and the National Technical Information Service.**

# ABOUT NTIS

The National Technical Information Service (NTIS) is an agency of the U.S. Department of Commerce. It is the central source for the public sale of U.S. Government-sponsored research, development and engineering reports, as well as foreign technical reports and other analyses prepared by national and local government agencies, their contractors or grantees. NTIS is one of the world's leading processors of specialty information.

The NTIS information collection exceeds 1.3 million titles, about 300,000 of which contain foreign technology or marketing information. All are permanently available for sale, either directly from the 80,000 titles in shelf stock or from the microfiche masters of titles less in demand. Seventy thousand new reports of completed research are added to the data base annually. In the same period NTIS supplies its customers with more than 6 million documents and microforms. It ships about 25,000 information products daily.

Full summaries of current U.S. and foreign research reports and other specialized information, in hundreds of subject categories, are published regularly by NTIS in a wide variety of weekly newsletters, a biweekly journal, an annual index and in various subscription formats for other Federal agencies. The complete texts of the reports cited are sold in paper and microform.

The most timely abstracts are continually grouped by NTIS into paperbound "Published Searches" covering some 2,200 topical subject areas. In addition, customers with a well-defined continuing interest can subscribe to a standing order microfiche service (SRIM) enabling them to automatically receive the full texts of only those documents relating to their individual requirements.

NTIS sells its technical information products and services under the provisions of Title 15 of the U.S. Code (1151-7). The law established a clearinghouse for scientific, technical and engineering information and directs NTIS to be self-supporting. It is a *unique* Government agency sustained only by its customers, operating very much as a business while in the public service. All the costs of NTIS products and services including rent, telephone, salaries, marketing, postage and all the other usual business expenses are paid from sales income, not tax-supported Congressional appropriations.

## NTIS/USAID INTERNATIONAL PROGRAM

The NTIS Office of International Affairs helps coordinate a U.S. Agency for International Development funded program to assist less developed countries obtain needed scientific and technical information. A worldwide network of 40 organizations cooperates with NTIS in the program. A major program objective is to make non-U.S. nationals and organizations aware of the range of available NTIS information and how it can be obtained.

NTIS is an active worldwide disseminator of technical information. The network which has been developed is now a major clearinghouse for the worldwide flow of technology information appropriate for use within the developing world.

For further information about the program contact the NTIS local organization within your country or write directly to:

Development Assistance Division

<b>16. Abstract (Limit: 200 words)</b> This report was created to support the transfer of useful technology to developing countries. An edited search of the NTIS Bibliographic Data Base was performed to locate "Appropriate Technology" reports, including those which could be used by technicians to assist people in developing nations. This report contains approximately 3,000 citations with their abstracts. Appropriate Technology has been broadly defined as information which can be adapted and applied to help solve local development problems of lower income groups. This refers primarily to direct benefits which foster self-reliance. The information covers many fields generally pertaining to one or more of the following categories: Smaller-scale technologies, labor-intensive technologies, low-cost technologies, alternative techniques, useful social and management technologies; and selected modern technologies adapted to local needs and environments. It has been primarily published for use in developing countries for small scale businessmen and industrialists, extension centers, research institutions, farmers, educational institutions, policy planners, and consultants.  This fourth edition supercedes Issue Number Three (PB 81-146052) published in January 1981.

UNITED STATES INTERNATIONAL DEVELOPMENT COOPERATION AGENCY  
AGENCY FOR INTERNATIONAL DEVELOPMENT  
WASHINGTON DC 20523

January 1983

Dear Colleague:

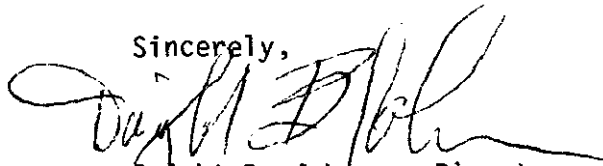

The Office of Development Resources in the Bureau for Latin America and the Caribbean, along with the Office of Development Information and Utilization in the Bureau for Science and Technology of the United States Agency for International Development (AID) are proud to collaborate in sponsoring this fourth edition of The Bibliography of Appropriate Technology Information for Developing Countries, produced by the National Technical Information Service (NTIS) of the U.S. Department of Commerce.

This publication is a joint product of two AID projects, each of which were specifically designed to transfer scientific and technological information in developing countries. One project covers Latin America and the Caribbean, the other Africa, Asia, and the Near East.

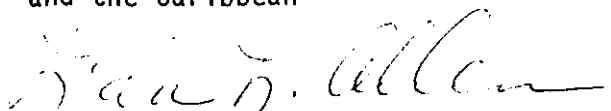

This edition includes more than 1,000 appropriate technology citations not listed in previous bibliographies. Most are reports recently entered into the NTIS computerized data base. Others are older reports specifically brought to the attention of the NTIS Office of International Affairs by individuals in developing nations who noted their usefulness. All the reports may be purchased directly from NTIS or ordered through the offices of the growing NTIS/USAID international technical information network.

We hope that you will find this volume a useful reference guide, and that the publications listed will contribute to the solving of development problems worldwide.

Sincerely,

Dwight B. Johnson, Director  
Office of Development Resources  
Bureau for Latin America  
and the Caribbean

Lida L. Allen, Director  
Office of Development Information  
& Utilization  
Bureau for Science and Technology

# INTRODUCTION

The National Technical Information Service created the Bibliography of Appropriate Technology Information to support the transfer of useful technology to developing countries. This fourth revision of the bibliography reflects NTIS' continuous efforts to locate reports applicable to the needs of individuals and organizations in that area. The selection of reports was made from the NTIS Data File which now has more than 1.3 million citations.

A broad and general definition of what constitutes an "appropriate technology" was used. The bibliography lists selected scientific and technical information reports which are available from NTIS and which can either be applied or adapted to help solve social development problems around the world. The editors have made a number of revisions to this bibliography, adding numerous new reports and deleting others which were determined to be not as useful as originally anticipated. In addition, the editors revised the subject index to enhance its usefulness for those individuals who only have a broad idea of what type of report is needed to complete a project. A brief description of each major part of the bibliography follows in the section on "How to Use This Bibliography."

The entire question of "what is appropriate technology" continues to be a much debated issue. Many have tried to define it in terms of its attributes, i.e. small-scale, labor intensive, low cost, making maximum use of local skills and resources, etc. Others have pointed out that such definitions are too limiting and a given technology is not appropriate or inappropriate "in-itself" but becomes appropriate only when it is adapted and applied to a local context and environment. Some have stressed the importance of using renewable energy resources and concern for environmental quality, evaluating technologies along these lines. Still others have defined appropriate technology in terms of its contribution to employment, citizen participation and social justice.

*Common to all these viewpoints, however, is the belief that science and technology should be appropriate to its local setting and that certain technologies can be inappropriate as the result of incompatibility with social, economic and environmental goals, conditions or values.*

The Bibliography was developed to help transfer technology:

- from developed countries to developing countries;
- from developing countries to developing countries;
- within a developing country (there are numerous cases where individuals are not even aware of the work completed or being done in their own countries); and finally,
- from developing countries to developed countries. (There are many organizations in developed countries which work on appropriate technologies. These organizations could further improve upon these technologies for ultimate transfer to developing countries in the form of technical know-how, project assistance, collaboration, etc.)

The major users of this bibliography are expected to be:

- Small Scale Businessmen and Industrialists
- Farmers
- Research Institutes—which can develop and adapt technologies to benefit relevant segments of a given society.
- Extension Centers—which can take appropriate technologies to the remotest areas and poorest people.
- Educational Institutions—which can use some of the documents to upgrade both course content and teaching materials. These institutions may also be involved in pure as well as applied research for transferring technologies into the hands of its end users.
- Policy Planners—who can plan and implement policies at the local, national, and regional levels.
- Consultants—who can develop and adapt the material for commercial exploitation.

The information compiled in this bibliography is broad in scope and generally conforms to one or more of the following eight categories that were developed as criteria for selection. The categories reflect general types of technology which can be used to upgrade the quality of life of low income groups. These eight categories are:

- **Smaller-Scale Technologies**  
This is exemplified by construction and farm equipment, manufacturing processes and scaled-down industrial plants. Other examples might be a report on a village-level cement plant or information about hand tractors for small farmers.
- **Labor-Intensive Technologies**  
Reports were chosen about devices and processes which generate employment and rely upon available labor and materials instead of scarce capital for startup and operation.
- **Low-Cost Technologies**  
This includes inexpensive and village-level technologies most appropriate for economically marginal groups in both urban and rural areas. Examples include hand pumps, rabbit raising, simple methods of candle manufacturing, etc.
- **Revived Technologies**  
This refers to products and processes once used in the industrialized countries which may still be economically beneficial in developing countries. For example, reports have been included on wind mills, certain machine tools, a variety of plant requirements; and industry profiles.
- **Improved Traditional Technologies**  
One example is giving ox carts of traditional dimensions better tires, wheel bearings, and a suspension system to improve load capacity and durability. Another is basing a fishing cooperative on indigenous management models.
- **Alternative Technologies and Know-How**  
This includes a broad spectrum of information, from proven age-old practices to modern alternative approaches to problem-solving. An example of this would be the *Chinese Barefoot Doctor's Manual*, a handbook featuring acupuncture and traditional herbal remedies as well as modern medical practices.
- **Useful Social and Management Technologies**  
This involves relevant information on health systems, education, cooperatives, small business administration, etc.
- **Selected Modern Technologies**  
An appropriate solution to a problem often requires the most sophisticated technology. An example would be the latest agricultural research used to develop a special disease-resistant strain of rice, solar energy used to power a remote radio station, or program planning methods which can be adapted to a developing country context to meet priority needs.

We hope you find these reports helpful and would appreciate hearing any suggestions about how the bibliography might be improved. Please let us know if you find certain documents especially useful in your development efforts.

# HOW TO USE THIS BIBLIOGRAPHY

This bibliography has been prepared to allow a user to search for reports under a descriptive term identifying his need. The user should first review the Subject Index. Each subject listed is followed by the titles and order numbers of the reports containing information on that subject. The user should then refer to the citations which follow in the Appropriate Technology Abstracts. The citations are listed in alpha-numerical order. The Corporate Author Index follows the abstracts should a user need to locate a report prepared by a specific institute.

Several specialized indexes follow for users searching for a specific type of report. They include a listing of Foreign Language Reports in the bibliography as well as a listing of 4-8 page Industry Profiles and lengthier Industrial Plant Reports. The Order Form to request NTIS reports is included as is a specialized document report form which select organizations working directly with the poor in Latin America and the Caribbean may use to order reports free of charge from NTIS.

Should the user have any questions on how to utilize this bibliography, *please consult your local NTIS cooperating organization listed on the last page of the bibliography. The reports included here are only a select few in the entire NTIS collection; an additional 70,000 reports are placed into the collection every year. The local organization can help you locate all these reports.*

The following briefly describes several of the major sections in more detail:

The **Subject Index** lists all the reports available under 375 specific categories. Should the report deal with various topics it will be listed under each one of the topics. A major revision was made in the subject index in this edition to better reflect the needs of individuals in developing countries. Of particular interest was the reduction in the number of descriptors and identifiers from well over 1500 to a more workable total of 300-400 categories most applicable to developing areas. The work was completed by Constellate Consultants, Ltd., the NTIS Cooperating Organization in New Delhi, India.

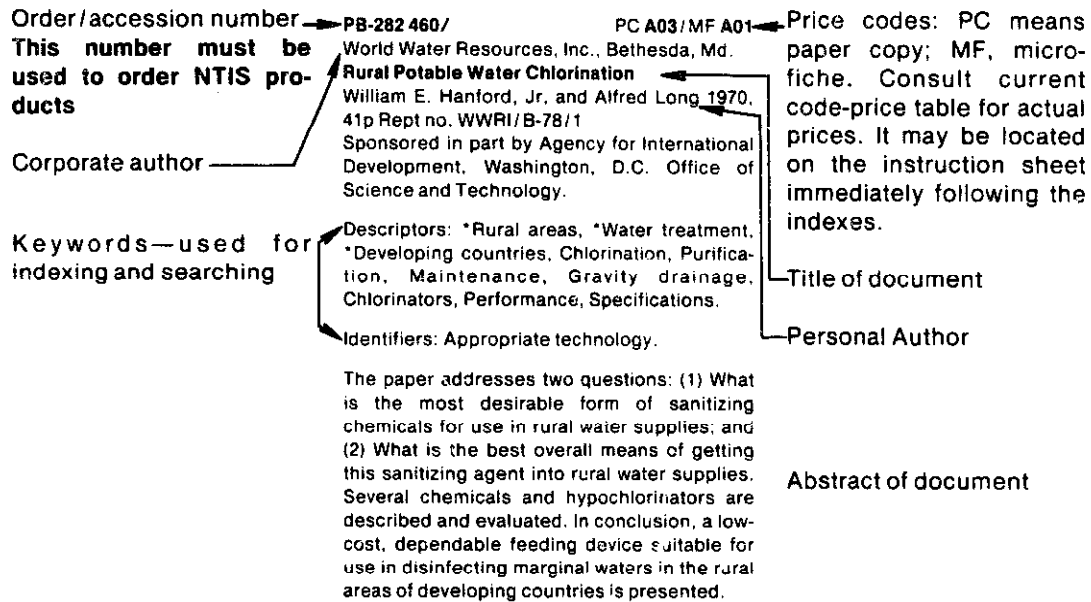

The **Corporate Author Index** lists the corporations responsible for preparing the reports included in the bibliography. The **Foreign Language Index** lists all the Spanish and French Appropriate Technology reports available from NTIS.

The **Index on Industry Profiles and Industrial Plant Reports** lists the subjects in alphabetical order. The title and accession number of both types of reports are listed. However, abstracts are only available for the industrial plant reports: they are located in the main body of the bibliography. The profiles are four-to-eight page professional analyses prepared for USAID in 1966-67 to promote the development and growth of small industry in developing countries. An example of a profile follows this index. The industrial plant reports contain more descriptive information on many of the same subjects as the profiles.

The **NTIS Document Report Subsidy** is only available for a specialized group of individuals residing in Latin America and the Caribbean. The form describes which specific groups are qualified to request the reports and the document request form is on the back of the same form.

The following is a sample of a typical abstract entry:

## Abstract Entry

# ORDERING INFORMATION

Most documents in this publication can be ordered directly from NTIS in both paper copy and microfiche. To order a document, you need to look up the *Order Accession Number* (upper left corner) and the *Price Code* (upper right corner) of each citation in the Appropriate Technology Abstracts. Then follow carefully the ordering instructions which are included, along with the *order form*, at the end of this publication. **Order by number, not by Title.**

## ACCESSION NUMBERS

Most Accession Numbers begin with the letters PB. This is the standard code given to documents entering the NTIS data base. Other publications, however, are assigned a different prefix to help identify the source of the document. Examples are: DOE—Department of Energy; COM—Commerce Department; etc. When ordering a document be sure to use the complete accession number for each publication requested.

## PRICE CODES

Price Codes are generally listed as PG A02 and MF A01. This means that paper copy (PC) can be found by looking in the A code price listed below. MF refers to Microfiche and almost always costs \$4.50 for those ordering from North America or USAID assisted countries. The price is \$9 for other foreign countries. Other price codes are sometimes used.

The following are the price codes most frequently listed in this bibliography. The prices are for 1983 and reflect the cost in North American and USAID assisted countries. Prices in other countries are generally double the price listed here. If the price code is not here, please contact NTIS directly.

## NTIS STANDARD PRICE SCHEDULE A

PRICE CODE	PAGE RANGE	BASIC NORTH AMERICAN PRICE	PRICE CODE	PAGE RANGE	BASIC NORTH AMERICAN PRICE	PRICE CODE	PAGE RANGE	BASIC NORTH AMERICAN PRICE	PRICE CODE	PAGE RANGE	BASIC NORTH AMERICAN PRICE
A01	Microfiche	4.50	A07	126-150	14.50	A14	301-325	25.00	A21	476-500	35.50
	Paper Copy		A08	151-175	16.00	A15	326-350	26.50	A22	501-525	37.00
A02	001-025	7.00	A09	176-200	17.50	A16	351-375	28.00	A23	526-550	38.50
A03	026-050	8.50	A10	201-225	19.00	A17	376-400	29.50	A24	551-575	40.00

Produccion Caprina en Medios Dificiles de America Latina (Goat Raising in Difficult Areas of Latin America)  
PB80-157100  
Resumen de la Investigacion Pecuaría del Centro Experimental de Gualaca (Summary of Farming Research from the Experimental Center of Gualaca)  
PB80-160674  
Management of Rangelands and Other Grazing Lands of the Tropics and Subtropics for Support of Livestock Production  
PB80-163546  
Hill Lands. Proceedings of the International Symposium Held at West Virginia University, Morgantown on October 3-9, 1979  
PB81-126427  
Potencial de la Ganadería Tropical Tecnificada Bajo el Sistema del Pastoreo Rotativo Intensivo - Repercusion Social Y Economía (Potential of Tropical Breeding of Cattle by the Technical System of Intensive Rotation of Pastures)  
PB81-159410  
The Sociology on Pastoralism and African Livestock Projects  
PB82-162363  
Pig Farming - Feeding and Management Practices  
PB82-172655  
Feeding Dairy Cattle and Buffaloes Economically  
PB82-174513  
Feeding of Goats  
PB82-175039  
Energy and Protein Requirements of Various Ruminant Species and Development of Feeding Standards  
PB82-178047  
Murrah Buffaloes at National Dairy Research Institute, Karnal  
PB82-178054  
Dairy Demonstration Units at National Dairy Research Institute, Karnal (Five Hectare Dairy Demonstration Unit, Two Hectare Mixed Farming Unit, One Hectare Buffalo Unit, One Acre Mini Dairy Unit)  
PB82-178062  
Nutrient Requirements of Goats: Angora, Dairy, and Meat Goats in Temperate and Tropical Countries  
PB82-182106  
Karan Swiss Developed at National Dairy Research Institute  
PB82-188525  
Dairy Handbook (Production)  
PB82-188681  
The Water Buffalo: New Prospects for an Underutilized Animal  
PB82-198565  
Alternative Sources of Protein for Animal Production  
PB-224 427/5  
Potential Increases in Food Supply Through Research in Agriculture. Increased Productivity from Animal Agriculture  
PB-257 362/4  
Machine Milking and Its Effects on Cows  
PB-267 598-T  
Physiology of Milk Secretion in Machine Milking  
PB-270 413-T

Livestock and the Environment: A Bibliography with Abstracts. Volume V  
PB-286 361/1  
Managing Public Rangelands: Effective Livestock Grazing Practices and Systems for National Forests and National Grasslands  
PB-286 446/0  
L'Exploitation des Paturages (Managing Public Rangelands: Effective Livestock Grazing Practices and Systems for National Forests and National Grasslands)  
PB-286 447/8  
Ganado Bovino Para Carne - Descorne, Castracion, Marcacion a Hierro, Marcas (Beef Cattle - Dehorning, Castrating, Branding and Marking)  
PB-292 766/3  
L'Elevage du Lapin (Raising Rabbits)  
PB-293 767/0  
L'Aménagement de Points d'Eau dans les Pacages (Stock-water Developments: Wells, Springs, and Ponds)  
PB-293 863/7  
L'Engraissement et L'Exploitation des Bovins de Boucherie (The Feeding and Management of Beef Cattle)  
PB-293 864/5  
Proceedings of the Seminar on Agricultural Policy: A Limiting Factor in the Development Process Held at Washington, DC, on March 17-21, 1975  
PB-294 018/7  
Proceedings of a Workshop on the Role of Sheep and Goats in Agricultural Development Held at Morrilton, Arkansas on November 15-17, 1976  
PB-294 127/6  
The Role of Sheep and Goats in Agricultural Development. A State of the Arts Study  
PB-294 137/5  
Commercial Rabbit Raising  
PB-294 237/3  
Raising Rabbits in the Tropics  
PB-294 446/0  
L'Aménagement d'un Poulailler Familial (Poultry Unit for Family and 4-S)  
PB-294 904/8  
Norms and Tables for Animal Nutrition  
TT-68-50103

### ANIMAL WASTES

Supplementing the Energy and Plant Nutrient Requirements Through Organic Recycling  
CONF-800396-1  
Fuel Gas Production from Animal Residue. Dynatech Report No. 1551  
COO/2991-10  
Fuel Gas Production from Animal Waste. Phase I. Annual Summary Report, May 17, 1976-May 17, 1977  
COO-2991-17  
Fuel Gas Production from Animal and Agricultural Residues and Biomass. Seventh Quarterly Coordination Meeting, Seattle, Washington, January 9-10, 1978  
COO-2991-28  
Inventario de Residuos Organicos de Uso Potencial en Panama Para Su Conversion a Gas Metano Y Fertilizantes Organicos (Inventory of Organic Residues of Potential Use in Panama to Obtain Methane Gas and Organic Fertilizers)  
PB80-159841  
Aprovechamiento de Desechos para la Generacion de Bio-Gas como Fuente de Energia (Utilization of Residues for the Obtainment of Bio-Gas as an Energy Source)  
PB80-169998  
Water Quality Control and Management of Animal Wastes Through Culture with Selected Fishes  
PB80-206188  
Biological Conversion of Animal Wastes to Nutrients  
PB-221 171/2  
Conversion of Cattle Manure Into Useful Products  
PB-264 014/2  
Methane Generation from Human, Animal, and Agricultural Wastes  
PB-276 469/4  
Biomass Utilization in Minnesota  
PB-282 531/3  
Livestock and the Environment: A Bibliography with Abstracts. Volume V  
PB-286 361/1  
Management of Swine Manure for the Recovery of Protein and Biogas  
PB-286 722/4  
Water Quality Renovation of Animal Waste Lagoons Utilizing Aquatic Plants  
PB-286 938/6  
Recycling Poultry Waste as Feed. Will It Pay  
PB-294 412/2  
Feasibility Study for Anaerobic Digestion of Agricultural Crop Residues, 1980 Update. Final Report  
SERI/TR-98175-1  
Anaerobic Fermentation of Beef Cattle Manure. Final Report  
SERI/TR-98372-1

### APPROPRIATE TECHNOLOGY

Chautauqua Notebook: Appropriate Technology on Radio  
DEB1029445  
Building a Library for Energy and Appropriate Technology  
PB80-207251  
Appropriate Technology and Scaling Considerations for Developing Nations  
PB81-160855  
Tecnología Apropriada para Paises Subdesarrollados. (Appropriate technology for Underdeveloped Countries) (2nd Symposium)  
PB81-184160  
Technologies Appropries. (Appropriate Technologies).  
PB82-118969  
Appropriate Technology Project at Nagina  
PB82-168634

Intermediate Technology: An Informal Survey  
PB-285 908/0  
The Relevance of AT (Appropriate Technology) Development in the U.S. to the Third World (A Compendium of U.S. A.T. Organizations)  
PB-295 955/9

### AQUACULTURE

Primary and Secondary Production in the Tropical Atlantic  
AD-717 965/8  
Development of the Cage Culture Method of Fish Production for Commercial Use in Large Reservoir Lakes  
COM-72-10056/3  
The Design of an Aquaculture Enterprise  
COM-72-11408-18  
A Pilot Fish-Pond System for Utilization of Sewage Effluents, Humboldt Bay, Northern California  
COM-73-10333/5  
Combined Culture of Channel Catfish and Golden Shiners in Wading Pools  
COM-73-10810/2  
Syllabus of Fish Health Management: I. Fish Culture Methods. II. Fish Disease Diagnosis  
COM-74-10692/3  
Power Plant Waste Heat Utilization in Aquaculture. Volume I  
PB81-110785  
Power Plant Waste Heat Utilization in Aquaculture. Volume II  
PB81-110793  
Power Plant Waste Heat Utilization in Aquaculture. Volume III  
PB81-110801  
Production of Crayfish in Rice Fields  
PB81-115917  
How to Build a Crab Pot  
PB81-127979  
Lobster Nutrition Workshop Proceedings, 1980 Held at the University of Maine at Orono, January 15 and 16, 1980  
PB81-132763  
Experimental Macroalgal Mariculture  
PB81-149130  
Integrated Agriculture-Aquaculture Farming Systems  
PB81-163248  
Bulletin of the Brackishwater Aquaculture Development Centre. Volume 5, Number 1 and 2, January and July 1979  
PB82-117250  
Bulletin of the Brackishwater Aquaculture Development Centre. Volume 5, Number 1 and 2, January and July 1980  
PB82-117326  
Review of Aquaculture Development Activities in Central and West Africa  
PB82-160227  
Manual for Fish Cultivation in Floating Cages in Natural and Artificial Reservoirs (Manual para el Cultivo de Peces en Jaulas Flotantes en Reservorios Naturales y Artificiales)  
PB82-161712  
Report of Fishcultural Investigations in the Federation of Malaysia. Increasing Fish Production by Improved Fishcultures, Phase I.  
PB-195 900/6  
A Technology Assessment Methodology. Project Summary  
PB-202 778-7  
Aquacultural Developments in Peru  
PB-211 671/3  
Aquacultural Survey in Japan. (Ja-639.3-S355).  
PB-219 739/0  
An International Centre for Manatee Research: Report of a Workshop held 7-13 February 1974 in Georgetown, Guyana, South America  
PB-240 244/4  
Preliminary Results with a Pilot Plant Waste Recycling Marine-Aquaculture System  
PB-247 182/9  
Use of Zooplanktonic Fishes in Channel Catfish Production Ponds  
PB-256 827/7  
Marine Polyculture Based on Natural Food Chains and Recycled Wastes  
PB-261 939/3  
Aquaculture as an Integral Part of the Agricultural Farming System. A Case Study in the North-East of Thailand  
PB 263 672/8

COBALT

## CENTRAL AFRICAN REPUBLIC

Five Industries for the Central African Republic  
PB-206 775/9

## CENTRAL AMERICA

Caracterización, Manejo y Almacenamiento de Algunas Frutas Tropicales (Characteristics, Handling, and Storage of Some Tropical Fruits)  
PB80-157746  
Informe del Programa de Capacitación Centroamericana (Report on the Capacitation Program of Central America)  
PB80-175060  
Problemas de Contaminación Y Tratamiento de Contaminantes (Problems of Contamination and Treatment)  
PB80-175789  
Seminarío internacional Sobre Tecnología de Semillas para Centroamérica, Panamá y el Caribe (International Seminar on Seed Technology for Central America, Panama, and the Caribbean)  
PB81-147704  
Aprovechamiento del Falso Fruto del Jacote Marañon (Utilization of the Pseudofruit of the Cashew Trees)  
PB81-152258  
Energy and Development in Central America. Volume I: Regional Assessment  
PB81-231540  
Energy and Development in Central America. Volume II: Country Assessments  
PB81-231557  
Central America: Small-Farmer Cropping Systems  
PB82-131327  
An Industrial Park Development Program for Central America  
PB-206 904/5  
The Central American Workshop on the Environment and Development. Antigua, Guatemala, July 25-30, 1971  
PB-211 487/4  
Conservación del Medio Ambiente Físico y el Desarrollo (Environment and Development)  
PB-217 119/7  
Central America Malaria Research Station. (Lat-614.4323-D419a).  
PB-219 726/7  
A.I.D. Spring Review of Small Farmer Credit. Volume I. Small Farmer Credit in Mexico and Central America  
PB-224 025/7  
Aspectos de la Producción Agropecuaria de Centroamérica en el Marco de la Integración Económica (Aspects of Central American Farming Production within the Framework of Economic Integration)  
PB-289 983/9

## CERAMICS

Ceramic Materials  
AD-755 650/9  
Needs and Opportunities for Ceramic Science and Technology  
COO-2390-15  
International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology for Bricks and Ceramics: Aims and Approaches  
PB80-146830  
Creating a Ceramics Industry on the Blackfeet Reservation.  
PB-170 306/5  
Plant Requirements for Manufacture of Ceramic Dinnerware.  
PB-177 919/8

## CHEMICAL INDUSTRY

Biological Utilization of Wood for Production of Chemicals and Foodstuffs  
AD-A098 945/9  
International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology for the Chemical Industry  
PB80-153125  
Proceedings of the Workshop on Feedstocks for Organic Chemical Industries, Bombay, July 18, 1981  
PB82-214818  
Plant Requirements for Manufacture of Salicylic Acid  
PB-292 666/5  
Plant Requirements for Manufacture of Potash  
PB-292 672/3  
Plant Requirements for Manufacture of Bottled Oxygen and Acetylene  
PB-292 801/8  
Plant Requirements for Manufacture of Sulfuric Acid  
PB-292 864/6  
Plant Requirements to Set Up and Operate a Phosphate Processing Plant  
PB-292 955/2  
Chemical Processing. An Operation Manual for Cooperative Program Use  
PB-294 140/9  
Estudio Técnico-Económico para la Fabricación de Cal en Honduras (Technical-Economic Study on the Production of Lime in Honduras)  
PB-296 721/4  
Industrias Químicas S.A. A Proposed Plant to Produce Sulfuric Acid in Panama  
PB-298 643/8

## CHILDREN

The Acceptability of Whey-Soy Mix as a Supplementary Food for Pre-School Children in Developing Countries  
AD-772 930/4  
Travaux Menagers en Milieu Rural (Homemaking Around the World)  
PB80-100357  
Puericulture: La Periode Prenatale (Prenatal Care)  
PB80-143016  
Information on Early Childhood  
PB80-2241/3  
Primary School Arts and Crafts: Developing Manual

Skills, Lesson Plans. Classes I thru VI  
PB81-151318  
Some Facets of Child Development  
PB82-105768  
Residential Programmes for Destitute Children. Part I: Organisation and Administration  
PB82-105834  
Working Children in Bombay: A Study  
PB82-105842  
A Guidebook for Anganwadi Workers  
PB82-107731  
Vocational Training in Residential Institutions. Part II: Vocational Training  
PB82-107756  
Working Mother and Early Childhood Education  
PB82-107764  
Analysis of Nutrition-Related Activities in Honduras  
PB82-130949  
Oral Fluid Therapy in Diarrhea and Dehydration: Current Concepts and Practical Considerations  
PB82-131103  
Republique Unie Du Cameroun Enquete Nationale Sur La Nutrition: Entreprise Par Le Gouvernement Du Cameroun. (Republic of Cameroon. National Inquest on Nutrition: Enterprise for the Government of Cameroon).  
PB82-132853  
Perspectives in Maternal-Infant Nutrition  
PB82-159872  
Child Care Needs of Low Income Mothers in Less Developed Countries: A Summary Report of Research in Six Countries in Asia and Latin America  
PB82-160169  
Studies on Pre-School Children

Fabricas de Cemento de Pequena Escala (Small-Scale Cement Plants)  
PB81-195877  
Rice Improvement in China and Other Asian Countries; Proceedings of the International Rice Research Workshop (181), Guangzhou, China, 1979  
PB82-161613  
A Barefoot Doctor's Manual  
PB-239 557-1  
Chinese Chain and Washer Pumps  
PB-297 368/3  
Small Hydroelectric Power Development in China  
UCID-18772

## CHITINS

Industrial Prospects for Chitin and Protein from Shellfish Wastes  
PB-267 527/0

## CLAYS

Lime-Cement Combination Stabilization  
AD-762 552/8  
Development of a Glass Polymer Composite Sewer Pipe from Waste Glass. Final Report  
BNL-51194  
Waste Glass as a Flux for Brick Clays  
PB-214 271/9

## CLOTHING

Travaux Menagers en Milieu Rural (Homemaking Around the World)  
PB80-100357  
International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Production of Cotton Cloth  
PB80-152911  
Plant Requirements for Manufacture of Nylon Hosiery.  
PB-175 538/8  
Plant Requirements for Manufacture of Cotton Dresses.  
PB-175 539/6  
Men's Work Shirts. Capital Requirements, Techniques and Operations.  
PB-177 915/6  
Plant Requirements for Manufacture of Men's Socks.  
PB-177 921/4  
Plant Requirements for Manufacture of Terry Cloth.  
PB-177 924/8  
Plant Requirements for Manufacture of Worsted Yarns.  
PB-177 927/1  
Plant Requirements to Set Up and Operate a Dry Cleaning Plant.  
PB-177 928/9  
Plant Requirements for Manufacture of Stretch Socks for Men and Children.  
PB-177 935/4  
Silk Screen Printing on Textiles.  
PB-177 946/1  
Make-a-Dress. Learn to Sew the Easy Way  
PB-287 252/1  
Comment Faire Une Robe. (Make-a-Dress. Learn to Sew the Easy Way)  
PB-287 253/9  
Manual de Administracion para la Industria del Vestuario (Administrative Manual for the Clothing Industry)  
PB-290 423/3  
Plant Requirements for Manufacture of Crochet and Knitting Yarns  
PB-292 675/6  
Homemaking Around the World  
PB-292 767/1  
Plant Requirements for Manufacture of Standard Sport Stockings  
PB-292 802/6  
Plant Requirements for Manufacture of Shell Buttons  
PB-293 005/5

## COAL MINING

Development of a Non-Clogging Water Spray System  
PB-250 626/9

## COASTS

Experimental Macroalgal Mariculture  
PB81-149130  
Coastal Zone Pollution by Oil and Other Contaminants: Guidelines for Policy, Assessment and Monitoring in Tropical Regions. Based Upon a Case Study in Indonesia, in 1973  
PB-247 431/0  
Water Supply and Wastewater in Coastal Areas: Proceedings of Southeastern Conference Held on April 2-4, 1975  
PB-248 297/4  
Coastal Zone Pollution in Indonesia - A Reconnaissance Survey  
PB-255 447/5

## COBALT

Water Hyacinths and Alligator Weeds for Removal of Silver, Cobalt, and Strontium from Polluted Waters.  
N75-24163/8

## SUBJECT INDEX

### COCONUTS

- El Cocotero en Panama (The Coconut Tree in Panama) PB80-161540
- Sun-Drying Methodology: Report of a Seminar, 21 May 1976 PB82-136292
- Lethal Yellowing Disease of Coconut in Jamaica PB82-160862
- Copra Processing in the Trust Territory. A Report to the Congress of Micronesia PB-205 781/0
- Development of a Scientific Basis for the Manufacture of Low-Cost Protein Foods and Beverages from Fresh Coconuts PB-213 594/6

### COFFEE

- Manual de Recomendaciones para Cultivar Cafe. (3a. Edicion)(Manual of Recommendations of Coffee Growing. Third Edition.) PB80-158306
- Subproductos del Cafe (Coffee By-Products) PB90-159312
- Central America: Fungal Fermentation of Coffee Waste PB80-169717
- Utilizacion de la Pulpa de Cafe en la Produccion de Gas Combustible (Bio-Gas Utilization of Coffee Pulp in the Production of Bio-Gas) PB80-170301
- Treatment of Wastes from Coffee Processing in Costa Rica. PB-217 790/5
- Coffee: Production and Marketing Systems PB-273 553/8

Integrated Agriculture-Aquaculture Farming Systems  
PB81-163248

The Potential for Regional Cooperation in Fertilizer: A Methodology Study  
PB81-209603

A Comparison of Public Transport in Cities in South East Asia  
PB81-232902

Rodents in Tropical Rice  
PB82-160946

Studies in Family Planning: South East Asian Countries  
PB82-172651

Masalah Bangunan, Volume 23, Numbers 3-4, September-December 1978  
PB82-213976

Engineering Study of Latent and Lateritic Soils in Connection with Construction of Roads, Highways, and Airfields. Phase I. Southeast Asia (Thailand)  
PB-207 399/7

Plant Protection Problems in Southeast Asia  
PB-212 101/0

Regional Workshop on Water Resources, Environment, and National Development. Volume I. Summary of Proceedings. Singapore, March 13-17, 1972  
PB-217 117/1

Development of Agricultural Mechanization Technologies at the International Rice Research Institute. (Fea-631.3-K45).  
PB-219 702/8

Drying and Processing Research at IRRI. (633.18-M266)  
PB-225 787/1

Regional Workshop on Water Resources, Environment and National Development held at Singapore on 13-17 March 1972. Volume II: Selected Papers  
PB-235 270/6

Ferrocement, A Versatile Construction Material: Its Increasing Use in Asia  
PB-261 818/9

Aquaculture in Southeast Asia. A Historical Overview  
PB-274 436/5

## SOUTHEAST ASIAN

Course on Research in Family Planning Communication. Course Report - Volume I  
PB82-167651

## SOYBEANS

Crop Phenology Literature Review for Corn, Soybean, Wheat, Barley, Sorghum, Rice, Cotton, and Sunflower  
E80-10093

Cultivo de la Soya en Panama: Analisis Y Recomendaciones Preliminares (Cultivation of Soybeans in Panama: Analysis and Preliminary Recommendations)  
PB80-157118

La Soya: Fuente de Proteina y Aceite (The Soya Bean: Source of Protein and Oil)  
PB80-171267

Whole Soybean Foods for Home and Village Use  
PB81-209678

Plant Requirements for Manufacture of Soybean Oil and Meal.  
PB-177 933/9

An Analysis of the Potentials and Prospects of Increasing Edible Oil Production in West Pakistan  
PB-210 597/1

Genetic Vulnerability of Major Crops  
PB-212 941/9

Development of Soy-Based Foods of High Nutritive Value for Use in the Philippines  
PB-213 758/3

Report on Wheat or Oat-Soy Mixtures. (612-398-G739b).  
PB-219 703/6

Un Modelo de Fortificación del Maíz con Harina de Soya, Lisina y Otros Nutrientes, en una Comunidad Rural de Bajo Nivel Socioeconomico (From the Study: A Model for Corn Fortification with Soy Bean Flour, Lysine and Other Nutrients in a Low Socioeconomic Rural Community)  
PB-224 224/6

Handbook of Selection and Seed Growing of Oil Plants  
TT-71-50100

## SPAIN

Spain's Leather Industry: Prospects for Blue Chrome (Wet-Blue) Processing  
PB-267 949/6

## SPRAYERS

Knapsack Sprayers: Use, Maintenance, and Accessories  
PB82-160896

Development of a Non-Clogging Water Spray System  
PB-250 626/9

## SPRINGS

Plant Requirements for Manufacture of Mechanical Springs  
PB-177 939/6

## SRI LANKA

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology in the Textile Industry of Sri Lanka  
PB80-159304

Sri Lanka: The Ceylon Institute of Scientific and Industrial Research  
PB80-169725

Postharvest Food Losses in Sri Lanka; Report of a Workshop, 11-16 February 1980  
PB81-129975

Proposed Water Management Program for Major Irrigation Schemes in Sri Lanka  
PB82-130931

Draft Environmental Report on Sri Lanka  
PB82-131004

Evaluation of Low-Cost Extrusion Cooker in Sri Lanka  
PB82-133786

Analysis of a Shanty Town  
PB82-135948

Future of Shanty Towns  
PB82-135955

Sun-Drying Methodology: Report of a Seminar, 21 May 1978  
PB82-136292

Bibliography of Scientific Literature Relating to Sri Lanka: First Supplement  
PB82-138157

Bibliography of Scientific Literature on Sri Lanka and by Sri Lankan Scientists Relating to Agriculture, Forestry, Veterinary Sciences and Fisheries, 1960-1978: Volume I  
PB82-138165

Bibliography of Scientific Literature on Sri Lanka and by Sri Lankan Scientists Relating to Agriculture, Forestry, Veterinary Sciences and Fisheries, 1960-1978: Volume II  
PB82-138173

Transport Policies in Sri Lanka and Some Consequences  
PB82-143900

The Role of the Agricultural Tractor in Road Haulage in Sri Lanka  
PB82-143918

Bullock Cart Haulage in Sri Lanka  
PB82-143926

Natural Products for Sri Lanka's Future. Report of a Workshop Held at Colombo, Sri Lanka, on 2-6 June, 1975  
PB-251 520/3

Country Development Strategy Statement, FY 1981. Sri Lanka  
PB-298 037/3

## STANDARDIZATION

Consultation Visit to the Honduras Department of Engineering and Standardization  
PB80-162134

Standardization and Measurement Services in Indonesia  
PB80-166267

Report to AID on an NBS/AID Workshop on Standardization and Measurement Services  
PB80-181829

NBS/AID/PCSIR (Pakistan Council of Scientific and Industrial Research) Survey on Standardization and Measurement Services in Pakistan  
PB80-199441

Standardization and Measurement Services in the Sudan  
PB81-151425

Standardization in Support of Development. Proceedings of a Seminar, Held at the National Bureau of Standards, Gaithersburg, Maryland on October 17-18, 1977  
PB-283 929/8

## STEEL INDUSTRY

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology for the Iron and Steel Industry  
PB80-149065

Small Business in the Metals Industry: A Background Study  
PB-255 649/6

Plant Requirements to Set Up and Operate a Small Steel Melting Plant  
PB-292 869/5

Plant Requirements to set up and Operate Small Steel Rolling Mill  
PB-292 957/8

Technological Profiles on the Iron and Steel Industry  
PB-296 578/8

## STOVES

Fire Safety of Wood-Burning Appliances, Part 1: State of the Art Review and Fire Tests, Volume 1 and Volume 2  
PB81-145823

Solid Fuel Cooking Stoves: International Directory  
PB81-215089

The New Nepali Chulo: Fuel Efficient and Smokeless Cooking Stoves  
PB82-218819

## STRONTIUM

Water Hyacinths and Alligator Weeds for Removal of Silver, Cobalt, and Strontium from Polluted Waters.  
N75-24163/8

## SUBSAHARAN AFRICA

Village Housing in the Tropics, with Special Reference to West Africa.  
PB-188 926/0

Fishculture Survey Report for West Central Africa, Increasing Fish Production by Improved Fish Production by Improved Fishcultures.  
PB-195 916/2

Marketing of Staple Food Crops in Tropical Africa: Overall Analysis and Report  
PB-211 669/7

Arid Lands of Sub-Saharan Africa  
PB-245 595/4

## SUDAN

Standardization and Measurement Services in the Sudan  
PB81-151425

Mobilization of Rural Savings: The Case of the Sudanese Savings Bank  
PB81-217598

Kenya-Sudan Road Link: A Socio-Economic Study. Report I: Alignment - Water Supply - Places of Particular Value  
PB82-145855

