF WIND POWER FOR RURAL CONDITIONS IN INDIA IS ASSESSED. EARLY AND CURRENT WIND POWER AND WINDMILL DEVELOPMENT ARE SURVEYED, AND WIND MEASUREMENTS ON RECORD ARE MENTIONED. THE RELATIVE ECONOMICS OF WIND POWER AND POWER TAKEN FROM THE GRID (FOR AREAS WHERE SUCH POWER IS ACCESSIBLE) ARE COMPARED FOR RURAL ELECTRIFICATION, WITH BASE PRICES FOR POWER AND DISTANCE (OF VILLAGE) FROM GRID CONNECTIONS TAKEN INTO ACCOUNT. WIND DATA ARE PROVIDED FOR VARIOUS LOCATIONS IN INDIA (DESIGN WIND SPEED FOR ENERGY MAXIMUM; POWER DENSITY FOR DESIGN WIND SPEED; WINDMILL HOURS OF OPERATION BASED ON DESIGN SPEED).

77-0404 THEORY PREDICTS PERFORMANCE OF DARRIEUS WINDMILL. NEW SCI. 73(1044): 700, MARCH 24, 1977.

WIND TUNNEL TESTS ON DARRIEUS TURBINES AT KINGSTON POLYTECHNIC, ENGLAND, ARE DESCRIBED.

77-0405 THOMAS R L, RICHARDS T R
ERDA/NASA 100-KILOWATT MOD-O WIND TURBINE OPERATIONS AND PERFORMANCE.
NTIS, SEPTEMBER 1977. 18P.
NASA-TM-73825, N78-15563, ERDA/NASA/1028-77/9

THIS PAPER WAS PRESENTED AT THE CONFERENCE ON WIND ENERGY CONVERSION SYSTEMS, WASHINGTON, D.C., SEPTEMBER 19-21, 1977. THE ERDA/NASA 100 KW MOD-O WIND TURBINE BECAME OPERATIONAL IN SEPTEMBER 1975 AT THE NASA PLUM BROOK STATION NEAR SANDUSKY, OHIO. THE OPERATION OF THE WIND TURBINE HAS BEEN FULLY DEMONSTRATED AND INCLUDES START-UP, SYNCHRONIZATION TO THE UTILITY NETWORK, BLADE PITCH CONTROL FOR CONTROL OF POWER AND SPEED, AND SHUT-DOWN. ALSO, FULLY AUTOMATIC OPERATION HAS BEEN DEMONSTRATED BY USE OF A REMOTE CONTROL PANEL, 50 MILES FROM THE SITE, SIMILAR TO WHAT A UTILITY DISPATCHER MIGHT USE. THIS REPORT BRIEFLY DESCRIBES THE OPERATION SYSTEMS AND EXPERIENCE WITH THE WIND TURBINE LOADS, ELECTRICAL POWER AND AERODYNAMIC PERFORMANCE OBTAINED FROM TESTING.

77-0406 VERHOLEK M G
SUMMARY OF WIND DATA FROM NUCLEAR POWER PLANT SITES.
NTIS, MARCH 1977. 342P.
BNWL/WIND-04

OUR COUNTRY'S URGENT NEED TO DEVELOP ALTERNATE ENERGY SOURCES HAS SPAWNED FEDERAL SUPPORT FOR A NATIONAL WIND ENERGY CONVERSION PROGRAM (WECP). THIS PROGRAM IS SPONSORED BY THE U.S. ENERGY RESEARCH AND DEVELOPMENT

ADMINISTRATION (ERDA) THROUGH THE WIND SYSTEM BRANCH OF THE DEPARTMENT OF SOLAR ENERGY. THE PRIMARY GOAL OF THE WECP IS THE DEVELOPMENT AND COMMERCIALIZATION OF DURABLE AND ECONOMICALLY VIABLE WIND ENERGY CONVERSION SYSTEMS (WECS). IN ORDER TO DETERMINE WHERE WECS TURBINES COULD BE EFFECTIVELY USED AND HOW MUCH ENERGY IS AVAILABLE FOR EXPLOITATION, SPECIAL WIND CLIMATOLOGY STUDIES ARE REQUIRED. WHILE SEVERAL SUCH STUDIES HAVE BEEN CONDUCTED ALREADY, FURTHER WORK IS NEEDED TO EXPAND AND IMPROVE OUR EXISTING DATA BASE. THIS STUDY IS INTENDED TO PROVIDE ADDITIONAL DATA FOR INCLUSION IN ASSESSMENTS OF AVAILABLE WIND ENERGY.

77-0407 TODD C J, EDDY R L, JAMES R C, HOWELL W E
COST-EFFECTIVE ELECTRIC POWER GENERATION FROM THE WIND.
NTIS, AUGUST 1977. 34P.
PB-273582

THE IDEA OF GENERATING WINDPOWER AT THE WINDIEST AVAILABLE SITES (WIND FARMS) IS EXAMINED FOR ITS EFFECT ON FEASIBILITY OF LARGE-SCALE WINDPOWER INPUT TO THE NATIONWIDE ELECTRIC POWER NETWORK. WINDPOWER IS CONSIDERED IN ASSOCIATION WITH PUMPED-STORAGE HYDROELECTRIC PLANTS FOR LOAD LEVELING AND EXISTING TYPES OF TRANSMISSION LINES FOR INTERCONNECTING THE WIND FARMS AND ENERGY-STORAGE SITES WITH LOAD CENTERS UP TO 2000 KM AWAY. POTENTIAL ENERGY HARVEST FROM WIND FARM SITES IN THE 17 WESTERN STATES IS ESTIMATED AT WELL OVER 100 GW, AND MANY TIMES THIS IN ARTIC NORTH AMERICA. AT THE 100-GW LEVEL OF DEVELOPMENT, BUS BAR COST AT THE WIND FARM WOULD BE ABOUT 3 MILLS/MJ (10 MILLS/KWH). ENERGY STORAGE REQUIRED FOR LOAD LEVELING WOULD ADD ABOUT 1.8 MILLS/MJ AND TRANSMISSION COST ANOTHER 2.1 MILLS/MJ, FOR A TOTAL COST AT THE LOAD CENTER OF 6 MILLS/MJ (21 MILLS/KWH), ALL IN 1976 DOLLARS. THIS WOULD BE COMPETITIVE WITH ENERGY GENERATED NEAR LOAD CENTERS BY NEW NUCLEAR OR FOSSIL-FUEL POWERPLANTS. WINDPOWER APPEARS ENVIRONMENTALLY ACCEPTABLE AND AVOIDS MANY OF THE ENVIRONMENTAL LIABILITIES OF CONVENTIONAL SOURCES. LARGE-SCALE WINDPOWER IMPLEMENTATION WILL REQUIRE MAJOR ADVANCE COMMITMENT OF CAPITAL, ABOUT \$1 BILLION, TO LOWER BUS BAR COSTS TO 4.4 MILLS/MJ (16 MILLS/KWH). THE TIMETABLE WILL THEREFORE LIKELY DEPEND ON FEDERAL INCENTIVES.

77-0408 TODD R W
USE OF THERMAL STORAGE.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P.X73-X74.

THE USE OF WIND POWER FOR GENERATING HEAT FOR SPACE HEATING THROUGH HYDRAULIC RESISTANCE IS DESCRIBED. THE USE OF WIND POWER FOR ELECTRIC RESISTANCE HEATING AND HEATED WATER STORAGE SYSTEMS IS ALSO DESCRIBED.

77-0409 TODD C J, EDDY R L, JAMES R C, HOWELL W E
COST-EFFECTIVE ELECTRICAL POWER GENERATION FROM THE WIND.
AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, PROCEEDINGS
OF THE ANNUAL MEETING. VOL. 1. ORLANDO, FLORIDA, JUNE 6-19, 1977. CAPE
CANAVERAL, FLORIDA, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY
SOCIETY, 1977. SECT. 19, SESSION B.2. 5P.

WIND ENERGY CONVERSION SYSTEMS (WECS) NOW BEING DEVELOPED ARE EXPECTED TO BE ABLE TO PROVIDE LARGE AMOUNTS OF ELECTRICAL ENERGY AT SELECTED WINDY SITES AT COSTS COMPETITIVE WITH ENERGY FROM NEW COAL AND NUCLEAR POWERPLANTS. WECS AND HYDROELECTRIC FACILITIES FOR STORAGE CONNECTED TO THE SAME LARGE-SCALE TRANSMISSION GRIDS ARE EXPECTED TO PUT LARGE ENERGY RESOURCES WITHIN REACH OF LOAD CENTERS UP TO 2000 KM FROM THE WIND SITES. DIVERSITY OF WIND SITES REDUCES THE COST OF STORAGE REQUIRED TO SMOOTH FLUCTUATIONS IN WIND ENERGY. TRANSMISSION FROM THE BEST SITES TO LOAD CENTERS IS EXPECTED TO BE PREFERABLE TO LOCAL GENERATION FROM THE WIND AND SUN AT INFERIOR SITES. ALL ELEMENTS OF THE INTEGRASYSTEM ARE WITHIN THE PRESENT STATE OF THE ART.

77-0410 TODD F
HAVING TO LOOK AT COAL, TIDES, STEAM, WIND.
ALASKA IND. 9(6): 34-40, JUNE 1977.

ALASKA NOT ONLY HAS THE GREATEST PETROLEUM RESERVES OF ALL 50 STATES, BUT ALSO HAS THE GREATEST POTENTIAL FOR GENERATING ENERGY FROM SEVERAL ALTERNATIVE AND AS YET BARELY EXPLOITED SOURCES SUCH AS COAL.

HYDROELECTRICITY, TIDAL CURRENTS, AND THE POWERFUL AND CONSISTENT WINDS THAT BLOW ALONG THE ALASKAN COAST. AT PRESENT, THE STATE'S LARGEST SOURCE OF NONCONVENTIONALLY GENERATED ELECTRICITY IS BEING PRODUCED AT TWO SOUTHEASTERN ALASKAN PULP MILLS THAT BURN A COMBINATION OF SAWDUST, BARK, OIL, AND A BY-PRODUCT OF PULP MANUFACTURING CALLED RED LIQUOR. OF PARTICULAR PROMISE ARE THE STATE'S ABUNDANT COAL RESOURCES. COAL MAY ONE DAY BE EXPORTED FROM ALASKA TO JAPAN OR EVEN TO SOUTHERN CALIFORNIA. THE POTENTIAL OF WIND POWER IS DISCUSSED ALSO.

77-0411 TOMPKINS L L
TEMPERATURE CONTROL SYSTEM UTILIZING NATURALLY OCCURRING ENERGY SOURCES.
U.S. PATENT NO. 4,015,962, APRIL 5, 1977. 10P.

A TEMPERATURE CONTROL SYSTEM FOR AN ENCLOSED STRUCTURE IS DISCLOSED WHICH UTILIZES TWO CIRCUITS, ONE FOR HEATING AND ONE FOR COOLING THE STRUCTURE. THE SYSTEM MAKES MAXIMUM USE OF NATURALLY OCCURRING SOURCES OF ENERGY, SUCH AS WIND AND SOLAR HEAT TO PROVIDE THE REQUISITE HEATING OR COOLING. WIND DRIVEN COMPRESSORS, ONE IN EACH CIRCUIT, PROVIDE THE MOTIVE FORCE FOR THE HEATING AND COOLING FLUID IN THE CLOSED LOOP CIRCUITS. THE COOLING CIRCUIT TRANSFERS HEAT TO THE HEATING CIRCUIT TO MINIMIZE UNUTILIZED ENERGY. A STORAGE UNIT IS PROVIDED TO STORE HEAT OR LOW TEMPERATURE FLUID WHEN HEATING OR COOLING OF THE STRUCTURE IS NOT IMMEDIATELY REQUIRED.

77-0412 VUKOVICH F M, CLAYTON C A
ON A TECHNIQUE TO DETERMINE WIND STATISTICS IN REMOTE LOCATIONS, FINAL REPORT.
NTIS, DECEMBER 1977. 124P.
RLO-2445-78/1

A TECHNIQUE HAS BEEN DEVELOPED TO PREDICT WIND STATISTICS IN REMOTE LOCATIONS WHERE WIND DATA ARE USUALLY NOT AVAILABLE. THE TECHNIQUE USES HISTORICAL WIND DATA FROM A SYNOPTIC WEATHER STATION TOGETHER WITH A STATISTICAL PREDICTION MCDEL TO OBTAIN DATA FROM WHICH WIND STATISTICS CAN BE DEVELOPED. THE FORM OF THE STATISTICAL MODEL AND ITS PARAMETER ESTIMATES WERE DEVELOPED FROM SIMULATIONS FOR THE REGION OF INTEREST THAT, IN TURN, WERE BASED ON A HYDRODYNAMIC MODEL. PREDICTIONS AND EVALUATIONS WERE MADE IN AND AROUND THE CITY OF ST. LOUIS. THE BEST PREDICTIONS OF WIND STATISTICS WERE MADE AT LOCATIONS NEAR THE CENTER OF THE CITY WHERE THE SIMULATIONS WERE THE BEST. THE ACCURACY OF THE SIMULATIONS DEPENDED ON THE PARAMETERS USED TO DESCRIBE THE FORCING FUNCTIONS. CONSIDERABLY MORE INFORMATION WAS AVAILABLE ON THESE PARAMETERS FOR THE CENTRAL CITY THAN FOR THE SURROUNDING AREAS.

77-0413 200 KW TURBINES SITES SELECTED. WIND POWER DIG. 1(9): 20, SUMMER 1977.

TWO 200 KW TURBINES WILL BE INSTALLED AS PART OF ERDA'S WIND POWER RESEARCH ACTIVITIES. THEY WILL BE ON BLOCK ISLAND (RHODE ISLAND) AND CULEBRA ISLAND (PUERTO RICO).

77-3414 TRACI R M, PHILLIPS G T, PATNAIK P C, FREEMAN B E
DEVELOPMENT OF A WIND ENERGY SITE SELECTION METHODOLOGY. FINAL REPORT,
MAY 3, 1976-JUNE 3, 1977.
NTIS, JUNE 1977. 206P.
RLO-2440-11

THIS REPORT DESCRIBES PROGRESS ACHIEVED DURING THE SECOND PHASE OF A PLANNED THREE-PHASE PROGRAM TO DEVELOP AN IMPROVED WIND ENERGY CONVERSION SYSTEM (WECS) SITING METHODOLOGY. THE GOAL OF THE PROGRAM IS THE DEVELOPMENT OF A PRACTICAL AND WORKABLE WIND ENERGY PROSPECTING AND SURVEYING TOOL. THE METHODOLOGICAL APPROACH CONSISTS OF COMBINING DATA ANALYSIS PROCEDURES FOR ANALYZING AND COMPACTING HISTORICAL METEOROLOGICAL DATA FOR A MESOCALE (APPROXIMATELY 100 KM) REGION OF INTEREST WITH MATHEMATICAL WINDFIELD MODELING TO DEFINE THE WIND CHARACTERISTICS OF POTENTIAL WIND ENERGY SITES WITHIN THE REGION. THE SECOND PHASE, DISCUSSED HEREIN, INVOLVES MODEL IMPROVEMENT, DEVELOPMENT OF THE METHODOLOGY AND A PRELIMINARY SITE SURVEY DEMONSTRATION STUDY.

77-0415 UPMALIS A
WIND-POWER ELECTRICITY FOR HIGH-RISE FLATS.
ELEKTROTECH. Z. (ETZ) B. 29(11): 355-357, MAY 20, 1977. (IN GERMAN)

THE TECHNICAL AND ECONOMICAL FEASIBILITY OF SUPPLYING THE ELECTRICITY REQUIREMENTS OF A HIGH RISE BLOCK OF FLATS FROM AC GENERATORS CONNECTED TO THE GRID AND DRIVEN BY VARIABLE-PITCH PROPELLERS MOUNTED ON THE ROOF OF THE BUILDING AT A HEIGHT OF ABOUT 120 M ABOVE GROUND LEVEL IS INVESTIGATED FOR CERTAIN LOCATIONS ON THE BELGIAN, GERMAN AND ENGLISH COASTAL BELT. IT IS CONCLUDED THAT DEMAND COULD BE MET COMPETITIVELY BUT THAT PEAK DEMAND WOULD NEED SUPPLEMENTATION FROM THE GRID.

77-0416 URBANEK A
GOOD OUTLOOK FOR WIND ENERGY CONVERTERS.
ELEKTROTECHNIK 59(17): 24, SEPTEMBER 9, 1977. (IN GERMAN)

BRIEF PARTICULARS ARE GIVEN OF SOME OF THE LARGE WIND ENERGY CONVERTER PROJECTS DESCRIBED AT THE JUNE 1977 CONFERENCE OF THE GERMAN SOLAR ENERGY SOCIETY IN BREMEN.

77-0417 VAN HOLTEN T
MODERN RESEARCH IN THE FIELD OF WIND ENERGY.
INGENIEUR 89(7): 129-136, FEBRUARY 17, 1977. (IN DUTCH)

THIS ARTICLE CONSIDERS THE FACTORS WHICH LED TO THE SETTING UP IN MARCH 1976 OF THE NETHERLANDS FIVE YEAR NATIONAL WIND ENERGY RESEARCH PROGRAMME. PROBLEMS FOR STUDY INCLUDE NOT ONLY PURE WINDMILL TECHNOLOGY BUT ALSO METEOROLOGICAL QUESTIONS AND THE COUPLING TO THE ELECTRICITY NETWORK OF A FLUCTUATING ENERGY SOURCE. AN HISTORICAL SURVEY FROM CIRCA 1900 IS FOLLOWED BY A DISCUSSION OF THE POTENTIAL CONTRIBUTION OF WIND ENERGY IN THE LIGHT OF RECENT INVESTIGATIONS.

77-0418 VAN HOLTEN T
WINDMILLS WITH DIFFUSER EFFECT INDUCED BY SMALL TIPVANES.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P.E3.31-E3.46.

BETZ'S FORMULA FOR THE MAXIMUM POWER OUTPUT OF WINDMILLS IS VALID ONLY FOR WINDMILL TYPES EXERTING A STEADY, AXIAL FORCE ON THE AIR. TYPES NOT COVERED BY BETZ'S ANALYSIS, SUCH AS WINDMILLS APPLYING RADIAL AS WELL AS AXIAL FORCES TO THE AIR, MAY HAVE A MUCH LARGER POWER OUTPUT. THIS REPORT DEALS WITH A TYPE OF WINDMILL WHERE RELATIVELY SMALL VANES, ATTACHED TO THE TIPS OF THE MILLBLADES, DEFLECT THE AIR RADIALLY OUTWARDS. THE DIFFUSER EFFECT CAUSED BY THE TIPVANES DOWNSTREAM OF THE WINDMILL IS ASSOCIATED WITH A GENERAL TYPE OF FLOW RESEMBLING A VENTURI-FLOW, WHERE THE WINDMILL IS PLACED NEAR THE NARROWEST PART OF THE STREAMTUBE. THE RESULTING INCREASED MASS FLOW THROUGH THE DISC PLANE OF THE WINDMILL CAUSES A LARGER POWER OUTPUT PER UNIT AREA SWEPT BY THE MILLBLADES.

77-0419 VANDERPLAATS G, FUHS A E
AERODYNAMIC DESIGN OF A CONVENTIONAL WINDMILL USING NUMERICAL
OPTIMIZATION.
J. ENERGY 1(2): 132-134, MARCH-APRIL 1977.

THE PURPOSE OF THIS TECHNICAL NOTE IS TO IDENTIFY NUMERICAL OPTIMIZATION TECHNIQUES AS AN EFFECTIVE TOOL FOR AUTOMATED SYNTHESIS OF WINDMILL DESIGN. SEVERAL SIMPLE DESIGN EXAMPLES ARE PRESENTED TO SHOW THE EFFICIENCY AND GENERALITY OF THESE METHODS. THE EXTENSION TO MORE SOPHISTICATED DESIGN PROBLEMS IS DISCUSSED, AND THE ADVANTAGES AND LIMITATIONS OF THESE TECHNIQUES ARE IDENTIFIED.

77-0420 VENDOLSKY I
POSSIBILITIES OF USING WIND ENERGY IN THE COUNTRIES OF THE THIRD WGRLD.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN,
GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977. P.
305-322. (IN GERMAN)

THE FIELDS OF APPLICATION FOR THE USE OF WIND POWER IN COUNTRIES OF THE THIRD WORLD DO NOT NECESSARILY COINCIDE WITH THOSE OF THE INDUSTRIAL COUNTRIES. IN THE INDUSTRIAL COUNTRIES ONE IS CONCERNED WITH PRODUCING MORE ENERGY ECONOMICALLY, BUT IT IS THE AIM OF THE THIRD WORLD COUNTRIES SIMPLY TO OBTAIN ENERGY, BECAUSE OF THE LOW STAGE OF DEVELOPMENT OF THE INFRA-STRUCTURE, WHERE FOR IRRIGATION AND DRINKING WATER PROJECTS, SECURE OUTPUT IS NOT OF SUCH IMPORTANCE AS THE PROVISION OF A CERTAIN AMOUNT OF WORK (ENERGY) IN A CERTAIN SPACE OF TIME. A POSSIBILITY IS SHOWN WHERE IN

CONDITIONS OF LACK OF FOSSIL FUELS ON AN ISLAND WITH RELATIVELY GOOD INFRA-STRUCTURE THE USE OF WIND ENERGY FOR ELECTRICITY GENERATION APPEARS TO BE VERY SUITABLE.

77-0421 SEVEN-STORY-HIGH EGGBEATER DELIVERS 65 KW. MECH. ENG. 99: 45, AUGUST 1977.

A LARGE VERTICAL AXIS WIND TURBINE BEING TESTED AT SANDIA LABORATORIES IS DESCRIBED.

77-0422 HARNESSING THE WIND: A WAY OF LIFE. ORG. GARD. FARM. 24: 36+, OCTOBER 1977.

MARTIN JOPP'S LIFE-LONG INVOLVEMENT WITH WIND ENERGY IS DESCRIBED.

77-0423 1930S WIND-POWERED PLANT RE-EVALUATED. MECH. ENG. 99: 56, JANUARY 1977.

THE MADARAS ROTOR POWER PLANT, DEVELOPED IN THE 1930'S BY J. D. MADARAS, IS BEING INVESTIGATED BY THE UNIVERSITY OF DAYTON RESEARCH INSTITUTE ON A GRANT FROM ERDA. THE POWER PLANT CONSISTED OF A CIRCULAR TRACK, AN ENDLESS TRAIN OF VERTICAL, CYLINDRICAL ROTOR UNITS MOUNTED ON STREAMLINED FLAT CARS, A POWER COLLECTION AND DISTRIBUTION SYSTEM, AND A CONTROL AND MAINTENANCE BUILDING, ALL LOCATED ON AN 80-ACRE SITE. THE UNIVERSITY OF DAYTON INVESTIGATION WILL INCLUDE WIND TUNNEL TESTS, AN EVALUATION OF STRUCTURAL, ELECTRICAL, AND MECHANICAL COMPONENTS, COMPUTERIZED SIMULATIONS OF THE UPDATED MADARAS PLANT'S PERFORMANCE, AND ECONOMIC EVALUATION OF THE PLANT AND THE WAY IT COULD BE USED AS PART OF A LARGE PUBLIC SYSTEM.

77-0424 MCCONNELL R D, VAN SANT J H, FORTIN M, PICHE B EOLIENNES POUR LES ILES-DE-LA-MADELEINE. ENG. J. 60(1): 20-22, JANUARY 1977. (IN FRENCH)

77-0425 WALTERS R E INNOVATIVE WIND TURBINES.
ANNUAL CONFERENCE ON ENERGY, 3D., UNIVERSITY OF MISSOURI, ROLLA, OCTOBER 13, 1976. PROCEEDINGS. NORTH HOLLYWOOD, WESTERN PERIODICAL COMPANY, 1977. P. 268-275.

THE INITIAL INVESTIGATION OF TWO INNOVATIVE CONCEPTS IN WIND ENERGY CONVERSION TURBINES IS PRESENTED. THE FIRST CONCEPT IS A VORTEX CONCENTRATOR, A DEVICE WHICH CREATES A STRONG VORTEX IN THE AMBIENT WIND. THE ENERGY PER UNIT AREA IN THE VORTEX REGION IS MUCH HIGHER THAN FOR THE UNDISTURBED WIND, ALLOWING THE ENERGY TO BE MORE EFFICIENTLY CONVERTED TO MORE USEFUL FORMS. THE SECOND CONCEPT IS A VERTICAL AXIS WIND TURBINE WHICH USES STRAIGHT BLADES COMPOSED OF AIRFOIL SHAPES HAVING HIGH EFFICIENCY. THIS WOULD BE ATTAINED BY USING CIRCULATION CONTROLLED (C.C.) AIRFOILS FOR THE BLADES; THESE AIRFOILS CONTAIN SLOTS NEAR THE ROUNDED TRAILING EDGES THROUGH WHICH A SMALL AMOUNT OF COMPRESSED AIR IS BLOWN TO OBTAIN HIGH LIFT FORCES. STRAIGHT BLADES ALLOW CYCLIC PITCH CONTROL, AS WELL AS LOCATING EACH BLADE ELEMENT AT A LARGER RADIUS FROM THE SHAFT SO THAT MAXIMUM ROTOR TORQUE IS PRODUCED.

UPDATING AN ANCIENT ART: RESEARCH AND DEVELOPMENT TOWARD MODERN WIND POWERED CARGO SHIPS.
SHIP TECHNOLOGY AND RESEARCH (STAR) SYMPOSIUM, 2D, SAN FRANCISCO, CALIFORNIA, MAY 25, 1977. PROCEEDINGS. NEW YORK, SOCIETY OF NAVAL ARCHITECTS AND MARINE ENGINEERS, 1977. P.1-20.

THE DRAMATIC INCREASE OF FUEL COSTS DURING THE LAST FEW YEARS HAS RENEWED INTEREST IN SAIL POWERED COMMERCIAL SHIPS. THIS PAPER REVIEWS RESEARCH AND DEVELOPMENT EFFORTS, SINCE THE 1950'S, APPLICABLE TO THE DESIGN OF LARGE EFFICIENT SAILING VESSELS. DATA APPLICABLE TO SHIPS IN THE 15,000 TO 25,000 DEADWEIGHT TON RANGE IS EMPHASIZED SINCE A "UNIVERSAL BULKER" OF THIS SIZE IS THE MOST PROMISING APPLICATION FOR A MODERN SAILING SHIP. AERODYNAMIC, HYDRODYNAMIC AND PRACTICAL CONSIDERATIONS FOR SUCH A SHIP ARE DISCUSSED.

77-0427 WARREN A W. EDSINGER R W. CHAN Y K A SIMULATION MODEL FOR WIND ENERGY STORAGE SYSTEMS. VOLUME 1: TECHNICAL REPORT. FINAL REPORT. NTIS, AUGUST 1977. 101P. N78-20802

A COMPREHENSIVE COMPUTER PROGRAM FOR THE MODELING OF WIND ENERGY AND STORAGE SYSTEMS UTILIZING ANY COMBINATION OF FIVE TYPES OF STORAGE (PUMPED HYDRO, BATTERY, THERMAL, FLYWHEEL AND PNEUMATIC) WAS DEVELOPED. THE LEVEL OF DETAIL OF SIMULATION MODEL FOR WIND ENERGY STORAGE (SIMWEST) IS CONSISTENT WITH A ROLE OF EVALUATING THE ECONOMIC FEASIBILITY AS WELL AS THE GENERAL PERFORMANCE OF WIND ENERGY SYSTEMS. THE SOFTWARE PACKAGE CONSISTS OF TWO BASIC PROGRAMS AND A LIBRARY OF SYSTEM, ENVIRONMENTAL, AND LOAD COMPONENTS. THE FIRST PROGRAM IS A PRECOMPILER WHICH GENERATES COMPUTER MODELS (IN FORTRAN) OF COMPLEX WIND SOURCE STORAGE APPLICATION SYSTEMS, FROM USER SPECIFICATIONS USING THE RESPECTIVE LIBRARY COMPONENTS. THE SECOND PROGRAM PROVIDES THE TECHNO-ECONOMIC SYSTEM ANALYSIS WITH THE RESPECTIVE I/O, THE INTEGRATION OF SYSTEMS DYNAMICS, AND THE ITERATION FOR CONVEYANCE OF VARIABLES. SIMWEST PROGRAM, AS DESCRIBED, RUNS ON THE UNIVAC 1100 SERIES COMPUTERS.

PROGRAM DESCRIPTIONS, FLOW CHARTS, AND PROGRAM LISTINGS FOR THE SIMWEST MODEL GENERATION PROGRAM, THE SIMULATION PROGRAM, THE FILE MAINTENANCE PROGRAM, AND THE PRINTER PLOTTER PROGRAM ARE GIVEN.

77-0430 WASSERMAN H
ENERGY'S POINT OF NO RETURN; INDUSTRY HIDES FROM THE SUNNATION 224(9): 263-266, MARCH 5, 1977.

THE TECHNOLOGY TO HARNESS SOLAR ENERGY ON A MASS SCALE ALREADY EXISTS. POLITICAL AND SOCIAL BARRIERS, HOWEVER, STAND IN THE WAY OF THE DEVELOPMENT OF ANY COMPREHENSIVE PROGRAM. ANY MAJOR SHIFT TO SOLAR POWER WOULD COMPROMISE ENERGY CORPORATION'S INVESTMENTS IN NUCLEAR ENERGY. MOREOVER, PRIVATE HOMES AND SMALL INDUSTRIES EQUIPPED WITH SOLAR HEATERS WOULD MEAN LESS DEPENDENCE ON LARGE UTILITIES TO MEET ENERGY NEEDS. SOLAR POWER INSTALLATION WOULD ALSO PROVIDE MORE, NOT LESS, JOBS AS MANY UNION LEADERS BELIEVE.

77-0431 WEBER W
INFLUENTIAL FACTORS IN COST ANALYSIS OF WIND ENERGY CONVERTERS WITH HORIZONTAL AXES.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN, GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977. P. 99-110. (IN GERMAN)

A CAPITAL INVESTMENT CALCULATION IS CARRIED OUT WITH REGARD TO POSSIBLE ELECTRICAL POWER GENERATION, WHICH IS PRODUCED BY THE OPERATION OF WIND ENERGY CONVERTERS (WEK) WITH HORIZONTAL AXES, WHICH EXAMINES THE

OPERATION OF WEK'S SO AS TO COVER COSTS. THE IMPORTANT PARAMETERS ARE VARIED AND THEIR EFFECT ON THE PRODUCTION AND COST SITUATION IS SHOWN.

77-0432 WEBER W
THE OPTIMUM CONFIGURATION OF ROTOR BLADES FOR HORIZONTAL WIND ENERGY
CONVERTERS.

17P.
NASA-TT-F-17379

CONSIDERATIONS, PROCEDURES AND SOME RESULTS RELATING TO THE PROBLEM OF THE AERODYNAMIC CONFIGURATION OF ROTOR BLADES FOR WIND ENERGY CONVERTERS ARE PRESENTED.

77-C433 WEIMER G A
ANOTHER ENERGY SOURCE IS BLOWING IN THE WIND.
IRON AGE 220: 27-29, JULY 4, 1977.

DOZENS OF WIND ENERGY R+D EFFORTS, LARGELY FEDERALLY FINANCED, ARE UNDERWAY THROUGHOUT THE U.S., EUROPE, JAPAN, AND EVEN THE USSR. MOST PROJECTS HAVE A COMMON OBJECTIVE: MAKING WIND ENERGY CONVERSION SYSTEMS FINANCIALLY COMPETITIVE WITH OTHER ELECTRIC POWER GENERATING PLANTS. BY FAR THE LARGEST WIND TURBINE PROGRAM INVOLVES CONSTRUCTION OF GIGANTIC WINDMILLS THAT ARE INTENDED TO PRODUCE ENOUGH POWER TO DRIVE A 3000 KW TURBINE.

77-0434 WEISBRICH A L
TOROIDAL ACCELERATOR ROTOR PLATFORMS FOR WIND ENERGY CONVERSION.
WIND TECHNOL. J. 1(3): 11-20, FALL 1977.

PRESENTED IS A TOROIDAL ACCELERATOR ROTOR PLATFORM (TARP) DESIGN FOR WIND ENERGY CONVERSION SYSTEMS (WECS) APPLICATION. A TARP WECS IS ANALYZED FOR PERFORMANCE AND ECONOMIC VIÁBILITY USING BOTH EXPERIMENTAL RESULTS AND ANALYTICAL APPROACHES. RESULTS INDIC E À TARP WECS TO HAVE UNUSUAL PROMISE AND POTENTIAL FOR MEETING THE DIVLKSE PREREQUISITES FOR A WECS TO BECOME A VIABLE ENERGY SYSTEM ALTERNATIVE. THESE ARE REDUCED ENERGY COST, APPLICABILITY AND INTERFACE ADAPTABILITY TO A BROAD RANGE OF USES. ENVIRONMENTS AND STRUCTURES, AS WELL AS AESTHETIC DESIGN WITH MINIMAL ENVIRONMENTAL IMPACT. AS AN OBSTRUCTION TYPE FLOW CONCENTRATOR AND ACCELERATOR, A TARP GENERATES LOW PRESSURE, HIGH KINETIC WIND ENERGY REGIONS AT ITS ROTOR DISK SITES. ROTOR PERFORMANCE IS THUS ENHANCED VIA FLOW AUGMENTATION WHICH IS CALCULATED TO YIELD POWER OUTPUT LEVELS PER UNIT DISC AREA AT LEAST THREE TIMES THAT OF A CONVENTIONAL WECS. AUGMENTATION OF FLOW ALSO PERMITS HIGHER ROTOR RPM, REDUCING DRIVE SYSTEM COST, AND EXTENDS POWER GENERATION CAPABILITY TO LOWER AMBIENT WIND DUE TO A TARP'S UNIQUE DESIGN FEATURES, IT MAY BE ADAPTABLE VELOCITIES. FOR INTERFACE WITH MANY COMMON STRUCTURES AND ENVIRONMENTS FOR MULTI-PURPOSE USE. THE ABOVE MAY INCLUDE BUILDINGS IN AN URBAN ENVIRONMENT, FARM SILOS, COMMUNICATION TOWERS, POLLUTION CONTROL STACKS, WATER TOWERS, ETC. ALSO, SUBSYSTEM PROTECTION FROM THE ELEMENTS AND EASE OF SERVICEABILITY ARE INHERENT IN A TARP WECS DESIGN. THE ABOVE FEATURES ARE PROJECTED TO YIELD SIGNIFICANT IMPROVEMENT IN ENERGY COST.

77-0435 WEISBRICH A L
VARIABLE GEOMETRY WINDTURBINE.
U.S. PATENT NO. 4,021,140, MAY 3, 1977. 4P.

AN OMNIDIRECTIONAL TURBINE IS DESCRIBED WHICH PROVIDES A ROTATIONAL OUTPUT OF ONE SENSE IN RESPONSE TO FLUID FLOW APPROACHING THE TURBINE FROM ANY DIRECTION PARALLEL TO ITS PLANE OF ROTATION. THE INVENTION IS CONTEMPLATED FOR USE IN CONJUNCTION WITH ELECTRIC GENERATORS OR POWER GENERATING SYSTEMS IN GENERAL CAPABLE OF UTILIZING POWER OUTPUT FROM THE TURBINE.

77-0436 WHERE THERE'S A WIND THERE COULD BE A WALL. NEW SCI. 76(1077): 348, NOVEMBER 10, 1977.

A "WINDWALL", SAID TO BE CHEAPER AND VISUALLY LESS OBTRUSIVE THAN A WINDMILL, IS DESCRIBED IN CONNECTION WITH A HOUSING DEVELOPMENT IN PEACEHAVEN, SUSSEX, ENGLAND.

77-0437 WIEDERHOLD H
DO-IT-YOURSELF WIND POWER PLANT. REPORT OF THE ASSOCIATION FOR WIND

ENERGY RESEARCH AND APPLICATIONS.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN,
GERMANY, F.R., JUNE 7-8, 1977. MUNCHEN, DGS, 1977. P. 329-334. (IN
GERMAN)

A FULLY AUTOMATIC WIND ENERGY PLANT IN NORTH GERMANY, WHICH IS USED FOR SPACE HEATING IS DESCRIBED. THE FOLLOWING DETAILS ARE TREATED IN THE REPORT: THE FUNCTION OF THE ADJUSTABLE PROPELLER, THE FUNCTION OF THE GENERATOR AND THE ELECTRICAL CIRCUIT, THE FUNCTION OF THE AUTOMATIC CONTROL WITH PROTECTION AGAINST STORMS.

77-0438 WILLEM R A
CYLINDRICAL ARRAYS OF VERTICAL-AXIS WIND TURBINES.
WIND TECHNOL. J. 1(2): 11-16, SUMMER 1977.

THIS PAPER PRESENTS THE CONCEPT OF WIND ENERGY CONVERSION USING TALL CYLINDRICAL ARRAYS OF VERTICAL-AXIS TURBINES. THIS CONCEPT PROVIDES AN ALTERNATIVE TO THE LARGE SINGLE TURBINE APPROACH FOR ECONOMICAL WIND POWER CONVERSION. VARIOUS ASPECTS OF THE CONCEPTS ARE CONSIDERED AND A COMPARISON IS MADE WITH RESPECT TO GROUND-MOUNTED TURBINE SYSTEMS.

77-0439 WILLIAMS J R, CHRISTIANSON F, HUDSON W T
DEVELOPMENT OF A TOTAL ENERGY SYSTEM FOR THE CEDAR GAP CHRISTIAN RETREAT
CENTER.
AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, PROCEEDINGS
OF THE ANNUAL MEETING. VOL. 1. ORLANDO, FLORIDA, JUNE 6-19, 1977. CAPE
CANAVERAL, FLORIDA, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY
SOCIETY, 1977. SECT. 38, P. 27.

THE CEDAR GAP CHRISTIAN CENTER INCLUDES 2 LODGES OF 25 ROOMS EACH, A 5,300 SQ. FT. DINING HALL, 6 COTTAGES OF 1,200 SQ. FT. EACH, 6 COTTAGES OF 800 SQ. FT. EACH, A SHOWER AND LAUNDRY FACILITY OF ABOUT 800 SQ. FT., A 5,500 SQ. FT. RECREATIONAL BUILDING, AND A 1,200 SQ. FT. CHAPEL. THE DECISION WAS MADE TO PROVIDE ALL THE ENERGY NEEDS OF THE CHRISTIAN RETREAT WITH ON-SITE RENEWABLE SOURCES OF ENERGY. THE AVERAGE ELECTRIC POWER REQUIREMENTS OF THE RETREAT ARE PROJECTED TO BE AROUND 35 KW WITH PEAK POWER REQUIREMENTS IN EXCESS OF 100 KW. MUCH OF THIS POWER WILL BE PROVIDED BY HYDROELECTRIC UNITS ON STREAMS RUNNING ACROSS THE PROPERTY. THE REMAINDER WILL BE SUPPLIED BY WIND GENERATORS AND A SOLAR POWER PLANT OPERATED BY EXCESS HEAT FROM THE SOLAR COLLECTORS ON THE LODGES AND DINING HALL. AS A FINAL BACKUP, A WOOD BURNING BOILER IN THE SUBSTATION AT THE LODGE AND DINING HALL CAN SUPPLY ADDITIONAL HOT WATER FOR THIS FACILITY AS WELL AS HOT WATER TO RUN THE TURBINE-GENERATOR.

77-0440 WILSON R E, WALKER S N
PERFORMANCE-OPTIMIZED HORIZONTAL-AXIS WIND TURBINES.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. B1.1-B1.28.

DESIGN PROCEDURES FOR OPTIMUM WIND TURBINES ARE SHOWN TO BE DIFFERENT FROM THOSE USED FOR PROPELLERS. AN OPTIMUM DESIGN GENERATION APPROACH FOR WIND TURBINES IS DEVELOPED FROM A MODIFIED STRIP THEORY THAT INCLUDES TIP-LOSS. THE APPROACH ENTAILS A LOCAL OPTIMIZATION OF BLADE ELEMENT PARAMETERS TO MAXIMIZE POWER OUTPUT. EXAMPLES ARE PRESENTED THAT ILLUSTRATE THE OPTIMUM DESIGN GENERATION PROCEDURE AND OFF-DESIGN PERFORMANCE.

 ROCKVILLE CENTRE, N.Y., WIND ENERGY WORKSHOP OF LONG ISLAND, 1977. 48P.

INCLUDED ARE NAMES AND ADDRESSES OF MANUFACTURERS AND DISTRIBUTORS OF WIND ENERGY SYSTEMS AND ADDRESSES OF ORGANIZATIONS, PUBLICATIONS, CONSULTANTS, SCIENTISTS, RESEARCHERS, AND PUBLIC OFFICIALS IN THE WIND ENERGY FIELD.

- 77-0443 WIND ENERGY FOR RURAL HEATING, AN INTERVIEW WITH DR. LEO SODERHOLM. WIND POWER DIG. 1(9): 6-10, SUMMER 1977.
- 77-0444 WIND ENERGY MISSION ANALYSIS. EXECUTIVE SUMMARY.

NTIS, FEBRUARY 18, 1977. 28P. C00/2578-1/1

THE PRINCIPAL OBJECTIVES OF THIS STUDY WERE (1) TO ASSESS THE POTENTIAL FOR WIND ENERGY CONVERSION SYSTEMS ON A NATIONAL SCALE, (2) IDENTIFY HIGH-POTENTIAL APPLICATIONS FOR WECS, (3)DEFINE FUNCTIONAL, PERFORMANCE, OPERATIONAL, AND COST GOALS FOR WECS, (4) EVALUATE THE IMPACT OF THE WIDE-SCALE DEPLOYMENT OF WECS ON ENERGY USERS, AND (5) IDENTIFY THE INSTITUTIONAL AND NON-TECHNICAL PROBLEMS ASSOCIATED WITH THE ACCEPTANCE OF WIND ENERGY SYSTEMS. THE STUDY CONCENTRATED ON BROAD APPLICATIONS OF WECS OVER LARGE GEOGRAPHIC AREAS ENCOMPASSING THE ENTIRE UNITED STATES. EMPHASIS WAS PLACED ON IDENTIFYING AND EXPLORING HIGH-AGGREGATE ENERGY USERS WHO HAVE SIGNIFICANT POTENTIAL TO UTILIZE WIND ENERGY IN PLACE OF OTHER ALTERNATIVES.

77-0445 WIND ENERGY MISSION ANALYSIS. FINAL REPORT. NTIS, FEBRUARY 18, 1977. 252P. C00/2578-1/2

THE DEVELOPMENT OF WIND ENERGY SYSTEMS IN THE U.S. IS DISCUSSED UNDER THE FOLLOWING HEADINGS: BASELINE POWER SYSTEMS; ASSESSMENT OF WIND POTENTIAL; IDENTIFICATION OF HIGH POTENTIAL APPLICATIONS; ELECTRIC UTILITIES; RESIDENTIAL APPLICATION; PAPER INDUSTRY APPLICATION; AGRICULTURE APPLICATION; AND REMOTE COMMUNITY APPLICATIONS.

77-0446 WIND ENERGY MISSION ANALYSIS. FINAL REPORT, APPENDICES A-J. NTIS, FEBRUARY 18, 1977. 504P. C00/2578-1/3

INFORMATION IS PRESENTED CONCERNING METEOROLOGICAL DATA AND SUPPORTING ANALYSES, GROSS ENERGY CONSUMPTION PATTERNS AND END-USE ANALYSIS, ANALYSIS FOR INDUSTRIAL APPLICATIONS OF WIND ENERGY CONVERSION SYSTEMS (WECS), ANALYSIS FOR RESIDENTIAL APPLICATIONS OF WECS, ANALYSIS FOR APPLICATION OF WECS TO COMMUNITIES REMOTE FROM UTILITY GRIDS, ANALYSIS FOR AGRICULTURAL APPLICATIONS OF WECS, REGIONAL EVALUATION OF THE ECONOMICS OF WIND TURBINE GENERATION TO THE U.S. ELECTRIC UTILITY DISTRICT, IMPACT OF STORAGE ON WECS, FINANCIAL ANALYSIS TECHNIQUES, AND SYSTEM SPACING.

77-0447 WIND POWER ACCESS CATALOG. NO.1 WIND POWER DIG. NO. 10: C1-C40, FALL 1977.

THIS IS A COMPREHENSIVE CATALOG OF WIND MACHINES AND ACCESSORIES, INCLUDING SPECIFICATIONS AND MANUFACTURERS' NAMES AND ADDRESSES.

77-0448 JONES W J, RUANE M
ALTERNATIVE ELECTRICAL ENERGY SOURCES FOR MAINE.
NTIS, DECEMBER 1977. 554P.
PB-287909

INCLUDED IS AN EVALUATION OF ELEVEN TECHNOLOGIES AS POSSIBLE ALTERNATIVES TO THE CONSTRUCTION OF A BASE-LOAD TYPE 600 MWE COAL-FIRED GENERATING PLANT, CENTRAL MAINE SEARS ISLAND NO. 1, IN 1986. CONSIDERED ALTERNATIVES ARE GEOTHERMAL, OCEAN THERMAL, OCEAN AND RIVERINE CURRENT, WAVE, WIND, AND SOLAR ENERGY CONVERSION; CONSERVATION, FUEL CELLS, CONVERSION OF BIOMASS AND SOLID WASTES, AND THE ENVIRONMENTAL IMPACTS OF THESE TECHNOLOGIES.

77-0449 WIND POWER ON A COMMERCIAL BASIS? ELECTR. TIMES NO. 4412: 2, JANUARY 21, 1977.

THE HIGHLANDS AND ISLANDS DEVELOPMENT BOARD HAS TAKEN STEPS TO INSTALL TWO 10 KW WINDMILLS TO PROVIDE FOR HALF OF THE ISLAND OF COLONSAY. WIND PROFILES SUGGEST THERE IS SUFFICIENT WIND TO JUSTIFY THE SCHEME, WHICH WILL PROVIDE HYDROGEN, BY ELECTROLYSIS, FOR STORAGE AND POWERING A PETROL GENERATOR.

77-0450 WIND POWER PLANTS. A VARIETY OF PLANTS OFFERED IN THE POWER RANGE BETWEEN 30W AND 30KW.
MITTEILUNGSBL. DTSCH. GES. SONNENENERG. 2(3): 17, MAY 1977. (IN GERMAN)

A BRIEF SURVEY OF POSSIBLE USES FOR WIND POWER PLANTS IN POWER GENERATION IS FOLLOWED BY THE RANGE OF PLANTS THE VARIOUS FIRMS HAVE TO OFFER. THE

SUPPLY ENCOMPASSES 50 M PLANTS AS WELL AS 20 KW CONVERTERS.

77-0451 FRAENKEL P
WIND RESEARCH IN GREAT BRITAIN.
WIND POWER DIG. 1(8): 30-31, SPRING 1977.

REPORTED ARE A NUMBER OF PROJECTS CURRENTLY UNDER WAY IN GREAT BRITAIN.

77-0452 ZIMMERMAN J S
WIND ENERGY: A RENEWABLE ENERGY OPTION.
ASPE/MSFC SYMPOSIUM ON ENGINEERING AND PRODUCTIVITY GAINS FROM SPACE
TECHNOLOGY, PROCEEDINGS. NASA, MAY 1977. P. 19-31. NTIS 1977.
N77-30275

WIND TURBINE GENERATOR RESEARCH PROGRAMS ADMINISTERED BY THE ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION ARE EXAMINED. THE DESIGN AND OPERATION OF TURBINE DEMONSTRATION MODELS ARE DESCRIBED. WIND ASSESSMENTS WERE MADE TO DETERMINE THE FEASIBILITY OF USING WIND GENERATED POWER FOR VARIOUS PARTS OF THE COUNTRY.

77-0453 WIND-GENNI UNVEILED.
WIND POWER DIG. 1(8): 21-22, SPRING 1977.

THE WIND-GENNI, A HORIZONTAL-TO-VERTICAL AXIS DRIVE WIND GENERATOR IS DESCRIBED. DEVELOPED BY THE PRODUCT DEVELOPMENT INSTITUTE OF TOLEDO, OHIO, IT CAN BE PLUGGED DIRECTLY INTO THE CIRCUITRY OF MOST HOMES BY MEANS OF A 3-PRONG STOVE TYPE PLUG. A UNIQUE FEATURE OF THE TOTAL WIND-GENNI SYSTEM IS THE INCLUSION OF A "BASE LOAD INJECTOR" THAT ALLOVS THE OWNER TO USE THE UTILITY POWER GRID AS A SOURCE OF BACK-UP OR SUPPLEMENTARY POWER DURING PERIODS OF LOW WIND.

77-0454 ZIEGLER A
WIND POWER RESEARCH.
MITTEILUNGSBL. DTSCH. GES. SONNENENERG. 2(3): 8-12, MAY 1977. (IN GERMAN)

ON THE BASIS OF THE METEOROLOGICAL CONDITIONS A SURVEY IS PRESENTED OF THE REGIONS IN THE FRG, WHICH ARE SUITABLE FOR WIND POWER UTILIZATION. HOWEVER, IN ORDER TO DETERMINE THE POTENTIAL TECHNICALLY FLASIBLE, IT HAS TO BE DECIDED FIRST WITH WHICH TYPE OF PLANT WIND POWER IS TO BE CONVERTED INTO ELECTRIC POWER. OF ALL THE CONCEPTS PROPOSED SO FAR, THE "HUETTER" CONCEPT SEEMS TO BE THE MOST PROMISING AT THE MOMENT. IN ORDER TO MAKE A SUBSTANTIAL CONTRIBUTION TO THE ENERGY SUPPLY, ABOUT 400 WIND POWER PLANTS WITH A CAPACITY OF 3 MW EACH WOULD HAVE TO BE TAKEN INTO OPERATION BY 1985, SOMETHING WHICH CANNOT BE ACHIEVED AT THE PRESENT STATE OF THE MANUFACTURING CAPACITIES. UNSOLVED PROBLEMS OF WIND POWER CONVERSION ARE INVESTIGATED BY A NUMBER OF RESEARCH GROUPS AT THE MOMENT. THE VARIOUS PROJECTS ARE LISTED IN TABULAR FORM.

77-0455 WINDERL W R
WIND OPERATED GENERATOR.
U.S. PATENT NO. 4,039,848, AUGUST 2, 1977. 8P.

A WIND OPERATED GENERATOR IS DESCRIBED WHICH HAS COUNTERROTATING PROPELLERS WITH AN ALTERNATING CURRENT GENERATOR POSITIONED BETWEEN THE BLADES OF THE PROPELLERS AND SPACING THE SAME. THE PROPELLERS AND GENERATOR PARTS ARE MOUNTED ON CONCENTRIC SHAFTS SUPPORTED IN A POSITIVE DRIVE STRUCTURE IN WHICH THE SHAFTS ARE TIED TOGETHER THROUGH GEARING TO INSURE POSITIVE STARTING AND COUNTERROTATION OF THE PROPELLERS IN A POSITIVE EQUAL DRIVE SYSTEM. A GOVERNOR ASSOCIATED WITH ONE OF THE SHAFTS GOVERNS THE OPERATIONAL SPEED OF ROTATION OF BOTH PROPELLERS TO PROTECT THE PROPELLERS AND GENERATOR.

77-0456 WINDHEIM R
PROGRAMME FOR THE USE OF WIND ENERGY IN THE CONTEXT OF NON-NUCLEAR ENERGY RESEARCH.
ENERGIE VOM WIND. CONFERENCE ON WIND POWER WITH EXHIBITION, BREMEN, GERMANY, F.R., JUNE 7-8, 1977. PROCEEDINGS. MUNCHEN, DGS, 1977. P. 39-46. (IN GERMAN)

THE OUTLINE PROGRAMME ON ENERGY RESEARCH OF THE WEST GERMANY GOVERNMENT INCLUDES WIND POWER. A SURVEY IS PRESENTED ON THE PROGRAMME FOR THE USE OF WIND POWER. IN THE CONTEXT OF THIS PROGRAMME, THE CONSTRUCTION OF THE

GROWIAN (LARGE WIND POWER PLANT) PROTOTYPE EQUIPMENT WITH AN OUTPUT OF 2-3 MW IS TO BE CARRIED OUT.

77-0457 WINDMILL POWER FOR CITY PEOPLE: A DOCUMENTATION OF THE FIRST URBAN WIND ENERGY SYSTEM.
WASHINGTON, D.C., U.S. GOV. PRINT. OFFICE, SEPTEMBER 1977.

COVERED ARE ZONING, STRUCTURAL CALCULATIONS, PUBLIC UTILITY COMMISSION REGULATIONS AND TARIFFS, AS WELL AS BASIC WINDPOWER THEORY AND PRACTICE FOR ANYONE CONSIDERING A CITY OR SUBURBAN WIND ENERGY SYSTEM. THIS WAS WRITTEN BY THE PEOPLE WHO INSTALLED A 2 KW JACOBS WIND-ELECTRIC SYSTEM ATOP THE HOUSING COOPERATIVE AT 519 E. 11TH. STREET IN N.Y.C.

77-0458 YEN J T
TORNADO-TYPE WIND ENERGY SYSTEM: BASIC CONSIDERATION.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, SEPTEMBER 7-9,
1976. PROCEEDINGS. CRANFIELD, BEDFORD, ENGLAND, BRITISH HYDROMECHANICS
RESEARCH ASSOCIATION, 1977. P. E4-47 TO E4-64.

A NEW CONCEPT IN WIND TURBINES IS DESCRIBED: THE TORNADO-TYPE WIND ENERGY SYSTEM. A BASIC THEROMODYNAMIC CONSIDERATION IS PRESENTED TO GAIN A PROPER PERSPECTIVE OF THE OVER-ALL PERFORMANCE OF THIS NEW DESIGN. SOME DETAILS OF WIND TUNNEL DATA, DERIVATION OF THE SCALING LAWS, AND SOME RECENT RESULTS IN FLOW VISUALIZATION ARE ALSO PRESENTED.

 WATER HEATING SYSTEM IN THE PACIFIC NORTHWEST.
 INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 12TH, PROCEEDINGS.
 LA GRANGE PARK, ILLINOIS, AMERICAN NUCLEAR SOCIETY, 1977. VOL.2,

A REVIEW OF THE EXPERIMENTAL WORK CONDUCTED WITH A SOLAR/WIND-POWERED/HEAT PUMP HEATING SYSTEM ON A RESIDENCE LOCATED IN SEATTLE, WASHINGTON IS PRESENTED. THE SYSTEM WAS DESIGNED AND CONSTRUCTED BY THE DEPARTMENT OF LIGHTING, SEATTLE, WASHINGTON. TO OBTAIN ACTUAL TEST DATA ON THE OPERATION OF SOLAR/WIND-POWERED/HEAT PUMP SYSTEMS TO DETERMINE THE AMOUNT OF USEFUL ENERGY THAT COULD BE OBTAINED FROM THESE SOURCES. THE SYSTEM UTILIZES A CONVENTIONAL SOLAR SYSTEM INTEGRATED WITH HYDRONIC HEATING, A WATER-TO-AIR HEAT PUMP, AND A THERMAL ENERGY STORAGE SYSTEM FOR LEVELIZING THE DEMAND AND A WIND-GENERATOR. DATA ARE PRESENTED ILLUSTRATING THE PERFORMANCE AND COST EFFECTIVENESS OF THE SYSTEM. DATA WAS COLLECTED OVER ONE YEAR OF OPERATING THE SYSTEM AT A RESIDENCE UNDER ACTUAL LIVING CONDITIONS TO DETERMINE HOW SUCH A SOLAR/WIND-POWERED/HEAT PUMP SYSTEM WOULD ACTUALLY PERFORM.