Kenya-Sudan Road Link. A Socio-Economic Study. Report 2: Organizing Roadworks - Social Aspects  
PB82-147273

Kenya-Sudan Road Link. A Socio-Economic Study. Report 3: The Turkana Road  
PB82-147281

Report of a Workshop on Aquatic Weed Management: Some Prospects for the Sudan and the Nile Basin, Held at Khartoum, Sudan on 24-29 November 1975  
PB-259 990/0

International Forum on Appropriate Industrial Technology, Held at New Delhi/Anand, India on November 20-30, 1978. Agricultural Machinery Industry and Rural Industrialization in the Sudan  
PB-297 179/4

Country Development Strategy Statement, FY 1981. Sudan  
PB-298 086/0

## SUGAR

Appropriate Technology on Mini-Sugar (Ops Khandsari)  
PB80-125693

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Technological Choices in Sugar Processing  
PB80-144033

The Conversion of Agricultural By-Products to Sugars  
PB81-241432

Evaluation of the Health Aspects of Sucrose as a Food Ingredient  
PB-262 668/7

Plant Requirements for Manufacture of Raw Sugar  
PB-293 007/1

International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology for Production of Sugar and Other Sweetening Agents  
PB-294 677/0

Ethanollic Fuels from Renewable Resources in the Solar

# SUBJECT INDEX

## TECHNOLOGY TRANSFER

**Age**  
 PB-295 645/6  
 International Forum on Appropriate Industrial Technology, Held at New Delhi/Anand, India on November 20-30, 1978. Technology Planning Factors in the Cane Sugar Industry  
 PB-297 239/6  
 Elaboracion de la Panela (Production of 'Panela' or Brown Sugar Cakes)  
 PB-297 867/4  
 International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Appropriate Technology in Production of Cane Sugar  
 PB-298 846/7  
 International Forum on Appropriate Industrial Technology Held at New Delhi/Anand, India on November 20-30, 1978. Cane Sugar Techniques in Developing Countries  
 PB-298 863/2

### SUGAR BEETS

Systems Study of Fuels from Sugarcane, Sweet Sorghum, and Sugar Beets. Volume III. Conversion to Fuels and Chemical Feedstocks. Task 77. Final Report  
 BMI-1957(V.3)  
 Ethanol: A Brief Economic Evaluation  
 DOE/BP/15325-T8  
 Study of the Production of Ethanol from Sugar Beets for Use as a Motor Fuel. Final Report, February 1, 1980-April 30, 1981  
 DOE/CS/83010-1  
 Selected Articles on Sugar Beet  
 PB-257 550/4  
 Fuels from Sugar Crops: Systems Study for Sugarcane, Sweet Sorghum, and Sugar Beets  
 TID-22781  
 Fuels from Sugar Crops. Second Quarterly Report  
 TID-27834

### SUGARCANE

A Philippine Sugar Cane District: Spatial Phenomena Affecting Sugar Cane Production on the Haciendas.  
 AD-679 475/4  
 Systems Study of Fuels from Sugarcane, Sweet Sorghum, and Sugar Beets. Volume III. Conversion to Fuels and Chemical Feedstocks. Task 77. Final Report  
 BMI-1957(V.3)  
 Production of Sugarcane and Tropical Grasses as Renewable Energy Source. Third Annual Report, 1979-1980  
 DOE/ET/20071-T2  
 Petroleum Plantations  
 LBL-8236  
 Production of Sugarcane and Tropical Grasses as a Renewable Energy Source. Second Annual Report, 1978-1979

## SUBJECT INDEX

Summary of Projects, Small Scale Appropriate Energy Technology, Region IX Program, 1979  
DOE/SF/01963-T3  
Contribution to the Analysis of the Development of Unconventional Energy Sources in Latin America  
ERDA-tr-298  
Ecological Considerations of the Solar Alternative  
LBL-5927  
Utilization of Wind Power in Agriculture in the USSR  
N74-15752/0  
Using the Energy of the Wind for Electrification  
N74-16801/4  
Wind Power Machines.  
N75-17786/5  
Wind Motors: Theory, Construction, Assembly and Use in Drawing Water and Generating Electricity.  
N75-19821/8  
Wind Turbine Generator Rotor Blade Concepts with Low Cost Potential.  
N78-17466/1  
Wind Turbine Structural Dynamics.  
N78-19616/9  
Proceedings of the Alternate Energy Systems Seminar.  
N78-27522/9  
Expert Opinion on Wind Energy Conversion Systems Designed by Hermann Honner.  
N79-18456/0  
Investigation of a Generator System for Generating Electrical Power, to Supply Directly to the Public Network, Using a Windmill.  
N79-31779/8  
Flutter Analysis of Small Windturbine, Designed for Manufacture and Use in Developing Countries.  
N80-18415/3  
A Horizontal Axis Sail Windmill for Use in Irrigation.  
N80-29844/1  
Wind Machines  
NSF-RA-N-75-051  
Electricity from the Wind: A Guide for the Generalist  
PB80-139751  
Selecting Water-Pumping Windmills  
PB80-149776  
Memoria del Primer Seminario Nacional de Energia (Memoir of the First Seminar on Energy)

PB82-108929  
Timber and Timber Products in Structural Uses  
PB82-209149  
Plant Requirements for Manufacture of Wood Tables and Chairs.  
PB-177 925/5  
Plant Requirements for Manufacture of Flush Doors.  
PB-177 929/7  
Report on Survey Team Projected AID Research Program on Improved Forest Products Utilization in Latin America  
PB-206 802/1  
Utilization of Bark Waste  
PB-221 876/6  
Black Walnut as a Crop. Black Walnut Symposium, Carbondale, Illinois, August 14-15, 1973  
PB-223 510/9  
Some Woods of Hawaii...Properties and Uses of 16 Commercial Species  
PB-235 801/8  
How Craftsmen and Home Hobbyists Can Make and Use Wood Plastic Composite Materials  
PB-242 973/6  
Manual Talla de Madera (Wood Carving Manual)  
PB-276 507/1  
Sash and Door Plant; A Reference for use in Planning New Industrial Facilities  
PB-292 734/6  
Plant Requirements for Manufacture of Boxes and Shooks  
PB-292 922/2  
Woodworking in Estonia: Historical Survey.  
TT-68-50342

## WOOD STOVES

Environmental and Health Aspects of Biomass Energy Systems  
CONF-800814-11  
Small-Scale Energy-Technology Projects in the Pacific Territories: A Case-Study Review  
DE82001338  
Cameron Renewable Energy: Project Possibilities  
PB81-145658  
The New Nepali Chulo: Fuel Efficient and Smokeless Cooking Stoves  
PB82-218819  
Natural Energy and Living, Number 3, 1978  
PB-290 420/9

## WOOD WASTES

Particleboards from Lower Grade Hardwoods  
AD-A044 578/3  
Conversion of Cellulosic Wastes to Liquid Fuels  
COO-2982-57  
Conversion of Wood Residues to Diesel Fuel  
COO-2982-67  
Alcohol Production from Agricultural and Forestry Residues  
DOE/EV-0108  
An Evaluation of Wood-Waste Energy Conversion Systems.  
N79-10528/4  
Energy from Biomass: The Simplex Process for the Gasification of Coal and Forest Pulp  
PB81-110512  
Wood Wastes.  
PB-175 550/3  
Utilization of Bark Waste  
PB-221 876/6  
Fuel and Energy Production by Bioconversion of Waste Materials - State-of-the-Art  
PB-258 499/3  
Clean Fuels from Agricultural and Forestry Wastes  
PB-259 956/1  
Chemicals from Wood Waste  
PB-262 489/8  
Pyrolytic Conversion of Agricultural and Forestry Wastes in Ghana - A Feasibility Study  
PB-271 392/3  
Pyrolytic Conversion of Agricultural and Forestry Wastes to Alternate Energy Sources in Indonesia; a Feasibility Study  
PB-275 569/2  
A Study of the Feasibility of Utilizing Solid Wastes for Building Materials. Phase III and IV Summary Reports  
PB-285 437/0  
Wood Pellet Feasibility Study  
RHO-CD-829  
Efficient Burning of Wood Waste  
SVF-57

## WOODEN STRUCTURES

FPL (Forest Products Laboratory) Designs Meet Family Housing Needs  
AD-744 691/7  
Strength of Timber Roof Connections Subjected to Cyclic Loads  
PB81-139222  
The Kenyan Low Cost Modular Timber Bridge  
PB81-214595  
Research Report on Nail-Joints in Timber Structures. Part III  
PB82-108960

Timber and Timber Products in Structural Uses  
PB82-209149  
Wood in the Construction of Mass-Produced Houses  
PB-207 812/9  
Low-Cost Wood Homes for Rural America - Construction Manual  
PB-211 640/8  
Wood in Marine Structures. Proceedings of a Seminar Held at Wrightsville Beach, North Carolina on October 7-8, 1977  
PB-275 344/0

## WOODWORKING

Survey of the Market for Sawmilling and Woodworking Equipment in Singapore  
DIB-76-02-503  
Plywood Processing and Woodworking Equipment Study in Taiwan R. O. C.  
DIB-77-10-514  
Problems in the Construction of Woodworking Machines

**AD-A003 909/9** PC E02/MF A01  
Naval Research Lab., Washington, DC.  
**Corrosion of Metals in Tropical Environments: Part 10 - Final Report of Sixteen-Year Exposures**  
Final rept.  
C. R. Southwell, and J. D. Bultman. 2 Jan 75, 41  
Rept no. NRL-7834  
See also Part 9, AD-687 705.

Keywords: \*Corrosion, Tropical tests, Sea water, Fresh water, Tables(Data).

A comprehensive long-term investigation of corrosion of 52 metals immersed in seawater and in fresh water, suspended at mean-tide level, and exposed to marine and inland tropical atmospheres has been completed for exposure periods of up to 16 years. A series of reports on specific metal groups has already been published. This is a final report on the project; it presents tabulated results for all metal-environment combinations included in the study, both for simple plates and bimetallic couples. Many of these are previously unreported data. Time-corrosion curves for all single-metal exposures not previously reported on to completion are included; these are for 16 wrought and cast ferrous metals in two atmospheres and 7 nonferrous metals in all five environments. Because of their basic value for comparing corrosiveness of environments and for evaluating effectiveness of alloys, curves for all the commercially pure metals are presented for all five environments. The final steady-state corrosion rate is a most useful value for estimating expected metal life; this value (R sub c) has been established for most metals in each environment and is included with all curves and tabulated data.

Naval Postgraduate School, Monterey, CA.  
**Factors Affecting the Fatigue Strength of Ferrocement**  
Master's thesis  
David P. Sargent, Jr. Dec 74, 89p

Keywords: \*Reinforced concrete, Fatigue(Mechanics), Wire, Orientation(Direction), Impregnation, Cements, Fatigue tests(Mechanics), Stresses, Theses, \*Concrete, \*Ferrocement.

Ferrocement is a composite material consisting of multiple layers of wire mesh impregnated with a cement mortar. Steel rods may be sandwiched in the center to give added strength, and to shape the mesh before application of the mortar. Selection of materials can vary considerably. Investigation of the influence of wire orientation on the fatigue strength of ferrocement was undertaken in this study. Tests were also conducted to determine the effect on fatigue life of voids in the specimens caused by poor penetration of the mortar.

**Recovery and Reuse of Wastepaper from Shredded Household Trash**  
Forest Service research paper  
James F. Landrie. 1975, 14p Rept no. FSRP-FPL-252

Keywords: Waste disposal, Reclamation, \*Paper, Separation, Thermoplastic resins, Films, \*Waste recycling, Waste papers, Refuse disposal, Recycled paper, Shredding, Classifiers, Sorting.

The report describes the research and development of the dry process originated at the Forest Products Laboratory for separating wastepaper from shredded household trash. The process, based on air classification, provides for removal of thermoplastic films. It also permits separation of the wastepaper by grade. Indications are that the recovered paper can be used successfully in a variety of products.

**The Use of Microfiches for Scientific and Technical Reports: Considerations for the Small User**  
B. J. S. Williams, and R. N. Broadhurst. Oct 74, 27p  
Rept no. AGARD-ograph-198  
NATO furnished.

Keywords: Microfiche, Reports, User needs, Costs, Film readers, \*Information services.

The report is intended primarily for the small user concerned with the use of microfiches for scientific and technical report material. In the context of the report the small user is considered to be the individual engineer or project worker or, at most, the small company, department or project team handling microfiches on a modest scale. While emphasis has been placed on the use of microfiches - their reading, duplication, print out and storage - some general information has also been included on the production of microfiches. The report has been confined to the type of microfiche containing 60 or 98 frames (now referred to as 'medium reduction microfiches') used for the reproduction of individual reports. Medium reduction microfiches are also widely used for reproducing journals and periodicals on an issue-by-issue basis, for individual articles, monographs or papers and, less exclusively, for parts lists and maintenance manuals. Parts of the report will, therefore, be found broadly relevant to these other applications.

**The Reclamation of Drinking Water from Sewage**  
Annual rept. 1 Jan-31 Dec 72  
M. G. McGarry. 4 Feb 75, 74p ARDG(FE)-472-2  
Grant DA-RDRF-S92-544-72-G181

Keywords: \*Water treatment, Drinking water, Water reclamation, Waste water, Arid land, Nitrogen, Algae, Photosynthesis, Activated carbon, Filtration, Thailand, \*Waste water reuse, Potable water, Chemical removal(Water treatment), Harvesting of algae, Aeration ponds, Lagoons(Ponds), Activated carbon treatment, Water pollution control.

Indirect reuse of wastewaters in drinking water supplies is common practice in industrialized states today. The investigations reported upon have been directed towards improvements upon existing techniques more applicable to the tropical and savanna developing country. High costs and technical difficulties have been encountered in the removal of nitrogen and low level organics. In this study, investigations have been conducted into nitrogen stripping by photosynthetic algal growth, using the nitrogen as a nutrient with subsequent algae harvest from ponds, and low level organics reduction by (a) powdered activated carbon treatment and (b) semi-rapid filtration. Several processes including high rate treatment oxidation ponds, dissolved air flotation, roughing filtration, photosynthetic nitrogen stripping ponds, powdered activated carbon adsorption, dual-media filtration and chlorination were developed and specifically applied to domestic wastewater reclamation for drinking water. These were incorporated into two process streams, one using activated carbon for low level organics removal and the other semi-rapid filtration.

**Analyzing the Use of Technology to Upgrade Education in a Developing Country**  
Research memo.  
Margaret B. Carpenter, L. G. Chester, H. S. Dordick, and Sue A. Haggart. Mar 70, 147p Rept no. RM-6179-RC

Keywords: Teaching methods, Instructional materials, Technology, Schools, \*Education, Television systems, Cost analysis, Instructors, Colombia, Developing countries.

The memorandum describes an application of the techniques of system analysis to educational planning. Particular emphasis is placed on evaluating the usefulness of technology in education, especially television. In contrast to most analyses of educational technology, the present study (1) considers the technology as it interrelates with the entire educational system in which it is to function, and (2) proposes alternative means to attain similar improvements in that system. By comparing the cost of alternative ways to attain similar improvements, the study shows that the cost of technological improvements is approximately the same as that of improvements achieved through more conventional means.

Contract DAAG17-73-C-0119

Keywords: \*Milk, Dehydrated foods, Rations, Storage, Substitutes, \*Food processing, Vegetable oils, Flavor, Beverages, Evaluation, Food additives.

A dry whole milk substitute for ration use was developed. This investigative study involved the selection and evaluation of formulation variations, processing parameters, and instantizing conditions as they affect the physical and flavor characteristics of the product. The historic problems of a chalky mouth sensation and very limited shelf life were overcome. Chemical, physical and organoleptic methods were used to evaluate product quality. A specific formulation and process are proposed.

RAND Corp., Santa Monica, CA.  
**A Housing Services Policy for Low-Income Urban Families in Underdeveloped Countries**  
Georges Vernez Dec 74, 26p Rept no. P-5328

Keywords: Underdeveloped areas, Nations, Marketing, Policies, Construction, Urban areas, Finance, Management planning and control, Classification, \*Housing, Developing countries, Squatter communities, Services, Low income families.

Housing policies for urban low-income families in underdeveloped countries have typically stressed the public supply of fully serviced standard housing units, but these policies are mostly unsuccessful. In practice, a large proportion of the demand for shelter has been overflowing into so-called squatter settlements that are developing at the periphery of most large sized cities of the emerging nations. The paper discusses a housing services policy which promises to be effective for these families. The financial component of the policy is studied.

**AD-A013 482/5** PC A05/MF A01

**The Effects of Precycling on the Strength of Ferrocement**  
Master's thesis  
Earle Stanley Babcock. Jun 75, 90p

Keywords: \*Reinforced concrete, Fatigue(Mechanics), Fatigue tests(Mechanics), Wire, Stresses, Cyclic tests, Tensile properties, Bending stress, Theses, \*Concrete, \*Ferrocement.

Ferrocement is a composite material made up of cement mortar reinforced with a mesh of steel wire. Its non-homogeneity results in material characteristics which are peculiarly its own. In this study, the ferrocement specimens tested varied in the type of wire reinforcement used, as well as in the water content of the mortar. Stress versus cycles to failure curves were developed, and comparisons were made between the curves of different types of specimens. Bending and tensile strength tests were conducted after cyclic loading in order to gain insights on the effects of precycling. Finally, some comparisons were made which related the data from this thesis to that of several preceding studies.

**Piping in Earth Dams Constructed of Dispersive Clay; Literature Review and Design of Laboratory Tests**  
Final rept.  
Edward B. Perry. Nov 75, 131p Rept no. WES-TR-S-75-15

Keywords: \*Dams, Earth fills, Seepage, Clay, Leakage(Fluid), Soil erosion, Test facilities, Earth dams, Dispersive clays, Piping(Erosion).

It was assumed when empirical piping criteria were developed 25 yr ago that soil type and method of construction were the main parameters controlling the resistance of homogeneous earth dams to piping failure. Research on piping failure in earth dams constructed of dispersive clay (a particular type of soil in which the clay fraction erodes in the presence of water by a process of deflocculation) was initiated in Australia about 15 yr ago. This research has resulted in a method of analysis to assess the susceptibility of a homogeneous earth dam, constructed of predominately illite or montmorillonite clay, to dispersive clay piping. The first study of dispersive clay in the United States, reported in 1972, developed a relationship between percent sodium and total soluble salts in the soil pore water extract and field performance of earth dams as evidenced by piping failure or rainfall erosion damage. This research has demonstrated the usefulness of the pinhole erosion test as a method of identifying dispersive clays, shown the feasibility of using filters to prevent piping in dispersive clays, and indicated that stabilization of dispersive clays is possible.

The study associates arthropod-borne viral diseases with ecologically diverse areas of Colombia, South America. The objective was to determine if domesticated animals, and to a limited lesser extent man, resident in the coastal plain, mountain valleys and highlands had been infected with certain insect-borne vir-

uses. A record intensive study was carried out in an area of ecological transition to determine if the changes in bird, mammal biting insect populations and their associated viruses could be detected in primary and secondary forests and nearby croplands and pastures over a two-year period. Microbiological data are presented and discussed.

**Entomological Studies. Part II**  
Final rept.  
Robert P. Hanson, and Thomas M. Yuill. Oct 74, 213p AFOSR-TR-75-1645  
Grant AF-AFOSR-2337-72  
See also Part 3, AD-A019 544.

Keywords: Entomology, \*Insects, Ecology, Diptera, Tropical regions, Disease vectors, Arthropod borne diseases, Domestic animals, Humans, Forests, Colombia, South America, Culicoides, Culicidae, \*Diseases, Hematophagous insects, Ecosystems, Phlebotomidae, Tabanidae, Simuliidae.

The entomological studies reported in this volume represent an effort to document environmental changes, such as habitat availability, host availability and climate, as they relate to the abundance and distribution of hematophagous Diptera. Some studies were conducted in primary and secondary forests and associated clearings which are areas of early ecological disturbance. Other studies were performed in an area of great ecological disturbance. The data show that the ecological changes have altered populations of biting insects and influence the potential and actual risk of transmission of arthropod-borne pathogens of man and domesticated animals.

Keywords: Ecology, Disease vectors, Wildlife, Tropical regions, Forests, Mammals, Birds, Plants(Botany), Vertebrates, Invertebrates, Pathogenic microorganisms, Colombia, South America, \*Animal diseases, Ecosystems.

Disease causing agents are as real a part of tropical ecosystems as are the more conspicuous vertebrate, invertebrate and plant members. Tropical ecosystems are complex and man-induced modification may lead to increased disease prevalence. Prediction of disease problems related to ecological perturbation rests on understanding the composition and function of the ecosystem. Changes in populations of wild vertebrate reservoirs and insect vectors are the key to changes in disease incidence. The studies presented in this section represent an effort to describe the bird and mammal communities found in primary and secondary forests and associated agricultural clearings. Important information about the occurrence of certain pathogenic agents was also obtained.

Keywords: Solar heating, \*Solar collectors, Water, Space heaters, Hot water, \*Buildings, Solar radiation, Solar energy, Energy storage, Energy conservation, Cost analysis, Naval research, \*Solar heating systems, \*Solar water heating, Insolation.

The purpose of this document is to provide guidance in the design and cost analysis of solar heating systems for buildings and domestic hot water (DHW). The nature of solar radiation, several types of solar systems, storage devices, and architectural considerations are among topics included. Calculation methods are included for determining collector size, storage size, simplified building and DHW loads, value of fuel saved, and saving-investment ratios. The calculation procedure is based on parametric curves for 'fraction of heating load supplied by solar energy' and 'several' rules of thumb' for design. A series of 11 worksheets is used to enable the engineer with no prior experience with solar systems to accomplish a complete design and cost analysis. With this information he can prepare bidding and specification documents for the job. Tables of solar insolation at various Navy stations, typical building heat loads, collector prices by type, and storage tank prices are included. Two example problems are worked for tube-in-sheet collectors: one for space and DHW heating for a single dwelling, and the other DHW supply for a dispensary. Neither was found to be cost effective when competing against present day prices for natural gas. A directory of manufacturers and bibliography is also included. (Author)

## APPROPRIATE TECHNOLOGY ABSTRACTS

### Solid Waste Management - Tomorrow's Alternatives in the Urban-Rural Environment

Master's thesis  
Ronald J. Weeden. 1975, 161p Rept no. AFIT-CI-76-44

Keywords: \*Waste disposal, Management planning and control, Regulations, Legislation, Materials recovery, Economic analysis, Collecting methods, Shredding, Incinerators, Fuels, Packaging, Theses, Solid waste disposal, \*Waste recycling, Waste transfer stations, Sanitary landfills, Composts.

Solid wastes collection and disposal problems are enormous and inadequacies are not only polluting our land, air, and water, but are precipitating social, economic, and political problems as well. It is assumed that any design for solid waste management must include resource recovery as an integral part of the system, but only within the limits of cost/benefit advantages and, equally important, within the limits of developing markets for recovered materials. Viable alternatives are documented for solving the immediate problem and integrating the capability for conserving precious resources by enhancing the following objectives: (1) Improve efficiencies; (2) Enhance satisfaction; (3) Increase local knowledge and information; and, (4) Economically recover and process materials.

Ballistic Research Labs., Aberdeen Proving Ground, MD.

**Solar Energy Storage**  
Arthur Gauss, Jr. Jun 76, 24p Rept no. BRL-1895

Keywords: \*Solar energy, Low temperature, Reversible, Chemical reactions, \*Solar collectors, \*Solar heating systems, Endothermic reactions, Flat plate models, Heat of vaporization, Heat pumps, Heat storage, Solar space heating.

Low temperature processes for solar energy storage have been evaluated. Temperatures are low enough so that relatively inexpensive flat plate solar collectors can be employed. Low temperature reactions are proposed which demonstrate the principles of chemical storage of solar energy. Certain of these reactions could be laboratory tested with little difficulty since they yield products which separate naturally. The most practical low temperature system analyzed to date is the heat of vaporization storage system. The storage capacity for this system, typically about 200 kcal/liter, is close to an order to magnitude better than conventional sensible heat storage in water. (Author)

**Procedures to Minimize Mechanical Damage to Freeze-Dried Foods**  
Final rept. 15 Aug 73-14 Apr 75  
Shri C. Sharma, and Edward Seltzer. Mar 75, 128p FEL-20  
Contract DAAK03-73-C-0013

Keywords: Freeze dried foods, Meat, \*Food processing, Damage, Packaging, Formulations, \*Food storage, Polymeric films, Phosphates, Proteins, Mechanical properties, Additives, Moisture content, Storage, Stability, Binders.

The objective of the studies reported herein was to develop procedures principally to minimize mechanical breakage during handling and transport, while retaining or improving other quality characteristics of ten meat/seafood products. The effects of freezing rate prior to freeze drying, dehydration parameters, and various food grade additives were evaluated. Formulations have been developed which result in the products which are mechanically stable and exhibit superior texture, rehydration and organoleptic qualities. The major advance discovered in this study has been the effectiveness of salt soluble meat proteins, dispersed by an optional incorporation of phosphates, as binder for the meat tissues, in a process sequence which includes lyophilization. The phosphate treatment is part of the additive system, the effectiveness of which is augmented by sodium chloride and in some cases by wheat gluten and meat emulsion.

### Research and Development of Fiber-Reinforced Concrete in North America

Final rept.  
George C. Hoff. Feb 74, 19p Rept no. WES-MP-C-74-3

Presented at Symposium on Concrete Research and Development (1970-1973) Sep 73, Sydney, Australia.

Keywords: \*Reinforced concrete, \*Concrete, Fiber reinforcement, Reinforcing materials, Steel, Glass, Plastics, Fibers, Spalliation, Impact strength, Flexural properties, Metal fibers, Glass fibers, Glass textiles, Mortars(Material), \*Ferrocement.

Fiber-reinforced concrete (FRC) in North America is emerging from the laboratory and is finding many potential applications. Steel, glass, and plastic fibers are being used in mortars and concretes to improve the characteristics of these materials, particularly the flexural and impact strengths. Steel-FRC is being used mostly for pavement overlays. Glass-fiber-reinforced cements are being used in architectural products. Plastic-fiber-reinforced products are being used for improved spall and impact resistance. The applications of FRC are limited only by the ingenuity of the user. (Author)

See also Rept. no. AEWES-TR-C-69-C-1 dated Feb 69, AD-685 824.

Keywords: \*Concrete, \*Reinforced concrete, Reinforcing materials, Fiber reinforcement, Bonding, Deformation, Shrinkage, Flexural strength, Cracking(Fracturing), Deflection, Strength(Mechanics), \*Bamboo reinforced concrete.

Military construction activities in Southeast Asia have caused renewed interest in bamboo reinforcement and an investigation of the use of bamboo as expedient reinforcement for concrete was begun at the U. S. Army Engineer Waterways Experiment Station. The more important results and conclusions are summarized here.

### Expedient Reinforcement for Concrete for Use in Southeast Asia. Report 3. Additional Tests of Bamboo

Frank B. Cox, and James F. McDonald. Dec 70, 101p Rept no. WES-TR-C-69-3-3  
See also Report 2, AD-706 846.

Keywords: \*Reinforced concrete, Reinforcing materials, Plants(Botany), Preparation, Loads(Forces), \*Bamboo reinforced concrete, \*Concrete, Bamboo.

This report summarizes the to-date (October 1969) results of a current WES study on the feasibility of using bamboo as an expedient reinforcement for temporary reinforced concrete structures. The report contains the results of an investigation of the most important engineering properties of an Asian species of bamboo (*Phyllostachys bambusoides* or Madake), some additional properties (since the publication of Report 1) obtained for the local Mississippi cane (*Arundinaria tecta*), description of short-time static tests conducted on 14 beams, description of tests of two beams subjected to sustained loading, conclusions, and tentative, to-date recommendations for the design of bamboo-reinforced members.

### Water Hyacinth Research in Puerto Rico

Final rept.  
William N. Rushing. Sep 73, 33p Rept no. WES-MP-M-73-13

Keywords: \*Water hyacinth, \*Weed control, \*Puerto Rico, Biological control, Productivity, \*Aquatic weeds, Snails, Food consumption, Electric power plants, Pumping, Lakes, Reservoirs, \*Aquatic plant control, *Pomacea australis*, *Eichhornia crassipes*.

Water hyacinths are by far the most troublesome aquatic weeds in Puerto Rico. In 1972 the Tropical Terrain Research Detachment of the U. S. Army Engineer Waterways Experiment Station conducted a limited study on the productivity of water hyacinths in field situations and on the biological control of some native aquatics with the Brazilian snail, *Pomacea australis*. This paper presents some quantitative data on water hyacinth productivity in three different natural locations on the island. Data are also given on amounts and rates of consumption of aquatics by the snail, whose use as an agent for biological control of aquatic weeds appears promising.

### International Symposium on Wind Energy Systems, Held at Cambridge Univ., 7-9 Sep 76

Conference rept.  
Robert H. Nunn. 7 Dec 76. 28p Rept no. ONRL-C-31-76

Keywords: Energy conversion turbines, Axes, Orientation(Direction), Configurations, Efficiency, Augmentation, \*Wind energy, Economic analysis, Fabrication, State of the art, Forecasting, Symposia, Planning, Great Britain, Windmills, Wind turbines, Vertical axis turbines, Horizontal axis turbines, Wind power generation, Meetings.

Vertical - and horizontal-axis systems were discussed both in theory and in practice. Applications ranged from wind farms each with hundreds of megawatt units to the use of Cretan windmills to provide water for cattle. Wind energy conversion units have been operated in several configurations and the theory of their performances is sufficiently advanced to allow design for fabrication. The trends are towards larger units for municipal power systems and smaller units for domestic use. In the former case, the behavior of large wind turbines operating in large arrays, and the output (with and without storage) of several such arrays when geographically dispersed, has yet to be well understood. The field has reached a level of maturity characterized by such factors as economics, environmental impact, and public acceptance.

**Is There a 'Best' Sawing Method**  
Forest Service research paper

## APPROPRIATE TECHNOLOGY ABSTRACTS

Hiram Hallock, Abigail R. Stern, and David W. Lewis.  
1976, 14p Rept no. FSRP-FPL-280

Keywords: Lumber, \*Wood, Yield, Sizes(Dimensions), Diameters, Shrinkage, Length, Patterns, Computer applications, Tables(Data), \*Sawmills, \*Industrial plants, Sawing, Wooden logs, Saw mills, BOF computer program.

The Best Opening Face (BOF) computer sawing program has been used to investigate the relationship, in terms of lumber yield, of log diameter (5 to 20 in.), log length (8 to 24 ft.), and taper (1 to 5 in.) to eight of the most commonly used sawing methods. Results generally show that logs 16 feet or shorter and with 3 inches or less of taper, yield best when sawn by one sawing method, and those longer and with more taper by another method. Results of this research can form the basis for making rational selection of sawing systems in new mills when the log mix to be processed is known. As examples of the potential of this information in management decisions, three actual sawmill log mixes were analyzed in terms of expected yields by each of the sawing methods.

**Individual Log Yields by Eight Sawing Systems**  
Forest Service research paper  
Hiram Hallock, Abigail R. Stern, and David W. Lewis.  
Dec 76, 84p Rept no. FSRP-FPL-280-Suppl  
Supplement to AD-A035 615.

Keywords: Lumber, Industries, Operations research, Production, Production engineering, Systems analysis, Mixtures, Wood, Sizes(Dimensions), Optimization, Saws, Industrial equipment, Computer programs, Computerized simulation, Tables(Data), \*Sawmills, \*Wood products, \*Industrial plants, BOF(Best Opening Face) computer program, Best opening face computer program, Logs(Wood), Sawmills.

When a new sawmill or a major change in an existing sawmill is being planned, an important consideration is the inherent capability of each of the potential sawing systems to convert the available mix of logs into the most lumber. Through the medium of the Best Opening Face (BOF) computer program, eight sawing systems were used to saw a mix of logs encompassing all combinations of 5- to 20- inch diameters, 8- to 24 foot lengths, and 1 to 5 inches of taper. The results were summarized and published in USDA Forest Service Research Paper FPL 280, 'Is There a 'Best' Sawing Method'. For the person faced with making a systems selection choice using his own mix of logs, the complete data developed by the BOF program is essential. This paper contains that data and suggestions for its use. These tables are a supplement to USDA Forest Service Research Paper FPL 280. (Author)

**Test Fills for Rock-Fill Dams**  
Final rept.  
David P. Hammer, and Victor H. III Torrey, Mar 73,  
170p Rept no. WES-MP-S-73

Keywords: \*Dams, Rock, Compacting, Foundations(Structures), Construction equipment, Vibrators(Machinery), Rollers.

Data from 14 Corps of Engineers' (CE) rock test fill projects are summarized, and six of these projects are analyzed in detail. Variables most often investigated in these test fills were (1) lift thickness, (2) roller type, (3) number of roller passes, and (4) rock gradation. Measured parameters were (1) compaction, (2) permeability, and (3) grain-size distribution, both before and after compaction. The vibratory roller generally gave the best compaction, but also caused a substantial amount of surficial breakage for most rock types. It was found in most cases that better results were obtained with a vibratory roller when compacting material with the fines (sizes less than plus or minus 3 in.) removed. The possibility of using the Los Angeles abrasion test to predict rock breakage was explored. However, no conclusions could be drawn due to the lack of data and to the diversity of testing methods used in the projects studied. Recommend procedures for (1) planning and design, (2) construction, (3) measurements and observations, and (4) evaluation of results of future test fills are given.

**Urban Food Supply and Distribution: Characteristics and Utilization of Fresh Food Markets in Bangkok and Thonburi**  
Technical rept.  
Margaret E. Crawford, 22 Feb 74, 127p Rept no. TR-5  
Contract Nonr-1224(56)

Keywords: Fresh foods, \*Marketing, \*Thailand, Urban areas, Food, Commerce, Commodities, Supplies, Sources, Rural areas, \*Food supply, Bangkok(Thailand), Thonburi(Thailand).

This report deals with one aspect of the problem of food supply and distribution to urban areas. It describes major internal characteristics of nearly two hundred fresh-food markets or talat in Bangkok Thonburi, Thailand. These characteristics are then summarized in a measure of market utilization. Indicators of change within the market system are identified along with market responsiveness in meeting the changing needs of a rapidly growing urban population. (Author)

Army Engineer Waterways Experiment Station, Vicksburg, MS.  
**Potential Nonstructural or Low Cost Waterways System Improvements**  
Final rept.  
Frederick M. Ankiam, Jun 71, 146p Rept no. WES-MP-O-71-1

Keywords: Water traffic, Inland waterways, Operational effectiveness, Utilization, Optimization, Low costs, Cost benefits, Regulations, Locks(Waterways), Commodities, Barges, Towing, Modification, Management planning and control, Questionnaires, \*Waterway transportation.

The inland waterways system of the United States as it exists today has a number of problems associated with near-capacity traffic conditions. In many places on the Mississippi, Ohio, and Missouri Rivers and their navigable tributaries, there are serious impediments to the free flow of waterborne commerce. This study was conducted to determine the potential for more efficient utilization of existing inland waterways resources and facilities as a possible alternative to heavy investment in major construction. The study was based on distribution of a questionnaire, meetings and discussions with the Civil Works Task Group for Inland Waterways Systems Analysis, and visits to Corps of Engineers Civil Works offices and river sites by the author. The inland waterways system is an intimate interweaving of three significant subsystems: the physical waterway, the towing industry, and commodities. These subsystems and their interrelations are discussed in detail herein. It was determined that there are a number of areas of potential for improvement in the inland waterways system. These areas involve such items as changes in operating procedures of the locks, revisions of the operating rules for towboats approaching and using locks, staffing considerations, additional assistance at heavily trafficked locks, and other such factors.

**Particleboards from Lower Grade Hardwoods**  
Forest Service research paper  
Bruce G. Heebink, and William F. Lehmann, Jun 77,  
15p Rept no. FSRP-FPL-297

Keywords: Fiberboard, Hardwoods, Panels, Adhesive bonding, Urea, Phenols, Formaldehyde, Bending stress, Expansion, Sizes(Dimensions), Plywood, Strength(Mechanics), Stiffness, Accelerated testing, Aging(Materials), \*Wood wastes, \*Particle board, Commercial standard 236.

Properties and characteristics are reviewed for particleboards prepared from hardwood residues of a number of species. In general, hardwood particleboards met or exceeded the minimum properties defined in Commercial Standard CS 236 for both Type 1 (interior) and Type 2 (exterior) applications. However, certain anomalies in the data suggest need for further research in the areas of wood-adhesive interactions, particularly with the higher density hardwoods. An appendix of research references is included for hardwood usage in composite panel products other than particleboard. (Author)

## APPROPRIATE TECHNOLOGY ABSTRACTS

**Effect of Geography on the Extensive Agricultural Use of Sewage (Wplyw Czynnika Geograficznego na Rozpowszechnienie Rolniczego Wykorzystania wod Sciekowych)**

Jan Wierzbicki. Sep 77, 10p Rept no. CRREL-TL-642  
Trans. of Gaz Woda Technika Santarna (Poland) v24  
n11 p407-410 1950, by Sam Blalock.

**Keywords:** \*Sewage disposal, Waste recycling, \*Irrigation, Fertilizers, Rural areas, Agronomy, Agriculture, Urban planning, Climate, Terrain, Soils, Geographic areas, Land use, Waste management, Translations, \*Poland, Sewage irrigation.

This article considers the causes of the elimination of many irrigated fields in England when the development of this kind of arrangement was appearing in other countries. Unfavorable local and soil climatic conditions necessitated the replacement of irrigated fields by purification plants of another type. The liquidation of irrigated fields in England and in the Eastern United States should not be an example for countries in which other geographic conditions predominate. The considerable simultaneous increase in arrangements of this type in other countries proves the incorrectness of uncritical copying of England's example and negative reaction to the agricultural use of sewage water in localities with conditions which favor its use. **Micro-Level Approaches for Improving Water Resource Knowledge Transfer in Rural Areas**  
Technical rept.  
Nathan Buras. Jun 77, 18p Rept no. SOL-77-12  
Contract N00014-75-C-0865

**Keywords:** \*Water resources, Rural areas, Technology transfer, Irrigation systems, Water supplies, Water wells, Water quality, India, West Africa, Guatemala, Peru, Mexico, Israel, Conferences, Meetings, Developing countries, Information transfer.

One of the topics discussed at the Second International Conference on Transfer of Water Resources Knowledge (Colorado State University, Fort Collins, Colorado, June 29 - July 1, 1977) dealt with utilization of water resources knowledge in the context of regional development. Six papers were presented to the conference under this heading covering a broad range of issues: from a diagnostic description of a difficult situation in rural India, to a theoretical approach to the policy decisions relevant to rural modernization efforts. This general report summarizes the six papers, comments briefly on them, then focuses on two key points which were by-passed by the papers: (a) the resistance to change of farming communities at lower levels of technological sophistication; (b) attempts to overcome this resistance.

Forest Products Lab., Madison, WI.  
**Improved Utilization of Lumber in Glued Laminated Beams**  
Forest service research paper  
Russell C. Moody. 1977, 52p Rept no. FSRP-FPL-292

**Keywords:** Lumber, Beams (Structural), Laminates, Adhesive bonding, Quality, Modulus of elasticity, Tensile strength, Shear strength, Compressive properties, Bending, Forests, Conservation, \*Wood, \*Building materials.

Evaluation of 120 glued laminated (glulam) beams provided criteria for improved utilization of lumber in such beams. Objectives were: (1) to determine if lumber grade can be somewhat reduced on the compression side of beams without significantly changing design strength; (2) to establish analytic procedures for incorporating lumber having had its modulus of elasticity (E) determined (E-rated lumber) into glulam beams; and (3) to determine the effect on beam properties of using lumber with limited wane. The procedures developed will provide those preparing specifications a wider raw material base for glulam timber, resulting in more efficient use of our timber resource.

**Keywords:** Climate, Tropical regions, Meteorological data, Monsoons, Rainfall, diurnal variations, Seasonal variations, Rainfall intensity, Temperature, Forests, Weather stations, Weather forecasting, Southeast Asia, Thailand, Humidity, \*Meteorology.

Major results of a two year project to study the climatological and micrometeorological conditions in a tropical evergreen forest region are summarized in this report. The study has been under the sponsorship of the U. S. Army Engineer Topographic Laboratory. The forest area under study is in the interior of Thailand and is influenced by a cool, dry northeast monsoonal flow from November to March and a warm, moist southwest monsoonal flow from May to September. Measured information were collected during a three year field program sponsored by the U. S. Army Natick Laboratories and included ground station temperature, relative humidity, precipitation, evaporation, hours of sunshine, and tower measurements of temperature, dew point temperature, and wind speed, incoming and reflected solar radiation, incoming and outgoing infrared radiation and sub-surface temperature profiles in the forest and in a cleared area within the forest region.

**Waste Water Use for Feed Cropland (Ispol'zovaniye Stochnykh vod Dlya Orosneniya Kormovykh Ugodyi)**  
N. A. Kovaleva, L. F. Mikheyeva, and M. I. Demina.  
Apr 78, 6p Rept no. CRREL-TRANS-673  
Draft, trans. of mono. Kupavna, Ministry of Amelioration and Water Utilization, All Union Scientific Research Institute for Utilization of Waste Water in Agriculture, 1976 4p.

**Keywords:** Irrigation systems, Farm crops, Sewage, Grasses, Grazing, Fertilizers, Domestic animals, Translations, \*USSR, \*Irrigation, Fodder, \*Waste water reuse, Sewage irrigation, Corn plants.

One of the effective means for upgrading fodder-producing areas is to irrigate them with waste water. The experience of farms in Moscow, Leningrad, Kaliningradskaya, Volgogradskaya, and other oblasts in the RSFSR, the Ukrainian SSR, Latvian SSR and others indicates that meadows and pastures irrigated with sewage water grow 7,000-10,000 fodder units per hectare. Research and studies of the used field irrigation systems indicate not only the high effectiveness of the use of waste water in the irrigation of fodder crop land but, the high water retention effect, since each hectare uses up to 6,000-7,000 cubic meters of waste water per year. Computations indicate that factual possibilities for the development of waste water irrigation of fodder crops exist in many parts of our country, totaling an area of 2.6 million hectares, with an annual use of about 13 cubic kilometers of waste water.