77-0467 YEE S T, YUNG T, CHANGE P, SCAVUZZO R J, TIMMERMAN D H, FENTON J W VIBRATION CHARACTERISTICS OF A LARGE WIND TURBINE TOWER ON NON-RIGID FOUNDATIONS.

NTIS, MAY 1977. 34P.
ERDA/NASA/1004-77/1

VIBRATION CHARACTERISTICS OF THE MOD-OA WIND TURBINE SUPPORTED BY NONRIGID FOUNDATIONS WERE INVESTIGATED FOR A RANGE OF SOIL RIGIDITIES. THE STUDY SHOWS THAT THE INFLUENCE OF FOUNDATION ROTATION ON THE FUNDAMENTAL FREQUENCY OF THE WIND TURBINE IS QUITE SIGNI ICANT FOR COHESIVE SOILS OR LOOSE SAND. THE REDUCTION IN NATURAL FREQUENCY CAN BE GREATER THAN 20 PERCENT. HOWEVER, FOR A FOUNDATION RESTING ON WELL GRADED, DENSE GRANULAR MATERIALS OR BEDROCK, SUCH EFFECT IS SMALL AND THE FOUNDATION CAN BE TREATED AS A FIXED BASE.

WIND ENERGY STATISTICS FOR LARGE ARRAYS OF WIND TURBINES. ANNUAL
PROGRESS REPORT, MAY 1, 1976 - DECEMBER 31, 1976.
NTIS, JANUARY 1977. 36P.
RL0/2439-77-1

IN A MANNER SIMILAR TO THE ANALYSIS OF ARRAYS OF WIND TURBINES IN NEW ENGLAND AND THE CENTRAL U.S., ARRAY ANALYSES ARE BEING DONE FOR THE GREAT LAKES AREA, AND FOR THE PACIFIC COAST. IN ADDITION TO THE TYPES OF DATA COMPUTED FOR THE NEW ENGLAND AND CENTRAL U.S. ARRAYS (TIME AUTOCORRELATIONS, SPATIAL CROSS CORRELATIONS, MEAN WIND TURBINE POWER BY SEASON, OUTPUT POWER PROBABILITY DISTRIBUTIONS, AND SPEED AND POWER RUN TIME PROBABILITIES), ADDITIONAL ANALYSES OF WIND SPEED AND POWER BY TIME OF DAY AND WIND SPEED VERSUS HEATING OR COOLING DEGREE DAYS ARE ALSO BEING DONE. ALSO POWER OUTPUT CORRECTIONS FOR DENSITY MEAN WIND SPEED GUSTS, RMS DIRECTION FLUCTUATIONS AND FOR VERTICAL SHEAR ARE BEING INCORPORATED, AS DESCRIBED IN SUBSEQUENT SECTIONS OF THIS REPORT. AS EXAMPLES OF THE ARRAY ANALYSIS, RESULTS FROM THE GREAT LAKES ARRAY FOR 1971 ARE PRESENTED.

77-0474 JUSTUS C G, HARGRAVES W R
WIND ENERGY STATISTICS FOR LARGE ARRAYS OF WIND TURBINES (GREAT LAKES AND
PACIFIC COAST REGIONS). ANNUAL PROGRESS REPORT, MAY 1976 - APRIL 30,
1977.
NTIS, MAY 1977. 117P.
RL0/2439-77-2

ARRAYS OF SIMULATED 0.5 MW, 1.5 MW AND 2.0 MW WIND TURBINES IN THE GREAT LAKES AND PACIFIC COAST REGIONS ARE STUDIED. THE PARAMETERS ANALYZED ARE: BASIC WIND STATISTICS, TIME AND SPATIAL CORRELATIONS, MEAN WIND POWER OUTPUT, WIND POWER FREQUENCY (AVAILABILITY WITHOUT STORAGE), AND RUN DURATION OF WIND SPEED AND ARRAY POWER (PROBABILITIES OF WIND AND POWER LULLS OF VARIOUS DURATION, WITHOUT STORAGE). NEW ASPECTS OF THE PRESENT STUDY INCLUDE EVALUATION OF DIURNAL AS WELL AS SEASONAL VARIATIONS OF WIND AND WIND POWER, INCLUSION OF DENSITY, WIND SHEAR, WIND GUSTS AND OTHER FACTORS IN THE MODEL POWER OUTPUT CURVE SIMULATION, STUDY OF THE POSSIBLE RELATION BETWEEN WIND SPEED AND DEGREE DAYS (KNOWN TO AFFECT A PORTION OF UTILITY DEMAND), AND DEVELOPMENT AND VERIFICATION OF A SIMPLIFIED ARRAY SIMULATION MODEL.

77-0475 RAMSDELL J V
SEMI-ANNUAL REPORT OF THE WIND CHARACTERISTICS PROGRAM ELEMENT, APRIL
1976 - DECEMBER 1976.
NTIS, JANUARY 1977. 92P.
BNWL/WIND-02

THE WIND CHARACTERISTICS PROGRAM ELEMENT (WCPE) PROVIDES WIND INFORMATION, THROUGH THE WIND ENERGY CONVERSION PROGRAM (WECP), FOR THOSE INVOLVED IN ENERGY PROGRAM PLANNING, DESIGN AND EVALUATION OF PERFORMANCE OF WIND ENERGY CONVERSION SYSTEMS (WECS), SELECTION OF SITES FOR WECS INSTALLATION, AND WECS OPERATIONS. CURRENTLY THE TECHNICAL WORK WITHIN THE WCPE IS DIVIDED AMONG FOUR PROGRAM AREAS. THESE AREAS ARE TO PROVIDE WIND CHARACTERISTICS FOR DESIGN AND PERFORMANCE EVALUATION; SITE SELECTION; RESOURCE ASSESSMENT; AND OPERATIONS. WORK IS BEING UNDERTAKEN IN THE FIRST THREE AREAS.

77-0476 RAMSDELL J V
ANNUAL REPORT OF THE WIND CHARACTERISTICS PROGRAM ELEMENT, APRIL 1976 JUNE 1977.
NTIS, JULY 1977. 138P.
BNWL/WIND-10

BATTELLE, PACIFIC NORTHWEST LABORATORIES (PNL), HAS BEEN PROVIDING TECHNICAL AND MANAGEMENT SUPPORT FOR THE WIND CHARACTERISTICS PROGRAM ELEMENT (WCPE) OF THE WIND ENERGY CONVERSION PROGRAM SINCE APRIL 1976. THIS FIRST ANNUAL REPORT TO THE WIND SYSTEMS BRANCH (WSB) OF ERDA'S DIVISION OF SOLAR ENERGY DESCRIBES THE TECHNICAL PROGRESS WITHIN THE PROGRAM ELEMENT FROM APRIL 1976 THROUGH JUNE 1977. WITHIN THE WIND ENERGY CONVERSION PROGRAM, THE WCPE IS A SERVICE ELEMENT TO PROVIDE INFORMATION ON WIND CHARACTERISTICS TO THOSE INVOLVED IN ENERGY PROGRAM PLANNING, DESIGN AND EVALUATION OF PERFORMANCE OF WIND ENERGY CONVERSION SYSTEMS (WECS), SELECTION OF SITES FOR INSTALLATION OF WECS, AND OPERATION OF WECS. TO IDENTIFY PERTINENT WIND CHARACTERISTICS AND COLLECT AND PRESENT THAT INFORMATION IN FORMATS THAT ARE USEABLE, THE WCPE HAS BEEN DIVIDED INTO FOUR TECHNICAL AREAS: DESIGN AND PERFORMANCE EVALUATIONS; SITE SELECTION; PRESITING EVALUATION; AND PLANNING AND OPERATION.

HYDROGEN FUEL PRODUCTION BY WIND ENERGY CONVERSION.
MIAMI INTERNATIONAL CONFERENCE ON ALTERNATIVE ENERGY SOURCES, MIAMI
BEACH, FLORIDA, DECEMBER 5-7, 1977. PROCEEDINGS. UNIVERSITY OF FLORIDA,
CORAL GABLES, FLORIDA, 1977. P. 667-668.

WE CONCLUDE THAT HYDROGEN CAN BE PRODUCED BY WEC TECHNOLOGY AT A CUST THAT IS LESS THAN THE CURRENT GASOLINE PRICE IN MOST PARTS OF THE WORLD, AT THE VERY PREVALENT WIND SITES WHERE THE MEAN WIND SPEED EXCEEDS ABOUT 5 M/S.

77-0478 CAMPBELL J S
THE CAMPBELL CHINESE-TYPE WINDMILL.
MIAMI INTERNATIONAL CONFERENCE ON ALTERNATIVE ENERGY SOURCES, MIAMI
BEACH, FLORIDA, DECEMBER 5-7, 1977. PROCEEDINGS. UNIVERSITY OF FLORILA,
CORAL GABLES, FLORIDA, 1977. P. 863-864.

A NEW VERTICAL-AXIS WINDMILL USING THE SAME BASIC PRINCIPLE AS THE OVER-300-YEARS-OLD CHINESE WINDMILL HAS BEEN DEVELOPED. THE BASIC PRINCIPLE OF CHINESE WINDMILLS IS THE USE OF SAILS IN A MANNER SIMILAR TO SAILING. THESE SAILS, TRAVELING A HORIZONTAL CIRCULAR COURSE, ROTATE A CENTRAL VERTICAL SHAFT.

AN ENERGY ANALYSIS OF A WIND ENERGY CONVERSION SYSTEM FOR FUEL
DISPLACEMENT.
MIAMI INTERNATIONAL CONFERENCE ON ALTERNATIVE ENERGY SOURCES, MIAMI
BEACH, FLORIDA, DECEMBER 5-7, 1977. PROCEEDINGS. UNIVERSITY OF FLORIDA,
CORAL GABLES, FLORIDA, 1977. P. 669-680. ALSO: WASHINGTON, D.C.,
HEMISPHERE PUBL. CORP., 1978. VOL.4, P.1901-1924.

ENERGY CONVERSION MACHINES WHICH UTILIZE RENEWABLE SUPPLIES OF ENERGY AS FUEL MAY DELIVER CONSIDERABLY MORE ENERGY TO ULTIMATE USERS THAN IS CONSUMED DURING MANUFACTURE, DEPLOYMENT, AND OPERATION OF THE MACHINE. AN INPUT/OUTPUT APPROACH IS EMPLOYED TO ESTIMATE THE ENERGY EMBODIED IN A 1,500 kW(E) HORIZONTAL-AXIS WIND ELECTRIC GENERATING STATION USED TO DISPLACE FOSSIL FUEL IN AN ELECTRIC UTILITY SYSTEM. FIVE RATIOS COMPARING DELIVERED ELECTRICAL ENERGY TO THE ENERGY REQUIREMENT OF THE WIND MACHINE ARE DISPLAYED. THE RESULTS INDICATE THAT THE SYSTEM CONSIDERED COULD BE A LARGE NET PRODUCER OF ENERGY AND SHOULD DISPLACE A QUANTITY OF FOSSIL ENERGY EQUIVALENT TO THAT EMBODIED IN THE MACHINE IN CONSIDERABLY LESS THAN ONE YEAR.

AN AXIAL-FLOW WIND-TURBINE WITH DELTA-WING BLADES
MIAMI INTERNATIONAL CONFERENCE ON ALTERNATIVE ENERGY SOURCES, MIAMI
BEACH, FLORIDA, DECEMBER 5-7, 1977. PROCEEDINGS. UNIVERSITY OF FLORIDA,
CORAL GABLES, FLORIDA, 1977. P. 695-697. ALSO: WASHINGTON, D.C.,
HEMISPHERE PUBL. CORP., 1978. VOL.4, P.1615-1645.

RESULTS ARE REPORTED OF WIND-TUNNEL TESTS OF A SMALL SCALE, DYNAMOMETER EQUIPPED, MODEL WIND TURBINE REPRESENTING WHAT IS BELIEVED TO BE A UNIQUE CONCEPT FEATURING DELTA-WING BLADES (OR SAILS). IT IS SHOWN THAT THE INHERENT ADVANTAGES OF THIS BLADE FORM DERIVE FROM BOTH THE LOW SPEED AERODYNAMIC CHARACTERISTICS OF DELTA WINGS AND, FOR THE WIND-TURBINE APPLICATION, THE EASE WITH WHICH SUCH BLADES CAN BE CONSTRUCTED. EASE, AND CHEAPNESS, OF CONSTRUCTION ARE PARTICULARLY IMPORTANT FOR APPLICATIONS IN DEVELOPING NATIONS WHERE IT IS VERY DESIRABLE TO COMBINE LOCAL CONSTRUCTION WITH THE USE OF ONLY INDIGENOUS MATERIALS.

FLAP-CONE CONTROL OF WINDMILL SPEED.
MIAMI INTERNATIONAL CONFERENCE ON ALTERNATIVE ENERGY SOURCES, MIAMI
BEACH, FLORIDA, DECEMBER 5-7, 1977. PROCEEDINGS. UNIVERSITY OF FLORIDA,
CORAL GABLES, FLORIDA, 1977. P. 681-682. ALSO: WASHINGTON, D.C.,
HEMISPHERE PUBL. CORP., 1978. VOL.4, P.1681-1692.

ALTHOUGH THE WINDMILL HAS BEEN WITH US FOR QUITE SOME TIME, ITS APPLICATION IS YET RATHER LIMITED DUE MAINLY TO THE LACK OF AN EFFICIENT MEANS OF "COLLECTING" THE VARIABLE WIND ENERGY AND THE DIFFICULTY IN PROVIDING A STEADY POWER OUTPUT. IN ORDER THAT THE WINDMILL CAN BE EFFECTIVELY USED AS A POWER GENERATOR, ITS ROTATIONAL SPEED MUST BE PROPERLY CONTROLLED AND THE EFFICIENCY IN TRANSFORMING WIND ENERGY INTO USEFUL WORKING POWER INCREASED. THIS WORK IS AN ATTEMPT TRYING TO CONTROL THE ROTATIONAL SPEED OF THE WINDMILL WITH INCREASED POWER OUTPUT.

TOROIDAL ACCELERATOR ROTOR PLATFORMS FOR WIND ENERGY CONVERSION.
MIAMI INTERNATIONAL CONFERENCE ON ALTERNATIVE ENERGY SOURCES, MIAMI
BEACH, FLORIDA, DECEMBER 5-7, 1977. PROCEEDINGS. UNIVERSITY OF FLORIDA,
CORAL GABLES, FLORIDA, 1977. P. 799-806. ALSO: WASHINGTON, D.C.,
HEMISPHERE PUBL. CORP., 1978. VOL.4, P.1735-1754.

TARP IS AN OBSTRUCTION TYPE FLOW CONCENTRATOR AND ACCELERATOR WHICH GENERATES LOW PRESSURE, HIGH KINETIC ENERGY REGIONS AT THE SITE OF THE ROTOR DISKS. THE TARP STRUCTURE IS SUBSTANTIALLY THE SHAPE OF AN INNER SECTION OF A HOLLOW TOROID. A TWIN ROTOR SYSTEM IS MOUNTED WITHIN THE PERIPHERAL CHANNEL ABOUT A TARP STRUCTURE SUCH THAT EACH ROTOR IS SITUATED IN THE OPTIMUM VELOCITY REGION OF THE SYMMETRICAL FLOW FIELDS ESTABLISHED WITHIN THIS CHANNEL AND ABOUT THE TARP STRUCTURE FOR BEST ENERGY RECOVERY. FLOW APPROACHING A TARP IS DIVERTED SYMMETRICALLY ABOUT IT WITHIN ITS PERIPHERAL CHANNEL AND IS, THEREBY, ACCELERATED ABOVE

 WIND POWER DIG. 1(9): 23, SUMMER 1977.
- 77-0493 ZELBY L W
 WIND SYSTEM WITH OFF-THE-SHELF COMPONENTS.
 MIAMI INTERNATIONAL CONFERENCE ON ALTERNATIVE ENERGY SOURCES, MIAMI
 BEACH, FLORIDA, DECEMBER 5-7, 1977. PROCEEDINGS. UNIVERSITY OF FLORIDA,
 CORAL GABLES, FLORIDA, 1977. P. 861-862.

A SELF-CONTAINED WIND SYSTEM WAS DESCRIBED SEVERAL YEARS AGO. SUCH A SYSTEM CAN BE BUILT WITH OFF-THE-SHELF COMPONENTS AND WOULD BE SUITABLE IN REGIONS OF THE U.S.A. IN WHICH THE AVERAGE WIND VELOCITY EXCEEDS 10 KM/N. THE SYSTEM CONSISTS OF THE FOLLOWING COMPONENTS: A WINDMILL, TOWER AND GENERATOR COMPRISING THE FRONT END OF THE SYSTEM; AND ELECTROLYTIC CELLS, A COMPRESSOR, A MODIFIED 1C ENGINE AND POWER SPLITTERS COMPRISING THE STORAGE. THE ENTIRE SYSTEM IS DESIGNED TO PROVIDE ABOUT 30,000 KWH ANNUALLY FOR A 200 M2 LIVING AREA HOME, WITH 15 KW PEAK CAPACITY.

NET ENERGY ANALYSIS OF FIVE ENERGY SYSTEMS.

NTIS, SEPTEMBER 1977. 156P.

ORAU/1EA(R)-77-12

A NET ENERGY ANALYSIS IS PERFORMED FOR EACH OF FIVE DEVELOPING ENERGY TECHNOLOGIES: OCEAN THERMAL ENERGY CONVERSION, WIND ENERGY CONVERSION, IN SITU OIL SHALE PROCESSING, FLUIDIZED-BED COAL COMBUSTION, AND MUNICIPAL SOLID WASTE UTILIZATION. ENERGY EXPENDITURES REQUIRED DURING CONSTRUCTION AND LIFE LONG OPERATION AND MAINTENANCE ARE ESTIMATED USING INPUT-OUTPUT AND PROCESS ANALYSES. THESE EXPENDITURES, INCLUDING BOTH DIRECT AND INDIRECT CONSUMPTION, ARE CLASSIFIED AS CAPITAL OR OPERATING EXPENDITURES AND AS EXPENDITURES FOR ELECTRIC OR NONELECTIRC INPUTS TO THE SYSTEMS. VARIOUS RATIOS THAT COMPARE THE ANTICIPATED ENERGY PRODUCT OF A SYSTEM TO ITS ESTIMATED ENERGY SUBSIDY ARE DEFINED. IT IS NOT, IN GENERAL, POSSIBLE TO COMPARE DISSIMILAR TECHNOLOGIES ON THE BASIS OT THESE PERFORMANCE INDICES. HOWEVER, THE INDICES DO INDICATE ALL OF THE SYSTEMS CONSIDERED HERE ARE NET PRODUCERS OF ENERGY AND DECISIONS TO PROCEED WITH DEVELOPMENT AND DEPLOYMENT SHOULD BE BASED ON OTHER CONSIDERATIONS.

AN ENERGY CENTER IN SRI LANKA.
INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 11TH, PROCEEDINGS.
NEW YORK, AMERICAN INSTITUTE OF CHEMICAL ENGINEERS, 1976. VOL.1. SAE
PAPER 769011, P. 58-63.

IN APRIL, 1975, THE GOVERNING COUNCIL OF THE UNITED NATIONS ENVIRONMENT PROGRAM ISSUED A DECISION WHICH ADDRESSED THE PROBLEM OF PROVIDING ENERGY TO REMOTE VILLAGES IN THE DEVELOPING WORLD. THE DECISION EXPRESSED THE BELIEF THAT EXISTING TECHNOLOGY COULD BE USED TO HARNESS RENEWABLE RESOURCES SUCH AS SOLAR AND WIND ENERGY, AND THE ENERGY WHICH CAN BE DERIVED FROM PLANT AND ANIMAL MATTER AS INPUTS TO AN ENERGY SYSTEM WHICH COULD PROVIDE RELIABLE POWER TO SUCH VILLAGES. AS A RESULT OF THAT DECISION, OKLAHOMA STATE UNIVERSITY WAS CHOSEN TO DEVELOP PLANS FOR A RURAL ENERGY CENTER, TO BE INSTALLED IN SRI LANKA, WHICH WOULD BE A MODEL FOR FUTURE CENTERS IN ASIAN VILLAGES. THIS PAPER DESCRIBES THE SYSTEM WHICH HAS BEEN DEVISED, THE CONSTRAINTS AND ECONOMICS ASSOCIATED WITH ITS DEVELOPMENT, AND THE POSSIBLE IMPACT IT MIGHT HAVE IN THE FUTURE IN DEVELOPING NATIONS OF THE WORLD.

76-0219 AMERICAN POWER CONFERENCE 1. COMBUSTION 48(1): 8-24, JULY 1976.

ABSTRACTS OF SOME PAPERS GIVEN AT THE AMERICAN POWER CONFERENCE ARE INCLUDED. ONE PAPER IS ON WIND POWER POTENTIAL USING OFFSHORE SITES IN NEW JERSEY.

76-0220 ANTOGINI E
DEVICE FOR CONVERTING FLUID FLOW INTO KINETIC ENERGY.
U.S. PATENT NO. 3,976,396 AUGUST 24, 1976. 8P.

THE PRESENT INVENTION RELATES TO A DEVICE FOR CONVERTING FLUID FLOW KINETIC ENERGY INTO ROTATIONAL KINETIC ENERGY COMPRISING A BODY MOUNTED FOR VERTICAL ROTATION ABOUT A LONGITUDINAL AXIS THEREOF, A PLURALITY OF HORIZONTALLY SPACED VERTICALLY EXTENDING VANES PIVOTABLY MOUNTED ON THE BODY AND ROTATABLE BETWEEN AN OPEN POSITION IN WHICH THE VANE EXTENDS OUTWARDLY FROM THE BODY AND A CLOSED POSITION IN WHICH THE VANE LIES WITH ONE SURFACE THEREOF ADJACENT THE SURFACE OF THE BODY. THE PLURALITY OF

FEATHER MEMBERS ARE SPACEDLY MOUNTED LONGITUDINALLY OF EACH FRAME AND EXTEND OUTWARDLY AND TRANSVERSELY OF THE SURFACE OPPOSITE TO THE ONE SURFACE OF THE VANE. THE FEATHERS ARE DIMENSIONED TO ABUT THE BODY WHEN THE VANE IS IN THE OPEN POSITION TO PROVIDE STOP MEANS FOR EACH VANE.

(IN GERMAN)
AED-CONF-76-203-005

THE ENERGY DEMAND OF PLATFORMS IN OCEAN ENGINEERING CAN BE SATISFIED BY WIND ENERGY CONVERTING SYSTEMS. THE RELATIVELY LOW AND CONTINUOUS POWER DEMAND OF SUCH STATIONS, AND THE GREAT AVERAGE WIND VELOCITIES IN THE OCEAN MAKES THE USE OF WIND ENERGY CONVERTERS ECONOMIC. ALTHOUGH THERE ARE SATISFACTORY RESULTS WITH NEW VERTICAL AXIS WIND ROTORS (DARRIEUS-ROTOR), THE WIND TURBINE WITH HORIZONTAL AXIS OF ROTATION AND HIGH TIP-SPEED RATIO OF THE ROTOR BLADES SEEMS TO BE THE MOST EFFECTIVE AND ECONOMIC SYSTEM. TO ENSURE THE POWER SUPPLY OF THE STATION ALSO DURING LONGER PERIODS OF NO WIND, THE WIND CONVERTER HAS TO WORK IN CONNECTION WITH STORAGE BATTERY BANKS. BOTH PARTS, WIND CONVERTER WITH ALTERNATOR AND THE STORAGE BATTERIES, HAVE TO BE AN INTEGRATED SYSTEM.

76-0224 BAILEY W
CAPTURING HYDRO POWER, EARTH POWER AND WIND POWER WITH MEANS AND METHODS
OF STORING SAME.
U.S. PATENT NO. 3,974,394 AUGUST 10, 1976. 4P.

IN AREAS WHERE WIND POWER, HYDRO POWER AND EARTH HEAT POWER ARE ALL AVAILABLE AND ARE TO BE DEVELOPED, A COMMON MEANS AND METHOD OF STORING SUCH POWER DURING OFF PEAK PERIODS OF POWER USE ARE FREQUENTLY REQUIRED. HERE POWER STORAGE IS ACCOMPLISHED BY THE LIFTING OF UNDERGROUND WEIGHTS. EARTH POWER MAY BE GEOTHERMAL HEATS, VOLCANIC HEATS, HEATS FROM HOT SPRINGS, DEEP HOLES IN THE EARTH, OR HEATS FROM DEEP OIL OR GAS WELLS, SUCH AS COME TO THE SURFACE WHEN THEY BRING UP OIL OR NATURAL GAS. THESE ARE ALL HERE COMBINED AS A COMMON SOURCE OF POWER. ANY OR ALL MAY CONTRIBUTE POWER TO THE POWER STORAGE.

76-0225 BALANCED PROGRAM PLAN. VOL. 8. ANALYSIS FOR BIOMEDICAL AND ENVIRONMENTAL RESEARCH.
NTIS, OCTOBER 1976. 77P.
ERDA-116(VOL.8)

THE BALANCED PROGRAM PLANNING (BPP) EFFORT WAS INITIATED BY THE DIVISION OF BIOMEDICAL AND ENVIRONMENTAL RESEARCH (DBER) OF ERDA TO IDENTIFY AND

DEVELOP A RESEARCH PLAN FOR INVESTIGATING THE ENVIRONMENTAL IMPACTS ASSOCIATED WITH ENERGY TECHNOLOGIES BEING DEVELOPED BY ERDA. "ENVIRONMENTAL IMPACTS" IS TAKEN HERE TO REFER TO POLLUTANTS, HEALTH EFFECTS, ECOLOGICAL EFFECTS, SOCIOECONOMIC AND LONG-TERM IMPA TS. AS DEFINED FOR THE BPP EFFORT, SOLAR ENERGY INCLUDES TIDAL AND HYDROELECTRIC AS WELL AS THE MORE USUAL CATEGORIES OF SOLAR THERMAL CONVERSION, PHOTOVOLTAIC CONVERSION, WIND ENERGY CONVERSION, OCCAN THERMAL CONVERSION, BIOCONVERSION, AND HEATING AND COOLING OF BUILDINGS.

VERTICAL-AXIS WIND TURBINE TECHNOLOGY WORKSHOP, ALBUQUERQUE, N.M., MAY
17, 1976. PROCEEDINGS. ALBUQUERQUE, N.M., SANDIA LABS., JULY 19/6.
P.II.118 -- II.125.
SAND-76-5586

THE UTILIZATION OF AERODYNAMIC DATA IS DESCRIBED ALONG WITH MODELS FOR THE OTHER SYSTEM COMPONENTS TO ESTIMATE THE PERFORMANCE OF THE 17-M TURBINE SYSTEM, LEADING TO SELECTION OF THE GENERATOR CAPACITY AND THE GEAR RATIOS FOR THE SPEED INCREASER. INPUT/OUTPUT RELATIONSHIPS FOR THE COMPONENTS ARE COMBINED TO ESTIMATE MAXIMUM SYSTEM OUTPUT POWER AS A FUNCTION OF TURBINE ROTATIONAL SPEED. IN ADDITION, THE PERCENTAGES OF TIME THAT WIND SPEED WOULD BE EXPECTED TO EXCEED THE WIND SPEEDS REQUIRED FOR POSITIVE AND MAXIMUM POWER ARE CALCULATED. THE BASIC SYSTEM COMPONENTS ARE THE SYNCHRONOUS GENERATOR, THE SPEED INCREASER, AND THE WIND TURBINE. GENERATOR CAPACITIES OF 30 KW AND 60 KW ARE CONSIDERED FOR COMPARATIVE PURPOSES.

17, 1976. PROCEEDINGS. ALBUQUERQUE, N.M., SANDIA LABS., JULY 1976.
P.II.19 --II.28.
SAND-76-5586

THE OBJECTIVES OF ECONOMIC STUDIES ARE TWOFOLD. FIRST, TO IDENTIFY TRADEOFFS AND TRENDS AMONG SYSTEM DESIGN PARAMETERS WHICH LEAD TO THE DEFINITION OF SCALE-UP SYSTEMS. SECOND, TO IDENTIFY THE COST OF OPTIMUM SYSTEMS IN ORDER TO DETERMINE THE ROLE OF THE VERTICAL-AXIS WINDTURBINE IN WIND POWER. SINCE THE VAWT IS IN EARLY STAGES OF DEVELOPMENT, AN ITERATIVE PROCESS IS VISUALIZED TO MEET THE ABOVE OBJECTIVES WHEREIN THE ECONOMICS OF VAWT SYSTEMS ARE CONTINUOUSLY UPDATED AS NEW PERFORMANCE AND COST DATA BECOMES AVAILABLE. ECONOMIC STUDIES PERFORMED TO DATE ARE SUMMARIZED WITH EMPHASIS ON TRENDS RELATED TO SYSTEM DESIGN, FOR EXAMPLE, IN THE AREAS OF AERODYNAMICS AND STRUCTURES. THE EFFECTS OF POTENTIAL COMPONENT COST SAVINGS ARE ALSO INDICATED.

THE AERODYNAMIC, MECHANICAL, OPERATIONAL, AND MANUFACTURING ASPECTS OF A VERTICAL AXIS WIND ENERGY CONVERTER (DARRIEUS ROTOR) ARE DEALT WITH. DESIGN TECHNIQUES AND DESIGN STUDIES ARE DESCRIBED. A PROSPECTIVE, BASED ON THE SYSTEM'S ADVANTAGES (INDEPENDENCE FROM WIND DIRECTION, SIMPLICITY OF MANUFACTURE, INSTALLATION, AND MAINTENANCE), IS MADE TO CONTINUE THE DEVELOPMENT WITH THE AIM OF A SERIES PRODUCTION OF THIS VERTICAL-AXIS WIND TURBINE IN A PERFORMANCE RANGE UP TO APPROXIMATELY 20 KW. FOR GREATER POWER RANGES THE DISADVANTAGES OF THIS DESIGN BECOME PREDOMINANT (COMPARATIVELY LOW ROTATING SPEED, LARGE AMOUNT OF MATERIAL FOR THE ROTOR BLADES). THE HORIZONTAL ROTOR AXIS DESIGN WITH A CONSIDERABLY MORE ADVANCED STATE OF DEVELOPMENT HAS TO BE PREFERRED IN A POWER RANGE ABOVE 20 KW FOR IRRIGATION PURPOSES AND POWER SUPPLY.

AN APPRAISAL OF ELECTRICAL ENERGY ALTERNATIVES AVAILABLE TO THE STATE OF
NEW YORK. REPORT FOR SEPTEMBER 1, 1975--AUGUST 31, 1976.
NTIS, OCTOBER 1976. 210P.
PB-262573

THE DEVELOPMENT AND APPLICATION OF A MODEL FOR THE APPRAISAL OF ELECTRICAL ENERGY ALTERNATIVES AVAILABLE TO THE STATE OF NEW YORK IS DESCRIBED. PRIOR WORK RELATED TO THE ACQUISITION OF A DATA BASE REPRESENTATIVE OF THE CURRENT AND FUTURE SYSTEMS FOR ELECTRIC POWER GENERATION IS SUMMARIZED. THE IMPLICATIONS OF NEW STUDIES IN THE AREAS OF WIND TURBINES AS A MODE OF GENERATION, SOLID WASTES AS AN ALTERNATIVE FUEL, AND SOLAR ENERGY FOR RESIDENTIAL HEATING AND PASSIVE ENERGY CONSERVATION TO ELECTRICAL ENERGY GENERATION IN NEW YORK STATE ARE EVALUATED. A CALCULATIONAL SYSTEM THAT PERMITS THE APPRAISAL OF A BROAD RANGE OF SCENARIOS IN A CONSISTENT MANNER IS DEVELOPED.

 STATUS OF THE ERDA/SANDIA 17-METER DARRIEUS TURBINE DESIGN.
 ENERGY DIG. 5(6): 6, DECEMBER 1976.

THIS ARTICLE IS AN EXCEPTIONAL PAPER FROM AN INTERNATIONAL SYMPOSIUM: "WIND ENERGY SYSTEMS" HELD AT ST JOHN'S COLLEGE, CAMBRIDGE, ENGLAND. UNDER SPONSORSHIP OF THE ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION (ERDA) WIND ENERGY PROGRAM, SANDIA LABORATORIES HAS BEEN INVESTIGATING THE DARRIEUS WIND TURBINE AS AN ALTERNATIVE TO THE CONVENTIONAL HORIZONTAL AXIS WIND TURBINE. THE CURRENT EFFORT AT SANDIA LABORATORIES HAS BEEN DIRECTED TOWARD THE DESIGN AND FABRICATION OF A 17-METER DIAMETER DARRIEUS TURBINE. THE BASIC ROTOR CONFIGURATION CONSISTS OF THREE NACA 0012 BLADES, EACH BLADE BEING SUPPORTED BY TWO STRUTS THAT EXTEND FROM THE VERTICAL ROTATING SHAFT TO THE BLADES. THE ROTATING SHAFT, WHICH WILL BE FABRICATED FROM STEEL, HAS AN OUTER DIAMETER OF 0.508M (20-IN.) WITH 2.54CM (1-IN.) WALL THICKNESS. THE BLADES ARE REQUIRED TO OPERATE UP TO 75 RPM IN A 26.8 M/S (60 MPH) WIND WITHOUT PERMANENT DEFORMATION AND TO WITHSTAND 53.6 M/S (120MPH) WIND AT ZERO RPM. THE TURBINE BASE CONTAINS THE MEANS OF AXIAL SUPPORT OF THE TURBINE, THE POWER TRAIN (CONSISTING OF A SPEED INCREASER, SYNCHRONOUS GENERATOR, AND AN INDUCTIVE STARTER), AND A BRAKING SYSTEM. THE DESIGN ROTATIONAL SPEED IS 45.4 RPM AND MAXIMUM POWER IS 70 KW. DUE TO TURBINE COMPONENT INEFFICIENCIES, THE ELECTRICAL GENERATOR WILL SEE APPROXIMATELY

60 KW, WHICH IS ITS RATED CAPACITY.

WIND TURBINE.
GERMAN (FRG) PATENT 2,540,757/A/, APRIL 8, 1976. 23P. (IN GERMAN)

A VERTICAL-AXIS WIND TURBINE IS DESCRIBED. THE DRIVE ROTOR OF THE TURBINE HAS A NUMBER OF OBLONG BLADES, THE CENTRAL BENT PORTIONS OF WHICH ARE OF STREAMLINE SHAPE. THE PARTICULAR CURVED SHAPE OF THE BLADES ENSURES THAT MAINLY TENSILE STRESS WILL OCCUR IN THE BLADE. THE TURBINE IS OF THE SELF-STARTING TYPE. THIS IS ATTAINED BY STARTER ROTORS. EACH OF THESE ROTORS HAS A NUMBER OF HOLLOW BLADES WHICH ARE ARRANGED IN OPPOSITE DIRECTIONS, THE BLADES PARTLY OVERLAPPING EACH OTHER IN S SHAPE. THE SPEED RATIO OF THE TURBINE HAS A VALUE OF APPROXIMATELY 5 TO 7. IN PRACTICE, TURBINE PLANTS MAY BE BUILT WHICH CONSIST OF A NUMBER OF DRIVE ROTORS ARRANGED ONE ABOVE THE OTHER ON THE SHAFT. EACH FOLLOWING DRIVE ROTOR HAS A GREATER DIAMETER THAN THE ADJACENT LOWER ROTOR.

76-0237 BLAKE S
SAVONIUS ROTOR WIND TURBINES.
WIND POWER DIG. 1(6): 25-27, SEPTEMBER 1976.

THE SAVONIUS ROTOR (S-ROTOR) WAS INVENTED BY CAPTAIN SIGURD SAVONIUS, A FINN, IN 1924. SINCE THAT TIME, NO LESS THAN FOURTEEN RESEARCH GROUPS HAVE INVESTIGATED AND EVALUATED S-ROTORS OF VARIOUS SIZES AND CONFIGURATIONS BOTH IN FREE WIND AND IN WIND TUNNELS. THIS ARTICLE DISTILLS THE EXPERIENCES AND FINDINGS REPORTED BY THESE GROUPS AND OUR OWN EXPERIENCES AND FINDINGS. IT CONSIDERS IMPORTANT DESIGN PARAMETERS, ADVANTAGES AND DISADVANTAGES OF THE DESIGN, CERTAIN TECHNIQUES AND MATERIALS FOR SIMPLE ROTOR CONSTRUCTION, AND ROTOR OUTPUTS WHEN COUPLED WITH WATER PUMPS AND ELECTRICAL GENERATORS.

SOLAR ENERGY: PERSPECTIVE AND PROSPECTS.
AM. POWER CONF. PROC. 38: 447-457, 1976.

WITH SOLAR ENERGY PROMISING TO SUPPLEMENT THE NATION'S ENERGY RESOURCES, ITS PROSPECTS ARE REVIEWED. THE FEDERAL GOVERNMENT THROUGH NSF AND SUBSEQUENTLY THROUGH ERDA, HAS BEEN SUPPORTING SOLAR RESEARCH. ALSO, THE UTILITY INDUSTRY HAS BEEN SUPPORTING RESEARCH THROUGH EPRI. THE PROGRAM AT EPRI IS SUMMARIZED BRIEFLY. TECHNOLOGY REVIEWS AND ASSESSMENTS OF SOLAR HEATING AND COOLING, SOLAR ELECTRIC POWER GENERATION, WIND ENERGY CONVERSION, OCEAN THERMAL ENERGY CONVERSION, PHOTOSYNTHESIS OF BIOMASS, AND ENVIRONMENTAL IMPACTS ARE INCLUDED. IT IS CONCLUDED THAT LARGE-SCALE UTILIZATION OF SOLAR APPLICATIONS FOR ELECTRIC POWER PRODUCTION IS NOT ANTICIPATED BEFORE THE YEAR 2000. COMPETITIVE ENERGY COSTS MUST BE DEMONSTRATED, REQUIRING MAJOR COST REDUCTIONS IN COLLECTORS, REFLECTORS, OR PHOTOVOLTAIC ARRAYS, AS WELL AS LONG SYSTEM LIFETIMES OF 15 TO 30 YEARS. SOLAR ENERGY SYSTEMS MUST BE ASSESSED UNDER THE SAME CONDITIONS OF RELIABILITY AS CONVENTIONAL POWER SYSTEMS.

76-0244 BRIGHT C
POWER GENERATING APPARATUS.
U.S. PATENT NO. 3,974,395, AUGUST 10, 1976. 10P.

A CONTROL SYSTEM FOR OBTAINING MAXIMUM POWER OUTPUT FROM ELECTRICAL GENERATING WATER PUMPING, FLYWHEEL STORAGE AND LIKE SYSTEMS COMPRISING A WIND-DRIVEN PRIME MOVER COUPLED TO AN ELECTRICAL GENERATOR OVER AN EXTENDED RANGE OF WIND VELOCITIES IS DESCRIBED. THE MAXIMUM ELECTRICAL OUTPUT POWER IS OBTAINED BY SYNCHRONIZING THE SPEED OF THE GENERATOR, AND HENCE THE SPEED OF THE PRIME MOVER, WITH THE MAXIMUM POWER OUTPUT OF THE PRIME MOVER. SINCE THE MAXIMUM OUTPUT POWER OF A WIND-DRIVEN PRIME MOVER IS PROPORTIONAL TO THE THIRD POWER OF THE WIND VELOCITY, AND IS A FUNCTION OF AN ANGULAR VELOCITY-DEPENDENT POWER COEFFICIENT, MEANS ARE PROVIDED FOR DETECTING THE ANGULAR VELOCITY OF THE PRIME MOVER AND GENERATING A SIGNAL PROPORTIONAL TO THE CUBE OF THE WIND VELOCITY. THE SIGNAL THUS GENERATED IS USED FOR CONTROLLING THE MAGNITUDE OF THE EXCITATION FIELD CURRENT IN THE ELECTRICAL GENERATING APPARATUS WHEREBY THE ELECTRICAL OUTPUT VARIES APPROXIMATELY AS A CUBIC FUNCTION OF THE WIND VELOCITY AND, CONSEQUENTLY, AS A LINEAR FUNCTION OF THE OUTPUT POWER OF THE PRIME MOVER. FOR THIS PURPOSE THE CONTROL-SIGNAL GENERATING MEANS EMPLOYS A SOLID STATE DEVICE OR THE LIKE WHICH IS BIASED TO OPERATE ALONG THE THIRD POWER PORTION OF ITS CHARACTERISTIC OPERATING CURVE.

TWENTY-ONE DIFFERENT GIROMILL CONFIGURATIONS COVERING THREE SIZES OF GIROMILL SYSTEMS WERE ANALYZED, VARYING SUCH PARAMETERS AS ROTOR SOLIDITY, ROTOR ASPECT RATIO, RATED WIND VELOCITY, AND NUMBER OF ROTOR BLADES. THE PERFORMANCE, DESIGN, AND COST EFFECTIVENESS OF THESE 21 CONFIGURATIONS WERE DETERMINED. THE RESULTS OF THIS ANALYSIS FORMED THE BASE FOR SELECTING A CONFIGURATION THAT WAS OPTIMIZED FOR THE LEAST COST OF ENERGY.

76-0248 BUCK J A
WIND POWERED IRRIGATION IN KANSAS. A SYSTEMS DYNAMICS APPROACH.
NTIS, 1976. 138P.
AD-A052630

MANY OPTIONS HAVE BEEN PROPOSED FOR HARNESSING WIND POWER FOR IRRIGATION. HERE, TWO OPTIONS ARE INVESTIGATED USING A SYSTEM DYNAMICS APPROACH. THE FIRST OPTION USES MECHANICAL ENERGY EXTRACTED FROM THE WIND AS INPUT TO A MECHANICAL PUMP. A FLYWHEEL SERVES AS A BUFFER AND AS STORAGE FOR LOW WIND PERIODS. THE SECOND OPTION USES THE MECHANICAL OUTPUT FROM THE WINDMILL TO GENERATE ELECTRICITY. THIS ELECTRICITY IS THEN FED INTO AN ELECTROLYSIS CELL TO PRODUCE HYDROGEN GAS. THIS GAS IS THEN BURNED IN AN INTERNAL COMBUSTION ENGINE WHICH DRIVES THE PUMP. SURPLUS HYDROGEN IS STORED IN DEPLETED NATURAL GAS WELLS FOR USE DURING LOW WIND PERIODS. A BACK UP SYSTEM IS PROVIDED IN BOTH OPTIONS FOR WHEN THE WIND IS NOT BLOWING AND THE STORED ENERGY HAS BEEN EXHAUSTED. (THE DOCUMENT'S PARTIALLY ILLEGIBLE.)

APPLICATION OF LAMINATED WOODEN BLADES TO A TWO-METER DARRIEUS TYPE
VERTICAL AXIS WIND TURBINE.
NTIS, DECEMBER 1976. 21P.
SAND-75-0284

THE USE OF LAMINATED LAUAN PLYWOOD IN A 2-METER-DIAMETER, 3-BLADE DARRIEUS WIND TURBINE IS DESCRIBED. THE MANUFACTURE, TESTING AND TENSILE STRESS ANALYSIS OF LAMINATED WOODEN BLADES ARE DESCRIBED. ALTHOUGH THE TENSILE STRENGTHS OF ALL CANDIDATE UNIDIRECTIONAL LAMINATES (LAUAN, MONALAVA, POPLAR AND MAPLE) EXCEEDED THE INDUCED BLADE STRESSES, LAUAN WAS CHOSEN FOR WIND TUNNEL TESTING BASED ON COST AND DIMENSIONAL STABILITY. TWO AIRFOIL SECTIONS, NACA 0012 AND NACA 0025, OF 7.39 CM CHORD LENGTH (I.E., LEADING TO TRAILING EDGE DIMENSION) WERE SHAPED FROM CURVED LAMINATED LAUAN BLANKS WHICH HAD THE GRAIN ORIENTED ALONG THE BLADE ARC. THE THICKER NACA 0025 AIRFOIL, WHERE THE THICKNESS IS 25 PERCENT OF THE CHORD LENGTH, PERFORMED NORMALLY IN THE WIND TUNNEL TEST. THE THIN NACA 0012 BLADE WAS EXCITED INTO RESONANCE WELL BELOW THE PEAK POWER RPM AND CONSTRAINED THE TURBINE TO LOW POWER OUTPUT. THE 2-METER

WIND TURBINE MODEL TESTS INDICATED THAT, WITH APPROPRIATE BLADE DESIGN, WOOD HAS POTENTIAL FOR SMALL VERTICAL AXIS WIND TURBINES.

SELF-REGULATING COMPOSITE BEARINGLESS WIND TURBINE. FINAL REPORT JUNE 3,
1975--JUNE 2, 1976.
NTIS, SEPTEMBER 1976. 62P.
C00/2614-76/1

THE COMPOSITE BEARINGLESS ROTOR (CBR) CONCEPT HAS BEEN SHOWN TO HAVE CHARACTERISTICS IDEALLY SUITED FOR WIND TURBINE APPLICATIONS. THIS ROTOR CONCEPT PROVIDES A FULLY SELF-REGULATING AND SELF-ALIGNING WIND TURBINE.

SUCH A SYSTEM WAS ACHIEVED WITHOUT THE NEED FOR AUXILIARY CONTROLS OR SENSORS. THESE FEATURES ALLOW SELF-STARTING FOR WIND INITIATING FROM ANY DIRECTION AND AUTOMATIC PITCH AND YAW VARIATIONS TO OPTIMIZE PERFORMANCE UNDER ALL NORMAL WIND CONDITIONS. THE WORK DESCRIBED IN THIS REPORT CONSISTS OF THE DESIGN OF A 4.5 FT DYNAMICALLY SCALED WIND TURBINE MODEL AND THE TESTING OF THIS MODEL IN THE UNITED TECHNOLOGIES LOW SPEED WIND TUNNEL. SEVERAL CONCEPTS WERE INVESTIGATED WHICH WERE DESIGNED TO ACHIEVE SELF-REGULATION. OF THESE, A SYSTEM WHICH CONSISTED OF A HUB SUPPORTED PENDULUM INTEGRATED WITH THE CBR BLADE PROVIDED THE FEATURES DESIRED. TESTING OF THIS CONFIGURATION CONSISTED OF STARTUPS FROM ANY WIND DIRECTION WITH WIND SPEEDS UP TO 30 MPH. STRESS AND STABILITY CHARACTERISTICS WERE INVESTIGATED DURING THE TEST PROGRAM AND THE CBR WIND TURBINE DEMONSTRATED LOW STRESS LEVELS AND HIGHLY STABLE RESPONSE CHARACTERISTICS UNDER ALL CONDITIONS TESTED.

76-0260 CHENEY M C, SPIERINGS P A M
SELF-REGULATING COMPOSITE BEARINGLESS WIND TURBINE. EXECUTIVE SUMMARY,
JUNE 3, 1975-JUNE 2, 1976.
NTIS, SEPTEMBER 1976. 13P.
C00/2614-76/2

AN INVESTIGATION WAS CONDUCTED INTO THE FEASIBILITY OF APPLYING THE COMPOSITE BEARINGLESS ROTOR (CBR) CONCEPT TO WIND TURBINES. THE CBR BLADE IS COMPRISED OF A CONVENTIONAL BLADE CONSTRUCTION OVER THE OUTBOARD SPAN, BUT INBOARD IS MADE UP SIMPLY FROM A FINITE LENGTH (ABOUT 15 PERCENT OF THE RADIUS) OF UNIDIRECTIONAL COMPOSITE MATERIAL. THIS MEMBER, CALLED THE FLEXBEAM, REPLACES THE HINGES AND BEARINGS NORMALLY LOCATED AT THE BLADE ROOT AND PROVIDES THE NECESSARY FLATWISE AND EDGEWISE STIFFNESS, BUT DUE TO THE UNIDIRECTIONAL FIBER ALIGNMENT, HAS LOW TORSIONAL STIFFNESS. BLADE PITCH CONTROL IS ACHIEVED BY APPLYING A MOMENT AT THE OUTBOARD END OF THE FLEXBEAM AND ELASTICALLY TWISTING IT. THE WORK DESCRIBED IN THE FINAL REPORT WAS CONDUCTED UNDER CONTRACT WITH ERDA AND CONSISTED OF THE DESIGN AND FABRICATION OF A DYNAMICALLY SCALED WIND TURBINE MODEL, THE WIND TUNNEL TESTING OF THIS MODEL, AND THE EVALUATION OF SEVERAL CONTROL CONCEPTS IN AN ATTEMPT TO ACHIEVE A SELF-REGULATING SYSTEM. SUCH A SYSTEM WAS ACHIEVED AND EXPERIMENTALLY DEMONSTRATED IN THE WIND TUNNEL. OPERATING CHARACTERISTICS AT WIND SPEEDS EXCEEDING 30 MPH WERE INVESTIGATED AND SIMULATED START UPS AND WIND DIRECTION CHANGES WERE SUCCESSFULLY EXECUTED.

LOW COST INSTRUMENTATION FOR A WIND ENERGY SURVEY.
INTERNATIONAL INSTRUMENTATION SYMPOSIUM, 22D, SAN DIEGO, CAL., MAY 25-27, 1976. PROCEEDINGS. PITTSBURGH, PA., ISA, 1976. P. 109-115.

WIND-RUN, OR MEAN WIND SPEED, IS OBTAINED BY COUNTING ONE PULSE PER REVOLUTION OF THE ANEMOMETER ON A MODIFIED POCKET CALCULATOR. POWER REQUIREMENTS ARE REDUCED TO AN AVERAGE OF LESS THAN MA BY TURNING THE DISPLAY OFF WHEN IT IS NOT BEING READ. MEAN WIND SPEEDS OVER AVERAGING PERIODS OF AN HOUR OR SUBMULTIPLES OF AN HOUR DOWN TO A MINUTE OR LESS ARE RECORDED ELECTRONICALLY. ONE SYSTEM RECORDS A FREQUENCY PROPORTIONAL

TO THE WIND SPEED ON CHANNEL ONE AND A CLOCK PULSE TRAIN ON CHANNEL TWO. MEAN WIND SPEEDS OVER THE TIME INTERVALS AS SHORT AS THREE TO FIVE SECONDS OR AS LONG AS ONE MONTH CAN BE RETRIEVED. A SECOND SYSTEM USES A STANDARD CASSETTE TAPE TO RECORD DATA IN AN INCREMENTAL DIGITAL FORM, USING 12 BIT BINARY NUMBERS IN BIPHASE AUDIO TONES. AVERAGING PERIODS OF 1, 2, 5, 15, 30 OR 60 MINUTES MAY BE SELECTED.

FOCUS ON RENEWABLE ENERGY IN NEW ZEALAND.
NEW ZEALAND ENERGY J. 49: 48-53, APRIL 25, 1976.

FOLLOWING A DISCUSSION OF THE FLOW OF RADIANT ENERGY IN THE BIOSPHERE, MEANS OF USING SOLAR ENERGY AND OTHER RENEWABLE ENERGY SOURCES TO SUPPLY THE ENERGY NEEDS OF ADVANCED COUNTRIES ARE CONSIDERED, WITH PARTICULAR REFERENCE TO THE AVAILABILITY OF THESE POTENTIAL ENERGY SCURCES IN NEW ZEALAND. IT IS ESTIMATED THAT ABOUT HALF OF THE TOTAL DOMESTIC HOT WATER CONSUMED IN NEW ZEALAND SHOULD BE HEATED BY SOLAR ENERGY. SOME RESULTS INDICATE THAT PRODUCTION OF ETHYL ALCOHOL FROM VEGETABLE SOURCES MAY BE FEASIBLE; HOWEVER, THE EXTENSIVE LAND AREA REQUIRED MUST BE CONSIDERED. THE AVERAGE ANNUAL WIND ELECTRIC ENERGY AVAILABLE IN NEW ZEALAND IS ABOUT O.1 PERCENT OF THE ANNUAL AVERAGE SOLAR ENERGY INCIDENT ON THE HORIZONTAL PLANE. SMALL WINDMILLS HAVE BEEN IN WIDESPREAD USE FOR STOCK WATERING. A NATIONAL WIND ENERGY RESOURCE SURVEY IS UNDER WAY.

THE AEROSOLEC ELECTRIC POWER PLANT HAS BEEN DEVELOPED TO SUPPLY ISOLATED TELECOMMUNICATION CENTERS. POWER IS GENERATED BY WIND AND/OR SUN. THE PLANT COMPRISES A SOLAR GENERATOR, AN AEROGENERATOR, A STORAGE BATTERY AND CHEMICAL DRY BATTERIES, BOTH GENERATORS BEING IN PARALLEL AND SHARING IN PRODUCING POWER DEPENDING UPON WIND AND SUN CONDITIONS PREVAILING ON THE SITE. THE STORAGE BATTERY CATERS FOR THE STORAGE, REGULARITY AND CONTINUITY OF POWER SUPPLY. THE DRY BATTERIES ARE USED AS ULTIMATE STANDBY, WARRANTING PERMANENT SUPPLY EVEN IN CASE OF OUTAGE OF THE OTHER SOURCES. POWER RATINGS ANTICIPATED TODAY RANGE FROM 100 TO 400 WATTS FOR CONTINUED ROUND THE CLOCK SERVICE. WITH LACKING WIND AND/OR SUN, INDEPENDENT OPERATION FOR A FORTNIGHT IS FORESEEN ON STORAGE BATTERIES AND DRY BATTERIES.

76-0268 COMPARISON OF DIFFERENT WIND ENERGY CONVERSION SYSTEMS. PART 1. THE NOAH SYSTEM COMPARED WITH THE ULRICH HUTTER SYSTEM. TRANSLATION OF GERMAN REPORT.

NTIS, 1976. 10P.
RFP-TRANS-204

THE ANALYSIS IS BEING MADE WITHIN THE FRAMEWORK OF STRUCTURAL COMPONENTS WHICH ARE GENERALLY IMPORTANT FOR WIND ENERGY SYSTEMS. ADVANTAGES AND DISADVANTAGES ARE EVALUATED FROM TECHNICAL VIEWPOINTS (TYPE OF CONSTRUCTION, NOVELTY, SUSCEPTIBILTY TO FAILURE, EASE OF REPAIRS, MAINTENANCE REQUIREMENTS), AS WELL AS IN TERMS OF EXPECTED POWER, PERFORMANCE, MANUFACTURING COST AND ECONOMY.

76-0269 CONGRESSIONAL SEMINAR ON THE POTENTIAL FOR SOLAR AND WIND ELECTRIC POWER GENERATION.

NEW YORK, SCIENTIST'S INSTITUTE FOR PUBLIC INFORMATION, 1976. 53P.

CONGRESSIONAL SEMINAR ON THE POTENTIAL FOR SOLAR AND WIND ELECTRIC POWER GENERATION, WASHINGTON D.C., FEBRUARY 9, 1976.

REPRESENTATIVE RICHARD L. OTTINGER, THE MODERATOR OF THE SEMINAR, INITIALLY STATED THAT "IF SOLAR ENERGY IS TO ATTAIN COMMERCIAL STATUS BY THE YEAR 2000, SOLAR RESEARCH AND DEVELOPMENT SHOULD BE FUNDED AT A LEVEL CLOSER TO NUCLEAR RESEARCH AS IT IS FUNDED TODAY." REPRESENTING THE SCIENTISTS' INSTITUTE FOR PUBLIC INFORMATION WAS ALLAN MCGOWAN. SPEAKERS

FOLLOWING MR. MCGOWAN'S BRIEF REMARKS WERE FRANK ELDRIDGE, MITRE CORPORATION; JOSEPH LINDMAYER, SOLAREX CORPORATION; PIET BOS, EPRI; RON LARSON, GEORGIA INSTITUTE OF TECHNOLOGY; WILL SMITH, SCIENCE AND TECHNOLOGY COMMITTEE; AND DAN AHEARNE, CONSULTANT TO CONGRESSMAN HAROLD RUNNELS AND THE OFFICE OF TECHNOLOGY ASSESSMENT.

STOCHASTIC MODELLING OF SITE WIND CHARACTERISTICS. FINAL REPORT JANUARY
1975--SEPTEMBER 1976.
NTIS, NOVEMBER 1976. 311P.
PB-261178

THE ECONOMIC FEASIBILITY OF A WIND ENERGY CONVERSION SYSTEM DEPENDS ON AN ACCURATE ASSESSMENT OF THE WIND CHARACTERISTICS AT EACH SITE. STATISTICAL METHODS AND PROBABILITY MODELS ARE USED TO DETERMINE OPTIMAL EVALUATION PROCEDURES FOR SURVEY DATA. SEVERAL YEARS OF HOURLY RECORDS FROM SIX MIDWEST SITES AND ONE ROCKY MOUNTAIN SITE PROVIDE A DATA BASE TO DEVELOP THE MODELS AND PROCEDURES. (PORTIONS OF THIS DOCUMENT ARE NOT FULLY LEGIBLE.)

WIND ENERGY MISSION ANALYSIS. EXECUTIVE SUMMARY.
NTIS, OCTOBER 1976.
TID-27698, SAN/1075-1/3

THE WIND ENERGY CONVERSION BRANCH OF THE ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION UNDERTOOK THE TASK OF DETERMINING THE ECONOMIC VIABILITY OF WIND ENERGY CONVERSION SYSTEMS (WECS). A CONTRACT, AT(04-3)-1075 "WIND ENERGY MISSION ANALYSIS," WAS AWARDED TO LOCKHEED EARLY IN 1975 AND COMPLETED EARLY IN 1976. THE RESULTS OF THIS STUDY ARE SEVERELY CONDENSED AND SUMMARIZED IN THIS EXECUTIVE SUMMARY TO PROVIDE AN OVERVIEW OF OVER 850 PAGES OF REPORT AND APPENDICES AND OVER 1,000 PAGES OF PROCESSED WIND DATA.

76-0273 COTY U A
WIND ENERGY MISSION ANALYSIS. FINAL REPORT.
NTIS, SEPTEMBER 1976. 608P.
SAN/1075-1/1

MAPS OF WIND POWER DENSITIES ARE PRESENTED COVERING THE UNITED STATES AND TERRITORIES. EACH REGION IS ASSESSED IN TERMS OF AVAILABLE WIND POWER, ITS DISTRIBUTION OVER THE LAND, AND ITS FREQUENCY, DEVIATION, AND STRENGTH. A MATRIX OF ENERGY USERS AND THEIR APPLICATIONS OF WIND ENERGY CONVERSION SYSTEMS IS ASSEMBLED AND EVALUATED TO SELECT THOSE COMBINATIONS WHICH HAVE THE HIGHEST POTENTIAL IN TERMS OF NATIONWIDE IMPACT. THE HIGH POTENTIAL APPLICATIONS ARE ANALYZED IN DEPTH TO DETERMINE DEGREE OF MARKET PENETRATION, PERFORMANCE AND COST GOALS, MARKETING CHANNELS, INCENTIVES TO IMPLEMENTATION, AND INSTITUTIONAL CONSTRAINTS. AN INITIAL ASSESSMENT OF PUBLIC ACCEPTANCE WAS PERFORMED DURING THE COURSE OF THE STUDY WHICH IS ANALYZED AND REPORTED. WIDELY VARYING SCENARIOS ARE POSTULATED TO DEVELOP EXTREME, YET POSSIBLE, LIMITS OF IMPLEMENTATION RATES. THE EFFECTS OF THESE IMPLEMENTATION RATES ARE DETERMINED AS THEY PERTAIN TO PRODUCTION RATES, SUPPLY OF CRITICAL MATERIALS, LAND USAGE, CAPITAL REQUIREMENTS, ENVIRONMENTAL POLLUTION, ELECTRICAL ENERGY GENERATED, FOSSIL FUEL SAVED, BALANCE OF TRADE, NET FLOW OF FREE ENERGY, AND ENERGY PAYBACK TIME.

HIGH POTENTIAL OF WIND AS AN ENERGY SOURCE.
LOS ANGELES COUNCIL OF ENGINEERING + SCIENCE, PROCEEDINGS SERIES VOL. 2:
ENERGY LA; TACKLING THE CRISIS. GREATER LOS ANGELES AREA ENERGY
SYMPOSIUM, CALIFORNIA, MAY 19, 1976. NORTH HOLLYWOOD, CAL., WESTERN
PERIODICAL CO., 1976. P. 181-187.

WIND ENERGY IS AN ABUNDANT RESOURCE IN THE UNITED STATES. IT CAN BE CAPTURED ECONOMICALLY BY LARGE WIND TURBINE GENERATORS AND USED TO SUPPLEMENT ELECTRIC ENERGY PROVIDED FROM FOSSIL FUEL AND HYDROELECTRIC

RESOURCES. TODAY'S TECHNOLOGY IS MORE THAN ADEQUATE FOR WIND ENERGY TO MAKE AN IMMEDIATE CONTRIBUTION TO ALLEVIATING THE ENERGY CRUNCH. A RECENTLY COMPLETED STUDY SPONSORED BY THE ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION SHOWS THAT THE FULL POTENTIAL OF THE WIND IS FAR GREATER THAN PREVIOUSLY ESTIMATED. FULL IMPLEMENTATION WOULD PRODUCE CLEAN ENERGY WITHOUT POLLUTION, AND WOULD MAKE A SIGNIFICANT CONTRIBUTION TO THE CONSERVATION OF OUR FOSSIL FUEL RESERVES.

 A GRAPHICAL METHOD FOR CALCULATING WIND-ROTOR CHARACTERISTICS.
 EINDHOVEN, THE NETHERLANDS, EINDHOVEN UNVIERSITY OF TECHNOLOGY,
 DEPARTMENT OF PHYSICS, WIND ENERGY GROUP, REPT. R-257-S, APRIL 1, 1976.
 37P.

TO DETERMINE WINDROTOR CHARACTERISTICS ONE HAD TO GET THROUGH A LOT OF WORK. A RAPID METHOD IS DESCRIBED HERE OF MAKING CALCULATIONS BY MEANS OF GRAPHS. FOR SEVEN STANDARD RADII TWO GRAPHS ARE REQUIRED, VALID FOR ONLY ONE NUMBER OF BLADES, BUT OTHERWISE UNIVERSAL, SINCE THEY ARE INDEPENDENT OF SHAPE OF THE BLADE SECTION. THE GRAPHS ARE BASED ON THE GENERAL MOMENTUM THEORY.

SECTION, INTERNATIONAL SOLAR ENERGY SOCIETY AND SOLAR ENERGY SOCIETY OF
CANADA, INC. VOL. 9. CAPE CANAVERAL, FLORIDA, AMERICAN SECTION OF THE
INTERNATIONAL SOLAR ENERGY SOCIETY, 1976. P. 257-261.

THE DESIGN AND CONSTRUCTION OF A MINIMUM-ENERGY-DEPENDENT HOME FOR A MIDDLE-AGED AMERICAN COUPLE WHOSE ENVIRONMENTAL EXPECTATIONS ARE TYPICAL OF MANY PEOPLE ARE DESCRIBED. THE UTILIZATION OF SOLAR AND WIND ENERGY, TOGETHER WITH GARDENING AS A HOBBY, PRODUCED A HOST OF RELATED ACTIVITIES WHICH EFFECTIVELY CHANGED THEIR LIFE-STYLE. SURPRISINGLY, THIS UNASSUMING AND PERSONAL HOME HAS ELICITED WIDESPREAD PUBLIC ATTENTION. PRIMARY ENERGY FOR THE HOME IS PROVIDED BY A 570 SQUARE FOOT ROOF-MOUNTED FLAT-PLATE COLLECTOR, A 3.2-KW WIND GENERATOR, AND A WOOD-BURNING STOVE.

76-0280 DEPENDABILITY OF WIND ENERGY GENERATORS WITH SHORT-TERM ENERGY STORAGE. SCIENCE 194(2468): 935-937, NOVEMBER 26, 1976.

POWER FLUCTUATIONS AND POWER DURATION CURVES FOR WIND ENERGY GENERATORS, INCLUDING ENERGY STORAGE FACILITIES OF A CERTAIN CAPACITY, ARE COMPARED TO THOSE OF TYPICAL NUCLEAR REACTORS. A STORAGE SYSTEM CAPABLE OF DELIVERING THE YEARLY AVERAGE POWER OUTPUT FOR ABOUT 10 HOURS ALREADY MAKES THE DEPENDABILITY OF THE WIND ENERGY SYSTEM COMPARABLE TO THAT OF A TYPICAL NUCLEAR PLANT.

76-0281 DESIGN STUDY OF WIND TURBINES 50KW TO 3000KW FOR ELECTRIC UTILITY APPLICATIONS. VOLUME 1 - SUMMARY REPORT.

NTIS, SEPTEMBER 1976. 65P.
ERDA/NASA/9403-76/1, NASA-CR-134934, N78-12529

THIS STUDY WAS ONE OF TWO PARALLEL EFFORTS CONDUCTED TO DEFINE THE WIND TURBINE CONFIGURATION THAT WOULD LEAD TO GENERATION OF ELECTRICAL POWER IN A COST EFFECTIVE MANNER. ALL POSSIBLE OVERALL SYSTEM CONFIGURATIONS, OPERATING MODES, AND SUBSYSTEM CONCEPTS WERE EVALUATED FOR BOTH TECHNICAL FEASIBILITY AND COMPATIBILITY WITH UTILITY NETWORKS, AS WELL AS FOR ECONOMIC ATTRACTIVENESS. A DESIGN OPTIMIZATION COMPUTER CODE WAS DEVELOPED TO DETERMINE THE COST SENSITIVITY OF THE VARIOUS DESIGN FEATURES, AND THUS ESTABLISH THE CONFIGURATION AND DESIGN CONDITIONS THAT WOULD MINIMIZE THE GENERATED ENERGY COSTS. THE PRELIMINARY DESIGNS OF BOTH A 500 KW UNIT AND A 1500 KW UNIT OPERATING IN A 12 MPH AND 18 MPH MEDIAN WIND SPEED RESPECTIVELY, WERE DEVELOPED. THIS REPORT SUMMARIZES BOTH THE RATIONALE EMPLOYED IN THIS STUDY AND THE KEY FINDINGS OF THIS STUDY, BUT DOES NOT PRESENT AN IN-DEPTH DETAILED DISCUSSION OF ALL DESIGN CONSIDERATIONS.

76-0282 DESIGN STUDY OF WIND TURBINES 50 KW TO 3000 KW FOR ELECTRIC UTILITY APPLICATIONS. VOLUME II - ANALYSIS AND DESIGN. PHILADELPHIA, GENERAL ELECTRIC COMPANY, DECEMBER 1976. 328P. ERDA/NASA/9403-76/2, N78-17462

THIS STUDY WAS ONE OF TWO PARALLEL EFFORTS CONDUCTED TO DEFINE THE WIND TURBINE CONFIGURATION THAT WOULD LEAD TO GENERATION OF ELECTRICAL POWER IN A COST EFFECTIVE MANNER. ALL POSSIBLE OVERALL SYSTEM CONFIGURATIONS, OPERATING MODES, AND SUBSYSTEM CONCEPTS WERE EVALUATED FOR BOTH TECHNICAL FEASIBILITY AND COMPATIBILITY WITH UTILITY NETWORKS, AS WELL AS FOR ECONOMIC ATTRACTIVENESS. A DESIGN OPTIMIZATION COMPUTER CODE WAS DEVELOPED TO DETERMINE THE COST SENSITIVITY OF THE VARIOUS DESIGN FEATURES, AND THUS ESTABLISH THE CONFIGURATION AND DESIGN CONDITIONS THAT WOULD MINIMIZE THE GENERATED ENERGY COSTS. THE PRELIMINARY DESIGNS OF BOTH A 500 KW UNIT AND A 1500 KW UNIT OPERATING IN A 12 MPH AND 18 MPH MEDIAN WIND SPEED RESPECTIVELY, WERE DEVELOPED. THIS REPORT PRESENTS A DETAILED TECHNICAL DISCUSSION OF THE VARIOUS DESIGN FEATURES AND COMPONENTS EVALUATED, AND THE RATIONALE EMPLOYED TO SELECT THE FINAL DESIGN CONFIGURATION. ALL PERTINENT TECHNICAL PERFORMANCE DATA AND COMPONENT COST DATA IS INCLUDED. THE COSTS OF ALL MAJOR SUBASSEMBLIES ARE ESTIMATED AND THE RESULTANT ENERGY COSTS FOR BOTH THE 500 KW AND 1500 KW UNITS ARE CALCULATED.

76-0283 DESIGN STUDY OF WIND TURBINES 50 KW TO 3000 KW FOR ELECTRIC UTILITY APPLICATIONS. VOLUME III - SUPPLEMENTARY DESIGN AND ANALYSIS TASKS. NTIS, DECEMBER 1976. 55P. NASA-CR-135121, N78-17463

THIS STUDY WAS CONDUCTED TO PROVIDE ADDITIONAL DESIGN AND ANALYSIS DATA TO SUPPLEMENT THE RESULTS OF THE TWO PARALLEL DESIGN STUDY EFFORTS. THE KEY RESULTS OF THE THREE SUPPLEMENTAL TASKS INVESTIGATED ARE: THE VELOCITY DURATION PROFILE HAS A SIGNIFICANT EFFECT IN DETERMINING THE OPTIMUM WIND TURBINE DESIGN PARAMETERS AND THE ENERGY GENERATION COST; MODEST INCREASES IN CAPACITY FACTOR CAN BE ACHIEVED WITH SMALL INCREASES IN ENERGY GENERATION COSTS AND CAPITAL COSTS; REINFORCED CONCRETE TOWERS THAT ARE ESTHETICALLY ATTRACTIVE CAN BE DESIGNED AND BUILT AT A COST COMPARABLE TO THOSE FOR STEEL TRUSS TOWERS. THE APPROACH USED, METHOD OF ANALYSIS, ASSUMPTIONS MADE, DESIGN REQUIREMENTS, AND THE RESULTS FOR EACH TASK ARE DISCUSSED IN DETAIL IN THIS REPORT.

76-0284 DESIGN STUDY OF WIND TURBINES 50 KW TO 3000 KW FOR ELECTRIC UTILITY APPLICATIONS. ANALYSIS AND DESIGN.
NTIS, FEBRUARY 1976. 535P.
DGE/NASA/9404-76/2, NASA-CR-134937

THIS REPORT PRESENTS COMPLETE DETAILS OF THE RESULTS OF A PROGRAM TO DEVELOP PRELIMINARY DESIGNS OF LOW POWER (50-500 KW) AND HIGH POWER (500-3000 KW) WIND GENERATOR SYSTEMS WGS) FOR ELECTRIC UTILITY APPLICATIONS. THESE DESIGNS PROVIDE THE BASES FOR DETAIL DESIGN, FABRICATION, AND EXPERIMENTAL DEMONSTRATION TESTING OF THESE UNITS AT SELECTED UTILITY SITES. THE PROGRAM INCLUDED FOUR TASKS: A CONCEPTUAL DESIGN TASK; AN OPTIMIZATION TASK; A PRELIMINARY DESIGN TASK; AND A UTILITY REQUIREMENTS EVALUATION TASK.

HELICOPTERS, PROPELLERS, WINDMILLS, AND ENGINES.
AMERICAN INSTITUTE OF AERONAUTICS AND ASTRONAUTICS, FLUID AND PLASMA
DYNAMICS CONFERENCE, SIH, SAN DIEGO, CALIFORNIA, JULY 14-16, 1976. PAPER
76-367. 13P.

THE DEVELOPMENT OF AIRSCREW THEORY IS SUMMARIZED IN A CONVENIENT PERIODIZATION:INTUITIVE ERA FROM 400 BC TO MID-NINETEENTH CENTURY; THE MOMENTUM THEORY ERA FROM THE MID-NINETEENTH TO THE EARLY TWENTIETH CENTURY; THE CLASSICAL VORTEX WAKE ERA FROM THE EARLY TWENTIETH CENTURY TO CIRCA 1970; AND THE COMPUTER MODELED WAKE ERA FROM CIRCA 1960 TO THE PRESENT. THE MIX OF EXPERIMENTAL AND THEORETICAL METHOD CHARACTERISTIC OF THESE PERIODS IS REVIEWED AND EVALUATED. GREATEST PROGRESS IS SEEN IN THE FLEXIBLE METHODS AVAILABLE WITHIN THE LAST DECADE, WITH PROGRAMS HANDLED BY LARGE DIGITAL COMPUTERS, AND CAPABILITY OF PERFORMANCE PREDICTION. THE VALUE OF APPROXIMATE METHODS, RELYING ON PRESCRIBED EXPERIMENTAL WAKE MODELS, WIND TUNNEL DATA, CASCADE TUNNEL AIRFOIL DATA AND FLOW VISUALIZATION, WHEREVER EVEN COMPUTER CALCULATIONS BECOME EXORBITANTLY CUMBERSOME, IS STRESSED.

ANALYSIS OF ENERGY USAGE ON LONG ISLAND FROM 1975 TO 1995: THE
OPPORTUNITIES TO REDUCE PEAK ELECTRICAL DEMANDS AND ENERGY CONSUMPTION BY
ENERGY CONSERVATION, SOLAR ENERGY, WIND ENERGY, AND TOTAL ENERGY SYSTEMS.
NEW YORK, DUBIN-MINDELL-BLOOME ASSOCIATES, 1976. 91P. A CONDENSATION OF
A COMPREHENSIVE STUDY DATED OCTOBER 31, 1975, DONE FOR THE DEPARTMENT OF
ENVIRONMENTAL CONTROL, COUNTY OF SUFFOLK, NEW YORK.

THE LONG ISLAND LIGHTING COMPANY (LILCO) SERVES LONG ISLAND AND A SMALL SECTION OF QUEENS, NEW YORK, WITH ELECTRICITY AND GAS. THE COMPANY HAS UNDER CONSTRUCTION ONE NUCLEAR-POWERED, 830-MW ELECTRIC GENERATING PLANT, THE SHOREHAM, SCHEDULED TO COME ON-LINE LATE IN 1978; IN ADDITION, LILCO HAS MADE APPLICATION TO CONSTRUCT TWO NEW NUCLEAR PLANTS IN THE TOWN OF RIVERHEAD IN SUFFOLK COUNTY, LONG ISLAND; JAMESPORT I AND JAMESPORT II, EACH WITH A CAPACITY OF 1150 MW ARE PLANNED TO COME ON-LINE IN 1982 AND 1984, RESPECTIVELY. LILCO'S JUSTIFICATION FOR THESE TWO NEW PLANTS IS BASED ON THE SYSTEM REQUIRED TO MELT THE LOADS WHICH, ACCORDING TO THEIR FORECASTS, WILL OCCUR DURING THE PERIOD 1975-1995. THE PROJECTION OF THE PEAK ELECTRIC DEMAND AND THE YEARLY CONSUMPTION OF ELECTRICITY AND THE METHOD OF FORECASTING (EXPONENTIAL SMOOTHING ANALYSIS) BY LILCO ARE ANALYZED. AN INTENSIVE ENERGY CONSERVATION PROGRAM COUPLED WITH A MODEST SOLAR ENERGY SYSTEM FOR DOMESTIC HOT WATER AND SPACE HEATING AND COOLING IS SHOWN TO HAVE THE POTENTIAL OF REDUCING THE NORMAL LOADS TO THE EXTENT THAT NOT ONLY COULD THE JAMESPORT I AND II PLANTS BE CANCELLED, BUT ALSO THAT THE COMPLETION OF THE SHOREHAM PLANT COULD BE DELAYED. THE POTENTIAL OF THE WIND ENERGY REQUIREMENTS FOR THE NEXT TWENTY YEARS. ON-SITE TOTAL ENERGY SYSTEMS AND THE USE OF SOLID WASTE FOR FUEL ARE CITED AS TWO ADDITIONAL MEASURES TO FURTHER REDUCE THE NEED FOR RAW SOURCE ENERGY (FOSSIL FUEL OR NUCLEAR), FOR CENTRAL ELECTRIC GENERATING PLANTS.

76-0294 DUC M
EQUIPMENT FOR UTILIZATION OF WIND ENERGY, PARTICULARLY FOR HEATING OF LIQUIDS.
GERMAN (FRG) PATENT NO. 2,545,951/A/. TO UNICUM S.A., 42 - SAINT-ETIENNE, FRANCE. APRIL 29, 1976. 31P. (IN GERMAN)

A PLANT FOR UTILIZING WIND ENERGY, WHICH IS PARTICULARLY USED FOR HEATING LIQUIDS, IS DESCRIBED. THE WIND TURBINE HAS EITHER A HORIZONTAL OR A VERTICAL AXIS. AN ELECTRIC GENERATOR IS ARRANGED DIRECTLY ON THE AXIS. THE ELECTRIC ENERGY SUPPLIED BY THE GENERATOR IS USED FOR HEATING ELEMENTS ARRANGED IN THE SUPPLY VESSEL OF THE LIQUID. DEPENDING ON THE ENERGY AMOUNT GENERATED, THE LIQUID OF THE HEATING SYSTEM (E.G. CENTRAL HEATING) IS HEATED EITHER PROPORTIONALLY OR COMPLETELY THROUGH THE WIND ENERGY EQUIPMENT. WITH CALM OR LOW WIND, THE LIQUID IS HEATED CONVENTIONALLY BY MEANS OF A NORMAL HEATING SYSTEM.

76-0295 DUFFY R
AN ANALYSIS OF THE FEASIBILITY OF WINDMILLS FOR POWER GENERATION IN NEW YORK STATE.
NTIS, OCTOBER 1976. 136P.
N77-26638, RPI-TA-17

THE POTENTIAL USE OF WIND ENERGY AS A SOURCE OF GENERATING ELECTRIC POWER AS A METHODOLOGY IS DESCRIBED FOR EVALUATING THE ECONOMIC VIABILITY AND ACCEPTABILITY OF WINDMILLS FOR WIND ENERGY CONVERSION IN A LARGE SIZE SUCH AS NEW YORK STATE. THE MINIMUM COST OF ENERGY PRODUCTION FOR A SYSTEM YIELDING HIGH LEVELS OF ENERGY IS DETERMINED. ELEMENTS IN THE EVALUATION INCLUDE: (1) AN ANALYSIS OF RECORDED WIND DATA FROM WHICH AVAILABLE WIND ENERGY LEVELS MAY BE DETERMINED; (2) AN ENGINEERING ANALYSIS OF KNOWN WINDMILL CONCEPTS TO DETERMINE THOSE SPECIFIC WINDMILLS WHICH HAVE THE GREATEST POTENTIAL FOR LARGE SCALE GENERATION OF SYNCHRONOUS AC CURRENT; AND (3) A COUPLING OF THE SELECTED MILLS AND THE AVAILABLE WIND ENERGY PROFILES WITH CAPITAL INVESTMENT AND OPERATING COST INFORMATION TO DETERMINE ISOECONOMIC CONTOUR LINES THROUGHOUT THE STATE.

THE MUNICIPAL UTILITY IN CLAYTON, NEW MEXICO, HAS BEEN SELECTED TO FIELD TEST A 200 KILOWATT WIND TURBINE GENERATOR FOR ERDA.

76-0298 ENERGY FOR RURAL DEVELOPMENT: RENEWABLE RESOURCES AND ALTERNATIVE TECHNOLOGIES FOR DEVELOPING COUNTRIES.
WASHINGTON, D.C., NATIONAL ACADEMY OF SCIENCES, 1976. 318P.

ENERGY R+D WITH POTENTIAL FOR SMALL-SCALE APPLICATION IS LISTED BY NATION, AND INSTITUTION OR ORGANIZATION, AND CONTACT INFORMATION IS INCLUDED. MANUFACTURERS OF SOLAR HEATING AND COOLING DEVICES AND TERRESTRIAL SOLAR PHOTOVOLTAIC DEVICES ARE TABULATED ALSO. EXTERNAL COMBUSTION ENGINES, THE RANKINE AND STERLING ENGINES, ARE DISCUSSED AS SMALL-SCALE POWER SOURCES FOR DEVELOPING NATIONS. CURRENTLY MANUFACTURED WINDMILL PUMPS AND GENERATORS AND COMMERCIAL DEVELOPERS OF WIND MACHINES ARE LISTED. WINDMILL TOWERS FOR CONSTRUCTION ON THE FARM ARE DESCRIBED. CURRENTLY MANUFACTURED SMALL-SCALE HYDROPOWER MACHINERY IS ILLUSTRATED WITH SPECIFICATIONS. THE HELICAL ROTARY SCREW EXPANDER AND ITS POTENTIAL FOR GEOTHERMAL APPLICATION ARE EXPLAINED.

76-0299 ENERGY RESEARCH AND DEVELOPMENT. NEW ZEALAND ENERGY
NEW ZEALAND ENERGY RESEARCH AND DEVELOPMENT COMMITTEE, AUCKLAND, NEW
ZEALAND. NTIS, 1976. 15P.
NP-21435

THE NEW ZEALAND ENERGY RESEARCH AND DEVELOPMENT COMMITTEE WAS FORMED IN 1974 TO PROMOTE AND SUPPORT ENERGY R AND D IN GOVERNMENT DEPARTMENTS, UNIVERSITIES, RESEARCH ASSOCIATIONS, AND THE PRIVATE SECTOR. THE COMMITTEE ESTABLISHED A SERIES OF PRIORITIES TO ASSIST IT IN DECIDING ON PROJECTS THAT SHOULD BE FUNDED. A CONSORTIUM HAS UNDERTAKEN A STUDY OF THE RAKAIA RIVER TO DETERMINE THE POTENTIAL OF THE RIVER FOR POWER GENERATION AND FOR IRRIGATION. FOUR CONTRACTS HAVE BEEN LET ON INVESTIGATIONS OF SOLAR ENERGY, AND TWO CONTRACTS HAVE BEEN LET ON THE POTENTIAL OF WIND ENERGY DEVELOPMENT. ENERGY DEMAND FROM THE MEAT, PULP, AND PAPER INDUSTRIES IS REPORTED. THE COMMITTEE IS CONCERNED WITH ENERGY POLICY AND WITH A SMALL GROUP CONDUCTING DETAILED STUDIES OF VARIOUS ENERGY SCENARIOS. THE COMMITTEE ADMINISTERS THE ENERGY RESEARCH THAT IS CONDUCTED UNDER THE JOINT US/NZ AGREEMENT FOR SCIENTIFIC AND TECHNOLOGICAL COOPERATION; SEVERAL JOINT PROJECTS ARE UNDERWAY, MAINLY ON GEOTHERMAL ENERGY.

76-0300 ENVIRONMENTAL ASSESSMENT OF SOLAR ENERGY POWER PLANTS.
SEMIANNUAL EPRI SOLAR PROGRAM REVIEW MEETING AND WORKSHOP, FALMOUTH,
MASSACHUSETTS, OCTOBER 6, 1976. PROCEEDINGS. P.5.1--5.41.
EPRI-ER-371-SR

THE FOLLOWING FOUR TOPICS ARE DISCUSSED: REFERENCE PLANT DESIGNS; REFERENCE SITE SELECTION; SOLAR THERMAL ENVIRONMENTAL ASSESSMENT; AND COST-EFFECTIVENESS ANALYSIS.

76-0301 ENVIRONMENTAL ASSESSMENT OF SOLAR ENERGY POWER PLANTS.
SEMIANNUAL EPRI SOLAR PROGRAM REVIEW MEETING AND WORKSHOP, FALMOUTH,
MASSACHUSETTS, OCTOBER 6, 1976. P.9.1--9.53.
EPRI-ER-283-SR(VOL. 2)

THE ENVIRONMENTAL ASSESSMENT OF SOLAR ENERGY POWER PLANTS IS DISCUSSED FOR THE FOLLOWING SOLAR ENERGY CONCEPTS: (1) SOLAR THERMAL, A CONCEPT BASED UPON CONCENTRATION OF THE THERMAL ENERGY AVAILABLE FROM DIRECT SOLAR INSOLATION FOR USE AS A HEAT SOURCE IN A THERMODYNAMIC CYCLE; (2)

PHOTOVOLTAIC, A CONCEPT BASED UPON DIRECT CONVERSION OF SOLAR INSOLATION (DIRECT AND DIFFUSE) TO ELECTRICITY UTILIZING SOLAR CELLS WHICH EXHIBIT PHOTOVOLTAIC CHARACTERISTICS; (3) WIND, A CONCEPT BASED UPON CONVERSION OF THE KINETIC ENERGY AVAILABLE IN THE MOVING ATMOSPHERE INTO ROTATING MECHANICAL ENERGY TO TURN ELECTRIC GENERATORS; (4) OCEAN THERMAL, A CONCEPT BASED UPON THE TEMPERATURE DIFFERENCE THAT EXISTS BETWEEN OCEAN SURFACE WATER AND DEEP WATERS; AND (5) PHOTOPRODUCTION, A CONCEPT BASED UPON THE UTILIZATION OF BIOMASS (VEGETATION) FORMED BY PHOTOSYNTHESIS AS A SOURCE OF ENERGY.

- 76-0303 FANUCCI J B, WALTERS R E INNOVATIVE WIND MACHINES; THEORETICAL PERFORMANCE OF THE VERTICAL AXIS WIND TURBINE.

 VERTICAL-AXIS WIND TURBINE TECHNOLOGY WORKSHOP, ALBUQUERQUE, N.M., MAY 17, 1976. PROCEEDINGS. ALBUQUERQUE, N.M., SANDIA LABS., JULY 1976.

 P.III.61--III.96.
 SAND-76-5586

THE PURPOSE OF THE PROJECT IS TO THEORETICALLY AND EXPERIMENTALLY STUDY TWO WIND MACHINE CONCEPTS. THE FIRST CONCEPT IS THAT OF A VORTEX CONCENTRATOR, I.E., A VERTICAL AIRFOIL IS USED TO FORM A STRONG WING TIP VORTEX, AND THE CONCENTRATED ENERGY IN THE VORTEX IS HARNESSED BY A RELATIVELY SMALL, HIGH-SPEED TURBINE LOCATED DOWNSTREAM OF THE WING TIP. THE SECOND MACHINE IS A VERTICAL-AXIS STRAIGHT-BLADED TURBINE WHICH UTILIZES HIGH-LIFT, VARIABLE ANGLE-OF-INCIDENCE CIRCULATION-CONTROLLED AIRFOILS TO FORM THE BLADES.

76-0304 FERNANDO A D N, SMULDERS P T
WIND ENERGY UTILIZATION IN SRI LANKA: POTENTIALITIES AND CONSTRAINTS.
AMERSFOORT, THE NETHERLANDS, STEERING COMMITTEE WIND ENERGY DEVELOPING
COUNTRIES, DHV, CONSULTING ENGINEERS; IN COLLABORATION WITH THE
NETHERLANDS ALUMNI ASSOCIATION OF SRI LANKA, COLOMBO, SRI LANKA, MAY
1976. 18P.

AFTER GIVING A BRIEF HISTORICAL REVIEW OF THE USE OF WIND ENERGY IN SRILANKA, THE AUTHOR DISCUSSES THE AVAILABLE METEOROLOGICAL DATA. WATER RESOURCES IN TERMS OF GROUND WATER POTENTIAL, RAINFALL, SEEPAGE AND WATERDEPTH ARE GIVEN. WATERNEEDS FOR PURPOSE OF DRAINAGE, IRRIGATION, DAIRY FARMING ARE BRIEFLY ANALYZED. WITH THIS INFORMATION POSSIBLE AREAS WHERE WIND ENERGY COULD BE UTILIZED FOR WATER PUMPING ARE SUGGESTED. THE REPORT ALSO MENTIONS THE APPLICATION OF ELECTRICITY GENERATION. MAPS ARE INCLUDED.

76-0305 FINAL REPORT/ENERGY CONSERVATION STATION. THE NEW ENGLAND REGIONAL COMMISSION, CONTRACT NUMBER 10530670.
PROVIDENCE, RHODE ISLAND, REDE CORPORATION, 1976.

THIS NEW ENGLAND ENERGY CONSERVATION PROJECT EMPLOYED WORKING PROTOTYPES THAT DEMONSTRATED PRACTICAL ALTERNATIVE ENERGY STRATEGIES IN FOUR SPECIFIC AREAS: (1) SOLAR RETROFITTING OF BUILDINGS; (2) INNOVATIVE WIND GENERATORS; (3) ENERGY STORAGE SYSTEMS; AND (4) TASK-ORIENTED LIGHTING. ORIGINALLY DESIGNED TO BE DEMONSTRATED ON THE STILLMAN WHITE BRASS FOUNDRY RESTORATION IN DOWNTOWN PROVIDENCE, R.I., SUBSEQUENT INSTALLATION AND TESTING WAS COMPLETED AT THE FAMILY EDUCATION CENTER OF THE UNITED AUTO WORKERS INTERNATIONAL UNION IN NORTHERN MICHIGAN. THE REPORT CONCLUDES THAT RETROFITTING OF CERTAIN PUBLIC AND PRIVATELY OWNED FACILITIES IS COST EFFECTIVE AT THE PRESENT TIME; THAT THE NEW ENGLAND STATES SHOULD TAKE AN ACTIVE ROLE TO EXPOSE THE GENERAL PUBLIC TO SOLAR DEVICES AT PUBLIC FACILITIES, SO AS TO ACCELERATE MARKET ACCEPTANCE OF SOLAR WATER HEATING; THAT WIND GENERATORS ARE PRACTICAL AS SUPPLEMENTAL ELECTRIC-GENERATING SOURCES; THAT ENERGY STORAGE FROM RENEWABLE RESOURCES IS VIABLE; AND THAT TASK-ORIENTED LIGHTING CAN REDUCE ELECTRIC LIGHT USE BY AS MUCH AS 50 PERCENT OF PRESENT CONSUMPTION. THE REPORT SUGGESTS THAT NEW EMPLOYMENT CAN BE CREATED FOR UNSKILLED WORKERS IN THE RELAMPING OF STATE-OWNED PROPERTIES, AND THAT EMPLOYMENT CAN BE EXPANDED FOR ROOFERS, CARPENTERS, PLUMBERS, AND GENERAL CONTRACTORS IN THE RETROFIT AREAS DEMONSTRATED, AND FOR METAL WORKERS, PLASTICS FABRICATORS, ELECTRICAL WORKERS, AND INSTALLERS IN THE WIND-CONVERSION INDUSTRIES. THE STATEMENTS, FINDINGS, AND RECOMMENDATIONS CONTAINED IN THE REPORT ARE SOLELY THOSE OF THE RESEARCH AND DESIGN INSTITUTE, AND DO NOT NECESSARILY

76-0306 FINE K
RENEWABLE ENERGY HANDBOOK.
TOROMTO, ENERGY PROBE, 1276. 61P.

THE POTENTIAL FOR RENEWABLE ENERGY USE IN CANADA IS EXAMINED. IT IS POINTED OUT THAT CANADA CAN CHOOSE TO BEGIN TO DIVERSIFY ITS ENERGY SUPPLY NOW, MOVING RAPIDLY AND SMOOTHLY TOWARDS AN EFFICIENT ENERGY SOCIETY BASED ON RENEWABLE ENERGY SOURCES; OR, IT CAN CONTINUE ON ITS PRESENT COURSE AND FACE THE POSSIBILITY OF BEING FORCED BY NECESSITY TO MAKE A LATER TRANSITION TO RENEWABLE SOURCES, PROBABLY WITH A GREAT DEAL OF ECONOMIC AND POLITICAL DISRUPTION. THE HANDBOOK BEGINS WITH A DISCUSSION ON MAJOR ISSUES AND OPTIONS AVAILABLE. THE SECOND SECTION DEALS WITH THE TECHNOLOGY, APPLICATIONS AND COSTS OF DIRECT SOLAR ENERGY UTILIZATION, SOLAR THERMAL ELECTRICITY GENERATION, PHOTOVOLTAIC CONVERSION, WIND ENERGY, BIOMASS ENERGY, HEAT PUMPS, AND ENERGY STORAGE. SECTION THREE DISCUSSES HOW RENEWABLE ENERGY MIGHT REALISTICALLY SUPPLY CANADA'S ENERGY REQUIREMENTS WITHIN A REASONABLE PERIOD OF TIME. SOME ISSUES ON HOW GOVERNMENT, INDUSTRY, AND THE INDIVIDUAL MAY BECOME INVOLVED TO MAKE THIS HAPPEN ARE SUGGESTED. A LIST OF RESOURCE PEOPLE AND RENEWABLE ENERGY BUSINESSES IS PROVIDED IN THE LAST SECTION. A RECOMMENDED READING LIST AND BIBLIOGRAPHY COMPLETE THE HANDBOOK.

76-0307 FISCHER A
WIND ENERGY GENERATION FOR ELECTRIC POWER PRODUCTION, PRELIMINARY
STUDIES. PART 1.
NTIS, MARCH 1976. 18P. (IN SWEDISH)
STU-75-3260

STUDIES OF WIND POWER GENERATION DONE BY SAAB-SCANIA DURING 1975 ARE DESCRIBED. THE PROJECT DEALS WITH GENERATION OF ELECTRICITY FOR DELIVERY TO THE TRANSMISSION SYSTEM. BOTH PLANTS WITH HORIZONTAL AXIS AND PLANTS WITH VERTICAL AXIS HAVE BEEN STUDIED. A PROJECTED PILOT PLANT WITH A ROTOR OF 18 METERS AND AN EFFECT OF 50 KW AT 10 M/S WIND VELOCITY IS DESCRIBED. SUGGESTIONS ARE MADE FOR A CONTINUATION OF THE PROJECT.

76-0308 FLYING IN THE FACE OF THE WIND. CONSULT. ENG. (LONDON) 40(11): 42-43, NOVEMBER 1976.

THE PRACTICAL APPROACH TO BUILDING A WINDMILL IN DENMARK IS DISCUSSED TOGETHER WITH A PROJECT TO BUILD A 54 M DIAM, 2 MW WINDMILL, WHICH WILL GENERATE ALL THE COMMUNITY'S ELECTRICITY AND HAVE SPARE CAPACITY TO FEED THE NATIONAL GRID.

76-0309 FOLEY G, NASSIM C, LEACH G
THE ENERGY QUESTION.
NEW YORK, PENGUIN BOOKS, 1976. 344P.

THIS SURVEY OF THE WORLD'S ENERGY RESOURCES AND THEIR POTENTIAL FOR DEVELOPMENT DEMONSTRATES THE INEXTRICABLE LINKAGE BETWEEN INDUSTRIAL CIVILIZATION AND ENERGY CONSUMPTION. APPROACHES TO ENERGY DEMAND AND CONSUMPTION FORECASTING, ENERGY CONVERSION PROCESSES, AND THE NEED TO CONSERVE ENERGY AND PLAN FOR SCARCITY ARE ALSO ADDRESSED.

76-0310 FORBES R B
GEOTHERMAL ENERGY AND WIND POWER: ALTERNATE ENERGY SOURCES FOR ALASKA.
ALASKAN GEOTHERMAL AND WIND POWER RESOURCES PLANNING CONFERENCE,
ANCHORAGE, ALASKA, JULY 8-9, 1975. CONFERENCE PROCEEDINGS. NTIS, APRIL
1976. 256P.
PB-261521

THE ALASKAN ENERGY PROBLEMS THAT CAN BE ALLEVIATED THROUGH WIND AND GEOTHERMAL RESOURCES ARE DEFINED, AND RECOMMENDED PLANS FOR THE INITATION OF STATE AND FEDERAL PROGRAMS ARE PRESENTED. WORKING GROUPS WERE FORMED IN THE FOLLOWING AREAS: AGRICULTURE, ELECTRIC POWER, FISHERIES AND AGRICULTURE, GEOTHERMAL RESOURCE RESEARCH AND DEVELOPMENT, SPACE HEATING AND INDUSTRIAL APPLICATION, AND WIND POWER DEVELOPMENT AND APPLICATIONS.

76-0311 FOREMAN K M, GILBERT B, OMAN R A
DIFFUSER AUGMENTATION OF WIND TURBINES.
NTIS, 1976. 13P.
CONF-760842-6

WIND TUNNEL INVESTIGATION OF MCDELS OF TWO DIFFUSER DESIGN CONCEPTS IS DIRECTED TOWARD UNCONVENTIONAL, VERY SHORT, COST-EFFECTIVE, CONFIGURATIONS. ONE APPROACH USES THE ENERGETIC EXTERNAL WIND TO PREVENT SEPARATION OF THE DIFFUSER'S INTERNAL BOUNDARY LAYER. ANOTHER METHOD USED HIGH LIFT AIRFOIL CONTOURS FOR THE DIFFUSER WALL SHAPE. DIFFUSER MODEL TESTS HAVE INDICATED ALMOST A DOUBLING OF WIND POWER EXTRACTION CAPABILITY FOR DAWTS COMPARED TO CONVENTIONAL TURBINES. ECONOMIC STUDIES OF DAWTS HAVE USED THESE TEST DATA AND RECENT (1975) COST PROJECTIONS OF WIND TURBINES WITH DIAMETER. THE SPECIFIC POWER COSTS (\$/KW) FOR A REALISTIC DAWT CONFIGURATION ARE FOUND TO BE LOWER THAN CONVENTIONAL WIND TURBINES FOR VERY LARGE SIZE ROTORS, ABOVE 50 METERS DIAMETER, AND FOR ROTOR DIAMETERS LESS THAN ABOUT 20 METERS. THE COST-TO-BENEFIT ASSESSMENT FOR INTERMEDIATE SIZE ROTORS IS AFFECTED BY THE UNCERTAINTY BAND OF COST FOR THESE ROTOR SIZES.

- 76-0317 FREEMAN B E-A NEW WIND ENERGY SITE SELECTION METHODOLOGY. FINAL REPORT. 17 MARCH 1975-16 APRIL 1976. NTIS, MAY 1976. 236P. PB-282834. NSF/RA-761229

THE OBJECTIVES OF THIS STUDY WERE TO DEVELOP SIMULATION METHODS TO MAKE THE SITING OF WIND ENERGY DEVICES MORE ACCURATE, TO IDENTIFY AND OBTAIN DATA ON METEOROLOGICAL FIELD EXPERIMENTS, AND TO BEGIN THE PROCESS OF EVALUATION OF COMPUTER CODES BY THE COMPARISON OF CALCULATIONS WITH FIELD DATA. ONE OF THE MAJOR TASKS ACCOMPLISHED WAS THE ADAPTATION, DEVELOPMENT, AND INITIAL TESTING OF METEOROLOGICAL SIMULATION MODELS. THE MESOSCALE COMPUTER CODES (SIGMET) WERE EXTENSIVELY MODIFIED TO BROADEN THE PHYSICAL EFFECTS TO BE TAKEN INTO ACCOUNT, AND A MICROSCALE COMPUTER CODE (MICMET) WAS SELECTED, MODIFIED, AND TESTED.

DEVELOPMENT OF A WIND ENERGY SITE SELECTION METHODOLOGY. PROGRESS
REPORT, MAY 3--DECEMBER 3, 1976.
NTIS, 1976. 152P.
RL0/2440-76/4

THE COMPONENTS OF THE SITE SELECTION METHODOLOGY, AND THE METHOD OF EMPIRICAL ORTHOGONAL EIGENFUNCTIONS FOR THE IDENTIFICATION OF RECURRENT METEOROLOGICAL PATTERNS IN THE CLIMATOLOGICAL DATA ARE DESCRIBED. SEVERAL FASTER METEOROLOGICAL COMPUTER CODES ARE COMPARED. THE FURTHER DEVELOPMENT AND TESTING OF THE PRIMITIVE EQUATION MODELS (THE SIGMET FAMILY OF CODES) ARE DESCRIBED. THIS CONSISTS OF DEVELOPMENTS WHICH WILL PERMIT CALCULATIONS TO BE PERFORMED MORE RAPIDLY (THROUGH PARTIAL IMPLICITIZATION) AND MORE ACCURATELY (THROUGH IMPROVED PHYSICAL MODELS).

76-0320 FREEMAN B E, TAFT J R
MATHEMATICAL MODELING OF TOPOGRAPHIC EFFECTS OF WIND ENERGY SYSTEMS.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, U.K.,
DEPARTMENT 7, 1976. NTIS, APRIL 1976. 26P.
BNWL-SA-5935, CONF-760909-3

IN THE BASIC WIND CHARACTERISTICS ASSESSMENT PROCEDURE A NEW STEP IS INCORPORATED TO OVERCOME ITS MOST SERIOUS DEFICIENCIES. THIS STEP EMPLOYS MATHEMATICAL MODEL-BASED METEOROLOGICAL PREDICTION TOOLS. WITH THEM CLIMATOLOGICAL DATA FROM WEATHER STATIONS IN THE REGION ARE USED TO INFER CLIMATOLOGICAL DATA AT THE UNMEASURED LOCATIONS WITHIN THE REGION. METEOROLOGICAL PHENOMENA TAKING PLACE IN REGIONS COMPARABLE TO THE DISTANCE BETWEEN SYNOPTIC WEATHER STATIONS (APPROXIMATELY 200 KM) AND IN THE IMMEDIATE VICINITY OF THE WINDMILL SITE (APPROXIMATELY 1 KM) ARE CONSIDERED. COMPUTER CODES WERE DEVELOPED FOR EACH OF THESE REGIMES, AND CALCULATIONS OF WIND FLOW OVER COMPLEX TERRAIN HAVE BEEN PERFORMED. RESULTS OF SOME OF THESE WIND CALCULATIONS ARE PRESENTED, ILLUSTRATING THE EFFECTS OF TERRAIN ON WIND ENERGY POTENTIAL.

76-0321 GEOTHERMAL AND WIND POWER: ALTERNATE ENERGY SOURCES FOR ALASKA.
PROCEEDINGS OF A CONFERENCE HELD IN ANCHORAGE, ALASKA, JULY 8-9, 1975.
ANCHORAGE, FORBES, R.B., ALASKA STATE ENERGY OFFICE, 1976. 249P.
GEOTHERMAL AND WIND POWER: ALTERNATE ENERGY SOURCES FOR ALASKA.
ANCHORAGE, ALASKA, JULY 8-9, 1975.

THE REPORT ATTEMPTS TO DEFINE ALASKA ENERGY PROBLEMS THAT CAN BE ALLEVIATED THROUGH THE EFFICIENT USE OF WIND POWER AND GEOTHERMAL RESOURCES, AND TO PRESENT RECOMMENDED SHORT- AND LONG-RANGE PLANS FOR THE INITIATION OF STATE AND FEDERAL PROGRAMS IN THE MORE PROMISING AREAS. AFTER THE INITIAL CHAPTER, ALASKA AND THE ENERGY CRUNCH, THE CHAPTERS FOLLOWING ARE: ENERGY ECONOMICS; ALASKA'S GEOTHERMAL POTENTIAL; GEOTHERMAL RESOURCE APPLICATIONS; SPACE HEATING AND INDUSTRIAL APPLICATIONS; ENVIRONMENTAL HAZARDS AND PROTECTION; WIND POWER POTENTIAL OF ALASKA; POWER AND ENERGY PRODUCTIVITY OF SMALL WIND-MILLS IN ALASKA; WIND POWER APPLICATIONS; ALASKAN AGRICULTURE AND THE ENERGY PROBLEM; FISHERIES AND AQUACULTURE; AND CONCLUSIONS AND RECOMMENDATIONS. MUCH ADDITIONAL INFORMATION ON ESKIMO VILLAGES, GEOTHERMAL SPRINGS, AND DEMONSTRATION PROJECTS IS GIVEN IN SEVEN APPENDIXES.

76-0322 GILMORE E
WIND ENERGY: VALUE AND FUTURE IMPACT ON TEXAS.
PRESENTED AT TEXAS ENERGY FORECAST CONFERENCE, HOUSTON, MARCH 15-16, 1976. 7P.

THE WIND POWER POTENTIAL FOR TEXAS HAS BEEN ESTIMATED TO BE ABOUT 250,000 MW, OR ABOUT 10 TIMES THE AVERAGE OF ELECTRICITY GENERATED IN THE STATE. THE IMPACT OF WIND ENERGY DEPENDS ON THE PHILOSOPHY OF ALTERNATIVE ENERGY. IT IS NOT A QUESTION OF AVAILABLE WIND ENERGY OR NEED FOR A SCIENTIFIC OR TECHNOLOGICAL BREAKTHROUGH, BUT A QUESTION OF HOW MUCH EVERYONE IS WILLING TO PAY FOR ENERGY NOW AND IN THE FUTURE. THE PRICE INCLUDES THE EFFECT ON THE ENVIRONMENT.

76-0323 GLASGOW J C, LINSCOTT B S
EARLY OPERATION EXPERIENCE ON THE ERDA/NASA 100 KW WIND TURBINE.
NTIS, SEPTEMBER 1976. 28P.

N77-10640, NASA-TM-X-71601

AS PART OF THE ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION (ERDA) WIND-ENERGY PROGRAM, NASA LEWIS RESEARCH CENTER IS TESTING AN EXPERIMENTAL 100-KW WIND TURBINE AT SANDUSKY, OHIO. ROTOR-BLADE AND DRIVE-SHAFT LOADS AND TOWER DEFLECTION WERE MEASURED DURING OPERATION OF THE WIND TURBINE AT RATED RPM. THE BLADE LOADS MEASURED ARE HIGHER THAN ANTICIPATED. PRELIMINARY RESULTS INDICATE THAT AIR-FLOW BLOCKAGE BY THE TOWER STRUCTURE PROBABLY CAUSES THE HIGH ROTOR-BLADE-BENDING MOMENTS.

SOME WINDMILL ROTORS SUITABLE FOR USE IN A RURAL ENVIRONMENT.
BANGALORE, INDIA, INDIAN INSTITUTE OF SCIENCE, DEPARTMENT OF AERONAUTICAL ENGINEERING, REP. 76 FM 1, JANUARY 1976. 15P.

AS PART OF A PROJECT FOR ASTRA ON WINDMILLS SUITABLE FOR FABRICATION AND USE IN INDIAN RURAL AREAS, FOUR ROTORS WERE TESTED IN A SMALL WIND TUNNEL. BASED ON THE RESULTS OF THESE TESTS, A SMALL WINDMILL USING SAILS FOR THE ROTOR SURFACES WAS FABRICATED AND TESTED. THIS REPORT SUMMARISES THE RESULTS OBTAINED TO DATE AND DESCRIBES A DESIGN THAT APPEARS PROMISING IN THE LIGHT OF THE EXPERIMENTS.

76-0326 GRAVEL M
ENERGY: A RADICAL REDIRECTION.
J. ENERGY DEV. 1: 191-200, SPRING 1976.

SUITABLE APPROACHES FOR A NATIONAL ENERGY POLICY ARE DISCUSSED, TAKING INTO ACCOUNT THE GOAL OF ENERGY SELF-SUFFICIENCY FOR THE U.S. CURRENT COMMITMENTS IN REGARD TO ENERGY POLICY ARE CRITICALLY EXAMINED. IT IS CONCLUDED THAT THE PREFERENTIAL TREATMENT OF THE BREEDER REACTOR IN THE ALLOCATION OF FUNDS AT THE EXPENSE OF SOLAR ENERGY OPTIONS CANNOT BE JUSTIFIED. THE PROPOSAL IS MADE TO PLACE GREATER EMPHASIS ON THE DEVELOPMENT OF APPROACHES FOR THE UTILIZATION OF SOLAR ENERGY. ATTENTION IS GIVEN TO SOLAR HEATING AND COOLING OF BUILDINGS, WIND ENERGY, AND BIOCONVERSION TO FUELS. DIFFICULTIES CONCERNING A USE OF SOLAR CELLS ARE RELATED TO THEIR HIGH PRICE. IT IS RECOMMENDED TO PROVIDE GOVERNMENT SUPPORT IN ASSURING A MARKET WHICH WOULD MAKE A LOWERING OF THE PRODUCTION COSTS POSSIBLE.

76-0327 GRAYBILL C L
WIND ENERGY CONVERSION DEVICE.
U.S. PATENT NO. 3,995,170, NOVEMBER 30, 1976. 8P.

A WIND ENERGY CONVERSION DEVICE FOR CONVERTING DIRECTIONAL WIND FORCE TO TORQUE ALONG ON A VERTICAL ROTATIONAL AXIS IS DESCRIBED. THE DEVICE INCLUDES A PLURALITY OF FLEXIBLE VANES MOUNTED TO A FRAMEWORK FOR ROTATION THEREWITH ABOUT A VERTICAL AXIS. THE VANES ARE MOUNTED TO UPRIGHT POSTS ON THE FRAMEWORK. AXIAL VANE SIDE EDGES EXTEND TO OPPOSITE RADIAL SIDES OF THE POSTS AND ARE CONNECTED IN A SPECIFIC MANNER TO THE FRAME IN ORDER TO PRODUCE A POSITIVE EFFECT ON ROTATION OF THE DEVICE IN A PRESCRIBED DIRECTION, IN RESPONSE TO WIND CURRENTS.

76-0328 GRIMMER D
A LOW-COST METHOD OF CONSTRUCTING DARRIEUS BLADES.
WIND POWER DIG. 1(6): 31-34, SEPTEMBER 1976.

DESCRIBED ARE DARRIEUS ROTOR BLADES MADE OF A MILD STEEL STRIP BENT AS A TROPOSKIEN, ON WHICH IS GLUED EXPANDABLE HONEYCOMB PAPER CUT IN THE RIGHT CURVED AIRFOIL. THE PAPER HONEYCOMB IS WATER-PROOFED AND COVERED WITH A THIN OUTERSKIN (DACRON POLYESTER OR FIBERGLASS).