**Solar Heating of Buildings and Domestic Hot Water**  
Final rept. Jul 74-Dec 75  
E. J. Beck, Jr. and R. L. Field. Nov 77, 89p Rept no. CEL-TR-835

**Keywords:** Solar heating, Housing (Dwellings), Hot water, Solar energy, Solar collectors, Water tanks, Heat transfer, Design to cost, Architecture, Sizes (Dimensions), Fuel consumption, Savings, Investments, Bibliographies, \*Solar heating systems, Solar space heating, Hot water heating, \*Solar water heating, Houses, Insulation, Cost analysis.

The purpose of this document is to provide guidance in the design and cost analysis of solar heating systems for buildings and domestic hot water (DHW). The nature of solar radiation, several types of solar systems, storage devices and architectural considerations are among topics included. Calculation methods are included for determining collector size, storage size, simplified building and DHW loads, value of fuel saved, and saving-investment ratios. The calculation procedure is based on parametric curves for 'fraction of heating load supplied by solar energy' and several 'rules of thumb' for design. A series of 11 worksheets is used to enable the engineer with no prior experience with solar systems to accomplish a complete design and cost analysis. With this information he can prepare bidding and specification documents for the job. Tables of solar insolation at various Navy stations, typical building heat loads, collector prices by type, and storage tank prices are included. Two example problems are worked for tube-in-sheet collectors: one for space and DHW heating for a single dwelling, and the other DHW supply for a dispensary. Neither was found to be cost effective when competing against present day prices for natural gas. A directory of manufacturers and bibliography is also included. (Author)

Office of the Chief of Engineers (Army), Washington, DC.  
**Fish Production in China. Transportation of Fish Eggs, Fry and Young**  
Yuh-Farn Chang. Jul 78, 21p

**Keywords:** \*Fishes, Eggs, \*Transportation, Fisheries, Containers, Barrels, Production, Density, China, Handling, Fishing industry, Aquaculture, Dissolved gases, Oxygen, Carp, Mulllets, Bigheads, Cargo transportation.

The proper transportation and handling of fish eggs and fry is a vital part of any fish production system. Careful planning is important. The first thing to decide is the type of container to be used to hold the fish. There are buckets and barrels of many sizes and designs, each with different characteristics. A second consideration is the density to which the fry should be packed in the container. This must be as dense as possible to save space and money, but not so dense as to kill the fish. The two most important factors in determining the maximum allowable density are water temperature and dissolved oxygen levels. Fish fry and eggs are shipped by three major means: by land, by water, and by air. This involves either trucks, trains, boats, airplanes, or human labor. Each method has advantages for different situations. During any form of transportation, water maintenance is necessary. If some sort of method for replenishing dissolved oxygen is used, replacement of water can be put off, but still not avoided. The source of fresh water must be inspected carefully before it is used. Clean pond water appears to be best. Any temperature difference between old and new water should be minimized. In more recent years, cultivation of mullet species has become prominent, moving in with the more traditional species, the carps and the bigheads. Most of the techniques used for the transportation of all species, including mullet, apply to their eggs. (Author)

**Fish Production in China. The Rearing of Fish Fry and Fingerlings**  
Yuh-Farn Chang. Jul 78, 43p

**Keywords:** \*Fishes, Fisheries, \*China, Breeding, Production, Cleaning, \*Ponds, Reproduction (Biology),

## APPROPRIATE TECHNOLOGY ABSTRACTS

**Aquaculture, Dredging, Pest control, Calcium oxides, Bleaching agents, Effectiveness, Animal nutrition, Feeding stuffs, Fertilizers, Sewage, Manure, Leguminous plants, Byproducts.**

The supply of fish fry and fingerlings is of primary concern to the fish culturing industry. In order to increase the supply, it is necessary to improve rearing techniques. The first of many parts to this program is to improve pond condition. It is recommended that rearing ponds be drained and cleaned once a year. The cleaning process involves treatment with various chemical substances, and simple mud removal (dredging). This reduces the incidence of disease, eliminates pest species and other harmful organisms, and facilitates repair of the pond's structure. Many different chemicals can be used, although lime and bleaching powder seem to be the most effective. The second area to be considered is that of fry nutrition. Different species of fry have different food preferences. For this reason, they can be found in different areas of the pond. For each species of fish, slightly different pond and fertilizer conditions are considered optimal. The basic fertilizers used are grass, cow manure, soybean milk, and peanut cakes. Recent experiments using human sewage have proven very successful, with exciting prospects for the future. A third consideration is the selection of a suitable rearing pond. Characteristics of a good pond are: an ample water source, appropriate size and depth, circular shape, level bottom, non-leaking, and plenty of sunlight.

**AD-A058 106/6** **PC A02/MF A01**  
Forest Products Lab., Madison, WI.  
**Use of Wood in Mobile Homes is Increasing**  
Forest Service resource bulletin  
H. Edward Dickerhoof. 1978. 24p Rept no. FSRB-FPL-4

**Keywords:** \*Housing, Lumber, Mobile, Construction, Standards, Plywood, Gypsum, Mathematical analysis, \*Wood, \*Fuels, Mobile homes, Softwoods, Hardwoods, Gypsum board, Houses, Trailers.

In recent years increased amounts of dimension lumber have been used per mobile home unit. This is a result of increasingly stringent construction standards adopted during the mid-1970's and because the average size per unit has increased. The demand for conventional exteriors in double-wide mobile homes has brought about large increases in the use of softwood and hardwood plywood. Gypsum board has been used increasingly as an alternative to hardwood plywood for interior walls. (Author)

Association of Scientists and Engineers of the Naval Sea Systems Command, Washington, DC.  
**Why Not Sails**  
Kenneth C. Morisseau. Mar 78, 23p  
Proceedings of the Annual Technical Symposium (15th), Association of Scientists and Engineers of the Naval Air and Sea Systems Command, Washington, DC 1978.

**Keywords:** Marine propulsion, Wind, Naval architecture, Energy conservation, Technology forecasting, Prototypes, Trade off analyses, Ship hulls, \*Wind energy, \*Boats, Sailboats.

With the shortage of fossil fuels becoming a serious problem and the high cost and environmental hazards of nuclear propulsion, it appears to be a good time to go back and take a hard look at the use of sails as the device and wind as the energy source for ship propulsion. (In the interest of adding credence to what may be considered a questionable endeavor, it should be noted that serious studies are being made both in Britain and West Germany concerning the practicality of sail propulsion for commercial vessels.) The paper reviews the history of sails as a means of propulsion, the capabilities and limitations of modern sailing ship designs with both conventional displacement hulls and unconventional hull forms such as semi-submersible and hydrofoil supported considered. A variety of designs to suit naval and commercial applications are provided for further consideration. (Author)

Contract DADA17-71-C-1084

**Keywords:** Bacterial diseases, Fungus diseases, Infectious diseases, Tropical diseases, Skin diseases, Tropical regions, Epidemiology, Therapy, Chemotherapy, Preventive medicine, Panama, Venezuela, Costa Rica, Guatemala, Vietnam, Soaps, \*Diseases, \*Fungi, Tinea corporis, Tinea cruris, Tinea pedis, Columbia, Infections.

Bacterial skin infections in the tropics are the predominant cause of dermatological disease in civilians and are directly related to temperature, humidity, exposure, and living conditions. Substandard housing and poor hygiene, biting and vector insects contribute to high rates of infection. Tropical skin infections are usually streptococcal. In military populations, personnel on field operations are at highest risk. Support troops, even in the tropics, have a much lower incidence of streptococcal pyoderma. Currently available deodorant soaps do not prevent skin infections, but chlorhexidine gluconate looks promising. Epidemic furunculosis is related to close social contact, and may be more common than most physicians realize. Early treatment with antibiotics plays a significant role in prevention of new furuncles among contacts. Antibiotic resistant strains of bacteria pose new problems in cutaneous microbiology. Severe fungal infections of the skin may attack up to 70% of military personnel in hot humid environments. Occlusion is the most significant factor, and appears to be related to accumulation of CO<sub>2</sub> under damp clothing. Combined therapy of tinea corporis/cruris with topical miconazole/hydrocortisone is highly effective. Hydrocortisone alone makes these infections worse in the tropics. Topical clotrimazole is effective in the treatment of dermatophytosis, but tinea pedis is difficult to treat and usually recurs.

**Concrete for Earth-Covered Structures**  
Final rept.  
James E. McDonald, and Tony C. Liu. Sep 78, 31p  
WES-MP-C-78-15, CTIAC-34

**Keywords:** Underground structures, \*Concrete, Waterproofing, Permeability, Moisture, Porosity, Fiber reinforced composites, Strength (Mechanics), Habitability, Construction materials, \*Reinforced concrete, \*Ferrocement, Earth covered structures.

Low permeability to water is a primary consideration in the design and construction of earth-covered concrete structures. Factors affecting the permeability of concrete are generally classified into three groups: (1) constituent materials; (2) methods of concrete preparation; and (3) subsequent treatment of the concrete. Each group of factors is examined in this paper and recommendations are made on how to obtain concrete that is virtually impermeable. Also, some specialized concretes with potential applications in earth-covered structures are discussed briefly. These include polymer-impregnated, polymer, and fiber-reinforced concretes and ferro-cement. (Author)

### **Wastewater Stabilization Pond Linings**

Special rept.  
E. Joe Middlebrooks, Catherine D. Perman, and Irving S. Dunn. Nov 78, 118p CRREL-S-78-28  
Contract DACAB9-77-C-1895

**Keywords:** \*Waste water, \*Ponds, Sealing compounds, Linings, Soil stabilization, Waste treatment, Environmental protection, Asphalt, Concrete, Plastics, Costs, Protective coatings, Moistureproofing, Wastewater stabilization lagoons, Bentonite, Water pollution control, Hydrology.

A review of the literature on wastewater stabilization lagoon linings covering the work during the past 20 years is presented. Design, operating and maintenance experiences are presented for soil sealants, natural sealants, bentonite clays, chemical treatments, gunite, concrete, asphaltic compounds, plastics and elastomers. The characteristics of various materials, applicability to different wastes, construction techniques and details of installation techniques are presented. Installation costs for various materials and comparative costs are summarized. A summary of reported seepage rates for various types of lining materials is presented. A survey of the 50 states was conducted to determine the requirements for liners and allowable seepage rates. Requirements are varied and depend upon the local soil conditions and the experiences of the regulatory agencies with various materials. The trend is toward more stringent requirements. Accepted design and installation procedures are summarized, and detailed drawings of installation techniques are presented. Recommendations of the manufacturers and installers of liners are also presented. (Author)

Richard Kenneth Rankin. May 80, 131p  
Master's thesis.

**Keywords:** Rural areas, Finance, Sources, Agriculture, Economics, Theses, \*Agricultural economics, \*India, \*Banking, Foreign Technology, Credit.

Since the turn of the twentieth century, there has been an effort in India to replace the usurious moneylender with institutionalized forms of rural credit. This attempt became more critical with the coming of the Green Revolution (1960's) and the associated increase in demand for rural credit. Primarily the Government of India has relied on the Cooperative Movement in its effort to institutionalize the supply of rural credit. This thesis examines some of the major problems and obstacles encountered as well as corrective measures taken with respect to the cooperative movement. (Author)

## APPROPRIATE TECHNOLOGY ABSTRACTS

This thesis provides a contractor involved in earthen dam construction with the appropriate tools and techniques needed to develop and implement a statistically based process control system for the impervious zone (or core). Initial research consisted of an extensive literature search to obtain background material related to compaction of embankments and obtaining the plans, specifications, and test data from the Corps of Engineers dam site used as an example in the thesis. Personal interviews were conducted with contractor and Corps personnel at the dam site directed toward gaining insight into the current practices involved in Corps dam construction projects and their comments concerning feasibility of a statistically based process control system. The practical situation observed and implemented on the Corps dam for embankment compaction of earthen dams was meshed with the theory of statistically based process control. A set of guidelines was developed for a contractor to use to set up statistically based process control techniques involved in analyzing test data for the impervious zone of an earthen dam.

**Application of Technology Transfer Process Model for Thailand**  
Master's thesis  
Pairoat Kaensarn. Mar 80, 109p

Keywords: \*Thailand, \*Technology transfer, Models, Economics, Religion, Culture, Psychology, Theses.

The physical background of the country, national economy, and some characteristics of Thai people, which, from the author's perspective, have significant influences on the elements of the model and the knowledge transfer process itself are described. Each element of the model is discussed as to how it is affected by organizational factors. Economic, religious and cultural factors are considered. At the end of the study, a recommended strategy to improve the effectiveness of the knowledge transfer process and the efficiency of knowledge utilization within the country is proposed. The anticipated improvement of the transfer process is also briefly discussed.

Over the past two decades U.S. lumber imports from the tropics have increased fourfold. Plywood trade, mostly from Asian sources, has soared forty-fold and now equals our domestic production. Log imports, though, have decreased drastically from about 100 million board feet (log scale) in the 1950's to 30 million currently. Much of the world timber trade now is in the form of processed material. Many more tropical wood species and species groupings are being made available to U.S. processors. Most of these have been well known for many years on the European markets. This interest in supplemental supplies from overseas is in both softwoods and hardwoods. An extensive foreign literature has described the properties and uses of tropical woods, but much of it is no longer readily available. In this country the U.S. Forest Products Laboratory, over the years, issued 'Information Leaflets' or 'Foreign Wood Series' reports on some species of importance. But many of these are now out of print. The most recent comprehensive document, 'Properties of Imported Tropical Woods,' contained a description of about 100 tropical genera.

**Accelerating the Kiln Drying of Oak**  
Forest Service research paper  
William T. Simpson. Sep 80, 12p Rept no. FSRP-FPL-378

Keywords: Lumber, Industrial production, \*Drying, Steam, \*Wood, \*Industrial plants, Moisture content, Surface finishing, Production rate, High temperature, Hardwoods, Quality.

Reducing kiln-drying time for oak lumber can reduce energy requirements as well as reduce lumber inventories. In this work, 1-inch northern red oak and white oak were kiln-dried from green by a combination of individual accelerating techniques--presurfacing, presurfacing, accelerated and smooth schedule, and high-temperature drying below 18 percent moisture content. Results were compared with those achieved by conventional kiln drying. Drying time in the combined techniques procedure was reduced by more than 50 percent. The results for quality of the lumber were mixed. In most of the material, the quality was acceptable, but enough honeycomb was present to be of concern. (Author)

**Wind Energy - How Reliable**  
Structures rept.  
Douglas J. Sherman. Jan 80, 36p Rept no. ARL/STRUC-380

Keywords: Wind, Mechanical energy, Electric power production, Reliability, Storage, Wind velocity, Variations, Statistical analysis, \*Wind energy.

The reliability of a wind energy system depends on the size of the propeller and the size of the back-up energy storage. Design of the optimum system for a given reliability level can be performed if a time series of wind speed data is available. However, a design based on conventional meteorological records, which sample the wind speed with a ten minute averaging time at three-hourly intervals, will over-estimate the storage by a factor of approximately 2, and if the wind speed is only available on a daily basis the storage will be over-estimated by a factor of 2.5 to 4.0. This is because a propeller can respond to wind speed changes in much less than ten minutes and also because three-hourly sampling does not often pick up the brief high-speed incidents which generate a significant part of the wind energy. A nomogram is presented, based on some continuous wind speed measurements, which enables storages calculated from three-hourly or daily data to be appropriately reduced because of these two effects. **Biological Utilization of Wood for Production of Chemicals and Foodstuffs**  
Forest Service research paper  
George J. Hajny. Mar 81, 67p Rept no. FSRP-FPL-385

Keywords: \*Wood, Industrial production, \*Chemical industry, \*Food, Trees, Residues, Cellulose, Lignin, Chemical derivatives, Sugars, Alcohols, Fermentation, Yeasts, Hydrolysis, Percolation, Nutrients, Feeding, Animal husbandry.

In the long term, mankind will have to depend on solar energy and photosynthetic processes rather than on fossil materials for energy and material needs. Cellulose and the hemicelluloses, which make up about 70 percent of the dry matter of trees and shrubs, are the most abundant, renewable, raw materials on earth. At present, the highest uses of wood are for structural material and as a source of fiber. There are, however, large quantities of wood residues produced during harvesting and manufacture that might be used. Intensive silviculture can greatly increase the supply of wood for all purposes. This paper reviews the work the U.S. Forest Products Laboratory has done over nearly 70 years to produce chemicals and feedstuffs from wood residues. Wood has been converted successfully to fermentation chemicals such as ethyl alcohol, glycerol, arabitol, erythritol, butanol, acetone, and 2,3-butylene glycol as well as to feedstuffs such as molasses and yeast, and to wood modified to make the polysaccharides digestible by ruminants. At present such use of wood is economically marginal, but is potentially economic in the future. (Author)

**Irrigation as a Factor in the Economic Development of Thailand.**

James R. Price. Jun 64, 10p Rept no. SORO/CINFAC/1-64  
Contract DA-49-092-ARO-7

Keywords: \*Irrigation, \*Thailand, Cereals, Irrigation systems, History, Economics, Floods, Counterinsurgency, Agriculture, Rural areas.

The question of irrigation and flood control in Thailand has been historically bound together not only with the immediate problems of production of Thailand's main export crop of paddy rice, but with the pattern of Thailand's foreign economic and political relations. Developmental irrigation and flood control projects only now nearing completion are virtually identical to those recommended more than half a century ago by a Dutch irrigation adviser, and which could have been completed within twelve years at a fraction of the cumulative costs, both in capitalization and crop losses, to date. **Woodworking Machines.**  
May 64, 2p FPL-048

Keywords: Machines, Wood, Saws, \*Wood, Milling Machines, Industrial Equipment, Material Separation, \*Sawmills, \*Industrial plants, Woodworking Machines.

Woodworking machines are made to do a wide variety of jobs. For any one job there are usually a number of makes, sizes, and styles of machines from which to choose. They are not standardized. Only a brief classification and outline of specifications for fairly typical machines of the more important types is attempted. Small light machines of the home workshop size are not included. Woodworking machines may be divided into three broad classes based on function: sawmill, planing mill, and industrial plant machinery. The function of sawmill machinery is to cut the log into rough, green lumber. The planing mill takes the rough lumber (usually dry), and prepares it for general construction uses, such as flooring, siding, shiplap, or framing. The industrial plant cuts up lumber and makes it into doors, furniture, boxes, or other fabricated products. (Author)

**Fire in Tropical Forests and Grasslands.**

Technical rept.  
Robert B. Batchelder, and Howard F. Hirt. Jun 66, 396p ES-23  
Contract DA-19-129-AMC-229(N)

Keywords: Fires, \*Tropical regions, Forest fires, \*Grass, Meteorology, Soils, Control, Armed forces research, Climatology, Culture, Ecology, Maps, \*Forestry, \*Fire safety.

Fire in the tropics has a long history in which frequent wide-spread burning has profoundly altered physical and cultural environments. A vast and diverse literature pertaining to fire and its effects in tropical forests and grasslands was evaluated, classified and presented in a selected bibliography. Emphasis is on the relation of fire to climate, natural vegetation, soils, cultural origins, technological level and way of life and other significant factors of the total environment. The incidence and frequency of occurrence of fire are examined in terms of the geographic distribution of passive and active environmental characteristics. The relationship of burning to climate and natural vegetation is shown on maps which represent a first attempt to depict the geographic distribution of fire in the tropics. Potential combustibility and the implications of fire to military operations are discussed. (Author)

**Natural Resistance of Woods to Biological Deterioration in Tropical Environments. Part I. Screening Tests of a Large Number of Wood Species.**  
Interim rept.

C. R. Southwell, C. W. Hummer, Jr, B. W. Forgeson, T. R. Price, and T. R. Sweeney. 7 Feb 62, 49p Rept no. NRL-5673-Pt-1

Keywords: \*Wood, Biological contamination, Tropical deterioration, Identification, Sampling, Exposure, Test methods, Marine borers, Resistance(Biological), Isopora, Degradation, Tropical tests, Sea water, Soils, Fungus deterioration.

In four different tropical environments, heavily infested with wood-destroying organisms, 114 species of scientifically identified woods have been undergoing a screening test for periods up to an 18-month exposure. Many of the woods were selected because of their reputed resistance to biological attack. Results of marine borer resistance studies have revealed 21 woods to be highly resistant to borers in Pacific Ocean water for the first 14 months of exposure. In tropical brackish water only 3 woods studied were highly resistant and very heavy damage was observed on 69 during the 14-month period. Stake tests in tropical jungle soil on both the Atlantic and Pacific Coasts of Panama showed 26 woods to be very durable to both subterranean termites and fungal decay for the first 18 months of exposure. A number of these resistant woods had not been studied previously. From the results of these studies, each wood included has been assigned resistance ratings of high, moderate, or low in respect to marine borer attack in sea water, teredo attack in brackish water, subterranean termites in tropical soil, and fungal decay in contact with jungle soil. Detailed descriptions of wood species which are considered to be of special interest are included. (Author)

## APPROPRIATE TECHNOLOGY ABSTRACTS

age, Physical properties, Management planning, Sources, Israel, \*Ground-water.

This report is one of a series under a program started in November, 1964, entitled 'An Inventory of Geographical Research on Desert Environments.' Geographic areas covered by the inventory were generally those classified as arid or extremely arid. Some variation in coverage occurs from chapter to chapter, without change in the objective of compiling and presenting the greatest possible amount of useful information in the allotted time. The purpose of the inventory is to determine in detail what topics have been or are being investigated for the world's deserts, to appraise the reported work, and to disclose areas of study where further work is needed. The series of chapters does not attempt to recapitulate all information known about the deserts of the world, but rather comprises a compendium-guidebook to past and present research. It is based upon a critical review of the published literature augmented by consultations with specialists. (Author)

**The Ecology of the Forest/Savanna Boundary (Proceedings of the Igu Humid Tropics Commission Symposium, Venezuela, 1964).**  
Technical rept. on Savanna Research Project Theo L. Hills, and Roland E. Randall. May 68, 153p  
Rept nos. TR-14, Savanna Research Series-13  
Contract Nonr-3855(00)

Keywords: \*Plants(Botany), \*Ecology, Trees, Grass, Rainfall, Distribution, Climatology, Soils, \*Forestry, History, Paleontology, Floods, \*Deserts, Fires, Animals, Humidity, Symposia, \*Tropical regions, Venezuela, Canada, Savannas.

The report is the outcome of a symposium on the ecology of the forest/savanna boundary. The papers presented at the meeting have been cut and edited so that a theme is presented rather than a series of papers. In the introduction, the problems involved in savanna classification and the ambiguity of terminology are discussed, types of savanna found in different parts of the world described, and methods of examination analysed. The section is concluded by a description of the field trip made by the Symposium members, during which many of the differences in altitude were seen in a fresh light. A second chapter is concerned with savanna/forest boundaries held stable by factors of the physical environment, here the roles of flooding and desiccation, climate, soils and geomorphology are examined. In the third chapter the authors discuss stable boundaries resulting from human action. Fire and the role of domesticated grazing animals are seen as the major factors. The subject of the fourth section is the boundary when not in equilibrium. Many factors are examined in different parts of the world including soil, wild animals, fire, palaeoclimatology and man. An evaluation is made of the use of palynological and historical data. (Author)

**Tropical Environmental Data (Trend): Cooperative Research Programme No. 27.**  
Semiannual rept. no. 2, 1 Jul-31 Dec 67.  
1968, 96p  
Contract DAJB29-67-C-0122

Keywords: \*Forestry, \*Tropical regions, Rainfall, \*Thailand, Hydrology, Micrometeorology, Soils, Mate-

rials, Deterioration, Bacteria, Fungi, Periodic variations, Rivers, Terrain, Mapping, Evapotranspiration, Sensors, Atmospheric temperature, Plants(Botany), Dry-evergreen forest.

The programme is an interdisciplinary study of a dry-evergreen forest environment in the 1,500 mm annual rainfall zone about 300 km north-east of Bangkok and 60 km south of Nakhon Ratchasima (Khorat). The programme is providing a reference framework of data on environmental factors, particularly those which relate to tropical deterioration of materials and to personnel operating in tropical forest environments, and is examining the interaction of meteorological, hydrological, soils, vegetation and other biological factors in such environments. Keywords: \*Soils, \*Deserts, \*Plants(Botany), Classification, Thickness, Sand, Distribution, Clay, Physical properties, Climatology, Plant tissue, Water, Measurement, Israel, Summer, Negev Desert.

The report discusses the root systems in sandy deserts as related to soil properties. 13 leading species were excavated and described. These are classified in three types. Soil moisture was measured at two locations in the Negev desert during the summer of 1966 and its use by plants discussed. The effect of sand cover and irrigation on the competition between leading desert psamophytes was examined. (Author)

**The Effects of African Agricultural Practices on Soil Productivity and Nutrient Levels in Kenya.**  
Final rept.  
Paul L. Lehrer. Sep 61, 209p  
Contract N00014-67-A-0244

Keywords: Rural areas, \*Agriculture, Kenya, \*Soils, Soil mechanics, Production, Nutrition, Deterioration, Fertilizers, Economics, Sociology, Structural geology, Climatology, Rainfall, Maps, Nutrients.

The purpose of this study is to examine the effects of African agricultural practices in Kenya on soil productivity. Emphasis is placed on discovering what effects cultivation would have on the nutrient levels of virgin soils in that country. It was found that fragmentation, female labor, and the attitude toward fertilization was actually more important than the more tangible physical considerations in understanding the basic charac-

teristics of African agriculture. The deterioration of the physical condition of the soil through continuous cultivation perhaps is more responsible for a decreased productivity than is nutrient depletion. Only through sustained use of fertilizers can the productivity of Kenya soils be substantially increased. The economic future of the African farmer will depend upon his ability to obtain a higher income through the sale of cash crops. (Author)

**Drained-Field Agriculture in Southwestern Tlaxcala, Mexico.**  
Final rept.  
Gene C. Wilken. Sep 68, 155p  
Contract N00014-67-A-0244

Keywords: Rural areas, \*Agriculture, \*Mexico, Climatology, Rainfall, Population, Soils, Drainage, Floods, Erosion, Irrigation systems, Deposition, Production, Reclamation, Ecology, Sociology, \*Water Management, Tlaxcala(Mexico).

This study examines the land and water management problems of Tlaxcala, concentrating on the southwestern portion of the state which lies at the northern end of the Basin of Puebla on the Mesa Central of Mexico. To cope with poorly drained, sand-filled streamways which threaten flood and deposition on basin floor soils, the Tlaxcala farmers practice sophisticated land conservation and reclamation techniques, using a minimum of equipment. In the process, they have created a productive and distinctive agricultural region. A description of the methods they employ to maintain and expand the agricultural base in this difficult environment forms part I of this study. In part II, the ecology of farm life is discussed and the geographical relationship between complexes of agricultural practices, social systems, and populations is discussed. (Author)

**A Philippine Sugar Cane District: Spatial Phenomena Affecting Sugar Cane Production on the Haciendas.**  
Final rept.  
Norman W. Schul. Aug 62, 256p  
Contract N00014-67-A-0244

Keywords: Agriculture, \*Philippines, Statistical analysis, Climatology, Terrain, Management planning, Labor, Commerce, Rural areas, Machines, Regression analysis, Transportation, Industries, Soils, Production, Site selection, Maps, \*Sugarcane.

The study primarily involves the analysis of physical and cultural factors affecting sugar cane yield although it will also further an understanding of the spatial organization of sugar cane production. The study is based on the Victoria's Milling District, which covers approximately 37,000 hectares in northern Negros Occidental Province in the central Philippines. A simple model was used to describe the area's spatial organization of sugar cane production in the sphere of plantation agriculture. The model stipulates (1) an extensive land area, (2) mono-cropping, (3) centralized managerial control, (4) an abundant labor supply and (5) production for the export market. It has these further qualities which are believed to be comparable for most sugar cane districts in the Philippines: the characteristic hacienda-central settlements, the problems of mechanization, and the quota system for sugar cane. The yield factors studied were hacienda size, hauling distance from the hacienda to the mill, the slope, soil quality, the necessity for trucking, tenure, and the type of power used in land preparation. **Planned Change in Agrarian Countries.**  
Technical rept.  
Arthur H. Niehoff. Dec 69, 157p Rept no. HUMRRO-TR-69-21  
Contract DAHC19-70-C-0012

Keywords: \*Management planning, Rural areas, Culture, Social communication, Economics, Agriculture, Sociology, Agrarian countries, \*Social change, Ethnic groups, Civic programs.

The report is an effort to provide operationally relevant concepts and guidelines for persons responsible for planning and implementing development projects in agrarian countries. A framework for describing or evaluating the conduct of development projects is proposed, and applied to the results of an analysis of 203 case studies of past projects. Influences, conditions, and techniques which appear to affect project outcome are: (1) local cultural characteristics, such as leader patterns, social structure, and economic patterns; (2) motivation for change, including felt needs and perceived practical benefits; and (3) project strategies, such as the innovator's image characteristics, communication, and participation. The case study analysis suggests that factors of special importance to success in development projects are cooperation of local leaders, degree and immediacy of practical benefits which recipients anticipate, innovator skill in communication processes, participation of recipients in implementing the change, and establishing arrange-

ments for maintenance of the innovation by the local people. (Author)

**Modernization in a Regional Context: Pretheory and Practice in Western Nigeria.**

Final rept.  
Thomas Harden Eighmy. Oct 69, 447p  
Contract N00014-67-A-0244-0001  
Prepared in cooperation with Wisconsin Univ., Madison, Dept. of Geography. Continuation of Contract Nonr-2300(09).

Keywords: Economics, \*Nigeria, Reviews, Management planning, Environment, Agriculture, Commerce, Urban areas, Rural areas, Government(Foreign), Population, Roads, Communication systems, Factor analysis, Attitudes, Mathematical prediction, \*Regional Planning Modernization.

Modernization, viewed in a regional setting, is a process resulting jointly in areal integration and differentiation. A conceptual spatial model of modernization is proposed. The arguments developed are applied to Western Nigeria in relation to the location of agricultural production, the development of a system of periodic food markets, and the unequal modernization of the large preindustrial Yoruba towns. Measurement of the spatial aspects of modernization is achieved through the use of principal components analysis with components scores, regression analysis with residuals, and trend surface fitting. **The Philippine Family Planning Program: Some Suggestions for Dealing with Uncertainties.**

John E. Koehler. Feb 70, 35p Rept no. RM-6149-AID  
Contract F44620-67-C-0050

Keywords: \*Philippines, \*Population Control, Reproduction(Physiology), Control, Females, Public health, Education, Sociology, Statistical data, Attitudes, Demography, \*Birth control.

Some tentative conclusions about family planning in the Philippines are presented. Using data from National Demographic Survey (NDS), the study investigated knowledge and use of birth control procedures among Philippine women by language, income, age, rate of use, information source, and use or nonuse. The study offers the following suggestions to designers of the AID family planning program in the Philippines: (1) to avoid explicit reference to some population growth rate as a formal program goal; (2) to examine the complex relationship between knowledge and use of contraceptive techniques; (3) to gather information from across the country rather than in depth from any single area or ethnic group; and (4) to use its leverage over the various agencies concerned to record experiences of individual women and to standardize recordkeeping. (Author)

**Optimum Subsurface and Underground Shell Structures for Better Housing in Hot-Arid Lands. Part I: A Case for Subsurface and Underground Housing in Hot-Arid Lands. Part II: Optimization of Subsurface and Underground Shells.**  
Interim technical rept. no. 1  
Sudhir Kumar, and Jason Cheng-Chuan Shih. Apr 70, 179p\*  
Research in Some Aspects of Fluid and Solid Mechanics.

**Keywords:** Underground structures, Structural shells, \*Housing, Reviews, Construction materials, Numerical analysis, Tropical regions, Subsurface housing, Underground housing.

This report consists of two distinct parts. A case was made for subsurface and underground housing in hot-arid lands in Part I. This includes discussions of environmental conditions, past developments of subsurface housing, new conceptual designs for dwellings, apartments, complexes of large and multiple buildings and transportation tunnels, etc. Part II of the report presents analytical optimization of subsurface cylindrical shells and completely underground shells, with a view to keep at a minimum the quantity of material used in the shells. The subsurface cylindrical shells are optimized by limit analysis, whereas the optimum shape and thickness distribution of the underground shells is determined by elastic analysis. Shapes of several shells have been determined as examples and design charts for general use have been prepared for all these shells. (Author)

**Biological Deterioration of Wood in Tropical Environments. Part 2. Marine Borer Resistance of Natural Woods over Long Periods of Immersion.**  
Final rept.  
C. R. Southwell, J. D. Bultman, B. W. Forgeson, and C. W. Hummer. 7 Dec 70, 47p Rept no. NRL-7123  
See also Part 1, AD-653 856.

**Keywords:** \*Wood, Degradation, Tropical deterioration, \*Marine borers, Resistance(Biological), Sea water, Identification, Tropical regions, Crustacea, Mollusca, Panama, Trees, Teredo, Pholad, Limnoria, Panama Canal Zone, Biological deterioration.

One hundred and fifteen wood species have been exposed to marine borers in three different tropical waters for periods up to 90 months. Underwater sites were in the Panama Canal Zone and included two oceans and a brackish-water lake. Over 30 species of marine-boring organisms were identified from these waters; their extreme activity in the warm tropical environments provided a very thorough screening test for the woods. Samples have been evaluated separately for resistance to the three principal borer classes--teredo, pholad, and limnoria. Several of the woods were resistant to one or more of the borer types. Some of these resistant species are relatively unknown as marine construction timbers, and in some instances they proved to be more durable than Greenheart, Teak, and other commercial marine woods. The species most resistant to all borers was Dalbergia retusa (Cocobolo), whose oily extract may provide leads to a satisfactory wood preservative. The woods most resistant to each of the different classes of borers are tabulated, with their respective silica content and density included. Silica was shown to be significant only in relation to teredine borers, while wood density was important only with pholads. Woods considered to be of special interest because of findings in the study are discussed individually. (Author)

Contract N00014-67-A-0432-0001  
Prepared in cooperation with Bellairs Research Inst., St. James (Barbados); McGill Univ., Montreal (Quebec). Marine Sciences Centre, and University of the West Indies (Barbados). Dept. of Biology. See also AD-614 791.

**Keywords:** Ecology, Atlantic Ocean, Plankton, Salinity, Fertility, Nutrition, Sea water, Chemical properties, Chlorophylls, Aquatic animals, Periodic variations, \*Aquaculture, Primary biological productivity, Biological productivity.

Forty-eight collections were made for a study of primary and secondary production at a station in 460 m of water, between 29 August 1967 and 1 September 1969, and 22 additional collections at 17 deep water stations within a radius of 100 miles from Barbados. Primary production by carbon fixation lacked seasonal variation and annual production was estimated at 117 g C /sq m/year. Predictable seasonal variations were also lacking in concentrations of nutrients and in the composition and quantity of phytoplankton and zooplankton. However evidence was obtained of oscillations with a two to four months' periodicity in the con-

## APPROPRIATE TECHNOLOGY ABSTRACTS

centration of chlorophyll and the numbers of Trichodesmium, which is the most important phytoplankton of the surface waters. This is tentatively ascribed to a short term growth and decay cycle which may be determined by grazing by zooplankton. Additional information was obtained on an inverse correlation between salinity and silicate concentration in the surface water previously reported. The low salinity/high silicate water found off Barbados at various times from January to August appears to originate with the Amazon River outflow and is identified with the fresh water lenses some 500 miles to the east of the island. **Rapid Production of Pallet Deckboards from Low-Grade Logs**  
R. A. Hann, R. W. Jakerst, R. S. Kurtenacker, C. C. Peters, and J. L. Tschernitz. 1971, 18p\* Rept no. FSRP-FPL-154

Keywords: Wood, Processing, Pallets, Production, Economics, Cutting, Standards, Quality control, Thickness, Drying, Laminates, Adhesives, Aging (Materials), Impact tests, Bending, Acceptability, \*Wood products, Pallet deckboards, Hardwoods.

Low-grade red oak logs were made into satisfactory pallet deckboards in approximately 15 minutes by a process of rotary knife cutting, press drying, and gluing into the final product. Advantages, in addition to speed of processing, were the high yield from low-grade material, and an apparently acceptable end product. (Author)

**Solving the Galvanic Cell Problem in Ferro-Cement**  
Interim technical rept.  
Kenneth A. Christensen, and Robert Brady Williamson. Jul 71, 67p Rept nos. UCSEM-71-14, TR-2  
Contract N00014-69-A-0200-1007  
Report on Structures and Materials Research.

Keywords: \*Reinforced concrete, \*Corrosion, Electrolytic cells, Cements, Steel, Reinforcing materials, Inhibition, Barrier coatings, Additives, Chromium compounds, Oxides, Construction materials, \*Ferro-cement, Galvanic corrosion, Chromium oxides.

The nature and constitution of ferro-cement is reviewed with special reference to the structure of cement paste. The microstructure of low water to cement ratio pastes is presented in schematic illustrations to show that a thin paste layer can be used to protect steel reinforcing material from a marine environment. A galvanic cell between the plain steel reinforcing bar and the galvanized steel mesh ordinarily used in ferro-cement is identified. This galvanic cell gives off hydrogen gas at the plain steel reinforcing bar which leads to poor bonding. Possible solutions to this problem are presented and one, the use of chromium trioxide (CrO<sub>3</sub>) in the mix water, is shown to solve the problem most effectively. This leads to improved mechanical properties as well as a sounder barrier to corrosion of the reinforcement. (Author)

**Biological Deterioration of Woods in Tropical Environments. Part 3. Chemical Wood Treatments for Long-Term Marine-Borer Protection**  
Final rept.  
C. R. Southwell, and J. D. Sultman. 9 Dec 70, 32p  
Rept no. NRL-7345  
See also Part 2, AD-716 740.

Keywords: Wood, \*Marine borers, Environmental tests, Oceans, Tropical regions, Crustacea, Mollusca-cides, Creosote, Arsenic compounds, Copper compounds, Teredo, Pholad, Limnoria, Biodeterioration, \*Wood preservatives, Copper arsenates, Pine wood, Fir wood.

Six chemical wood preservatives were selected for evaluation over long periods of exposure in extremely borer-active marine environments. Southern Yellow Pine and Douglas Fir were full-cell pressure-treated with these chemicals and exposed in tropical seas and tropical brackish water for periods up to 90 months. Subsequently, 16 of the natural tropical woods considered best for use with pressure preservatives were combined with whole creosote and exposed in the most borer active of the seawater sites for periods exceeding 4 years. All samples have been removed, sectioned, and rated separately for the three major groups of marine borers: teredo, pholad, and limnoria. The long-term results show that heavy treatments of whole creosote and chromated copper arsenate (CCA, type A) are very effective preservatives for Southern Pine exposed in seawater, while the CCA was the singularly most effective treatment against the brackish-water Psiloteredo. Some of the most promising results were obtained with combinations of a few relatively limnoria-resistant tropical woods with a teredo-effective creosote pressure treatment. (Author)

**Comparison of Wood Preservatives in Stake Tests**  
Forest Service research note  
L. Gjovik, and H. L. Davidson. 1972, 92p\* Rept no. FSRN-FPL-02/72

Keywords: Wood, Protective treatments, Environmental tests, Deterioration, Fungusproofing, Isoptera, \*Wood preservatives, Pine wood, Coptotermes formosanus, Formosan termites, Biodeterioration.

Reported are results on test stakes of southern pine sapwood 2 by 4 by 18 inches in size, treated by pressure and nonpressure processes, in decay and termite exposure in various climates. Also included in some of the tests are smaller pine stakes and those of treated and untreated plywood, modified woods, laminated paper plastic, and pine infected with Trichoderma mold. Preservatives such as coal-tar creosote and petroleum oils containing copper naphthenate, zinc naphthenate, phenyl mercury oleate, and pentachlorophenol have added a few months to 4 years to the life of the untreated stakes. Some waterborne preservatives have provided less protection to the stakes than the standard preservative oils. (Author)

**FPL (Forest Products Laboratory) Designs Meet Family Housing Needs**  
Forest Service research paper  
G. F. Sherwood. 1972, 30p\* Rept no. FSRP-FPL-173

**Keywords:** Housing, Design, Construction, Construction materials, Wood, Foundations(Structures), Costs, Rural areas, Questionnaires, \*Houses, \*Wooden structures, Low cost housing, Rural housing.

The Forest Products Laboratory (FPL) has developed five house plans for low-cost rural houses to demonstrate cost-saving principles of construction. The plans feature simplicity of design, but provide structurally sound houses that fulfill the needs of many families. A questionnaire was mailed to 1,620 individuals who requested and were sent the FPL plans during 1969. A total of 1,129 responded. The replies indicated that 225 houses had been built and that 318 houses were planned for future construction. Ninety-three percent of the reported costs were less than \$12,000; 92 percent indicated incomes of less than \$7,000. In general, the survey results show that structurally sound houses can be built to meet the needs of low-income families at prices they can afford to pay. (Author)

**Control of Flies and Cockroaches by Insect Hormones**

Annual rept. no. 1, 1 Aug 71-31 Jul 72  
Lawrence I. Gilbert. 10 Aug 72, 13p  
Contract N00014-67-A-0356-0024

**Keywords:** Insect control, Hormones, Blattidae, Blood proteins, Chemical bonds, Labeled substances, Muscidae, Chromatographic analysis, Metabolism, Biochemistry, \*Insects, Cockroaches, Juvenile hormones, Dopamine, Cuticle, Tanning materials.

The research described deals with two subjects; hormone receptors in insects and the tanning of the insect cuticle. If either process can be interfered with, one would have an effective means of insect control. Receptor studies using sucrose density gradient ultracentrifugation demonstrated the existence of two protein receptors in the crustacean hepatopancreas that bind label from 3H-ecdysone (molting hormone). Microchemical analysis demonstrated that the label was now due to a previously undescribed ecdysone metabolite.