(POTENTIALITIES AND LIMITATIONS OF THE UTILIZATION OF WIND MACHINES).
CONFERENZA LAXIALE DI INGEGNERIA AMBIENTALE, 1ST, ROME, APRIL 2, 1976.
INGEGNERIA, P. 265-274, SEPTEMBER-OCTOBER, 1976. (IN ITALIAN)

THE ARTICLE REVIEWS ECONOMIC AND TECHNOLOGICAL EXPLOITATION OF WIND POWER

IN THE PAST AND THE SITUATION FAVORING IT, AND SURVEYS THE CURRENT OUTLOOK FOR WIDE-SCALE UTILIZATION OF WIND POWER, TAKING A DIM VIEW OF THE PROSPECTS EXCEPT FOR PUMPING OF WATER FROM DEEP WELLS WHERE IT IS COMPETITIVE WITH OTHER POWER SOURCES. THE HIGH COST AND SHORT LIFE OF THE BATTERIES NEEDED TO STORE ENERGY DERIVED FROM WIND AND RELEASE IT ON DEMAND IS SEEN AS THE MAJOR OBSTACLE, ALONG WITH THE LOW ENERGY CONCENTRATION AND IRREGULARITY IN MAGNITUDE, DIRECTION, AND VELOCITY. PUMPING WATER AS PART OF A TURBINE SYSTEM, AND USE AS AUXILIARY POWER SOURCE IN VEHICLES POWERED BY OTHER SOURCES, ARE MENTIONED. LARGE-SCALE WIND POWER FARMS ARE VIEWED AS NOT ONLY NONCOMPETITIVE, BUT POSSIBLY CONDUCIVE TO CLIMATIC "POLLUTION" BY SLOWING DOWN AND DISTRIBUTING WIND CURRENTS AND PATTERNS.

WIND POWER STUDIES: REGIONAL WIND ENERGY MEASUREMENTS. PROGRESS REPORT,
JULY-SEPTEMBER 1976.
NTIS, NOVEMBER 1, 1976. 12P.
UCRL-50034-76-4

THIS REPORT DISCUSSES THE WIND POWER FIELD MEASUREMENT PROGRAM WHICH IS BEING CONDUCTED IN CONJUNCTION WITH NUMERICAL ANALYSES OF REGIONAL WIND ENERGY. EARLY EXAMPLES OF DATA COLLECTED IN THE PROGRAM ARE GIVEN, INCLUDING DATA CONFIRMING THE EXISTENCE OF A BROAD AREA OF HIGH WIND SPEEDS WHICH WERE PREDICTED IN PREVIOUS NUMERICAL ANALYSES. THE MEASUREMENT PROGRAM IS DESCRIBED, AND PLANS FOR FURTHER NUMERICAL ANALYSIS AND THE CONTINUATION OF THE MEASUREMENT PROGRAM ARE DISCUSSED.

76-0333 HARTEL R W
WIND-POWERED AERATION FOR REMOTE LOCATIONS. M.S. THESIS.
FORT COLLINS, COLORADO, COLORADO STATE UNIVERSITY, FALL 1976. 103P.

THE OBJECTIVES OF THIS RESEARCH WERE TO INVESTIGATE THE USE OF WIND-POWERED AERATORS (WPA'S) AND TO FURTHER DEVELOP THE DESIGN. THESE WPA'S WERE STUDIED FOR USE IN INCREASING OXYGEN LEVELS IN LAKES TO PREVENT WINTERKILL AND IN SEWAGE LAGOONS TO INCREASE LAGOON CAPACITY. THE WPA CONVERTS THE ENERGY IN THE WIND INTO COMPRESSED AIR WHICH IS FORCED TO EXIT AT THE BOTTOM OF THE LAKE. THESE AIR BUBBLES CAUSE CIRCULATION WHICH BRINGS THE WARMER WATER AT THE BOTTOM OF THE LAKE IN CONTACT WITH THE ICE. A HOLE IS MELTED IN THE ICE THROUGH WHICH OXYGEN FROM THE ATMOSPHERE IS TRANSFERRED. THREE DIFFERENT WPA'S WERE INSTALLED AT DIFFERENT SITES. THESE SYSTEMS WERE TESTED AND EVALUATED. THE RESULTS OF THIS WORK SHOW THAT THESE SYSTEMS WORKED SATISFACTORILY BUT THAT CERTAIN IMPROVEMENTS IN DESIGN MUST BE MADE TO INCREASE THE EFFICIENCY OF THE WPA. FROM THE EXPERIENCE GAINED IN STUDYING THESE SYSTEMS A NEW PROTOTYPE IS DESIGNED. IN ADDITION TO THE STUDY OF THE MECHANICS OF THE WPA, PRELIMINARY RESEARCH WAS PERFORMED CONCERNING TWO-PHASE AIR-BUBBLE FLOW. RESEARCH OF THIS NATURE IS NEEDED FOR INCREASING THE EFFICIENCY OF THE WPA BY DETERMINING THE OPTIMUM BUBBLE FLOW PARAMETERS. FROM THIS RESEARCH ON TWO-PHASE AIR-BUBBLE FLOW, ANOTHER EXPERIMENT IS RECOMMENDED WHICH DETERMINES THE HEAT TRANSFER CHARACTERISTICS OF THE AIR-BUBBLE FLOW AND INDUCED CIRCULATION.

76-0334 HAWRALEK J, RACHUK T, BARLISHEN J
WIND POWER IN ALBERTA.
ALBERTA RESEARCH COUNCIL INF. SER. NO. 70. SEPTEMBER 1976. 118P.

THIS MANUAL WAS PREPARED IN RESPONSE TO A GROWING INTEREST IN THE DOMESTIC USE OF WIND POWER AS AN ENVIRONMENTALLY ATTRACTIVE ENERGY SOURCE. IT PROVIDES FACTUAL INFORMATION ON EQUIPMENT, CONSTRUCTION, OPERATION AND COSTS. OTHER TOPICS COVERED INCLUDE A BRIEF HISTORY OF WIND MACHINES AND CURRENT RESEARCH BEING UNDERTAKEN IN CANADA; THE BASIC STRUCTURE AND OPERATION OF WIND MACHINES, INCLUDING WIND PUMPS AND AEROGENERATORS. A DETAILED "HOW TO" GUIDE EXPLAINS THE STEPS INVOLVED IN SITING AND SELECTING THE CORRECT WIND PLANT TO MEET ENERGY REQUIREMENTS. THE FINAL CHAPTERS OF THE MANUAL INCLUDE LISTS OF MANUFACTURERS AND DISTRIBUTORS, THOSE AGENCIES FROM WHICH CONSTRUCTION PLANS ARE AVAILABLE, AND ASSOCIATIONS PROMOTING WIND POWER UTILIZATION.

76-0335 HEATH S D
LOOK AT VOCATIONAL TRAINING FOR THE SOLAR ENERGY INDUSTRY.
SHARING THE SUN, PROCEEDINGS OF THE JOINT CONFERENCE OF THE AMERICAN SECTION, INTERNATIONAL SOLAR ENERGY SOCIETY AND SOLAR ENERGY SOCIETY OF CANADA, INC. VOL. 8. CAPE CANAVERAL, FLORIDA, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, 1976. P. 298-310.

THE PRIMARY THRUST OF THIS PAPER IS TO EXPLORE THE OPPORTUNITY FOR PRESENT AND PROSPECTIVE TRADESMEN TO BECOME COMPETENT IN SOLAR SYSTEM INSTALLATIONS AND MAINTENANCE. A TRAINING PROGRAM WHICH OFFERS A MAJOR CONTRIBUTION TO OVERCOMING BARRIERS TO INNOVATION THAT MIGHT EXIST IN THE THE PURPOSE AND OPERATION OF THE CONSTRUCTION INDUSTRY IS DISCUSSED. TRAINING MUST NECESSARILY TEACH NEW SKILLS AND UPGRADE PRESENT SKILLS IN RELATION TO ESTABLISHED CONSTRUCTION LABOR CLASSIFICATIONS. CERTAIN EMPHASIS MUST ALSO BE PLACED ON TEACHING OF THE BASIC THEORY AND TECHNICAL RUDIMENTS RELATED TO THE INSTALLATION OF SOLAR ENERGY SYSTEMS. A VIABLE TRAINING PROGRAM MUST PROCESS TRAINEES THROUGH STRUCTURED SOLAR SYSTEM INSTRUCTION AND AT THE SAME TIME CONTINUE TO EVALUATE THE TRAINEE'S RESPONSE TO SOLAR SYSTEM EXPOSURE. CURRENT EMPLOYMENT OPPORTUNITIES MUST ALSO BE UNDER CONTINUAL EVALUATION AND ANALYSIS. A COMPREHENSIVE LOOK AT ONE TRAINING PROGRAM NOW IN OPERATION IN THE SOUTHWEST UNITED STATES IS DISCUSSED. THE TRAINING FACILITY IS OPERATED BY THE SAN DIEGO COUNTY CONSTRUCTION LABORERS TRAINING AND RETRAINING TRUST (A NON-PROFIT TAFT-HARTLEY AUTHORIZED ORGANIZATION). THE PROGRAM PROVIDES BASIC TRAINING APPLICABLE TO THE THE BUILDING TRADES IN THE INSTALLATION AND MAINTENANCE OF A WIDE VARIETY OF SOLAR ENERGY SYSTEMS.

76-0336 HENGEVELD H J
EEN ELEKTRONISCHE GELIJKSPANNINGS-DRAAISPANNINGS OMZETTER T.B. V. HET
TRANSPORT VAN ENERGIE VAN EEN WINDMOLENAS NAAR HET DRAAISTROUMNET. (AN
ELECTRONIC DC TO AC CONVERTER TO BE USED FOR THE TRANSFER OF ENERGY FROM
A WINDMILL SHAFT TO THE UTILITY NETWORK).
EINDHOVEN, THE NETHERLANDS, UNIVERSITY OF TECHNOLOGY, DEPARTMENT OF
ELECTRICAL ENGINEERING, REP. NO. EM 76-12, JUNE 1976.

DESCRIBED IS THE DESIGN AND CONSTRUCTION OF AN ELECTRONIC CONVERTER CONSISTING OF A LOW TO HIGH CHOPPER AND A THREE PHASE BRIDGE CONVERTER. THE CHOPPER CONTROL CHARACTERISTIC TO OBTAIN THE MAXIMUM EFFICIENCY IN THE SYSTEM WIND-TURBINE-GENERATOR-LOAD AT ALL WIND SPEEDS IS DERIVED. MEASUREMENTS OF A TEST CIRCUIT (BKW) ARE GIVEN.

76-0337 HERONEMUS W E
OCEANIC WINDPOWER.
ENERGY FROM THE OCEANS: FACT OR FANTASY. REPORT NO. 76-19. RALEIGH,
NORTH CAROLINA, NORTH CAROLINA STATE UNIVERSITY, 1976. P. 10-18.

THE OCEANIC WINDPOWER RESOURCE IS EXAMINED MACROSCOPICALLY. ONE REGION IN WHICH THAT RESOURCE IS KNOWN TO BE RICH IS THEN EXAMINED IN GREATER DETAIL. SIX DIFFERENT PRODUCTS ASSOCIATED WITH THE U.S. ENERGY INDUSTRY ARE THEN PROPOSED AS PRODUCTS THAT COULD BE PROVIDED FROM WINDPOWER SYSTEMS. A CLOSER LOOK AT THE POSSIBLE SIZE OF THAT ATLANTIC COAST RESOURCE IS TAKEN AND AN ESTIMATED TOTAL ANNUAL PRODUCTIVITY IS WEIGHED AGAINST THE LAST YEAR'S 73 QUAD U.S. ENERGY BUDGETS: A 12 PERCENT IMPACT FROM THIS ONE SOLAR REPLENISHED RESOURCE ALONE IS PREDICTED. STATEMENTS AS TO SYSTEM ENERGY BUDGET AND ENVIRONMENTAL IMPACT ARE MADE. CONCLUSIONS SUGGEST THAT WINDPOWER SYSTEMS, INCLUDING OCEANIC WINDPOWER SUBSYSTEMS, SHOULD BE ADVANCED RAPIDLY BY THE UNITED STATES.

 SUMMARY OF THE ROLE OF PLANNING AND ANALYSIS IN THE DEVELOPMENT OF THE
 FEDERAL SOLAR ENERGY PROGRAM.
 SHARING THE SUN, PROCEEDINGS OF THE JOINT CONFERENCE OF THE AMERICAN
 SECTION, INTERNATIONAL SOLAR ENERGY SOCIETY AND SOLAR ENERGY SOCIETY OF
 CANADA, INC. VOL. 1. CAPE CANAVERAL, FLORIDA, AMERICAN SECTION OF THE
 INTERNATIONAL SOLAR ENERGY SOCIETY, 1976. P. 188-210.

THE PROJECTS THAT HAVE GUIDED THE GROWING FEDERAL EFFORTS TO DEVELOP SOLAR ENERGY TECHNOLOGIES ARE SUMMARIZED. PLANNING AND ANALYSIS INCLUDE STUDIES INVOLVING MISSION ANALYSIS, COMPARATIVE SYSTEM EVALUATION, APPLICATION SELECTION, PRELIMINARY SYSTEM DESIGN, AND ENGINEERING AND ECONOMIC EVALUATION. AS PLANNING METHODOLOGY HAS EVOLVED AND EXPANDED OVER THE PAST THREE TO FIVE YEARS, THE RESULTS OF THE PLANNING STUDIES HAVE INFLUENCED DIRECTION, CONTENT, SCHEDULE, AND GOALS OF THE FEDERAL SOLAR ENERGY PROGRAM. PLANNING PROJECTS ARE REVIEWED IN EACH OF A LARGE NUMBER OF IMPORTANT SUBPROGRAM AREAS OF SOLAR TECHNOLOGY RESEARCH, DEVELOPMENT, AND DEMONSTRATION. REFERENCES TO THE RESULTS OF THESE PLANNING STUDIES ARE GIVEN AS THEY ARE NOW AVAILABLE.

76-0341 HEWSON E W, BAKER R W, BROWNLOW R
RESEARCH ON WIND POWER POTENTIAL IN SELECTED AREAS OF OREGON: FOURTH
PROGRESS REPORT.
CORVALLIS, OREGON, OREGON STATE UNIVERSITY, JUNE 1976. 43P.

DURING THE FOURTH YEAR OF THE PROJECT, RESEARCH CENTERED ON WIND SITE PROSPECTING AND ANALYSIS OF POTENTIAL WIND POWER SITES, THE DEVLOPMENT OF A PROMISING NEW WIND ANALYSIS TECHNIQUE, AND CONTINUED RESEARCH ON WIND TUNNEL SIMULATIONS OF WIND FLOW OVER A MODEL OF A COASTAL HEADLAND. A DETAILED FIELD PROGRAM OF MONITORING THE WIND FLOW OVER YAQUINA HEAD USING A TEMPORARY, 27-M (90-FT) TOWER INSTRUMENTED AT FOUR LEVELS WAS ACCOMPLISHED. THE DATA FROM THIS PROJECT AGREED CLOSELY WITH THAT OBTAINED FROM THE WIND TUNNEL RESEARCH. A PERMANENT 30-M (100-FT) METEOROLOGICAL TOWER WAS ERECTED FARTHER EAST ON YAQUINA HEAD AND INSTRUMENTED AT TWO LEVELS. THIS IS THE PROPOSED SITE FOR THE EARLY ERECTION OF A LARGE AEROGENERATOR. FURTHER ANALYSIS OF DATA FROM THE OREGON COASTAL AREAS NEAR CAPE BLANCO AND TILLAMOOK INDICATES THAT THERE MAY BE SUFFICIENT WIND TO SUPPORT MEDIUM-SIZED WIND POWER FARMS IN THESE AREAS. THE COLUMBIA RIVER GORGE AREA FROM THE CENTRAL CASCADE RANGE TO ITS EASTERN EXTENSION INTO WASHINGTON AND OREGON IS A PROMISING AND ATTRACTIVE AREA FOR LARGE PERMANENT WIND POWER FARMS. THE TECHNIQUE FOR MEASURING THE WINDS IN THE LOWER BOUNDARY LAYER BY USING SINGLE ENGINE SMOKE ROCKETS SHOWS MUCH PROMISE; HOWEVER, FURTHER DEVELOPMENT IS NEEDED TO ENSURE STABLE FLIGHTS UNDER STRONG WIND FLOW.

76-0342 HIRST P
REGULATION, STORAGE AND CONVERSION OF WIND PRODUCED ELECTRICAL ENERGY AT
THE LEVEL OF A FEW HUNDRED WATTS.
ENERGY DIG. 5(6): 7-9, DECEMBER 1976.

THIS ARTICLE IS AN EXCERPTED PAPER FROM AN INTERNATIONAL SYMPOSIUM: "WIND ENERGY SYSTEMS" HELD AT ST. JOHN'S COLLEGE, CAMBRIDGE, ENGLAND. THE WIND TURBINE ASSUMED IS ONE OF THE VERTICAL AXIS TYPE COUPLED THROUGH A GEARBOX TO A PERMANENT MAGNET ALTERNATOR. BY REDUCING MAGNETIC "COGGING" IN THE ALTERNATOR AND MECHANICAL FRICTION AS MUCH AS POSSIBLE, THE SYSTEM WILL ROTATE AT VERY LOW WIND SPEEDS WITH THE ALTERNATOR UNLOADED. THE BATTERY CHARGER WILL ACCEPT, OVER A 10:1 RANGE, WHATEVER VOLTAGE THE ALTERNATOR PRODUCES, AND WILL LOAD THE ALTERNATOR WITH A CURRENT DETERMINED TO BE A PRE-PROGRAMMED FUNCTION OF ALTERNATOR VOLTAGE. IN THIS WAY THE WIND TURBINE MAY BE OPERATED NEAR OPTIMUM EFFICIENCY OVER A CONSIDERABLE RANGE OF WIND SPEED. ON RISING WIND SPEED THE ALTERNATOR VOLTAGE SENSING ARRANGEMENT PROVIDES A SIGNAL AND POWER TO A LINEAR FORCE MOTOR TO RELEASE THE FRICTION BRAKE ON THE EPICYCLIC GEARBOX. THIS PERMITS THE ANNULUS TO ROTATE AND LIMITS THE SPEED AND TORQUE OF THE ALTERNATOR

ROTOR. FOR POWERING MANY COMMERCIAL PIECES OF EQUIPMENT AN AC SUPPLY IS REQUIRED. PRODUCING A TRUE SINE WAVE IS INEFFICIENT AND EXPENSIVE. A SIMPLE SQUARE-WAVE INVERTER MAY BE ADEQUATE.

A VERTICAL AXIS SAILWING ROTOR.
DUBLIN, IRELAND, LOW ENERGY SYSTEMS, 1976. 21P.

CONSTRUCTION OF A SIMPLE TO BUILD VERTICAL AXIS WIND TURBINE WITH 3 OR 4 SAILWINGS IS DESCRIBED. CONSTRUCTION PLANS OF THE COMPONENTS ARE GIVEN IN DETAIL.

76-0351 IGT ANNUAL REPORT 1976.
CHICAGO, ILLINOIS, INSTITUTE OF GAS TECHNOLOGY, 1976. 33P.

PROGRAMS OF THE INSTITUTE OF GAS TECHNOLOGY, AFFILIATED WITH THE ILLINOIS INSTITUTE OF TECHNOLOGY IN CHICAGO, FOR 1976 ARE REVIEWED. THE INSTITUTE'S R+D EFFORTS AND ACCOMPLISHMENTS CONCERNING FOSSIL AND NONFOSSIL FUEL RESOURCES, ENERGY SUPPLY, THE HYGAS PROCESS, THE STEAM-IRON PROCESS, ASH AGGLOMERATION, COAL GASIFICATION, OIL SHALE AND PEAT GASIFICATION, PLANNING AND POLICY, ENERGY CONSERVATION, AND PRESERVATION OF THE ENVIRONMENT ARE DISCUSSED. IGT EDUCATIONAL PROGRAMS, FINANCING, AND INFORMATION SERVICES ARE ALSO SUMMARIZED.

76-0352 IGT RESEARCH ON NONFOSSIL FUEL SOURCES. GAS SCOPE 35(1): 1-8, SPRING 1976.

THE INSTITUTE OF GAS TECHNOLOGY'S RESEARCH INTO FUEL CELLS, HYDROGEN, OCEAN THERMAL ENERGY, AND WIND ENERGY IS REVIEWED. HYDROGEN PRODUCTION, TRANSMISSION, AND USE IN VEHICLES AND APPLIANCES IS DISCUSSED. THE INSTITUTE IS ANALYZING CHEMICAL-ENERGY CARRIERS, SPECIFICALLY GASEOUS AND LIQUID HYDROGEN, AMMONIA, METHANOL, AND SYNTHETIC GASOLINE, FOR OCEAN THERMAL FLOATING PLANTS. INVESTIGATIONS INDICATE THAT A WIND ENERGY SYSTEM USING AVAILABLE COMPONENTS WOULD BE TECHNICALLY FEASIBLE NOW FOR A DAIRY, POULTRY, OR SWINE FARM. BATTERY AND HOT WATER STORAGE WOULD PROVIDE FOR WIND VARIATIONS.

76-0353 IGRA 0 SHROUDS FOR AEROGENERATORS. AIAA J. 14(10): 1481-1483, OCTOBER 1976.

TO USE WIND POWER EFFICIENTLY, REDUCE THE SIZE OF ROTORS, AND TO INCREASE THE ROTATIONAL SPEEDS, VARIOUS COMBINATIONS OF TURBINES OPERATING INSIDE SPECIALLY DESIGNED SHROUDS COMPOSED OF A BELL-SHAPED INTAKE, A CYCLINDRICAL SECTION, AND A DIFFUSER HAVE BEEN RECENTLY INVESTIGATED. THIS ARTICLE PRESENTS A NEW APPROACT TO SHROUD DESIGN, SUCH THAT GOOD AERODYNAMIC PERFORMANCE IS RETAINED, WHILE THE SHROUD IS MADE MORE ATTRACTIVE ECONOMICALLY.

76-0354 HERMAN S W, CANNON J S
INEXHAUSTIBLE RESOURCES.
ENERGY FUTURES; INDUSTRY AND THE NEW TECHNOLOGIES, BY HERMAN S W AND
CANNON J S. NEW YORK, INFORM INC., 1976. P. 17-257.

THIS SECTION, SECTION I, SUMMARIZES INFORMATION ON NONDEPLETABLE RESOURCES OF SOLAR HEATING AND COOLING, SOLAR CELLS, SOLAR THERMAL ELECTRIC CONVERSION, OCEAN THERMAL ELECTRIC CONVERSION, WIND GENERATORS, NUCLEAR FUSION, AND HYDROGEN PRODUCTION. EACH OF THE SEVEN CHAPTERS CONSISTS OF TWO-PARTS--AN OVERVIEW, OR GENERAL INTRODUCTION TO THE STATUS OF THE TECHNOLOGY, FOLLOWED BY FROM 3 TO 34 INDIVIDUAL PROFILES OF COMPANIES' PROJECTS IN THE TECHNOLOGY. THE OVERVIEW SUMMARIZES DATA ON THE TICHNOLOGY, THE ENVIROMENTAL IMPACT, THE HISTORY, OBSTACLES TO THE COMMERCIALIZATION, FEDERAL AND PRIVATE PROGRAMS, AND A BRIEF PROGNOSIS OF THE TECHNOLOGY'S FUTURE.

76-0355 INTERVIEW WITH HERMAN DREES, PRESIDENT, PINSON ENERGY CORP. WIND POWER DIG. 1(7): 5-13, DECEMBER 1976.

76-0356 JANSEN W A M
HORIZONTAL AXIS FAST RUNNING WIND TURBINES FOR DEVELOPING COUNTRIES.
AMERSFOORT, THE NETHERLANDS, STEERING COMMITTEE FOR WIND ENERGY IN
DEVELOPING COUNTRIES, SWD, DHV, CONSULTING ENGINEERS, JUNE 1976. 91P.

THIS REPORT GIVES BRIEFLY THE THEORIES THAT FORM THE BASIS FOR CALCULATION OF THE DESIGN AND THE BEHAVIOUR OF A WINDMILL. A MODIFICATION OF THE PRANDTL MODEL OF TIP LOSSES IS DERIVED. THIS MODIFICATION TAKES THE RELATIVELY HEAVY LOADING OF THE WINDMILL ROTOR INTO ACCOUNT. IT IS ARGUED THAT, IN CONTRAST WITH PROPELLER DESIGN, A MAXIMUM ENERGY EXTRACTION IS REACHED BY ENLARGING THE CHORDS OF THE BLADES NEAR THE TIPS. SELECTION, DESIGN AND CONSTRUCTION OF SEVERAL ROTORS AND OF A TEST UNIT ARE DESCRIBED. TESTS OF STEEL PLATE ROTORS AND SO-CALLED SAIL TOUSER ROTORS ARE DESCRIBED WHILE TEST RESULTS ARE PRESENTED IN THE FORM OF CP-LAMBDA AND CQ-LAMBDA CHARACTERISTICS. FINAL CONCLUSION IS THAT WITH SIMPLE MATERIALS HIGH POWER COEFFICIENTS ARE POSSIBLE.

76-0357 JANSEN W A M
LITERATURE SURVEY, HORIZONTAL AXIS FAST RUNNING WIND TURBINES FOR
DEVELOPING COUNTRIES.
AMERSFOORT, THE NETHERLANDS, STEERING COMMITTEE FOR WIND ENERGY IN
DEVELOPING COUNTRIES, SWD, DHV, CONSULTING ENGINEERS, MARCH 1976. 43P.

LITERATURE IS EXAMINED ON THE KEYWORDS: ROTOR, AERODYNAMIC PROFILES, TURBINE AERODYNAMICS, PERFORMANCE, DEVELOPING COUNTRIES, SMALL PLANTS. AS A RESULT, SOME STARTING POINTS ARE NOTED FOR RESEARCH ON BEHAVIOUR AND APTITUDE OF FAST RUNNING WIND TURBINES FOR DEVELOPING COUNTRIES.

76-0358 JAYADEV T S
WINDMILLS STAGE A COMEBACK.
IEEE SPECTRUM 13(11): 44-49, NOVEMBER 1976.

THERE IS NEW INTEREST IN THE WIND BECAUSE WIND POWER PLANTS CAN BE CONNECTED DIRECTLY TO THE LOCAL POWER GRID, RESULTING IN AN IMMEDIATE SAVINGS IN FOSSIL FUEL. THERE IS NO NEED FOR A SEPARATE ENERGY-STORAGE FACILITY SO LONG AS THE CONTRIBUTION DERIVED FROM WIND POWER IS SMALL COMPARED WITH THE SYSTEM'S TOTAL CAPACITY. A WIND-ENERGY SYSTEM CONSISTS OF THREE SUBSYSTEMS--AERODYNAMIC, MECHANICAL, AND ELECTRICAL--THAT INTERACT AND INFLUENCE EACH OTHER'S PERFORMANCE. PRESENT-DAY U.S. TECHNOLOGY IS WELL DEVELOPED IN ALL THESE AREAS, BUT THERE REMAINS THE PROBLEM OF FAILURES IN WIND SYSTEMS AT THEIR AERODYNAMIC-STRUCTURAL INTERFACE. RESONANT FREQUENCIES ARE MORE TROUBLESOME IN VARIABLE-SPEED CONSTANT-FREQUENCY (VSCF) SYSTEMS THAN IN CONSTANT-SPEED CONSTANT-FREQUENCY (CSCF) SYSTEMS, BUT THE SPREAD IN VARIABLE SPEED NEED NOT SPAN THE RESONANT FREQUENCIES. FOR EXAMPLE, WITH A 20-30 PERCENT SPEED VARIATION, A DOUBLE-OUTPUT INDUCTION GENERATOR PROVIDES 90 PERCENT OF THE ENERGY THAT COULD BE COLLECTED FROM AN IDEAL VSCF SCHEME.

76-0359 JAYADEV T S, SMITH R T
WIND-POWERED ELECTRIC UTILITY PLANTS.
J. ENG. IND. 98: 293-296, FEBRUARY 1976.

THIS PAPER DESCRIBES THE GENERAL OPERATING MODES OF WIND-POWERED ELECTRIC UTILITY PLANTS UNDER CONSTANT-SPEED OR VARIABLE SPEED CLASSIFICATIONS. IT IS SHOWN THAT FOR A PARTICULAR SET OF WIND FREQUENCY-VELOCITY SPECTRA THERE ARE A NUMBER OF ATTRACTIVE SYSTEM CONFIGURATIONS, SO FAR AS TOTAL YEARLY ENERGY PRODUCTION IS CONCERNED. THUS, DETAILED COST EFFECTIVENESS STUDIES AND ADDITIONAL RESEARCH WILL BE REQUIRED TO DEVELOP WIND ELECTRIC CONVERSION SYSTEMS (WECS).

76-0362 JORDAN P F, GOLDMAN R L
SEGMENTED AND SELF-ADJUSTING WIND TURBINE ROTORS. FINAL REPORT.
NTIS, APRIL 1976. 113P.
C00/2613-2

AN INVESTIGATION WAS CARRIED OUT TO EXAMINE THE USE OF BLADE AEROELASTIC PROPERTIES FOR PROVIDING ROTATIONAL SPEED CONTROL FOR A WIND TURBINE GENERATOR (WTG). THE STUDY WAS SPECIFICALLY DIRECTED AT OBTAINING A ROTOR CONFIGURATION THAT HAS THE CAPABILITY FOR MAINTAINING NEARLY CONSTANT TORQUE AT CONSTANT RPM IN THE PRESENCE OF VARYING WIND CONDITIONS AND IS AIMED AT ELIMINATING THE CURRENT REQUIREMENT FOR MECHANICAL PITCH CHANGE DEVICES. THE APPROACH CONSIDERED IS ONE IN WHICH ROTOR TWIST DUE TO AERODYNAMIC LOADING IS USED TO ADJUST THE BLADE'S PITCH AS THE WIND SPEED CHANGES. THE PRELIMINARY DESIGN CONCEPT THAT HAS EVOLVED IS A FLEXIBLE ROTOR BLADE FORMED FROM A SERIES OF INDIVIDUAL, LIGHT, RIGID SEGMENTS THAT ARE ARRANGED ALONG THE BLADE SPAR. EACH

SEGMENT CAN ROTATE AROUND THE SPAR BUT IS RESTRICTED IN PITCH BY A NONLINEAR MECHANICAL SPRING. THE RESULTS OF PERFORMANCE CALCULATIONS AS WELL AS VIBRATION AND FLUTTER ANALYSES ARE PRESENTED. BASED ON THESE RESULTS, THE CONCEPT APPEARS TO PROVIDE AN ATTRACTIVE SOLUTION TO THE PROBLEM OF WTG OPERATION IN A VARYING WIND FIELD.

76-0363 JOSEPHSON J
ENERGY: THE U.S. AT THE CROSSROADS.
ENV. SCI. TECHNOL. 10(9): 854-859, SEPTEMBER 1976.

A QUICK-FIX TO THE ENERGY PROBLEM IS POSSIBLE THROUGH CONSERVATION MEASURES NORMALLY ASSOCIATED WITH WARTIME AUSTERITY. EFFORTS SHOULD BE ACCELERATED TO BRING RENEWABLE ENERGY RESOURCES TO A STATE OF HIGH TECHNOLOGY. SOLAR ENERGY FOR HEAT AND HOT WATER, AND EVEN FOR COOLING, IS NOW AVAILABLE. SOME ELECTRIC UTILITIES ARE INTERESTED IN WIND ENERGY AND SEVERAL FIRMS CARRY EQUIPMENT FOR HOME, FARM, AND BUSINESS NEEDS. THE CALIFORNIA GEYSERS PROVIDE 502 MW FOR 5 PERCENT OF THE NEEDS OF THE PACIFIC GAS + ELECTRIC CO. HYDROGEN SYSTEMS WERE THE CENTRAL TOPIC OF THE FIRST WORLD HYDROGEN ENERGY CONFERENCE HELD IN MARCH 1976. ADVANCING RENEWABLE ENERGY RESOURCES TECHNOLOGY IS DISCUSSED. THE MAIN THRUST OF ENERGY DEVELOPMENT WILL REMAIN FOSSIL AND NUCLEAR.

76-0364 JUSTUS C G
WIND ENERGY STATISTICS FOR LARGE ARRAYS OF WIND TURBINES (NEW ENGLAND AND CENTRAL U.S. REGIONS). FINAL REPORT.
NTIS, AUGUST 1976. 129P.
PB-260679

THE PERFORMANCE CHARACTERISTICS HAVE BEEN SIMULATED FOR LARGE DISPERSED ARRAYS OF 500 KW-1500 WIND TURBINES PRODUCING POWER AND FEEDING IT DIRECTLY INTO THE UTILITY DISTRIBUTION GRID IN THE NEW ENGLAND-MIDDLE ATLANTIC AND THE CENTRAL U.S. REGIONS. DESPITE COMPARABLE WIND REGIMES IN COASTAL NEW ENGLAND AND IN THE CENTRAL U.S., WIND POWER IS POTENTIALLY CLOSER TO BEING COST-EFFECTIVE AS A FUEL SAVER IN NEW ENGLAND. THIS IS BECAUSE OF THE HEAVY RELIANCE ON EXPENSIVE FUELS IN NEW ENGLAND AS COMPARED WITH THE CENTRAL U.S. AREA. BY ARRAY POWER RETURN TIME ANALYSIS, IT IS ESTIMATED THAT 24 TO 48 HOURS OF STORAGE WOULD INCREASE THE POWER RELIABILITY OF 200 KW PER 1500 KW GENERATOR TO ABOUT 95 PERCENT IN NEW ENGLAND, AND TO BETTER THAN 95 PERCENT IN THE CENTRAL U.S. PRELIMINARY ANALYSIS OF DIURNAL CYCLES OF MONTHLY MEAN WINDS VERSUS TIME OF DAY SHOWS THAT IN BOTH NEW ENGLAND AND THE CENTRAL U.S., THERE IS A STRONG SUMMERTIME AFTERNOON PEAK IN AVAILABLE WIND, WHICH WOULD CORRESPOND TO THE SUMMERTIME PEAK AIR CONDITIONING LOAD. THE APPENDICES INCLUDED IN THIS REPORT ARE: (1) ANALYSIS METHODS; AND (2) SOME ASPECTS OF STATISTICS OF ARRAYS OF WIND TURBINES.

 PLANNING SOLAR'S FUTURE.
 IEEE SPECTR. 13(6): 54-59, JUNE 1976.

EXAMINES THE BUDGETARY AND DEVELOPMENTAL TARGETS OF VARIOUS SOLAR-ELECTRIC TECHNOLOGIES--NAMELY, WIND, PHOTOVOLTAIC, SOLAR-THERMAL, OCEAN-THERMAL, AND SATELLITE POWER GENERATION--IN COMPARISON WITH OTHER TECHNOLOGIES THAT ARE EXPECTED TO CONTRIBUTE SIGNIFICANTLY, IN THE LONG TERM, TO THE GENERATION OF ELECTRIC POWER. THE PRESENT STATUS AND PROBLEMS OF SOME OF THE SOLAR-ELECTRIC TECHNOLOGIES ARE ALSO ADDRESSED.

76-0368 KIRSCHBAUM H S, SOMERS E V, SULZBERGER V T

EVALUATION OF OFFSHORE SITE FOR WIND ENERGY GENERATION. AM. POW. CONF. PROC. 38: 474-483, 1976.

AN EVALUATION OF AN OFFSHORE SITE OFF THE NEW JERSEY SHORE FOR WIND ENERGY GENERATION IS GIVEN. THE SITE POTENTIAL IS DISCUSSED AND A BRIEF ECONOMIC ANALYSIS IS MADE.

76-0369 KING J A FORECAST FOR SAILING SHIPS. FUTURES 8(6): 517-524, DECEMBER 1976.

THE IMCREASE IN FUEL PRICES HAS SPURRED REEVALUATION OF THE ECONOMIC FEASIB!!ITY OF WIND-POWERED VESSELS. ADVANCEMENTS IN THE FIELDS OF AEROD!NAMICS, NAVAL ARCHITECTURE, CLIMATOLOGY, AND NAUTICAL ENGINEERING HAVE BEEN GENERALLY IGNORED BY COMMERCIAL SHIPPERS AND SHIPBUILDERS BECAUSE OF THE AVAILABILITY OF INEXPENSIVE FUEL. THE DYNASCHIFF CAN COMPETE SATISFACTORILY IN WORLD SHIPPING MARKETS, IF GIVEN THE OPPORTUNITY. THE SHIP'S MASTS AND ASSOCIATED SAILS ARE DESIGNED AS A HIGH-ASPECT RATIO, VERTICAL WING THAT PROVIDES THE SHIP WITH MORE EFFICIENT SAILING QUALITIES TO THE WINDWARD. A "ROTOR-SHIP" HAS VERTICAL CYLINDERS MOUNTED ON ITS DECK THAT ARE ROTATED ABOUT THEIR MAJOR AXES BY SMALL MOTORS, AND THE AIRFLOW AROUND THE ROTATING CYLINDERS CREATES LIFT. STILL, THAT THE TECHNICAL PROBLEMS CAN BE OVERCOME IS SAYING ONE THING, BUT TO PROVIDE THE CONDITIONS THAT WOULD ENCOURAGE THE USE AND DEVELOPMENT OF VIABLE SAILING VESSELS IS ANOTHER OF A DIFFERENT CHARACTER.

76-0370 KIRK J A, STUDER P A, EVANS H E
MECHANICAL CAPACITOR.
NTIS, MARCH 1976. 61P.
N76-20634

A NEW ENERGY STORAGE SYSTEM (THE MECHANICAL CAPACITOR), USING A SPOKELESS MAGNETICALLY LEVITATED COMPOSITE RING RCTOR, IS DESCRIBED AND DESIGN FORMULAS FOR SIZING THE COMPONENTS ARE PRESENTED. THIS NEW SYSTEM IS CONFIGURED AROUND A PERMANENT MAGNET (FLUX BAISED) SUSPENSION WHICH HAS ACTIVE SERVO CONTROL IN THE RADIAL DIRECTION AND PASSIVE CONTROL IN THE AXIAL DIRECTION. THE STORAGE RING IS USED AS A MOVING ROTOR AND ELECTRONIC COMMUTATION OF THE STATIONARY ARMATURE COILS IS PROPOSED. THERE IS NO MECHANICAL CONTACT WITH THE ROTATING SPOKELESS RING; THEREFORE, LONG LIFE AND NEAR ZERO RUNDOWN LOSSES ARE PROJECTED. A 7-KW H SYSTEM IS SIZED TO DEMONSTRATE FEASIBILITY. A LITERATURE REVIEW OF FLYWHEEL ENERGY STORAGE SYSTEMS IS ALSO PRESENTED AND GENERAL FORMULAS ARE DEVELOPED FOR COMPARING ROTOR GEOMETRIES.

EVALUATION OF OFFSHORE SITE FOR WIND ENERGY GENERATION.
IEEE POWER ENG. SOC., TEXT OF "A" PAPER FROM THE SUMMER MEETING,
PORTLAND, OREGON, JULY 18-23, 1976. NEW YORK, IEEE, CAT. NO.
76CH1135-3-PWR, 1976. 7P.

AN ANALYSIS OF THE POTENTIAL FOR WIND GENERATION AT AN OFFSHORE SITE IDENTIFIED BY PSE+G OF NEWARK, N.J., INDICATES A POTENTIAL IN EXCESS OF 5700 KWH/KW FOR A 1MW WINDMILL RATED AT 20 MI/H AND HUB HEIGHT OF 235 FEET. THE PRELIMINARY ECONOMICS OF THE APPLICATION OF WIND POWER, AS A LIMITED SUPPLEMENT TO BASE LOADED NUCLEAR AND OTHER FORMS OF GENERATION, APPEARS TO OFFER ENOUGH PROMISE THAT A MORE SERIOUS STUDY IS WARRANTED TO DETERMINE THE OVERALL ECONOMIC, TECHNICAL, AND ENVIRONMENTAL FEASIBILITY OF SUCH AN APPLICATION. IN ADDITION SOME OF THE STATISTICAL PROPERTIES OF THE WIND AT THE OFFSHORE SITE MUST HAVE BEEN ANALYZED.

76-0372 KLING A
WIND POWER PLANT.
GERMAN (FRG) PATENT 2,506,160/A/, AUGUST 26, 1976. 49P. (IN GERMAN)

THE INVENTION IS CONCERNED WITH A WIND-POWER PLANT WHOSE ROTOR AXIS IS PIVOTED IN THE SUPPORTING STRUCTURE AND SWINGABLE AROUND AN AXIS OF TILT, FORMING AN ANGLE WITH THE ROTOR AXIS AND THE VERTICAL AXIS, AND ALLOWING PRECESSION OF THE ROTOR. ON CHANGES OF WIND DIRECTION AN ELECTRIC POSITIONING DEVICE IS MOVING THE ROTOR AXIS INTO THE NEW DIRECTION IN SUCH A WAY THAT NO PRECESSION FORCES ARE EXERTED ON THE SUPPORTING STRUCTURE AND THIS ONE MAY VERY EASILY BE HELD. INSTEAD OF ONE ROTOR, ALSO A TYPE WITH TWO COAXIAL, CO-PLANAR COUNTERCURRENT ROTORS MAY BE

USED. EACH OF THE TWO COUNTERCURRENT ROTORS IS CARRYING A NUMBER OF MAGNETIC POLES, DISTRIBUTED ALL OVER THE CIRCUMFERENCE, ACTING TOGETHER WITH THE MAGNETIC POLES OF THE OTHER ROTOR. AT LEAST THE POLES OF ONE ROTOR HAVE ELECTRIC LINE WINDINGS BEING CONNECTED BY LEADS WITH A COLLECTOR SO THAT THE TWO ROTORS FORM THE TWO PARTS OF A POWER GENERATOR BEING EACH ROTATABLE WITH RESPECT TO THE OTHER ('STATOR' AND 'ROTOR').

- AWAND T A, ALWARD R, SAULNIER B, BUDGEN H P, BRUNET E RURAL ENERGY CENTRE FOR AFRICA USING SOLAR, WIND, AND BIOGAS ENERGIES. SHARING THE SUN, PROCEEDINGS OF THE JOINT CONFERENCE OF THE AMERICAN SECTION, INTERNATIONAL SOLAR ENERGY SOCIETY AND SOLAR ENERGY SOCIETY OF CANADA, INC. VOL. 9 CAPE CANAVERAL, FLORIDA, AMERICAN SECTION OF THE INTERNATIONAL SOLAR ENERGY SOCIETY, 1976. P. 282-309.

A RURAL ENERGY CENTRE UTILIZING SOLAR, WIND AND BIOGAS ENERGIES IN ORDER TO SATISFY THE BASIC ENERGY NEEDS, HAS BEEN DESIGNED FOR A TYPICAL VILLAGE IN SENEGAL. THE PARAMETERS OF SITE SELECTION, AND THE BALANCE BETWEEN THE SUPPLY AND DEMAND FOR ENERGIES ARE DISCUSSED. IN THE CENTRE, ENERGY WILL BE SUPPLIED FOR WATER PUMPING AND POTABILIZATION, COOKING AND SOME LIGHTING. THE ENERGY REQUIRED FOR ECONOMIC FACTORS HAVE BEEN CONSIDERED IN MAKING THE SELECTION OF EQUIPMENT NEEDED. THE CONCEPT OF AN APPROPRIATE TECHNOLOGY APPROACH HAS BEEN FOLLOWED IN UNDERTAKING THE STUDY.

76-0379 LEON H I, GORMAN R, SAWLEY R
SOLAR ENERGY OPTIONS FOR ELECTRIC UTILITIES.
ENGINEERING IN A CHANGING ECONOMY. PROCEEDINGS OF THE SOUTHEAST REGION 3
CONFERENCE, CLEMSON, SOUTH CAROLINA, APRIL 5-7, 1976. NEW YORK,
INSTITUTE OF ELECTRICAL AND ELECTRONICS ENGINEERS, 1976. P. 76-78.

FOUR SOLAR ELECTRIC TECHNOLOGIES FOR UTILITIES ARE EXAMINED: SOLAR THERMAL, SOLAR PHOTOVOLTAIC, OCEAN THERMAL, AND WIND CONVERSION. THE TECHNOLOGIES ARE ASSESSED AND COMPARED BY DEFINING A BASELINE OF CONVENTIONAL PLANTS, THE SOLAR ELECTRIC PLANT OBJECTIVES FOR PERFORMANCE, CAPITAL COST AND YEAR OF COMMERCIAL AVAILABILITY, AND A STANDARD SET OF ECONOMIC MEASURES TO CALCULATE BUS BAR COST.

ERDA'S PLANS TO PROMOTE SOLAR ENERGY ARE DISCUSSED. SOLAR HEATING AND COOLING, SOLAR PROCESS HEATING, WIND ENERGY, SOLAR THERMAL CONVERSION, PHOTOVOLTAICS, OCEAN THERMAL ENERGY, AND FUELS FROM BIOMASS ARE CONSIDERED BRIEFLY. NO TECHNOLOGICAL BREAKTHROUGH IS NEEDED TO CONVERT SOLAR ENERGY TO SEVERAL USEFUL FORMS. CAPITAL COSTS ARE NOW SEVERAL TIMES THE COST OF COMPETING ENERGY FORMS--THE MAJOR AIM IS TO LOWER THESE COSTS.

C00-2618-1

HONEYWELL, IN A JOINT EFFORT WITH MINNESOTA POWER AND LIGHT COMPANY, BOEING VERTOL COMPANY, AND DR. C.G.JUSTUS, GEORGIA INSTITUTE OF TECHNOLOGY, HAS CONDUCTED A REGIONAL APPLICATION STUDY OF WIND ENERGY SYSTEMS. PROOF OF ECONOMIC VIABILITY IS NEEDED TO JUSTIFY THE CAPITAL INVESTMENT TO BUILD A PRACTICAL WIND ENERGY CONVERSION SYSTEM (WECS). THE OBJECTIVES OF THIS STUDY HAVE BEEN TO ASSESS CURRENT WECS VIABILITY FOR A UTILITY APPLICATION AND TO DEFINE THE ATTRIBUTES AND PERFORMANCE REQUIREMENTS OF A SYSTEM CAPABLE OF YIELDING A SATISFACTORY RETURN ON INVESTMENT TO A UTILITY COMPANY. MINNESOTA POWER AND LIGHT COMPANY, AN INVESTOR-OWNED COMPANY WITH 853-MW OWNED CAPACITY, HAS SERVED AS THE CASE STUDY SUBJECT UTILITY. AN INITIAL SYSTEM DEFINITION WAS DEVELOPED BASED ON AVAILABLE WIND INFORMATION AND NEAR-TERM WIND TURBINE GENERATOR (WTG) TECHNOLOGY. THE SYSTEM WAS TAILORED TO FIT MP + L'S FORECASTED GENERATION NEEDS AND THE COMPANY'S EXISTING TRANSMISSION AND DISTRIBUTION SYSTEM. HONEYWELL DEVELOPED A WECS SI..ULATION TO CONVERT WIND DATA TO WIND ENERGY AVAILABLE FOR INPUT TO THE UTILITY'S GRID. THE SIMULATION WAS USED TO EVALUATE THE PERFORMANCE OF PRELIMINARY DESIGN WIND TURBINE GENERATORS DEVELOPED FOR ERDA/NASA BY THE GENERAL ELECTRIC COMPANY AND KAMAN AEROSPACE CORPORATION, AND TO EVALUATE THE PERFORMANCE OF A WIND TURBINE OPTIMIZED FOR THE NORTHERN MINNESOTA WIND REGIME AND DEVELOPED BY THE BOEING VERTOL COMPANY UNDER SUBCONTRACT TO HONEYWELL. OVERALL EVALUATION OF WECS PERFORMANCE WAS CONDUCTED BY MP + L USING THE COMPANY'S PRODUCTION COSTING AND FINANCIAL PLANNING MODELS.

WIND DRIVEN MECHANICAL DRIVE.
U.S. PATENT NO. 3,964,426, JUNE 22, 1976. 4P.

A MECHANICAL DRIVE ACTUATED BY WIND HAS PROPELLERS ROTATABLY MOUNTED ON A VERTICAL STANDARD WHICH IS ROTATABLY FASTENED TO THE DECK OF A SHIP. THE ROTATIONAL FORCE OF THE PROPELLERS IS TRANSMITTED BY A SERIES OF SHAFTS TO DRIVE THE SHIP'S SCREW. THE VERTICAL STANDARD MAY BE ROTATED TO TAKE FULL ADVANTAGE OF THE PREVAILING WINDS.

76-0387 LINGELBACH D D
SIMULATION OF WIND TURBINE GENERATOR SYSTEM POWER FLOW DYNAMICS.
KANSAS STATE UNIVERSITY OF AGRICULTURE AND APPLIED SCIENCE, MIDWEST POWER
SYMPOSIUM, MANHATTAN, KANSAS STATE UNIVERSITY, OCTOBER 6-8, 1976. PAPER.
31P.

THE DYNAMICS OF THE POWER FLOW IN A PARTICULAR WIND TURBINE DRIVING DIFFERENT TYPES OF GENERATORS IS ANALYZED. THE TYPES OF GENERATOR DISCUSSED INCLUDE THE CONVENTIONAL SYNCHRONOUS GENERATOR, THE INDUCTION GENERATOR, AND THE FIELD-MODULATED GENERATOR OPERATING INTO AN ELECTRICAL SYSTEM AND INTO AN ISOLATED PURE RESISTIVE LOAD. THE DISCUSSION IS LIMITED TO THE DYNAMICS OF REAL POWER (WATTS), DISREGARDING PROBLEMS OF REACTIVE POWER FLOW. TO OBTAIN THE DYNAMIC RESPONSE OF THE SYSTEM, APPROXIMATE INCREMENTAL CHANGES IN THE WIND VELOCITY WERE SIMULATED MANUALLY. IT IS SHOWN THAT THE FIELD-MODULATED GENERATOR WITHOUT FEEDBACK SUPPLYING A PURE RESISTIVE LOAD IS ABLE TO EXTRACT MORE ENERGY THAN THE OTHERS FOR VARIABLE WIND VELOCITIES. REGARDLESS OF THE TYPE OF ELECTRICAL GENERATOR USED, A SYSTEM WITH VELOCITY TYPE DAMPING LOSSES SHOULD OPERATE AT A TIP SPEED RATIO BELOW THAT YIELDING MAXIMUM POWER COEFFICIENT IN ORDER TO MAXIMIZE THE ELECTRICAL POWER DEVELOPED.

WIND ENERGY OVERVIEW.
INTERSOCIETY ENERGY CONVERSION ENGINEERING CONFERENCE, 11TH, STATELINE, NEVADA, SEPTEMBER 12-17, 1976. PROCEEDINGS. NEW YORK, AMERICAN INSTITUTE OF CHEMICAL ENGINEERS, 1976.

WIND ENERGY IS COMPARED WITH AIR TRANSPORTATION, AND IT IS NOTED THAT, IN ITS EARLY DAYS, AIR TRANSPORTATION, ALTHOUGH TECHNICALLY FEASIBLE, APPEARED COMPLETELY NON-COMPETITIVE WITH LONG ESTABLISHED TRADITIONAL

TRANSPORTATION NETWORKS. THIS SITUATION HAS NOW REVERSED, BECAUSE OF THE IMPORTANCE OF THE NON-REPLENISHABLE RESOURCE OF TIME. IT IS SUGGESTED THAT ANOTHER NON-REPLENISHABLE, FOSSIL FUEL, MAY PROVIDE THE SAME DRIVING FORCE FOR COMMERCIALIZATION OF WIND ENERGY. BECAUSE OF THE CURRENT EXTENSIVE AND WIDE RANGING RESEARCH EFFORT IN WIND ENERGY, THESE PROCEEDINGS DO NOT COVER THE ENTIRE WIND PROGRAM. HOWEVER, THEY PROVIDE AN OVERVIEW OF SOME OF THE IMPORTANT TECHNICAL AND ECONOMIC WORK IN PROGRESS.

CAN CANADA HARNESS THE WIND?
ENG. J. 59: 46-48, SEPTEMBER 1976.

CANADA'S OPTIONS FOR WIND POWER AND NEW DEVELOPMENTS IN WIND POWER GENERATOR (WPG) TECHNOLOGY ARE DISCUSSED. BATTERIES FOR POWER STORAGE ACCOUNT FOR ABOUT 50 PERCENT OF SYSTEMS COSTS, REQUIRE MAINTENANCE AND POSSIBLY BACKUP FROM A CONVENTIONAL GENERATOR IN SLACK-WIND PERIODS. A POWER CONVERSION UNIT DEVELOPED BY WINDWORKS MAKES IT POSSIBLE TO DO WITHOUT BATTERIES AND TO CONVERT VARIABLE CURRENT FROM A WPG TO 60-CYCLE AC SO THAT LOAD CAN BE SHARED WITH THE LOCAL POWER GRID AND EXCESS WIND-GENERATED POWER CAN BE FED INTO THE GRID. POSSIBILITIES OF ACCOMMODATING LARGER WPG INTO SUCH A SETUP ARE GOOD, AND THE OUTLOOK FOR

WPG ON THE ORDER OF 10 KW TO 100 KW IS EXAMINED, PARTICULARLY OFFSHORE WPG. BRIEF DATA ARE PROVIDED ON CANADA'S WINDIEST REGIONS BEST SUITED TO WPG USE. THE HERONEMUS PLAN FOR LARGE WPG ON THE GREAT LAKES AND WESTERN GREAT PLAINS, WITH ELECTROLYTICALLY RECOVERED HYDROGEN AS SECONDARY PRODUCT, IS MENTIONED.

PROTECTING THE ENVIRONMENT.
ENCYCLOPEDIA OF ENERGY, D.N. LAPEDES, ED. NEW YORK, MCGRAW HILL BOOK
CO., 1976. P. 49-55.

THE ENVIRONMENTAL IMPACTS OF PRODUCING AND UTILIZING FOSSIL AND NUCLEAR FUELS ARE INVESTIGATED. THE MEASURES APPLIED FOR KEEPING THESE IMPACTS WITHIN SOCIALLY ACCEPTABLE LIMITS AND MAJOR LEGISLATIVE APPROACHES TO THIS END ARE EXAMINED. THE EFFECTS OF PRODUCING COAL, OIL, NATURAL GAS, URANIUM, OIL SHALE, TAR SANDS, AND GEOTHERMAL ENERGY ARE SPECIFICALLY INVESTIGATED. HEAT ENERGY FROM THESE SOURCES CAN BE USED DIRECTLY AS PROCESS HEAT BY INDUSTRY TO HEAT AND COOL BUILDINGS OR FOR CONVERSION INTO ELECTRICAL AND MECHANICAL ENERGY. COMMON TO ALL OF THESE USES ARE THE ENVIRONMENTAL EFFECTS FROM BURNING OF FOSSIL FUELS OR THE FISSIONING OF URANIUM. THE ENVIRONMENTAL ASPECTS OF THE CONVERSION OF HEAT INTO MECHANICAL ENERGY AND ELECTRICITY ARE PEVIEWED. THE ENVIRONMENTAL INTO MECHANICAL ENERGY AND ELECTRICITY ARE PEVIEWED. THE ENVIRONMENTAL DISCUSSED BRIEFLY. MEASURES TO CONTROL AIR QUALITY, WATER QUALITY, LAND POLLUTION, STRIP MINING, AND NUCLEAR POWER ARE NOT WITHOUT IMPACTS OF THEIR OWN IN TERMS OF COST, JOBS, OR RESOURCES. THE AUTHOR CONCLUDES THAT THE PROBLEM IS TO BALANCE SOCIETY'S NEED FOR ENERGY AGAINST THE NEED FOR A LIVABLE ENVIRONMENT, AT THE SAME TIME GIVING APPROPRIATE ATTENTION TO IMPORTANT ECONOMIC, TECHNICAL, AND SOCIAL FACTORS.