Experiments with the lipoidal juvenile hormone showed that a specific hemolymph (blood) lipoprotein binds 14C-juvenile hormone. Using column chromatography, electrophoresis, and immunological procedures, the author has shown that 14C-dopamine (a central compound in tanning of the cuticle) is metabolized by two different routes in the tobacco hornworm. The immunochemical and radiotracer studies demonstrate for the first time that these hemolymph carrier proteins do indeed traverse the epidermal cell to make their way unaltered into the cuticle undergoing tanning. **Flexural Strength of Ferro-Cement Panels**

Technical rept.

J. E. Tancreto, and H. H. Haynes. Aug 72, 38p\* Rept no. NCEL-TR-772

**Keywords:** \*Reinforced concrete, Flexural strength, Panels(Structural), Steel, Wire, Reinforcing materials, Fracture(Mechanics), Composite materials, \*Ferrocement.

The report studies ferro-cement panels reinforced with plain steel woven wire mesh and subjected to flexural loads to determine the first cracking, visible cracking, and ultimate strength properties. The reinforcement variables were mesh size (which ranged from 2 x 2 to 14 x 14 wires/in.), wire diameter (which ranged from 0.011 to 0.041 inch), and percentage of steel (which ranged from 1 to 3% by area in the direction of principal stress). Control panels of unreinforced mortar and panels reinforced with chicken wire or steel rods were also tested. (Author)

**Disposal of Cellulosic Waste Materials by Enzymatic Hydrolysis**

Mary Mandels, Lloyd Hontz, and Dixon Brandt. 1972, 16p\*

**Keywords:** \*Cellulose, Decomposition, \*Enzymes, Cellulose, Disposal, Wastes(Industrial), Wastes(Sanitary engineering), Glucose, Hydrolysis, Production, Fungi, Cotton, Paper, Wood, Biodeterioration, \*Waste disposal, Solid waste disposal, Celluloses, Bagasse, Rice hulls, \*Agricultural wastes, Trichoderma viride.

The paper summarizes studies on pollution abatement by enzymatic conversion of waste cellulose to useful products. Cellulose is the major component of card board boxes, kraft paper, paper bags, correspondence paper, and newspaper, or any other product of wood pulp or cotton. One approach has been the direct conversion of cellulose to animal protein by ruminant feeding, or to single cell protein by growing bacteria or fungi on cellulose. The authors' approach has been a different one. Cellulose was converted to glucose by acid or enzymatic hydrolysis.

**Lime-Cement Combination Stabilization**

Technical manuscript

Lovick P. Suddath. May 73, 40p Rept no. CERL-TM-M-47

**Keywords:** \*Clays, Stabilization, Construction, Clay, Density, \*Cement, Compressive properties, Wear resistance, Army research, \*Roads, \*Soil stabilization, Workability.

## APPROPRIATE TECHNOLOGY ABSTRACTS

Soil stabilization is used extensively in road and airfield construction. In particular, soil-cement appears to be a favorite among the engineers. As the plasticity of a soil increases, the ability to adequately mix the cement with the soil becomes a critical factor. Also the quantity of cement required to stabilize the soil becomes excessive. The objective of the study was to determine the effect of reduced compacted density on the durability of cement stabilized clays, pretreated with lime. The reduction in density did not impair the durability of cement stabilized clay soils, which were pretreated with lime. Most of the test results indicated an improved resistance to freeze-thaw. An evaluation of the unconfined compressive strength results obtained during freeze-thaw shows that lime pretreatment improved the strengths. (Modified author abstract)

Final rept.  
Edward O. Gangstad, Julian J. Raynes, Ralph M. Burress, John Stanley, and Kermit Sneed. Jun 73, 154p\*  
See also AD-759 500.

Keywords: Plants(Botany), Control, \*Fishes, Pest control, Inland waterways, Ecology, Food, Removal, Efficiency, Digestive system, Nutrition, Test methods, Florida, \*Aquatic plant control, Ctenopharyngodon idella, Herbivorous fishes, Aquatic weeds, \*Weed control, Biological pest control.

During the last decade, research to discover means of controlling obnoxious aquatic plant growth has included evaluation of various species of herbivorous fishes. Two of the species studied, Israeli carp and the white amur fish, have shown sufficient efficacy to offer promise for utilization in controlling aquatic weeds in habitats occupied by established game fish populations. The Israeli carp was only effective in controlling filamentous algae and is useless for control of rooted aquatic plants. The white amur fish, on the other hand, has shown great promise in controlling submersed and emergent types of plants. The purpose of this research report was to determine the efficiency of the white amur fish (Ctenopharyngodon idella) as a biological control agent for aquatic weed populations in natural habitats, with evaluation of the effects of space and plant nutrients resulting from the destruction of weeds in the aquatic ecosystem. This research information provides the basis to establish a system of knowledge for control and operational procedures for use of white amur fish for aquatic plant control. (Author)

**Leadership through an Understanding of Human Motivation with Special Application to a Partially Industrialized Country**  
Master's thesis  
Ali Saraf-Yazdy. Jun 73, 87p

Keywords: Leadership, Analysis, Motivation, Management control systems, Group dynamics, Classification, Psychometrics, Theory, Reviews, Theses, \*Management techniques, Developing countries, Participative management, Human needs.

Management includes the functions of planning, organizing, directing, controlling and staffing. The function of directing includes the skill of leadership. A manager is charged with carrying out all of the functions of management. Some authorities have said that managers should be leaders but leaders need not be managers. There has been confusion concerning these terms because of their wide interchangeable use, and they are used interchangeably in this paper but for clarity when the terms manager or management are used they refer to that part of management which involves getting things done through people.

**Principles for Protecting Wood Buildings from Decay**  
Forest Service research paper  
T. C. Scheffer, and A. F. Verrall. 1973, 59p\* Rept no. FSRP-FPL-190

Keywords: \*Buildings, Wood, Protection, Preservation, Buildings, Degradation, Construction materials, Fungus deterioration, Moisture, Foundations(Structures), Walls, Floors, Roofs, Impregnation, \*Wood preservatives.

Problems caused by decay in buildings in the United States and the means to avoid or control them are dealt with in this work. The principal moisture situations and construction features most responsible for the occurrence of decay in various building parts are described, and directions are given for approximately modifying or eliminating undesirable conditions. Emphasis throughout is on the two primary means of protecting against decay: (1) The use of dry wood and of construction methods to keep wood dry, and (2) methods to treat wood with a suitable preservative in areas where dry conditions cannot be maintained.

Keywords: \*Milk, Food, \*Children, Acceptability, \*Beverages, Army research, Developing countries.

Testing of a whey-soy beverage powder was carried out in Chile, Vietnam, India, Pakistan, Sierra Leone and the Dominican Republic to determine its probable acceptability for use as a supplementary food for pre-school children. Test results indicated that the beverage powder should be acceptable in all test countries except possible Sierra Leone. Moreover, since the tests were carried out in a variety of geographical areas and cultures and in several types of distribution systems, it may be concluded that there is a high probability that the beverage powder will be acceptable in pre-school child feeding programs in most parts of the developing world.

# APPROPRIATE TECHNOLOGY ABSTRACTS

## The Biological Control of Schistosomiasis: A Program to Develop Use of Trematode Interactions in the Snail Host in Conjunction with the Molluscicide Endos as a New Approach to the Control of Human Schistosomiasis in Egypt and Ethiopia

Final rept. Aug 72-Oct 73  
Donald Heyneman, and Harry G. Lee. 31 Dec 73, 33  
Contract N00014-69-A-0200-2005

Keywords: \*Schistosomiasis, Trematodes, Gastro-poda, Schistosoma, Parasitic diseases, Parasites, Molluscicides, Egypt, Ethiopia, \*Pest control, \*Diseases, Biological pest control, Echinostomata, Host parasite relations.

A series of 25 field stations were established from which 4000 snails were collected. These snail hosts serve as hosts of both of the endemic schistosome species (*Schistosoma haematobium* from *Bulinus truncatus*, *Bu. abyssinicus*, *Bu. sericinus*, and *Bu. forskalii*; and *S. mansoni* from *Biomphalaria pfeifferi*) and a number of possible trematode antagonists among the echinostome species found parasitizing these snails. About 75 collections of cercariae were made and analyzed. A species of 43-spined *Echinoparyphium* proved to be a widespread parasite in the various forms of *Bulinus* collected both in Ethiopia and Egypt. Efforts to develop this species as a biological control of *S. haematobium* are underway. Factors required for successful biological control are described and discussed.

### Aquatic Plant Control Program. Technical Report 6. Biological Control of Water Hyacinth with Insect Enemies

Final rept.  
Edward O. Gangstad, Julian J. Raynes, Charles F. Zeiger, Jean M. Ingersoll, and Robert D. Gordon. Jan 74, 156p\*  
See also report dated Oct 73, AD-769 583.

Keywords: Aquatic plants, \*Aquatic weeds, Beetles, Control, Ecology, Coleoptera, Insects, \*Aquatic plant control, \*Water hyacinth, *Neochetina eichhorniae*, Biological weed control, \*Weed control.

Present water hyacinth control programs provide at best only short-term control, and thus are of short-term benefit as far as productivity of the environment is concerned, whereas successful biological control will provide long-term benefits to productivity, with a concomitant reduction in the use of chemical or mechanical disturbances of the environment. Once a biological control agent is established, it becomes an integral part of the environment and as such may properly be considered a self-renewable resource, and a beneficial addition to our environment. It is a hope that *Neochetina eichhorniae* will prove to be just that, and that it will, alone or in conjunction with other native or introduced natural enemies, bring about the alleviation of the problems caused by water hyacinth in the southeastern United States. ### Foundations for Family Housing

Final rept.  
J. E. Bowles. Apr 74, 109p\* Rept no. CERL-TR-D-20

Keywords: \*Housing, Foundations(Structures), Sites, Soil science, Superstructures, Structural mechanics, Environmental engineering, Cost analysis, \*Soils.

The report presents in abbreviated form information necessary to select appropriate foundations for family housing for various site conditions, climates, and construction methods. Included are a comprehensive survey of foundations presently used for family housing, a review of the soil mechanics used in foundation design, a discussion of current forms of house construction, and examples of cost computations for some typical foundations. Also included are several tables which facilitate the selection of an appropriate foundation type. (Author)

### Fatigue of Ferro-Cement

Master's thesis  
Michael G. Simpson. Jun 74, 119p

Keywords: \*Reinforced concrete, Fatigue(Mechanics), Ship hulls, Stresses, Test methods, Fracture(Mechanics), Electron microscopy, Theses, \*Ferrocement, Wire cloth, Scanning electron microscopy.

Ferro-cement is a cement mortar with a high relative volume of well dispersed steel wire reinforcement. The material properties of ferrocement are neither those of the mortar alone nor of the reinforcement and vary as the mortar and reinforcement configurations are changed. In this study, several variations of ferrocement were fabricated and subjected to constant amplitude cyclic loads up to ten million cycles. Stress versus cycles-to-failure plots were developed and comparisons between the data for various ferrocement modifications were made. Monotonic tests

were conducted on the ferro-cement to allow comparisons with work conducted by other experimenters. An investigation of the fracture surface was conducted using a scanning electron microscope. (Author)

### Investigation of Rational Effluent and Stream Standards for Tropical Countries

Annual rept. 1 Nov 71-30 Apr 73  
Mainwaring B. Pescod. 28 May 74, 61p ARDG/FE-476-2  
Grant DA-RDRF-S92-544-72-G179

Keywords: \*Water pollution, \*Water supply, Streams, Southeast Asia, Standards, Quality, Irrigation systems, Sewage treatment, Drinking water, Oxygen, Fishes, Oxidation, Waste water, Costs, Thailand, \*Water quality, Water quality standards, Oxidation lagoons, Developing countries.

Water quality standards were reviewed and tentative stream standards proposed for use in developing countries of Southeast Asia on the basis of legitimate water uses and adaptation of available data to local conditions. A survey of stream standards and water uses applied in the Southeast Asian region indicated that few countries had adopted standards and practically no attempt had been made to adjust to suit local conditions. Experimental studies suggested that oxidation pond effluent would have a beneficial effect on the oxygen balance of a stream under tropical conditions provided that the algal concentration was not more than 10,000 cells/ml after dilution in the stream. Oxidation ponds were assessed as being more attractive than either trickling filter or activated sludge treatment plants for populations less than 175,000 and land rental costs of U.S. \$0 10 per square meter per year or less. ### The Use of Coral as an Aggregate for Portland Cement Concrete Structures

Final rept.  
P. A. Howdysshell. Jun 74, 43p\* Rept no. CERL TR-M-88

Keywords: Construction materials, \*Coral, \*Concrete, Construction, Structures, Deterioration, Military engineering, Pacific Ocean Islands, \*Cement, \*Aggregates(Materials), Evaluation.

The investigation documents the experience gained by the Corps of Engineers and the Navy since World War II in the use of coral as an aggregate for portland cement concrete. The approach was to evaluate relevant literature and construction and inspection records, visit construction and material preparation sites, evaluate existing coral concrete structures, and analyze coral aggregate and coral concrete samples in the laboratory. The results of the investigation indicate that coral has successfully been used as an aggregate for concrete in vertical construction. The only significant type of deterioration observed in coral concrete structures was the cracking and spalling of concrete associated with corroding reinforcing steel. The severity of the corrosion-spalling problem was sufficient in some cases to affect structural integrity, while in other cases little or no deterioration was observed. For the most part specifications and construction techniques currently being used for production of coral aggregate and coral concrete are similar to specifications and techniques for conventional aggregate and concrete. ### Properties of Particleboards at Various Humidity Conditions

Forest Service research paper  
J. Dobbin McNatt. 1974, 26p\* Rept no. FSRP-FPL-225

Keywords: \*Fiberboard, \*Wood, Humidity, Stresses, Moisture, Flexural strength, Plastic properties, Compressive properties, Bending, Loads(Forces), Exposure(General), Degradation, Stiffness, Drying, Tables(Data), \*Particle board, Design.

## APPROPRIATE TECHNOLOGY ABSTRACTS

The changes in properties of particleboard that result from changes in moisture content should be determined to avoid possible problems related to linear expansion and thickness swelling and to loss in load-carrying capacity and stiffness. In this report the physical and mechanical properties are determined for five commercial particleboards manufactured primarily from planer shavings and for a board made at the Forest Products Laboratory from random-width Douglas-fir flaxes, 1 inch long and 0.015 inch thick. All were conditioned at humidity exposures between oven-dry and 90 % relative humidity. (Modified author abstract)

**Investigation of Stress Concentration in Reinforced Concrete Components**  
Final technical rept. 1 Jun 73-31 May 74  
T. E. Glynn, and M. Z. Al-Salih. Jun 74, 26p  
Grant DA-ERO-591-73-G-0041

Keywords: \*Reinforced concrete, Stresses, Static tests, Dynamic tests, Crack propagation, Formulations, Ireland, \*Ferrocement.

This report is a continuation of the former efforts to elucidate the behavior of ferrocement concrete in static and dynamic stress fields. The influence of various reinforcements on pre and post cracking of thin sections forms the main topic of this report. The objects of the testing program were to compare the effectiveness of various steel mesh configurations in arresting crack propagation in stressed members; to provide experimental data for checking theoretical predictions of strength based on material parameters; to identify areas of future research potential. The work to date has been devoted to flexural and direct tensile tests on thin slabs. The slabs were reinforced uniformly with steel meshes of various patterns. The matrix consisted of microconcretes, and some variations in the mix design were incorporated.

**Africa: A Bibliographic Survey of Literature**  
1973, 623p\* Rept no. DA-PAM-550-17

Paper copy available from GPO.

Keywords: \*Africa, Bibliographies, Handbooks, Political science, Sociology, Economics, Military forces(Foreign), Military organizations, Transportation, Communication and radio systems, Literature surveys, \*Socioeconomic status, Developing countries.

Like the previous volume on the subject (DA PAM 550-5) which was issued in April 1967, the new edition endeavors to assess the problems and prospects in the vast continent. The difficulties and accomplishments are looked at from both--a broad, regional point of view, as well as from a specific, national point of view. The work includes data on the strategic importance of Africa as a continent, and also provides facts and figures on the political, sociological, economic, and military aspects that contribute to the viability of individual African states. More than four thousand books, periodical articles, and monographs, were searched in the preparation of this work. The body of material is supported by 91 appendixes and 53 maps, of which 18 are in color.

Naval Ship Research and Development Lab., Annapolis, MD.  
**State-of-the-Art Survey of Ferrocement**  
Research and development rept.  
Frank E. Brauer. Jan 71, 38p Rept no. NSRDL/A-8-529  
Distribution limitation now removed.

Keywords: Cements, \*Reinforced concrete, Composite materials, Construction materials, Ships, Wire, Reinforcing materials, Tensile properties, Flexural strength, Modulus of elasticity, Fatigue(Mechanics), Compressive properties, Shear stresses, Corrosion resistance, Impact shock, Mechanical properties, Shock resistance, State-of-the-art reviews, Cracks, Ductility, Steel, Bonding, Corrosion inhibition, \*Ferrocement, Portland cement.

From this literature study it was found that ferrocement is a composite material of superior mechanical properties when compared to reinforced concrete. This superiority is reflected in greater flexural crack strength, tensile strength, ductility, and impact strength. Much more research into the material properties of ferrocement must be done to fully understand the nature of the strengthening mechanism in ferrocement and to provide designers with comprehensive, reliable information necessary for the maximum utilization of ferrocement. **Potential Health and Safety Impacts from Distribution and Storage of Alcohol Fuels**  
S. E. Rosenberg, and J. R. Gasper. Jun 80, 33p

Contract W-31-109-ENG-38

Keywords: Alcohol fuels, Accidents, Chemical explosions, Chemical spills, Energy policy, \*Alcohols, \*Gasohol, \*Fire safety, \*Health, Ethanol, Fires, Gasoline, Health hazards, Ingestion, Inhalation, Methanol, Petroleum industry, Risk assessment, Safety, Skin absorption, Standards, Storage, Toxicity.

This assessment includes three major sections. Section 1 is a synopsis of literature on the health and safety aspects of neat alcohols, alcohol-gasoline blends, and typical gasoline. Section 2 identifies the toxic properties of each fuel type and describes existing standards and regulations and suggests provisions for establishing others. Section 3 analyzes the major safety and health risks that would result from the increased use of each type of alcohol fuel. Potential accidents are described and their probable impacts on occupational and public populations are determined. An attempt was made to distill the important health and safety issues and to define gaps in our knowledge regarding alcohol fuels to highlight the further research needed to circumvent potential health and safety problems. **Design and Installation Manual for Thermal Energy Storage**  
R. L. Cole, K. J. Nield, R. P. Rohde, and R. M. Wolosewicz. Jan 80, 381p  
Contract W-31-109-ENG-38

Keywords: Phase change materials, \*Solar heating systems, Solar water heaters, Thermal energy storage equipment, Auxiliary heating, Blowers, Concretes, Construction, Cost, Data, Design, Draft control systems, Fiberglass, Heat exchangers, Heat losses, Heat transfer fluids, Installation, Latent heat storage, Manuals, Performance, Physical properties, Plastics, Pressure drop, Pumps, Rock beds, Safety, Safety engineering, Size, Specific heat, Specifications, Steels, Stratification, Tanks, Temperature monitoring, Thermal insulation, Valves, \*Solar water heating.

The purpose of this manual is to provide information on the design and installation of thermal energy storage in active solar systems. It is intended for contractors, installers, solar system designers, engineers, architects, and manufacturers who intend to enter the solar energy business. The reader should have general knowledge of how solar heating and cooling systems operate and knowledge of construction methods and building codes. Knowledge of solar analysis methods such as f-Chart, SOLCOST, DOE-1, or TRNSYS would be helpful. The information contained in the manual includes sizing storage, choosing a location for the storage device, and insulation requirements. Both air-based and liquid-based systems are covered with topics on designing rock beds, tank types, pump and fan selection, installation, costs, and operation and maintenance. Topics relevant to latent heat storage include properties of phase-change materials, sizing the storage unit, insulating the storage unit, available systems, and cost. Topics relevant to heating domestic water include safety, single- and dual-tank systems, domestic water heating with air- and liquid-based space heating systems, and stand alone domestics hot water systems. Several appendixes present common problems with storage systems and their solutions, heat transfer fluid properties, economic insulation thickness, heat exchanger sizing, and sample specifications for heat exchangers, wooden rock bins, steel tanks, concrete tanks, and fiberglass-reinforced plastic tanks. (ERA citation 05:018778)

This report assesses the potential impact of re-refining used automotive and industrial lubricating oils on the national petroleum consumption. The technical base for this assessment is derived from a comprehensive review of the processes utilized in re-refining used oil

## APPROPRIATE TECHNOLOGY ABSTRACTS

and those processes used to produce lube oil from crude. Both existing and recently proposed processes are considered. Additionally, an extensive review of processes described in the patent literature is provided. Re-refining processes are surveyed and evaluated. Process descriptions are provided; hardware is identified, and process energy and economic requirements are calculated. Factors affecting the profitability of a re-refining operation are discussed. Economic projections of the demand for lube oil and the ability to satisfy this demand from crude oil are made and the value of lube oil as a vital resource and the need for conservation are addressed. Other factors related to re-refining are discussed, including lube oil characteristics, degradation, lube oil quality and engine sequence testing, and legislative and institutional barriers. Finally, an energy assessment of used oil utilization is made. Two options are considered in this assessment: (1) all used oil is re-refined and recycled back to lube oil; (2) all used oil is burned to recover its heat content. (ERA citation 04:035786)

**Systems Study of Fuels from Sugarcane, Sweet Sorghum, and Sugar Beets. Volume III. Conversion to Fuels and Chemical Feedstocks. Task 77. Final Report**  
E. S. Lipinsky, R. A. Nathan, W. J. Sheppard, and J. L. Otis. 31 Dec 76, 183p  
Contract W-7405-ENG-92

Keywords: \*Ammonia, Chemical feedstocks, \*Ethanol, Furfural, \*Sugarcane, Acetic acid, Acid hydrolysis, Anaerobic digestion, Bagasse, Biosynthesis, Comparative evaluations, Cost, Economics, Fermentation, High btu gas, Industrial plants, Liquids, Residues, Thermochemical processes, \*Sorghum, \*Sugar beets, Refuse derived fuels.

Information developed in field interviews and literature research which form the basis of extensive calculations that pertain to numerous alternative means of converting the sugar crops into fuels and chemical

feedstocks is reported. Investigation of numerous candidate fuels and chemical feedstocks that might be made from sugar crops indicates that ethanol and ammonia are the most promising. The projected cost of ethanol by use of well-established fermentation technology on juice extracted from sugarcane or on molasses is expected to be quite close to that projected for ethanol from natural gas liquids or petroleum by 1980. The ammonia market is substantial (17 million tons), but this key fertilizer and chemical product is expected to cost close to \$200 per ton when made from sugar crop residues, well above what ammonia made from natural gas at \$3 per million Btu costs. However, sugarcane-based ammonia might compete well with coal-based ammonia. Sugarcane appears to be the most promising sugar crop for conversion to fuels and chemicals in the short and intermediate term. The costs of sugarcane juice and bagasse are lower than for the corresponding sugar beet products. Of the sugar crops, sweet sorghum has the greatest long-range appeal for the United States because the crop can grow over a much wider geographical range than can sugarcane. The development of processes to manufacture ammonia, methanol, acetic acid, and thermochemical substitute natural gas (SNG) from sugar crop residues depends on technology to generate synthesis gas. Sugarcane bagasse appears to be the most economic source of furfural. Anaerobic digestion of sugarcane or sugan-containing juices to SNG is ruled out on economic grounds. The principal findings of the conversion aspects of the research are summarized quantitatively. Alternative routes for conversion of sugar crops to fuels and chemicals are presented. (ERA citation 03:006207)

P. F. Palmedo, and R. Nathans. May 74, 12p

Keywords: Developing countries, \*Energy source development, Planning, Energy policy, Charges, Distribution, Economic development, Energy supplies, Forecasting, Production, Simulation.

The volatility of energy prices, as well as the precariousness of international energy supply, is forcing many developing countries to consider new ways to satisfy their energy needs over the next several decades. As a result it is likely that major changes in energy production - distribution systems will occur in large numbers of these countries. A necessary component of the important decisions these countries must make, e.g., with respect to changes in plans for their economic development or the introduction of new technologies, is the need to assess the alternatives and plan for their country's current and future energy needs. This working paper discusses the establishment of an Energy Institute for Developing Countries, whose major function would be to assist and work with interested countries in the performance of energy planning and assessment analyses. Other areas to be covered by the Institute include: (1) preparation of methodologies for evaluation and assessment of new technologies for individual countries; (2) generation of data bases of technical coefficients; (3) provision of user manuals, training of technical personnel and extensive consultations with appropriate government officials in developing countries; and (4) support to agencies and organizations in the U.S. concerned with energy problems in developing countries. The paper discusses the need for and characteristics of a comprehensive energy planning and assessment framework, and a scheme for micro and macro assessments of alternative energy technologies. It also lists a series of specific mechanisms for developing appropriate

models and data bases, and transferring the results to interested developing countries.

Keywords: Developing countries, \*Energy source development, Technology utilization, Efficiency, Energy consumption, Energy sources, Financing, Global aspects, Planning, Recommendations, Research programs.

Some of the implications of the choice between renewable, decentralized technologies and nonrenewable, centralized technologies as applied to developing countries are presented. The focus on developing countries does not imply that the choice is not a pertinent one for developed countries, but only that it is a particularly pressing one for the lesser-developed countries. In order to clarify the significance of the distinction between renewable and depletable resources, two qualifications are made. The resource and its feasible system to use that resource is of primary interest. Sunlight is free but the devices to use that resource may require a rare metal, which then makes the use of solar energy not renewable. The second qualification is that some resources that are finite such as deuterium as used in fusion reactors have such large abundance that they can be considered renewable. Some specific steps that can be taken to give renewable energy resources an opportunity to compete on a more equal footing with conventional fossil and nuclear technologies in the LDCs are: stimulate and support energy planning in developing countries; include appropriate technology in developed country R and D programs; and develop and demonstrate technologies in the LDCs. These activities would represent no financial burden to the developed world. A realistic appraisal of potential renewable resources to meet the future energy needs of developing countries is important. (EPA citation 02:039519)

**Energy Planning and Management in Developing Countries: Thoughts Concerning a Conceptual Framework**  
R. Nathans, and P. F. Palmedo. 11 Oct 77, 39  
Contract EY-76-C-02-0016

Keywords: Developing countries, \*Energy management, Energy models, Data acquisition, Government policies, International cooperation, Planning, Social impact, Sociology, Urban areas.

The unique characteristics of the energy situation in developing countries imposes a unique set of requirements on analytical techniques used for energy planning. The urgency of the situation requires the rapid development and use of simplified models which make maximum use of available data but which can reflect the international energy context. Those techniques must also be able to deal with central energy/development issues such as energy equity or the energy impli-

Caribbean consultation on energy and Agriculture, Santo Domingo, Dominican Republic, 1 Dec 1978.

Keywords: Developing countries, \*Energy source development, Energy supplies, Energy analysis, Planning, Regional analysis, Renewable energy sources, Systems analysis.

Many developing countries are embarking on a petroleum-intensive path of development just at a time in history when petroleum is about to become scarce and expensive. At the same time the use of traditional forms of energy—wood, crop residues, and animal waste—is meeting with a variety of problems. Long-range integrative national energy planning has become urgent. That planning should consider a wide range of geographical scales, from the household and village to the world scene. It should extend at least 25 years into the future. An overall framework for analysis is presented based on a normative, scenario approach. (ERA citation 04:033654)

Contract EY-76-C-02-0016  
International seminar on energy, Hyderabad, India, 4 Jan 1979.

Keywords: Developing countries, Energy facilities, \*Energy source development, Site selection, Allocations, Competition, Electric utilities, Energy models, Geography, India, Planning, Regions: analysis, Resources, Simulation, State government.

The interregional allocation of, and competition for, natural resources for energy development is assuming increasing importance in many large developing countries, particularly in countries such as India that are in the more advanced stages of industrialization, and where state governments and regional agencies have significant planning powers. This paper explores the applicability of optimal resource allocation models designed primarily for already-developed economies, such as that of the U.S., Canada, and Western Europe, to the emerging problems of such developing countries. In particular, the potential application of electric-utility-siting models is discussed in the context of electric grid expansion in the State of Andhra Pradesh in Southern India. Specific topics addressed include the degree to which models can be effectively used in the rather different conditions and priorities of industrializing countries; the requirements for basic-model reformulations to account for unique factors of geography (climate, hydrology, the extant conditions of the infrastructure within which any development must occur); and the ability to include and quantify environmental impacts of energy development as well as policy considerations relevant in the context of developing countries. The paper identifies desirable research direc-

tions, indicates data needs, and assesses those aspects of subnational energy-planning problems that should receive better emphasis in national and international energy-planning efforts. (ERA citation 04:033733)

**Planner's Energy Workbook: A Manual for Exploring Relationships Between Land Use and Energy Utilization**

T. O. Carroll, R. Nathans, P. F. Palmado, and R. Stern. Jun 77, 129  
Contract EY-76-C-02-0016

Keywords: Energy analysis conservation, Energy supplies, \*Land use, Rural areas, Urban areas, Communities, Charges, Correlations, Demand factors, Energy consumption, Energy policy, Government policies, Manuals, Planning, Regional analysis, Social impact, \*Regional planning, \*Energy management.

It has been clear that the magnitude and character of a region's energy requirements are intimately related to the spatial configuration and mix of land use activities. To the degree to which they can shape the future configurations of residential, commercial, industrial, and transportation activities, local governments and their planners must give serious consideration to the energy implications of those configurations in the light of future social goals and requirements. This Planner's Energy Workbook describes a set of procedures that can be used to carry out community and regional energy analyses. The choice of land use activity parameters and their relation to energy use characteristics are associated with the normal planning concepts of land use density, type of residential development, commercial floorspace, industrial sales and employment, and shopping and work trip lengths. At the same time these energy related intensity coefficients are expressed in a form that permits the analysis of short-term conservation strategies such as the retrofit of insulation and the introduction of new technologies such as solar energy. An integrating framework is provided to construct total community or area energy consumption profiles and future needs; to examine compatibility between area requirements and the energy supply-distribution system serving the area; and to evaluate the implications for energy use of the physical configuration of urban, suburban and rural areas. Two cases illustrate the application of this Workbook. The Long Island area is representative of major suburban regions throughout the U.S. which have undergone major growth and development. A community redevelopment design in Tucson, Arizona is typical of rapid and major land use development within the environs of an existing city. (ERA citation 03:010551)

**Programmatic Areas for U.S. Assistance for Energy in the Developing Countries**

P. F. Palmado, R. Nathans, E. Beardsworth, and G. Tschannerl. Dec 78, 118p  
Contract EY-76-C-02-0016

Keywords: Developing countries, Federal assistance programs, Economic development, Education, Energy

sources, Financing, Renewable energy sources, Sociology, Technology transfer, USA, \*Energy source development.

A previous report entitled Energy Needs, Uses and Resources in Developing Countries presented an analysis of the energy problems facing the developing countries and the types of solutions that are available to them. In this report a wide variety of U.S. assistance programs which can facilitate those solutions is identified. The report identifies 28 programmatic areas for assistance activities. In each area specific projects are indicated as examples and the general level of required funding is estimated. Twenty-two programmatic areas cover the development of conventional and renewable energy resources and technologies; six with assessment and planning, energy institutions, and training and education. Two hypothetical overall assistance programs are described with possible project distributions encompassing some twenty countries. A broadly based U.S. energy assistance program which draws upon the highest quality of U.S. technical capabilities can make a significant contribution to the future economic and sociologic well-being of the developing countries of the world. **Development of a Glass Polymer Composite Sewer Pipe from Waste Glass. Final Report**

R. Rayfiel, and L. E. Kukacka. Feb 80, 76p  
Contract AC02-76CH00016

Keywords: \*Asbestos, \*Cement, \*Clays, Composite materials, \*Glass, Reinforced concrete, \*Pipes(Tubes), \*Waste recycling, Comparative evaluations, Cost, Fabrication, Mechanical properties, Pipelines, Recycling, Sewage, Wastes.

A range of polymer-aggregate composites for applications in industry which appear to be economically attractive and contribute to energy conservation were developed at BNL. Waste glass is the aggregate in one such material, which is called glass-polymer-composite (GPC). This report assays the economics and durability of GPC in piping for storm drains and sewers. The properties of the pipe are compared statistically with the requirements of industrial specifications. These establish the raw materials requirements. The capital and operating costs for producing pipe are then estimated. Using published sales values for competing materials, the return on investment is calculated for two cases. The ultimate energy requirement of the raw materials in GPC is compared with the corresponding requirement for vitrified clay pipe. The strengths of GPC, reinforced concrete, vitrified clay and asbestos cement pipe are compared after extended exposure to various media. The status of process and product development is reviewed and recommendations are made for future work. (ERA citation 05:033908)

**The Role of Cooperatives in the Production and Marketing of Fruits and Vegetables in Puerto Rico.**  
 Final rept.  
 Aug 70, 474p EDA-70-020  
 Grant EDA-02-6-09134

Keywords: \*Marketing, Cooperation, Farm processing, Economic development, \*Puerto Rico, Agricultural products, \*Fruits, \*Vegetables, Financial management, Management engineering, Local government, Policies, Market research, Economic factors, Technical assistance projects, \*Agricultural cooperatives, Cooperatives, Cooperative production and marketing systems.

The report concludes that a new fruit and vegetable growing and marketing cooperative should be established as the basic element in an approach to self-sufficiency in fruit and vegetable production for Puerto Rico. The study says adequate financing and management and enthusiastic support from the Commonwealth government can produce an agricultural cooperative that will contribute significantly to community economy. Types of produce have been examined in terms of production and marketing. Organization of cooperatives is also discussed. (EDA abstract)

**COM-71-00716/5** PC A17/MF A01  
 Black and Veatch, Kansas City, MO.  
**Preliminary Study of the Development of Water Resources of the Humacao Sub-Region Puerto Rico**  
 May 71, 388p EDA-71-060  
 Prepared in cooperation with Domenech (R. A.) and Associates, Hato Rey, Puerto Rico.

Keywords: \*Water supply, Surveys, Economic development, \*Puerto Rico, \*Water resources, Requirements, Recommendations, Surface water runoff, Groundwater, Demography, Econometrics, Water storage, Classifications, Soil erosion, Waste water, Flood control, Government policies, Humacao(Puerto Rico).

The report appraises present and future water needs and analyzes potential yield from sources of water supply. Surface water and ground water control problems are identified. Alternative recommendations are made on how to provide water for the area's change over from an agricultural to an industrial economy. These include use of ground water as an economical water source and surface water through reservoirs, wastewater reclamation, and long distance imports. Sea water as a source is reported as uneconomical. Other recommendations: floodways and levees rather than storage reservoirs for flood control. Wastewater disposal in the ocean with disposal in streams to be phased out. Data to be coordinated for guidance in design of water development projects, and strict regulation to be provided to avoid waste resulting from increasing competition for water supplies. Detailed maps and figures are included.

 National Marine Fisheries Service, Gloucester, Mass. Fishery Products Technology Lab.  
**A Study to Develop New Products from Whiting or Other Underutilized Species**  
 Feasibility study Nov 68-Oct 70  
 M. L. Anderson, and J. M. Mendelsohn. Aug 71, 79p EDA-71-090

Keywords: \*Fishes, \*Food processing, Economic development, Abundance, Unemployment, Freeze drying, Market research, Cost estimates, Feasibility, Whiting, Salt curing, Fishcakes.

The study describes development of a rapid salt-curing process for whiting and similar species that are underutilized when they are most seasonally abundant. The process requires fish fillets to be ground in saturated

brine with salt added to keep the brine saturated during salting. It can be completed in less than a day. Reports indicate the product is a good ingredient for fishcakes and can be used to make convenience-type heat-and-serve foods. Limited marketing studies indicate good commercial potential for these products when a meat-bone separator is further developed. The report says whiting and related products must be produced on a semi-commercial scale before costs can be assessed, but that estimates indicate they can be competitive with other products now on the market. **The Potential for Fishery Development in the Caribbean and Adjacent Seas**  
 Clarence P. Idyll. 1971, 17p Marine Bull-1, NOAA-71102004  
 Presented at Rhode Island Univ. on Mar 16, 1971, at a seminar on issues of International Economic Development.

Keywords: \*Fisheries, Economic development, Caribbean Sea, Developing countries, Food supply, Economic factors, Fishing, Seafood, Financing, Marketing, Manpower, Government policies.

The Caribbean Region is examined for its potential to produce greater supplies of food from the sea. The Caribbean people are relatively large consumers of fish and spend an important part of their scarce foreign exchange to buy fish from other nations. In considering the potential of fish and seafood from these enormous water areas it would appear that importing large supplies of seafood would be unnecessary. Factors to consider in fishery development in this area include the political, social and economic aspects, since these determine whether whatever fish is available can be transported, marketed and purchased by the people of this area.  Richard A. Collins. Aug 71, 14p NOAA-72011320  
 Grant NMFS-4-67-D  
 Prepared in cooperation with Arkansas Game and Fish Commission, Little Rock, Ark.

Keywords: \*Aquaculture, Catfishes, Freshwater fishes, Growth curves, Diets, Reservoirs, \*Fisheries, Fish cages, Cage culture.

Four different cage designs ranging in volume from three to 12 cubic yards were each stocked with 300 fingerling catfish per cubic yard to determine the effects of the different cage sizes on growth and conversion of the fish. Fingerlings were graded to a uniform size before being stocked in an attempt to eliminate the differential growth. Results indicate that in large reservoir lakes the cage size can be unlimited in surface area and as deep as the water containing adequate dissolved oxygen. The depth of the cages had no important bearing on the growth rate and in the cages with the greater surface area the catfish grew more rapidly and converted food better. It was concluded that differential growth of catfish in cages is a result of initial variance of the fingerling fish and not to hierarchy. Large numbers of wild fish around the cages caused problems of loss of food and possibly introduction of diseases. The wild fish can, however, be effectively trapped in the area of the cages. The economic evaluation indicates the following situations: a small scale operation incorporated into an existing business such as a marina and a very large scale operation (200,000 or more fish). Keywords: \*Fishes, Aquaculture, Growth, Mortality, Diseases, Economics, Florida, \*Cage culture, Sea Grant program, Trachinotus carolinus.

The University of Miami has been actively involved in developing pompano farming as a viable industry, both through its research programs and its consultations with companies involved with pompano-rearing. Objectives of this project were to assess the suitability of cages for raising pompano and to measure growth and mortality at stocking densities that would be likely in a commercial operation. This paper presents the results of the above investigation and, on the basis of data collected and observations made, discusses the problems and future of pompano farming as a potential industry.

Keywords: \*Fisheries, Feasibility, Economic development, \*Puerto Rico, Aquaculture, Employment, Unemployment, Financing, Bibliographies, Regional planning, Technical assistance.

The report reviews possibilities for a distant-water fishing industry in Puerto Rico and concludes that fishing, processing, and shore support can all be developed for profit but not without risk. It is suggested that a Puerto Rican fleet could harvest a substantial amount of fish in the Caribbean and the tropical Atlantic. Alternatives of how best to do this are presented. The report also reviews potential for developing Puerto

Keywords: \*Fishes, \*Aquaculture, Catfishes, Carp, Minnows, Shiners, Mixing, Growth, Ecology, Ictalurus punctatus, Notemigonus crysoleucas, Tilapia mossambica, Cyprinus carpio, Tilapia aurea, Animal behavior.

The study was undertaken to obtain information on the behavior, comparative efficiencies, and degrees of compatibility of channel catfish and golden shiners when in different combinations and under different spatial limitations. It was found that growth increments of carp (*Cyprinus carpio*) and tilapia (*Tilapia aurea*) in mixed culture sometimes exceeded those exhibited by either in monoculture. The authors found that the channel catfish, golden shiner and tilapia (*T. mossambica*) were extremely compatible. When combined, each stimulated the other to a faster and stronger feeding response, which resulted in a more efficient conversion of food.

Keywords: Lobsters, Shellfish, \*Fisheries, Identifying, Manuals, Florida, Mexico Gulf, Caribbean Sea, Distribution(Property), Sea Grant program, NOAA.

The manual is intended to provide the non-specialist with the means of identifying in the field, both the shallow-water and deep-water lobsters which either are already fished commercially or might be fished if sufficient stocks could be discovered through exploratory trawling. To accomplish this end, a key is given together with explanatory illustrations of the important features used for identification. Preference has been given to conspicuous external characters such as shape, coloring, and sculptural features. The known geographical distribution of the various species is included in the descriptions, along with known depth ranges. Insofar as known, growth rates, spawning times, temperature and bottom conditions, and other pertinent data are given.

Grant NMFS-1-69-R

Keywords: \*Fish protein concentrates, Digestion(Decomposition), Hydrolases, Fishes, Preparation, Hydrolysis, Food processing, Food storage, Solvent extraction, Hake, Merluccius productus.

An innovative procedure for developing and building a laboratory digestion unit capable of handling and producing approximately 10 liters of fish protein hydrolysate (FPH) is described. The unit consists of a pump, heat exchanger, and holding vat. Comminuted fish is pumped from the holding vat through the heat exchange system and recycled back into the holding vat until the comminuted fish reaches 140F. It is held at this temperature for one half hour at which point the comminuted fish, if capable of autolysis, will have shown a marked decrease in viscosity. The digestion process frees the fish bones from its fleshy matrix and may be easily separated at this point by sieving or centrifugation. The development of the laboratory digester provided a tool with which to determine the autolytic capabilities of other fish and fish scrap species. A detailed mineral analyses of bones prepared from seven species of autolyzed fish was conducted as well as

preliminary examination on the general chemical and biological parameters of this autolyzed FPH.

Keywords: Flatfishes, Aquaculture, Animal nutrition, Diets, Larvae, Animal diseases, Documentation, Manuals, \*Fishes, Sea Grant program, Paralichthys, Paralichthys lethostigma, Ancylosetta quadrocellata.

Basic culture techniques for rearing flatfishes are presented with consideration of supplies of eggs for culture, larval food and disease control, collection and care of postlarvae and juveniles, nutrition of postlarvae and juveniles, and environmental conditions for *Paralichthys* culture. Recommendation on site selection and construction of a physical plant are included. Three species of flatfish - *Paralichthys dentatus*, *P. lethostigma*, and *Ancylosetta quadrocellata* are involved. This paper is intended as an introductory presentation to the layman who desires to work with one or more phases of the life cycle of the flatfish, and should serve as an introduction to the literature and culture techniques for interested scientists. Thirty-seven references are cited.

**Syllabus of Fish Health Management: I. Fish Culture Methods. II. Fish Disease Diagnosis**  
George W. Klontz. Dec 73, 235p\* TAMU-SG-74-401, NOAA-74030411

Prepared in cooperation with Idaho Univ., Moscow.

Keywords: \*Aquaculture, \*Animal diseases, \*Fishes, Bacteria, Viruses, Nutrition, Epidemiology, Parasitic diseases, Fungus diseases, Mycobacterium, Animal ecology, Diagnosis, Toxicity, Hematology, Sea Grant program, Neoplastic diseases, Idiopathic diseases.

The syllabus of fish health management consists of two sections. The first which deals with fish culture methods, gives information on: fish culture (husbandry) in the U.S.; types of fish husbandry; the basic constituents of a fish rearing facility; and fish nutrition. The second provides information on fish disease diagnosis. Subjects encompassed are: Principles of epidemiology of fish diseases; diagnostic methodology; and treatment and control of fish diseases. The types of diseases are bacterial, virus, mycotic, parasitic, environmental, nutritional, neoplastic, and idiopathic. The taxonomy of fish parasites is set forth in the report.

Grant NMFS-2-144-R

Keywords: Catfishes, Feeding habits, Aquaculture, Cost comparison, Feeding stuffs, Tennessee, \*Fishes, \*Cage culture.

During 1971 and 1972, channel catfish fingerlings were stocked in cages at Maples Creek Lake, a 90-acre public fishing lake located in Carroll County, TN, to study some techniques involved in the production of channel catfish in cages. The fish were fed from July 30, 1971 until May 29, 1972 at which time they were harvested. The maximum production achieved in any cage was 575 lb/cu M. There was no significant difference in net gain or feed conversion due to the different stocking rates, which indicated crowding was not a factor in any of the cages. An analysis of production data indicated there was no significant difference in net gain or feed conversion due to feeding method. (Modified author abstract)

**Keywords:** \*Computers, Developing countries, Computer programming, Data processing, Education, Foreign aid, Nigeria, Ethiopia, Uganda, Turkey, Brazil, Colombia, Korea, Taiwan, Thailand.

The objective of this report is to contribute to more effective use of computer technology by the developing countries. An intensive survey of computer use and development in nine selected countries and an analysis of other supporting data have resulted in the formulation of specific conclusions. Recommendations for guidance of responsible officials in the developing countries and in the Agency for International Development have been developed in response to the conclusions and are presented in summary form. Later sections of the report include the facts and discussions in support of the conclusions, with emphasis on the responsibilities of the national governments, the problems of education and training, present computer applications, and the role of ADP standards. The results of the individual country surveys are included in the appendix. The report is a part of joint efforts on the part of the Department of Commerce and the Agency for International Development to bring U.S. high technology more effectively to bear on the problems of economic and social development in the less-developed countries of the world.

**Keywords:** Fish marketing, Commercial fishing, Co-operative enterprises, Prices, Costs, Fishing equipment, New England, \*Fishery cooperatives, Reprints, Sea Grant program.

There are about eighty co-operative associations in the commercial fisheries of the United States. Of these, the Point Judith Fishermen's Co-operative Association is one of the most successful. Fishermen are motivated to band together in such organizations by the payment of low prices by fish dealers, by high individual costs in getting fish to the market, by the inordinate expense of money and time in obtaining equipment on a retail, individual basis, and by an unsatisfac-

tory supply of producer services beneficial to fishing. As a case study to illustrate and analyse the functioning of co-operative within the framework of Thompson's open system theory the Point Judith Fishermen's Co-operative Association is described.

**Keywords:** \*Buildings, Environmental engineering, Storms, Earthquakes, Turkey, Peru, Philippine Islands, Developing countries, Earthquake resistant structures, Avalanches, Site surveys, Structural engineering, Disasters, \*Earthquake engineering, \*Wind pressure, \*Housing, Low cost housing, Windstorms.

The report provides technical information regarding characteristics of materials and building systems, and discusses the structural performance of buildings subjected to the action of earthquakes and wind forces with specific reference to structures typical of developing countries. Potential ways are described in which structures can be made more resistant to such action. Siting considerations are discussed from a geological, seismic and climatological viewpoint, and recommendations relating to siting problems are made. Techniques of housing construction, both traditional and industrialized, are described and improvements resulting in better earthquake or windstorm resistance are suggested. Building codes, their improvement and their enforcement are also discussed.

**The Potential of Handcrafts as a Viable Economic Force - An Overview**  
May 74, 56p  
Paper copy available from GPO

**Keywords:** Crafts, Marketing, Craftsmen, Skills, Financing, Designers, Economic factors, Operating costs, Blighted areas, \*Handicrafts, Design crafts.

Handcrafts are considered to be an emerging and viable economic force, but their impact must be viewed relative to their setting. They often may generate jobs and income in areas that offer only meager alternatives. Handcrafts preserve our national folk heritage, contribute to our cultural traditions, and provide both recreational and therapeutic benefits to handicapped persons, the elderly, and others. Crafts can be produced, individually, by sophisticated urban-oriented artisans and by isolated mountaineers; by urban or rural cooperatives; by such ethnic groups as Indians, Mexican-Americans, and Alaskan Natives; and by craft centers, where volume production is combined with hand skills. There is growing market for quality crafts that can be supplied in quantity and dependably.

Puerto Rico Univ., Mayaguez. Dept. of Marine Sciences.  
**The Development of Cultures of the Channel Catfish *Ictalurus punctatus* and *Tilapia* Species in Puerto Rico**  
Final rept. 1 Jul 71-30 Jun 74  
Francisco A. Pagan-Font. 30 Jun 74, 174p NOAA-75022110

**Keywords:** Catfishes, Aquaculture, \*Fishes, Fisheries, Puerto Rico, Cultures(Biology), Recommendations, Salinity, Temperature, Feeding stuffs, Channel catfish, *Ictalurus punctatus*, *Tilapia aurea*.

Polyculture of channel catfish with *Tilapia* spp. was demonstrated. Recommended harvest size for catfish is 350 g obtainable in one year. *T. aurea* can produce three crops per year at a weight of over 68.1 g per fish. Sugar mill waste, rum and beer distillery wastes, tuna stickwater, pharmaceutical yeasts, and chicken manure were found to be of possible use as local fish feeds. Raceway cultures were found to be expensive and are not recommended at this time. In polyculture trials it was found that 9000 kg per hectare per year may be attained. The Lajas Valley appears to be most suitable for fish culture where some 700 acres, which is too saline for agricultural purposes, could be used.

A 1973 international workshop held in Manila, Philippines, addressed the state-of-the-art in mitigating building damages from winds. The workshop was jointly sponsored by the United States Agency for International Development (USAID), a Philippine advisory committee, and the U.S. National Bureau of Standards (NBS). This report presents the proceedings derived from the workshop. The proceedings present recommendations, the workshop program, five reports, and nine technical articles. The technical articles addressed four primary topics which were used to guide subsequent workshop discussions. The topics ad-

## APPROPRIATE TECHNOLOGY ABSTRACTS

dressed were: wind and aerodynamics, structural related technology, socio-economic and architectural considerations, and codes and standards. The results of the workshop suggest improved building practices for developing countries and the development of improved design criteria for low-rise buildings to better resist the effects of extreme winds.

**CONF-760536-1** PC A02/MF A01

Oak Ridge National Lab., TN.  
**Potential for Energy Conservation Technology Transfer**

E. C. Hise. 1976, 11p  
Southern interstate nuclear board meeting, Winston-Salem, North Carolina, United States of America (USA), 24 May 1976.

Keywords: Commercial buildings, \*Energy conservation, Energy consumption, Houses, Technology transfer, Air conditioning, Capital Economics, Efficiency, Engineering, Environmental effects, Furnaces, Government policies, Heat pumps, Modifications, Sociology, Space heating, Standards, Thermal insulation, Water heaters, \*Buildings, Residential buildings, Hot water heating.

The segment of energy consumption related to space conditioning and water heating in residential, commercial, and institutional buildings is discussed specifically. Within this constraint building energy consumption is discussed, considering three choices: drastic alteration of life style; even greater energy operating costs; or relatively large capital expenditures to reduce building energy consumption. It is concluded that the average existing residence can, through insulation, reduce its energy consumption to 60 percent of present for an expenditure of \$500 to \$1000 and a pay back of 5 to 10 years. The average existing commercial or institutional building can save even more, although their construction may require less commonplace insulation methods than residences. New construction can show greater energy savings at little or no additional construction cost. From data contained in reports in the bibliography (10 items), the author again concludes that the average existing residential heating/cooling system (equipment) can be modified or replaced to reduce its energy consumption to 60 percent or even 40 percent of the present at a cost of a few hundred to \$3000 as a function of the problem. The possible savings in commercial and institutional buildings are equally great. (ERA citation 01:019507)

Keywords: Heat recovery, Industrial plants, \*Waste heat utilization, \*Energy conservation, Meetings, Agriculture, Heat exchangers, Heat storage, Heat transfer, Research programs, Thermal effluents, Uses, Waste heat.

A workshop on Fluid Waste Heat Recovery and Utilization was held in Washington, D.C. to develop specific ideas for research and development relating to the utilization of industrial process fluid waste streams at temperatures from 100 exp 0 to 200 exp 0 F. The participants represented the agricultural, chemical, food processing, metals, textiles, petroleum, and paper industries and community systems. The broad topics considered included heat recovery techniques and equipment; decontamination of waste heat media; uses of waste heat to enhance biological processes, e.g., in aquaculture and greenhouses; space heating; heat storage and transport; and the modification of industrial processes to eliminate waste heat streams. The participants formulated 93 specific research and development ideas. (ERA citation 02:052230)

**Third International Symposium on Alcohol Fuels Technology**

Apr 80, 714p  
Contract FG03-79CS50015  
International symposium on alcohol fuels technology, Asilomar, CA, USA, 28 May 1979.

Keywords: Alcohol fuels, Biomass, \*Environmental impacts, Leading abstract, Meetings, Production, \*Alcohols, \*Fuels, Safety, Socio-economic factors.

At the opening of the Symposium, Dr. Sherrah, Senior Vice President of Continental Oil Company, addressed the attendees, and his remarks are included in this volume. The Symposium was concluded by workshops which addressed specific topics. The topical titles are as follows: alcohol uses; production; environment and safety; and socio-economic. The workshops reflected a growing confidence among the attendees that the alcohols from coal, remote natural gas and biomass do offer alternatives to petroleum fuels. Further, they may, in the long run, prove to be equal or superior to the petroleum fuels when the aspects of performance, environment, health and safety are combined with the renewable aspect of the biomass derived alcohols. Although considerable activity in the production and use of alcohols is now appearing in many parts of the world, the absence of strong, broad scale assessment and support for these fuels by the United States Federal Government was a noted point of concern by the attendees. The environmental consequences of using alcohols continues to be more benign in general than the petroleum based fuels. The exception is the family of aldehydes. Although the aldehydes are easily suppressed by catalysts, it is important to understand their production in the combustion process. Progress is being made in this regard. Of course, the goal is to burn the alcohols so cleanly that catalytic equipment can be eliminated. Separate abstracts are prepared for the Energy Data Base for individual presentations. Contract EY-78-C-07-1570  
International Solar Energy Society meeting, Atlanta, GA, USA, 28 May 1979.

Keywords: \*Houses, \*Solar cooling systems, \*Solar heating systems, Computer codes, Control systems, Data acquisition systems, Design, Heat exchangers, Idaho, Mathematical models, Monitoring, Performance, Rock beds, Sensible heat storage, Solar air conditioning, Solar air heaters, Solar space heating.

Two nearly identical manufactured solar houses were designed and built in Idaho. The solar system was designed to be eventually offered as an option on any home manufactured by Boise Cascade. The active solar heating and cooling system uses simple air collectors, rock storage, and a heat exchanger to preheat hot water. Summer cooling is provided by blowing cool, night air through the rock bed and then circulating house air through the cool rocks as needed. Both houses are being monitored for two years to obtain dynamic heating and cooling system performance. The data will be used to modify computer models such as TRNSYS to obtain more accurate performance predictions. Initial predictions of performance and cost indicate that positive monthly savings will be achieved. (ERA citation 04:046213)

 Contract W-7405-ENG-26  
 Waterpower 79 international conference: small scale hydropower, Washington, DC, USA, 1 Oct 1979.  
 Microfiche copies only.

**Keywords:** \*Dams, Fish passage facilities, Low-head hydroelectric power plants, Design, \*Fishes, \*Hydroelectric power, Operation, Safety, Electric power plants, State of the art.

One of the most frequently raised environmental issues that may affect the development of small hydroelectric technology is the possible requirement of fish passage facilities at existing dams. The need for these facilities may be a significant factor in determining the economic feasibility of small hydro projects. Some preliminary results of an ongoing study reviewing fish passage technology relating to small hydro development are described. Types of structures available to move upstream migrating fish around dams, and downstream passage facilities are discussed. Some basic design considerations for successful operation of upstream passage facilities and basic cost figures are presented. (ERA citation 05:06704)

**Supplementing the Energy and Plant Nutrient Requirements Through Organic Recycling**  
 S. S. Mahdi, and R. V. Misra. 1980, 9p  
 National symposium on recycling of residues of agriculture and industry, Ludhiana, India, Mar 1980. Portions of Document are illegible.

**Keywords:** \*Agricultural wastes, Biological wastes, \*India, Renewable energy sources, Agriculture, Animals, Biogas process, Conversion, Crops, Culture media, Fertilizers, Human populations, Manures, Nutrients, Organic compounds, Recycling, Soils, Solid wastes, \*Bioconversion, \*Animal wastes, \*Waste recycling, Foreign technology.

In context of dwindling non-renewable energy resources and increasing health hazards because of environmental pollution, recycling of organic residues obtained through various sources like crops, animals, and human beings is becoming increasingly important. The organic residues obtained as wastes through these sources can be recycled effectively to meet scarce resources of energy and the plant nutrients, so vitally needed for our day-to-day activities and for raising agricultural production. Agriculture is the main stay of the Indian economy. Considerable quantities of crop residues available from agriculture can be utilized to serve as a source of organic fertilizers which not only provide plant nutrients but also improve soil health. The country has a large animal and human population. The animal and human wastes can be successfully

used for production of energy and organic fertilizer by routing through biogas system. There is a need to develop an integrated energy and nutrient supply program. An action program is outlined. (ERA citation 05:033791)

In a recent study undertaken to ensure the early incorporation of environmental considerations in decisions concerning biomass-to-energy systems, a number of issues emerged indicating the need for early attention to environmental, socioeconomic and health concerns. Both production of biomass as well as conversion can lead to environmental impact, and although most impacts will be site-specific, some generic effects can be identified. The most important potential impacts arise first, from the need for large-scale commitment of resources for production, and second, from uncontrolled widespread small-scale utilization. Because biomass-related impacts cover a very broad spectrum of materials, processes, end products, and effects, the discussion presented here, except for an overview of generic effects and comment on production impacts, will be directed primarily to those resulting from residential wood combustion. The Decentralized Solar Energy Technology Assessment Program (DSETAP) is discussed. In this program four communities were involved in an assessment of the compatibility of diverse conservation and renewable energy-supply technologies and community values and goals and in community planning for the implementation of compatible energy demand and supply alternatives. The approach taken by these communities has several basic components, including: (1) recruiting and organizing for the assessment planning process; (2) collection and analysis of data related to community energy use and indigenous renewable-energy resources; (3) creation and maintenance of a community education and information program; (4) development of policies favorable to the development of preferred community futures; and (5) development of implementation or action strategies. How these components were carried out by the four communities in the DSETAP is reviewed. Particular attention is paid to a number of important issues which were raised during the course of the DSETAP, including the role of public participation, group decision-making techniques, the

International meeting on modern ceramic technology, Rimini, Italy, 26 May 1976.

**Keywords:** \*Ceramics, Industrial plants, Capital, Demand factors, Energy consumption, Energy demand, Environmental effects, Manufacturing, Materials, Resources, Technology assessment, Investments, Manpower, Energy requirements, Fabrication, Ceramics industry, Industries.

There clearly seems to be a consensus developing that technological requirements, including ceramics, will be sought in the next few decades with regard to (1) substituting common and readily available materials for rarer and therefore diminishing resources, (2) making strong efforts to either conserve energy or develop new sources of energy, (3) protecting the environment, and (4) providing opportunities for more worker satisfaction. An attempt is made to relate these objectives to needs and opportunities for ceramics. The following considerations are discussed in reference to the ceramic industry: labor-capital requirements, materials resource requirements, energy requirements, environmental requirements, fabrication requirements, and new product requirements. **Analysis of the Economic Potential of Solar Thermal Energy to Provide Industrial Process Heat. Final Report, Volume I**  
7 Feb 77, 120p  
Contract EY-76-C-02-2829

**Keywords:** Agriculture, Industrial plants, \*Process heat, \*Solar collectors, Solar cookers, Solar drying, Solar furnaces, Solar kilns, Solar stills, Solar water heaters, Automobile industry, Boilers, Building materials, Chemical industry, Coal industry, Concentrating collectors, Cost, Economics, Environmental effects, Fertilizers, Financial incentives, Flat plate collectors, Food industry, Glass industry, Industry, Legal aspects, Life-cycle cost, Mathematical models, Meat industry, Metal industry, Mineral industry, Ore processing, Paper industry, Petroleum industry, Site selection, Solar cooking, Solar distillation, Solar dryers, Synthetic fuels industry, Technology assessment, \*Solar heating systems, Textile industry, Industries, \*Solar water heating.

The process heat data base assembled as the result of this survey includes specific process applications from 78 four-digit Standard Industrial Classification (SIC) groups. These applications account for the consumption of 9.81 quadrillion Btu in 1974, about 59 percent of the 16.6 quadrillion Btu estimated to have been used for all process heat in 1974. About 7 exp 1 / sub 2 percent of industrial process heat is used below 212 exp 0 F (100 exp 0 C), and 28 percent below 550 exp 0 F (288 exp 0 C). In this study, the quantitative assessment of the potential of solar thermal energy systems to provide industrial process heat indicates that solar energy has a maximum potential to provide 0.6 quadrillion Btu per year in 1985, and 7.3 quadrillion Btu per year in 2000, in economic competition with the projected costs of conventional fossil fuels for applications having a maximum required temperature of 550 exp 0 (288 exp 0 C). A wide variety of collector types were compared for performance and cost characteristics. Performance calculations were carried out for a baseline solar system providing hot water in representative cities in six geographical regions within the U.S. Specific industries that should have significant potential for solar process heat for a variety of reasons include food, textiles, chemicals, and primary metals. Lumber and wood products, and paper and allied products also appear to have significant potential. However, good potential applications for solar process heat can be found across the board throughout industry. Finally, an assessment of nontechnical issues that may influence the use of solar process heat in industry showed that the most important issues are the establishment of

solar rights, standardization and certification for solar components and systems, and resolution of certain labor-related issues. (Volume 1 of 2 volumes.). (ERA citation 02:058733)

**Keywords:** \*Manures, \*Methane, Anaerobic digestion, Bench-scale experiments, Biosynthesis, Cattle, Comparative evaluations, Configuration, Diagrams, Fermentation, Gas yields, Laboratory equipment, Tables, \*Bioconversion, Manufactured gas, Solid wastes, Synthetic fuels.

A large scale laboratory system was constructed to evaluate the methane yields from various organic materials. The initial substrate for these studies was beef feed lot manure. Methane yields ranged from 0.11 to 0.259 m exp 3 per kg volatile solids fed with a fermentation temperature of 58 exp 0 C. The gas yield for a given manure was a function of retention time. However, fresh manure produced substantially more gas than manure that had been on the lots for several months. Retention times of 3.7 days and loadings of 8.76 kg per m exp 3 per day resulted in stable operation. The results of a separate study of the effect of reactor type on methane production showed that if a balanced population of organisms can be maintained in the initial stage, a multi-stage fermentation is more efficient than a complete-mix system. However, when the system is stressed, failure of the multi-stage system is more rapid. If the objective is to maximize the conversion of solids to methane, a staged system will produce more methane per unit volume of reactor. If the objective is to maximize methane production per unit volume of reactor, a single stage complete-mix reactor operating at near the critical retention time is required. (ERA citation 03:023375)

## APPROPRIATE TECHNOLOGY ABSTRACTS

Optimization, Production, \*Pyrolysis, Synthesis, \*Automotive fuels, \*Agricultural wastes.

The current status and future plans for a project to convert waste cellulosic (biomass) materials to quality liquid hydrocarbon fuels is described. The basic approach is indirect liquefaction, i.e., thermal gasification followed by catalytic liquefaction. The indirect approach results in separation of the oxygen in the biomass feedstock, i.e., oxygenated compounds do not appear in the liquid hydrocarbon fuel product. The process is capable of accepting a wide variety of feedstocks. Potential products include medium quality gas, normal propanol, diesel fuel and/or high octane gasoline. A fluidized bed pyrolysis system is used for gasification. The pyrolyzer can be fluidized with recycle pyrolysis gas, steam or recycle liquefaction system off gas or some combination thereof. Tars are removed in a wet scrubber. Unseparated pyrolysis gases are utilized as feed to a modified Fischer-Tropsch reactor. The liquid condensate from the reactor consists of a normal propanol-water phase and a paraffinic hydrocarbon phase. The reactor can be operated to optimize for either product. The following tasks were specified in the statement of work for the contract period: (1) feedstock studies; (2) gasification system optimization; (3) waste stream characterization; and (4) liquid fuels synthesis. In addition, several equipment improvements were implemented. (ERA citation 06:004616)

**Conversion of Wood Residues to Diesel Fuel**  
J. L. Kuester. 1981, 19p Rept no. CCONF-810237-1  
Contract AS02-76CS40202

Annual wood energy program and contractor review meeting, Washington, DC, USA, 9 Feb 1981.

Keywords: Biomass, \*Wood wastes, Alkanes, Boiling points, Calorific value, Catalytic reforming, \*Fuels, Chemical composition, Chemical reactors, Density, Experimental data, Fischer-tropsch synthesis, Fluidized bed, Fuel oils, Gasification, Gasoline, Liquefaction, Physical properties, Propanols, \*Pyrolysis, Pyrolytic gases, Yields.

The basic approach is indirect liquefaction, i.e., thermal gasification followed by catalytic liquefaction. The indirect approach results in separation of the oxygen in the biomass feedstock, i.e., oxygenated compounds do not appear in the liquid hydrocarbon fuel product. The general conversion scheme is shown. The process is capable of accepting a wide variety of feedstocks. Potential products include medium quality gas, normal propanol, paraffinic fuel and/or high octane gasoline. A flow diagram of the continuous laboratory unit is shown. A fluidized bed pyrolysis system is used for gasification. Capacity is about 10 lbs/h of feedstock. The pyrolyzer can be fluidized with recycle pyrolysis gas, steam or recycle liquefaction system off gas or some combination thereof. Tars are removed in a wet scrubber. Unseparated pyrolysis gases are utilized as feed to a modified Fischer-Tropsch reactor. The liquid condensate from the reactor consists of a normal propanol-water phase and a paraffinic hydrocarbon phase. The reactor can be operated to optimize for either product. If a high octane gasoline is desired, the paraffinic fuel is passed through a conventional catalytic reformer. The normal propanol could be used as a fuel extender if blended with the hydrocarbon fuel products. Off gases from the downstream reactors are of high quality due to the accumulation of low molecular weight paraffins. (ERA citation 06:018255)

Contract EY-76-C-02-2991

Keywords: Anaerobic digestion, \*Fuels, Fuel gas, \*Manures, Biosynthesis, Cattle, Chemical reaction kinetics, Computer codes, Computers, Design, Diagrams, Economics, Energy balance, Equipment, Material balance, Materials handling, Mathematical models, \*Methane, Net energy, Optimization, Production, Sewage, Tables, \*Waste recycling, \*Animal wastes, Synthetic fuels, Manufactured gas, Solid wastes.

A comprehensive mathematical model description of anaerobic digestion of animal residues was developed, taking into account material and energy balances, kinetics, and economics of the process. The model has the flexibility to be applicable to residues from any size or type of animal husbandry operation. A computer program was written for this model and includes a routine for optimization to minimum unit gas cost, with the optimization variables being digester temperature, retention time, and influent volatile solids concentration. The computer program was used to determine the optimum base-line process conditions and economics for fuel gas production via anaerobic digestion of residues from a 10,000 head environmental beef feedlot. This feedlot at the conditions for minimum unit gas cost will produce 300 MCF/day of methane at a cost of \$5.17/MCF (CH sub 4), with a total capital requirement of \$1,165,000, a total capital investment of \$694,000, and an annual average net operating cost of \$370,000. The major contributions to this unit gas cost are due to labor (37 percent), raw manure (11 percent), power for gas compression (10 percent), and digester cost (13 percent). A conceptual design of an anaerobic digestion process for the baseline conditions is presented. A sensitivity analysis of the unit gas cost to changes in the major contributions to unit gas cost was performed, and the results of this analysis indicate areas in the anaerobic digestion system design where reasonable improvements could be expected so as to produce gas at an economically feasible cost. This sensitivity analysis includes the effects on unit gas cost of feedlot size and type, digester type, digester operating conditions, and economic input data. (ERA citation 03:011895)

**Fuel Gas Production from Animal Waste. Phase I. Annual Summary Report, May 17, 1976--May 17, 1977**

E. Ashare, R. L. Wentworth, D. L. Wise, and D. C. Augenstein. 31 May 77, 30p  
Contract EY-76-C-02-2991

Keywords: Fuel gas, \*Manures, Anaerobic digestion, Biosynthesis, Carbon dioxide, Flowsheets, Production, Recommendations, Removal, Research programs, Scrubbing, Technology assessment, \*Animal wastes, \*Methane, \*Bioconversion, Synthetic fuels, Manufactured gas, Air pollution control, Solid wastes.

Quarterly coordination and review meetings were held with contractors in the area of fuel gas from animal residue via anaerobic digestion. Site visits to individual contractors were made to discuss progress of work. An engineering and economic analysis was performed for an anaerobic digestion process for the production of fuel gas from animal wastes. A comprehensive engineering report was prepared describing this study. A study of processes for the removal of acid gases from digester gas has been initiated. This study is directed at reviewing the technology and assessing the technical and economic feasibility of gas scrubbing technology for removal of CO sub 2 from digester gas. Proposals submitted to ERDA in the field of fuel gas from biomass were reviewed and evaluated. (ERA citation 03:009864)

The potential of solar photovoltaic power in the third world (less developed countries) is analyzed. Application of irrigation systems powered by photovoltaics in Bangladesh, Chad, India, and Pakistan, plus an economic analysis of a photovoltaic-powered village in northern India indicate solar energy is competitive with the least-cost fossil-fuel alternatives. The most cost-effective method for specific geographical locations can be determined by field testing based on the case history data reported. (ERA citation 02:045245)

Tens of millions of farmers currently subsist on small farms below two hectares in size. The increasing cost of animal irrigation coupled with decreasing farm size and the lack of a utility grid or acceptable alternate power sources is causing interest in the use of solar photovoltaic for these very small (subkilowatt) water pumping systems. The attractive combinations of system components (array, pump, motor, storage, and controls) have been identified and their interactions characterized in order to optimize overall system efficiency. Computer simulations as well as component tests were made of systems utilizing flat plate and low concentration arrays, direct-coupled and electronic impedance matching controls, fixed and incremental (once or twice a day) tracking, dc and ac motors, and positive displacement, centrifugal and verticle turbine pumps. The results of these analyses and tests are presented for Orissa, India and Cairo, Egypt, and include water volume pumped as a function of time of day and year. Finally, a description and operational data is given for the prototype unit that was developed as a result of the previous analyses and tests. (ERA citation 04:054323)

## APPROPRIATE TECHNOLOGY ABSTRACTS

### Fuels from Solar Energy: Photosynthetic Systems—State of the Art and Potential for Energy Production

J. C. Goldman. Jul 78, 124p  
Contract EG-77-S-02-4151

**Keywords:** Unicellular algae, \*Algae, Aquaculture, Cultivation techniques, Photosynthesis, Ponds, Productivity, Reviews, Single cell protein, Solar energy conversion, \*Bioconversion, State of the art, Biomass, Biological industrial waste treatment, Life support systems, Chemical feedstocks, Synthetic fuels, Forecasting.

Research on the mass culturing of microalgae has been carried out over the past 30 years in many parts of the world. Today there are numerous potential applications for algal mass cultures including protein production, wastewater treatment, water renovation, closed life-support systems, production of commercial chemicals, aquaculture, and bioconversion of energy. Photosynthetic yields over 30 gr dry wt m exp -2 day exp -1 have been attained on occasion in many locations for short periods and yields between 15 to 25 gr dry wt m exp -2 day exp -1 for longer periods are now common. This apparent upper limit in productivity is not coincidental. Under outdoor conditions peak yields are possible only under conditions of light limitation. Photosynthetic algae absorb light energy and convert it to stored chemical energy under rigid adherence to the laws of thermodynamics. By examining the basic physics of photosynthesis, it is possible to clearly demonstrate that under conditions of full sunlight in the most ideal locations maximum yields of 30 to 40 gr m exp -2 day exp -1 can be expected. For long-term operation of large-scale outdoor cultures, many bioengineering factors are involved and realistic yields considerably less than the maximum potential can be anticipated. Manipulation of the two independent variables, flow rate and depth, is the key to maximizing yields for varying outdoor sunlight intensities. Future applications for algal mass cultures will probably be restricted to small well-managed systems for solving specific environmental problems in individual communities and not on the grand scale envisaged in the past. **Beneficial Utilization of Waste Heat from Power Plants in Wastewater Treatment Systems**  
S. N. Ni, and A. W. Obayashi. Jun 79, 115p  
Contract EC-77-S-02-4531

**Keywords:** Fossil-fuel power plants, Sewage, \*Waste heat utilization, Waste processing plants, \*Waste water, Economics, Energy conservation, Municipal wastes, Waste heat, Water pollution control, Sewage treatment, Sludge digestion, Anaerobic processes.

A number of wastewater treatment processes were analyzed for possible benefit in using waste heat from co-located steam-electric power plants. Three levels of treatment standards were considered, ranging from secondary treatment to stricter tertiary requirements which involve nutrient removal. Three sizes of treatment plants were analyzed, ranging from those serving 33,000 to 2,000,000 population. The processes analyzed included activated sludge, trickling filter, rotating biological contactors and the Bardenpho process. In the study, a fraction of the condenser discharge was considered mixed with primary-treated wastewater, thereby accelerating the biological secondary-treatment processes at the expense of dilution. In each case, the most cost-effective fraction of condenser flow to be utilized was determined. After treatment, a

portion of the mixture would be returned to the power plant in order to recycle the corresponding condenser discharge and provide the necessary evaporative makeup for the cooling system. The balance of the mixture would constitute the water product of the treatment plant. The benefit of waste heat used to replace fuel oil in sludge digesters was also analyzed. In the case of the lowest effluent standards (Group 1), the most cost-effective secondary treatment process was activated sludge without waste-heat recycle because it is dominated by non-thermal considerations. Group 2 standards were favored by rotating biological contactors with waste-heat recycle. The most advanced Group 3 standards were optimally met by the Bardenpho process, also with waste-heat recycle. In all cases, anaerobic sludge digestion with waste heat in place of fuel oil was most economical. The overall savings in levelized annual costs ranged from 1.5% for the smallest plants to 9.9% for the largest plants, by using waste heat optimally as compared with optimal systems without waste heat. Contract AC02-77CH00178

**Keywords:** Developing countries, Wind power, Wind turbines, Wind-powered pumps, Availability, \*Wind energy, \*Water pumps, \*Turbines, Resource assessment, Specifications.

This report is designed to assist engineers, energy planners in developing countries, and donor agencies' personnel to assess the global potential of wind energy conversion systems (WECS). The cost effectiveness of WECS mainly depends on the availability of the wind resource, system power performance, and the comparative cost of alternate energy sources. Therefore, this report presents an overview of the global wind resource including observed zonal wind systems for each continent, available wind data, current wind maps, and on-going studies to assess the global wind potential. Also, because the most accurate method of assessing wind energy potential in a certain

location is on-site measurement, the differences between commercially available wind sensors and recording equipments are discussed. A methodology is outlined for obtaining a match between machine and site characteristics for most cost-effective power production. The first three sections deal primarily with wind resource and wind-machine interaction. The final two sections cover wind machine technology and wind energy applications. (ERA citation 06:030415)

## APPROPRIATE TECHNOLOGY ABSTRACTS

**Keywords:** District cooling, \*District heating, Heat distribution systems, \*Solar ponds, \*Solar water heating, Comparative evaluations, Cooling load, Cost, Design, Feasibility studies, Flat plate collectors, Heat exchangers, Heating load, Optimization, Pipes, Pumps, Salinity gradients, Size, Solar space heating, Texas, Washington Dc.

A preliminary investigation is reported of the feasibility of incorporating solar ponds into new subdivisions to provide district heating, domestic hot water (DHW), and district cooling. Two locations were chosen for analysis: Fort Worth, Texas and Washington, DC. Solar ponds were sized to meet space heating, cooling, and DHW loads in each location for differing community sizes. Parameters such as storage layer temperature, pond geometry, and storage depth vs surface area were varied to determine the most effective approach to solar pond utilization. A distribution system for the district heating system was designed, including sizing of heat exchangers, piping and pumps. Cost estimates for the pond and distribution system were formulated by using data generated in pond sizing, as well as associated system costs (e.g., salt costs and distribution system costs). Finally, solar ponds were found to be competitive with residential flat-plate collector systems, with delivered energy costs as low as \$16.00/GJ. (ERA citation 06:027055)

Contract FG02-80R510236

**Keywords:** Wind turbines, \*Wind energy, Hydraulic equipment, Performance testing, Power generation, Test facilities.

The purpose of this research was to design, build and test a hydraulic wind energy system. This design used a three bladed turbine, which drove a hydraulic pump. The energy is transmitted from the pump through a long hose and into a hydraulic motor, where the energy is used. This wind system was built and tested during the winter of 1980-1981. The power train included a five meter, three bladed wind turbine, a 9.8:1 ratio gearbox, a 1.44 cubic inch displacement pump with a small supercharge gear pump attached. The hydraulic fluid was pumped through a 70', 3/4" I-D-high pressure flexhose, then through a volume control valve and into a 1.44 cubic inch displacement motor. The fluid was returned through a 70', 1" I-D-flexhose. (ERA citation 06:028561)

**Keywords:** Appropriate technology, \*Fishes, \*Greenhouses, Guam, Oceania, Renewable energy sources, \*Wood stoves, \*Solar drying, \*Solar water heating, Stoves, Design, Drying, Micronesia, Technology transfer, \*Wood.

During 1978, 1979, and 1980, 28 small-scale energy projects were funded in the Pacific Territories. The projects attempt to be appropriate for developing Pacific island communities by using local labor and materials, using renewable resources, incorporating simple technologies, and being culturally sensitive. Most of the projects are completed now and are at the technology transfer stage. During the last three years the projects were monitored. Five case studies have been prepared which illustrate elements and define features which contribute or hinder technology transfer. Case studies include a typhoon-proof greenhouse on Guam, wood stoves and small solar devices on Yap, various devices built at a youth educational facility on Ponape, an unusual solar hot water system on Majuro, and a solar fish drying facility on an outer Truk island. Conclusions from these studies are extrapolated to all 28 projects. (ERA citation 07:006987)

**Keywords:** Developing countries, \*Irrigation, Pumps, Pumping, Energy demand, Renewable energy sources, Energy supplies, Economic analysis, Fossil fuels, Electric power, \*Water pumps.

An analysis of the costs of mechanized irrigation in developing countries is presented. Both conventional (oil, electric) and renewable (solar, wind, biomass) energy sources have been considered as prime movers for small irrigation pumps. A range of renewable energy options, photovoltaic cell arrays powering electric pumpsets, windmill pumpers of the classic American type, and bio-gas powered engines, have been analyzed and the costs of irrigation pumping have been determined as functions of the appropriate variable (cell array prices, solar and wind availability, etc.) in each case. The study highlights the importance of more extensive data collection on renewable resource availability in DCs as well as the need for examining decentralized renewable resource technology in an integrated context of rural energy use.

**Keywords:** \*Photovoltaic power system, Technology assessment, Commercialization, Marketing research, Developing countries, Ivory coast, Mexico, Forecasting, South Africa, Developed countries, United States, France, Federal republic of germany, Japan, Research programs.

A global overview of the status of the photovoltaics (PV) technology and its commercialization is presented. There are substantial marketing opportunities for selected PV applications, despite high-PV costs. These are mostly in the developing nations. Also, the adoption of solar technologies like PV might be quite beneficial to the developing nations. The Ivory Coast and Mexico were reviewed for their potential as PV consumers. The near-term potentials are promising. The long-term outlooks are clouded by possible competition from other indigenous energy resources or adverse political decisions. The Republic of South Africa, a highly industrialized nation, was also evaluated as a PV consumer. Its near-term potential appears to be minimal because of cheap coal power and an existing power grid. The same factors, plus nuclear power that will soon come on line, could inhibit long-term PV development. The US, France, West Germany, and Japan are the major industrial nations conducting research, development and commercialization programs on PV. At least twelve other countries are involved to a lesser degree. In technology, the US is ahead but the programs and the progress in the other three major countries are nevertheless significant. They are well aware of the exporting potential of PV and are taking steps to exploit it. France and West Germany are developing complete saleable systems, whereas the US has been concentrating on components. Japan has been developing its own technology base and systems and may soon decide to become more active in the market place. Federal funding in the US for PV is being drastically reduced. In contrast, the governmental funding in the other three major nations is relatively strong and appears to be growing.

Sponsored in part by Domestic and International Business Administration, Washington, D.C.

**Keywords:** Market surveys, \*Woodworking, \*Sawmills, \*Singapore, Molding machines, Planers, \*Marketing, Drilling machines(Tools), Materials handling equipment, Exports, International trade, Market research, United States, SIC 3423, SIC 3537, SIC 3567, SIC 3811, SIC 3546, SIC 3425, SIC 3535, SIC 9770.

There are important markets in Singapore for several of the product categories under reference e.g., wood-working items. However, the total sawmilling and woodworking industry is not buoyant and in fact, certain sectors (e.g. sawmilling) are quite stagnant. Growth trends for the foreseeable future would therefore not be significant. Currently, awareness of the U.S. range of products is poor. Most respondents had no prior experience with U.S. equipment. Several misconceptions were evident; for example, it was felt that U.S. equipment is highly priced or even over-priced; U.S. equipment, because of its high level of sophistication, is often not relevant to local operating requirements. Sales potential for the immediate future is generally poor. Of the total range of items under review, respondents indicated that the items more likely to be purchased within the next two years would probably include portable sawmills, molders, planing machines, drilling machines, and materials handling equipment.

**Plywood Processing and Woodworking Equipment Study in Taiwan R. O. C**

Foreign market survey rept.

Jun 77, 70p Rept no. Job-770355

**Keywords:** Market surveys, \*Woodworking, \*Plywood, \*Taiwan, Exports, Market research, \*Marketing, United States, SIC 3553, SIC 9770, Foreign trade.

The market research was undertaken to study the present and potential US share of the market in Taiwan for plywood processing and woodworking equipment; to examine growth trends in the Taiwan end-user industries over the next few years; to identify specific product categories that offer the most promising export potential for US companies; and to provide basic data which will assist US suppliers in determining current and potential sales and marketing opportunities. The trade promotional and marketing techniques were also reviewed.

Contract AID/af-C-1135-13

U.S. sales only for 8 months. Available to foreign addressees in May 80.

**Keywords:** \*Fisheries, Economic development, Developing countries, Djibouti Republic, Production, Marketing, Food, Imports, Distribution(Property), Employment, Africa, Boats, Demand(Economics), Equipment, Technical assistance, Management, National government, Eastern Region(Africa).

In response to a request from the USAID Mission to Djibouti and AFR/DR/EAP, Washington, an RDA team consisting of a Senior Fisheries Specialist and a Senior Fisheries Economist visited Djibouti in October through November 1978 to evaluate the present fishery and, if appropriate, to recommend a program for fisheries development. This report summarizes the current status of fisheries in Djibouti, considers proposed development activities of other bilateral donors, and recommends a program of assistance to the small-scale artisanal fishermen of Obock, Tadjoura and Djibouti City. The project is designed to increase both fisheries production and improve marketing of the catch.

**DOE Facilities Solar Design Handbook**

Jan 78, 177p

Contract W-7405-ENG-36

**Keywords:** \*Buildings, Commercial buildings, \*Solar cooling systems, \*Solar heating systems, Manuals, Climates, Control systems, Data, Design, Economics, Heat storage, Heat transfer, Insolation, Regional analysis, Size, Solar air conditioners, Solar air conditioning, Solar collectors, Solar space heating, Solar-assisted heat pumps, Thermal insulation, Weather, Handbooks.

This handbook covers design of solar heating systems for commercial and laboratory buildings at Department of Energy Facilities. It includes discussions of solar energy fundamentals, solar heating and cooling technology, systems, and components, as well as a discussion of solar system economics. Quantitative analysis, with generalized design and sizing curves, is presented for solar heating so that collector and other system parameters can be cost-economically sized without a computer simulation. Solar system design considerations and guidelines, as well as guidelines for developing subsystem specifications, are presented. Thus this handbook is both a primer for the solar novice and a reference manual for the solar system designer. (ERA citation 03:030607)

**Ethanol: A Brief Economic Evaluation**

Sep 80, 12p

Contract AC79-79BP15325

**Keywords:** Biomass conversion plants, \*Ethanol, Bio-synthesis, By-products, Economic analysis, \*Corn, \*Alcohols, \*Fuels, \*Biocconversion, Feasibility studies, Fermentation, Financial incentives, Geothermal process heat, Maize, \*Sugar beets.