WIND TURBINE.
GERMAN (FRG) PATENT NO. 2,410,802/A/, SEPTEMBER 18, 1975. 7P. (IN GERMAN)

A WIND TURBINE IS DISCLOSED WHICH CONSISTS OF A ROTATING DRUM CARRIED IN BALL BEARINGS AND ADJUSTABLE TO THE WIND DIRECTION BY MEANS OF A VERTICAL CONTROL SURFACE ATTACHED TO CONNECTING RODS LEADING TO THE DRUM. THE DRUM HAS AN AXIAL WIND INLET OPENING. TWO AXIAL GUIDE PLATES ARE CONNECTED TO THE BASE PLATE AND THE DRUM ON BOTH SIDES OF THIS OPENING; THEY SERVE AS CONTROL DEVICES FOR THE WIND ENTERING THE DRUM. OPPOSITE TO THE WIND INLET OPENING IN THE DRUM, THERE IS ANOTHER OPENING FOR REMOVING THE WIND TO THE BACK. THE DRUM AND THE TWO SHEET STEEL WALLS ON ITS SIDES ARE COVERED BY A PLATE IN ORDER TO FULLY UTILIZE THE WIND ENTERING THE DRUM.

76-0400 MARCUS S
HERE COMES THE WIND.
ENV. ACTION 8(3): 3-7, JUNE 5, 1976.

BOSTON WIND, FOUNDED IN JULY 1975 AS THE ONLY ALTERNATIVE ENERGY CENTER IN BOSTON, BELIEVES THAT INDIVIDUAL SELF-SUFFICIENCY IS THE MOST SENSIBLE GOAL FOR ENERGY PRODUCTION. DESPITE THE PAST PROVED PERFORMANCE OF WIND MILLS, WIND ENERGY BECAME OBSOLETE DURING THE 1930'S-40'S BECAUSE OF THE EASY ACCESSIBILITY OF FOSSIL FUELED ELECTRIC POWER. BUT AS THE SUPPLY OF FOSSIL FUELS DWINDLE AND THEIR PRICES INCREASE, A RETURN TO WIND POWER GENERATION BECOMES MORE ATTRACTIVE TO INDIVIDUAL CONSUMERS. WIND ENERGY IS ACTUALLY SOLAR ENERGY IN KINETIC FORM, AND A MILL TO GATHER THIS ENERGY IS SIMPLE TO BUILD, ACCORDING TO BOSTON WIND. WHILE WIND POWER BY ITSELF IS NOT A PANACEA, IF INTEGRATED WITH OTHER ENLIGHTENED TECHNOLOGIES, WIND MILLS COULD HELP PROVIDE A HIGH QUALITY, LONG LASTING ANSWER TO MANY ENERGY NEEDS TO THE NORTHEAST.

OPTIMIZATION AND CHARACTERISTICS OF A SAILWING WINDMILL ROTOR. FINAL REPORT. FEBRUARY 1, 1975 -- JANUARY 31, 1976.
NTIS, MARCH 1976. 90P.
PB-259898

WITHIN THIS FOURTH AND FINAL QUARTER PROGRESS REPORT ARE COMPREHENSIVELY DISCUSSED ALL OF THE RESEARCH EFFORTS UNDERTAKEN BY THE PRINCETON WINDMILL GROUP OVER THE PAST YEAR. THIS INCLUDES A DETAILED ACCOUNTING OF THE DEVELOPMENT AND OPERATIONAL TECHNIQUES OF THE PRINCETON MOVING-VEHICLE WINDMILL TESTING FACILITY. ALSO PRESENTED IS A COMPLETE DOCUMENTATION OF THE PERFORMANCE BUILD-UP (DP(MAX) = .06 TO CP(MAX) = .40) OF A 12 FT. DIAMETER, TWO-BLADED SAILWING ROTOR. THIS REPORT FURTHER INCLUDES AN EXAMINATION OF AN EXPLORATORY RESEARCH EFFORT DIRECTED TOWARD USING A SMALL, FIRST-STAGE, COAXIAL ROTOR TO AUGMENT WINDMILL PERFORMANCE. FINALLY CONSIDERED ARE THE RESULTS AND CONCLUSIONS OF AN EXTENSIVE WIND-TUNNEL TEST PROGRAM AIMED AT A QUANTITATIVE DETERMINATION OF THE AERODYNAMIC PENALTIES ASSOCIATED WITH NUMEROUS SIMPLIFICATIONS OF THE BASIC DOUBLE-MEMBRANED SAILWING CROSS-SECTION.

UTILIZATION OF WIND ENERGY).
FRANKFURT AM MAIN, GERMANY F.R., UMSCHAU VERLAG, 1976. 201P. (IN
GERMAN)

THE 3RD PART OF THE PROGRAMME STUDY "NON-NUCLEAR-NON-FOSSIL PRIMARY ENERGY SOURCES" SUPPORTED BY BMFT EVALUATES THE POSSIBLE WINNING OF ENERGY FROM THE WIND AND THEN DEALS WITH THE WAYS TO OBTAIN MEASURING DATA OF THE WIND. THE STUDY IS GLOBAL, RELATED TO EUROPE AND ESPECIALLY TO THE FRG. IN THE FOLLOWING CHAPTERS 1) THE HISTORICAL DEVELOPMENT OF THE WIND ENERGY CONVERTERS IS EXPLAINED; 2) FREE-DRIVING AND WIND TURBINES WITH A SHELL AND THEIR POWER VALUES ARE DISCUSSED; 3) THE ADVANTAGES AND DISADVANTAGES OF SEVERAL WIND TURBINES AND ROTORS ARE COMPARED; 4) THE PRESENT LEVEL OF TECHNOLOGY IS EXPLAINED AND THE FUTURE

POSSIBLE DEVELOPMENT OF THE WIND CONVERTERS IS ESTIMATED. THE CALCULATION OF THE CONVERSION EFFICIENCY, THE AVAILABILITY OF SECONDARY ENERGY AND THE TECHNICALLY UTILIZED WIND ENERGY POTENTIAL IS BASED ON THE TWO-WING WIND CONVERTER WITH HORIZONTAL AXIS. FUNDAMENTALS ARE WIND ENERGY UTILIZATION SYSTEMS OF 3 MW AND 1 MW AND SMALL SYSTEMS. RELATIVELY BRIEFLY EXPLAINED ARE WAYS TO STORE THE SECONDARY ENERGY PRODUCED. ELECTRO-CHEMICAL, HEAT- AND PUMP STORAGES AND PRESSURE-AIR-STORAGE GAS TURBINES ARE DISCUSSED. THE CHAPTER "ASPECTS OF UTILIZATION" SHOWS BRIEFLY ENVIRONMENTAL EFFECTS AND ASPECTS OF SECURITY AND THEN DEALS WITH COST DETERMINATION FOR SYSTEMS OF DIFFERENT POWER AND WITH THE COSTS NECESSARY FOR RESEARCH AND DEVELOPMENT. THE REPORT ENDS WITH RECOMMENDATIONS AND PROPOSALS FOR RESEARCH AND DEVELOPMENT.

76-0404 MELISS M ENERGY SOURCES FOR TOMORROW. TRANSLATED FROM A GERMAN PAPER. NTIS, 1976. 17P. ERDA-TR-226

THE REGENERATIVE SOURCES OF SOLAR ENERGY, WIND ENERGY FROM THE SEAS, EARTH HEAT, AND RUNNING WATER WERE INVESTIGATED BY A CONSORTIUM OF MAJOR RESEARCH INSTALLATIONS. THE SOURCES WERE ASSESSED FIRST ON A GLOBAL BASIS, THEN MORE SPECIFICALLY FOR THE GERMAN FEDERAL REPUBLIC. THIS PAPER SUMMARIZES RESULTS FROM THE COMPLETE STUDY, BUT IS DEVOTED MOSTLY TO AN ANALYSIS OF UTILIZATION OF WIND ENERGY, USING THE FOLLOWING TOPICS: PHYSICAL BASES AND THEORETICAL POTENTIAL, WIND ENERGY INSTALLATIONS AND TECHNICALLY USEFUL POTENTIAL, UTILITY ASPECTS, AND RECOMMENDATIONS FOR RESEARCH AND DEVELOPMENT WORK.

CANADA'S RENEWABLE ENERGY RESOURCES: AN ASSESSMENT OF POTENTIAL.
NTIS, APRIL 1976. 528P.
N78-13588

RISING COSTS OF CONVENTIONAL, FRONTIER, AND NUCLEAR ENERGY PRODUCTION AND

THE PROSPECT OF FUTURE SHORTAGES HAVE PROMPTED A RESURGENCE OF INTEREST IN ALTERNATIVE, RENEWABLE ENERGY TECHNOLOGIES. PRINCIPAL SOURCES OF RENEWABLE ENERGY (SOLAR RADIATION, WIND, AND BIOMASS), AS WELL AS WAVES, THERMAL GRADIENTS, AND SENSIBLE HEAT SOURCES ARE REVIEWED TO ESTABLISH, IN GENERAL TERMS, THEIR SIGNIFICANCE IN THE CANADIAN CONTEXT. NEXT, THE TECHNICAL CHARACTERISTICS, EFFICIENCY, COSTS, IMPACTS, AND STATE OF THE ART OF SIXTEEN HARNESSING OR CONVERSION TECHNOLOGIES ARE PRESENTED AS AN INFORMATION BASE UPON WHICH TO BUILD AN ASSESSMENT OF POTENTIAL. A METHOD OF COMPARING THE LIFE COST OF A RENEWABLE ENERGY SYSTEM TO THAT OF THE LIKELY CONVENTIONAL ALTERNATIVE IS PROPOSED AND APPLIED IN CASES WHERE ADEQUATE TECHNICAL AND ECONOMIC DATA ARE AVAILABLE.

76-0408 MIERNIK M
IMPACTS OF ALTERNATIVE ENERGY SYSTEMS: A CRITICAL LOOK.
NESEA 76: DECISION MAKING IN SOLAR TECHNOLOGY. CONFERENCE AND EXHIBITION
OF THE NEW ENGLAND SOLAR ENERGY ASSOCIATION, 1ST, AMHERST, MASSACHUSETTS,
JUNE 24, 1976. SHAW, E., ED. TOWNSHEND, VERMONT, NEW ENGLAND SOLAR
ENERGY ASSOCIATION, 1976. P. 73-79.

THIS PAPER POINTS OUT SOME HAZARDS OF ALTERNATIVE ENERGY SYSTEMS. THE PROBLEMS ENCOUNTERED IN UTILIZING SOLAR ENERGY CONVERSION SYSTEMS ARE VARIED-INCLUDING SUCH AREAS AS BUILDING CONSTRUCTION, ACCESS TO SUNLIGHT, ZONING, AND TRANSFERABLE DEVELOPMENT RIGHTS. SOLAR HEATING AND COOLING AND DIRECT CONVERSION TO POWER BY THERMAL AND PHOTOVOLTAIC MEANS ARE SPECIFICALLY DISCUSSED. ENVIRONMENTAL PROBLEMS ENCOUNTERED WHEN UTILIZING WIND POWER AND OCEAN THERMAL GRADIENTS TO GENERATE POWER ARE SUMMARIZED. OWNERSHIP OF THESE RESOURCES IS EXAMINED.

NTIS, OCTOBER 1976. 431P.
PB-268718

AN INVESTIGATION IS MADE OF VARIOUS PROBLEMS ASSOCIATED WITH THE DESIGN OF HORIZONTAL AXIS, LOW SOLIDITY, HIGH PERFORMANCE WIND TURBINES. THE REPORT DEALS WITH THE FOLLOWING TOPICS: (A) WIND TURBINE PERFORMANCE AS DETERMINED FROM VARIOUS ELEMENTARY AND MORE REFINED MOMENTUM THEORIES; (B) PERFORMANCE TRADE-OFFS BETWEEN CONSTANT RPM AND CONSTANT VELOCITY RATIO OPERATION; (C) AERODYNAMIC VORTEX THEORIES FOR BLADE LOADINGS INCLUDING UNSTEADY EFFECTS AND WIND SHEAR VELOCITY GRADIENTS; (D)CONTROL DYNAMICS OF A SYNCHRONOUS ALTERNATOR-WIND TURBINE SYSTEM; (E) LINEAR AEROELASTIC STABILITY STUDIES OF ROTOR BLADES IN THE PRESENCE OF MODERATE INITIAL CONING ANGLES; (F) NONLINEAR DYNAMIC RESPONSE OF ROTOR BLADES INCLUDING GRAVITY AND WIND SHEAR EXCITATION; (G) AN EXPERIMENTAL INVESTIGATION OF A .914 M (3 FT) DIAMETER, 2 BLADED WIND TURBINE PLACED IN A WIND TUNNEL.

76-0410 MINARDI J E, LAWSON M O, WILLIAMS G
ELECTROFLUID DYNAMIC (EFD) WIND DRIVEN GENERATOR. FINAL REPORT.
NTIS, OCTOBER 1976. 84P.
C00/4130--77/1

THE EFD WIND DRIVEN GENERATOR DIRECTLY CONVERTS WIND ENERGY TO ELECTRICAL ENERGY WITHOUT MOVING PARTS EXCEPT, POSSIBLY, FOR DIRECTING IT INTO THE WIND. ADVANTAGES OF THE EFD WIND DRIVEN GENERATOR ARE: THERE ARE NO FUNDAMENTAL REASONS TO RESTRICT THE SIZE, AND THUS ECONOMICS OF SCALE CAN BE REALIZED; ALL PROBLEMS OF PITCH CONTROL, BEARINGS, TRANSMISSIONS, GENERATOR DESIGN, AND MATCHING OF GENERATOR CHARACTERISTICS TO WIND ROTOR CHARACTERISTICS ARE AVOIDED IN THE EFD SINCE IT IS A DIRECT ENERGY CONVERSION DEVICE. THE TECHNICAL AND ECONOMIC IMPACT OF THE EFD WIND DRIVEN GENERATOR ON WIND ENERGY SYSTEMS IS POTENTIALLY VERY FAVORABLE. THEORETICAL ANALYSIS PREDICTS FAVORABLE PERFORMANCE CHARACTERISTICS FOR THE EFD WIND GENERATOR; HOWEVER, DETAILED EXPERIMENTAL DATA HAVE BEEN LACKING ON THE ACTUAL PERFORMANCE OF SUCH GENERATORS. THEREFORE, THE FIRST YEAR OF RESEARCH ON EFD WIND DRIVEN GENERATORS WAS DESIGNED TO INCLUDE EXPERIMENTS ON AN EFD WIND DRIVEN GENERATOR TEST RIG, AS WELL AS THEORETICAL STUDIES OF SUITABLE GENERATOR CONFIGURATIONS. PRESENTED IS A THEORETICAL ANALYSIS OF THE EFD WIND DRIVEN GENERATOR, INCLUDING A COMPUTER STUDY OF ELECTRIC FIELD GEOMETRY AND AN ANALYSIS OF CHARGED COLLOID PRODUCTION REQUIREMENTS. ALSO DESCRIBED IS EXPERIMENTAL DATA OBTAINED WITH THE EFD TEST RIG AND A SMALL WIND TUNNEL DESIGNED AND BUILT FOR THIS PROGRAM. FUTURE PLANS ARE ALSO DETAILED.

SYSTEMS DEVELOPMENT AND TEST CENTER ACTIVITIES IN THE WIND SYSTEMS
PROGRAM AT ROCKY FLATS.
NTIS, 1976. 5P.
RFP-2698

A TEST CENTER HAS BEEN ESTABLISHED WITH 12 MACHINE TOWERS OF VARYING DESCRIPTIONS AND EIGHT WTGS ERECTED TO DATE. ADDITIONALLY, TWO LARGE AND THREE SMALL METEOROLOGICAL TOWERS HAVE BEEN INSTALLED AS WELL AS A SMALL IRRIGATION SYSTEM, TYPICAL OF THE TYPE COMMONLY USED THROUGHOUT THE COUNTRY. EXPERIENCE WITH THESE MACHINES HAS REVEALED A NUMBER OF OPERATIONAL PROBLEMS, BUT HAS RESULTED IN HARDWARE MODIFICATIONS BY MANUFACTURERS. THE OTHER MAIN AREA OF EFFORT HAS BEEN TO SOLICIT AND EVALUATE PROPOSALS FOR DEVELOPMENT OF 8 KW, 40 KW, AND HIGH RELIABILITY SWECS.

76-0412 MOSEY D
POWER FROM HYPERION'S GRANDCHILDREN.
SCI. DIMENSION 8(5): 14-20, 1976.

THE PRACTICABILITY OF EXPLOITING WIND ENERGY TO AUGMENT CANADA'S ENERGY SUPPLIES IN SELECTED AREAS IS EXAM-INED WITH REFERENCE TO WINDMILL DESIGN, AVAILABLE WIND POWER, PRODUCTIVITY, COSTS, AND OTHER RELEVANT PARAMETERS. CURRENT RESEARCH UNDER THE NATIONAL RESEARCH COUNCIL INCLUDES A BROAD RANGE OF ECONOMIC AND ENGINEERING ASPECTS OF HIGH-GRADE WIND ENERGY. ADVANTAGES OF THE VERTICAL AXIS TURBINE WIND GENERATOR ARE OUTLINED, NOTING THAT POWER PRODUCTION OF THE TURBINE INSTALLATION AT THE MAGDALEN ISLANDS SITE (AVERAGE WIND SPEED 32 KM/HR) CAN BE ESTIMATED AT ABOUT 70 KW YEAR-ROUND WITH A CAPITAL COST PER KILOWATT OF APPROXIMATELY \$1400, A RELATIVELY HIGH FIGURE, BUT SUITABLE FOR THE SITE, WHERE FUEL COSTS ARE VERY LARGE. ADVANTAGES AND DISADVANTAGES OF THE SEVERAL TYPES OF WINDMILLS-CONVENTIONAL, CONSTANT SPEED VERTICAL AXIS, HORIZONTAL AXIS, ETC.-ARE DISCUSSED AND ILLUSTRATED. MIXING POWER FROM WIND GENERATORS WITH THAT FROM CONVENTIONAL DIESEL UNITS OFFERS PROMISING POSSIBILITIES FOR THE SOLUTION OF BASE AND PEAK LOAD DEMANDS. DETAILED INFORMATION ON WIND CONDITIONS AND SPEED PROBABILITY DISTRIBUTIONS OVER LARGE AREAS FOR EACH MONTH OF A 3-YR PERIOD ARE REQUIRED BEFORE REASONABLY ACCURATE ESTIMATES OF WIND ENERGY AVAILABILITY CAN BE ATTEMPTED. ENVIRONMENTAL ASPECTS - OBTRUSIVENESS OF THE STRUCTURES ON A LANDSCAPE - MUST NOT BE DISREGARDED. PHOTOGRAPHS, CHARTS, AND TABLES AUGMENT THE TEXT.

76-0413 MUSGROVE P J VARIABLE GEOMETRY VERTICAL AXIS WINDMILL. ENERGY DIG. 5(6): 10-11, DECEMBER 1976.

THE VGVAW OPERATES AERODYNAMICALLY IN EXACTLY THE SAME WAY AS THE DARRIEUS WINDMILL, BUT HAS STRAIGHT BLADES ATTACHED TO A HORIZONTAL CROSS-ARM. IF THE BLADES ARE RIGIDLY ATTACHED TO THE CROSS-ARM, BENDING STRESSES IN HIGH WIND SPEEDS BECOME EXCESSIVE, AND CROSS-BRACING BETWEEN THE BLADES, THOUGH POSSIBLE, IS IMPRACTICAL. IN THE VGVAW EXCESSIVE BLADE STRESSES ARE AVOIDED BY ATTACHING THE BLADES TO THE CROSS-ARM VIA A HINGE. AT LOW ROTATIONAL SPEEDS, CORRESPONDING TO LOW WIND SPEEDS, THE BLADES ARE KEPT IN THE UPRIGHT POSITION, AGAINST HINGE STOPS, BY TENSION IN THE TIE-WIRES. THESE TIE-WIRES, ATTACHED TO THE UPPER PART OF EACH BLADE, ARE CONNECTED TO A SINGLE VERTICAL EXTENSION SPRING HOUSED WITHIN THE INNER, TUBULAR, WINDMILL DRIVE SHAFT. TYPICALLY THE SPRING RATE AND PRE-TENSION ARE ADJUSTED SO THAT WHEN THE WIND SPEED IS LESS THAN ABOUT 5 M/S THE MOMENT ABOUT THE HINGE DUE TO THE TIE-WIRE TENSION EXCEEDS THE MOMENT ABOUT THE HINGE DUE TO BLADE CENTRIFUGAL FORCES. UP TO THIS SPEED, WHICH IS APPROXIMATELY THE ANNUAL AVERAGE WIND SPEED OVER THE ULK., THE BLADES THEREFORE REMAIN UPRIGHT AND GIVE MAXIMUM AERODYNAMIC EFFICIENCY. WHEN THE WIND SPEED INCREASES, THE ROTATIONAL SPEED OF THE WINDMILL ALSO INCREASES, AND THE RESULTING INCREASED CENTRIFUGAL FORCES MAKE THE BLADES INCLINE OUTWARDS. THE PROTOTYPE VGVAW HAS A DIAMETER OF 3M AND 2 BLADES EACH 2M LONG AND IS SUPPORTED ON A 5M HIGH, 10CM DIAMETER GUYED STEEL TOWER.

VERTICAL- AND HORIZONTAL-AXIS SYSTEMS WERE DISCUSSED BOTH IN THEORY AND IN PRACTICE. APPLICATIONS RANGED FROM WIND FARMS EACH WITH HUNDREDS OF MEGAWATT UNITS TO THE USE OF CRETAN WINDMILLS TO PROVIDE WATER FOR CATTLE. WIND ENERGY CONVERSION UNITS HAVE BEEN OPERATED IN SEVERAL CONFIGURATIONS AND THE THEORY OF THEIR PERFORMANCES IS SUFFICIENTLY ADVANCED TO ALLOW DESIGN FOR FABRICATION. THE TRENDS ARE TOWARDS LARGER UNITS FOR MUNICIPAL POWER SYSTEMS AND SMALLER UNITS FOR DOMESTIC USE. IN

THE FORMER CASE, THE BEHAVIOR OF LARGE WIND TURBINES OPERATING IN LARGE ARRAYS, AND THE OUTPUT (WITH AND WITHOUT STORAGE) OF SEVERAL SUCH ARRAYS WHEN GEOGRAPHICALLY DISPERSED, HAS YET TO BE WELL UNDERSTOOD. THE FIELD HAS REACHED A LEVEL OF MATURITY CHARACTERIZED BY SUCH FACTORS AS ECONOMICS, ENVIRONMENTAL IMPACT, AND PUBLIC ACCEPTANCE.

76-0421 OBERMEYER J L, TOWNES H W
ECONOMIC EVALUATION OF SMALL-SCALE WIND POWERED ELECTRIC GENERATION
SYSTEMS.
ASME PAPER 76-WA/ENER-1, 1976. 4P.

PRESENTED IS AN ECONOMIC EVALUATION OF SEVERAL COMMERCIAL WIND POWERED ELECTRIC GENERATION SYSTEMS OF THE TYPE WHICH COULD BE USED BY AN INDIVIDUAL HOME OWNER. A SYSTEM INCLUDES A WIND PLANT, TOWER, STORAGE BATTERY AND D-C TO A-C INVERTER. THE ANALYSIS CONSIDERED A TOTAL OF 12 DIFFERENT SYSTEM CONFIGURATIONS. THE EVALUATION OF ENERGY OUTPUT WAS BASED ON WIND SPEED DATA FOR SEVERAL LOCATIONS IN THE STATE OF MONTANA. THE ANALYSIS CAN BE EXTENDED TO OTHER LOCATIONS ON THE BASIS OF MEAN ANNUAL WIND SPEED. THE RESULTS OF THE EVALUATION INDICATE THAT SOME OF THE "HOME BUILT" SYSTEMS ARE COMPETITIVE ECONOMICALLY AT THE PRESENT TIME IN SOME "WINDY" LOCATIONS. NONE OF THE SYSTEMS WHICH ARE ECONOMIC COULD INDIVIDUALLY SUPPLY THE ENTIRE POWER REQUIREMENT FOR A SINGLE FAMILY DWELLING.

BNWL-SA-5840

THE EXISTING INFORMATION ON MEAN WIND PROFILES AND THE CHARACTERISTICS OF TURBULENCE AT A POINT ARE ADEQUATE FOR MANY PURPOSES, BUT THEY ARE NOT SUFFICIENT FOR WECS DESIGN. THE PURPOSE OF THIS PAPER IS TO DESCRIBE SOME OF THE VARIABILITY OBSERVED IN A RECENT MEASUREMENT PROGRAM. IN PARTICULAR, THE VARIATIONS OF THE VERTICAL AND LATERAL SHEAR OF THE LONGITUDINAL COMPONENT OF THE WIND WILL BE DESCRIBED. DATA ON THE FLUCTUATIONS OF THE VERTICAL AND LATERAL SHEARS OF THE LONGITUDINAL WIND

COMPONENT NEAR THE SEATTLE, WASHINGTON, CENTRAL BUSINESS DISTRICT HAVE BEEN ANALYZED TO DETERMINE SHEAR CHARACTERISTICS DOWNWIND OF LARGE ROUGHNESS ELEMENTS. THE ANALYSIS HAS EXAMINED THE FREQUENCY DISTRIBUTIONS AND TIME SCALES OF THE SHEAR FLUCTUATIONS. WHEN POSSIBLE THE RESULTS HAVE BEEN COMPARED WITH RESULTS OF ANALYSIS OF DATA FROM CAPE KENNEDY, FLORIDA.

76-0427 PETERSON R, CROMACK D
CENTRALIZED SOLAR/WIND HOME HEATING.
ANNUAL CONFERENCE ON ENERGY, 2D., UNIVERSITY OF MISSOURI, ROLLA, OCTOBER
7-9, 1975. PROCEEDINGS. NORTH HOLLYWOOD CALIFORNIA, WESTERN PERIODICAL
COMPANY, 1976. P. 108-115.

IN THE IMMEDIACY OF NATIONAL GOALS FOR ENERGY INDEPENDENCE, THE NEED EMERGES TO USE DIALECTIC METHODS TO DIMINISH THE ENERGY-CONSUMPTIVE CHARACTERISTICS OF THE TYPICAL HOME. AT THE CUTTING EDGE OF RESOURCEFUL PROGRESS ARE THE RESIDENTIAL DEVELOPMENTS THAT EMBRACE ALTERNATIVE AND CONSERVATIVE ENERGY TECHNIQUES. IN CONJUNCTION WITH SUCH A PLANNED, LOW-IMPACT COMMUNITY, THIS PAPER PROPOSES A CLUSTER-CENTRALIZED SYSTEM THAT UTILIZES WIND ENERGY IN COMBINATION WITH SOLAR THERMAL ENERGY FOR SPACE AND DOMESTIC WATER HEATING. A DESCRIPTION OF THE RANDOM SOLAR-WIND RESOURCE EMBODIES A MATCHING PROBLEM THAT IN TURN REVEALS THE BENEFITS OF THE COMBINED MODE OF ENERGY COLLECTION. THOUGH SOLAR AND WIND ENERGY SYSTEMS HAVE BEEN COINCIDENTALLY ADVANCED, THEIR MUTUAL AND UNIFIED APPLICATION REMAINS NOVEL. THE COMBINED SYSTEM DEMONSTRATES AN APPEALING ABILITY TO FULFILL THE HEATING REQUIREMENTS.

WIND TURBINES WITH VERTICAL MAIN AXLES AND WITH VERTICALLY STANDING
TURBINE BLADES ROTATING ROUND THEIR OWN VERTICAL AXLE AND WHICH ARE
PLACED IN THE BEST POSITION FOR THE DIRECTION OF WIND OVER TOOTHED GEARS.
GERMAN (FRG) PATENT NO. 2,506,584/A/, SEPTEMBER 16, 1976. (IN GERMAN)

THE DISCOVERY CONCERNS A WIND TURBINE ROTATING ROUND A VERTICAL AXLE WITH VERTICALLY STANDING TURBINE BLADES ROTATING ROUND THEIR OWN VERTICAL AXLE. THE TURBINE ROTATES ROUND THE BEARING MAST AND SEVERAL SUCH TURBINES CAN BE ARRANGED SO AS TO SAVE SPACE. THE TURBINE BLADES ARE ADJUSTED OVER THE TOOTHING GEARS, WHICH ARE, E.G., POWERED BY AN ELECTRONIC CONTROL SYSTEM, TO SUIT THE WIND DIRECTION AT THE TIME.

76-0429 PIEPERS G G
WINDENERGIE IN NEDERLAND. (WIND ENERGY IN THE NETHERLANDS).
TNO PROJECT 76(2): 49-56, 1976. (IN DUTCH)

IF THE NORTHSEA COAST WERE HALF OCCUPIED BY WIND TURBINES, NEARLY 15 PERCENT OF THE ELECTRICITY PRODUCED IN 1974 WOULD BE AVAILABLE BY MEANS OF 5000 (DIAM.50M) WIND TURBINES. THE COSTS PER RMH AT DEN HELDER ARE ESTIMATED TO BE COMPARABLE WITH THOSE USING CONVENTIONAL FUEL. IN THE NATIONAL RESEARCH PROGRAM ON WIND ENERGY, FINANCED BY THE GOVERNMENT, A NUMBER OF DUTCH RESEARCH INSTITUTES AND INDUSTRIES WILL INVESTIGATE HORIZONTAL AXIS AND VERTICAL AXIS WIND TURBINES AND THEIR POSSIBLE CONTRIBUTION TO THE NATIONAL ENERGY PRODUCTION.

76-0430 PIPE TOWER DEVELOPED. WIND POWER DIG. 1(7): 18, DECEMBER 1976.

A NOVEL TOWER SYSTEM DESIGNED TO SUPPORT A 2500 WATT, 32 VOLT JACOBS WIND GENERATOR IS DESCRIBED.

76-0431 POLLARD W G
THE LONG-RANGE PROSPECTS OF SOLAR ENERGY.
AM. SCI. 64(4): 424-429, JULY-AUGUST 1976-

THE LONG-RANGE POTENTIAL OF VARIOUS WAYS OF USING SOLAR ENERGY 15 EVALUATED FROM AN ECONOMIC AND COMMERCIAL STANDPOINT. SOLAR RADIATION USED DIRECTLY AND INDIRECTLY IS ANALYZED. THE VARIOUS TECHNOLOGIES ARE ASSUMED TO BE ESTABLISHED AND THE RESULTING SYSTEMS ARE VISUALIZED IN OPERATION BY INDUSTRY IN THE NORMAL BUSINESS OF SELLING ELECTRICITY, FUEL, OR EQUIPMENT. MANY SOLAR SYSTEMS ARE CONFRONTED BY CONSTRAINTS AND SHOW VARYING DEGREES OF PROMISE. SMALL, SELF-CONTAINED TOTAL ENERGY SYSTEMS FOR RURAL AREAS SEEM DESTINED TO PLAY AN INCREASINGLY IMPORTANT ROLE IN THE TOTAL WORLD ENERGY SYSTEM. WIND POWER IS DISCUSSED AS AN INDIRECT FORM OF SOLAR ENERGY.

INFORMATION IS SUMMARIZED ON WIND TURBINE DESIGN, WIND TURBINE MATERIALS, POWER CONVERSION, AND APPLICATION FEASIBILITY.

76-0433 PONTIN G W W ENERGY PRODUCING WINDMILLS. EXEC. ENG. 56(5-6): 23-24, JUNE-JULY 1976.

IN THIS ARTICLE, THE AUTHOR COVERS THE THEORY OF WINDMILLS AND SIGNIFICANCE OF THE THEORETICAL FACTORS. THE ECONOMICS AFFECTING ENERGY CONVERSION ARE DISCUSSED. SOME FEATURES OF MODERN WIND UNITS, TOGETHER WITH A CLASSIFICATION SYSTEM AND POSSIBLE APPLICATIONS, ARE PROVIDED.

76-0434 POTTER A G
SOLAR-ASSISTED POWER SYSTEMS.
ANNUAL CONFERENCE ON ENERGY, 2D., UNIVERSITY OF MISSOURI, ROLLA, OCTOBER
7-9, 1975. PROCEEDINGS. NORTH HOLLYWOOD, CALIFORNIA, WESTERN PERIODICAL
COMPANY, 1976. P. 47-56.

EXCEPT FOR HYDROELECTRIC POWER, SOLAR ELECTRIC GENERATION HAS NOT BEEN WIDELY USED IN THE PAST TO ASSIST POWER SYSTEM GENERATION BECAUSE OF ITS RELATIVELY HIGH COST. THIS SITUATION HAS NOW STARTED TO CHANGE WITH THE ADVENT OF THE ENERGY CRISIS AS EXEMPLIFIED BY DECREASING NATURAL GAS SUPPLIES AND INCREASING FOSSIL FUEL PRICES. ONE POSSIBLE RESPONSE TO THIS SITUATION WHICH APPEARS TO HAVE A RELATIVELY GOOD CHANCE FOR ECONOMIC SUCCESS IS THE UTILIZATION OF WIND AND SOLAR THERMAL ENERGY FOR SPACE AND WATER HEATING LOADS SERVED BY NATURAL GAS OR ELECTRIC POWER. UNFORTUNATELY, A LARGE PORTION OF THE ENERGY COLLECTED IN A TYPICAL SOLAR HEATING SYSTEM IS LOST BECAUSE THE RECEIVED SOLAR ENERGY IS VARIABLE AND, IN MOST CASES, IS NOT WELL CORRELATED WITH COLLECTION SITE LOADS. THIS PAPER EXAMINES THE FEASIBILITY OF USING THE EXCESS ENERGY AVAILABLE FROM SOLAR HEATING SYSTEMS FOR ELECTRIC POWER PRODUCTION SO THAT POWER SYSTEM PEAKING CAPACITY AND TOTAL FOSSIL FUEL CONSUMPTION CAN BE REDUCED. AS SOLAR ELECTRIC GENERATION BECOMES LARGER, ENERGY STORAGE SYSTEMS WILL BE NEEDED TO ASSURE POWER SYSTEM STABILITY AND RELIABILITY. AT THE SOLAR COLLECTION SITE, THERMAL ENERGY AND CHEMICAL STORAGE UNITS IN BATTERY FORM ARE PREFERRED. FOR LARGE CENTRAL ENERGY STORAGE FACILITIES, PUMPED HYDRO, COMPRESSED AIR, LIQUID AMMONIA, STORAGE BATTERIES, AND LIQUID HYDROGEN SYSTEMS ARE POSSIBLE CHOICES. THE LIQUID AMMONIA STORAGE SYSTEM ARE NOT FEASIBLE.

76-0436 RAMAKUMAR R
OPERATIONAL AND CONTROL ASPECTS OF WIND ENERGY SYSTEMS UTILIZING FIELD MODULATED GENERATORS.
1976 CONTROL OF POWER SYSTEMS CONFERENCE AND EXPOSITION, OKLAHOMA CITY, MARCH, 10-12, 1976. NEW YORK, IEEE, 1976. P. 111-114.

TWO CONTROL SYSTEMS ARE PRESENTED AND DISCUSSED FOR OPERATING WIND-DRIVEN VARIABLE-SPEED CONSTANT-FREQUENCY FIELD MODULATED GENERATOR SYSTEMS IN PARALLEL WITH UTILITY POWER LINES. ONE OF THEM USED WIND SPEED AND AEROTURBINE SHAFT SPEED AS CONTROL INPUTS AND THE OTHER USES AEROTURBINE SHAFT TORQUE AND SPEED AS CONTROL INPUTS. THE OBJECTIVE IS TO MAINTAIN A CONSTANT AND OPTIMUM TIP SPEED RATIO WITH VARYING WIND SPEEDS TO DELIVER MAXIMUM POSSIBLE ELECTRICAL POWER TO THE POWER GRID.

UTILIZATION OF SOLAR AND WIND ENERGY TO IMPROVE THE LIVING ENVIRONMENT IN LESS DEVELOPED COUNTRIES.
INST. ENVIRON. SCI. PROC. 22: 314-318, 1976.

INTRODUCTION OF DECENTRALIZED SMALL-SCALE SYSTEMS CAN "ENERGIZE" THE RURAL ECONOMIES OF LESS DEVELOPED COUNTRIES AND IMPROVE THE LIVING ENVIRONMENT FOR MILLIONS OF PEOPLE. NEARLY 66 PERCENT OF THE WORLD'S POPULATION INHABIT LESS DEVELOPED COUNTRIES, ONE HALF OF WHOM LIVE IN SCATTERED RURAL AREAS OR BIG CITY SLUMS UNDER THE MOST DEHUMANIZING CONDITIONS. A THREE-PHASE, STEP BY STEP APPROACH FOR ADOPTING TECHNOLOGIES DESIGNED TO EXPLOIT RENEWABLE ENERGY SOURCES AT THE RURAL LEVEL IS DESCRIBED. THE FIRST STEP IS THE ESTABLISHMENT OF AN ENERGY CENTER IN EACH VILLAGE OR CLUSTER OF VILLAGES TO PROVIDE THE BASIC HUMAN NEEDS OF EXISTENCE. THE CENTER WOULD THEN EXPAND TO PROVIDE ENERGY FOR IMPROVING AGRICULTURAL PRODUCTIVITY AND SMALL-SCALE INDUSTRIAL DEVELOPMENT.

76-0438 RAMAKUMAR R, HUGHES W L
WIND ENERGY UTILIZATION--AN OVERVIEW.
ANNUAL ASME SYMPOSIUM ON ENERGY ALTERNATIVES, 16TH, ALBUQUERQUE, N.M.,
FEBRUARY 1976. PROCEEDINGS. P. 143-149.

A BRIEF OVERVIEW OF THE POTENTIAL OF WIND AS A NATURAL, CLEAN AND REPLENISHABLE SOURCE IS PRESENTED.

76-0439 RAMAKUMAR R, HUGHES W L, ALLISON H J, YARLAGADDA R K, SMITH G G, TSUNG C C, ASHBAUGH C D, HOY L D, RAHMAN A U, ALI M H, DESHMUKH R R DEVELOPMENT AND ADAPTATION OF FIELD MODULATED GENERATOR SYSTEMS FOR WIND ENERGY APPLICATION. FINAL REPORT.

NTIS, AUGUST 1976. 420 P.
PB-272495, ERDA/NSF/AER/00647-76/2

THE OBJECTIVES OF THIS PROJECT ARE: (1) TO DEVELOP A MATHEMATICAL MODEL AND UNDERSTANDING OF THE FIELD MODULATED GENERATOR SYSTEM CULMINATING IN USABLE DESIGN CURVES FOR OPTIMUM PERFORMANCE OVER THE SELECTED OPERATING SPEED RANGE; AND (2) TO STUDY THE PROBLEMS AND ARRIVE AT CONTROL PHILOSOPHIES AND PERIPHERAL EQUIPMENT NEEDED TO OPERATE A WIND-DRIVEN FIELD MODULATED GENERATOR SYSTEM IN PARALLEL WITH A CONVENTIONAL POWER SYSTEM.

76-0440 REVIE R W, BOCKRIS J O'M SOLAR ENERGY FOR A FUTURE SOCIETY. APEA J 16(PT.2): 39-43, 1976.

THE SUN IS AN INEXHAUSTIBLE ENERGY SOURCE CAPABLE OF ELEVATING THE ENTIRE WORLD POPULATION TO THE STANDARD OF LIVING ENJOYED IN THE U.S. METHODS OF CONVERTING SOLAR ENERGY FALL INTO SIX CATEGORIES: SOLAR HEATING AND COOLING OF BUILDINGS, INCLUDING AGRICULTURAL AND INDUSTRIAL PROCESSES; PHOTOVOLTAICS; OCEAN THERMAL ENERGY; BIOCONVERSION; WIND ENERGY; AND SOLAR-THERMAL ELECTRIC POWER. THE PRINCIPLES, PRESENT STATUS, AND FUTURE OF THESE METHODS ARE EXAMINED.

76-0441 RANGI R S
RECENT CANADIAN ACTIVITIES IN WIND POWER.
SHARING THE SUN, PROCEEDINGS OF THE JOINT CONFERENCE OF THE AMERICAN
SECTION, INTERNATIONAL SOLAR ENERGY SOCIETY AND SOLAR ENERGY SOCIETY OF
CANADA, INC. VOL. 1. CAPE CANAVERAL, FLORIDA, AMERICAN SECTION OF THE
INTERNATIONAL SOLAR ENERGY SOCIETY, 1976. P. 110-118.

THE MAJOR PART OF THE WIND POWER ACTIVITY IN CANADA IS CENTERED AROUND VERTICAL-AXIS WIND TURBINES (VAWT). THE NATIONAL RESEARCH COUNCIL, HAVING DEVELOPED THE VAWT, IS CONCENTRATING ON THIS CONCEPT. THREE CANADIAN COMPANIES, DOMINION ALUMINUM FABRICATING, LIMITED, BRISTOL AEROSPACE LIMITED, AND BARBER HYDRAULIC TURBINE LTD., HAVE STARTED TO MARKET THE VAWT. THE NATIONAL RESEARCH COUNCIL, IN CO-OPERATION WITH QUEBEC HYDRO, IS INSTALLING A 200 KW VAWT AT A SITE ON THE MAGDALEN ISLANDS. THIS UNIT IS EXPECTED TO BE IN OPERATION IN OCTOBER 1976. BRACE RESEARCH INSTITUTE AND THE UNIVERSITY OF SHERBROOKE ARE CONTINUING WITH RESEARCH AND DEVELOPMENT OF THE HORIZONTAL WIND MACHINE. BRISTOL AEROSPACE AND THE UNIVERSITY OF MANITOBA, WITH NATIONAL RESEARCH COUNCIL FINANCIAL SUPPORT, HAVE STARTED WORK TO DEVELOP A LOW SPEED GENERATOR SUITABLE FOR WIND POWER APPLICATION.

76-0442 REED J W
PREDICTING WIND POWER AT TURBINE LEVEL FROM AN ANEMOMETER RECORD AT
ARBITRARY HEIGHT.
INTERNATIONAL SYMPOSIUM ON WIND ENERGY SYSTEMS, CAMBRIDGE, U.K.,
SEPTEMBER 7, 1976. NTIS, 1976. 10 P.
SAND-76-5397, CONF-760909-1

WIND SPEED VARIATION WITH HEIGHT IN THE FRICTIONAL BOUNDARY LAYER DEPENDS ON WIND SPEED, SURFACE ROUGHNESS AND THERMODYNAMIC STABILITY. OVER RELATIVELY FLAT TERRAIN, SUITABLE FOR EXTENSIVE FIELDS OF WIND ENERGY EXTRACTORS, USEFUL WIND INCREASES IN PROPORTION TO THE ONE-SEVENTH POWER OF HEIGHT ABOVE GROUND. THIS CLOSELY APPROXIMATES THE MORE GENERAL AND THEORETICALLY BASED LOGARITHMIC MODEL ABOVE STANDARD 10 METER ANEMOMETER HEIGHT AND WITH THE 0.03M ROUGHNESS LENGTH OFTEN FOUND BY OBSERVATION. SEVERAL DATA-COLLECTIONS HAVE BEEN ASSEMBLED TO VERIFY THE UTILITY OF THIS ONE-SEVENTH POWER LAW, FROM SPECIAL METEOROLOGICAL RESEARCH TOWERS AS WELL AS LONG-TERM RECORDS FROM REGULAR WEATHER STATIONS WHERE THE ANEMOMETER HAPPENED TO BE MOVED ON OCCASION. A MINOR CORRECTION FOR LOWER SPEEDS OF 2-8M/S IMPROVES PREDICTIONS BUT IS NOT ESSENTIAL TO GROSS POWER AVAILABILITY CALCULATIONS FOR LARGE TURBINE BLADES.

PROBABLY NOT AS WELL KNOWN AS THE PIONEERING WORK OF THE CHICAGO ISTITUTE OF GAS TECHNOLOGY IN COAL GASIFICATION IS THE ASSOCIATION'S INCREASING INVOLVEMENT IN THE DEVELOPMENT OF NONFOSSIL ENERGY SOURCES. WORK IS SUMMARIZED IN THE FIELDS OF OCEAN THERMAL ENERGY CONVERSION, FUEL CELL POWER PLANTS, HYDROGEN, LOW COST ELECTROLYZERS, THERMOCHEMISTRY, PIPELINE TRANSMISSION, SOLAR ENERGY, LARGE STORAGE CAPACITY, AND WIND ENERGY SYSTEMS.

76-0448 REUTER R C
STRUCTURAL OVERVIEW.
VERTICAL-AXIS WIND TURBINE TECHNOLOGY WORKSHOP, ALBUQUERQUE, N.M., MAY
17, 1976. PROCEEDINGS. ALBUQUERQUE, N.M., SANDIA LABS., JULY 1976. P.
II.126--II.129.
SAND-76-5586

WHENEVER ADVANCED HARDWARE INVOLVES LARGE, PERIODIC LOADS, LOW NATURAL FREQUENCIES AND MANY INTERACTING COMPONENTS, THE PROBABILITY OF ENCOUNTERING STRUCTURAL PROBLEMS IS HIGH. THE DARRIEUS VERTICAL AXIS WIND TURBINE IS TYPIFIED BY THESE FEATURES. THE VAWT STRUCTURAL PROGRAM AT SANDIA HAS THREE NATURAL OBJECTIVES: (1) TO UNDERSTAND THE PROBLEMS AND THEIR SOLUTIONS, (2) TO AID AND SUPPORT DESIGN, AND (3) TO ASSIST IN SYSTEM COST EVALUATION. PRESENTLY BEING EMPHASIZED ARE STRENGTH REQUIREMENTS NECESSARY TO MEET PERFORMANCE CONDITIONS, STIFFNESS REQUIREMENTS FOR CONTROL OF NATURAL FREQUENCY LOCATIONS, FATIGUE REQUIREMENTS FOR SAFETY AND LOW LIFE CYCLE COSTS, AND ALSO AEROELASTICITY EFFECTS WHICH COUPLE STRUCTURAL BEHAVIOR WITH AERODYNAMICS.

TOWER ANALYSIS.
VERTICAL-AXIS WIND TURBINE TECHNOLOGY WORKSHOP, ALBUQUERQUE, N.M., MAY

17, 1976. PROCEEDINGS. ALBUQUERQUE, N.M., SANDIA LABS., JULY 1976. P. II.151--II.167. SAND-76-5586

DURING THE COURSE OF SANDIA LABORATORIES' WIND ENERGY PROGRAM, TWO WIND TURBINES HAVE BEEN BUILT AND OPFRATED WITH NO APPARENT PROBLEMS RESULTING FROM BLADE SUPPORT TOWER DESIGN. THE SMALLER TURBINE, A TWO METER MODEL, HAS A PRISMATIC, TRIANGULAR CROSS SECTION TRUSS TOWER, AND THE LARGER ONE, A 5 METER TURBINE, HAS A TUBULAR TOWER. SINCE NO SUSTAINING PROBLEMS HAVE ARISEN FROM EITHER TOWER DESIGN, THE RATIONALE FOR SELECTION OF A TRUSS TOWER OR TUBULAR TOWER IS STILL UNCERTAIN. THE PURPOSE OF THIS REPORT IS TO ENHANCE TOWER SELECTION RATIONALE BY ESTABLISHING SOME DESIGN GUIDELINES FOR VAWT BLADE SUPPORT FOWERS, AND TO REVIEW THE SPECIFIC DESIGN FOR THE TOWER OF THE FORTHCOMING 17 METER TURBINE.

COMPOSITE METHOD OF PLOTTING PRODUCTIVITY PROVISION CURVES OF JOINTLY
UTILIZED SOLAR AND WIND ENERGY PLANTS.
GELIOTEKHNIKA 4: 52-56, 1976. TRANSL.: APPL. SOLAR ENERGY 12(4): 39-42, 1976.

A METHOD OF COMPOSITE PLOTTING OF A RESULTANT SUMMARY CURVE OF PROVISION OF PRODUCTIVITY OF A SOLAR AND A WIND ENERGY PLANT JOINTLY USED FOR ENERGY AND WATER MANAGEMENT PURPOSES IS CONSIDERED.

76-0460 SALIEVA R B
DESIGN PRINCIPLES FOR SOLAR AND WIND POWER INSTALLATIONS.
GELIOTEKHNIKA 12(1): 51-57, 1976. TRANSL.: APPL. SOLAR ENERGY 12(1): 41-45, 1976.

THE SYSTEMS APPROACH FOR PLANNING AND DESIGN OF SOLAR AND WIND POWER INSTALLATIONS INVOLVING NATURAL, TECHNOLOGICAL AND HUMAN FACTORS IS DISCUSSED. FIVE BASIC FEATURES ARE CONSIDERED; OPERATIONAL TARGETS, THE PRESENCE OF CONTROL, HIERARCHIC STRUCTURE, CONTINUOUS VARIATION OF THE STATE OF SUBSISTENCE AND ELEMENTS, AND THE NECESSITY OF USING COMPUTERS FOR THE SOLUTION OF ALL OPTIMISATION PROBLEMS.

76-0461 SALIEVA R B
EXPERIENCE OF EVALUATION OF THE RELIABILITY OF SYSTEMS OF POWER SUPPLY
FROM RENEWABLE ENERGY SOURCES BY TWO-MODEL DISTRIBUTION CURVES.
GELIOTEKHNIKA 4: 57-62, 1976. TRANSL.: APPL. SOL. ENERGY 12(4): 43-47,
1976.

THE POWER SUPPLY CONSIDERED AS AN EXAMPLE RELATES TO A RADIO RELAY COMMUNICATION SYSTEM WHICH IS TO BE EQUIPPED WITH WIND AND SOLAR POWER PLANTS SUPPLEMENTED OCCASIONALLY BY A DIESEL POWER PLANT. MATHEMATICAL DESCRIPTION OF THE FUNCTION OF DISTRIBUTION OF THE LENGTH OF THE PERIOD OF OPERATION OF AN ELECTRIC STORAGE BATTERY W\$SUB \$PHI\$\$ BY MEANS OF A TWO-MODAL CURVE IS CONSIDERED. THE PARAMETER W\$SUB \$PHI\$\$ CHARACTERIZES THE DISTRIBUTION OF THE LENGTH OF CONTINUOUS FUNCTIONING OF THE APPARATUS CONTROLLING THE WORK OF THE ELECTRIC STORAGE BATTERY. THIS IS IMPORTANT IF ONE IS TO TAKE INTO ACCOUNT THAT 90-95 PERCENT OF THE ENERGY CONSUMED IS TO BE PRODUCED BY WIND ENERGY OR SOLAR ENERGY PLANTS WORKING JOINTLY WITH AN ELECTRIC STORAGE BATTERY.

76-0462 SALIEVA R B
OPTIMISATION CRITERIA FOR SOLAR AND WIND POWER SYSTEMS.
GELIOTEKHNIKA 12(1): 58-63, 1976. TRANSL.: APPL. SOL. ENERGY 12(1): 46-49, 1976.

IT IS SHOWN THAT THE DESIGN OF SOLAR AND WIND POWER SYSTEMS REQUIRES BOTH THE SPECIFICATION OF THE TARGET FUNCTION AND THE OPTIMISATION OF THE SYSTEM WITH RESPECT TO TWO CRITERIA, NAMELY, THE SYSTEM MUST DE ECONOMICAL AND IT MUST DE RELIABLE.

76-0463 SAVINO J M, WAGNER L H
WIND TUNNEL MEASUREMENTS OF THE TOWER SHADOW ON MODELS OF THE ERDA/NASA
100kw WIND TURBINE TOWER.
NTIS, NOVEMBER 1976. 37 P.
NASA-TM-X-73548, N77-13534, DOE/NASA/1004-77/1

DETAILED WIND SPEED PROFILE MEASUREMENTS WERE MADE IN THE WAKE OF 1/25 SCALE AND 1/48 SCALE TOWER MODELS TO DETERMINE THE MAGNITUDE OF THE SPEED REDUCTION (THE TOWER SHADOW). THE 1/25 SCALE TOWER MODELED CLOSELY THE ACTUAL WIND TURBINE INCLUDING THE SERVICE STAIRWAY AND THE EQUIPMENT ELEVATOR RAILS ON ONE FACE. THE 1/48 SCALE MODEL WAS MADE OF ALL TUBULAR MEMBERS. MEASUREMENTS WERE MADE ON THE 1/25 SCALE MODEL WITH AND WITHOUT THE STAIRWAY AND ELEVATOR RAILS, AND ON THE 1/48 ALL TUBE MODEL WITHOUT STAIRS AND RAILS. THE TEST RESULTS SHOW THAT THE STAIRS AND RAILS WERE A MAJOR SOURCE OF WIND FLOW BLOCKAGE. THE ALL TUBULAR 1/48 SCALE TOWER WAS FOUND TO OFFER LESS RESISTANCE TO THE WIND THAN THE 1/25 SCALE MODEL THAI CONTAINED A LARGE NUMBER OF SQUARE SECTIONS. SHADOW PHOTOS ARE INCLUDED TO SHOW THE EXTENT OF THE BLOCKAGE OFFERED TO THE WIND FROM VARIOUS DIRECTIONS.

WIND-POWERED AERATION FOR REMOTE LOCATIONS. FINAL REPORT, MARCH 15, 1975
- AUGUST 31, 1976.
NTIS, OCTOBER 1976. 152 P.
ERDA/NSF/00833-75/1

WIND-POWERED AERATORS WERE INSTALLED AND OPERATED AT THREE FISH WINTERKILL LAKES AND AT A SEWAGE LAGOON. A WIND-POWERED AERATOR IS A SYSTEM THAT CONVERTS THE ENERGY IN THE WIND DIRECTLY INTO COMPRESSED AIR WHICH CAN BE USED IN AN AERATION PROCESS. NO AUXILIARY ENERGY STORAGE IS REQUIRED IN THAT THE LAKE ACTS AS A STORAGE DEVICE FOR THE OXYGEN. NONE OF THE LAKES WHERE WIND-POWERED AERATORS WERE INSTALLED EXPERIENCED FISH WINTERKILL DURING THE 1975-1976 WINTER. WIND-POWERED AERATION SHOWS PROMISE FOR INCREASING SEWAGE LAGOON CAPACITY ONLY UNDER SEVERE WEATHER CONDITIONS. THE MOST DESIRABLE WIND-POWERED AERATOR WOULD BE AN AMERICAN WIND TURBINE DRIVING A ROTARY BLOWER MOUNTED ON A SINGLE POLE TOWER. THE WINDS ARE OF SUFFICIENT STRENGTH AND FREQUENCY FOR WIND-POWERED AERATION IN NORTHEASTERN COLORADO AND SOUTHEASTERN WYOMING, BETWEEN THE FRONT RANGE AND THE CONTINENTAL DIVIDE.

76-0465 SCHIERHOLZ P M, SOMERVELL W L, BABCOCK W, HARTEL R, TIMBRE K
WIND POWERED AERATION FOR REMOTE LOCATIONS. PROGRESS REPORT. MARCH 15,
1975-MARCH 15, 1976.
NTIS, APRIL 1976. 74 P.
PB-259304, ERDA/NSF/00833-75/1

THIS REPORT CONCERNS THE USE OF WIND POWER DIRECTLY TO COMPRESS AIR TO INCREASE OXYGEN LEVELS IN POLLUTED RIVERS AND LAKES SUBJECT TO WINTERKILL. A PRIME ADVANTAGE MAY BE USING THE WATER FOR STORAGE OF OXYGEN ELIMINATING REQUIREMENTS FOR ENERGY STORAGE SUCH AS BATTERIES. THREE SITES ARE PROPOSED FOR THE INSTALLATION OF WIND POWERED SYSTEMS. ONE IS A LAKE CHOSEN ON THE HIGH PLAINS FOR EASE OF ACCESS, ANOTHER IS A HIGH MOUNTAIN LAKE SUBJECT TO WINTERKILL AND THE THIRD IS A HIGH PLAINS RIVER WITH POLLUTION PROBLEMS.

76-0466 SCHOENBALL W
MECHANICAL OVERLOAD PROTECTION FOR WIND IMPELLERS.
GERMAN (FRG) PATENT NO. 2,558,848/A/, SEPTEMBER 16, 1976. 5 P. (IN GERMAN)

THE INVENTION CONCERNS A WIND IMPELLER WITH A HORIZONTAL AXIS OF ROTATION, WHICH IS AT RIGHT ANGLES TO THE WIND AT NORMAL WINDSPEEDS, BUT AT HIGH WIND PRESSURES IS PRESSED UPWARDS THROUGH A RIGHT ANGLE, OUT OF THE WIND DIRECTION, BY A SWIVELLING AXLE. ACCORDING TO THE INVENTION THE IMPELLER IS HELD IN POSITION AGAINST THE WIND BY A COUNTER WEIGHT HUNG ON ROPES. WHEN THE IMPELLER IS PRESSED UPWARDS, THE COUNTER WEIGHT IS PULLED UP BY THE ARRANGEMENT OF ROPES. WHEN THE WIND PRESSURE DROPS THE IMPELLER IS PULLED BACK INTO POSITION AGAINST THE WIND BY THE LOAD OF THE COUNTER WEIGHT.

76-0467 SCHROEDER K
WIND-POWERED ENGINE, PARTICULARLY FOR PRODUCING ELECTRICAL ENERGY.
GERMAN (FRG) PATENT NO, 2,502,783/A/, JULY 29, 1976. 7 P. (IN GERMAN)

THE WIND-POWERED ENGINE HAS 2 WIND-OPERATED PROPELLERS WHICH ARE SITUATED ONE BEHIND THE OTHER, BEARING-MOUNTED, INDEPENDENT OF ONE ANOTHER AND ROTATING IN OPPOSITE DIRECTIONS, WHICH CONVERT THEIR ENERGY OF ROTATION IN AN ELECTRIC GENERATOR. THE ROTOR AND STATOR OF THE GENERATOR ARE EACH CONNECTED TO ONE PROPELLER, SO THAT THEY ROTATE IN OPPOSITE DIRECTIONS. SPEED REGULATION TAKES PLACE DUE TO STRESSES IN THE PROPELLERS. THE PITCH OF THE BLADE ENDS CHANGES AT HIGH WIND SPEEDS. BRAKING SURFACES ARE CREATED THERE WHICH STOP THE MACHINE.

76-0468 SEGINER A
FLAP-AUGMENTED SHROUDS FOR AEROGENERATORS.
ENERGY LA: TACKLING THE CRISIS. GREATER LOS ANGELES AREA ENERGY
SYMPOSIUM, CALIFORNIA, MAY 19, 1976. LOS ANGELES COUNCIL OF ENGINEERING
+ SCIENCE, PROCEEDINGS SERIES VOL. 2. NORTH HOLLYWOOD, CALIFORNIA,
WESTERN PERIODICAL COMPANY, 1976. P. 188-196.

AXISYMMETRICAL SHROUDS FOR WINDMILLS ARE AUGMENTED BY RING-SHAPED "FLAPS" AND THEIR PERFORMANCE IS STUDIED EXPERIMENTALLY. THE CONCEPT OF THE SHROUD AS AN ANNULAR "WING" IS JUSTIFIED, LEADING TO THE CONCLUSION THAT HIGH-LIFT TECHNIQUES SHOULD BE USED IN SHROUD DESIGN, AND THAT HIGH-LIFT DEVICES, SUCH AS FLAPS, WOULD INCREASE THE POWER OUTPUT OF THE WINDMILL. IT IS SHOWN EXPERIMENTALLY THAT THE IDEAL POWER OUTPUT OF A FLAP-AUGMENTED SHROUDED TURBINE CAN BE MORE THAN 4 TIMES THE POWER OF UNSHROUDED TURBINES OF THE SAME DIAMETER.

76-0469 SELLMAN D L
WIND MOTORS.
U.S. PATENT NO. 3,988,072, OCTOBER 26, 1976. 4 P.

WIND MOTORS ARE DESCRIBED WHICH ARE PROPELLED BY IMPACT OF THE WIND AGAINST THE VANES OF AN IMPELLER WHEEL THAT HAVE WIND CHANNELING DEVICES THAT GATHER THE WIND FROM A LARGE AREA AND FUNNEL IT AT INCREASED DENSITY AND PRESSURE TO APPLY MULTIPLIED IMPACT AGAINST THE IMPELLER VANES.

76-0470 SFORZA P M
VORTEX AUGMENTOR CONCEPTS FOR WIND ENERGY CONVERSION. PROGRESS REPORT
MAY-NOVEMBER 1975.
NTIS, JANUARY 1976. 65 P.
PB-263749

A PROGRESS REPORT ON RESEARCH, DESIGN, AND DEVELOPMENT OF AERODYNAMIC DEVICES WHICH CAN CONCENTRATE AND AUGMENT NATURAL WINDS IS PRESENTED. THE KEYSTONE ELEMENT HERE IS THE GENERATION AND CONTROL OF DISCRETE VORTICES OF HIGH KINETIC ENERGY DENSITY BY THE APPROPRIATE INTERACTION OF SUITABLY DESIGNED AERODYNAMIC SURFACES WITH NATURAL WINDS OF LOW KINETIC ENERGY DENSITY. PROPERLY DESIGNED TURBINES WOULD BE UTILIZED TO TRANSFORM THE ENERGY IN THIS COMPACTED FIELD TO USEFUL SHAFT WORK. THIS IDEA IS TERMED THE VORTEX AUGMENTOR CONCEPT (VAC). TWO MAJOR GOALS ARE DESCRIBED: (1) EVALUATION AND ASSESSMENT OF THE VAC FOR WIND ENERGY CONVERSION APPLICATIONS; AND (2) CONSTRUCTION AND OPERATION OF A SMALL-SCALE OUTDOOR TEST MODEL. EACH TASK OBJECTIVE IS REVIEWED SO THAT A DESCRIPTION OF PROGRESS TO DATE AS WELL AS ANTICIPATED ACTIVITIES FOR THE REMAINDER OF THE PROGRAM IS PRESENTED.

II.73-II.106.
SAND-76-5586

SANDIA LABORATORIES CONTRACTED WITH WICHITA STATE UNIVERSITY TO CONSTRUCT FOUR DIFFERENT SYMMETRICAL AIRFOIL SECTIONS AND TO TEST THE MODELS AT ANGLES OF ATTACK 180 DEGREES FOR THREE DIFFERENT REYNOLDS NUMBERS. ONE OF THE REYNOLDS NUMBERS WAS TO BE AS LOW AS COULD BE OBTAINABLE AND STILL BE WITHIN THE OPERATIONAL RANGE OF THE FACILITY AND BALANCE SYSTEM. THE PURPOSE OF THESE TESTS WAS TO OBTAIN NEEDED SECTION DATA FOR THE NACA-0012 AIRFOIL OVER THE ANGLE OF ATTACK RANGE OF INTEREST AT AS LOW A REYNOLDS NUMBER AS POSSIBLE. IN ADDITION TO HELP ANSWER THE QUESTION OF THE OPTIMUM AIRFOIL FOR THE TURBINE, SIMILAR SECTION DATA FOR A THINNER (NACA-0009) AND THICKER (NACA-0015) AIRFOIL WAS DEEMED NECESSARY. ALSO, A NON-STANDARD AIRFOIL, A MODIFIED-0012 DESIGNATED NACA/0012H, WAS TESTED.

(THERMAL ATMOSPHERIC POWER SYSTEM CONCEPTS).
INTERNATIONAL SCIENTIFIC TECHNOLOGICAL CONFERENCE ON SPACE, 16TH, ROME,
MARCH 18-20, 1976. PROCEEDINGS. ROME, RASSEGNA, INTERNAZIONALE
ELETTRONICAL NUCLEARE ED AEROSPAZIALE, 1976. P. 525-536. (IN GERMAN)

THERMAL ATMOSPHERIC AREA POWER SYSTEMS EXPLOITING INSOLATION OF A ROOFED-OVER AREA, WITH THE GROUND ACTING AS A NATURAL COLLECTOR OF SUNSHINE ENERGY, AND A CENTRAL CHIMNEY PROVIDING A CONVECTION CHANNEL FOR EXTRACTING ENERGY FROM AIR CURRENTS GENERATED, ARE DESCRIBED. TRANSFORMATION OF THE KINETIC ENERGY OF THE RISING AIR CURRENTS TRAVERSING THE VERTICAL CHIMNEY INTO ELECTRICAL POWER OR MECHANICAL SHAFT OUTPUT BY MEANS OF WIND TURBINES, AND UTILIZATION OF RANDOM HORIZONTAL WIND IN ADDITION BY MEANS OF AN AUXILIARY SLEWABLE WIND TURBINE STAGE ATOP THE VERTICAL CHIMNEY, ARE ALSO DESCRIBED. THE CONCEPTS ARE RECOMMENDED PRIMARILY FOR ENERGY-POOR SEMI-ARID REGIONS WITH ABUNDANT INSOLATION. APPLICATIONS IN MORE TEMPERATE ENVIRONMENTS ARE ALSO CONSIDERED.

76-0476 SINGER R, ROBERTS T C
LAND USE REQUIREMENTS FOR FIVE ENERGY ALTERNATIVES.
AMERICAN NUCLEAR SOCIETY PUBLIC INFORMATION COMMITTEE REPORT, BLACK + VEATCH CONSULTING ENGINEERS, 1976. 12 P.

THE AMOUNT OF LAND NEEDED FOR VARIOUS ALTERNATIVE SOURCES OF ELLCTRIC POWER GENERATION IS USUALLY IGNORED, EVEN THOUGH THE SURFACE OF THE EARTH IS A FINITE RESOURCE. STILL, ESSENTIAL SITING CHARACTERISTICS LIKE WATER SUPPLY, TRANSPORTATION, AFFECTED POPULATIONS, GEOGRAPHICAL FEATURES, AND ELECTRICAL TRANSMISSION FACILITIES MUST BE CONSIDERED IF ANY DISCUSSION IS TO PROCEED. ANALYSES OF A NUMBER OF FACILITIES FOR FIVE TYPES OF GENERATION STATIONS--HYDROELECTRIC, FOSSIL, NUCLEAR, SOLAR, AND WIND--INDICATE THAT NUCLEAR POWER REQUIRES THE LEAST AMOUNT OF LAND

AND WIND POWER THE MOST. BECAUSE OF THEIR EFFICIENT USE OF LAND, NUCLEAR AND FOSSIL-FUELED FACILITIES WILL BE EASIEST TO LOCATE NEAR ESSENTIAL SITING REQUIREMENTS.

76-0489 STEWART H J
DUAL OPTIMUM AERODYNAMICS DESIGN FOR A CONVENTIONAL WINDMILL.
AIAA J. 14(11): 1524-1527, NOVEMBER 1976.

THE THEORETICAL POSSIBILITY OF DESIGNING THE BLADING OF A CONVENTIONAL WINDMILL SO AS TO MATCH THE OPTIMUM LOADING FOR MAXIMUM OUTPUT AT TWO DIFFERENT OPERATING CONDITIONS (I.E., AT TWO DIFFERENT VALUES OF THE RATIO OF TIP SPEED TO WIND SPEED) IS INVESTIGATED USING THE VORTEX BLADE ELEMENT THEORY. THE THEORY OF OPTIMUM LOADING IS DEVELOPED, INCLUDING THE EFFECT OF PROFILE DRAG. FOR THE RANGE OF PARAMETERS CONSIDERED, IT IS SHOWN THAT THE EFFECT OF PROFILE DRAG ON BLADE LOADING IS QUITE SMALL, ALTHOUGH THE EFFECT ON EFFICIENCY IS SIGNIFICANT. THE SIMPLER THEORY, NEGLECTING PROFILE DRAG, AND FIRST PRESENTED BY GLAUERT, THEN IS USED TO DESIGN THREE SETS OF BLADING WHICH MATCH THE GLAUERT LOADING CONDITIONS AT TWO CONDITIONS, TIP SPEED RATIOS OF 4 AND 5.

WINDMILL OPTIMIZATION.
ENERGY LA: TACKLING THE CRISIS. GREATER LOS ANGELES AREA ENERGY
SYMPOSIUM, CALIFORNIA, MAY 19, 1976. LOS ANGELES COUNCIL OF ENGINEERING
+ SCIENCE, PROCEEDINGS SERIES VOL. 2. NORTH HOLLYWOOD, CALIFORNIA,
WESTERN PERIODICAL COMPANY, 1976. P. 197-202.

THIS PAPER TREATS THE DEVELOPMENT AND STATEMENT OF THE WINDMILL LAW. IT ALSO SHOWS THE DERIVATION OF THE EQUATION FOR THE POWER SURFACE RELATING THE WIND VELOCITY, POWER AND ANGULAR VELOCITY OF THE ROTOR. IT IS AN APPLICATION OF BASIC FUNDAMENTALS AND YIELDS SEVERAL INSIGHTS REGARDING THE PHENOMENA ENCOUNTERED IN WIND POWER APPLICATIONS. IT HAS BEEN DEMONSTRATED THAT HIGH SPEED MILLS CAN EXTRACT MORE POWER FROM THE WIND THAN SLOW ONES. THE EQUATION OF THE POWER SURFACE HAS BEEN DERIVED. ITS GRAPH COMPARES FAVORABLY WITH PERFORMANCE CHARACTERISTICS OF MODEL WINDMILLS. IT SHOWS THAT INCREASING THE NUMBER OF BLADES GREATLY ENHANCES THE POWER OUTPUT OF A LOW SPEED MILL BUT HAS LITTLE EFFECT ON A HIGH SPEED MILL. IT SHOWS, HOWEVER, THAT STARTING TORQUE IS GREATLY ENHANCED FOR ALL MILLS BY INCREASING THE NUMBER OF BLADES.

76-0491 STOY B
NON-NUCLEAR, NON-FOSSIL SOURCES OF ENERGY.
ATOMWIRTSCH. - ATOMTECH. 21(11): 527-534, NOVEMBER 1976.

THE POTENTIAL OF ENERGY FROM THE EARTH'S CORE, EARTH'S CRUST, RIVERS, GROUNDWATER, GLACIAL ICE, SEA WATER, WAVES, TIDES, WIND, AMBIENT AIR, AND SOLAR RADIATION IS EVALUATED BY COMPARING EACH POTENTIAL ENERGY RESOURCE FOR TECHNICAL VIABILITY, ECONOMICS, AVAILABILITY, ECOLOGICAL IMPACT, AND POSSIBLE CONTRIBUTIONS TO FUTURE ENERGY REQUIREMENTS. AMBIENT AIR, A SOURCE OF ENERGY OVERLOOKED IN SYSTEMS STUDIES SO FAR, SEEMS TO HAVE THE GREATEST POTENTIAL. SINCE THE DIRECT OR INDIRECT USE OF SOLAR ENERGY IS NOT FEASIBLE WITHOUT THE APPLICATION OF ELECTRICITY, PARTICULAR IMPORTANCE IS ATTACHED TO THE FURTHER EXPANSION OF NUCLEAR POWER CAPABILITIES.

AEFODYNAMICS OF THE DARRIEUS TURBINE.
VERTICAL-AXIS WIND TURBINE TECHNOLOGY WORKSHOP, ALBUQUERQUE, N.M., MAY
1, 1976. PROCEEDINGS. ALBUQUERQUE, N.M., SANDIA LABS., JULY 1976. P.
11.29--II.58.
3A:D-76-5586

AN ANALYTICAL PERFORMANCE PREDICTION MODEL FOR THE DARRIEUS TURBINE IS PRESENTED. THIS MODEL IS SHOWN TO PREDICT THE PERFORMANCE OF SMALL SCALE ROTORS, FOR WHICH TEST DATA IS AVAILABLE, WITH REASONABLE ACCURACY. IT DISPLAYS A MARKED IMPROVEMENT OVER OLDER METHODS IN WHICH THE "INDUCED VELOCITY" THROUGH THE ROTOR IS CONSIDERED TO BE CONSTANT. THE MODEL IS CAPABLE OF PREDICTING THE OVERALL ROTOR POWER OUTPUT AND THE DISTRIBUTION OF AERODYNAMIC FORCES ALONG THE ROTOR BLADES. THE MODEL CAN BE USED TO STUDY THE EFFECTS OF ROTOR GEOMETRY VARIATIONS SUCH AS BLADE SOLIDITY, BLADE TAPER, AND VARIATIONS IN ROTOR HEIGHT TO DIAMETER RATIOS. IN ADDITION, SPACIAL VARIATIONS IN FREESTREAM VELOCITY SUCH AS THAT PRODUCED BY ATMOSPHERIC WIND SHEAR CAN BE HANDLED BY THE MODEL.

NASA-TM-X-71890

SEVERAL LARGE WIND TURBINE PROJECTS HAVE BEEN INITIATED BY NASA-LEWIS AS PART OF THE ERDA WIND ENERGY PROGRAM. THE PROJECTS CONSIST OF PROGRESSIVELY LARGE WIND TURBINES RANGING FROM 100 KW WITH A ROTOR DIAMETER OF 125 FEET TO 1500 KW WITH ROTOR DIAMETERS OF 200 TO 300 FEET. ALSO INCLUDED IS SUPPORTING RESEARCH AND TECHNOLOGY FOR LARGE WIND TURBINES AND FOR LOWERING THE COSTS AND INCREASING THE RELIABILITY OF THE MAJOR WIND TURBINE COMPONENTS. THE RESULTS AND STATUS OF THE ABOVE PROJECTS ARE BRIEFLY DISCUSSED. IN ADDITION, A BRIEF SUMMARY AND STATUS OF THE PLANS FOR SELECTING THE UTILITY SITES FOR THE EXPERIMENTAL WIND TURBINES IS ALSO DISCUSSED.

WIND-POWERED HYDROGEN ELECTRIC SYSTEMS FOR FARM AND RURAL USE. FINAL REPORT MAY - DECEMBER 1975.
NTIS, APRIL 1976. 171P.
PB-259318

PRELIMINARY DESIGN FOR WIND-ENERGY CONVERSION SYSTEMS SUPPLYING THE TOTAL ENERGY NEEDS OF SELECTED FARMS AND A RURAL HOME ARE SYNTHESIZED. THE CONCEPT IS A FULLY DEDICATED SYSTEM WHOSE COMPONENTS AND SUESYSTEMS ARE OFF-THE-SHELF TECHNOLOGY. THE PRINCIPAL SUBSYSTEMS AND COMPONENTS ARE: (1) INPUT (WIND TURBINE, ELECTROLYZER, AND RECTIFIERS); (2) STORAGE (BATTERIES, AND STORAGE TANKS OF HYDROGEN AND HOT WATER); AND (3) OUTPUT (INVERTER, MOTOR GENERATOR, ENGINE GENERATOR, AND FUEL CELL). TWO METHODS OF ENERGY STORAGE ARE EVALUATED FOR USE AND SUBSEQUENTLY FORM THE BASES UPON WHICH EACH DESIGN IS OPTIMIZED. IT IS SHOWN THAT WIND-ENERGY SYSTEMS BASED ON BATTERY-STORAGE SYSTEMS ARE: (1) SIMPLER TO CONSTRUCT AND MAINTAIN; (2) MORE EFFICIENT; AND (3) LESS EXPENSIVE THAN THOSE BASED ON HYDROGEN-STORAGE SYSTEMS. FURTHER, THE RELATIVE ECONOMICS OF EACH WIND-ENERGY SYSTEM ARE HEAVILY DEPENDENT ON WIND AVAILABILITY, NUMBER OF DAYS OF ENERGY STORAGE REQUIRED, AND THE MATCH BETWEEN THE WIND ENERGY AVAILABLE AND THE ENERGY REQUIREMENTS OF THE LOAD. OF ALL THE ENERGY REQUIREMENTS CHARACTERIZED, THE CASH GRAIN OPERATION IS SHOWN TO BE THE LEAST ADAPTABLE TO WIND-ENERGY SYSTEMS.

DESIGN AND TESTING OF A PROTOTYPE SAVONIUS WIND MACHINE.
FRONTIERS OF POWER TECHNOLOGY CONFERENCE, STILLWATER, OKLAHOMA, OKLAHOMA
STATE UNIVERSITY, 1976. P. 15.1-15.3.

THE VARIOUS TYPES OF MECHANICAL DEVICES THAT HAVE BEEN TRIED OR PROPOSED TO RECOVER WIND ENERGY CAN BE SEPARATED INTO TWO CATEGORIES: VERTICAL AXIS AND HORIZONTAL AXIS MACHINES. ONE OF THE SIMPLEST VERTICAL AXIS WIND MACHINES IS THE SAVONIUS TYPE. DURING 1974, IT WAS THEREFORE DECIDED TO STUDY THE SAVONIUS TYPE WIND MACHINE AT KANSAS STATE UNIVERSITY BECAUSE OF ITS SIMPLICITY AND POTENTIAL FOR A REASONABLY HIGH EFFICIENCY. SINCE THEN, THIS DECISION HAS BEEN FURTHER JUSTIFIED BY RESULTS OF RECENT WIND TUNNEL TESTS OF SAVONIUS ROTORS. DESIGN DETAILS ARE SUMMARIZED. RESULTS INDICATE THAT EFFICIENCIES OF 30 PERCENT WERE REACHED, BUT WITH OPTIMIZATION, EFFICIENCIES OF 37 PERCENT COULD BE ATTAINED.

INNOVATIVE WIND MACHINES. EXECUTIVE SUMMARY AND FINAL REPORT.
NTIS, JUNE 1976. 218PERDA/NSF/99367-76/2

INFORMATION IS PRESENTED CONCERNING WING TRAILING VORTICES, VORTEX TYPE CONCENTRATORS, VERTICAL AXIS WIND MACHINE ANALYSIS USING STRIP THEORY, NUMERICAL SOLUTION FOR THE UNSTEADY LIFTING CHARACTERISTICS OF VARIABLE PITCH CROSS-FLOW WIND TURBINES, AND OUTDOOR VAT TEST MODEL.

76-0527 WEINGARTEN L I, LOBITZ D W
BLADE STRUCTURAL ANALYSIS.
VERTICAL-AXIS WIND TURBINE TECHNOLOGY WORKSHOP, ALBUQUERQUE, N.M., MAY
17, 1976. PROCEEDINGS. ALBUQUERQUE, N.M., SANDIA LABS., JULY 1976. P.
II-137-II-150.
SAND-76-5586

THE ANALYSIS PRESENTED ADDRESSES THE BLADE WHICH IS BEING DESIGNED AND BUILT BY KAMAN FOR SANDIA'S 17-METER WIND TURBINE. THE BLADE CONSISTS OF TWO STRAIGHT SECTIONS AND A CENTER CIRCULAR SECTION. STRUTS ARE INCLUDED BETWEEN THE BLADE AND THE SHAFT TO PROVIDE ADDITIONAL SUPPORT. THE GEOMETRIC PROPERTIES USED IN THE ANALYSIS ARE ALSO GIVEN. THE STRUTS HAVE THE SAME CROSS SECTION AS THE BLADE. THE LOAD-CARRYING PORTION OF THE BLADE IS A 6061-T6 ALUMINUM LEADING-EDGE D-SECTION AND TRAILING-EDGE SPLINE. STRUCTURAL ANALYSIS RESULTS ARE PRESENTED.

76-0528 WEINGARTEN L I, BLACKWELL B F
SANDIA VERTICAL-AXIS WIND TURBINE PROGRAM. TECHNICAL QUARTERLY REPORT.
JANUARY - MARCH 1976.
NTIS, AUGUST 1976. 55P.
SAND-76-0338

THIS QUARTERLY REPORT DESCRIBES THE ACTIVITIES WITHIN THE SANDIA LABORATORIES VERTICAL-AXIS WIND TURBINE PROGRAM DURING THE THIRD QUARTER OF THE FISCAL YEAR 1976. INCLUDED ARE THE HIGHLIGHTS OF THE QUARTER; A REVIEW OF THE STATUS OF GENERAL DESIGN EFFORTS IN THE AREAS OF AERODYNAMICS, STRUCTURES, SYSTEMS ANALYSIS, AND TESTING; A SUMMARY OF PRELIMINARY DESIGN DETAILS OF THE PROPOSED 17-M TURBINE/60-KW GENERATOR SYSTEM FOR POWER GRID APPLICATION; AND STRUCTURAL ANALYSIS AND OPERATIONAL TEST RESULTS FOR THE EXISTING 5-M TURBINE.

DESIGN AND INSTALLATION OF HEATING SYSTEM FOR UMASS SOLAR HABITAT I.
NTIS, DECEMBER 1976. 102P.
UM-WF-TR-76-10

DETAILS ARE PRESENTED OF DESIGN PRINCIPLES AND INSTALLATION OF THE SOLAR AND WINDPOWERED HEATING SYSTEMS INSTALLED IN UMASS SOLAR HABITAT I. INCLUDED ARE A COMPLETE SPECIFICATION OF MATERIALS AND OPERATING INSTRUCTIONS. A SUMMARY OF POTENTIAL MODIFICATIONS AND IMPROVEMENTS TO THE SYSTEM IS ALSO INCLUDED.

STUDY OF ALASKAN WIND POWER AND ITS POSSIBLE APPLICATIONS. QUARTERLY PROGRESS REPORT 1 OCTOBER-31 DECEMBER 1975. GEOPHYSICAL INSTITUTE, UNIVERSITY OF ALASKA, FAIRBANKS, ALASKA, NTIS, JANUARY 20, 1976. 14P. PB-263695

EXTENSIVE ANALYTICAL STUDIES ON WIND SPECTRA WERE EXTENDED TO THE PRODICTION OF THE MONTHLY AND AVERAGE POWER OUTPUT FROM SPECIFIED WINDMILLS, BASED ON ONLY KNOWLEDGE OF THE MEASURED MEAN WINDSPEED. FOR THE ELEKTRO WINDMILL AND 44 SETS OF LONG TERM ALASKAN WIND FREQUENCY DATA, THE AUTHOR CALCULATED THE EXPECTED MEAN POWERS. THEN, FROM ANALYTICAL CONSIDERATIONS HE PREDICTED THE EXPECTED MEAN POWER, WITH RESULTING ERRORS OF O TO 7 PERCENT.

76-0532 WENTINK T
WIND POWER POTENTIAL OF ALASKA. PART 11. WIND DURATION CURVE FITS AND OUTPUT POWER ESTIMATES FOR TYPICAL WINDMILLS.
NTIS, AUGUST 1976. 92P.
RL0/2229/T12--76/1

AN EMPIRICAL ANALYTICAL FUNCTION (F1) AND THE WEIBULL FUNCTION (F3) WERE COMPARED FOR USE IN CASTING MEASURED LONG-TERM WIND SPEED FREQUENCY DATA IN THE FORM OF THE WIND SPEED DURATION CURVES. DATA FROM 18 ALASKAN LOCATIONS WERE USED IN THE 248 CASES TREATED. THE FITTED DURATION CURVES WERE COUPLED WITH THE INSTANTANEOUS POWER VS. WIND SPEED CHARACTERISTICS FOR THREE WIND ENERGY CONVERSION SYSTEMS (WECS) TO PREDICT THE PROBABLE MONTHLY AND ANNUAL MEAN ENERGY PRODUCTIVITY AND POWER LEVELS OF THE WECS. THE LATTER, AS USED HERE, WERE RATED AT 6 KW (ELEKTRO), 15 KW (GRUMMAN), AND 100 KW (NASA-MOD-0). IN THE ABSENCE OF THE RELIABLE TEST DATA FOR AVERAGE ENERGY OR AVERAGE POWER (ANTI P) AT KNOWN AVERAGE WIND SPEEDS NO CHOICE BETWEEN F1 AND F3 IS OBVIOUS, BUT STATISTICAL TESTS FAVOR F1. BOTH SEEM EQUALLY USEFUL FOR WIND POWER ESTIMATION. THE VALIDITY OF USE OF THE LONG-TERM AVERAGE WIND SPEED AS A KEY PARAMETER IN WIND WORK IS DEMONSTRATED.

WIND ENERGY POTENTIAL IN THE COASTAL AREAS OF LOUISIANA.
LA. ENG. P. 6-9. DECEMBER 1976.

WIND POWER DATA FOR VARIOUS SITES ALONG THE LOUISIANA GULF COAST ARE PRESENTED. THE FEASIBILITY OF USING CURRENT DESIGN WIND TURBINES FOR ELECTRIC POWER GENERATION AT THESE SITES IS DISCUSSED.

76-0535 WIDGER W K
ESTIMATING WIND POWER FEASIBILITY.
POWER ENG. 80: 58-61. AUGUST 1976.

A DESCRIPTION IS GIVEN OF A METHOD WHICH MAKES IT POSSIBLE TO OBTAIN WIND POWER FEASIBILITY FOR AN AREA ON THE BASIS OF AVERAGE WIND SPEED DATA. THE METHOD APPEARS PARTICULARLY USEFUL, WHEN APPLIED TO CLIMATOLOGICAL AVERAGE WIND SPEED DATA, AND FOR INITIAL FEASIBILITY ASSESSMENTS. ATTENTION IS GIVEN TO DATA NEEDS AND SOURCES, RELATIONSHIPS BETWEEN WIND SPEEDS, THE NOMINAL AVERAGE WIND POWER, AND A TECHNICAL EVALUATION.

75-0536 WIDGER W K, DERRICKSON R A
NEW ENGLAND WIND POWER -- COASTAL OR MOUNTAIN.
POWER ENG. 80(12): 43-47, DECEMBER 1976.

A COMPARATIVE STUDY IS MADE OF THE WIND POWER AVAILABLE IN THE COASTAL AND IMMEDIATE OFFSHORE AREA OF THE GULF OF MAINE AND ON THE EXPOSED RIDGES AND SUMMITS IN OR PERIPHERAL TO THE WHITE MOUNTAINS AND OTHER NEW ENGLAND RANGES. IT IS CONCLUDED THAT THE WIND POWER AVAILABLE AT ELEVATIONS OF ABOUT 3000 FT MSL OR ABOVE EQUALS OR EXCEEDS THAT AVAILABLE 50 OR MORE MILES OFFSHORE IN THE GULF OF MAINE. THERE IS NO WAY TO AVOID DAY-TO-DAY VARIABILITY DUE TO CHANGING SYNOPTIC WEATHER SITUATIONS, BUT THE HIGHER ELEVATIONS INLAND DO APPEAR TO PERMIT RELATIVELY STEADY SEASONAL AVERAGE POWER GENERATION, IF THE OPERATING RANGE IS

76-0537 WIEDUWILT G
WIND POWER PLANT.
GERMAN (FRG) PATENT 2,505,954/A/, AUGUST 26, 1976. 17P. (IN GERMAN)

THE WIND POWER PLANT DESCRIBED IN THIS INVENTION CONSISTS OF A VERTICAL ROTOR WITH A HORIZONTAL AND TRAVERSE TO WIND DIRECTION RUNNING SHAFT, WITH CIRCULAR IMPELLER SHOVELS. EXTRA GUIDE SHOVELS PROVIDE THAT WIND CANNOT HAVE A HINDERING AFFECT ON THE IMPELLER SHOVELS AT ANY POSITION. IN ADDITION A WIND DETOUR CANAL IS PROVIDED. THIS HAS THE TASK OF CAPTURING A GREATER AMOUNT OF WIND AND THAT OF DISTRIBUTING THE WIND TO THE WHEELS SO THAT THE BACK SIDE OF THE WHEELS ARE ACTIVATED ALSO. THROUGH CHANNELED WIND GUTTERS THE WIND IS EVENTUALLY LEAD TO THE CENTER OF THE WIND POWER PLANT. ADDITIONALLY THE COMPLETE INSTALLATION HAS A VERTICAL AXIS TURBINE. IT IS SIMILARLY CONSTRUCTED AS THE ABOVE DESCRIBED HORIZONTAL AXIS TURBINE, BUT DISPLAYS A SUBSTANTIALLY SMALLER MOMENT OF INERTIA, SO THAT IT IS ALSO CAPABLE OF RESPONDING TO SMALL WIND VELOCITIES.

76-0538 WIENECKE R
POSSIBLE SUBSTITUTES FOR THE PRESENT PRIMARY ENERGY SOURCES.
SYMPOSIUM ON ENVIRONMENTAL PROTECTION CONDITIONS AND LIMITS OF ECONOMIC GROWTH, AUGSBURG, GERMANY FR, JUNE 27, 1976. NTIS, 1976. 24P.
AED-CONF-76-323-001

THE PARAMETERS OF THE DEVELOPMENT OF ENERGY SUPPLY ARE EXAMINED FOR THE NEXT THOUSAND YEARS, IN ORDER TO GET A VIEW OF THE PARTS PLAYED BY THE DIFFERENT ENERGY CARRIERS. PROCEEDING FROM A RISING WORLD ENERGY DEMAND IN THE FUTURE, IT IS ESTABLISHED THAT GEOGRAPHICAL DISTRIBUTION AND THE QUANTITY OF RESERVES OF FOSSIL-ENERGY CARRIERS COMPEL THE INDUSTRIAL NATIONS, BEFORE ANYTHING ELSE, TO DEVELOP ALTERNATIVE ENERGY SOURCES. FOLLOWING THE PRESENT SITUATION, NUCLEAR ENERGY WILL THEREFORE DOMINATE. FROM THE DEVELOPMENT OF NON-NUCLEAR, NON-FOSSIL ENERGY CARRIERS (SUN, WIND ETC.) A CERTAIN EASING OF THE SITUATION ON THE ENERGY SECTOR HAS LONG BEEN AWAITED. UNTIL THE YEAR 2000, THESE ENERGY CARRIERS WILL, OF COURSE, BE ABLE TO CONTRIBUTE ONLY ABOUT 3 PERCENT TOWARDS INCREASING GUARANTEES OF SUPPLY.

76-0542 WILSON R E, WALKER S N, LISSAMAN P B S AERODYNAMICS OF THE DARRIEUS ROTOR. J. AIRCRAFT 13: 1023-1024, DECEMBER 1976.

TO ANALYZE A DARRIEUS TYPE CROSSWIND-AXIS WIND TURBINE, THE FORCES ON THE SYSTEM ARE EXPRESSED BY A MOMENTUM ANALYSIS OF THE WAKE AND BY AN AIRFOIL THEORY AT THE LIFTING SURFACE. EQUATING WAKE AND WING FORCES YIELDS EQUATIONS FOR DETERMINING INDUCED FLOWS. SOME AVAILABLE EXPERIMENTAL

DATA ON ROTOR POWER AND THRUST COEFFICIENTS ARE COMPARED WITH THEORETICAL RESULTS OF WILSON AND LISSAMAN (1974).

76-0543 WILSON R E
AERODYNAMICS OF THE DARRIEUS ROTOR.
VERTICAL-AXIS WIND TURBINE TECHNOLOGY WORKSHOP, ALBUQUERQUE, N.M., MAY
17, 1976. PROCEEDINGS. ALBUQUERQUE, N.M., SANDIA LABS., JULY 1976. P.
III.1 - III.9.
SAND-76-5586

PERFORMANCE MODELS OF THE DARRIEUS ROTOR HAVE BEEN FORMULATED BY WILSON AND LISSAMAN, TEMPLIN, JAMES, MURACA, SHANKAR AND STRICKLAND. THE CURRENT ANALYSIS IS IN ESSENCE A STRIP THEORY IN WHICH THE TIME-AVERAGED FORCE ON A BLADE ELEMENT IS EQUATED TO THE MEAN MOMENTUM FLUX THROUGH A STREAMTUDE OF FIXED LOCATION AND DIMENSIONS. THE ANALYSIS USES QUASI-STEADY AERODYNAMICS NEGLECTING THE EFFECTS OF MUTUAL INTERFERENCE AND OF MORE SIGNIFICANCE, NEGLECTS THE EFFECTS OF THE REAR BLADES IN CROSSING THE VORTEX SHEETS OF THE FORWARD BLADES (FRONT AND REAR BLADE LOADS ARE THE SAME).

76-0544 WILSON R E, LISSAMAN P B S, WALKER S N AERODYNAMIC PERFORMANCE OF WIND TURBINES. NTIS, JUNE 1976. 170P. PB-259089

THIS REPORT SUMMARIZES THE STATE-OF-THE-ART OF PERFORMANCE PREDICTION METHODS FOR BOTH HORIZONTAL AND VERTICAL AXIS WIND TURBINES. STRIP THEORY METHODS FOR HORIZONTAL AXIS WIND TURBINES ARE EVALUATED FOR VARIOUS TIP LOSS MODELS AND OCCURRENCE OF MULTIPLE SOLUTIONS IN STRIP THEORY ANALYSIS IS DISCUSSED AND ILLUSTRATED. THE PERFORMANCE OF HIGH-SOLIDITY TURBINES SUCH AS THE CHALK DESIGN ALSO ARE DISCUSSED. THE CONFIGURATION AND PERFORMANCE OF OPTIMUM HORIZONTAL AXIS WIND TURBINES ARE ADDRESSED. OPTIMIZATION SCHEMES ARE DEVELOPED AND DISCUSSED AND COMPARISONS WITH THE MOD-O ROTOR ARE MADE. PERFORMANCE AT OFF-DESIGN CONDITIONS IS ALSO EXAMINED. PERFORMANCE PREDICTION METHODS FOR VERTICAL AXIS WIND TURBINES ARE COVERED. CHAPTER 4 DEVELOPS THE PERFORMANCE MODEL FOR THE DARRIEUS ROTORS. MULTIPLE SOLUTIONS ARE FOUND TO OCCUR FOR DARRIEUS ROTORS IN THE SAME MANNER AS OCCURS FOR HORIZONTAL AXIS ROTORS. THIS FLOW MODEL IS COMPARED TO EXISTING EXPERIMENTAL DATA AND SHOWN TO YIELD EXCELLENT AGREEMENT. CHAPTER 5 CONTAINS AN ANALYTICAL MODEL OF THE FLOW IN A SAVONIUS ROTOR. THE FLOW MODEL IS SHOWN TO PREDICT THE ESSENTIAL FEATURES OF FLOW IN SAVONIUS ROTORS WITH CONSIDERATION OF VISCOUS EFFECTS.

- 76-0546 WIND ENERGY DEVELOPMENT POTENTIAL FOR THE NIAGARA FRONTIER TRANSPORTATION AUTHORITY: PRE-PROPOSAL. ENERGY RESEARCH GROUP OF WESTERN NEW YORK, 1976. 67P.

INFORMATION ON THE FEASIBILITY OF USING WIND POWER FOR ELECTRIC POWER PRODUCTION IN WESTERN NEW YORK IS PRESENTED. AREAS OF INVESTIGATION FOR THE NIAGARA FRONTIER TRANSPORTATION AUTHORITY INCLUDE AN ENERGY DEMAND ANALYSIS; ALTERNATIVE ENERGY OPTIONS; WIND SURVEY OF THE NFTA WATERFRONT SITE; ECONOMIC ANALYSIS; PERFORMANCE SPECIFICATIONS OF ALTERNATIVE ENERGY HARDWARE; AND ALTERNATIVE ENERGY HARDWARE ANALYSIS.

76-0547 YEN J T
TORNADO-TYPE WIND ENERGY SYSTEM: BASIC CONSIDERATION.
ASME PAPER 76-WA/ENER-2, 1976. 11P.

SINCE WIND ENERGY DENSITY IS LOW, A LARGE ROTOR DECOMES A NECESSITY FOR COLLECTING A SIGNIFICANT AMOUNT OF WIND ENERGY. IT IS GENERALLY RECOGNIZED THAT AROUND 200 FT IN DIAMETER IS ROUGHLY THE PRACTICAL LIMITING SIZE FOR SUCH ROTORS, USING MODERN MATERIALS AND MANUFACTURING PROCESSES. YET, SUCH A ROTOR SIZE WILL GENERATE ONLY AROUND 1-MW WITH A STRONG 30-MPH WIND. TO BREAK THROUGH THE "1-MW LIMIT", A NEW CONCEPT IS PROPOSED CALLED THE TORNADO-TYPE WIND ENERGY SYSTEM, ONE VERSION OF WHICH IS ILLUSTRATED AND A PATENT HAS BEEN APPLIED FOR THIS CONCEPT. A GENERAL DESCRIPTION OF THE CONCEPT, SCALING LAWS, AND WIND TUNNEL TEST DATA HAVE

BEEN COVERED IN A PREVIOUS PAPER. A BASIC THERMODYNAMIC CONSIDERATION WILL BE PRESENTED IN THIS PAPER TO GAIN A PROPER PERSPECTIVE OF THE OVERALL PERFORMANCE OF THE NEW DESIGN. SOME DETAILS OF WIND TUNNEL DATA, DERIVATION OF THE SCALING LAWS, AND SOME RECENT RESULTS IN FLOW VISUALIZATION ARE ALSO PRESENTED.

76-0549 WIND POWER--THE MODERN VERSION. PETROL. ECON. 43(6): 221-223, JUNE 1976.

THE NETHERLANDS HAS ACCEPTED AN INVITATION FROM THE INTERNATIONAL ENERGY AGENCY TO ACT AS HEAD COUNTRY FOR THE NEW LINE OF R+D INTO WIND POWER. THE U.K. IS TO ACT AS HEAD COUNTRY IN THE RELATED FIELD OF WAVE POWER. THE MOST OBVIOUS DRAWBACK TO THE CONCEPT OF WIND ENERGY IS VARIABILITY OF THE INCIDENCE OF WINDS. THIS DRAWBACK MAY EVENTUALLY BE OVERCOME BY THE DEVELOPMENT OF SUITABLE TECHNIQUES FOR ENERGY STORAGE. WIND AND WAVE POWER SYSTEMS ARE DISCUSSED.

76-0550 BUICK T R, MCMULLAN J T, MORGAN R, MURRAY R B ON MONITORING WIND POWER. WEATHER 31(12): 412-416, DECEMBER 1976.

THREE MAIN CONSIDERATIONS IN ANY PROPOSED WIND-POWER SCHEME ARE 1) AMOUNT OF POWER THAT IS THEORETICALLY AVAILABLE AT THE PROPOSED SITE; 2) TOTAL AMOUNT OF ENERGY (POWER X TIME) THAT CAN BE OBTAINED FROM A PROPOSED PLANT; AND 3) THE STRUCTURAL STRENGTH REQUIRED TO WITHSTAND THE FORCE THAT THE WIND IMPOSES ON THE POWER PLANT. WIND-FORCE MEASUREMENT PRESENTS SOME PROBLEMS. THIS PAPER DESCRIBES A DEVICE THAT WILL GIVE INFORMATION ON WIND SPEED, FORCE, POWER, AND ENERGY.

AN ENERGY ACCOUNTING EVALUATION OF SEVERAL ALTERNATIVES FOR HYDROPOWER
AND GEOTHERMAL DEVELOPMENT.
NTIS, JUNE 1976. 40P.
PB-269188, PRJER-031-1, W77-09057

ALTERNATIVE MANAGEMENT STRATEGIES FOR HYDROPOWER AND GEOTHERMAL DEVELOPMENT ARE MYRIAD. THE APPROACH TAKEN IN THIS STUDY IS BASED ON THE NOTION OF OPTIMUM DEPLOYMENT OF FINITE RESOURCES. A LEGITIMATE QUESTION WHICH THIS STUDY HAS ATTEMPTED TO ADDRESS IS: DOES THE CONSTRUCTION OF LARGE WATER MANAGEMENT FACILITIES, SUCH AS HYDROPOWER DAMS, WHICH INVOLVE HUGE AMOUNTS OF ENERGY, CONCRETE, AND STEEL, CONSTITUTE AN EFFICIENT USE OF BASIC RESOURCES. AN ENERGY ACCOUNTING ANALYSIS TECHNIQUE IS PROPOSED; AND, USING THIS PROCEDURE, ENERGY RESOURCE INPUTS ARE EXAMINED AND COMPARED FOR SPECIFIC HYDROPOWER DAMS AND GEOTHERMAL POWER PLANTS.

THE MONO-KAIROS WINDMILLS OF LASITHI.
BRITISH SCHOOL OF ARCHAEOLOGY AT ATHENS, ANNUAL, 70: 51-57, 1975.

DESCRIBED ARE OLD CORN GRINDING WINDMILLS ON CRETE. AT MIRABELLO AND LASITHI THERE ARE ABOUT ONE HUNDRED MILLS IN VARIOUS STATES OF RUIN, THE CHARACTERISTIC FEATURE OF WHICH IS THE FIXED DIRECTION, FACING THE PREVAILING WINDS. CONSTRUCTIONAL DETAILS ARE GIVEN.

75-0438 CANEGHEM A E VON
WIND POWER PLANT.
GERMAN (FRG) PATENT 2,402,647/A/, JULY 24, 1975. 17P. (IN GERMAN)

THE INVENTION APPLIES TO A WIND POWER PLANT IN WHICH THE WIND IS USED TO DRIVE WINDMILLS. THE PLANT CONSISTS BASICALLY OF A VERTICAL TUBE WITH A LATERAL WIND ENTRANCE OPENING WITH WINDMILL ON ITS LOWER END. ON ITS UPPER END, THE TUBE CARRIES A NOZZLE-LIKE TOP WHICH INCREASES THE WIND ENTERING THE TUBE BY PRESSURE DECREASE. THE WIND IS THUS MADE SUITABLE FOR HIGHER OUTPUTS. THE INVENTION IS ILLUSTRATED BY CONSTRUCTIONAL EXAMPLES.

75-0439 CHAJES A, COSTA A, KAMINSKY F C, KIRCHOFF R H, CROMACK C E INVESTIGATION OF THE FEASIBILITY OF USING WINDPOWER FOR SPACE HEATING IN COLDER CLIMATES. QUARTERLY PROGRESS REPORT NO. 1. MARCH-JUNE 1975. NTIS, JUNE 1975. 57P.

NSF-RANN/AER-75-00603/PR-75/1, NSF/RA/N-75-420

THIS REPORT REVIEWS THE WORK PLAN AND PROJECT DESCRIPTION. TOPICS COVERED INCLUDE: SUPPORT STRUCTURE, MOMENTUM EXCHANGER, ELECTRICAL SYSTEMS, THERMAL AND SOLAR COMPONENTS, AND MANUFACTURING.

A 100-KW METAL WIND TURBINE BLADE BASIC DATA, LOADS AND STRESS ANALYSIS.
FINAL REPORT.
NTIS, JUNE 1975. 241P.
N77-21467, NASA-CR-134956

A ROTOR LOADS COMPUTER PROGRAM WAS USED TO DEFINE THE STEADY STATE AND CYCLIC LOADS ACTING ON 60 FT LONG METAL BLADES DESIGNED FOR THE ERDA/NASA 100 KW WIND TURBINE. BLADE LOAD AND STRESS ANALYSIS USED TO SUPPORT THE STRUCTURAL DESIGN ARE PRESENTED. FOR THE LOADING CONDITIONS EXAMINED, THE METAL BLADES ARE STRUCTURALLY ADEQUATE FOR USE, WITHIN THE NORMAL OPERATING RANGE. AS PART OF THE WIND TURBINE SYSTEM.

AN ESTIMATE OF THE INTERACTION OF A LIMITED ARRAY OF WINDMILLS.
NTIS, NOVEMBER 1975. 43P.
N77-13539, MISU/IMI-DM-16

USING LOGARITHMIC WIND PROFILES, THE INCREMENT OF ROUGHNESS PARAMETER, AS AN INFINITE ARRAY OF WINDMILLS IS ADDED TO AN ALREADY ROUGH SURFACE, IS CALCULATED BY A METHOD OF SUPERPOSITION OF SURFACE STRESS AND WINDMILL DRAG. THE OBTAINED LOGARITHMIC PROFILES ARE USED TO CALCULATE THE RELATIVE POWER OF A SINGLE WINDMILL IN AN UNLIMITED ARRAY. THESE VALUES ARE THEN USED AS LIMITING VALUES FOR THE RELATIVE POWER OF A WINDMILL UNIT IN A LIMITED ARRAY, USING A SIMPLE CONTINUITY MODEL OF ENERGY FLOW. VARIOUS EXAMPLES ARE GIVEN TO ILLUSTRATE THE EFFICIENCY OF DIFFERENT WINDMILL UNITS AND ARRAY SIZES. EXAMPLES ARE ALSO GIVEN FOR A TENTATIVE 100 MW GROUP STATION, USING DIFFERENT RATED POWER UNITS. THE RESULTS ARE TO BE SEEN AS MAINLY QUALITATIVE DUE TO THE CRUDENESS OF THE ASSUMPTIONS INVOLVED. FAIRLY INDEPENDENT OF CHOSEN RATED POWER OF THE INDIVIDUAL UNITS, GROUP STATIONS WITH SMALL ARRAYS (5 TO 10 ROWS) SEEM TO BE MAINLY FED BY HORIZONTAL FLOW, BUT FOR LARGER ARRAY SIZES EXCEEDING 50 X 50 UNITS, THE VERTICAL FLUX FROM ABOVE BECOMES MORE IMPORTANT.

PB-246365

THIS REPORT DEVELOPS A METHODOLOGY FOR SYSTEMATICALLY IDENTIFYING, ASSESSING, AND COMPARING ENERGY ALTERNATIVES IN ENVIRONMENTAL IMPACT STATEMENTS (EIS). THE REPORT PROVIDES DESCRIPTIONS AND DATA ON THE MAJOR ENERGY RESOURCE SYSTEMS IN THE UNITED STATES AND SUGGESTS PROCEDURES FOR USING THESE DESCRIPTIONS AND DATA. THE STUDY CONSISTS OF TWO MAJOR PARTS. PART 1 CONTAINS DESCRIPTIONS OF THE COAL, OIL SHALE, CRUDE OIL, NATURAL GAS, TAR SANDS, NUCLEAR FISSION, NUCLEAR FUSION, GEOTHERMAL ENERGY, HYDROELECTRIC POWER, ORGANIC WASTES, AND SOLAR ENERGY RESOURCE SYSTEMS PLUS DESCRIPTIONS OF ELECTRIC POWER GENERATION AND ENERGY CONSUMPTION. EACH RESOURCE SYSTEM DESCRIPTION CONTAINS DATA AND INFORMATION ON ENERGY EFFICIENCIES, ENVIRONMENTAL RESIDUALS AND ECONOMIC COSTS. PART II DESCRIBES PROCEDURES FOR USING THE DESCRIPTIONS AND DATA CONTAINED IN PART I IN SYSTEMATICALLY EVALUATING AND COMPARING THE RESIDUALS, EFFICIENCIES, AND ECONOMIC COSTS OF A PROPOSED ENERGY ACTION AND ITS ALTERNATIVES, AND SUGGESTS PROCEDURES FOR IMPACT ANALYSIS.

VERGELIJKEND WINDTUNNELONDERZOEK VAN PROFIELEN VAN FOKWIEKEN VOOR
WINDMOLENS. (COMPARATIVE WIND TUNNEL INVESTIGATION OF SAIL PROFILES FOR
WINDMILLS).
NTIS, FEBRUARY 1975. 20P. (IN DUTCH)
N77-13012

LOW SPEED WIND TUNNEL TESTS WERE CARRIED OUT TO DETERMINE SAIL PROFILES FOR IMPROVING THE PERFORMANCE OF CLASSICAL DUTCH WINDMILLS. RESULTS ARE PRESENTED IN GRAPHS, IN WHICH THE COEFFICIENT OF FORCE-IN-PLANE RELATED TO THE WIND VELOCITY IS DEPICTED AS FUNCTION OF THE RATIO BETWEEN CIRCUMFERENTIAL SPEED AND EFFECTIVE WIND VELOCITY. IT APPEARS THAT IMPROVEMENTS IN PERFORMANCE MAY BE OBTAINED BY CHANGING THE SHAPE OF THE SAILS.

75-0463 FAUEL P L
VERGELIJKEND WINDTUNNELONDERZOEK VAN PROFIELEN VAN FOKWIEKEN VOOR
WINDMOLENS. (COMPARATIVE WINDTUNNEL RESEARCH ON AIRFOILS OF FORE WINGS
USED FOR WINDMILLS).
THE XETHERLANDS, DELFT UNIVERSITY OF TECHNOLOGY, DEPARTMENT OF
AERONAUTICAL ENGINEERING, REP. VTH-191, 1975. 7P. (IN DUTCH)

TO IMPRGVE THE WORKING OF THE OLD DUTCH WINDMILL USE IS OFTEN MADE OF SO CALLED "FORE WINGS" WITHOUT SPOILING THE FINE SHAPE OF THE MILLS. AS LEADING EDGE AN AUXILIARY "FORE-SAIL" INSTEAD OF THE CLASSICAL CURVED BOARD IS USED. HOWEVER, QUANTITATIVE VALUES ARE NOT AVAILABLE ON WHICH AN OPTIMAL CHOICE OF THE FORM OF THOSE FORE-WINGS CAN BE BASED. IN THIS REPORT MEASUREMENTS ARE DESCRIBED PERFORMED IN A NUMBER OF FORE-WING CONFIGURATIONS IN A LOW SPEED WIND TUNNEL. THE RESULTS, GIVEN IN GRAPHS IN WHICH IS PLOTTED THE COEFFICIENT OF THE FORCE IN THE PLANE OF MILLING RELATED TO THE EFFECTIVE WINDSPEED AS A FUNCTION OF THE RATIO OF TIP SPEED AND EFFECTIVE WINDSPEED, SHOW THAT, AS WAS EXPECTED, FORE-WINGS LEAD TO BETTER PERFORMANCE.