This construction of 10 million gallon per year ethanol plant is being considered. The initial feed to the plant would be corn, with sugar beets as a possible alternate feed. The ultimate plan is to use waste products and biomass feed stocks. Geothermal water would provide the necessary process heat for the plant. An economic evaluation was performed to assist the owners in their planning. Each of the following conclusions are based on an ethanol plant that produces 10 million gallons of ethanol per year. (1) Over a 20 year period, the plant using a corn feed stock would generate a rate of return of +12% on a total equity capital investment of \$33,000,000. (2) Over a 15 year period, the plant using a corn feed stock is probably not economically feasible since it would have a rate of return less than 12% or a total equity capital investment of \$33,000,000. (3) A corn feed stock plant operates at a loss for the first seven years if 95% of the \$33,000,000 cost is debt financed. The plant is economically feasible only if off-setting energy income from other profitable operation permits taking advantage of investment tax credits and depletion allowances that are available. If this is true, the project is highly feasible, paying back twice the 5% equity capital in the first year. (4) A sugar beet ethanol plant is not economically feasible since the cost of operation exceeds the value of the products sold. This is based on sugar beets at \$40 per ton, net back on the ethanol of \$1.50 per gallon, and net back on the by-products of \$4.94 per 100 pounds. (ERA citation 06:005890)

**Manual for Development of Small Scale Hydroelectric Projects by Public Entities**

Mar 81, 40p

Contract AS02-78F 04934

**Keywords:** Low-head hydroelectric power plants, Urban areas, \*Dams, Design, Economics, Feasibility studies, \*Hydroelectric power, Legal aspects, Licensing, Manuals, Power potential, Retrofitting.

This manual is designed to provide guidance to towns, cities, counties and other political subdivisions which are interested in undertaking or participating in small scale hydroelectric (SSH) development within or close to their territorial boundaries. The manual is primarily directed to those political subdivisions which either own or have access to a site, are interested in exploring the prospects for development of the site and do not have longstanding experience in the electric power development. For purposes of this manual a small scale hydroelectric project is a project of 25 to 30 MWs

or less and utilizes an existing dam or structure or utilizes the site characteristics of partially breached dams or structures. As the reader will observe from the discussion that follows, several incentives under federal and state law have been implemented which favor small scale hydroelectric development at existing sites. This manual is designed to assist political subdivisions in taking advantage of these incentives and devising strategies for development. The manual will provide information to political subdivisions as to what to expect in the development process and the kinds of informed questions to ask of paid advisers. The manual, however, cannot be and should not be used as a substitute for competent advice and assistance from experienced lawyers, engineers, accountants and financing experts. **Waste-to-Energy Compendium. Final Report**

Apr 81, 125p

Contract AC01-76CS20167

**Keywords:** Cogeneration plants, Refuse derived fuels, Refuse fueled power plants, \*Fuels, \*Waste disposal, \*Energy conservation, Resource recovery facilities, Steam generation plants, Boilers, Capitalized cost, Combustion products, Cost, Data compilation, Energy recovery, Equipment, Maintenance, Market, Materials recovery, Operation, Refuse-fueled boilers, Solid wastes, Specifications, Steam generation, Surveys, Uses, Waste processing plants, Waterwall incinerators.

A survey is made of 35 waste-to-energy recovery projects throughout the US. Included are nine refuse-derived fuel (RDF) production facilities, six RDF user facilities, two combined RDF production-user facilities, and 18 mass burning facilities with energy recovery. Only those facilities that are fully operational or those in advanced stages of startup and shakedown are surveyed. Information is provided on processing capacities, operation and maintenance problems, equipment specifications, capital and operating costs, and the current status of each facility. In addition, process flow schematics are provided for each of the nine RDF production plants and both RDF production-user plants. Unless otherwise indicated, the data in this report have been updated to October or November, 1980. (ERA citation 06:022238)

**Keywords:** Solar air conditioning, \*Solar heating systems, Solar space heating, Commercial buildings, Demonstration programs, Economics, Federal buildings, Maps, Performance, Residential buildings, Reviews, \*Solar cooling systems, \*Buildings.

The demonstration program includes commercial and residential-type buildings sponsored by DOE alone, or jointly with other Federal agencies, city and state governments, and private agencies. The commercial projects include a wide variety of building types, such as: office buildings, schools, fire stations, civic centers, factories, and libraries. Residential projects include both single and multifamily dwellings of various configurations. Approximately 200 projects will be instrumented to measure the performance of the solar systems. Analysis of the collected data will provide definitive guides for design criteria and permit realistic eco-

## APPROPRIATE TECHNOLOGY ABSTRACTS

conomic assessment of various solar systems. The demonstrations are discussed in three sections: section I--Commercial Demonstration Program--Non-Federal Buildings; section II--Commercial Demonstration Program--Federal Buildings; and section III--Residential Demonstration Program--Federal Buildings. Maps showing the locations (by state) of the buildings are provided at the beginning of each section along with an index that identifies each project and page number for the corresponding descriptive information. A map depicting the distribution of all demonstration projects is included in this introduction. The comparable map from last year's publication is also shown to depict the increase in the number of projects. The contents of this document are based on information available as of November 1, 1978. (ERA citation 04:032966)

**DOE/CS-0041/5** PC A05/MF A01  
Department of Energy, Washington, DC.  
**Energy Audit Workbook for Die Casting Plants**  
Sep 78, 81p

Keywords: Energy accounting, \*Energy conservation, \*Industrial plants, Air conditioning, \*Casting, Dies, Energy efficiency, Energy management, Lighting systems, Maintenance, Power factor, Space heating, Ventilation.

In a typical die-casting plant, it is possible to save as much as 15% of utility costs through common-sense actions without any appreciable capital expenditure. The workbook provides a do-it-yourself, fill-in-the-blanks approach to an energy-conservation program for die-casting plants that do not have full-time engineering personnel. Energy-conservation measures that demand no capital investment are: reduce the pre-heat time for molds and furnaces to the minimum required; preheat charge metal by storing on top of the furnaces; not over-fire; adjust the length of the mold preheater pilot flame to a minimum; lower the thermostats in the office area during the heating season; make the monthly energy consumption and cost data available to the manager and chief operating engineer; turn off stand-by furnaces that aren't absolutely necessary; lower the domestic hot water to 105 exp 0 F; and adjust burners to operate at the best efficiency. Measures that have shown a dramatic savings for the least initial investment are: design dies to minimize the amount of metal in the sprues and gates; cover hot stand-by crucibles with insulating covers; install electric igniters at casting stations to eliminate the large gas pilot flames; put insulated covers on charging ports to cut down the radiation losses; if practical, use exhaust gas heat to preheat inlet air or to heat hot water; if you use a boiler for space heating, have a technician check the efficiency; use energy conserving fluorescent lamps; control exterior lighting with photo electric cells; preheat combustion air where practical; and if you are being penalized by the electric company for a low power factor, it may be cost-effective to correct it. (ERA citation 04:006053)

**Energy Audit Workbook for Restaurants**  
Sep 78, 79p

Keywords: Energy accounting, \*Energy conservation, Restaurants, Air conditioning, Energy consumption, Energy efficiency, Energy management, Lighting systems, Space heating.

In a typical restaurant, it is possible to save as much as 15% of utility costs through common-sense actions without any appreciable capital expenditure. This workbook describes some simple methods by which the owner, manager, or operator of a restaurant can analyze energy uses, determine areas in which energy savings can be made, and estimate the magnitude of cost savings in accordance with U.S. Department of Energy procedures described as Class C Information Audits. The workbook provides a do-it-yourself, fill-in-the-blanks approach to an energy-conservation program for restaurants that do not have access to an engineering staff. Of necessity, it is a generalized approach that cannot be as detailed as an energy audit conducted by an engineering team. Start the energy audit of your restaurant by assembling energy-consumption data for the last 12 months, making yourself aware of your restaurant's geographic location and site conditions, and having your restaurant's description at hand. Next, list the heating plant, air-conditioning equipment, electrical equipment, and lighting fixtures that are controlled by you, the restaurant's owner

or manager. These systems are the biggest energy users in a restaurant, and you will want to understand them to help identify means of making them more efficient with the aid of this workbook. (ERA citation 04:006055)

**Architects and Engineers Guide to Energy Conservation in Existing Buildings**  
Feb 80, 469p

Keywords: \*Building, \*Energy conservation, Air filters, Cooling systems, Cost, Cost benefit analysis, Degree days, Efficiency, Energy consumption, Energy management, Heat losses, Heat recovery, Heating systems, Insulation, Lighting systems, Manuals, Modifications, Numerical data, Operation, Specifications, Tables, Waste heat utilization, Windows.

The manual enhances and simplifies the work of those architects and engineers whose practice includes the analysis and modification of existing buildings to reduce both fuel consumption and operating costs. A review of the principles of energy use and conservation is given. The manual also provides a step-by-step methodology for assessing and improving the year-round energy performance of buildings, as well as a series of forms, charts, and nomographs designed to serve as day-to-day tools in the energy professional's toolbox. After a cost-benefit analysis is prepared for each conservation opportunity, the owner will be able to implement decisions based on projected energy savings and calculate investment costs, operational changes, and payback periods. Each of these considerations is accorded a detailed treatment. (ERA citation 05:015987)

**Use of RDF as a Kiln Fuel. Final Report**  
Oct 80, 136p  
Contract AC01-76CS20167

Keywords: Cement industry, Kilns, Portland cement, Refuse derived fuels, \*Cement, \*Fuels, \*Industrial wastes, \*Industrial plants, Calcination, Chemical properties, Combustion properties, Commercialization, Data compilation, Energy recovery, Limestone, Municipal wastes, Physical properties, Production, Research programs, Shales.

Refuse derived fuel (RDF) has been experimented with and/or proposed for use in kilns for the production of portland cement, lime, and expanded shale (a form of lightweight aggregate). Technological issues affecting the use of RDF in kilns are reviewed as are the results of trials in which RDF has been used as a kiln fuel. Three future research/demonstration projects for addressing the major unresolved issues are discussed. These projects are: a lime plant trial; a trial in a precalcining furnace; and an extended trial in a cement kiln. (ERA citation 06:007907)

This report describes the design of a farm-based ethanol production system to be built by TVA at Muscle Shoals, Alabama. This facility will include cooking, fermentation, and distillation equipment to allow production of 8000 to 12,000 gallons of fuel ethanol during a three to four month period each year. Output will be about 10 gallons of 190-proof ethanol per hour. Present components are sized to allow 12 to 14 hour daily operation as a semi-continuous batch system. Intent of

## APPROPRIATE TECHNOLOGY ABSTRACTS

the project is to document equipment and energy requirements, ethanol yields, and feasibility of small farm-based ethanol plants for farm fuel self-sufficiency. Cooking and fermentation will be batch-type operations, and packed distillation columns will be used for separating ethanol from the fermented beer. Energy recovery and waste heat use are integrated when feasible. The fermented beer will be fed directly to the distillation columns without separation of solids. Although this is an area of concern, an economical method of separation could not be identified. (EPA citation 06-008713)

**Study of the Production of Ethanol from Sugar Beets for Use as a Motor Fuel. Final Report, February 1, 1980-April 30, 1981**  
H. W. Baird. 27 Apr 81, 41p  
Contract AC02-80CS83010

Keywords: Biomass conversion plants, \*Ethanol, \*Sugar beets, Economic analysis, \*Automotive fuels, \*Industrial plants, \*Bioconversion, \*Fuels, \*Alcohols, Environmental impacts, Feasibility studies, Fermentation, Health hazards, Investment, Market, Operating cost, Production, Safety, Site selection, Socio-economic factors.

This study was performed to assess the feasibility of producing fuel ethanol from sugar beets. Sugar beets are a major agricultural crop in the area and the beet sugar industry is a major employer. There have been some indications that increasing competition from imported sugar and fructose sugar produced from corn may lead to lower average sugar prices than have prevailed in the past. Fuel ethanol might provide an attractive alternative market for beets and ethanol production would continue to provide an industrial base for labor. Ethanol production from beets would utilize much of the same field and plant equipment as is now used for sugar. It is logical to examine the modification of an existing sugar plant from producing sugar to ethanol. The decision was made to use Great Western Sugar Company's plant at Mitchell as the example plant. This plant was selected primarily on the basis of its independence from other plants and the availability or relatively nearby beet acreage. The potential feedstocks assessed included sugar beets, corn, hybrid beets, and potatoes. Markets were assessed for ethanol and fermentation by-products saleability. Investment and operating costs were determined for each prospective plant. Plants were evaluated using a discounted cash flow technique to obtain data on full production costs. Environmental, health, safety, and socio-economic aspects of potential facilities were examined. Three consulting engineering firms and 3 engineering-construction firms are considered capable of providing the desired turn-key engineering design and construction services. It was concluded that the project is technically feasible. (ERA citation 06-019958)

**Energy Demand in the Developing Countries**  
J. Child, and M. Rodekohl. Apr 79, 20p

Keywords: Coal, Developing countries, Energy demand, Natural gas, Petroleum, Comparative evaluations, Consumption rates, Energy consumption, Forecasting, Opec, Tables, \*Energy source development.

This paper presents a summary of an analysis of the demand for energy in OPEC and the non-OPEC Developing Countries. While current energy-consumption levels in these countries are relatively small, their future economic growth is expected to be above the world average; therefore, their share of world energy demand is expected to increase. Their relatively high growth rates imply that the energy demanded by these nations will become increasingly important in any future evaluation of Free World energy markets. This paper presents a new model of developing country energy demand which is econometric in nature and is designed to forecast demand for oil, coal, and natural gas - excluding non-fossil fuels. Differences between the model used for the 1977 EIA Annual Report to Congress (1977 ARC) and the new model to be used in the 1978 ARC are discussed, the new model and data used in the analysis are defined, and results generated with the 1978 model and the 1977 model based

on identical sets of assumptions are compared. (ERA citation 04:055086)

W. J. Jewell, S. Dell'orto, K. J. Fanfoni, T. D. Hayes, and A. P. Leuschner. Apr 80, 934p  
Contract AS02-76ET20051

Keywords: Biomass conversion plants, \*Manures, \*Methane, Anaerobic digestion, Biogas process, Biosynthesis, Chemical reactors, Cows, Design, Farms, Maintenance, Operation, \*Bioconversion, \*Agricultural wastes.

Earlier studies have shown that although large quantities of agricultural residues are generated on small farms, it was difficult to economically justify use of conventional anaerobic digestion technology, such as used for sewage sludge digestion. A simple, unmixed, earthen-supported structure appeared to be capable of producing significant quantities of biogas at a cost that would make it competitive with many existing fuels. The goal of this study was to define and demonstrate a methane fermentation technology that could be practical and economically feasible on small farms. This study provides the first long term, large scale (reactor volumes of 34 m x 3 ) parallel testing of the major theory, design, construction, and operation of a low cost approach to animal manure fermentation as compared to the more costly and complex designs. The objectives were to define the lower limits for anaerobic fermentor operation in terms of mixing, insulation, temperature, feed rate, and management requirements in a cold climate with both pilot scale and full scale fermentors. Over a period of four years innovative fermentation processes for animal manures were developed from theoretical concept to successful full scale demonstration. Reactors were sized for 50 to 65 dairy animals, or for the one-family dairy size. The results show that a small farm biogas generation system that should be widely applicable and economically feasible was operated successfully for nearly two years. Although this low cost system outperformed the completely mixed unit throughout the study, perhaps the greatest advantage of this approach is its ease of modification, operation, and maintenance. **Production of Sugarcane and Tropical Grasses as Renewable Energy Source. Third Annual Report, 1979-1980**  
1980, 74p  
Contract AS05-78ET20071

Keywords: \*Grass, Sorghum, \*Sugarcane, Biomass, Cloning, Cost, Cultivation techniques, Economic analysis, Energy balance, Harvesting, Nutrients, Plant breeding, Production, Renewable energy sources, Short rotation culture, Yields, \*Fuels.

Research continued on tropical grasses from Saccharum and related genera as sources of intensively-propagated fiber and fermentable solids. Candidate screening for short-rotation grasses was expanded to include six sorghum x Sudan grass hybrids developed by the Dekalb Company. Sugarcane and napier grass yield trends in year 3 include: (1) increased yields with delay of harvest frequency; (2) lack of response to close spacing; (3) a superiority of napier grass over sugarcane when harvested at intervals of six months or less; and (4) a general superiority of the sugarcane variety NCo 310 over varieties PR 980 and PR 64-1791. Delayed tasseling of a wild, early-flowering S. spontaneum hybrid enabled three crosses to be made in December using commercial hybrids as female parents. Approximately 1000 seedlings were produced. The first field-scale minimum tillage experiment was completed. Sordan 77 produced 2.23 OD tons/acre/10 weeks, with winter growing conditions and a total moisture input of 4.75 inches. Mechanization trials included successful planting of napier grass with a sugarcane planter, and the mowing, solar-drying, and round-baling of napier grass aged three to six months. Production-cost and energy-balance studies were initiated during year 3 using first-ratoon data for intensively propagated sugarcane. Preliminary cost estimates for energy cane (sugarcane managed for total biomass rather than sucrose) were in the order of \$25.46/OD ton, or about \$1.70/mm Btus. (ERA citation 06:002167)

Contract W-31-109-ENG-38

Keywords: \*Agricultural wastes, \*Ethanol, Maize, \*Methanol, \*Wood wastes, \*Alcohols, Acid hydrolysis, Air pollution, Distillation, Enzymatic hydrolysis, Fermentation, Gasification, Land use, Plant stems, Production, Straw, Water pollution, Wheat.

Technologies available for the production of ethanol from whole corn are reviewed. Particular emphasis is placed on the environmental aspects of the process, including land utilization and possible air and water pollutants. Suggestions are made for technological changes intended to improve the economics of the process as well as to reduce some of the pollution from by-product disposal. Ethanol may be derived from renewable cellulosic substances by either enzymatic or acid hydrolysis of cellulose to sugar, followed by conventional fermentation and distillation. The use of two agricultural residues - corn stover (field stalks remaining after harvest) and straw from wheat crops - is reviewed as a cellulosic feedstock. Two processes have been evaluated with regard to environmental impact - a two-stage acid process developed by G.T. Tsao of Purdue University and an enzymatic process based on the laboratory findings of C.R. Wilke of the University of California, Berkeley. The environmental residuals expected from the manufacture of methyl and ethyl alcohols from woody biomass are covered. The methanol is produced in a gasification process, whereas ethanol is produced by hydrolysis and fermentation processes similar to those used to derive ethanol from cellulosic materials. ## APPROPRIATE TECHNOLOGY ABSTRACTS

ization, Communities, Education, Energy consumption, Energy storage, Engines, Environment, Human populations, Hydroelectric power plants, Industry, Information, information centers, Ocean thermal energy conversion, Research programs, Solar energy, Solar energy research institute, Total energy systems, Transportation systems, Us doe, Wind power, Listings.

The Directory facilitates quick access to DOE offices responsible for conservation and renewable energy activities. Because several offices in DOE may have responsibility for various phases of a technology or service (i.e., research, development, demonstration, commercialization, information, education, etc.) the Directory lists the key contacts from the various phases by category. The Directory is organized in five main categories plus an index and relevant appendices. The categories are: renewable energy technologies (thermal and electric solar, wind energy systems, small scale hydroelectric, biomass, ocean systems); complementary technologies (appropriate technology, advanced engine design, cogeneration, energy storage, total energy systems); conservation technologies (buildings and community systems, transportation, industrial and agricultural energy conservation, state and local programs); environment; and support services (information, outreach, education, small business support, basic research, data and analysis, publication, films, Solar Energy Research Institute, regional offices laboratories, and information centers). **Bicycle Promotion Plan**  
G. A. Simone. 9 Mar 81, 65p  
Contract AC01-80IR10999

Keywords: \*Bicycles, Design, Energy conservation, Financial incentives, Government policies, Grants, Implementation, National program plans, Planning, Program management, Public opinion, Recommendations, US DOE, Uses.

The objective of this Bicycle Promotion Plan is to outline a set of recommendations and supporting strategies for implementation by the US DOE toward increased use of the bicycle for energy conservation. The recommendations are designed in such a way as to function in concert with: (1) bicycle programs administered by other Federal government agencies; and (2) related programs and activities already sponsored by DOE. The approach to preparation of the Plan involved a review of all current and planned bicycle promotion programs at the Federal level as well as a review of the array of literature on the subject. The UniWorld project staff also interacted with several DOE program offices, in order to determine the extent to which they might appropriately contribute to the implementation of bicycle promotional efforts. A synthesis of all the information gathered was published in January of 1981 as a part of the project (The Bicycle Program Review). Based upon this information and an examination of the barriers to bicycle use identified by bicycle transportation specialists in the field, UniWorld developed a series of the most potentially effective recommendations and program strategies for implementation by DOE. The recommendations address activities that could be undertaken in conjunction with existing DOE programs, new developments that might be considered to fulfill critical needs in the field, and interagency efforts that DOE could play a role in. **Photovoltaic Water Pumping Applications: Assessment of the Near-Term Market**  
L. Rosenblum, W. J. Bifano, L. R. Scudder, W. A. Poley, and J. P. Cusick. Mar 78, 25p Rept no. NASA-TM-78847  
Contract EX-76-A-29-1022

Keywords: \*Photovoltaic power system, \*Solar water pumps, Solar cell arrays, Commercialization, Developing countries, Evaluation, Market, \*Irrigation, \*Water pumps, Marketing.

A preliminary assessment of the near-term market for photovoltaic water pumping applications is presented. One of the objectives of the Department of Energy's (DOE) National Photovoltaic Program is to stimulate the demand for photovoltaic power systems so that

appropriate markets will be developed in the near-term to support the increasing photovoltaic production capacity also being developed by DOE. Water pumping applications represent such a potential market for photovoltaics. The price of energy for photovoltaic systems is compared to that of utility line extensions and diesel generators. The potential "domestic" demand is defined in the government, commercial/institutional and public sectors. The foreign demand and sources of funding for water pumping systems in the developing countries are also discussed briefly. It is concluded that a near-term domestic market of at least 240 megawatts (peak) and a foreign market of about 6 gigawatts (peak) exists and that significant market penetrations should be possible beginning in the 1981-82 period. In its role of supporting the DOE National Photovoltaic Program, the NASA-LeRC is designing and fabricating a stand-alone photovoltaic power system for installation in the Papago Indian village of Schuchuli, located approximately 120 miles west of Tucson, AZ. This village presently has no electrical power. The photovoltaic system is being designed to provide electricity for village water pumping and basic domestic needs as part of a cost-shared experiment involving LeRC, the U.S. Public Health Service and the Papago Tribe of Arizona. The system will consist of a 3.5 kW (peak) photovoltaic array; controls, instrumentation, and storage batteries located in an electrical equipment building; and a 120 volt DC village distribution network. The photovoltaic system will power a 2 HP DC electric motor (replacing an existing diesel engine) for water pumping; 15 refrigeration units, a washing machine and a sewing machine in a domestic services building; and fluorescent lights in the feast house, church and each of the 15 homes in the village. **Social and Economic Impact of Solar Electricity at Schuchuli Village: A Status Report**  
W. J. Bifano, A. F. Ratajczak, D. M. Bahr, and B. G. Garrett. 1979, 18p Rept no. NASA-TM-79194

Keywords: \*Photovoltaic power system, Residential buildings, American Indians, Arizona, Clothes washers, Evaluation, Lighting systems, Refrigerators, Remote areas, Socio-economic factors, \*Community development, Papago Indian Reservation, Schuchuli(Arizona).

Schuchuli, a small remote village on the Papago Indian Reservation in southwest Arizona, is 27 kilometers (17 miles) from the nearest available utility power. In some respects, Schuchuli resembles many of the rural villages in other parts of the world. For example, it's relatively small in size (less than 100 residents), composed of a number of extended family groupings, and remotely situated relative to major population centers (190 km, or 120 miles, from Tucson). Its lack of conventional power is due to the prohibitive cost of supplying a small electrical load with a long-distance distribution line. Furthermore, alternate energy sources are expensive and place a burden on the resources of the villagers. On December 16, 1978, as part of a federally funded project, a solar cell power system was put into operation at Schuchuli. The system powers the village water pump, lighting for homes and other village buildings, family refrigerators and a communal washing machine and sewing machine. The project, managed for the US Department of Energy by the NASA Lewis Re-

search Center, provides for two years of technical monitoring as well as a one-year socio-economic study to assess the impact of a relatively small amount of electricity on the basic living environment of the villagers. The project background, implementation details and current status of the technical and socio-economic assessment are presented. (ERA citation 04:049641)

**Electric/Hybrid Vehicles Focus Group Research**  
Aug 78, 39p  
Contract EV-78-C-01-6458

**Keywords:** Electric-powered vehicles, Hybrid electric-powered vehicles, Appropriate technology, Commercialization, Decision making, Energy analysis, \*Energy conservation, Evaluation, Market, Regulations, US DC E, \*Automobiles, Meetings.

This report presents the major conclusions and findings from the focus group discussion on electric/hybrid vehicles, providing input in two decision-making areas: (1) evaluation of barriers and opportunities associated with successful commercialization of electric/hybrid vehicles; and (2) evaluation of appropriate Federal actions for promoting and facilitating commercialization. The technology represented by electric/hybrid vehicles was selected for research and evaluation as a candidate for commercialization because of the potential opportunity to reduce American dependence on gasoline. DOE recognizes that this potential can be realized through energy conservation as well as through the development of alternative sources of energy. As a major source of energy usage in the United States, the gasoline-powered vehicle is a logical target for consideration in commercialization studies. By encouraging the use of alternative technologies, DOE can achieve its mission of energy efficiency. This report addresses the question of whether electric/hybrid vehicles represent the appropriate alternative technology for DOE commercialization efforts. (ERA citation 04:034131)

**Low Head Hydropower: Focus Group Results**  
Aug 78, 32p  
Contract EV-78-C-01-6458

**Keywords:** \*Hydroelectric power, \*Electric power, Low-head hydroelectric power plants, Appropriate technology, Commercialization, Cost, Dams, Decision making, Economics, Energy efficiency, Evaluation,

Feasibility studies, Financing, Government policies, Licensing, Market, Retrofitting, Standardization, Electric power plants, National government, Constraints, Marketing, Meetings.

This report presents the major conclusions and findings obtained from a focus group discussion concerning low-head hydroelectric power generation. The information will provide DOE information from which to evaluate the barriers and opportunities associated with the successful commercialization of low head hydropower and to evaluate the appropriate Federal actions for promoting and facilitating commercialization of this technology. The primary questions put before the discussion group participants were: is commercialization of low head hydropower feasible; what is the nature and extent of the market for this technology; what barriers and opportunities are critical to the commercialization of low head hydropower; and what actions, if any, should be taken by the Federal government to bring about successful commercialization of this technology. The opinions, attitudes, and knowledge of the participants on these issues are summarized. (ERA citation 04:032775)

**Design of Residential Buildings Utilizing Natural Thermal Storage. Final Report**  
J. Lewis, C. Michal, and P. Pietz. Jun 79, 238p  
Contact EY-76-C-02-0016

**Keywords:** Building materials, Houses, \*Energy conservation, Cooling load, Design, Economics, Efficiency, Furnaces, Graphs, Heat storage, Heat transfer, Heating load, Numerical data, Thermal energy storage equipment, USA, \*Buildings, Residential buildings, Structural design.

The thermal storage capacity found in the materials of conventional building construction affect the heating and cooling requirements of buildings and the long-term efficiency of the space conditioning equipment used to meet these demands. The quantity of this natural thermal storage (NTS) can be increased through architectural design to improve overall building thermal performance and decrease the consumption of conventional fuels used for space conditioning. Improvements in performance come about when heating or cooling peak loads are reduced, when previously poorly used natural energy sources are tapped, or when conventional system efficiencies are increased. The capability of NTS materials to absorb, store and release thermal energies can be used advantageously to bring about these improvements. The technical and economic feasibility of these uses of NTS in residential construction in the north central and northeast US is examined. For many NTS applications, the percentage savings in heating and cooling are impressive, but the actual value of the energy saved is found to be insufficient to justify the incremental cost of NTS over reasonable levels of insulation and other energy strategies. NTS in the form of modified Trombe walls, when combined with energy conserving construction methods, is found to be an effective, available and marketable system. A prototypical residence incorporating this NTS system is designed for instrumentation and as a demonstration of NTS principles. Annual space conditioning costs are reduced to one-third of those found in new construction; built to current codes, and less than one-fifth the costs found in typical existing homes. Integrated fuels from biomass systems that might function in arid environments are discussed and illustrated. The emphasis is on principles and strategic guidelines for use by those initiating studies on arid land fuels from biomass. (ERA citation 05:033424)

**DOE/TIC-11261** PC A02/MF A01  
Science and Education Administration, Clay Center, NE. Meat Animal Research Center.  
**Methane and Biomass Production Systems for Beef Cattle Manure**  
A. G. Hashimoto, R. L. Prior, and Y. R. Chen. 1978, 25p

**Keywords:** \*Animal feeds, \*Manures, \*Methane, Amino acids, Anaerobic digestion, Biosynthesis, Cattle, Chemical composition, Comparative evaluations, Digestion, Histidine, Lysine, Methionine, Nitrogen, Nutrients, \*Proteins, Research programs, Single cell protein, Soybeans, Time dependence, Waste product utilization.

The research being conducted at the US Meat Animal Research Center to convert livestock manure into methane and a high protein feed ingredient by thermophilic anaerobic fermentation is summarized. The pilot scale fermentor is 5.7 m exp 3 with working volume between 5.1 to 5.4 m exp 3. Fermentation was started by adding fresh beef manure to previously heated tap water and maintaining the pH above 7. Gas production increased dramatically within nine days after start up, demonstrating the relative ease in initiating anaerobic fermentation of livestock manures. The results showed that the total solids, volatile solids and COD reduction decreased as the retention time decreased; the fixed solids and total nitrogen were not lost during fermentation; and the total gas and methane production increased as the retention time decreased. Kinetic constants for the generalized substrate utilization model were determined and were in close agreement with previously reported results. Experimental results agreed well with values predicted by the model. High protein biomass from the fermentation is being recovered through centrifugation and by direct incorporation into the ration. Possible disadvantages are high ration moisture content and more feed production than the number of animals needed to produce manure for the fermentation. Amino acid analysis shows that the fer-

## APPROPRIATE TECHNOLOGY ABSTRACTS

mentor effluent compares favorably with soybeans and that the centrifuged cake compares favorably with alfalfa hay. Feeding trials using dried centrifuge cake showed that the digestibility of dry matter, organic matter, and nitrogen tended to decrease slightly as the amount of cake in the ration increased. Preliminary results of the feeding trial using fermentor effluent mixed with corn and hay show that the fermentor effluent is utilized as well as soybean protein. (ERA citation 05:037795)

**EES Small Business Handbook**  
1980, 71p

**Keywords:** Energy extension service, \*Small businesses, Alabama, Connecticut, Energy conservation, Evaluation, Manuals, Michigan, New Mexico, Pennsylvania, Tennessee, Texas, Washington, Wisconsin, Wyoming.

As part of a nationwide effort to reduce dependence on foreign oil and to limit our vulnerability to supply disruptions, Congress enacted the National Energy Extension Service Act in June 1977. This Act authorized an initial 19-month pilot program to be followed by a national program, which was initiated in August 1979. Highlights of the Energy Extension Service (EES) program and the allocation of EES financial assistance for calendar year 1980 are contained in appendix A. All of the ten EES pilot States carried out energy-outreach programs for small business. This Small Business Handbook provides information on developing, organizing, staffing, and managing small-business energy-conservation programs including education, extension, and information activities. The Handbook is intended for use as a guide primarily by new EES States and State Energy Conservation Program (SECP) managers. Although the material in the Handbook is oriented toward energy-related programs for small business, other State users may find the Handbook of value in planning other programs for small businesses. An evaluation of the EES pilot program was initiated in 1977. The resulting report described the first year's activities in 10 Pilot States and reflected which of the 20 emphasis programs work best and why. The Small Business Handbook, building on the portion of the evaluation report dealing with small business and other documentation, addresses the types of management, organization, and implementation techniques that worked best in selected states. The Handbook addresses how these techniques can be employed by others to increase the probability of success when new small-business programs are established. (ERA citation 05:038278)

**Keywords:** Solar flux, Insolation, Calorimeters, Cost, Measuring instruments, Photometers, Photovoltaic cells, Pyranometers, Pyrheliometers, Radiometers, Tables, \*Solar energy, \*Instruments, Solar radiation, Radiation measuring instruments, Performance (Evaluation).

This report is organized to list and provide all available information about solar radiation measuring equipment which are being manufactured and are available on the market. The list is in tabular form and includes sensor type, response time, cost data and comments for each model. A cost code has been included which shows ranges only, due to price fluctuations and because some manufacturers are reluctant to publish their prices. In some instances a price is given for a particular date, but this is subject to change at the manufacturer's or dealer's discretion. An equipment vs. cost matrix for that equipment for which cost information is available is presented. Diagrams of insolation and basic instruments used in the measurement of solar radiation are included. A form has been designed to provide a complete profile and intended applications for each model of equipment on the market. This form was developed during the course of the research period to standardize and organize all pertinent data for potential use in a published catalog. To further extend the information presented in the listing, an address list is provided. Every manufacturer included in the equipment listing is identified with an appropriate address. Any additional information not included in the

listing may be obtained by contacting the manufacturer. A Glossary of Solar Radiation Terms frequently used with solar radiation measurement and equipment is included. (ERA citation 02:047907)

Contract EY-76-C-03-1217

**Keywords:** \*Concrete, Solar kilns, Concentrating collectors, Cost, Design, Economics, Heat exchangers, Performance, Process heat, Production, Research programs, Sensible heat storage, \*Solar energy, Steam, Steam generators, Tanks, Water, \*Solar water heating, Solar collectors, Concrete blocks.

The Phase I program and the design plan for the Phase II Experiment Integration wherein the AAI Corporation's 24/1 concentrating collector is used to produce hot water to cure concrete blocks is described. This concept has a tremendous potential since each block requires about 1500 Btu for curing at a temperature of 140 exp 0 F to 180 exp 0 F. To demonstrate this process, the solar hot water system will be installed at the new block fabricating plant being built by the York Building Products Co., inc. at Harrisburg, Pa. A circular underground curing tank will be the storage tank for the solar system. Since the plant is new, no retrofitting is required. The collectors will be mounted on the roof of the new block producing facility. A full-scale 256 ft exp 2 module of the 24/1 collector has been built and tested by AAI Corporation. A 9216 ft exp 2 array of collectors is required for this experiment. AAI Corporation is pursuing a development program planned to culminate in the marketing of the 24/1 collector at a selling price of \$7 to \$10 per square foot. The collector is built in 9 ft by 34 ft modules and is self-supporting with pads located at the four corners. It can be inclined at the most favorable angle for solar performance, and can be located on a roof, or as a separate unit on the ground. A final design and performance analysis and an economic analysis are presented. (ERA citation 02:045293)

Contract EG-77-C-01-4042

**Keywords:** Industry, Solar process heat, Demonstration programs, Forecasting, Government policies, Technology assessment, US DOE, \*Process heat, \*Solar energy, \*Agriculture.

A state-of-the-art review of solar process heat is given; near term prospects are discussed; and the federal solar industrial process heat program is reviewed. Existing solar industrial process heat projects are tabulated. (ERA citation 05:011676)

**EIS-AA-72-5805-D** PC E05  
Agricultural Stabilization and Conservation Service, Washington, DC.  
**Rural Environmental Assistance Program**  
Draft environmental impact statement.  
5 Dec 72, 116p USDA-ASCS-ES(Adm)-73-1, ELR-5805

**Keywords:** \*Environmental surveys, Conservation, United States, \*Puerto Rico, Virgin Islands, Soil conservation, Water conservation, Forest land, Wildlife, Pollution, Abatement, Rural areas, Construction, Vegetation, Soil erosion, \*Environmental impacts, Environmental impact statements.

The report describes the Rural Environmental Assistance Program, the Federal Government shares with farmers and ranchers and the cost of carrying out approved soil, water, woodland, and wildlife conservation and pollution-abatement practices on their land. The program places emphasis on the carrying out of long-term, enduring conservation and pollution-abatement measures on farm and ranch lands in all States, Puerto Rico, and the Virgin Islands. The program will speed up and/or make possible the carrying out of needed conservation and environmental protection and enhancing measures in rural America. The impact on the environ-

## APPROPRIATE TECHNOLOGY ABSTRACTS

ment will be beneficial and largely cumulative. The stimulus of this program sets in motion total direct investments in a wide variety of conservation and pollution-abatement practices, by close to a million farmers and ranchers a year, amounting to double the public contribution. Adverse environmental effects of major consequence would not be anticipated, if good management is carried out by program participants. Some minor adverse environmental impacts may occur during the construction of water storage facilities, terraces, diversions, pollution-abatement, and other such measures, and during the establishment of vegetative cover and tree plantings because of soil being open for a short period of time to potential erosion and noise from construction and tillage equipment. **Biofuels: A Survey**  
J. R. Benemann. Jun 78, 96p\*

Keywords: Biomass, Synthetic fuels, \*Bioconversion, Reviews, Combustion, Energy sources, Forecasting, Pyrolysis, Technology assessment, Thermochemical processes, Waste product utilization, \*Fuels, Solid waste disposal.

Photosynthesis, plant productivity, waste and residue resources, "energy farming," processes for using biomass directly or converting it to fuels, and overall economics are discussed. Applications by U.S. industries and utilities are emphasized and current U.S. research and development programs presented. With foreseeable technologies and economics, approximately 5% of the fossil fuels now consumed in the United States could presently be replaced by available forestry, agricultural, and municipal wastes and residues. Additional resources could be generated through optimization of agricultural and forestry residue production, use of noncommercial forests, and purposeful cultivation of plants for fuel production. Direct combustion, to produce electricity and/or steam, is the best developed and most widely applicable process for using low-moisture biomass. Biomass could become a supplemental fuel for some coal-fired power plants. The conversion of biomass to gaseous and liquid fuels by thermal or biological processes is technically feasible; however, the economics must be improved for widespread applications. Biofuels will be most widely used by current biomass producers (agriculture and forestry) and by small to medium-sized industries and towns located near available resources. The multiplicity of biomass resources and biofuel applications suggests that no single end use will predominate. (ERA citation 04:002697)

**Contribution to the Analysis of the Development of Unconventional Energy Sources in Latin America**  
I. Escobar, and M. E. Ibacache. Apr 77, 32p  
Translation of Spanish report.

Keywords: Biomass, \*Geothermal energy, \*Wind energy, MHD generators, Photovoltaic cells, \*Solar energy, Wind power, Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Dominican republic, Ecuador, El Salvador, Guatemala, Honduras, Jamaica, Mexico, Nicaragua, Panama, Paraguay, Peru, Trinidad and

obago, Uruguay, Venezuela, Education, Energy policy, \*Energy source development, Energy sources, Fossil fuels, Nuclear energy, Personnel, \*Bioconversion, \*Photovoltaic power system, Translations, Spain, Latin America, Foreign countries.

The energy demand for Latin America will be satisfied by the end of the present century mainly through utilization of its conventional hydraulic and fossil resources. Nuclear energy will experience a great development in Argentina, Brazil, and Mexico in the coming 20 years. The electronuclear alternative in other Latin American countries will be considerable depending on the degree of industrialization, geographical location and the possibilities for interconnecting networks for transmission and distribution of electrical energy in the country considered and depending on reduction in design scale and savings made in nuclear reactors presently in use (dropping down to capacities of about 150 MW per plant). The development of wind energy, thermal gradient of the ocean, solar energy, photovoltaic cells, processes of photosynthesis, MHD energy, geothermal energy, and tidal power as energy sources is discussed. (ERA citation 03:008613)

**ERDA-77-47/2** PC A04/MF A01  
Energy Research and Development Administration, Washington, DC. Div. of Solar Energy.  
**Solar Program Assessment: Environmental Factors. Solar Agricultural and Industrial Process Heat**  
Mar 77, 56p

Keywords: \*Agriculture, Industrial plants, \*Process heat, \*Environmental impacts, Air quality, Animal shelters, Construction, Environmental effects, Greenhouses, Land use, Noise, Safety, Solar air heaters, Solar collectors, Solar drying, Solar energy, Solid wastes, Steam generators, Thermal pollution, Water quality, \*Solar heating systems.

The major environmental issues associated with the further development of solar energy as a source of process heat in the industrial and agricultural sectors are presented and prioritized. Agricultural and industrial heating represents the specific application of a variety of Federally-funded solar technologies. To provide a background for this environmental analysis, the basic concepts and technologies of solar process heating are reviewed. The potential effects of these applications of solar energy on the full range of environmental concerns (e.g., air and water quality, biosystems, safety, social/institutional structures) are then discussed in terms of both their relative significance and possible solutions. Although the development of solar energy as a source of process heat will contribute to some environmental problems common to construction projects and energy-producing technologies (e.g., construction noise, thermal discharge to the air and water), only those impacts unique to the solar portion of the technology are discussed in depth. Finally, an environmental work plan is presented, listing research and development proposals and a National Environmental Policy Act (NEPA) document work plan which might help clarify and/or alleviate specific environmental and safety problems. **Managing the Socio-Economic Impacts of Energy Development: A Guide for the Small Community**  
Sep 77, 82p  
Contract EA-77-C-10-0037

Keywords: Communities, \*Energy source development, Socio-economic factors, Boom towns, Decision making, Economic growth, Economic impact, Economics, Employment, Environmental impacts, Evaluation, Government policies, Income, Information, Local government, Management, Planning, Public health, Recreational areas, Residential sector, Safety, Social impact, Solid wastes, State government, USA, Waste disposal, Water resources, Water treatment, \*Socio-economic status, Guidelines, Handbooks.