75-0464 FEMENIA J ALTERNATE ENERGY SOURCES FOR MARINE POWER PLANTS. NTIS, SEPTEMBER 1975. 22P. COM-75-11474

THIS REPORT DISCUSSES THE SIZE OF SHIP POWER PLANTS AND OTHER FACTORS GOVERNING THE SUITABILITY OF DIFFERENT TYPES OF FUEL FOR MARINE USE. IT THEN CONSIDERS VARIOUS ALTERNATIVES TO TRADITIONAL FUELS DERIVED FROM CRUDE PETROLEUM. TYPES OF FUEL CONSIDERED ARE OTHER LIQUID HYDROCARBON FUELS, BOTH NATURAL AND SYNTHETIC, HYDROCARBON FUELS IN SOLID, LIQUID/SOLID, AND GASEOUS FORMS, NON-HYDROCARBON FUELS AND SOLAR AND WIND ENERGY.

WIND FIELDS OVER TERRAIN IRREGULARITIES.
INITIAL WIND ENERGY DATA ASSESSMENT STUDY. CONFERENCE. ASHEVILLE, N.C.,
JULY 29, 1974. NTIS, MAY 1975. P. 80-106.
PB-244132

CHANGES IN TERRAIN SUCH AS HILLS, VALLEYS OR DISCONTINUITIES IN SURFACE TEXTURE CAN DISTURB THE GROUND WINDS AS CAN ALSO OBSTRUCTION TO THE WIND SUCH AS BUILDINGS, CITIES, AND OTHER STRUCTURES CREATED BY MEN. IN THE REGION OF DISTURBANCE, THERE ARE ZONES OF HIGH WIND SPEEDS AND OF LOW WIND SPEEDS. KNOWLEDGE OF THESE WIND FIELDS IS USEFUL IN SELECTING WINDMILL SITES WITH A VIEW TOWARD UTILIZING THE REGIONS OF HIGH WIND AND TO AVOID THE REGIONS OF LOW WINDS. THE ATMOSPHERIC BOUNDARY LAYER EXISTS TO A HEIGHTH OF APPROXIMATELY ONE KILOMETER. THE INTERACTION OF SYNOPTIC PRESSURE PATTERNS, CORIOLIS FORCES AND FRICTIONAL FORCES CAUSE THE DIRECTION OF THE WIND TO TURN FROM FLOWING PERPENDICULAR TO ISOBARS NEAR THE EARTHS SURFACE. THIS TURNING EFFECT IS GENERALLY NEGLIGIBLE BELOW A HEIGHT OF 50 TO 100 METERS (164 TO 328 FT). THE EFFECTS OF TURNING ARE IGNORED IN THE FOLLOWING DISCUSSIONS; HOWEVER, THE DESIGN OF WINDMILLS EXCEEDING 164 FEET IN HEIGHT SHOULD CONSIDER THIS EFFECT.

A HOUSE IN BUTTE, MONTANA WAS RETROFITTED TO USE SOLAR AND WIND ENERGY. SIX INCHES OF INSULATION WERE ADDED TO THE CEILING OF THE HOUSE; THE ROOF WAS MODIFIED TO INCORPORATE THE SKYLIGHT AND COLLECTORS; TWO 4 X 6 FT DOUBLE-GLAZED PICTURE WINDOWS WERE ADDED IN THE SOUTH WALL; A DOUBLE-GLAZED SKYLIGHT (APPROXIMATELY 66 SQ FT), 240 SQ FT OF FLAT-PLATE SOLAR COLLECTORS, AND A 3-KW WIND GENERATOR WERE INSTALLED; AND A WARM AIR HEATING SYSTEM CONSISTING OF AIR-HANDLING UNIT AND AIR-DISTRIBUTION SYSTEM WERE ADDED. THE WIND GENERATOR IS USED TO HEAT EITHER THE DOMESTIC WATER HEATER OR A HEATING ELEMENT IN THE THERMAL STORAGE TANK. SCHEMATICS ARE INCLUDED OF THE FLOOR PLAN, SKYLIGHT SECTION, PIPING, AIR HANDLING UNIT SECTION, SOLAR COLLECTOR SECTION, TEMPERATURE AND FLOW RATE MEASUREMENT POINTS, AND THE CONTROL SYSTEM.

75-0473 HERWIG L O
ERDA'S SOLAR ENERGY PROGRAM.
ASTM STAND. NEWS 3(8): 29, AUGUST 1975.

GENERAL OBJECTIVES IN EACH SUBPROGRAM FOR THE NEXT FIVE YEARS ARE SUMMARIZED. SOLAR THERMAL OBJECTIVES ARE TO DESIGN, CONSTRUCT, OPERATE, AND EVALUATE A 10 MW ELECTRIC, CENTRAL RECEIVER PILOT POWER PLANT; A TOTAL ENERGY PILOT POWER PLANT OF 200 KW ELECTRIC AND 200 KW THERMAL SIZE; AND A DISTRIBUTED COLLECTOR PILOT PLANT. PHOTOVOLTAIC OBJECTIVES ARE TO REDUCE SOLAR ARRAY PRICES TO ABOUT \$5 PER PEAK WATT BY 1978 THROUGH LOWER-COST FABRICATION TECHNIQUES AND ECONOMICS OF INCREASING PRODUCTION. WIND OBJECTIVES ARE TO DEVELOP AND DEMONSTRATE LARGE-SCALE (100 KW TO MULTIMEGAWATT ELECTRIC) SINGLE-UNIT WIND ENERGY SYSTEMS FOR SELECTED APPLICATIONS. BIOCONVERSION OBJECTIVES ARE TO DESIGN, CONSTRUCT, OPERATE AND EVALUATE PILOT PLANTS FOR CONVERSION OF URBAN ORGANIC WASTE AND AGRICULTURAL WASTE MATERIALS TO METHANE GAS. OCEAN THERMAL OBJECTIVES ARE TO DESIGN AND CONSTRUCT FACILITIES FOR TEST AND EVALUATION OF COMPONENTS AND SUBSYSTEMS FOR OCEAN THERMAL POWER PLANTS.

 ATLANTA, GA., SEPTEMBER 28 OCTOBER 2, 1975. NEW YORK, IEEE, CAT. NO.
 75CH0999-31A, 1975. P. 506-511.

THIS PAPER PRESENTS A GENERAL ANALYSIS OF ELECTRICAL ENERGY OUTPUT OF CONSTANT-SPEED, CONSTANT-FREQUENCY (CSCF) AND VARIABLE-SPEED, CONSTANT-FREQUENCY (VSCF) SYSTEMS BASED ON POWER-DURATION CURVES. IT IS SHOWN, FROM A SAMPLE CALCULATION, THAT VSCF SYSTEMS HAVE A SLIGHT EDGE OVER CSCF SYSTEMS FROM THE POINT OF VIEW OF ENERGY OUTPUT, BUT THEY CALL FOR LARGE CAPITAL OUTLAY IN GENERATING SYSTEMS WHEREAS CSCF SYSTEMS CALL FOR ELABORATE PITCH CONTROLS. IT IS SHOWN THAT GENERATOR EFFICIENCY HAS A DOMINANT INFLUENCE ON ENERGY OUTPUT IN BOTH THE SYSTEMS.

75-0482 JUSTUS C G
WIND DATA COLLECTION AND ASSESSMENT.
INITIAL WIND ENERGY DATA ASSESSMENT STUDY. CONFERENCE. ASHEVILLE, N.C.,
JULY 29, 1974. NTIS, MAY 1975. P. 107-121.

THE WIND DATA COLLECTION AND ASSESSMENT PORTIONS HAS AS ITS OBJECTIVE TO DETERMINE FROM THE SURFACE WIND POWER THE STATISTICS NECESSARY FOR SYSTEM EVALUATION STUDIES, AND ALSO TO DETERMINE THE HEIGHT VARIATION OF THESE STATISTICS SINCE THE TYPICAL WIND GENERATOR SYSTEM WILL NOT BE LOCATED AT THE LEVEL OF SURFACE ANEMOMETERS. THE NECESSARY WIND DATA STATISTICS CAN BE CHARACTERIZED IN TERMS OF A TWO PARAMETER DISTRIBUTION FUNCTION. TWO CHOICES THAT SEEMED TO BE DOING A GOOD JOB ARE THE LOG-NORMAL DISTRIBUTION AND THE WEIBULL DISTRIBUTION. ANOTHER ASSUMPTION IS THAT THESE STATISTICS ARE SUFFICIENTLY CONTINUOUS SO THAT A NATIONAL MAP CAN BE DRAWN OF THESE WIND POWER STATISTICS. THE GOAL OF THIS PROJECT IS TO COME OUT WITH A MAP OF THE NECESSARY TWO PARAMETERS THAT DESCRIBE THE DISTRIBUTION FUNCTIONS.

 (WIND IN BULGARIA AND THE POSSIBILITIES FOR ITS USE AS AN ENERGY SOURCE).
 KHIDROLOGIYA I METEOROLOGIYA 24(6): 22-27, 1975. (IN BULGARIAN)

THE REGIME OF THE SURFACE WIND IN BULGARIA AND THE POSSIBILITIES FOR ITS USE AS AN ENERGY SOURCE ARE EXAMINED. THE WIND REGIME IN BULGARIA DOES NOT FAVOR THE USE OF WIND ENERGY ON A VAST SCALE. OVER THE LARGEST PART OF THE TERRITORY, THERE ARE WINDS WITH MEAN ANNUAL VELOCITY UNDER 3 M/SEC (THE LOWEST LIMIT OF THE WORKING VELOCITY OF THE WIND GAGE). ALCNG WITH THIS, THE DURATION IN HOURS FOR A YEAR WITH WINDLESS WEATHER AND WIND VELOCITY UNDER 3 M/SEC IS ABOVE 70 PERCENT, BUT IN SOME REGIONS, IT REACHES 90 PERCENT. THE FOLLOWING PLACES ARE THE MOST FAVORABLE: OPEN MOUNTAIN PEAKS AND RIDGES, LOCATIONS ALONG THE BLACK SEA SIDE, AND DIFFERENT PLACES WITH RAISED TERRAIN IN THE NORTHEAST PART OF DOEROUDJA.

MEETING U.S. ENERGY REQUIREMENTS: SOLAR ENERGY'S POTENTIAL SHARE.
ASHRAE J. 17: 36-40, NOVEMBER 1975.

SOLAR HEATING AND COOLING OF COMMERCIAL BUILDINGS IS TECHNICALLY FEASIBLE. IF FUEL COSTS INCREASE ONLY SLIGHTLY, COMBINED HEATING AND COOLING WILL ALSO BECOME ECONOMICALLY JUSTIFIABLE. JUSTIFICATION FOR HEATING SISTEMS ONLY IS LESS DEMONSTRABLE, BUT IT WILL EXIST IN SEVERAL CASES. GREATER USE OF SOLAR ENERGIZED HEATING AND COOLING WILL BE POSSIBLE OVER THE NEXT FIVE YEARS AS COLLECTORS, STORAGE SYSTEMS, AND CONTROLS ARE PRODUCED IN MORE ECONOMICAL QUANTITIES. RESIDENTIAL SOLAR HEATING IS TECHNICALLY AND ECONOMICALLY FEASIBLE IN A SURPRISING NUMBER OF CASES. RESIDENTIAL COOLING, ALREADY DONE ON A SMALL SCALE, REQUIRES INCREASED DEVELOPMENT OF AIR-COOLED EQUIPMENT.

75-0492 WIND POWER. LYNGBY, DENMARK, AKADEMIET FOR THE TEKNISKE VIDENSKABER, 1975. 20P.

THE PRESENT REPORT CONTAINS THE FINDINGS OF A COMMITTEE SET UP TO STUDY

THE CONDITIONS FOR WIND ENERGY UTILIZATION IN DENMARK, MAINLY ON THE BASIS OF WIND CLIMATE RECORDINGS AT 31 DOMESTIC METEOROLOGICAL SURVEY STATIONS. THE MAJOR CONCLUSIONS ARE THAT ECONOMICALLY EFFICIENT WIND POWER PLANTS CAN BE BUILT AT SPOTS CHARACTERIZED BY HIGH AVERAGE WIND SPEEDS, SUCH AS THE FAROE ISLANDS. THIS, HOWEVER, MUST BE PRECEDED BY EXTENSIVE RESEARCH AND DEVELOPMENT WORK WITH RESPECT TO WIND-POWER PLANT EQUIPMENT AND DESIGN.

STATUS REPORT OF 100 KW EXPERIMENTAL WIND TURBINE GENERATOR PROJECT.
NTIS, JUNE 1975. 21P.
NASA-TM-X-71758, N75-29546

THE STATUS OF AN EXPERIMENTAL WIND TURBINE GENERATOR PROJECT IS DESCRIBED. THE MACHINE WILL BE READY FOR OPERATION IN AUGUST 1975. DESIGN CONSISTS OF A 125 FT. ROTOR TURBINE, TRANSMISSION, SHAFT, ALTERNATOR, AND TOWER. THE ROTOR CAN GENERATE 100 KW OF ELECTRICAL POWER AT WIND VELOCITY OF 18 MPH BY OPERATING TWO VARIABLE PITCH BLADES AT 40 RPM.

 DEVELOPMENT AND ADAPTATION OF FIELD MODULATED GENERATOR SYSTEMS FOR WIND
 ENERGY APPLICATIONS. PROGRESS REPORT.
 NTIS, OCTOBER 17, 1975. 135P.
 PB-263604

TWO WARD-LEONARD VARIABLE-SPEED DRIVE SYSTEMS WERE SET UP FOR USE AS MOTORING DYNAMOMETERS FOR TESTING FIELD MODULATED GENERATORS. ALL THE PARTS REQUIRED FOR THE DYNAMOMETER CRADLE ARRANGEMENT WERE DESIGNED AND FABRICATED. A SPECIALLY DESIGNED TEST MACHINE HAS BEEN FABRICATED FOR THE EXPERIMENTAL INVESTIGATION. THE STATOR AND ROTOR ARE BEING WOUND. THE SOLID STATE INVERTER REQUIRED FOR THIS SYSTEM IS BEING ASSEMBLED IN A CONVENIENTLY TRANSPORTABLE RACK FOR TESTING. PARALLEL-BRIDGE RECTIFIER SYSTEM STUDIES WERE EXTENDED TO INCLUDE BRIDGE-INPUT CAPACITORS FOR THE CASE OF RESISTIVE LOADS. FOURIER ANALYSIS OF SOURCE CURRENT AND LOAD CURRENT WAVEFORMS HAS BEEN COMPLETED, AND THE RESULTS ARE PRESENTED IN GRAPHICAL FORM FOR DIFFERENT VALUES OF (X SUB L/R SUB 1) AND (X SUB L/X SUB C) RATIOS. PRELIMINARY LITERATURE SURVEYS HAVE BEEN COMPLETED IN THE STUDY OF: (1) THE VARIABLE LOAD BAND PASS FILTER REQUIRED AT THE OUTPUT OF THE FIELD MODULATED GENERATOR SYSTEM; AND (2) THE SNUBBER AND VOLTAGE TRANSIENT DIVIDED CIRCUITRY ASSOCIATED WITH THE ELECTRONICS SUBSYSTEM. THE RESULTS ARE SUMMARIZED IN THIS REPORT.

 LA METEOROLOGIE ET L'ENERGIE EOLIENNE: CONVERSION EOLIENNE
 ELECTROSTATIQUE. (METEOROLOGY AND WINDPOWER: ELECTROSTATIC WIND
 CONVERSION).

THE APPLICATION OF ELECTROFLUID DYNAMICS IN EXPLOITATION OF A PRINCIPLE OF DIRECT CONVERSION BY TRANSPORT OF ELECTRICAL CHARGES UNDER THE INFLUENCE OF GAS FLOW IS EXAMINED WITH PARTICULAR REFERENCE TO THE CONVERSION OF WIND ELECTROSTATICS. A DEVICE PERMITTING DEPOSITION OF UNIPOLAR CHARGES UPON PARTICLES ENTRAINED BY A FLUID IS PLACED UPSTREAM. IN CASE OF WIND FLOW, THESE PARTICLES WOULD BE THE ATMOSPHERIC AEROSOL PROPER OR, ULTIMATELY, THE AEROSOLS PRODUCED BY AN ADEQUATE GENERATOR. THE LARGER UNIPOLAR IONS THUS PRODUCED, BEING OF LOW MOBILITY, ARE ENTRAINED BY THE FLOW AND RECEIVED DOWNSTREAM ON A GRID, WHICH IS CHARGED AT A POTENTIAL OF THE SAME SIGN AS THE IONS. THE WORK ACCOMPLISHED BY THE WIND, WHICH FORCES THE LARGE IONS TO ASCEND THE ELECTRICAL FIELD CREATED BY THE SPACE CHARGE AND DIRECTED IN THE OPPOSITE SENSE OF THE WIND SPEED, IS RECEIVED IN AN ELECTRICAL FORM IN THE EXTERNAL CIRCUIT THAT CONNECTS THE INPUT GRID TO THE OUTPUT GRID. THE COMPUTATIONS OF FLOW IN THE CASE OF A UNIDIMENSIONAL HYPOTHESIS ARE SET FORTH. THE EQUATIONS FOR THE POWER EXTRACTED PER SQUARE METER AS A FUNCTION OF EXTERNAL RESISTANCE MULTIPLIED BY SURRENT DENSITY AND GENERATOR SEGMENT ARE DERIVED. IN CONNECTION WITH THE COMPUTATION PROCEDURE, THERE ARE DISCUSSED A MODULE OF AN OPEN CIRCUIT. CONSTRAINTS UPON THE DEVELOPMENT OF AN ELECTRICAL FIELD IN THE MODULE, THE MODULE OF MAXIMUM POWER, A SHORT CIRCUITING OF THE GENERATOR, LIMITATION BY GAS FLOW DISRUPTION, AND THE GENERAL CASE. IN CONNECTION WITH THE PERFORMANCE OF A MODULE, THE ORDER OF MAGNITUDE OF THE DISRUPTION FIELD MODULES OF CONSTANT OUTPUT AND THE INTERACTION OF MECHANICAL AND ELECTRICAL EQUATIONS ARE EXAMINED. THE CASES OF CORONA DISCHARGE AND OF IONIZATION BY A RADIOACTIVE SOURCE ARE DISCUSSED.

A COMBINED POWER STATION IS DESCRIBED, WHICH ENABLES ONE TO CONVERT SOLAR ENERGY AND WIND ENERGY INTO OTHER FORMS OF ENERGY. THE PLANT CONSISTS OF A WATER-FILLED BOILER, IN WHICH SOLAR ENERGY HEATS THE WATER BY CONCENTRATION; SOLAR CELLS; AND FINALLY WIND ROTORS, WHICH TRANSFORM WIND ENERGY INTO ELECTRICAL ENERGY. THE TRANSFORMED ENERGY IS PARTLY AVAILABLE AS STEAM HEAT, PARTLY AS MECHANICAL OR ELECTRICAL ENERGY. THE PLANT CAN BE USED FOR SUPPLYING HEATING SYSTEMS OR ELECTROLYSIS EQUIPMENT. FINALLY, BY INCORPORATING SUITABLE MOTORS, A MOBILE VERSION OF THE SYSTEM CAN BE PRODUCED.

75-0510 SITING ENERGY FACILITIES AT CAMP GRUBER, OKLAHOMA. NTIS, JUNE 1975. VOL.2. 71P. PB-247127

COMPARING THE CHARACTERISTICS OF CAMP GRUBER WITH THE GENERAL SITING REQUIREMENTS FOR AN ENERGY CENTER REVEALS THAT THE CAMP IS SATISFACTORY. THE ENERGY FACILITIES FOR WHICH CAMP GRUBER DOES NOT APPEAR TO BE AN ATTRACTIVE SITE ARE THE MINE-MOUTH PLANTS. EXTRA COSTS MAY BE NECESSARY FOR PURCHASE OF WATER RIGHTS OR CONSTRUCTION OF STORAGE FACILITIES, CONVEYANCES, OR PURIFICATION PLANTS. CAMP GRUBER SATISFIES THE FOLLOWING REQUIREMENTS: AMPLE LOW COST LAND AREA; AMPLE WATER SUPPLY; FAVORABLE METEOROLOGICAL CHARACTERISTICS; MINIMUM ENVIRONMENTAL IMPACTS; LARGE MARKETS FOR ENERGY PRODUCTS; LOW CONSTRUCTION AND OPERATING COSTS; GOOD TRANSPORTATION FACILITIES; AND MINIMUM SOCIAL IMPACT.

- 75-0518 THE SOLAR RESOURCE SYSTEM.
 UNIVERSITY OF OKLAHOMA. SCIENCE + PUBLIC POLICY PROGRAM. REPORT. MAY
 1975. P. 11-21.

THE SOLAR ENERGY RESOURCE SYSTEM AND ITS RESOURCE BASE ARE DISCUSSED. FOUR POTENTIAL SOURCES OF SOLAR ENERGY ARE CONSIDERED: DIRECT RADIATION, WIND, ORGANIC FUELS, AND OCEAN THERMAL GRADIENTS. ENERGY EFFICIENCIES, ENVIRONMENTAL CONSIDERATIONS, TECHNOLOGIES FOR CONVERTING THE ENERGY, AND ECONOMICS OF EACH ALTERNATIVE SOURCE ARE DESCRIBED. ALL SOLAR SOURCES ARE CHARACTERIZED BY LOW PORE DENSITIES AND CONVERSION EFFICIENCIES, THUS RESULTING IN HIGH LAND AREA REQUIREMENTS FOR A GIVEN OUTPUT. OFFSETTING THE INITIAL LARGE INVESTMENT COSTS OF SOLAR POWER SYSTEMS ARE THE ULTIMATE ECONOMIC BENEFITS OF FREE ENERGY AND LOWER OPERATING COSTS.

 INITIAL WIND ENERGY DATA ASSESSMENT STUDY. CONFERENCE. ASHEVILLE, N.C.,

JULY 29, 1974. NTIS, MAY 1975. P. 122-125. PB-244132

MANY STATEMENTS HAVE BEEN MADE FROM TIME TO TIME CONCERNING THE VALUE OF INCREASING TOWER HEIGHT ABOVE THAT REQUIRED TO GIVE ADEQUATE GROUND CLEARANCE TO THE ROTOR OF AN AEROGENERATOR. THIS MINIMUM GROUND CLEARANCE IS USUALLY RECKONED TO BE AROUND 10 METERS, BECAUSE OF THE INCREASED RELATIVE EFFECT OF GROUND INDUCED TURBULENCE BELOW THIS LEVEL; THE UNDOUBTED REDUCTION IN MEAN WIND SPEED, EVEN ON THE MOST FAVORABLE SITES, NEAR TO GROUND LEVEL, AND, IN THE EXTREME CASE, THE SAFETY ELEMENT. IT IS NOT MERELY A QUESTION OF IMPROVEMENT IN WIND REGIMES THAT IS TO BE SOUGHT BUT ALSO AN IMPROVEMENT IN THE OPERATING CONDITIONS FOR THE WIND ROTOR ITSELF. THE PROBLEM OF OPTIMUM TOWER HEIGHT IS DISCUSSED.

THE METHOD OF EXPERIMENTALLY DETERMINING THE PERFORMANCE OF LARGE SCALE WINDMILL MODELS MOUNTED ON A MOVING VEHICLE IS DISCUSSED. AS A RESULT OF THE WIND TUNNEL EXPERIMENTS, ANALYSIS, AND THE LARGE SCALE VEHICLE WORK, AN OPTIMIZATION OF A PARTICULAR ROTOR IS DESCRIBED, AS ARE THE RESULTS OF BLADE TWIST EXPERIMENTS AS A METHOD OF RPM CONTROL. BECAUSE THE WIND TUNNEL MODELS WERE NECESSARILY SMALL SCALE, RIGID ROTOR BLADES WERE USED; HOWEVER, THE LARGE SCALE ROTORS TESTED AND REPORTED UPON WERE OF THE PRINCETON SAILWING TYPE. BY MEANS OF DIMENSIONAL ANALYSIS AND BY EXPERIMENTS, THE SIGNIFICANT TENSION COEFFICIENT FOR THE TRAILING EDGE CABLE OF THE SAILWING ROTOR WAS DETERMINED AND EVALUATED. THIS TENSION COEFFICIENT ENABLES THE DESIGN OF SUCH A ROTOR TO BE SUCH THAT THE LUFFING THRESHOLD CAN BE AVOIDED FOR ANY GIVEN SET OF CONDITIONS.

 (INVESTIGATION ON A GENERATOR SYSTEM, DELIVERING ELECTRICITY DIRECTLY TO

THE UTILITY NETWORK, BY MEANS OF A WINDMILL).

DELFT, THE NETHERLANDS, DELFT UNIVERSITY OF TECHNOLOGY, REP. NO. VE75A37,
MAY 1975. 128P. (IN DUTCH)

IN THIS REPORT A DESCRIPTION IS GIVEN OF A SYSTEM FOR THE GENERATION OF ELECTRICITY FOR THE PUBLIC 3-PHASE GRID, BY WINDPOWER. BESIDES THE TRANSFORMATION OF MECHANICAL ENERGY INTO ELECTRICAL ENERGY WITH THE VOLTAGE AND FREQUENCY OF THE GRID, THE GENERATION-SYSTEM IS GIVEN THE TASK TO ADJUST THE ROTATIONAL SPEED OF THE WINDMILL-SHAFT, IN ORDER TO GET THE MAXIMUM POWER THAT CAN BE EXTRACTED FROM THE WIND AT A GIVEN WIND SPEED. ALTHOUGH THIS RESULTS IN A ROTATIONAL SPEED OF THE GENERATOR CAN BE CONNECTED DIRECTLY TO THE GRID, BECAUSE CONSTANT OUTPUT VOLTAGE AND FREQUENCY ARE REALISED BY A CONVERTER FEEDING THE ROTOR CIRCUIT IN A SPECIAL WAY. IMPORTANT CHARACTERISTICS OF THE SYSTEM ARE THE BEHAVIOUR OF THE GENERATOR, BEING THAT OF A NORMAL SYNCHRONOUS GENERATOR AND THE NECESSARY CONVERTER CAPACITY, BEING ONLY APPROXIMATELY 15 PERCENT OF THE RATED CAPACITY OF THE GENERATOR.

75-0539 UTILIZATION OF WIND ENERGY ON MOUNT WASHINGTON.
MOUNT WASHINGTON OBSERVATORY NEWS BULL. 16(2): 41-47, JUNE 1975.

THE UTILIZATION OF WIND AS A SOURCE OF ELECTRICAL POWER IS NOT SO SIMPLE OR SO CHEAP AS MIGHT APPEAR AND SINCE WIND VELOCITY IS NOT CONSTANT, UTILIZATION OF WIND POWER FOR THE HOME IS VIEWED, AT THE MOMENT, AS A SUPPLEMENTARY RATHER THAN AS A PRIMARY SOURCE OF POWER. MOREOVER, ELECTRICAL ENERGY GENERATED BY THE WIND WOULD BE OF THE DC RATHER THAN THE AC TYPE THAT OPERATES MOST AMERICAN MOTOR APPLIANCES. THEREFORE, WHEN CONSIDERING THE COST OF THE EQUIPMENT NEEDED TO EXTRACT, STORE, AND CONVERT WIND POWER, IT MAY NOT BE AT ALL ADVANTAGEOUS. ON MT. WASHINGTON (N.H.), THERE IS AN ABUNDANCE OF WIND, THE AREA IS NOT SERVED BY POWER COMPANIES, AND THE OUTPUT OF A WIND-POWERED GENERATOR IS PROPORTIONAL TO THE CUBE OF THE WIND SPEED (A GENERATING UNIT CAPABLE OF PRODUCING 5 KW IN A 10-M.P.H. WIND COULD PRODUCE 40 KW IN A 20-M.P.H. WIND). HOWEVER, THE HARNESSING OF STRONG MOUNTAIN WINDS PRESENTS SOME PROBLEMS SUCH AS THE PERFORMANCE OF WIND-POWERED GENERATORS IN FREQUENT WINDS OF HURRICANE VELOCITY AND STRONG TURBULENCE. SEVERE WIND CONDITIONS MAY NECESSITATE DEACTIVATING OR DEMOUNTING THE EQUIPMENT, AND ICING COULD DAMAGE OR EVEN DESTROY IT. PLANS ARE UNDER WAY TO CONSTRUCT AND TEST A PROTOTYPE MACHINE SO THAT DATA CAN BE GATHERED ON THE PRACTICABILITY OF EXTRACTING POWER FROM THE WIND ON MT. WASHINGTON.

75-0540 UZZELL R S
WIND POWERED MACHINE.
GERMAN (FRG) PATENT, JULY 31, 1975. 11P. (IN GERMAN)

THE PATENT SPECIFICATION CONCERNS A WIND-POWERED MACHINE, WHERE THE WIND ROTOR IS MOUNTED TO ROTATE IN BEARINGS ON A FRAMEWORK, AND IS CONNECTED WITH A WEATHER VANE. THE WIND ROTOR DRIVES AN ELECTRIC GENERATOR. ACCORDING TO THE INVENTION THE WIND ROTOR IS ARRANGED AT THE NARROWEST CROSSECTION (THROAT) OF A CHAMBER IN THE FORM OF A VENTURI NOZZLE. SEVERAL GUIDE VANES ARE DISTRIBUTED EVENLY OVER THE CIRCUMFERENCE OF THE INLET OPENING ON THE INNER WALL OF THE VENTURI TUBE NEAR THE INLET OPENING.

MODELIJKHEDEN VOOR OPTIMALISERING VAN DE ENERGIE AFGIFTE DOOR EEN
WINDKRACHTCENTRALE. (POSSIBILITIES FOR OPTIMALIZATION OF THE POWER
PRODUCTION OF A WIND POWER ELECTRIC PLANT).
EINDHOVEN, THE NETHERLANDS, EINDHOVEN UNIVERSITY OF TECHNOLOGY,
DEPARTMENT OF ELECTRIC ENGINEERING, REP. NO. EM 75-2, APRIL 1975. 73P.
(IN DUTCH)

APPLICATIONS OF WINDMILL POWER OR WIND ENERGY IN GENERAL ARE MULTIPLE; ONE SPECIAL APPLICATION IS GENERATING ELECTRICAL ENERGY. ONE OF THE PROBLEMS OF A WINDMILL-DRIVEN ELECTRICAL PLANT 'S THAT ONLY AT ONE WIND VELOCITY THE EFFICIENCY OF ENERGY PRODUCTION IS MAXIMAL. THE TRANSMISSION-ALTERNATOR COMBINATION IS ADAPTED TO THE WINDMILL FOR THIS SPECIAL WIND VELOCITY ONLY. TRYING TO ADAPT THE POWER SYSTEM FOR ALL OCCURRING WIND VELOCITIES IS A PROBLEM OF CONTROL-ENGINEERING. THIS REPORT HAS THE INTENTION TO CONTRIBUTE TO THE SOLUTION OF THIS PROBLEM. FROM A SIMPLE WINDMILL-THEORY CONDITIONS OF OPTIMAL POWER-EFFICIENCY ARE DERIVED. CONTROL SYSTEMS THAT MEET THESE CONDITIONS ARE TREATED MORE OR LESS SYSTEMATICALLY. FINALLY, A SPECIAL KIND OF CONTROL SYSTEM, A SO CALLED OPTIMUM CONTROLLER, IS INTRODUCED IN THE LAST CHAPTER.

 WIND POWER PLANT.
 GERMAN (FRG) PATENT 2,423,612/A/, NOVEMBER 20, 1975. 9P. (IN GERMAN)

A WIND POWER PLANT IS PROPOSED SUITABLE FOR ELECTRICITY GENERATION OR WATER PUMPING. THIS PLANT IS TO BE SELF-ADJUSTING TO VARIOUS WIND VELOCITIES AND TO BE KEPT IN OPERATION EVEN DURING VIOLENT STORMS. FOR THIS PURPOSE THE MAST, CARRYING THE WIND ROTOR AND PIVOTABLE AROUND A HORIZONTAL AXIS, IS TILTABLE AND EQUIPPED WITH A WIND BLIND. FURTHER CLAIMS CONTAIN VARIOUS CONFIGURATIONS OF THE TILTING BASE IN RESPECT TO THE CUT IN OF AN ELASTIC LINK, THE ATTACHMENT AND DESIGN OF THE WIND BLIND AS WELL AS THE CONSTRUCTIVE ARRANGEMENT OF ONE OR MORE DYNAMOS.

 THE EFFECT OF ATMOSPHERIC TURBULENCE ON WINDMILL PERFORMANCE.
 LONDON, ONTARIO, FACULTY OF ENGINEERING SCIENCE, UNIVERSITY OF WESTERN
 ONTARIO, APRIL 1974. 15P.

THEORETICAL AND EXPERIMENTAL STUDIES HAVE BEEN MADE TO DETERMINE THE EFFECTS OF FREE STREAM TURBULENCE STRUCTURE ON THE PERFORMANCE OF A SIMPLE AIRSCREW WINDMILL. A MODIFIED BLADE ELEMENT METHOD WAS DEVELOPED TO PREDICT THE FLUCTUATING LIFT FORCES ON THE ROTOR BLADES AND COMPUTED VORTEX MODELS OF TURBULENCE WERE USED TO REPRESENT THE FLUCTUATING VELOCITY FIELD. EVENTUALLY THE COMPUTER PROGRAM WILL ENABLE LARGE ROTOR DIAMETER WINDMILL PERFORMANCE STUDIES TO BE CONDUCTED AND ALSO COMPARISONS TO BE MADE WITH SMALL TEST ROTORS.

WIND TURBINE.
WASHINGTON, D.C., ATOMIC ENERGY COMMISSION, PATENT APPLICATION, SEPTEMBER
20, 1974. 18P.
PAT-APPL-508016/WE

THE PATENT APPLICATION RELATES TO A WIND TURBINE ROTATABLE ABOUY A SHAFT WHICH MAY INCLUDE A DRIVE ROTOR WITH ONE OR MORE ELONGATED BLADES EACH HAVING A CENTRAL OUTWARDLY CURVED PORTION OF AIRFOIL SHAPE WHICH PRODUCES ROTARY MOTION WHEN THE BLADE ROTATES IN WIND AT A BLADE TIP VELOCITY TO WIND VELOCITY RATIO GREATER THAN ABOUT THREE OR FOUR. ADDITIONAL WIND ROTOR MEANS ARE DISPOSED AT BOTH ENDS OF THE CURVED PORTIONS OF THE ELONGATED BLADE FOR ROTATABLY ACCELERATING THE DRIVE ROTOR TO THE DESIRED VELOCITY RATIO, AND MEANS COUPLED TO SAID ROTORS FOR USING THE ROTATION THEREOF.

UNIVERSITY OF SHERBROOKE, MAY 29, 1974. SHERBROOKE, CANADA, UNIVERSITY
OF SHERBROOKE, 1974. P. 137-156.

THIS PAPER PRESENTS THE RESULTS OF A SERIES OF TESTS ON A SAVONIUS WING ROTOR 3 FEET HIGH AND 1.5 FEET IN DIAMETER MOUNTED VERTICALLY IN A WIND TUNNEL. EFFICIENCY AND POWER OUTPUT CHARACTERISTICS AS A FUNCTION OF ROTOR SPEED FOR SEVERAL WIND SPEEDS ARE GIVEN AS WELL AS STATIC TORQUE CHARACTERISTICS. MAXIMUM EFFICIENCY FOR THE DEVICE WAS DETERMINED TO BE 33 PERCENT, OCCURRING AT A RATIO OF WIND SPEED TO ROTOR TIP SPEED, U/V, OF ABOUT 0.85 TO 0.90, FOR WHICH THE POWER COEFFICIENT WAS FOUND TO BE 0.33. WIND SPEEDS RANGED FROM 15.6 FEET PER SECOND TO 21 FEET PER SECOND. IT IS CONCLUDED THAT SUCH A DEVICE CAN WELL SERVE TO PROVIDE AUXILLIARY POWER ON A SCALE COMPARABLE TO A SINGLE DWELLING, BEING RELATIVELY INEXPENSIVE TO FABRICATE, AND POSSESSING EXCELLENT TORQUE CHARACTERISTICS PARTICULARLY DURING RAPID VARIATIONS IN WIND SPEED AND DIRECTION. CONTINUED IMPROVEMENT IN DESIGN MAY WELL YIELD EFFICIENCIES OVER 40 PERCENT AND THUS THE DEVICE CAN BECOME A SERIOUS CONTENDER TO THE

HIGH SPEED ROTOR. CONSTRUCTED ON A LARGE SCALE, THE WING ROTOR HAS A DISTINCT POTENTIAL FOR USE IN WATER AS A LOW HEAD POWER GENERATING DEVICE.

 DESIGN S₽EEDS FOR WIND TURBINES.

 AUSTRALIAN CONFERENCE ON HYDRAULICS AND FLUID MECHANICS, 5TH,

 CHRISTCHURCH, NEW ZEALAND, DECEMBER 9-13, 1974. PROCEEDINGS, UNIVERSITY

 OF CANTERBURY, NEW ZEALAND, 1974.

PREDICTIONS OF WIND TURBINE PERFORMANCE ARE REQUIRED IN ORDER TO DESIGN AND COST WIND ENERGY CONVERSION SYSTEMS. BY ASSUMING THAT THE HOURLY-MEAN WIND-SPEED FREQUENCY CAN BE CHARACTERIZED BY THE WEIBULL DISTRIBUTION, AN OPTIMUM RATED WIND SPEED IS DEFINED WHICH MAXIMIZES THE PRIMARY ENERGY CONVERSION OF AN IDEAL WIND TURBINE. AS THE OVERALL CONVERSION SYSTEM DESIGN MAY REQUIRE A PRIME OPERATING TIME GREATER THAN THAT AVAILABLE ABOVE THE OPTIMUM RATED WIND SPEED, PRIMARY ENERGY CONVERSION PERFORMANCE AND PRIME TIME ARE PRESENTED AS FUNCTIONS OF RATED WIND SPEED. SECONDARY ENERGY CONVERSION PERFORMANCE BELOW RATED WIND SPEED IS PRESENTED IN A SIMILAR MANNER. THE INFORMATION GIVEN IS INTENDED TO PROVIDE A GUIDE TO THE RATING AND PERFORMANCE OF WIND TURBINES IN GIVEN WIND REGIMES.

 NTIS, FEBRUARY 1974. 84P.
 N74-31529

A SYSTEMS ANALYSIS OF SOLAR ENERGY PROGRAMS WAS CONDUCTED AND A SUMMARY OF THE RESULTS IS PROVIDED. VARIOUS SOLAR ENERGY APPLICATIONS AND TECHNIQUES ARE EXPECTED TO BECOME ECONOMICALLY COMPETITIVE WITH CONVENTIONALLY FUELED SYSTEMS BETWEEN 1985 AND 2000 AND, GIVEN STRONG FEDERAL SUPPORT, COULD PROVIDE SIGNIFICANT QUANTITIES OF ENERGY TO THE U.S. EARLY IN THE 21ST CENTURY. IN ORDER TO ACHIEVE THIS RESULT, A SET OF MULTI-DISCIPLINARY RESEARCH TASKS AND PROOF-OF-CONCEPT EXPERIMENTS ARE REQUIRED TO OVERCOME A VARIETY OF TECHNICAL, ECONOMIC, ENVIRONMENTAL, SOCIAL AND INSTITUTIONAL PROBLEMS WHICH CURRENTLY EXIST. THE PROBLEMS ASSOCIATED WITH EACH OF SEVEN SOLAR ENERGY APPLICATIONS AND TECHNIQUES ARE IDENTIFIED AND DETAILS OF PROOF-OF-CONCEPT EXPERIMENTS IN EACH AREA ARE OUTLINED. RECOMMENDED METHODS FOR THE DISSEMINATION AND UTILIZATION OF RESEARCH RESULTS ARE LISTED.

 PERFORMANCE ANALYSIS OF A WINDMILL WITH INCREASED POWER OUTPUT DUE TO TIPVANE INDUCED DIFFUSION OF THE AIRSTREAM.
 DELFT, DELFT UNIVERSITY OF TECHNOLOGY, DEPARTMENT OF AERONAUTICAL ENGINEERING, MEMO 224, 1974. 52P.

BETZ'S FORMULA FOR THE MAXIMUM POWER OUTPUT OF WINDMILLS IS VALID ONLY FOR WINDMILL TYPES CAUSING A STEADY, AXIAL FORCE TO BE APPLIED TO THE AIR. TYPES NOT COVERED BY BETZ'S ANALYSIS, SUCH AS WINDMILLS APPLYING RADIAL AS WELL AS AXIAL FORCES TO THE AIR, MAY HAVE A MUCH LARGER POWER OUTPUT. THIS REPORT DEALS WITH A TYPE OF WINDMILL WHERE RELATIVELY SMALL VANES, ATTACHED TO THE TIPS OF THE MILLBLADES, DEFLECT THE AIR RADIALLY OUTWARDS. THE RESULTING INCREASED MASS FLOW OF AIR THROUGH THE DISC LANE OF THE WINDMILL CAUSES A LARGER POWER OUTPUT PER UNIT AREA SWEPT BY

THE MILL BLADES. THE PHYSICAL PRINCIPLES OF THE SYSTEM ARE EXPLAINED, AND A THEORETICAL ASSESSMENT OF ITS POTENTIAL PERFORMANCE IS GIVEN. THE ANALYSIS IS BACKED UP BY EXPERIMENTS. ACCORDING TO THE QUANTITATIVE ANALYSIS THE POWER OF A WINDMILL MIGHT AT LEAST BE DOUBLED FOR A GIVEN FRONTAL AREA. AREAS WHERE FURTHER RESEARCH IS NEEDED ARE INDICATED.

CONTROL OF ENVIRONMENTAL IMPACTS FROM ADVANCED ENERGY SOURCES.
NTIS, MARCH 1974, 339P.
PB-239450

THE TECHNOLOGY AND ENVIRONMENTAL EFFECTS ASSOCIATED WITH PRODUCTION OF ENERGY FROM NEW OR ADVANCED SOURCES ARE REVIEWED. THESE INCLUDE SOLAR, GEOTHERMAL, OIL SHALE, SOLID WASTES, UNDERGROUND COAL GASIFICATION, AND HYDROGEN ENERGY SOURCES. PROJECTIONS TO THE YEAR 2000 OF LEVELS OF ENERGY PRODUCTION FROM THE FIRST FOUR OF THESE SOURCES ARE PRESENTED. ENVIRONMENTAL IMPACTS ON AIR AND WATER QUALITY, AND LAND USE ARE DERIVED PER UNIT OF ENERGY. LEVELS OF POLLUTANT EMISSIONS AND OTHER ENVIRONMENTAL EFFECTS OF THE DEVELOPMENT OF THESE ADVANCED ENERGY SOURCES ARE PROJECTED. IMPACTS LIKELY TO REQUIRE CONTROL MEASURES ARE IDENTIFIED. SUBJECTS FOR RESEARCH AND DEVELOPMENT DIRECTED TOWARD CONTROL OF ENVIRONMENTAL IMPACTS ARE RECOMMENDED. THESE RECOMMENDATIONS ARE INCORPORATED INTO A RESEARCH AND DEVELOPMENT PLAN. APPROXIMATE PRIORITY ASSIGNMENTS DERIVED FROM CONSIDERATION OF THE TIMING OF DEVELOPMENT AND THE IMPORTANCE AND DEGREE OF DEFINITION OF THE IDENTIFIED ENVIRONMENTAL EFFECTS ARE GIVEN.

 WIND ENERGY: ACHIEVEMENTS AND POTENTIAL. SYMPOSIUM PROCEEDINGS.
 UNIVERSITY OF SHERBROOKE, MAY 29, 1974. SHERBROOKE, CANADA, UNIVERSITY OF SHERBROOKE, 1974. P. 168-187.

THE ADVANTAGES OF VERTICAL AXIS WIND TURBINES ARE DISCUSSED BRIEFLY AND ATTENTION IS DRAWN TO THE IMPORTANCE OF GOOD LOW SPEED TORQUE

CHARACTERISTICS FOR SOME APPLICATIONS. DETAILS ARE GIVEN OF THE DESIGNS OF TWO MODEL SAVONIUS ROTORS: ONE OF THE CONVENTIONAL TYPE; THE OTHER INCORPORATING, IN ADDITION, LEADING EDGE SLOTS, TRAILING EDGE FLAPS AND OTHER FLOW GUIDING SURFACES. THE RESULTS OF COMPARATIVE TESTS CARRIED OUT IN A LOW-SPEED WIND TUNNEL SHOWED THAT THE HIGHEST EFFICIENCY, 55 PERCENT, WAS ACHIEVED WITH THE CONVENTIONAL ROTOR; THIS OCCURRED AT A VELOCITY RATIO OF 0.85. THE MAXIMUM EFFICIENCY WITH THE MODIFIED ROTOR WAS 43 PERCENT AT A VELOCITY RATIO OF 0.5. HOWEVER, THE MODIFIED ROTOR EXHIBITED A MUCH SUPERIOR TORQUE CHARACTERISTIC COMPARED WITH THAT OF THE CONVENTIONAL DESIGN. PROBABLE REASONS ARE GIVEN FOR THE OBSERVED PERFORMANCE CHARACTERISTICS. AN EVALUATION OF THE ANNUAL OUTPUT PER UNIT PROJECTED AREA, FOR EACH TYPE OF MACHINE, UNDER LIKELY WORKING CONDITIONS SHOWED THAT, FOR CONSTANT TORQUE OPERATION, THE SUPERIOR TORQUE CHARACTERISTIC OF THE MODIFIED ROTOR VIRTUALLY CANCELLED THE INFLUENCE OF ITS LOWER PEAK EFFICIENCY.

WIND MEASUREMENT AND DATA ANALYSIS IN A WINDMILL PLANT.
THE NETHERLANDS, EINDHOVEN UNIVERSITY OF TECHNOLOGY, DEPT. OF PHYSICS,
WIND ENERGY GROUP, REP. R-203-S, JULY 1, 1974. 5P.

AT THE EINDHOVEN UNIVERSITY OF TECHNOLOGY A FEW PERSONS IN THE SECTION OF FLUID DYNAMICS (PHYSICS DEPT.) ARE ENGAGED IN A WINDMILL PROJECT. THE OBJECT IS AN EXPERIMENTAL PLANT IN OPEN-AIR WITH THE PROPERTIES THAT ONE CAN: 1. MEASURE THE CHARACTERISTICS OF A MILL IN A SHORT TIME. 2. STUDY THE INFLUENCE OF FLUCTUATIONS IN THE WIND. 3. TRY OUT MATHEMATICAL MODELS. INVESTIGATIONS ON WIND MEASURING EQUIPMENT AND A DATA-ANALYZING SYSTEM ARE IN AN INITIAL STAGE. A FEW EXPERIMENTS HAVE BEEN CAPRIED OUT ON THE ROOF OF THE BUILDING, THE PLACE WHICH IS CHOSEN FOR A WINDMILL PLANT - FOR THE TIME BEING. THE MOST PRACTICAL WINDMETER IN AN EXPERIMENTAL PLANT SEEMS TO BE A CUPANEMOMETER. FIRST, HOWEVER, ONE HAS TO DETERMINE ITS PROPERTIES ACCURATELY; FOR INSTANCE, WITH A HOT-WIRE-ANEMOMETER AS REFERENCE. THE RESULTS OF THE MEASUREMENTS ARE ANALYZED BY MEANS OF A DIGITAL COMPUTER. A SYSTEM HAS BEEN DEVELOPED WHICH TRANSFERS THE INFORMATION BY PUNCH-TAPE TO THE COMPUTER. SUGGESTIONS ARE GIVEN FOR A MORE RAPID REGISTRATION SYSTEM.

 THE POTENTIAL CONVERSION OF WIND POWER TO ELECTRICAL ENERGY.
 WIND ENERGY: ACHIEVEMENTS AND POTENTIAL. SYMPOSIUM PROCEEDINGS.
 UNIVERSITY OF SHERBROOKE, MAY 29, 1974. SHERBROOKE, CANADA, UNIVERSITY
 OF SHERBROOKE, 1974. P. 214-235.

DESCRIBED ARE AN EXPERIMENTAL 100 W DARRIEUS WINDMILL, STORAGE IN LEAD/ACID BATTERIES, AND PROBLEMS WITH STARTING AND ANCHORING. PICTURES OF THE INSTALLATION ARE INCLUDED.

74-0300 MORSE F H
THE NATIONAL SOLAR ENERGY PROGRAM.
NTIS, 1974.
N75-24102

THE MAJOR EFFORTS WITHIN THE NATIONAL SOLAR ENERGY PROGRAM ARE DESCRIBED. THE FOLLOWING AREAS ARE INCLUDED: HEATING AND COOLING OF BUILDINGS, SOLAR THERMAL ENERGY CONVERSION, PHOTOVOLTAICS, BIOCONVERSION, WIND ENERGY CONVERSION. AND OCEAN THERMAL ENERGY CONVERSION.

74-0301 NATIONAL POWER SURVEY: ENERGY CONVERSION RESEARCH.
THE REPORT AND RECOMMENDATIONS OF THE TASK FORCE ON ENERGY CONVERSION
RESEARCH TO THE TECHNICAL ADVISING COMMITTEE ON RESEARCH AND DEVELOPMENT.
WASHINGTON, D.C., GOV'T. PRINT. OFFICE, JUNE 1974. 311P.

THIS REPORT CONTAINS THE 1974 DISCUSSIONS AND RECOMMENDATIONS OF THE FEDERAL POWER COMMISSION REGARDING ENERGY CONVERSION RESEARCH. AREAS OF CONSIDERATION INCLUDE FOSSIL FUEL TECHNOLOGY, NUCLEAR TECHNOLOGY, AND SOLAR, GEOTHERMAL, TIDAL, AND OCEAN THERMAL ENERGIES. ALSO INCLUDES ENERGY CONVERSION CYCLES AND EQUIPMENT (FUEL CELLS, MAGNETOHYDRODYNAMICS, ETC.), SUBSTITUTE FUELS, SITING AND ENVIRONMENTAL RESEARCH DEVELOPMENT, BY-PRODUCT APPLICATIONS, AND ENERGY STORAGE.

74-0302 NATIONAL POWER SURVEY: ENERGY SOURCES RESEARCH.
THE REPORT AND RECOMMENDATIONS OF THE TASK FORCE ON ENERGY SOURCES
RESEARCH TO THE TECHNICAL ADVISORY COMMITTEE ON RESEARCH AND DEVELOPMENT.
WASHINGTON, D.C., GOV'T. PRINT. OFFICE, JULY 1974. 125P.

EVALUATIONS OF RESEARCH AND DEVELOPMENT PROSPECTS, GOALS, AND RECOMMENDED FUNDING LEVELS FOR THE NEXT FIVE YEARS ARE CONTAINED IN THE 1974 NATIONAL POWER SURVEY REPORT. CONSIDERS THE ENERGY SOURCES OF COAL, PETROLEUM AND NATURAL GAS, OIL SHALE AND TAR SANDS, SOLAR ENERGY, GEOTHERMAL ENERGY, NUCLEAR FUELS, AND CONVERSION OF ORGANIC WASTES. INCLUDES AN APPENDIX ON SOLAR ENERGY.

74-0303 NEWMAN B G
MEASUREMENTS ON A SAVONIUS ROTOR WITH VARIABLE GAP.
WIND ENERGY: ACHIEVEMENTS AND POTENTIAL. SYMPOSIUM PROCEEDINGS.
UNIVERSITY OF SHERBROOKE, MAY 29, 1974. SHERBROOKE, CANADA, UNIVERSITY
OF SHERBROOKE, 1974. P. 115-136.

RESULTS OF WIND TUNNEL TESTS ON SIX MODELS OF SAVONIUS ROTORS (WITH VARIABLE GAPS) ARE GIVEN GRAPHICALLY. THEY ONLY GIVE AN INDICATION OF FULL SCALE PERFORMANCE BUT CAN BE USED TO COMPARE THE VARIOUS DESIGNS. THE S-ROTOR, IF SIMPLY CONSTRUCTED, IS USABLE IF POWER REQUIREMENTS ARE SMALL.

74-0304 AN OVERVIEW OF ALTERNATIVE ENERGY SOURCES FOR LDCS. NTIS, AUGUST 7, 1974. 372P. PB-239465

THE REPORT PRESENTS AN OVERVIEW OF ALTERNATIVE ENERGY SOURCES OF TYPES WHICH COULD BE OF SIGNIFICANT VALUE TO LESSER-DEVELOPED COUNTRIES IN ADJUSTING TO THE IMPACT OF SHARPLY HIGHER WORLD MARKET PRICES OF PETROLEUM. IT PRESENTS A HIGHLY CONDENSED REVIEW OF NON-CONVENTIONAL ENERGY TECHNOLOGIES, TOGETHER WITH SOME LIMITED COMMENTARY ON THE RELEVANCE OF THE MORE CONVENTIONAL TECHNOLOGIES IN NEW LESSER-DEVELOPED COUNTRY (LDC) ECONOMIC SETTINGS. IT ALSO PROVIDES A SUMMARY ON A COUNTRY-BY-COUNTRY BASIS OF THE CURRENT ECONOMIC POSTURE AND ENERGY RESOURCES ARRAY IN FIFTEEN LDC'S SELECTED AS BEING BROADLY REPRESENTATIVE--GEOGRAPHICALLY AND IN TERMS OF PETROLEUM-PRICE IMPACTS--OF THE QUITE WIDE RANGE OF SITUATIONS THAT NEED TO BE CONSIDERED.

74-0305 PARKES M E
THE USE OF WINDMILLS IN TANZANIA.
TANZANIA BUREAU OF RESEARCH ASSESSMENT AND LAND USE PLANNING, UNIVERSITY
OF DAR ES SALAAM, RESEARCH PAPER NO. 33, SEPTEMBER 1974. 75P.

BOTH GENERAL USE AND PARTICULAR USE OF WINDMILLS IN TANZANIA ARE REVIEWED. CHARACTERISTICS OF WIND PHENOMENA ARE DESCRIBED WHERE RELEVANT TO THE UNDERSTANDING OF WINDMILL SITE SELECTION, VARIOUS TYPES OF WINDMILLS ARE MENTIONED AND THEIR EXPECTED PERFORMANCES ARE PRESENTED. FROM AN ANALYSIS OF RELEVANT WIND DATA, THE POTENTIAL FOR WINDMILL USE IS ASSESSED AND PREDICTIONS ARE GIVEN FOR EXPECTED PERFORMANCE IN TWO GENERAL LOCATIONS. RECOMMENDATIONS FOR WINDMILL USE IN RURAL WATER SUPPLY, CATTLE WATERING AND IRRIGATION ARE DERIVED FROM CONSIDERATION OF APPROPIATE DESIGN CRITERIA. ANNUAL COSTS FOR THE LARGEST SIZE WINDMILL AND FOR THE EQUIVALENT DIESEL POWERED UNIT ARE COMPARED FOR WIND DATA ASSOCIATED WITH THE COASTAL AREAS. DESIGNS FOR WINDMILLS WHICH COULD BE LOCALLY MADE ARE DISCUSSED, AS WELL AS THE POSSIBILITY OF LOCAL MANUFACTURE OF CONVENTIONAL WINDMILLS.

WIND POWER AND THE VERTICAL-AXIS WIND TURBINE DEVELOPED AT THE NATIONAL
RESEARCH COUNCIL, OTTAWA, CANADA.
WIND ENERGY: ACHIEVEMENTS AND POTENTIAL . SYMPOSIUM PROCEEDINGS.
UNIVERSITY OF SHERBROOKE, MAY 29, 1974. SHERBROOKE, CANADA, UNIVERSITY
OF SHERBROOKE, 1974. P. 55-74.

A MAP WITH CONTOURS OF THE ESTIMATED WIND POWER AVAILABLE IN CANADA IS PREPARED. IT SHOWS LARGE AREAS WITH HIGH POWER POTENTIAL. A COMPARISON OF WIND ENERGY COST WITH ALTERNATE SOURCES SHOWS THAT THE CAPITAL COST OF CURRENT WIND MACHINES HAS TO BE REDUCED CONSIDERABLY IN ORDER TO MAKE WIND POWER COMPETITIVE WITH EXISTING SOURCES. THE DESIGN FEATURES, PERFORMANCE AND ECONOMICS OF A VERTICAL-AXIS WIND TURBINE, DEVELOPED AT THE NATIONAL RESEARCH COUNCIL, OTTAWA, ARE DESCRIBED. A CASE IS MADE THAT WITH THIS TURBINE DESIGN CONSIDERABLE CAPITAL COST SAVINGS ARE POSSIBLE.

74-0309 REY H A
A CHAT WITH A FIRETOWER.
ALTERN. SOURCES ENERGY NO. 14: 15-16, MAY 1974.

THE AUTHOR "CHATS" WITH AN OLD FIRETOWER WHO DAYDREAMS ABOUT BEING CONVERTED TO A WINDMILL TOWER.

 WIND POWERED WATER PUMPS IN INDIA. PAST, PRESENT AND FUTURE
 DEVELOPMENTS.
 ALL INDIA WORKSHOP ON FARM MACHINERY RESEARCH AND DEVELOPMENT, 7TH,
 PUNJAB AGRICULTURAL UNIVERSITY, LUDHIANA, APRIL 8-11, 1974. 26P.

WITH EMPHASIS ON INDIA, THE WORLD HISTORY OF NON-ELECTRIC GENERATING WINDMILLS IS SKETCHED. IT IS RECOMMENDED THAT APPROVAL AND ASSISTANCE BE GIVEN BY THE GOVERNMENT OF INDIA FOR WIDE SCALE RESEARCH AND IMPLEMENTATION OF LOW COST WINDMILLS DURING THE FIFTH FIVE YEAR PLAN.

74-0312 SHINYANGA WATER SUPPLY SURVEY. DRAFT FINAL REPORT.
AMERSFOORT, NETHERLANDS, D.H.V. CONSULTING ENGINEERS AND ARNHEM,
NETHERLANDS, ILACO INTERNATIONAL LAND DEVELOPMENT CONSULTANTS, APRIL
1974. P. 9-17, 43-56, AND 211-218.

THE REPORT DEALS FOR THE MAJOR PART WITH THE PLANNING AND DESIGN OF RURAL WATER SUPPLIES FOR DOMESTIC CONSUMPTION, OF THE SHINYANGA REGION'S POPULATION. METEOROLOGICAL DATA ARE GIVEN FOR A NUMBER OF STATIONS. THE USE OF MULTI-BLADE WINDMILLS FOR RURAL WATER SUPPLY IS STUDIED. IT IS CONCLUDED THAT ONLY SMALL CAPACITIES OF PUMPED WATER IN THE RANGE OF 20-15 CU M/DAY CAN BE OBTAINED IN THE SHINYANGA REGION, IF LESS RELIABLE OPERATION (FLUCTUATING WATER PRODUCTION) IS NOT A DISADVANTAGE.

 AERODYNAMIC PERFORMANCE THEORY FOR THE NRC VERTICAL-AXIS WIND TURBINE.
 NTIS, JUNE 1974. 38P.
 LTR-LA-160, N76-16618

A THEORY SUITABLE FOR DIGITAL COMPUTATION WAS DEVELOPED THAT ACCOUNTS FOR THE MAIN FEATURES OF THE PERFORMANCE OF THE NRC VERTICAL AXIS WIND TURBINE. THE THEORY TAKES INTO ACCOUNT THE CURVED BLADE SHAPE AND THE EFFECTS OF AIRFOIL STALLING ON PERFORMANCE. A COMPARISON IS MADE BETWEEN THEORETICAL AND EXPERIMENTAL POWER COEFFICIENT AND ROTOR DRAG COEFFICIENT. NUMERICAL RESULTS ARE PRESENTED TO SHOW THE THEORETICAL EFFECTS OF GEOMETRIC VARIABLES SUCH AS BLADE SOLIDITY AND ROTOR HEIGHT-DIAMETER RATIO, AND OF VARIATIONS IN AEROFOIL AERODYNAMIC CHARACTERISTICS.

 UNIVERSITY OF SHERBROOKE, MAY 29, 1974. SHERBROOKE, CANADA, UNIVERSITY
 OF SHERBROOKE, 1974. P. 199-213.

AN IREQ SEARCH FOR NEW METHODS OF SUPPLYING ELECTRICAL POWER TO REMOTE REGIONS OF QUEBEC HAS LED TO A DESIGN STUDY OF A WIND POWERED GENERATING SYSTEM. IN ORDER TO SATISFY THE DESIGN REQUIREMENTS AND TO MAKE USE OF EXISTING TECHNOLOGY, A WIND POWERED SYSTEM WITH COMPRESSED AIR STORAGE WAS SELECTED FOR THE STUDY. OBJECTIVES ARE TO SELECT SPECIFIC COMPONENTS, ESTIMATE THE SYSTEM PERFORMANCE AND MAKE ECONOMIC EVALUATIONS OF POSSIBLE FUTURE INSTALLATIONS. THIS PRESENTATION REVIEWS SOME OF THE CONSIDERATIONS INCLUDED IN THE DESIGN STUDIES.

 SYMPOSIUM ON RANN: RESEARCH APPLIED TO NATIONAL NEEDS, 1ST., WASHINGTON, D.C., NOVEMBER 18-20, 1973.

 PB-252603

THIS REPORT RECORDS THE PRESENTATIONS MADE AT THE FIRST RANN SYMPOSIUM AND PROVIDES EXAMPLES OF WHAT CAN BE ACHIEVED WHEN THE CAPABILITIES OF SCIENTISTS AND ENGINEERS ARE DIRECTED TOWARD NATIONAL PROBLEMS. THE ENERGY SECTION COVERS SUCH AREAS AS CONSERVATION PROGRAMS, ENERGY UNDER THE OCEANS, COAL GASIFICATION, GEOTHERMAL ENERGY, WIND ENERGY CONVERSION

AND SOLAR ENERGY. ENVIRONMENT IS CONCERNED WITH DISASTER MITIGATION, ENVIRONMENTAL THREATS TO MAN, THE MISSOURI LEAD BELT PROJECT, HUMAN HEALTH AND MERCURY, WEATHER MODIFICATION AND MANAGEMENT OF TEXAS COASTAL RESOURCES. PRODUCTIVITY INCLUDES SUCH AREAS AS RESOURCE ALLOCATION IN PUBLIC SAFETY SERVICES, TELECOMMUNICATIONS IN HEALTH CARE DELIVERY, ENZYNME ENGINEERING IN THE FOOD AND CHEMICAL INDUSTRIES, AUTOMATION IN MECHANICAL MANUFACTURING INDUSTRIES AND MAGNETIC SEPARATION IN THE MINING AND PROCESSING INDUSTRIES.

- 73-0134 ODUM H T ENERGY, ECOLOGY, AND ECONOMICS. AMBIO 2(6): 220-227, 1973.

THE ENERGY CONTROL OF THE ECONOMY AND THE RELATIONSHIP TO THE ENVIRONMENT ARE DISCUSSED. THE TRUE VALUE OF ENERGY TO SOCIETY IS THE NET ENERGY, WHICH IS FOUND AFTER THE ENERGY COSTS OF GETTING AND CONCENTRATING THAT ENERGY ARE SUBTRACTED. WORLDWIDE INFLATION IS DRIVEN IN PART BY THE INCREASING FRACTION OF FOSSIL FUELS THAT HAVE TO BE USED IN GETTING MORE FOSSIL AND OTHER FUELS. MANY CALCULATIONS OF ENERGY RESERVES WHICH ARE SUPPOSED TO OFFER YEARS OF SUPPLY ARE EXPRESSED AS GROSS ENERGY RATHER THAN NET ENERGY AND THUS MAY BE OF MUCH SHORTER DURATION THAN OFTEN MANY CALCULATIONS OF ENERGY RESERVES WHICH ARE SOCIETIES COMPETE FOR ECONOMIC SURVIVAL BY LOTKA'S PRINCIPLE WHICH SAYS THAT SYSTEMS WIN AND DOMINATE THAT MAXIMIZE THEIR USEFUL TOTAL POWER FROM ALL SOURCES AND FLEXIBLY DISTRIBUTE THIS POWER TOWARD NEEDS AFFECTING SURVIVAL. ENERGY SOURCES WHICH ARE NOW MARGINAL, BEING SUPPORTED BY HIDDEN SUBSIDIES BASED ON FOSSIL FUEL, BECOME LESS ECONOMIC WHEN THE HIDDEN SUBSIDY IS REMOVED. INCREASING ENÉRGY EFFICIENCY WITH NEW TECHNOLOGY IS NOT AN ENERGY SOLUTION, SINCE MOST TECHNOLOGICAL INNOVATIONS ARE REALLY DIVERSIONS OF CHEAP ENERGY INTO HIDDEN SUBSIDIES IN THE FORM OF FANCY, ENERGY-EXPENSIVE STRUCTURES. AN ECONOMY MUST MAXIMIZE ITS USE OF ENERGY FROM SUN, WIND, WATERS, AND WAVES. ENVIRONMENTAL TECHNOLOGY WHICH DUPLICATES THE WORK AVAILABLE FROM THE ECOLOGICAL SECTOR IS AN ECONOMIC HANDICAP. USE OF SOLAR ENERGY HAS ALREADY BEEN MAXIMIZED BY FORESTS AND FOOD PRODUCING PLANTS. THE ABILITY TO DO WORK DEPENDS ON THE ENERGY QUALITY AS WELL AS QUANTITY. MANY KINDS

OF GROWTH-PRIMING ACTIVITIES MAY FAVOR ECONOMIC VITALITY DURING PERIODS OF EXPANDING ENERGY AVAILABILITIES. THE MANY HIGH DENSITY AND GROWTH PROMOTING POLICIES AND STRUCTURES BECOME AN ENERGY LIABILITY DURING . PERIODS WHEN EXPANSION OF ENERGY SOURCES IS NOT POSSIBLE, BECAUSE THEIR HIGH ENERGY COST IS NO LONGER ACCELERATING ENERGY YIELD.

THE GENERAL ELECTRIC COMPANY SOLID POLYMER ELECTROLYTE (SPE) WATER ELECTROLYSIS TECHNOLOGY IS PRESENTED AS A POTENTIAL ENERGY CONVERSION METHOD FOR WIND-DRIVEN GENERATOR SYSTEMS. UNDER DEVELOPMENT SINCE 1967, THIS TECHNOLOGY IS RELATIVELY NEW, AND FURTHER SIGNIFICANT IMPROVEMENTS ARE PROJECTED OVER THE NEXT 5 TO 15 YEARS. ELECTROLYSIS LIFE AND PERFORMANCE DATA ARE PRESENTED FROM LABORATORY-SIZED SINGLE CELLS WITH HIGH CELL CURRENT DENSITY SELECTED (1000 ASF) FOR NORMAL OPERATION.

THIS ARTICLE DESCRIBES A WINDDRIVEN VEHICLE ON LAND OR WATER THAT IS ABLE TO RUN DOWNWIND FASTER THAN THE WIND SPEED. MATHEMATICAL ANALYSIS OF THE PERFORMANCE IS GIVEN. TRIAL RUNS IN WINDWARD AND DOWNWIND DIRECTION SHOW THE PRACTICABILITY OF SUCH A SYSTEM.

69-001/ EASTER B H
COMPUTER AIDED DESIGN OF POWER SYSTEMS USING ENERGY STORAGE.
PH.D. THESIS. ANN ARBOR, UNIVERSITY MICROFILMS, ORDER NO. 70-21,377,
1969. 130 P.

SCOPE AND METHOD OF STUDY: THE OBJECTIVE OF THIS STUDY IS THE DEVELOPMENT OF A DESIGN TECHNIQUE FOR THE COMPUTER-AIDED DESIGN OF POWER SYSTEMS WHICH HAVE ENERGY STORAGE UNITS AS AN INTEGRAL PART OF THE SYSTEM. A INTRODUCTION TO UNCONVENTIONAL POWER SOURCES REVEALS THE NEED FOR AN ENERGY STORAGE DEVICE AS AN INTEGRAL PART OF A POWER SYSTEM WHICH UTILIZES AN UNCONVENTIONAL SOURCE. THE SYSTEM TO BE MODELED IS THE ONE CURRENTLY UNDER INVESTIGATION BY OKLAHOMA STATE UNIVERSITY. THIS SYSTEM CONSISTS OF A WIND-POWERED GENERATOR SUPPLYING POWER TO AN ELECTROLYSIS CELL WHICH IN TURN STORES HYDROGEN AND OXYGEN AT HIGH PRESSURES. AN APPROPRIATE BACKGROUND STUDY IS MADE OF WIND GENERATION STUDIES AND SIMULATION SYSTEMS. THE SUITABILITY OF THE SIMULATION LANGUAGE, GPSS (GENERAL PURPOSE SIMULATION SYSTEM), IS PRESENTED IN DETAIL. AN INTRODUCTION TO THE FUNDAMENTALS OF GPSS IS GIVEN FOR THOSE WHO ARE UNFAMILIAR WITH THIS SIMULATION LANGAUGE. THE COMPUTER-AIDED DESIGN PROCEDURE IS OUTLINED AND EACH PORTION IS DISCUSSED. THE APPLICABILITY OF THIS DESIGN PROCEDURE TO A VARIETY OF NONLINEAR DESIGN PROBLEMS IS STRESSED. AN EXAMPLE POWER SYSTEM IS CARRIED THROUGH EACH STAGE OF THE DESIGN PROCEDURE AND THE FINAL COMPONENTS OF THE SYSTEM ARE SELECTED. THIS SAMPLE DEMONSTRATES THE VARIOUS STEPS IN THE DESIGN PROCEDURE. FINDINGS AND CONCLUSIONS: THE COMPUTER-AIDED DESIGN PROCEDURE THAT WAS DEVELOPED IS APPLICABLE TO ANY NONLINEAR PROCESS WHOSE NONLINEAR TRANSFER FUNCTIONS OCCUR SEQUENTIALLY. THESE NONLINEARITIES MAY BE TIME-INVARIANT, TIME-VARYING, OR STATISTICAL. THIS PROCEDURE STRESSES THE INTERPLAY BETWEEN COMPUTER SOLUTIONS AND ENGINEERING JUDGEMENT. A TECHNIQUE IS DEVELOPED FOR OBTAINING SOLUTIONS AT MANY POINTS ON A SEARCH GRID BY REPEATED GPSS SIMULATIONS IN ONE PROGRAM. THUS, ONE OF THE HYBRID COMPUTER TECHNIQUES IS NOW AVAILABLE TO USERS OF DIGITAL SIMULATION PROGRAMS.

 BARRAGEM ANEMOMOTRIZ. (WIND BARRAGE, AN INSTALLATION TO CAPTURE WIND ENERGY).
 LUANDA, ANGOLA, SERVICO METEOROLOGICA DE ANGELO, SEPTEMBER 1968. (IN PORTUGUESE)

DESCRIBED IS A SPECIAL TYPE OF A WIND AUGMENTING SYSTEM THAT CLAIMS TO CONVERT WIND ENERGY IN A MORE SIMPLE AND EFFICIENT WAY THAN CONVENTIONAL SYSTEMS WITH THE SAME CROSS AREA. THE AUGMENTOR CONSISTS OF A BARRAGE CLOSING A VALLEY, COMPOSED OF CYLINDRICAL FRAMES, PILED UP SO THAT WIND TUNNEL-LIKE APERTURES ARE FORMED IN WHICH WIND TURBINES ARE PLACED. DIMENSIONS AND POWER OUTPUT CHARACTERISTICS ARE GIVEN. WIND DATA ARE GIVEN OF THE (LATE) PORTUGUESE TERRITORIES AND APPROPRIATE SITES ARE INDICATED WHERE THIS METHOD COULD BE USED EFFECTIVELY.

68-0020 GLADWELL J K
A FIXED VENTURI WIND GENERATOR.
ELECT. REV. 182: 585, APRIL 19, 1968.

DESCRIBED IS A SMALL WIND GENERATOR USED FOR CHARGING BATTERIES FOR AUTOMATIC MARINE BEACONS HAVING A 12 V 32 W LAMP. THE WIND GENERATOR IS MOUNTED IN THE SAME NON-CORROSIVE ALUMINIUM STRUCTURE AS THE BEACON. IN THIS STRUCTURE A VENTURI IS BUILT TO FUNNEL THE WIND INTO THE FAN. THE VENTURI WAS SHOWN TO BE 100 PERCENT EFFICIENT WITH WINDS VARYING IN A DIRECTION 50 DEGREES EITHER SIDE OF THE FIXED AXIS.

 WIND ENERGY APPLIED TO THE GENERATION OF ELECTRICITY.
 REV. ELECTROTEC. 53(5): 202-210, 1967.

THIS ARTICLE IS A GENERAL REVIEW ON THE POSSIBILITIES OF GENERATING ELECTRICITY BY WIND ENERGY IN ARGENTINA. A LIST OF PUBLICATIONS ON VARIOUS ASPECTS OF THE PROJECT IS FOLLOWED BY A BRIEF DESCRIPTION OF A PROTOTYPE 50 KVA WIND GENERATOR. THE USE OF THIS GENERATOR FOR DIRECT PUMPING FROM WELLS AND WORKING IN PARALLEL WITH THE EXTERNAL NETWORK IS DESCRIBED. THE LOADING IS VARIED DEPENDING ON THE VELOCITY OF THE WIND. SUBJECTS DISCUSSED GENERALLY ARE THE QUALITY OF WIND GENERATED ELECTRICITY, LOW POWER GENERATORS FOR BATTERY CHARGING AND DOMESTIC PURPOSES, MEDIUM POWER GENERATORS MAINLY FOR IRRIGATION, AND HIGH POWER GENERATORS FOR SUPPLYING ENERGY TO CONVENTIONAL ELECTRICAL MACHINERY.

 IMPORTANCE OF WIND POWER FOR GERMAN ELECTRICITY SUPPLY.
 ELEKTRIZITAETSWIRTSCHAFT 64(7): 180-183, 1965. (IN GERMAN)

VARIOUS TEST INSTALLATIONS HAVE PROVED THE PRACTICABILITY OF PARALLEL OPERATION WITH THE SUPPLY SYSTEM. FURTHER, TO INCREASE THE POWERS OF SINGLE STATIONS TO 1000 KW APPEARS TECHNICALLY POSSIBLE. BUT FOR GERMAN CONDITIONS IT DOES NOT APPEAR POSSIBLE TO ACHIEVE ECONOMIC EFFICIENCY, EVEN IF LARGE NUMBERS WERE PRODUCED. THE REASONS FOR THIS ARE THE LARGE DIMENSIONS, THE REQUISITE RESERVES OF APPARATUS, THE LOW VALUE OF THE POWER, AND THE SHORT LIFE EXPECTATION.

 POWER FROM LOCAL ENERGY RESOURCES.
 UNITED NATIONS CONFERENCE ON NEW SOURCES OF ENERGY. PROCEEDINGS. NEW
 YORK, UNITED NATIONS, 1964. VOL. 1. GENERAL, P. 149-155.

TO AID DEVELOPMENT AND TO IMPROVE LIVING CONDITIONS IN MANY REMOTE, THINLY POPULATED AREAS A SUPPLY OF ENERGY IS A VERY IMPORTANT REQUIREMENT. IMPORTATION OF THIS ENERGY, EITHER THROUGH ELECTRICAL TRANSMISSION OR IN THE FORM OF FUEL, IS OFTEN PROHIBITIVELY EXPENSIVE. AN ALTERNATIVE, WHICH MAY BE MORE ECONOMICAL, IS THE EXPLOITATION OF LOCAL ENERGY RESOURCES SUCH AS WIND POWER, SOLAR ENERGY OR ORGANIC WASTES. THESE RESOURCES HAVE INDIVIDUAL CHARACTERISTICS WHICH NEED SPECIAL CONSIDERATION IN RELATION TO THE POSSIBLE POWER LOADS; AND THE LOADS SHOULD BE PLANNED TO MATCH THE UNCONVENTIONAL METHODS OF POWER PRODUCTION. THE USE OF LOCAL ENERGY RESOURCES IN COMBINATION MAY OFFER THE BEST PROSPECT OF SUCCESS IN PROVIDING A VALUABLE SERVICE TO REMOTE COMMUNITIES AND EXPERIMENTAL SCHEMES SHOULD BE ESTABLISHED TO T ST THE POSSIBILITIES UNDER PRACTICAL CONDITIONS.

 A STUDY OF THE HOURLY WIND SPEEDS AT CALCUTTA (DUM DUM) FROM THE POINT OF VIEW OF WIND POWER UTILIZATION.
 BANGALORE, INDIA, NATIONAL AERONAUTICAL LAB., JUNE 1963.

THE HOURLY WIND SPEED DATA OF CALCUTTA (DUM DUM) FOR THE YEARS 1958 TO 1960 HAVE BEEN ANALYZED. THE FREQUENCY DISTRIBUTION AND THE CUMULATIVE FREQUENCIES OF THE HOURLY WIND SPEEDS WERE COMPUTED AND USED TO WORK OUT THE ENERGY EXTRACTABLE FROM WIND. THE NUMBER OF HOURS OF LOW WIND, THE SPELLS OF SUCH LOW WINDS, AND THE DIURNAL VARIATION ARE DISCUSSED. THE ANNUAL MEAN WIND SPEED WORKS OUT TO 9 KM/HR. THE ANNUAL ENERGY OUTPUT OF A WIND ELECTRIC GENERATOR WITH 30 M2 SWEPT AREA, AND 12 PERCENT OVERALL POWER COEFFICIENT IS 1009 KWH. THE WATER PUMPING CAPACITY OF A WP-2 TYPE WINDMILL IS 30 500 KL (6,710,000 GAL) PER ANNUM OR 18,400 GAL PER DAY.

 WIND POWER.
 BRENNSTAFF-WAERME-KRAFT 14(7): 321-326, 1962. (IN GERMAN)

THIS ARTICLE IS A REVIEW OF THE PAPERS ON WIND POWER PRESENTED TO THE UNITED NATIONS CONFERENCE ON NEW ENERGY SOURCES, ROME, 1961. THEY DISCUSS THE PROBLEMS ENCOUNTERED IN HARNESSING AND USING THE ENERGY OF THE WIND AND DESCRIBE THE INVESTIGATIONS MADE IN MANY PARTS OF THE WORLD HAVING WIDELY-DIFFERENT CLIMATIC, GEOGRAPHICAL AND ECONOMIC CONDITIONS. THE COUNTRIES INTERESTED INCLUDED GREAT BRITAIN, FRANCE, DENMARK, WESTERN GERMANY, SPAIN, GREECE, HUNGARY, U.S.A., ALGERIA, EGYPT, ISRAEL, INDIA, ARGENTINA AND JAPAN. WIND POWER STUDIES CAN BE BROADLY DIVIDED INTO FOUR CATEGORIES: WIND MEASUREMENTS AND WIND BEHAVIOUR WITH THE OBJECT OF SELECTING SUITABLE SITES FOR WIND-DRIVEN PLANT; THE DESIGN OF THE PLANT AND THE MECHANICAL PROBLEMS INVOLVED; THE SMALL-SCALE GENERATION OF ELECTRICITY BY AUTONOMOUS PLANT; AND THE LARGE-SCALE GENERATION OF ELECTRICITY TO BE FED INTO A NETWORK. MANY COUNTRIES HAVE MADE EXTENSIVE WIND SURVEYS AND DENMARK, IN PARTICULAR, HAS INSTALLED, AT GEDSER, A 200 KW WIND DRIVEN GENERATOR WHICH SUPPLIES ELECTRICITY TO THE NETWORK.

CRITERIA FOR DESIGN OF WINDMILLS FOR LOW TO MODERATE WIND VELOCITIES.
BANGALORE, INDIA, NATIONAL AERONAUTICAL LAB. TECH. NOTE TN-WP-10-62,
AUGUST 1962. 25 P.

THE CRITERIA FOR THE DESIGN OF WINDMILLS FOR LOW TO MODERATE WIND VELOCITIES HAVE BEEN EXAMINED AND TWO DESIGNS OF WINDMILLS FOR PUMPING WATER ARE DESCRIBED. THE ELEMENTARY THEORIES OF WINDMILLS - THE MOMENTUM THEORY AND THE BLADE ELEMENT THEORY - GENERAL REQUIREMENTS AND OPTIMUM VALUES OF DESIGN VARIABLES ARE DISCUSSED. DIFFERENT DESIGNS OF ROTORS FOR BLADES HAVE BEEN STUDIED AND THE THEORETICAL VALUES OF TORQUE AND POWER DEVELOPED HAVE BEEN DETERMINED. FROM AN ANALYSIS OF THE PERFORMANCE CHARACTERISTICS, THE SPECIFICATIONS FOR TWO TYPES OF WINDMILLS, WHICH WOULD BE MOST SUITABLE FOR CONDITIONS IN INDIA, HAVE BEEN DRAWN UP.

62-0028 HABERMAN W L, CASTER E B
PERFORMANCE OF VERTICAL AXIS (CYCLOIDAL) PROPELLERS ACCORDING TO ISAY'S
THEORY.
INT. SHIPBUILD. PROGR. 9(90): 81-90, 1962.

A THEORETICAL METHOD PROPOSED BY ISAY FOR EVALUATING THE PERFORMANCE OF VERTICAL AXIS PROPELLERS WAS PROGRAMMED BY THE DAVID TAYLOR MODEL BASIN FOR USE ON HIGH-SPEED COMPUTERS. THE RESULTS OF NUMERICAL COMPUTATIONS OF THRUST AND TORQUE COEFFICIENT AND EFFICIENCY ARE PRESENTED FOR A SIXBLADED VERTICAL AXIS PROPELLER FOR A WIDE RANGE OF ADVANCE COEFFICIENTS AND MAXIMUM BLADE ANGLES. FROM THE RESULTS, IT IS CONCLUDED THAT, DUE TO CERTAIN ERRONEOUS ASSUMPTIONS, THE THEORETICAL METHOD AS PRESENTED BY ISAY CANNOT BE UTILIZED TO PREDICT THE PERFORMANCE OF VERTICAL AXIS PROPELLERS IN A QUALITATIVE WAY.

 D. E. F. WIND POWER COMMISSION REPORT.
 ELEKTROTEKNIKEREN 58(14): 326-330, 1962. (IN DANISH)

A COMMISSION OF THE DANISH POWER STATIONS ISSUED A REPORT ON THE USES OF WIND POWER FOR THE GENERATION OF ELECTRICITY. IT IS SHOWN THAT CURRENT OBTAINED FROM EXISTING WIND POWER STATIONS IS SLIGHTLY MORE EXPENSIVE THAN THAT OBTAINED FROM THE SWEDISH WATER POWER STATIONS. BUT CHEAPER THAN THAT OBTAINED FROM EXISTING STEAM POWER STATIONS IN DENMARK. BY USING MORE EFFICIENT EQUIPMENT, THE COST OF CURRENT OBTAINED FROM THIS POWER STATION CAN BE REDUCED EVEN MORE, TO A LEVEL OF 3.8 OERE PER KWH.

62-0031 KOGAN A, NISSIM E
SHROUDED AEROGENERATOR DESIGN STUDY. PART 1 -- TWO-DIMENSIONAL SHROUD
PERFORMANCE.
ANNUAL CONFERENCE ON AVIATION AND ASTRONAUTICS, 4TH. PROCEEDINGS.
JERUSALEM, WEIZMANN SCIENCE PRESS OF ISRAEL, 1962. P. 67-82.

THIS IS A PRELIMINARY STUDY OF THE PERFORMANCE OF A SHROUDED WINDMILL. A ONE-DIMENSIONAL APPROXIMATION ANALYSIS REVEALS THE DEPENDENCE OF GENERATOR POWER COEFFICIENT ON TURBINE LOAD FACTOR CD, DIFFUSER PRESSURE RECOVERY CPR, AND OVERALL PRESSURE COEFFICIENT CP. THE PERFORMANCE OF TWO DIMENSIONAL AND "HALF-MODEL" CONFIGURATIONS IS TESTED BY SIMULATING A TURBINE ROTOR BY AN ENERGY-DISSIPATING SCREEN. THE SMALL DEPENDENCE OF CPR AND CP UPON CD IS DEMONSTRATED EXPERIMENTALLY. A MAXIMUM POWER COEFFICIENT AND A CORRESPONDING OPTIMUM LOAD FACTOR ARE CALCULATED ON THIS BASIS AS FUNCTIONS OF CPR AND CP; COCPT IS A FUNCTION CPR ONLY.

WIND AS A SOURCE OF ENERGY IN SCOTLAND.
SYMPOSIUM ON NATURAL RESOURCES IN SCOTLAND, EDINBURGH, OCTOBER 31 ~
NOVEMBER 2, 1960. 16 P.

THE FACTORS INFLUENCING THE COST OF SUPPLYING ENERGY TO ANY PARTICULAR AREA ARE DISCUSSED IN RELATION TO BOTH CONVENTIONAL AND UNCONVENTIONAL SOURCES OF ENERGY. WIND POWER CHARACTERISTICS ARE THEN CONSIDERED AND DATA FOR WIND POWER POTENTIAL IN SCOTLAND ARE GIVEN. THESE ARE BASED ON A WIND POWER SURVEY MADE, A FEW YEARS AGO, BY THE ELECTRICAL RESEARCH ASSOCIATION. THE CONCLUSION REACHED IS THAT THE TOTAL WIND POWER CAPACITY WHICH MIGHT BE INSTALLED ECONOMICALLY IN SCOTTISH COASTAL AREAS IS RATHER GREATER THAN THAT FOR HYDRO-ELECTRIC POWER IN THE WHOLE COUNTRY. DIFFERENT SIZES OF WIND POWER PLANTS ARE CONSIDERED WITH THREE FORMS OF UTILIZATION AND SUGGESTIONS FOR WORK TO BE DONE TO FURTHER WIND POWER DEVELOPMENT ARE MADE.

60-0018 JAROSZEWICZ Z
PROBLEMS OF WIND POWER EXPLOITATION IN POLAND AND IN THE WORLD.
PRZEGL. ELEKTROTECH. 36(3): 103-106, 1960. (IN POLISH)

EXHAUSTION OF COMBUSTIBLE FUELS MAY OCCUR IN THE FORESEEABLE FUTURE AND ATOMIC POWER PLANTS STILL PRESENT CONSIDERABLE PROBLEMS. WIND POWER IS UNIVERSALLY AVAILABLE AND RECENT PROGRESS IN CONSTRUCTION OF WIND-DRIVEN ELECTRIC GENERATORS HAS PROVED THAT IT CAN BE ECONOMICALLY EXPLOITED, EITHER BY SMALL LOCAL UNITS 0.5-10 KW OR BY A SYSTEM OF LARGE UNITS 50-500 KW, OPERATING-DIRECTLY ON NET. STABILITY IS ACHIEVED FOR VARIABLE WIND SPEEDS AND LOADING CONDITIONS IF THE RATINGS OF INDIVIDUAL UNITS ARE SMALL COMPARED WITH THE NET POWER. COST COMPARISON WITH COMBUSTIBLE AND NUCLEAR FUEL CELLS IS SHOWN TO BE FAVOURABLE. FURTHER STABILITY AND RELIABILITY CAN BE ACHIEVED BY COMBINING WIND AND DIESEL SETS AND BY USING WIND STORAGE PUMPING IN HYDRAULIC STATIONS.

58-0022 THE LIGHT ALLOY WIND TURBINE PROPELLERS OF ELECTRICITE DE FRANCE. REV. ALUMINIUM 35: 1229-1236, 1958. (IN FRENCH)

WIND POWER BEING MUCH MORE ABUNDANT THAN HYDRO POWER AND MOREOVER PRACTICALLY UNLIMITED, SPECIALISTS HAVE PAID, IN THE VARIOUS COUNTRIES, A PARTICULAR ATTENTION TO THE FINDING OF SOLUTIONS WHICH WOULD BE APPROPRIATE TO GET IT HARNESSED. ELECTRICITE DE FRANCE TOOK AN ACTIVE PART IN THIS RESEARCH. AFTER HAVING COLLECTED THE ESSENTIAL STATISTICAL DATA THROUGH ANEMOMETRIC MEASURES, THEY FOSTERED THE BUILDING OF TWO AEROGENERATORS WITH LIGHT ALLOY PROPELLERS, AT PRESENT UNDER EXPERIMENTATION AT NOGENT-LE ROI (EURE-ET-LOIR) AND AT SAINT-REMY-DES-LANDES (MANCHE). THE DIAMETERS OF THE PROPELLERS ARE 99 FT AND 69 FT 7 INCH. THEIR POWER CAPACITY IS RESPECTIVELY 640 KW AT 52 FT/SEC AND 132 AT 39 FT/SEC.

57-0026 SABININ G K
ON A NEW SCHEME FOR A WINDMILL GENERATOR WITH PNEUMATIC POWER TRANSMISSION.
PROM. AERODINAMIKA NO. 8: 197-205, 1957. (IN RUSSIAN)

57-0027 WINDMILL 'DE HOOP', WERVERSHOOF, NOORD HOLLAND. ELEKTROTECHNIEK 35(16): 376-379, 1957. (IN DUTCH)

AN OLD-FASHIONED DUTCH WINDMILL HAS BEEN EQUIPPED WITH A 40 KW ASYNCHRONOUS ELECTROMOTOR CONNECTED WITH THE UTILITY NETWORK, IN FEEBLE WINDS BOTH THE WIND ROTOR AND THE ELECTROMOTOR WILL SUPPLY ENERGY TO THE GRINDING MILLSTONES. IN STRONG WINDS THE WIND-DRIVEN ELECTROMOTOR ACTS AS AN ASYNCHRONOUS GENERATOR, PROVIDING THE UTILITY NETWORK WITH ENERGY. A CIRCUIT DIAGRAM AND SOME OPERATION CHARACTERISTICS OF THE PLANT ARE GIVEN.

56-0039 ABE S
ON THE THEORY OF WINDMILLS.
INST. HIGH SPACE MECH. REP. 7(67): 135-148, 1956.

THE THEORY OF THE CHARACTERISTICS OF WINDMILLS UNDER THE CONSTANT WIND SPEED IS STATED WITH SPECIAL REFERENCE TO (I) THE EFFECT OF THE NUMBER OF BLADES, (II) THE MUTUAL INTERFERENCE OF THE BLADE ELEMENTS TO THE LIFT COEFFICIENT, (III) THE EFFECT OF THE INDUCED ROTATIONAL VELOCITY IN THE SLIPSTREAM AND (IV) THE STARTING CHARACTERISTICS. THE POWER COEFFICIENT CURVE OF THE MODEL WINDMILLS CALCULATED OUT BY THIS THEORY IS SHOWN TO COINCIDE FAIRLY WELL WITH THE EXPERIMENTAL RESULTS. THE BEST DISTRIBUTION OF THE CIRCULATION WHICH GIVES THE MAXIMUM POWER COEFFICIENT IS THEN FOUND FOR THE GIVEN BLADE NUMBER, FOR THE GIVEN RATIO OF THE TIP SPEED TO THE WIND SPEED, AND FOR THE GIVEN RATIO OF THE DRAG COEFFICIENT. SEVERAL DIAGRAMS ARE ALSO DRAWN UP FOR THE PURPOSE OF THE DESIGN.

 WIND DISTRIBUTION DATA IN GERMANY FOR THE UTILIZATION OF WIND ENERGY.
 STUDIENGESELLSCHAFT WINDKRAFT, STUTTGART, NO. 3, 1954. 107 P.

A GRAPHICAL PRESENTATION OF WIND VELOCITY AND WIND ENERGY DISTRIBUTION, AND SEASONAL AND DAILY VARIATIONS OF MEAN WIND SPEEDS FOR SOME 50 RECORDING INSTRUMENTS IN 40 METEOROLOGICAL STATIONS IN WESTERN GERMANY ARE PRESENTED. INCLUDED ARE A TOPOGRAPHICAL MAP AND LOCATION OF WINDMEASURING INSTRUMENTS FOR EVERY STATION.

54-0044 CHAPLIN S
ENFIELD ANEMO-ELECTRIC POWER PLANT DEVELOPMENTS IN GREAT BRITAIN.
0.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 33. LONDON,
H.M.S.O., 1954. P. 275-280.

THE AUTHOR GIVES A DETAILED DESCRIPTION OF THE ENFIELD 100 KW PLANT, TO BE BUILT ACCORDING TO THE PRINCIPLES PROPOSED BY ANDREAU (FRANCE). THE WIND TURBINE HAS HOLLOW PROPELLERS, WHICH ON ROTATING DRAW UP AIR THROUGH THE HOLLOW TUBULAR TOWER SHAFT, IN WHICH IS INSTALLED AN AIR TURBINE COUPLED TO A SYNCHRONOUS GENERATOR.

54-0045 CHRISTALLER H
INSTRUMENTS AVAILABLE IN GERMANY FOR MEASURING WIND POWER.
0.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 25. LONDON,
H.M.S.O., 1954. P. 189-191.

THIS IS A SURVEY OF THE BEST AVAILABLE GERMAN INSTRUMENTS FOR MEASURING WIND POWER.

54-0046 CHRISTALLER H
THE PRESENT DEVELOPMENT AND THE EXISTING POSITION OF THE UTILIZATION OF
WIND POWER IN GERMANY.
0.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 4. LONDON, H.M.S.O.,
1954. P. 11-16.

THIS IS A GENERAL NOTE ON THE UTILIZATION OF WIND POWER, SPECIFICALLY IN GERMANY. THE COASTS AND NORTHERN GERMAN PLAINS OFFER THE BEST POTENTIALITIES FOR WIND POWER UTILIZATION. THE AUTHOR STATES THE NEED FOR EVALUATING EXPERIMENTALLY THE FLUCTUATING MECHANICAL STRESSES IN BLADES AND TOWER. HE ALSO CONSIDERS GENERATORS RUNNING AT CONSTANT SPEED BY ADJUSTING BLADE PITCH MORE FAVOURABLE THAN THE COMBINATION OF VARIABLE FREQUENCY GENERATORS (AC OR DC) WITH RECTIFIERS. HE MEMORATES THE COMBINED RESEARCH ACTIVITIES OF THE 'VEREINIGUNG DEUTSCHER ELEKTRIZITAETSWERKE' AND THE RESEARCH ASSOCIATION FOR WIND POWER, STUTTGAPT. THE LATTER INTENDS TO ERECT A 100 KW INSTALLATION, FEEDING INTO THE UTILITY NETWORK.

54-0047 CHRISTALLER H
WIND VELOCITY AND ECONOMIC ROTATIONAL SPEED OF WINDMILLS.
O.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 35. LONDON,
H.M.S.O., 1954. P. 285-292.

DISCUSSED ARE SOME PRACTICAL QUESTIONS LINKED WITH THE FIXING OF THE ROTATIONAL SPEED OF A WINDMILL.

54-0048 CRESCENT C
NOTE ON THE UTILIZATION OF WIND POWER.
0.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 8. LONDON,
H.M.S.O., 1954. P. 47-48.

THIS SMALL NOTE DESCRIBES RESEARCH ACTIVITIES AND PARTICIPATING ORGANIZATIONS IN FRANCE. THE AUTHOR STATES THAT A HUNDRED MEASURING INSTRUMENTS, EVALUATING WIND ENERGY DENSITY, HAVE BEEN SET UP IN FRANCE, NORTHERN AFRICA AND OTHER CERTAIN TERRITORIES OF THE FRENCH UNION. HE SUMMARIZES SOME ATTRACTIVE DISTRICTS FOR WIND POWER UTILIZATION.

54-0049 FRANKENBERGER E
THE DAILY REGIME OF USABLE WIND ENERGY.
0.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 18. LONDON H.M.S.O., 1954. P. 133-136.

SOME RESULTS ARE GIVEN OF THE METEOROLOGICAL OBSERVATIONS NEAR QUICKBORN/HOLSTEIN MADE BY THE METEOROLOGICAL OFFICE FOR NORTH WESTERN GERMANY IN 1951. THEY CONTAIN THE MAGNITUDE AND SEASONAL CHANGES OF THE DAILY COURSE OF THE USABLE WIND ENERGY.

54-0050 GOLDING E W
MEMORANDUM ON THE MEASUREMENT OF WIND VELOCITY AND POWER.
0.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 26. LONDON,
H.M.S.O., 1954. P. 193-205.

THE AVAILABLE ENERGY IN A CERTAIN WIND REGIME CAN BE CALCULATED FROM VELOCITY DURATION CURVES OBTAINED BY HOURLY MEAN VELOCITY RECORDINGS. IT CAN EASILY BE SHOWN THAT THE ACTUAL ENERGY IN FLUCTUATING WINDS ALWAYS EXCEEDS THIS CALCULATED VALUE. THE ENERGY TO BE EXTRACTED, HOWEVER, HAS BEEN LIMITED BY THE ACTUAL WIND TURBINE CHARACTERISTICS, SUCH AS CUT-IN SPEED, FURLING VELOCITY, AND THE INERTIA OF THE MACHINE IN FOLLOWING QUICK VELOCITY FLUCTUATIONS. A DISCUSSION OF THIS MATTER INCLUDING EXAMPLES HAS BEEN PRESENTED IN THIS ARTICLE.

54-0051 GCLDING E W
NOTE ON THE ESTIMATION OF THE TOTAL PRACTICABLE INSTALLED CAPACITY OF WIND POWER PLANT IN ANY COUNTRY.

0.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 1. LONDON, H.M.S.O., 1954. P. 1-3.

IN THE UNITED KINGDOM AN ATTEMPT IS BEING MADE TO ESTIMATE THE TOTALLY POSSIBLE WIND ENERGY CAPACITY THAT CAN BE INSTALLED IN ALL SITES WHICH ARE HILLS OR RIDGES, CHOSEN BY STUDY OF WIND CHARTS OR BY ACTUAL INSPECTION. THE STUDY IS BASED ON STANDARD WIND TURBINES OF 50 M PROPELLER DIAMETER, MUTUALLY SPACED AT 400 M.

54-0052 GOLDING E W
POSSIBILITIES OF WIND POWER.
LECTURE DELIVERED BEFORE INSTITUTION OF EGYPTIAN ENGINEERS, CAIRO,
NOVEMBER 22, 1954.

54-0053 HALDANE T G N
PROBLEMS IN LARGE SCALE WIND POWER GENERATION.
O.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 2. LONDON,
H.M.S.O., 1954. P. 5-7.

THIS NOTE IS ON PROBLEMS IN LARGE-SCALE ELECTRICITY GENERATION BY WIND POWER IN GREAT BRITAIN. THE PRESENT RESEARCH IS AIMED AT SAVING COAL RATHER THAN PRODUCING FIRM POWER. A FEW 100 KW WINDMILLS HAVE BEEN TESTED IN GREAT BRITAIN AS A PROTOTPYE FOR 1000 TO 2000 KW PLANTS TO BE CONSTRUCTED.

54-0054 HALDANE T G N
THE LOCATION AND OPERATION OF WIND-DRIVEN PLANT.
O.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 21. LONDON,
H.M.S.O., 1954. P. 147-148.

IM THIS SHORT NOTE THE AUTHOR ASSUMES THAT RESULTS OF A STUDY OF CORRELATION BETWEEN WIND REGIMES AND RAINFALL COULD BE QUITE SUFFICIENT TO COMBINE UTILIZATION OF WIND POWER AND HYDRO-ELECTRIC SYSTEMS.

54-0055 JONES R L
WIND-POWER POTENTIAL; A SMALL-SCALE EXPERIMENT.
NEW ZEALAND, DOMINION PHYS. LAB., DEPT. SCI. IND. RES., REP. NO. R 200,
JUNE 29, 1953. 10 P. ALSO: O.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH.
PAP. NO. 45. LONDON, H.M.S.O., 1954. P. 423-433.

A SMALL-SCALE EXPERIMENT WAS CARRIED OUT AT MOORE'S VALLEY GEOPHYSICAL FIELD LABORATORY TO INVESTIGATE THE RELATIONSHIP BETWEEN WIND VELOCITY AND ELECTRIC POWER GENERATED BY A PROPELLER-DYNAMO UNIT OVER A PERIOD OF 17 MONTHS. THE RESULTS FOR FOUR MONTHS ARE ANALYZED IN DETAIL.

JUUL J
CONVERSION OF WIND POWER PLANT FROM DIRECT CURRENT TO ALTERNATING CURRENT
OUTPUT.
O.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 39. LONDON,
H.M.S.O., 1954. P. 371-379.

THIS REPORT IS ON RECONSTRUCTION OF THE DISMANTLED SMIDTH BOGOE DC PLANT INTO A 40 KW AC POWER PLANT CONNECTED TO THE SEAS UTILITY NETWORK. DISCUSSION ON OPERATING EXPERIENCE ILLUSTRATED WITH PERFORMANCE CHARACTERISTICS AND A DETAILED CIRCUIT DIAGRAM OF THE PLANT IS INCLUDED.

54-0057 JUUL J
WIND POWER PLANTS IN DENMARK.
O.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 40. LONDON,
H.M.S.G., 1954. P. 381-387.

THIS REPORT IS ON THE ACTIVITIES OF THE DANISH SOUTH EAST ZEALAND ELECTRICITY COMPANY SEAS, CONCERNING DESIGN, ERECTION, AND OPERATION OF THE 8 M PROPELLER DIAMETER VESTER EGESBORG TRIAL MILL. IN A PRELIMINARY STAGE WIND MEASUREMENTS WERE CARRIED OUT AND A LARGE NUMBER OF WING PROFILES HAD BEEN TESTED IN A WIND TUNNEL.

 DIRECT METHOD OF MEASURING WIND ENERGY USED BY THE ATHENS NATIONAL TECHNICAL UNIVERSITY.
 0.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 30. LONDON, H.M.S.O., 1954. P. 259-269.

EXPERIMENTS DURING ALMOST ONE YEAR WITH A SMALL WIND POWER PLANT SHOWED THAT THE ENERGY PRODUCED WAS NOT PROPORTIONAL TO THE CUBE OF THE WIND SPEED BUT MUCH LOWER. SOME OBJECTIONS ARE MADE TO DEVELOPMENT AND CONSTRUCTION OF LARGE PLANTS.

54-0064 SERRA L
ESTIMATION OF THE QUANTITY OF WIND ENERGY ANNUALLY UTILIZABLE IN FRANCE.
O.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 5. LONDON,
H.M.S.O., 1954. P. 17-26.

FROM AVAILABLE DATA ON THE WIND REGIME IN FRANCE, A STUDY IS MADE TO ESTIMATE THE TOTALLY UTILIZABLE QUANTITY OF WIND ENERGY, BASED ON 50 M DIAMETER WIND POWER UNITS GENERATING ANNUALLY 4000 KWH PER KW INSTALLED.

54-0065 SERRA L
NOTE ON THE WIND REGIME IN FRANCE COMPARED WITH THAT OF SOME OF THE WATER COURSES.
0.E.C., P.R.A. WORKING PARTY NO. 2. TECH PAP. NO. 12. LONDON,
H.M.S.O., 1954. P. 91-94.

THIS NOTE IS ON A LONG RANGE STUDY ON AVAILABLE POWER FROM DIFFERENT WIND REGIMES IN FRANCE COMPARED WITH LOCALLY AVAILABLE HYDRO-ELECTRIC ENERGY. FOR THE PYRENEES AND THE ALPS IT IS CONCLUDED THAT, USING INTERCONNECTED SYSTEMS, WIND POWER CAN PROVIDE AN APPRECIABLE ENERGY CONTRIBUTION DURING THE WINTER PERIOD.

54-0066 SERRA L
VARIATIONS OF THE WIND WITH LOCAL RELIEF. RESULTS OF WIND TUNNEL TESTS.
O.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 14. LONDON,
H.M.S.O., 1954. P. 103-111.

THIS PAPER REPORTS RESULTS OF AN INVESTIGATION ON MODELS IN A WIND TUNNEL.

54-0067 SERRA L
WIND REGIMES IN FRANCE.
0.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 13. LONDON,
H.M.S.O., 1954. P. 95-101.

RESULTS OF WIND DATA RECORDED DURING THREE YEARS AT 90 STATIONS IN FRANCE COORDINATED BY ELECTRICITE DE FRANCE ARE GIVEN.

54-0068 STASTIK WIND POWER ELECTRICAL GENERATING STATION A.C.S., ITALY.
0.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 34. LONDON,
H.M.S.O., 1954. P. 281-284.

THE STASTIK AEROGENERATOR CONSISTS OF A REINFORCED CEMENT BASE AND A

REVOLVING BASE AND IN THE CENTRE AN AXIAL AND RADIAL BEARING. THE CENTRE OF THE REVOLVING BASE SUPPORTS A SYSTEM OF VERTICAL COLUMNS AND A VARIABLE AND INDEFINITE NUMBER (ACCORDING TO THE DIMENSIONS, USE AND DESIRED CHARACTERISTICS) OF PARALLEL HORIZONTAL AXIS BLADE ROTORS. LATERAL SHAFTS ORIENT THE APPARATUS ACCORDING TO THE DIRECTION OF THE WIND. A SPECIAL SYSTEM OF REGULATORS ENABLES THE ROTORS TO TURN AT ALMOST CONSTANT SPEED IN SPITE OF VARIATIONS IN WIND SPEEDS. THIS REPORT DEALS WITH THE SPECIAL CHARACTERISTICS OF THE STASTIK INVENTION COMPARED WITH CONVENTIONAL WIND GENERATORS.

54-0069 STODHART A.H
THE GENERÁL REQUIREMENTS OF SITES FOR WIND-DRIVEN GENERATORS.
O.E.E.C., P.R.A. WORKING PARTY NO. 2. TECH. PAP. NO. 23. LONDON,
H.M.S.O., 1954. P. 181-184.

DISCUSSED ARE REQUIREMENTS FOR SITE SELECTION. MAJOR REQUIREMENTS ARE:

1. THE DISTRICT SHOULD BE WINDY. 2. SMOOTHLY CONTOURED HILLS WITH GOOD EXPOSURE, AND PREFERABLY RIDGE-SHAPED SHOULD BE SELECTED. 3. ACCESS TO THE HILL SHOULD BE SATISFACTORY AND THE NEAREST POWER LINE SHOULD BE AT NO GREAT DISTANCE. 4. THE POSSIBILITIES OF (A) COMBINING WIND AND WATER POWER AND (B) GROUPING THE WIND GENERATORS IN "WIND POWER AREAS".

46-0016 ARSANDAUX L
CONSEQUENCES OF THE INCREASE OF WIND GENERATOR POWER.
CONGRESS DU VENT. PROCEEDINGS, 1946. P. 91-96. (IN FRENCH)

REFERRING TO A PROPOSAL BY LANAUD AND POGGI TO CONSTRUCT A 1000 KW WIND GENERATOR, THE AUTHOR CONSIDERS SOME CONSTRUCTIONAL AND ECONOMIC ASPECTS WHEN INCREASING THE (LINEAR) SIZE OF A MACHINE. FOR A GIVEN TYPE THE POWER INCREASES WITH THE SQUARE, THE WEIGHT (INCLUDING TOWER) WITH THE CUBE AND SO THE KWH PRICE WITH THE 2/3 POWER OF SIZE. THE AUTHOR COMPARES MAXIMUM POWER OUTPUT WITH FIXED BLADES (BETWEEN CERTAIN VELOCITY LIMITS) TO CONSTANT POWER OUTPUT IN THE UPPER VELOCITY RANGE, THE LATTER REDUCING AERODYNAMIC EFFICIENCY SOMEWHAT, BUT KEEPING THE LOADS ON BLADES AND STRUCTURE LIMITED. CONSIDERATIONS ARE GIVEN TO THE NON-UNIFORMITY OF THE FLOW, TO PROBLEMS OF THE INERTIA OF THE ROTOR INCREASING WITH THE FOURTH POWER OF SIZE, AND INSTALLATION AND MAINTENANCE OF HEAVY GENERATORS ON HIGH TOWERS.

45-0010 ELECTRIC POWER FROM THE WIND - 1. ELECTR. WORLD 123: 73-75, 1945.

DISCUSSED IS THE FEASIBILITY FOR USE OF WIND POWER AS AN ADJUNCT TO EXISTING POWER SOURCES FOUND IN A FEDERAL POWER COMMISSION STUDY. DETAILS OF THE DESIGN AND ADVANTAGEOUS OPERATION OF A 7500 KW TWIN-WHEEL UNIT ON A 500 FT TOWER ARE ALSO COVERED.

45-0011 ELECTRIC POWER FROM THE WIND - 2. ELECTR. WORLD 123: 102-104, 1945.

EVIDENCE POINTS STRONGLY TO WIND AS A CONSISTENT AND RELIABLE POWER SOURCE IF APPROPRIATELY APPLIED. ANALYSIS OF WEATHER BUREAU RECORDS INDICATES THAT THE DEGREE OF VARIATION AND DURATION OF PERIODS OF DEFICIENCY MAY WELL PROVE LESS MARKED THAN FOR HYDRO POWER.

- 45-0012 THOMAS WIND-POWER UNIT. ELECTR. TIMES VOL. 108, JUNE 21, 1945.
- 45-0013 WIND POWER. PLANS FOR 7500 KW UNITS. ELECTR. REV. 137(3528): 18, 1945.
- 45-0014 WIND-POWER STUDIES SUGGEST FUTURE COMMERCIAL POSSIBILITIES. POWER 89(6): 64-66, JUNE 1945.

ENGINEERING STUDIES MADE UNDER THE DIRECTION OF THE FEDERAL POWER COMMISSION SHOW THAT RECENT DEVELOPMENTS HAVE BROUGHT LARGE-SCALE ELECTRIC POWER GENERATION FROM THE WIND WITHIN OUR GRASP. DESIGNS FOR UNITS UP TO 7500-KW ON TOWERS 500 FT HIGH ARE SUGGESTED.