A decision concerning large-scale energy development is usually a complex one requiring cooperation of all levels of government as well as the general public and the private sector. The purpose of this handbook is to provide local officials with guidance regarding how they may assess, plan, and manage the socio-economic impacts of such development. Key areas of

discussion in this report include: employment; personal income; housing; education; transportation; water supply; solid waste collection and disposal; waste water treatment; health care; recreation; and safety. It is unrealistic to expect the typical small community to develop capabilities to independently evaluate a highly technical development which to them is a one-time occurrence. Thus, local officials must be aware of resources which they may tap for information and assistance at other levels of government. This handbook advises local officials on how they should organize to most effectively participate in assessing, planning, and managing energy development and how to insure that information is collected and analyzed to reflect local priorities and future planning needs. To achieve the objectives of ERDA's Community Systems Program, physical and institutional characteristics that determine a community's levels and patterns of energy use must be defined and methods of coordinating its energy systems established. In Chapter 1, Managing Rapid Growth to Achieve the Goals of Energy-Related Community Development, the goals are identified and the development activities and man-

## APPROPRIATE TECHNOLOGY ABSTRACTS

agement functions constituting an effective approach to achieving them are defined. The characteristic problems of rapid growth are described and their causes traced. In Chapter 2, Identifying Elements of a Community-Development Approach Applicable to the Rapid-Growth Context, a number of domestic and European community-development approaches that might be applicable to managing rapid growth in the boomtown context are surveyed. Applicable elements of a number of U.S. mechanisms and of two French community-development approaches that can serve as the basis for formulating an organizational approach are identified. In Chapter 3, Formulating a General Community-Development Approach, the effectiveness of the approach, its adaptability to the boomtown context, and its capability for achieving the goals of energy-related development are demonstrated. In Chapter 4, Adapting the General Approach to Mercer County, North Dakota, the complex rapid-growth situation in Mercer County, North Dakota, is described. Chapter 5 is entitled, Defining the Limitations of the Mercer County Approach and the General Approach. The content of Volume I is supplemented and supported by a series of appendices, assembled in Volume II. (ERA citation 03:021681)

**Anaerobic Fermentation of Agricultural Residue: Potential for Improvement and Implementation. Final Report**  
W. J. Jewell, H. R. Capener, and S. Dell'orto. Feb 78, 456p  
Contract EY-76-S-02-2981

Keywords: \*Agricultural wastes, Anaerobic digestion, Chemical reactors, \*Manures, \*Methane, Agriculture, Bench-scale experiments, Biodegradation, Biomass, Biosynthesis, Chemical reaction kinetics, Cost, Design, Energy sources, Feasibility studies, Fermentation, Flow rate, Fluid flow, Forecasting, Gas flow, Nutrients, Recommendations, Research programs, Socio-economic factors, Tables, Temperature effects, Thermophilic conditions, \*Bioconversion, Synthetic fuels, Manufactured gas, Solid waste disposal, Biological energy conversion.

The results of studies designed to evaluate the potential of rapidly improving the technology of anaerobic fermentation of agricultural residues and methods of implementing it in existing agricultural operations are reported. The main objectives of this study were to: identify simple and low cost anaerobic fermentor design criteria that would be appropriate in small agri-

cultural operations, develop high rate fermentor concepts that would enable multiple product recovery from the reactor, expand the information base particularly in the area of temperature influence on the process, and to review sociological and economic issues relating to implementation of fermentation technology. This study has identified several major anaerobic fermentation concepts which illustrate that the technology may be rapidly improved. A simple reactor design utilizing an unmixed plug flow concept was shown to be comparable to the more complex completely mixed reactor when using dairy cow residue. A high rate thermophilic reactor designed to encourage flotation of particulate solids illustrated that liquid, solid, and gaseous products can be generated within the anaerobic fermentor thus eliminating an additional dewatering unit process. A third reactor concept involved extension of the anaerobic attached microbial film expanded bed to the treatment of cow manure slurries. A high rate of methane generation was recorded. Comprehensive thermophilic fermentation studies (60 exp 0 C) indicated that the increased temperature resulted in little improvement in total quantity or the rate of yield of gas over that obtained with mesophilic fermentation with reactor retention periods greater than 10 days. Finally, other areas where preliminary data were obtained are noted. (ERA citation 03:030554)

**Biomass-Based Alcohol Fuels: The Near-Term Potential for Use with Gasoline**  
W. Park, G. Price, and D. Saio. Aug 78, 84p  
Contract EG-77-C-01-4101

Keywords: \*Automotive fuels, \*Ethanol, \*Methanol, Alcohols, \*Bioconversion, Biomass, Economics, Feasibility studies, Forecasting, Synthesis, Technology assessment, Thermochemical processes, \*Gasohol, \*Fuels, Blends, Synthetic fuels.

This report serves as an introduction to the requirements and prospects for a nationwide alcohol-gasoline fuel system based on alcohols derived from biomass resources. Technological and economic factors of the production and use of biomass-based methanol and ethanol fuels are evaluated relative to achieving 5 or 10 percent alcohol-gasoline blends by 1990. It is concluded the maximum attainable is a nationwide 5 percent methanol or ethanol-gasoline system replacing gasoline by 1990. Relative to existing gasoline systems, costs of alcohol-gasoline systems will be substantial (ERA citation 04:005430)

This research effort performs a thorough survey of the state-of-the-art in each of the fields related to the community planning project for energy management and conservation. Appendix A describes the results of that survey. In attempting a major, interdisciplinary research and development project such as this one, it is necessary to integrate theory and practice from several fields. These include land use planning, political science, public administration, urban development, mechanical engineering, systems analysis, and the atmospheric sciences. The survey of current knowledge that was performed resulted in three major outputs. The first is an extensive bibliography of printed materials which are related to this project. The bibliography is presented as Appendix B at the conclusion of this document. The second major product of this task is an extensive set of abstracts of those relevant materials reviewed; this set of abstracts forms Appendix C. The third output of the survey is a set of reports of personal contacts with individuals or organizations that were either already working in the field of community energy analysis or were working in related fields. All contacts made were documented and contact reports are included in Appendix D. Appendix E is a description of

community decision-making processes. (ERA citation 03:018384)

Bureau of Community Health Service, Rockville, Md. Office for Family Planning.  
**Practical Suggestions for Family Planning Education**  
1975, 101p Rept no. DHEW/PUBL/HSA-75/16007  
Contract PHS-HSM-110-73-477

Keywords: \*Health education, Health care delivery, Family planning, Strategy, Sources, Plans, Methodology, Information systems, Health planning, Health care, Documents, Consumers, Biomedical information systems, Availability, Objectives, \*Birth control, \*Population control.

Educational activities within a family planning program are discussed in a report prepared under contract to DHEW's Bureau of Community Health Services. It is assumed that in-clinic education is important in family planning programs, and, based on this assumption, techniques for developing a family planning education program are suggested. Such techniques include problem identification and analysis, resource identification and use, and educational plan development. The goals and objectives of an educational plan are noted, and a checklist is provided for evaluating a family planning education program. The selection, development, and use of family planning educational materials are addressed, with emphasis on the advantages of educational materials, educational material guidelines, selecting from among family planning educational materials (printed, visual, and audiovisual materials), development of family planning educational materials, and appropriate use of materials. A model is described for the development of contraceptive educational materials which covers birth control pills, intrauterine devices, diaphragms, contraceptive creams and jellies, contraceptive foams, voluntary sterilization, and rhythm. A bibliography of family planning materials is provided.

Sigrid G. Deeds. Dec 73, 95p

Keywords: \*Health education, Family planning, Strategy, Social services, Project planning, Preventive medicine, Patients, Methodology, Health planning, Health care services, Education, Consumers, \*Birth control, \*Population control.

Guidelines for designing and improving educational components of family planning programs are presented in a manual directed to the educational specialist or person responsible for the educational services of a family planning program. Methods and techniques for assisting couples in developing positive attitudes and behavior in regard to family planning are discussed. The manual, which is intended as a general framework for planning, provides direction in charting an educational plan and in taking the first steps toward implementing the plan. The opening section touches on aspects of educational relationships and distinctions, including education versus information; communication in educational planning; attitude and behavior change; public relations versus education; counseling, interviewing, and consulting; training; definition of the educational component in family planning programs; the role of the educational staff; and qualifications for a family planning educational coordinator. Steps in the planning process are described in detail, followed by suggestions concerning the selection of educational methods and materials. The closing section presents an overview of the use of a variety of educational methods and materials in family planning programs. Lists of references are provided throughout the manual, and selected sources for family planning information (films, slides, tapes, catalogs, materials lists, periodicals) are also listed.

**Some Health Sector Analysis Methods for Developing Nations**  
Lawrence H. Stiffman. May 74, 185p

## APPROPRIATE TECHNOLOGY ABSTRACTS

**Keywords:** \*Health planning, System analysis, Strategy, Quality assurance, Methodology, Measurement, Health care, Health care utilization, Health care facilities, Health care costs, Forecasting, Data processing, Data processing systems, Data analysis, Cost effectiveness, Benefit cost analysis.

Quantitative methods and techniques for health planning and management are described in a manual directed to developing nations. The catalog of health sector analysis methods has two purposes: (1) to present a selection of past analyses of components of the health sector; and (2) to evaluate these analyses in terms of their ability to identify choices in allocating scarce resources among competing objectives, activities, or strategies; to evaluate the consequences of alternative decisions in terms of health, economic improvement, and cost; and to identify the preferred alternative given available information, skills, and resources. Application of health sector analysis techniques is described at the national, regional, single facility, and single program level. The manual opens with a discussion of the constraints in using quantitative methods and techniques. Program budgeting applications are then described in both developed and developing countries, and examples of cost-effectiveness analysis are offered for cholera and malaria. Forecasting and operations research techniques are described at the health program management level. Examples are presented of methods for identifying data, organizing data into information, and analyzing and managing information in decisionmaking. Methods included are time series analysis, regression analysis, simple population and utilization projections, queuing and inventory theory, and network analysis. Analytic or optimizing models, including linear and dynamic mathematical programming and Markovian analysis, are described. Allocation models are described for decisionmaking in regard to tuberculosis, allocating personnel moving patients, and environmental health. Supporting data, graphs, flow diagrams, and a bibliography are included.

Pan American Health Organization, Washington, DC.  
**Guide for the Organization of Health Services in Rural Areas and the Utilization of Auxiliary Personnel**  
1975, 72p  
Paper is the recommendations of two PAHO/WHO Working Groups convened in Washington, D.C., in April 1974.

**Keywords:** Rural health services, \*Health planning, Sanitation, Rural areas, Policies, Pediatrics, Objectives, Methodology, Health resources, \*Health manpower, Health care services, Guidelines, Foreign countries, Environmental health, Children, Child health services.

The overall objective of the two multidisciplinary working groups of the Pan American Health Organization was to develop a methodology for planning, organizing, and controlling programs in order to extend the coverage of health programs in rural areas. An organizational methodology is proposed for the extension of health service coverage to rural areas. The methodology is programmatic and involves an analysis of the situation, the definition of objectives and target populations, the determination of requirements, and execution. The proposed rural health program has three sub-programs: (1) health care (maternal and child health and other direct health activities); (2) basic sanitation (water and excreta); and (3) statistics (statistics for health services and vital statistics). The role of rural communities in the utilization of health services and the implementation of the proposed rural health program is discussed. Functions and training requirements for auxiliary personnel working in rural areas are identified. Data are tabulated on the assignment of tasks in a rural health program. The infrastructure of the proposed rural health program is detailed, with emphasis on planning, organization, execution, control, and supervision. Forms and guidelines are included for the conduct of a rural health program. A list of references is provided.

**HRP-0027818/4** **PC A05/MF A01**  
CPI Associates, Inc., Dallas, TX.  
**Health or Wealth -- Reassessment of an Old Dilemma**  
17 Jul 78, 94p

**Keywords:** Health economics, Economic studies, Economics, Foreign countries, Health care, Health status, Economic development, Measurement, Methodology, \*Health, \*Health planning.

Three essays focusing on the relationship between health needs and the need for economic development in less developed countries are presented. It is suggested that less developed countries try to equalize the distribution of health-related expenditures for different groups in the population. The inequity of health expenditures is more important than the actual amount spent. It is suggested that public sector spending for health services be increased. A long-term commitment to economic development should be undertaken as a strategy for improving health. Examples of the health versus development dilemma are provided. The many issues associated with the definition and measurement of the health of a nation's population are summarized. The uses and limitations of various methods of measurement are discussed, as are some of the key issues in the health and development process. It is recommended that a systems approach be used to health problems in developing countries.

**Keywords:** \*Socioeconomic status, Communities, Data, Demography, Economic conditions, Economics, Environmental health, Foreign countries, Health care, Health occupations, Health statistics, Health status indexes, Nutrition, Public health, Sociology, \*Health.

Relationships between socioeconomic development and health in the Dominican Republic are analyzed. The following characteristics of the Dominican Republic are examined: geography, climate, history, political structure, communications, transportation, religion, language, education, economy, social structure, health attitudes, rural life, urban life, and housing. Population characteristics -- migration, age, sex, ethnic composition, and marital status -- are also considered. Health status is assessed in terms of mortality, communicable diseases, zoonoses, chronic diseases, mental health, and causes of hospitalization. Attention is given to national health and development planning, public health service agencies, environmental services, nutrition, population program activities, health programs of international organizations, medical services and facilities, health manpower resources, and medical care financing and costs. Family planning has been officially recognized as the most urgent national health priority. Health-related data and a bibliography are included.

**Keywords:** \*Socioeconomic status, Communities, Data, Demography, Economic conditions, Economics, Environmental health, Foreign countries, Health care, Health occupations, Health statistics, Health status indexes, Nutrition, Public health, Sociology, \*Health.

Relationships between socioeconomic development and health in Nicaragua are analyzed. Background information is presented that concerns the physical setting of Nicaragua, education, the economy, the characteristics of the population, and the impact of the 1972 earthquake. Health status is examined in terms of general indicators, mortality data, morbidity data, and the quality of data. Special programs are described, including maternal and child health, family planning, nutrition, environmental sanitation, immunization coverage, and disease-specific programs (malaria and tuberculosis). The organization of health services is considered in relation to health agencies (Ministry of Public Health, National Board of Assistance and Social Welfare, National Guard health program, and the private sector), cooperation and planning, and pilot projects. Health resources are identified as manpower, training, medical care facilities, and health budgeting. National

health planning is discussed. Recommended measures to improve health planning and statistical information, nutrition, environmental sanitation, communicable disease control, and health resources are detailed. Health-related data are tabulated, and a selected bibliography is included.

**Syncrisis -- The Dynamics of Health. An Analytic Series on the Interactions of Health and Socioeconomic Development. XII -- Thailand**  
Paul O. Woolley. Jun 74, 150p Rept no. DHEW/PUB/OS-74/50008

**Keywords:** \*Socioeconomic status, Communities, Data, Demography, Economic conditions, Economics, Environmental health, Foreign countries, Health care, Health occupations, Health statistics, Health status indexes, Nutrition, Public health, Sociology, \*Health.

Relationships between socioeconomic development and health in Thailand are analyzed. The general characteristics of Thailand and the country's culture and economy are described. Health status is assessed in relation to demographic characteristics, patterns of morbidity and mortality, the consumption of medical services, malaria, and tuberculosis. Consideration is given to environmental sanitation, nutrition, health care services (organization and basic resources, health manpower, the availability of health care services, administrative issues, manpower training, and attitudes toward and the utilization of health care services), and external assistance. Perspectives on health planning are offered, along with recommendations dealing with the health sector, intersectoral planning, and social policy planning. Four factors are of major concern with regard to the health of Thailand's citizens: rapid population growth, sanitation and environmental hazards, malnutrition, and the allocation and utilization of resources in the health sector. The appendices contain a listing of agencies involved in nutrition, illustrations, and tables. A bibliography is provided.

May 75, 158p Rept no. DHEW/PUB/OS-75/50018

**Keywords:** \*Socioeconomic status, Communities, Data, Demography, Economic conditions, Economics, Environmental health, Foreign countries, Health care, Health occupations, Health statistics, Health status indexes, Nutrition, Public health, Sociology, \*Health.

Relationships between socioeconomic development and health in Botswana, Lesotho, and Swaziland are analyzed. Information relating to the health environment (setting, population characteristics, and health issues) is provided for each country. The determinants of health and disease are also covered, with attention given to population characteristics such as migration, distribution, employment and education, and fertility and family planning, as well as to health status as indicated by morbidity and regional disease problems and nutritional status as indicated by diet and undernutrition. Other areas dealt with include the health delivery system (infrastructure and health services health manpower and training, maternal and child health, family planning, and nutrition and food aid programs, and health planning, organization, and financing). The appendices provide additional information on the geography, climate, political development, economic development, and educational system in the three countries. A bibliography is included at the end of the descriptive sections about each country.

## APPROPRIATE TECHNOLOGY ABSTRACTS

**Keywords:** \*Socioeconomic status, Communities, Data, Demography, Economic conditions, Economics, Environmental health, Foreign countries, Health care, Health occupations, Health statistics, Health status indexes, Nutrition, Public health, Sociology, \*Health.

The relationship between socioeconomic development and health in Bangladesh is analyzed. An overview of the Bangladesh health sector is presented that encompasses national health policy, health services, health resources, environmental sanitation, health financing, and international donor (assistance) agencies. Background information on the country's geography, climate, history, governmental structure, economy, transportation, communication, education, housing, and cultural environment is given. Population characteristics are described in terms of distribution, migration, age, sex, ethnic composition, and marital status. Health status is assessed with respect to mortality, communicable diseases, and morbidity. Consideration is given to nutrition, national health policy and administration, Government and private health services and programs, population programs, environmental sanitation, health sector resources, health care financing, and donor assistance (multilateral, bilateral, and non-governmental organizations). Bangladesh's most critical problem is the need to control fertility. Infectious diseases and malnutrition are also significant problems. A bibliography is provided.

**Synopsis -- The Dynamics of Health. An Analytic Series on the Interactions of Health and Socioeconomic Development. XVIII -- Islamic Republic of Pakistan**

Arthur H. Furnia. Jun 76, 159p Rept no. DHEW/PUB/OS-76/50036

**Keywords:** \*Socioeconomic status, Communities, Data, Demography, Economic conditions, Economics, Environmental health, Foreign countries, Health care, Health occupations, Health statistics, Health status indexes, Nutrition, Public health, Sociology, \*Health.

Relationships between socioeconomic development and health in Pakistan are analyzed. The health environment in Pakistan (problems, issues, and policies) is characterized. Health risks, diseases, and other problems affecting the health environment are noted. The organization and functioning of the health system are detailed. Health manpower resources, population and family planning, nutritional deficiencies, maternal and child health care, environmental inadequacies and malaria control, dental health, mental health including narcotics control, and health system financing are addressed. The poor health environment of Pakistan appears to be the result of three fundamental factors: widespread infectious and communicable diseases, poverty and sociocultural attitudes that inhibit environmental improvement, and ineffective policies administered by a limited number of inadequately trained health workers that affect both the urban poor and the rural population. Increased assistance is needed in the following areas: reorganization of the Ministry of Health and Provincial health departments, environmental sanitation and hygiene, expanded health education curriculums in primary and secondary schools, and auxiliary health worker training. Additional information on sociopolitical characteristics of Pakistan and its population is appended. A bibliography is included.

**Synopsis -- The Dynamics of Health. An Analytic Series on the Interactions of Health and Socioeconomic Development. XIX -- Senegal**

Robin J. Menes. Jun 76, 161p Rept no. DHEW/PUB/OS-76/50037

**Keywords:** \*Socioeconomic status, Communities, Data, Demography, Economic conditions, Economics, Environmental health, Foreign countries, Health care, Health occupations, Health statistics, Health status indexes, Nutrition, Public health, Sociology, \*Health.

Relationships between socioeconomic development and health in Senegal are analyzed. Background information encompasses geography, climate, the political structure, education, communication, transportation, language, religion, and the economy. The demographic characteristics of the population are described in

terms of population dynamics, migration patterns, ethnic groups, marital status, population planning, and international assistance for family planning. Health status is assessed with regard to mortality, communicable diseases, chronic diseases, dental health, mental health, and zoonotic diseases. Consideration is given to the nutritional status of residents in the country, environmental health, health facilities and services, health manpower, national health policy and planning, and international organizations. Many serious diseases have been suppressed by mass immunization programs, but malaria, measles, tuberculosis, trachoma, and venereal disease are still present at high levels. There is a high infant and childhood mortality rate, environmental sanitation is almost nonexistent outside major cities, and health services are inadequate and inefficient. Nutrition appears to be good on the average. There is an obvious shortage of health manpower. Health and development planning operates under several handicaps; one is the fact that the Ministry of Health and Social Affairs plays almost no role in planning. A commitment has been made to upgrade rural health services, but implementation has been slow due to a lack of funds and an uncertain plan of action. A bibliography is provided.

Public Health Service, Rockville, MD. Office of International Health.

**Synopsis -- The Dynamics of Health. An Analytic Series on the Interactions of Health and Socioeconomic Development. XX -- Jamaica**

Arthur H. Furnia. Dec 76, 150p

**Keywords:** \*Socioeconomic status, Communities, Data, Demography, Economic conditions, Economics, Environmental health, Foreign countries, Health care, Health occupations, Health statistics, Health status indexes, Nutrition, Public health, Sociology, \*Health.

Relationships between socioeconomic development and health in Jamaica are analyzed. The health environment, health risks, diseases, and other problems affecting the health environment in Jamaica are noted. The organization and functioning of health services and delivery are detailed. Health manpower resources, population and family planning, nutritional deficiencies, maternal and child health, mental health (including drug control), dental health, the environment, and health care financing are addressed. Fundamental problems in the country, e.g., inadequate and insufficient health facilities, a shortage of health manpower widespread malnutrition, and poor dental health services, are identified. Objectives for 1980-81 concern maternal mortality and morbidity, reduction of abortions, nutrition programs for all women attending prenatal clinics, the incidence of malnutrition, preschool immunizations, neonatal deaths, examination for and treatment of cervical and breast cancer, increased clinical sessions at family planning clinics, training of community health aides and midwives, and involvement of the male population in family planning programs. The appendixes contain demographic and political information. A bibliography is provided.

**Synopsis -- The Dynamics of Health. XXI -- The Hashemite Kingdom of Jordan**

John F. Gallivan. May 77, 69p

**Keywords:** Health planning, Ailments, Classifications, Communities, Demography, Diseases, Foreign countries, Health care delivery, Health care technology, Injuries, Methodology, Preventive medicine, Research, Strategies, Vital statistics, \*Health.

This document on the health situation in Jordan is one of a series of reports concerned with health conditions in various countries and the effect these conditions have on socioeconomic development within the countries. Among the purposes of the studies are: (1) to provide a concise, up-to-date introduction to the health situation in a country for the use of the U.S. Agency for International Development and the international health community, and (2) to provide specialists in comprehensive health planning with a preliminary document and some indication of sources of information available for health planning within the particular country. The areas covered by the report include: the setting (e.g., the geography and climate, culture, and economy of Jordan); demographics; causes of death and illness (mortality, reportable diseases and other morbidity,

nutritional deficiencies, and environmental sanitation inadequacies); the health sector infrastructure, including the Ministry of Health and health and economic planning; curative resources (traditional practices, facilities, and manpower) and prevention. A bibliography accompanies the text.

**Synopsis -- The Dynamics of Health. XXII -- Kingdom of Morocco**

Juliana Weissman. Jun 77, 183p

**Keywords:** Environmental health, Health care delivery, Communities, Demography, Foreign countries, Health education, Public health education, Public health, Research, Vital statistics, \*Health, \*Socioeconomic Status.

A description and analysis of the health conditions in Morocco are provided, and the relationship of those conditions to Morocco's socioeconomic development is explored. While the leading causes of death for adults are unknown, tuberculosis, eye diseases and upper respiratory and gastrointestinal infections are widespread. Morocco's general mortality rate has decreased, but the infant mortality rate has remained high. Malnutrition, particularly protein-calorie malnutrition, is prevalent among more than 50 percent of Moroccan children under the age of four. Food production fluctuates from year to year, resulting in abrupt changes in availability of supplies. Uneven food distribution is a contributing factor to the high rate of malnutrition. The organization of health services is described, and it is pointed out that dispensaries for the provision of basic curative and preventive care are underutilized. Hospitals, it is noted, are not being operated at maximum efficiency. It is suggested that a program of health education be undertaken to teach people how to cope with unfavorable environmental conditions. Nutrition education would be one of the primary components of the health education program. Outside assistance to Morocco is examined.

**Synopsis -- The Dynamics of Health. XXIV -- Afghanistan**

Arthur H. Furnia. Mar 78, 175p Rept no. DHEW/PUB/OS-78/50056

**Keywords:** Environmental health, Health care delivery, Communities, Demography, Family planning, Foreign countries, Health care services, Personal health services, Research, Sanitation, Social services, Vital statistics, \*Health, \*Socioeconomic Status.

Health conditions in Afghanistan are described and analyzed and the relationship of those conditions to Afghanistan's socioeconomic development is examined. The health sector reflects dramatically the more fundamental problems that plague Afghanistan. Malaria and tuberculosis threaten life, while gastrointestinal, infectious and parasitic diseases contribute to mortality and morbidity. These diseases are widespread because Afghanistan has insufficient sanitary water supplies and waste disposal, inadequate housing and health facilities, a lack of trained health manpower, and nutritional problems. Specific problems hindering the improvement of the Afghan health sector are discussed. The Government of Afghanistan supports family planning, but not enough is actually being done. Because there is a widespread lack of environmental sanitation and personal hygiene, measles, diarrhea/dysentery, typhoid fever, intestinal helminthiasis, pneumonia, tuberculosis, eye and skin diseases and respiratory infections are prevalent. It is suggested that a substantial portion of Afghanistan's total budget could be allocated to the health sector to address the health problems of the population. Appendixes include: geographic, historical, political and economic aspects of Afghanistan, the structure of Afghan society, and a bibliography.

**Influences Affecting the Role of the Village Health Worker**

Gretchen Manley. 1978, 13p

## APPROPRIATE TECHNOLOGY ABSTRACTS

Presented at the American Public Health Association, 106th Annual Meeting, Los Angeles, CA, October 15-19, 1978.

**Keywords:** Health resources, Assessments, Comments, Evaluation, Feasibility studies, Foreign countries, \*Health care delivery, Health care, \*Health manpower, Health occupations, Methodology, Research, Reviews.

Four groups that influence the effectiveness and success of the village health worker (government, medical profession, community, and workers themselves) in developing countries are considered. Village health workers may be called health auxiliaries, community clinic attendants, health agents or village health promoters. In the selection of workers, the trend is to encourage community participation. Residency of a worker in the community to be served is necessary, while age and skill requirements vary. Experience in the selection and training of workers under 25 years of age has shown that it is difficult to keep these people in the job and that respect for them is often lacking due to their youth. No consensus exists on the educational qualifications of candidates. Government is often unable to meet local needs, due to limitations of size and distance. The village health worker concept is dependent on this factor and on the expertise of medical professionals. The community is the primary reason for the existence of workers, and workers must realize that they are performing a valuable service to the community. The most successful village health worker programs are those employing a fee-for-service plan or some form of health insurance plan.

**Agency for International Development (AID) Integrated Low Cost Health Projects. Volume II. Analysis**  
Naomi Baumslag, Chris Roesel, and Ed Sabin. Nov 78, 103p

**Keywords:** Family planning, Food, Foreign countries, \*Health care delivery, Health care services, Health care technology, Health manpower, Health resources, Nutrition, Personal health services, Projects, Social services.

An examination is provided of the integrated, low cost primary health care delivery systems funded by the Agency for International Development (AID) in Africa, Asia, Latin America, and the Near East. The importance of integrating nutrition interventions and health and family planning services is emphasized. Integration occurs mainly through the use of multipurpose village workers and the provision of a mixture of service components. Most of the projects discussed are either still being planned or in an early stage of implementation. Thirteen of the integrated health care projects examined are in Africa, 16 are in Latin America, 7 are in Asia and 3 are in the Near East. Bolivia, Columbia, the Dominican Republic, the Philippines, Nicaragua and Thailand have two projects each. A discussion of the health backgrounds of these project countries is presented, and health care personnel are considered. Tables and figures highlight the data presented. Appendixes contain: health indicators and per capita funding; project funding and donors; health care personnel salaries, training, and titles; health care personnel -- nutrition tasks; regional frequency of nutrition and nutrition-related interventions; tables summarizing 39 AID integrated projects; and definitions of nutrition interventions used for data compilation. International Health Programs.  
**Questionnaire for Determining Practices in Health Delivery Systems in Developing Countries**  
1978, 28p  
Contract AID-ta-C-1320

**Keywords:** Data collection, Data acquisition, Data processing systems, Design, Health care costs, Health care, \*Health care delivery, Health planning, Measurement, Methodology, Questionnaires, Strategies, Surveys.

The questionnaire discussed in this report was developed in response to the need for descriptive information about low-cost health care delivery systems.

Major emphasis is placed on different components of local health projects and innovative approaches or practices that influence such projects. Information is gathered on the population served, resources, project activities and services, how services are utilized by the population, the organizational and decisionmaking structure of projects, and ongoing evaluation activities. It is envisioned that the questionnaire will be useful to individuals who require an inexpensive method for obtaining descriptive data on the status of health programs in their countries. Nine sections comprise the questionnaire, each of which focuses on different aspects of health care delivery programs: program description, innovative practices and replication, areas of program interest and activities, volunteers and health workers involved, program facilities and outreach activities for providing direct health services, relations with other organizations and programs, community involvement, program management, and information and evaluation. The design and application of the questionnaire are detailed.

**Optimal Planning of Health Care Systems to Meet Social Demand and Manpower Requirements in Developing Countries. Technical Papers R/66**  
Amal Sami, Samir G. Boutros, and S. Aidaous. Oct 77, 25p

**Keywords:** \*Health planning, Foreign countries, Methodology, Models, Strategies, Theories, \*Health manpower.

A model is presented to aid developing countries in optimal health care planning. Problems faced by developing countries are explored, e.g., an increased demand resulting from rapid population growth and the improvement of peoples' social status. Manpower planning is stressed and the interaction between different components of the health care delivery system is considered. Difficulties that interfere with adequate health planning are discussed, including: lack of precise definitions; lack of adequate information; separation of health manpower decisions from general health planning; disassociation between health and educational planning; and bias in career selection. An explanation of the health care delivery system in Egypt is presented. A dynamic planning model which determines the optimal investment policies as well as the associated facilities allocation programs that concern manpower and hardware is presented. The data needed to run the model are examined. Figures illustrate the data.

**Health Planning in Developing Countries -- The 'Dependency' Concept as a Planning Aid**  
J. D. Macfarlane. Apr 76, 21p  
Methods of Demographic Projection Analysis, Technical Paper R/36. Paper presented to the International Conference on Statistics Computation Science and Social Research (12th), April 5-8, 1976, Cairo, A.R.E.

**Keywords:** \*Health planning, Communities, Demography, Distribution, Foreign countries, Health resources, Methodology, Models, Strategies, Theories.

A paper is presented which suggests that the friction between the viewpoint expressed by a group of planners in a developing country and the viewpoint expressed by a local group with some medical representation can be alleviated if the community dependency concept is used. A discussion of the dependency concept developed for allocating nursing resources is provided. Different ways that the community can be characterized -- whether there is a physician or a nurse in the community, the community's location with respect to the nearest inpatient facility, the nearest X-ray facility, and the nearest medical laboratory, whether there is a piped water supply, and whether there are special disease hazards in the area -- are noted. Two cases are considered to illustrate the difference between observed primary contacts and desirable primary contacts. Information concerning the dependency of the individuals in the community, the community's facilities, and the contact rate with the local physician or nurse can be used to form a hierarchical model of health care. The model will allow a side-by-side consideration of primary contact rates, mortality rates, and referral rates. A figure highlights the data. The appendix contains definitions of dependency classes.

**Governments and the People's Health**  
1978, 148p

International Conference on Primary Health Care held at Alma-Ata, USSR, on 6-12 September 1978.

**Keywords:** Developing countries, Socioeconomic factors, Planning, Priorities, Government, Public health, Epidemiology, \*Health care delivery.

Major problems still exist in the dissemination of primary health care to all populations, particularly to women and children. This special issue contains contributions by proponents of alternative and innovative approaches to primary health care. An equitable approach to health care is urgently needed, one that involves the participation of all governments. An understanding of traditional health services is necessary in order to effectively implement a new primary health care concept. It is suggested that socioeconomic determinants and consequences have a profound effect on health and disease. Programs in agriculture, education, commerce, and industry can be designed to assure improved health care services. A planning strategy for primary health care is presented, including what data are needed and what process should be used. The epidemiology and the economic status of each country must be considered. In addition, a reorientation of health personnel, an increase in community participation, and an integration of a primary health care program into the overall national development effort are essential for a health care system to be truly effective. Case studies of primary health care in Afghanistan and other countries are provided.

**Keywords:** Biomass conversion plants, \*Ethanol, Construction, Cost, Design, Diagrams, \*Alcohol, \*Fuels, \*Bioconversion, \*Industrial plants, Distillation, Energy balance, Enzymatic hydrolysis, Equipment, Fermentation, Heat treatments, Idaho, Maize, Process heat, Production, Water removal.

The objectives of the report are to (a) provide potential alcohol producers with a reference design and (b) provide a complete, demonstrated design of a small-scale fuel alcohol plant. This report describes a small-scale fuel alcohol plant designed and constructed for the DOE by EG and G Idaho, Inc., an operating contractor at the Idaho National Engineering Laboratory. The plant is reasonably complete, having the capability for feedstock preparation, cooking, saccharification, fermentation, distillation, by-product dewatering, and process steam generation. An interesting feature is an instrumentation and control system designed to allow the plant to run 24 hours per day with only four hours of operator attention. Where possible, this document follows the design requirements established in the DOE publication Fuel From Farms, which was published in February 1980. For instance, critical requirements such as using corn as the primary feedstock, production of 25 gallons of 190 proof ethanol per hour, and using batch fermentation were taken from Fuel From Farms. One significant deviation is alcohol dehydration. Fuel From Farms recommends the use of a molecular sieve for dehydration, but a preliminary design

## APPROPRIATE TECHNOLOGY ABSTRACTS

raised significant questions about the cost effectiveness of this approach. A cost trade-off study is currently under way to establish the best alcohol dehydration method and will be the subject of a later report. Volume one contains background information and a general description of the plant and process. (ERA citation 06:008762)

**Keywords:** Zooplankton, Food, \*Proteins, Chitins, \*Food processing, Meat, \*USSR, Translations, \*Krill.

Krill protein can be viewed as a highly valuable food product. The Okean protein paste obtained from krill in a frozen form can be used for preparing various dishes as well as in producing processed cheeses and other food products. The experiments conducted on sterilizing the protein paste and the freshly removed juice indicated that the sterilization temperature should not exceed 105C. At a temperature above 105C, the product turns dark and acquires an unpleasant aroma and taste. For food purposes it is possible to use fresh-

caught krill kept on the deck for not more than 4 hours. The krill which has been on the deck for more than 4 hours since catching should be used for producing feed meal. The coagulation of protein from the krill juice is possible following two variations. The first provides for protein coagulation in a heat exchanger and then the removal of the produced protein from the broth by filtering or centrifuging. In following the second variation, the coagulation of the protein from the krill juice occurs directly in the cans in sterilization. Here the broth is not removed, and in this regard the output of finished products increases. (Author)

## APPROPRIATE TECHNOLOGY ABSTRACTS

Solar heating and cooling systems operational results conference, Colorado Springs, CO, USA, 29 Nov 1978.

**Keywords:** \*Buildings, Passive solar heating systems, Rock beds, \*Solar heating systems, Cold storage, Control systems, Cooling, Design, Performance, Sensible heat storage, Solar air heaters, Solar collectors, Solar reflectors, Solar space heating, Thermal insulation, Thermal mass, Public buildings.

The Nambe Community Center is a solar heated adobe community building for the Nambe Indian Pueblo, located twenty miles north of Santa Fe, New Mexico. The 3000 ft exp 2 building makes use of several passive solar heating features. The active solar heating system is an air system using a 17 ton rock storage bed. The solar collector system consists of a 440 ft exp 2 vertical collector with a 1056 ft exp 2 reflector. The system also allows night evaporative cooling of the rock bed for summer cooling operation. The system became operational during the 1977-78 heating season, and solar heating data are presented for operation of the system in the spring of 1978. A discussion of using the rock bed for summer cold storage is also given. (ERA citation 04:022201)

**Keywords:** \*Ammonia, \*Crops, Plant growth regulators, Plants, Chemical precipitation, \*Nitrogen, Agricul-

ture, Biosphere, Energy demand, \*Fertilizers, Food Fossil fuels, Human populations, Nitrogen cycle, Nutrients, Synthesis, Farm crops, Haber process.

Raising food for present population requires nitrogenous fertilizers in addition to indirect management of the biosphere's nitrogen cycle. The Haber process for making the ammonia base of fertilizers is increasingly pressed by shortages of energy, while only minor improvements are still possible. I discuss the Haber process and 15 alternatives for increasing the nitrogen available to crops using less fossil energy. These alternatives span technology of fertilizer synthesis, farm management and technology, crop genetics, and market management. They were selected by criteria of energy-efficiency and of meeting the numerous biological/physical constraints posed by soils and plants. The alternatives vary in scope and efficacy due to scientific, economic, and political constraints which need to be appreciated by policy-makers and researchers alike. I conclude that the Haber process will be the mainstay for nitrogen-nutrition of crops for 50 years, and a few alternative strategies will slowly achieve a partial replacement of the Haber process. Full replacement in the longer run requires commitment within a few decades to developing the strongest alternatives. (ERA citation 02:049987)

**Keywords:** \*Arid land, Farm crops, Hydrocarbons, Lubricating oils, \*Proteins, \*Agriculture, Carbohydrates, Biological adaptation, Biosynthesis, Climates, \*Deserts, Irrigation, Nutrients, Plant breeding, Research programs, Socio-economic factors, Terrestrial ecosystems, Water supply, Biomass, Ecosystems, Energy sources, Lubricants, Organic compounds, Petroleum products, Renewable energy sources, \*Lubrication, \*Crops, \*Plants(Botany), Jojoba oils, Euphorbic, \*Jojoba, Prosopis juliflora.

Research programs on controlled environmental agriculture technology to allow a broad range of conventional and unconventional crops to be grown with very limited supplies of fresh or brackish water are reviewed. The use of water derived from the sea, from saline lakes, or from waste water treatment for crops in arid lands is discussed. Plant breeding programs to improve the nutritional value of food crops and irrigation systems to improve plant productivity are discussed. The production of liquid hydrocarbons and lubricating oils from plant species such as Euphorbic and Jojoba, and the use of leguminous plants such as mesquite (Prosopis juliflora), and other native plants, which thrive in arid regions, as important sources of proteins and carbohydrates are cited as examples of the productive potential of arid lands. 41 references. **Urbanism and Energy in Developing Regions**  
R. L. Meier, S. Berman, and D. Dowell. 1 Mar 78, 100p  
Contract W-7405-ENG-48

**Keywords:** Developed countries, Urban areas, Brazil, Comparative evaluations, Competition, Data compilation, Decision making, Demand factors, Developing countries, Education, Egyptian Arab Republic, Electric power, Employment, \*Energy, Energy conservation, Energy consumption, Energy efficiency, Energy models, Energy policy, Energy shortages, Energy sources, Energy supplies, Failures, Food, Foreign policy, Global aspects, India, Mexico, Population dynamics, Quality control, Resource conservation, Resource depletion, South Vietnam, Technology transfer, Water resources, Egypt.

The pace of urbanization must continue, because in most parts of the world the surplus population in the countryside has nowhere else to go. The world is about 40% urban now and apparently headed for the 80 to 90% share of the total population presently exhibited by the developed countries. Thus, the 1.6 billion urban dwellers in 1978 would become about 3 billion in 1995--if major catastrophes can be avoided. Feasibility assessments for Sao Paulo-Rio de Janeiro, Calcutta, Cairo-Alexandria, Mexico City, and Seoul are presented in the appendices. This analysis-from-a-distance is insufficient to judge how much extra installed electrical generating capacity is required before 1995, the added refining capability for liquid fuels, or the uses for new LNG and coal imports due to be arranged. It is evident that energy (and perhaps also water in most regions) planning is the major determinant of the manner in which these urban areas will adapt to the extraordinary pressures for new settlement. The current round of planning in such metropolitan areas has been addressed to solving traffic-congestion problems, and reorganizing land use in central districts, as the most pressing issues. Since energy sources and distribution systems now affect the largest and most crucial investments in urban growth it is to be expected that future metropolitan planning may concentrate upon energy efficiency. Energy supplies must be planned to meet requirements set by locally dominant values regarding human services and the environment. (ERA citation 03:050412)

Conference on the Agricultural Chemical Society,  
Nagoya, Japan, 1 Apr 1978.

**Keywords:** Biomass, Synthetic petroleum, \*Alcohols, Arid lands, Carbon dioxide, Coal, Economic analysis, Energy, substitution equivalent, Feasibility studies, Fermentation, Hydrocarbons, Photosynthesis, Plants, Resource potential, Trees, Yields, \*Sugarcane, \*Bioconversion, \*Fuels, Chemical feedstock, Euphorbia thyrus, Plants(Botany), Solid wastes, Manufactured gas, Synthetic fuels.

Photosynthesis is examined as an annually renewable resource for material and energy. The production of fermentation alcohol from sugar cane as a major source of materials for chemical feed-stocks is examined as well as the direct photosynthetic production of hydrocarbon from known plant sources. Experiments are underway to analyze the hydrocarbons from Euphorbia and other hydrocarbon containing plants with a view toward determining their various chemical components. In addition, experimental plantings of several species of Euphorbias have begun to obtain data on which species would be most successful. Using Euphorbia thyrus, there are indications that we may expect a yield of approximately ten barrels of hydrocarbon material per acre in a seven-month growing period on semiarid land. **Utilization of Solar Energy in Grain Drying. Final Report, June 1978-June 1979**  
M. N. Ozisik, and B. K. Huang. Jul 79, 33p

**Keywords:** \*Peanuts, Solar dryers, Data, Economics, Flow rate, Graphs, \*Greenhouses, Humidity, Moisture, Parametric analysis, Performance testing, \*Solar drying, Temperature monitoring.

Equipment was designed and constructed for use with an existing greenhouse solar drying system (solar barn) to study the utilization of solar energy for peanut curing under the conditions prevailing in North Carolina. The basic equipment consists of a rotary solar drum unit which holds about six tons of peanuts and a trailer unit which transport the drum and peanuts. The unique features of the prototype are that the perforated sheet metal surfaces and the dryer unit itself serves partly as a solar heat absorber/collector during drying mode operation and that the circumferential surface of the rotary drum unit can be disassembled and hung on the drum frame to serve as a ferris wheel plant production system during greenhouse mode operation. The design will provide multi-purpose utilization of the facilities enhancing the economic feasibility of the system. Four full-scale tests were performed for peanut drying using both solar and furnace heating. No-load tests were also performed for system performance study. Computer simulation programs were developed to correlate the measured data and the mathematical model prediction. The heat and mass transfer analysis of solar air heating and grain drying for the prototype model is described and the results of a parameter survey showing the effects of various system parameters on drying time are presented. Thesis.

**Keywords:** \*Alcohols, Alcohol fuel cells, \*Automotive fuels, \*Bioconversion, Boiler fuel, Diesel engines, \*Methanol, Otto cycle, Turbines, Bibliographies, Biological effects, Biomass, Biosynthesis, Boilers, Carbon dioxide, Carbonates, Chemical preparation, Combustion products, Economics, Environmental effects, Fermentation, Food, Fossil fuels, Fuels, Hazards, Performance testing, Production, Reviews, Safety, Synthesis, Technology assessment, Uses, \*Fuels.

The synthesis of methanol using existing and proposed means of production and sources of feedstocks is reviewed. Conventional methods of producing methanol are surveyed. Proposed methods of fermentation, electro-, and radiation-synthesis are discussed. Conventional production technology from synthesis gas is examined in detail. The range of possible sources of feedstocks from fossil fuels to biomass, atmospheric carbon dioxide, and carbonates are portrayed along with renewable and nonrenewable energy sources. A survey of recent studies and research on methanol is given within the historical context. Fuel related properties are reviewed and compared with isooctane. Combustion emissions and their variation with temperature and fuel preparation are similarly compared. Uses of methanol as a combustion fuel and recent tests in boilers, turbines, conventional and stratified charge Otto engines, and diesel engines are discussed emphasizing comparative efficiencies. Current developments on the uses of methanol directly and indirectly in fuel cells and as a feedstock for single cell protein are examined. Historical prices of methanol are presented along with major causes for the fluctuations. The costs of synthesizing methanol are presented including overall production costs from organic feedstocks. Proposed costs of producing methanol from electrolytic hydrogen and carbon dioxide are also given. Fiscal and physical causes for inflation are discussed along with the costs of storage, transportation and conversion. The numerous biological, physical, and chemical hazards of using methanol as a fuel are discussed together with safety precautions and treatment. 609 references. (ERA citation 02:040420)

Keywords: \*Machine tools, Roller bearings, Shafts (machine elements), Wood, Loads (forces), Lubrication, Noise reduction, Spindles, \*Woodworking.

For the construction of modern wood working machines, problems such as the most favorable tool spindle and snail bearings play an important part. The construction and functional details of these machines are considered. The interrelationships are discussed of speed, bearing load, fit and lubrication, as well as bearing devices and their installation. The particulars of motor shaft bearings are considered along with questions concerning oscillating shafts. Another, equally important construction detail is the chip suction system. Defects that might occur in the construction of suction hoods or at the machines themselves are described. Finally, questions of noise abatement, its cause and elimination are discussed. (Author)

**Water Hyacinths for Removal of Phenols from Polluted Waters.**  
 B. C. Wolverton. 5 Feb 75, 19 Rept no. NASA-TM-X-72722

Keywords: \*Phenols, Plants (Botany), \*Water pollution, Bayous, Ecology, Environmental monitoring, Evapotranspiration, Gas chromatography, Hydroponics, Plant roots, \*Aquatic weeds, \*Water hyacinth.

Removal of phenol by water hyacinths (*Eichhornia crassipes* (Mart.) Solms) in static water was investigated. 2.75 g dry weight of this aquatic plant demonstrated the ability to absorb 100 mg of phenol per plant per 72 hours from distilled water, river water, and bayou water. One hectare of water hyacinth plants is shown to be potentially capable of removing 160 kg of phenol per 72 hours from waters polluted with this chemical. (Author)

**Water Hyacinths for Removal of Cadmium and Nickel from Polluted Waters.**  
 B. C. Wolverton. 5 Feb 75, 11p Rept no. NASA-TM-X-72721

Keywords: \*Cadmium, \*Nickel, Plant roots, \*Water pollution, Aqueous solutions, Material absorption, Pollution control, Trace contaminants, \*Water hyacinth, \*Aquatic weeds.

Removal of cadmium and nickel from static water systems utilizing water hyacinths (*Eichhornia crassipes* (Mart.) Solms) was investigated. This aquatic plant demonstrated the ability to rapidly remove heavy metals from aqueous systems by root absorption and concentration. Water hyacinths demonstrated the ability to absorb and concentrate up to 0.67 mg of cadmium and 0.50 mg of nickel per gram of dry plant material when exposed for a 24-hour period to waters polluted with from 0.578 to 2.00 ppm of these toxic metals. It is found that one hectare of water hyacinths has the potential of removing 300 g of cadmium or nickel from 240,000 liters of water polluted with these metals during a 24-hour period. (Author)

**Aquatic Plants for Removal of Mevinphos from the Aquatic Environment.**  
 B. C. Wolverton. Feb 75, 8p Rept no. NASA-TM-X-72720

Keywords: \*Pesticides, Plants (Botany), \*Water pollution, Bioassay, Biological effects, Ecology, Environmental monitoring, Fishes, Grasses, Plant roots.

Fragrant waterlily (*Nymphaea odorata*, Ait.), joint-grass (*Paspalum distichum* L.), and rush (*Juncus repens*, Michx.) were used to evaluate the effectiveness of vascular aquatic plants in removing the insecticide mevinphos (dimethyl-1-carbomethoxy-1-propen-2-yl phosphate) from waters contaminated with this chemical. The emerged aquatic plants fragrant waterlily and joint-grass removed 87 and 93 ppm of mevinphos from water test systems in less than 2 weeks without apparent damage to the plants; whereas rush, a submersed plant, removed less insecticide than the water-soil

controls. Water-soil control still contained toxic levels of this insecticide, as demonstrated by fish bioassay studies, after 35 days. (Author)

Keywords: Africa, \*Agriculture, \*Drought, Economic development, Meteorological services, Precipitation (Meteorology), Chad, Hydrometeorology, Mali, Mauritania, Niger, Rain, Senegal, Upper Volta, Weather stations, \*Hydrology, \*Meteorology.

A meteorological and hydrological survey was made in six West African countries, namely, Upper Sahel, Upper Volta, Mali, Mauritania, Niger, Senegal, and Chad. The survey was carried out in conjunction with an economic development program particularly oriented to the severe drought problem of the Sahelian regions. Urgent investigation is needed in four areas: weather/crop correlations, weather/run-off correlations and maps of agricultural and water resources potential, periodic recurrence and persistence of rainfall, and droughts in relation to general atmospheric circulation. A list of stations and their services is included.

 Tran-Transl. Into English from the Book "Theorie, Construction, Montage, Utilisation au Paysage de l'Eau a la Production de l'Electricite" Paris, Dunod Publ., 1973 270 p.

Keywords: Windmills, Windpowered generators, Windpowered pumps, Electricity, Energy conversion, Windpower utilization, \*Water pumps, \*Wind energy, \*Turbines.

A brief history of windmills is given. Various models are described, with discussions of their pros and cons, especially in regard to number of blades and method of orientation to the wind. Systems for transmission of power from the wind motor to a pump, generator, or other type of equipment are described. A method for computing the tension and compression stresses on the wind motor pylon is given and the construction of pylons and water tanks is discussed. Foundation and anchoring systems are described, as are several methods for assembling and raising the wind motor on its pylon. Systems using wind motors to draw and elevate water by means of pumps and systems using wind motors in conjunction with generators, storage batteries, etc., to generate electricity are described. Efficiency tables and comparative cost-price tables are provided for each of these applications. (Author)

## APPROPRIATE TECHNOLOGY ABSTRACTS

**Water Hyacinths and Alligator Weeds for Removal of Lead and Mercury from Polluted Waters.**  
B. C. Wolverton, and R. C. McDonald. 11 Apr 75, 14p Rept no. NASA-TM-X-72723

Keywords: \*Lead (Metal), \*Mercury, Pollution control, Vegetation growth, \*Water pollution, Absorptivity, Machining, Tables (Data), Toxicity, \*Aquatic weeds, \*Alligator weed, \*Water hyacinth.

Removal of lead and mercury by water hyacinths (*Eichhornia crassipes*) (Mart.) Solms and alligator weeds (*Alternanthera philoxeroides*) (Mart.) Griesb. was investigated. Water hyacinths demonstrated the ability to remove 0.176 mg of lead and 0.150 mg of mercury per gram of dry plant material from distilled water and river water in a 24-hour period. One acre of water hyacinths is potentially capable of removing 105.6 grams of lead and 90.0 grams of mercury per day. Alligator weeds removed 0.101 mg of lead per gram of dry plant material in a 24-hour period. This same plant also demonstrated the ability to remove a minimum of 0.153 mg of mercury per gram of dry plant material in a six hour period. (Author)

**Bio-Conversion of Water Hyacinths into Methane Gas, Part 1.**  
B. C. Wolverton, R. C. McDonald, and J. Gordon. Jul 74, 13p Rept no. NASA-TM-X-72725

Keywords: Plants (Botany), Synthane, Cadmium, Fermentation, Nickel, Pollution control, \*Water hyacinth, \*Methane, \*Bioconversion, \*Aquatic weeds.

Bio-gas and methane production from the microbial anaerobic decomposition of water hyacinths (*Eichhornia crassipes*) (Mart) Solms was investigated. These experiments demonstrated the ability of water hyacinths to produce an average of 13.9 ml of methane gas per gram of wet plant weight. This study revealed that sample preparation had no significant effect on bio-gas and/or methane production. Pollution of water hyacinths by two toxic heavy materials, nickel and cadmium, increased the rate of methane production from 51.8 ml/day for non-contaminated plants incubated at 36 C to 81.0 ml/day for Ni-Cd contaminated plants incubated at the same temperature. The methane content of bio-gas evolved from the anaerobic decomposition of Ni-Cd contaminated plants was 91.1 percent as compared to 69.2 percent methane content of bio-gas collected from the fermentation of non-contaminated plants. **Flat-Plate Solar-Collector Performance Evaluation with a Solar Simulator as a Basis for Collector Selection and Performance Prediction.**  
F. F. Simon. 1975, 52p Rept nos. NASA-TM-X-71793, E-8470  
Conf-Presented at 1975 Intern. Solar Energy Soc. Meeting, Los Angeles, 28 Jul. - 8 Aug. 1975.

Keywords: Flat plates, Performance prediction, \*Solar collectors, Solar simulators, Air conditioning, Cost effectiveness, Performance tests, Solar energy conversion, Sunlight, Tables (Data).

The use of a solar simulator for performance determination permits collector testing under standard conditions of wind, ambient temperature, flow rate and sun. The performance results determined with the simulator have been found to be in good agreement with outdoor performance results. The measured thermal efficiency and evaluation of 23 collectors are reported which differ according to absorber material (copper, aluminum, steel), absorber coating (nonselective black paint, selective copper oxide, selective black nickel, selective black chrome), type of glazing material (glass, Tedlar, Lexan, antireflection glass), the use of honeycomb material and the use of vacuum to prevent thermal convection losses. The collectors were given performance rankings based on noon-hour solar conditions and all-day solar conditions. The determination with the simulator of an all-day collector performance was made possible by tests at different incident angles. The solar performance rankings were made based on whether the collector is to be used for pool heating, hot water, absorption air conditioning, heating, or for a solar Rankine machine. (Author)

**Grown Organic Matter as a Fuel Raw Material Resource**  
Final Report.  
W. L. Rother, H. M. Keener, R. D. Klein, H. J. Medvedski, and R. B. Curry. Oct 75, 134p Rept no. NASA-CR-2608  
Contract NGL-36-007-001

Keywords: Agriculture, Crop growth, Earth resources, \*Fuels, Organic materials, Cellulose, Cost analysis, Fibers, Food, Photosynthesis, Production management, Solar energy, \*Bioconversion.

An extensive search was made on biomass production from the standpoint of climatic zones, water, nutrients, costs and energy requirements for many species. No exotic species were uncovered that gave hope for a bonanza of biomass production under culture, location, and management markedly different from those of existing agricultural concepts. A simulation analysis of biomass production was carried out for six species using conventional production methods, including their production costs and energy requirements. These estimates were compared with data on food, fiber, and feed production. The alternative possibility of using residues from food, feed, or lumber was evaluated. It was concluded that great doubt must be cast on the feasibility of producing grown organic matter for fuel, in competition with food, feed, or fiber. The feasibility of collecting residues may be nearer, but the competition for the residues for return to the soil or cellulosic production is formidable. (Author)

**Water Hyacinths for Upgrading Sewage Lagoons to Meet Advanced Wastewater Treatment Standards, Part 1.**  
B. C. Wolverton, and R. C. McDonald. Oct 75, 9p Rept no. NASA-TM-X-72729

Keywords: Filtration, Plants (Botany), Sewage, \*Water treatment, Biochemistry, Chemical analysis, Pollution control, \*Water hyacinth, \*Sewage treatment, \*Aquatic weeds.

Water hyacinths, *Eichhornia crassipes* Mart. Solms, have demonstrated the ability to function as an efficient and inexpensive final filtration system in a secondary domestic sewage lagoon during a three month test period. These plants reduced the suspended solids, biochemical oxygen demanding substances, and other chemical parameters to levels below the standards set by the state pollution control agency. The water hyacinth-covered secondary lagoon utilized in this experiment had a surface area of 0.28 hectare (0.70 acre) with a total capacity of 6.8 million liters (1.5 million gallons), receiving an inflow of 522,100 liters (115,000 gallons) per day from a 1.1 hectare (3.8 acre) aerated primary sewage lagoon. These conditions allowed a retention time of 14 to 21 days depending on the water hyacinth evapotranspiration rates. The desired purity of final sewage effluent can be controlled by the water hyacinth surface area, harvest rate, and the retention time. (Author)

A low-cost solar home heating system to supplement existing warm-air heating systems is described. The report is written in three parts: (1) a brief background on solar heating, (2) experience with a demonstration system, and (3) information for the homeowner who wishes to construct such a system. Instructions are given for a solar heating installation in which the homeowner supplies all labor necessary to install off-the-shelf components estimated to cost \$2,000. These components, which include solar collector, heat exchanger, water pump, storage tank, piping, and controls to make the system completely automatic, are available at local lumber yards, hardware stores, and plumbing supply stores, and are relatively simple to install. Manufacturers and prices of each component used and a rough cost analysis based on these prices are included. This report also gives performance data obtained from a demonstration system which was built and tested at the Langley Research Center. (Author)

Feb 77, 59p Rept nos. NASA-CR-155150, BCL-OA-TFR-77-1  
Contract NASW-2800

Keywords: \*Sewage treatment, \*Water pollution, Aquaculture, Industrial wastes, Solid wastes, \*Water treatment, \*Aquatic weeds, Interviews, \*Water hyacinth.

The status of activity in the user community for water hyacinth-based wastewater treatment was evaluated. The principal technique used was that of interviewing people who either (1) were known to be engaged in hyacinth research or development or (2) had made inquiry to NASA about hyacinth systems. About 40 non-research organizations and a similar number of research organizations were contacted. As a result of the interviews and a review of the relevant literature, it was concluded that hyacinth systems have the potential for providing a lower cost way for small cities to meet increasingly stringent effluent requirements. A limited amount of full-scale demonstration of hyacinth systems has been carried out during the past two years, but the yield of design data has been small. Several organizations are currently planning construction

of experimental full-scale hyacinth-based wastewater treatment systems during 1977-1978.

**Comparative Reclamation of Potable Water from Biofilter and Activated Sludge Effluents at the Stander Water Reclamation Plant.**

S. H. V. Vanblerk, J. Prinsloo, and J. Vanleeuwen. 1977, 9p  
Conf-Presented at the Intern. Conf. On Advan. Treat. And Reclamation of Wastewater.

Keywords: Activated sludge, \*Water treatment, Water reclamation, Calcium oxides, Fluid filters, Industrial plants, \*Sewage treatment, Physical chemical treatment, Activated sludge treatment, South Africa.

## APPROPRIATE TECHNOLOGY ABSTRACTS

The reclamation of water from biofilter humus tank effluent and activated sludge effluent by a physical-chemical process was studied at a 4,500 cu m d<sup>-1</sup> water reclamation plant. Lime clarification followed by quality equalization, ammonia stripping, recarbonation, sand filtration, chlorination, active carbon adsorption, and chemical stabilization produced a high quality potable water from humus tank effluent. Water was reclaimed from activated sludge effluent utilizing the same process without quality equalization and ammonia stripping. The simplified process was easier to control and rendered a product water of comparable quality. In processing activated sludge effluent, consumption of chemicals was less and reclamation costs were reduced by 20 to 30%, depending on the size of the plant.

Contract EC-77-C-01-5084, EC-77-A-31-1034  
Subm-Sponsored by NASA Prepared in Cooperation with Portland Cement Assoc.

Keywords: \*Energy conservation, Heat storage, Industrial energy, Economic analysis, Feasibility analysis, Industrial wastes, Manufacturing, Waste utilization, \*Waste heat utilization, \*Cement, Industries.

In the manufacture of cement, literally trillions of Btu's are rejected to the environment each year. The purpose of this feasibility study program was to determine whether thermal energy storage could be used to conserve or allow alternative uses of this rejected energy. This study identifies and quantifies the sources of rejected energy in the cement manufacturing process, established use of this energy, investigates various storage system concepts, and selects energy conservation systems for further study. Thermal performance and economic analyses are performed on candidate storage systems for four typical cement plants representing various methods of manufacturing cement. Through the use of thermal energy storage in conjunction with waste heat electric power generation units, an estimated 2.4 x 10 to the 13th power Btu/year, or an equivalent on investment of the proposed systems are an incentive for further development.

analysis, Technology utilization, \*Bioconversion, Canada, \*Wood wastes, Solid waste disposal, Reclamation, Biomass.

The British Columbia Wood Waste Energy Co-ordinating Commission was formed to evaluate the potential increased use of wood waste as an energy source in British Columbia. As part of this program, the committee commissioned a study of the technology available for recovering energy from wood waste and evaluation of the merits of various systems available for energy recovery. The terms of reference of the study may be summarized as follows: (1) identify potential applications in the forest-products industry for wood-waste fuels to replace fossil fuels; (2) identify and assess the relative merits of the various classes of systems for wood energy conversion; and (3) identify and evaluate specific existing commercial and pilot-scale systems for wood-energy conversion with emphasis on all possible end uses of each system.

**Study of the Situation and the Needs in Africa Relating to Meteorological Telecommunications.**  
G. A. Delorme, and J. M. Rainer. Mar 78, 104p Rept no. ESA-CR(P)-1091  
Contract ESA-3530/78-F-FC(SC)

Keywords: Africa, Weather stations, International cooperation, Aircraft communication, Communication satellites, Data collection platforms, Data links, Meteorological satellites, Point to point communications, Radio communication, Spacecraft communication, Underwater communication, \*Meteorology, France, Weather communication.

The organization of meteorological telecommunications at global and African regional level is recalled and the situation concerning the operation of the African regional and national networks with reference to WMO recommendations is reviewed. Operation of the various components of the regional plan is examined: point-to-point circuits, radio broadcasts, networks for assembly of synoptical, and ship and aircraft data. The shortcomings and deficiencies in the use of equipment and with the operation of the system are noted and prospects for improvement are listed. The advantages of circuits using underwater cables and communication satellites over HF radio circuits are stressed, as is the adaptation to the needs of the national SSB (single sideband) HF networks. In the case of a developing continent, utilization of space systems for meteorological telecommunications, which has already started with WEFAX dissemination and the collection of data, seems to have a real future. Taking into account the reliability of service by satellite - and apart from the transmission of data from the National Meteorological Center to the Regional Telecommunication Hub (RTH) which is akin to collection - all the other telecommunication functions required for meteorology can be carried out through broadcasts. Proposals for a satellite telecommunications system for meteorological needs are made.

**Photovoltaic Power Systems for Rural Areas of Developing Countries.**  
L. Rosenblum, W. J. Bifano, G. F. Hein, and A. F. Ratajczak. 1979, 19p Rept nos. NASA-TM-79097, E-9921  
Conf-Presented at the Intern. Seminar on Solar Energy, Tokyo, 5-10 Feb. 1979; Sponsored by the United Nations and Govt. Of Japan.

**Keywords:** Developing nations, Photovoltaic conversion, Rural areas, Technology utilization, Utilities, Arizona, Cost effectiveness, Educational television, Industries, Solar cells, Upper Volta, \*Photovoltaic power system, Developing countries, \*Electric power.

Systems technology, reliability, and present and projected costs of photovoltaic systems are discussed using data derived from NASA. Lewis Research Center experience with photovoltaic systems deployed with a variety of users. Operating systems in two villages, one in Upper Volta and the other in southwestern Arizona are described. Energy cost comparisons are presented for photovoltaic systems versus alternative energy sources. Based on present system technology, reliability, and costs, photovoltaics provides a realistic energy option for developing nations.

**Assessment of the Potential of Solar Thermal Small Power Systems in Small Utilities.**  
Final Report.  
P. Steitz, L. G. Mayo, and S. P. Perkins, Jr. Nov 78, 222p Rept nos. NASA-CR-158093, JPL-1060-14 Contract JPL-954971  
Subm-Prepared for JPL and Doe.

**Keywords:** Economic factors, Solar generators, Utilities, Concentrators, Parabolic antennas, Rankine cycle, Solar energy conversion, \*Electric power, Electric power plants, \*Solar thermal power plants, Tower focus power plants, Assessments, Economic analysis.

The potential economic benefit of small solar thermal electric power systems to small municipal and rural electric utilities is assessed. Five different solar thermal small power system configurations were considered in three different solar thermal technologies. The configurations included: (1) 1 MW, 2 MW, and 10 MW parabolic dish concentrators with a 15 kW heat engine mounted at the focal point of each dish, these systems utilized advanced battery energy storage; (2) a 10 MW system with variable slat concentrators and central steam Rankine energy conversion, this system utilized sensible thermal energy storage; and (3) a 50 MW central receiver system consisting of a field of heliostats concentrating energy on a tower-mounted receiver and a central steam Rankine conversion system, this system also utilized sensible thermal storage. The results are summarized in terms of break-even capital cost... The break-even capital cost was defined as the solar thermal plant capital cost which would have to be achieved in order for the solar thermal plants to penetrate 10 percent of the reference small utility generation mix by the year 2000. The calculated break-even capital costs are presented.

Stuttgart Univ. (Germany, F.R.). Forschungsinst. Windenergie-technik.  
**Expert Opinion on Wind Energy Conversion Systems Designed by Hermann Honnef.**  
Final Report.  
H. Doerner. Dec 77, 80p Rept no. BMFT-FB-T-77-35 Subm-Sponsored by Bundesmin. Fuer Forsch. U. Technol.

**Keywords:** Windpower utilization, Systems engineering, Aerodynamic characteristics, Cost effectiveness, High altitude, Rotors, Test facilities, Towers, Turbine blades, Turbines, Windpowered generators, \*Wind energy, Wind power, \*Turbines, Comparison.

The plans by Hermann Honnef for using wind power by means of large-scale wind energy conversion systems with regard to the proposed technical design and their presently expected cost-effectiveness were assessed. The conclusion that the findings and experience of the past few decades have shown that this type of wind energy conversion systems using contra-rotating, multi-blade turbines are not economical. The cost-effectiveness of this type was compared unfavourably with the advanced type of free-running, two-bladed turbines. The assertion that wind conditions at altitudes between 200 and 500 m were sufficiently explored for the purpose of wind energy facilities, is not valid.

**Investigation of a Generator System for Generating Electrical Power, to Supply Directly to the Public Network, Using a Windmill.**  
C. Tromp. Aug 79, 159p Rept no. NASA-TM-75497 Contract NASW-3199

**Keywords:** Electric generators, Windpowered generators, Windmills, Windpower utilization, Current converters (Ac to dc), Electric networks, Electric potential, Electric power transmission, Energy conversion efficiency, Stators, Synchronous motors, Transformers, Voltage regulators, Wind velocity, \*Wind energy, \*Electric power, Translations. Wind power generation, Electric power plants, Wind power plants.

A windpowered generator system is described which uses a windmill to convert mechanical energy to electrical energy for a three phase (network) voltage of constant amplitude and frequency. The generator system controls the windmill by the number of revolutions so that the power drawn from the wind for a given wind velocity is maximum. A generator revolution which is proportional to wind velocity is achieved. The stator of the generator is linked directly to the network and a feed converter at the rotor takes care of constant voltage and frequency at the stator.

Indian Space Research Organization, Ahmedabad. Space Applications Centre.  
**Satellite Instructional Television Experiment. Television Comes to Village: An Evaluation of Site.**  
B. C. Agrawal. Oct 78, 107p Rept no. ISRO-SAC-TR-09-78

**Keywords:** Educational television, Satellite television, Social factors, Agriculture, Children, Culture (Social sciences), Education, \*India, Parents, Programs, Rural areas, \*Education, \*Television.

The design and conclusions of India's satellite instructional television experiment (SITE) are presented and discussed. The socio-cultural changes triggered by the introduction of satellite TV were the central interest of the investigation. Seven villages, one each from six clusters and Kheda, about 20 to 30 km away from an urban centre and least contaminated by urban influence were selected. The field work was divided into three phases: pre-SITE, during-SITE, and post-SITE. Anthropological field methods were the main tools of data collection. The data were analyzed at two levels; household and village. Instructional, recreational, and children's programs were broadcast. Results indicate that, due to TV exposure, a number of innovations were adopted. Also, viewers' attendance was found to be intimately linked to agricultural and religious activity cycles of the village. The major implications which can be drawn to provide planning inputs for future national satellite based TV systems are summarized addressing problems in program type, schedules, and language differences.

**A Horizontal Axis Sail Windmill for Use in Irrigation.**  
S. K. Tewari. Mar 79, 22p Rept no. NAL-TN-54

**Keywords:** Windmills, Irrigation, Horizontal axis windmills, Wind energy, Wind power, \*Wind energy, Wind power, \*Turbines, Comparison.

## APPROPRIATE TECHNOLOGY ABSTRACTS

**Keywords:** \*Irrigation, Windmills, Windpower utilization, Windpowered pumps, Electric generators, Farms, Gears, Windpowered generators, \*Wind energy, \*Turbines.

Some basic considerations in the design and development of a horizontal axis windmill, intended primarily for irrigation in small farms from shallow open wells are described. This windmill has six triangular sails sweeping a circle of 10 meters in diameter and is an adaptation from Greek sail windmills. For the construction of this windmill, all efforts are made to use materials and parts readily available in the hardware market except for the gear boxes. The cost of material and parts is approximately \$900 which excludes cost of machining and fabrication charges. Preliminary performance tests indicate a pumping rate of 6300 to 11,000 liters/hour over a head of 6.85 meters in wind speeds of 10 to 16 km/hr.

**Solar Radiation on Inclined Surfaces.**  
May 80, 82 Rept no. NP-25081

**Keywords:** Data bases, India, Short wave radiation, \*Solar energy, Solar radiation, Tables (Data), Data acquisition, Electromagnetic radiation, Incident radiation, Radiation measurement, \*India.

Mean monthly values of daily shortwave radiation on inclined surfaces are presented for 13 locations in India. Values of direct, diffuse sky, reflected, and total shortwave radiation incident on an inclined surface are given for 9 slope angles (measured from the horizontal) and 8 aspects. All the data are computed using measured values of the total shortwave radiation on a horizontal surface according to the techniques described. Maximum and minimum values of direct solar radiation during each month are underlined and marked by asterisk respectively. Actual and potential users of radiation data, particularly those in the fields of agriculture, horticulture, forestry, architecture, heating and ventilating engineering, and photovoltaic sys-

tems, it is hoped, would find this publication useful in planning and designing of solar radiation devices.

**Marine Biomass: Algae as Source of Energy.**  
L. Edler, T. Vonwachenfeldt, and L. Emmelin. Apr 80, 115p Rept no. NE/BIO-80/12

**Keywords:** \*Algae, Biomass energy production, \*Energy, Marine environments, \*Methane, Baltic sea, \*Bioconversion, Coastal water, Fermentation, Shallow water, Sweden, Foreign technology.

Calculations based on data from laboratory and field measurements indicate that a production of as much as 115 tons of algae (dry matter) per hectare and year could be achieved. Culture of marine algae along the Swedish coast would probably take place in shallow, sheltered waters. Using a succession of naturally occurring species a growing season of 240 days could be achieved. With a production of 115 tons dm/ha/1 year/1 an output of approximately 110 MWhT/ha/1 year/1 of methane gas would be feasible using anaerobic fermentation. The area of the Baltic inside the 5 m depth curve is 19,000 sq km. If 10% of this area were available, a production of around 20 TWhT of gas annually would be the maximum potential of the system. A system is described for growing algae in the shallow marine environment. Energy analysis of the system indicates that approximately 5% of the energy output from an algae based methane plant would be required for growth, harvesting and conversion to methane.

Delegationen for Energiforskning, Stockholm (Sweden).  
**Production of a Raw Material for Energy Production in Agriculture.**  
G. Hellsroem. Apr 80, 48p Rept no. DFE-31

**Keywords:** \*Agriculture, Biomass energy production, Farm crops, Fuel production, \*Crops, \*Fuels, \*Leguminous plants, \*Plants (Botany), \*Sweden, Cost estimates, Hydrocarbon fuels, Rural land use, Vegetation growth, Foreign technology.

The total amount of energy in products produced by Swedish agriculture was estimated to 80 TWh: 30 TWh for cereals, 15 TWh for grass and leguminosae, and 35 TWh for straw and other agricultural wastes. Of this production a large part will be used as food even in the future. New plants that would produce more energy than the ones traditionally grown in Sweden are discussed. Also other types of energy from agriculture are discussed such as methane from manure, methanol from gasification processes, and ethanol from fermentative processes. Costs were estimated from different alternatives.

Contract DEN3-180, DE-AI01-79ET-2G485

**Keywords:** \*Agriculture, Energy conversion efficiency, \*Management planning, \*Philippines, \*Photovoltaic power system, Photovoltaic conversion, Power conditioning, Feasibility analysis, Food processing, Irrigation, Market research, Storage, Technology assessment.

The market potential in the Philippines for stand alone photovoltaic (P/V) systems in agriculture was assessed. Applications include: irrigation, postharvest operation, food and fiber processing and storage, and livestock and fisheries operations. Power and energy use profiles for many applications as well as assessments of business, government and financial climate for P/V sales are described. Many characteristics of the Philippine agriculture and energy sector favorably influence the use of P/V systems. However, serious and significant barriers prevent achieving the technically feasible, cost competitive market for P/V systems in the agricultural sector. The reason for the small market is the limited availability capital for financing P/V systems. It is suggested that innovative financ-

ing schemes and promotional campaigns should be devised.

Oak Ridge National Lab., TN.  
**Environmental Issues and Site Selection Criteria for Small Hydropower Projects in Developing Countries**  
G. F. Cada, and F. Zadroga. Mar 81, 55p  
Contract W-7405-ENG-26

**Keywords:** Developing countries, \*Hydroelectric power, \*Environmental impacts, Feasibility studies, Land use, \*Site selection, Socio-economic factors, Water resources.

Small Hydropower Projects (SHPP), i.e., those with capacities of 1000 kW or less, have great potential for elevating the standard of living and contributing to the economic growth of isolated rural communities in developing countries. However, construction and operation of a SHPP can result in adverse environmental impacts that should be considered in the initial stages of site selection and development. Environmental concerns can be factored into a site selection process both at the prefeasibility and feasibility stages. The prefeasibility study is the process by which a large number of potential sites is reduced to a much smaller number of candidate sites based on coarse-grained engineering, socioeconomic, and environmental criteria. Although many of the factors determining the suitability of a given site at the prefeasibility stage involve basic engineering or economic questions (e.g., availability of water and demonstrated need for power), four fundamental environmental issues that should be addressed are discussed in this report. The feasibility study is the final stage of site selection, where a relatively small number of candidate SHPP sites are examined in greater detail and the best are selected for development. Potential environmental impacts of SHPP's are discussed, and a checklist of environmental data that should be collected in order to judge the significance of the projected impacts is provided. Finally, recommendations are made as to the necessary train-

Contract EY-76-S-05-5099

Keywords: \*Textile industry, \*Energy conservation, Data compilation, Energy consumption, Materials, Research programs, Tables, Industries.

Energy conservation potential of each major process (batch and continuous) is estimated in this Phase I report. The approach was to gather process energy-consumption data from available literature and selected companies and to develop a production matrix by wet process within the industry. For Phase II, equipment and procedure modifications are being developed to demonstrate energy savings. (ERA citation 04:050281)

Contract EY-76-S-05-5099

Keywords: \*Textile industry, Color, Cost benefit analysis, Dyes, Education, \*Energy conservation, Energy consumption, Graphs, Numerical data, Processing, Research programs, Resource conservation, Tables, Textiles.

Phase I developed a profile of the energy consumption of major energy intensive wet processes in the textile manufacturing industry and identified major energy intensive wet processes where energy conservation research would be most productive. It is briefly described and Phase II developed and demonstrated, on a pilot or full scale basis, energy conserving modifications for selected processes identified in Phase I and analyzed additional areas of energy research identified in Phase II; examined cost-benefit relationships of proposed process modifications; and disseminated research results to the industry through short courses, workshops, trade publications, organizations, and relevant Georgia Tech courses. Some of the more promising advancements in the wet processing area discussed are dyeing, preparation of fabrics, and finishing. (ERA citation 05:024300)

**Production of Sugarcane and Tropical Grasses as a Renewable Energy Source. Second Annual Report, 1978-1979**  
1979, 134p  
Contract ET-78-S-05-5912

Keywords: \*Grass, \*Sugarcane, Feasibility studies, Field tests, Greenhouses, Moisture, Plant growth, Production, Renewable energy sources, Solar drying, \*Fuels.

Research continued on tropical grasses from Saccharum and related genera as sources of intensively-produced, solar-dried biomass. Categories of candidate grasses include short-, intermediate-, and long-rotation species. These categories are based on the time interval required for maximum dry matter production, and on future management requirements of energy crops for intensive co-production with food crop commodities. Year 1 studies at the greenhouse and field-plot levels were continued and broadened during Year 2. This included candidate screening, importation and quarantine of new clones, breeding, controlled nitrogen and water regimes, chemical growth control, tissue expansion and maturation control, seeding rates, harvest frequency, and variable row spacing. Second-year studies were extended to the project's field-scale and mechanized-harvest phases. These include initial economic analyses for the short-rotation phases. These include initial economic analyses for the short-rotation category of candidate species. (ERA citation 05:017513)

**Creating a Ceramics Industry on the Blackfeet Reservation.**  
Emmett F. Deady, Saul S. Geffer, Natalie Marra, and Robert F. Custard. Sep 65, 203p  
Contract EDA-14-20-0650-1379

Keywords: Economics, Montana, Industries, Ceramic materials, Feasibility studies, Labor, Commerce, Employment, Management engineering, \*Ceramics, \*Industrial Plants, Ceramics industry, Indian reservations, Area redevelopment.

The study reports that there exists at the Blackfeet Reservation a sufficient labor pool endowed with ceramic production capabilities and that all other factors controlling the success of such an industry are in evidence, provided the enterprise can be financed. It resolves that the plant should be directed to the production of art pottery, particularly fine figurines and pottery designed to reflect the American Indian tradition. It determined that the optimum method of production is slip casting but recommends flexible molding as soon as practical and suggests lines of experiments so directed. The study examines the market for Indian art pottery and recommends specific items at specific prices, and undertakes to predict sales quotas of such items. It shows that there is an annual sales of \$21,000,000 in the U. S. alone of art ceramic items and that there is no commercially produced Indian pottery of any significance at this time. It proposes that a \$100,000 penetration of this market is less than one-half of one percent, and concludes that this is feasible. The study recommends a program of facilities and equipment starting with a 4,940 square foot plant employing 20 people to be expanded to a 10,000 square foot plant employing 129 people, with a corollary ceramics industry to employ another 125 over a ten year program. It proposes a plan of implementation including management, capital, labor, and facility requirements over a ten year period to be financed with an investment of \$250,000 and shows that a break-even point is possible by the end of the first full year of operation. **Feasibility of Processing Tropical Fruit Concentrates in Puna, Hawaii.**  
Jun 65, 48p Rept no.  
Prepared in cooperation with Economic Development Administration, Washington, D. C.

Keywords: Economics, Hawaii, \*Fruits, \*Beverages, Feasibility studies, Processing, Dehydrated foods, Pectins, Costs, Concentration (Chemistry), Food, Industries, \*Food processing, Area redevelopment.

A pilot plant operation to determine the feasibility of processing tropical fruits with acerola plant equipment was a definite success. The technicians who carried out the pilot plant operation have concluded it is technically possible to produce high quality concentrates from passion fruit, guava and papaya on a commercial scale. No serious technical problems were encountered in the operation. In making these concentrates, the technologists attempted to get the highest brix reading possible instead of stopping at a lower and possibly more practical level of concentration. Subsequent product development work by the technologists proved satisfactory products could be made utilizing these concentrates. These products were jams, jellies, nectar bases, 2nd flavorings. An economic analysis of a projected full-scale commercial operation resulted in a very optimistic profit picture. These results apply only to the Puna District of Hawaii which offers unique advantages to the proposed operation. (Author)

Forest Products Lab., Madison, WI.  
**Houses Can Resist Hurricanes.**  
Research paper  
L. O. Anderson, and Walton R. Smith. Aug 65, 52p  
Rept no. FPL-33  
Prepared in cooperation with Southeastern Forest Experiment Station.

Keywords: Construction materials, Tropical cyclones, \*Building materials, \*Housing, \*Natural hazards, Tropical cyclones, Structures, Damage control, Hurricane, Foundations (Structures), Storms.

The report is based on a study of hurricane damage to man-made structures over a period of years. Not all damage can be eliminated, but a very high percentage of damage observed in the past could have been avoided with simple, inexpensive commonsense principles applied to building construction. Some of these principles are demonstrated here--especially in respect to the value of good foundations and the importance of ties between parts of the structure. (Author)

**Metal-Working Industry Training Manual.**  
1957, 184p Rept no. Technical Bull-62

Keywords: Instruction manuals, Machine shop practice, Industrial training, Material forming, Metals, Dies, Material removal, Heat treatment, Industrial equipment, Operation, Supervisory personnel, Management engineering, \*Training, \*Machine tools.

The manual contains material about the manufacturing practices and operational methods in the metal-working industry, relating principally to the use of machine tools and related equipment for manufacturing component parts of final products. It explains the efficient utilization of metal-working equipment, and allied problems of tooling, plant lay-out, methods, and the development of a program to assist the industry on production problems through a training program. This training program has been developed for senior management personnel, work managers, and foremen for the proper selection of machinery; utilization of machine tools; layout of production line; design, use, and making of jigs and fixtures; problems involving setup, machine loading, machine speeds, testing and quality control, selection of cutting tools, tool designs, tool-making and tool maintenance; and safety devices and programs in the shop. ### Plant Requirements to Set Up and Operate a Brass Foundry.

Revised ed.

May 59, 85p

Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, DC

**Keywords:** \*Industrial plants, Material forming, \*Brass, Management engineering, Copper alloys, Aluminum alloys, Magnesium alloys, \*Casting, Molding, Costs, Industrial equipment, Manufacturing methods, \*Foundries.

The manual deals with subjects concerning brass foundry operations and techniques. However, matters pertaining to the casting of other metals in the nonferrous category have been included, since it is quite generally the practice in America to utilize identical facilities to cast brass, bronze, zinc, aluminum, magnesium and other nonferrous metals. The manual includes current costs of labor, machinery, equipment and supplies, as well as additional information relative to engineering, training, safety, markets, sales, financial and economic factors.

### Plant Requirements for Manufacture of Mineral Wool.

Revised ed.

Mar 62, 40p

Prepared in cooperation with Vitro Engineering Co., Washington, DC.

**Keywords:** Industrial production, Thermal insulation, Manufacturing methods, Costs, Management engineering, Industrial equipment, \*Industrial plants, \*Mineral wool.

The purpose of this report is to present basic information relative to the establishment of a mineral wool plant in a foreign country. Mineral wool may be manufactured from rock, slag, or glass, any one of which may be processed from a molten state into a fluffy, light-weight mass of fine intermingled mineral fibers composed of complex silicates. This report pertains to

the fabrication of loose and granulated mineral wool from slag. These materials are used mainly for thermal insulation by the building trades. When mineral wool is to be supplied to manufacturers of specialized acoustical and filter products, chemical analysis and control of the fiber and completed wool will be necessary to assure conformance to the customer's specifications. This plant will require a substantial capital investment and a reasonable number of skilled workmen. Raw materials should be available locally, particularly slag and coke. Generally, the less developed countries do not offer particularly favorable conditions for the production of mineral wool, nor a large enough domestic market to lead to a profitable venture. However, such a plant would be feasible in an industrially developing country where a large volume of new construction and industries would create a sufficient demand. A favorable factor would be association of the mineral plant with a factory processing high and low temperature mineral wool felts, industrial batts, blankets, blocks, boards, and molded pipe insulations. ### A Small Sawmill Enterprise.

Revised ed.

Apr 59, 101p

**Keywords:** \*Wood, Industries, Machine tools, Portable, Saws, Operation, Costs, Labor, Money, Commerce, Law, Safety, Industrial equipment, Storage, Insects, Maintenance, Efficiency, Industrial procurement, \*Industrial plants, \*Small businesses, \*Sawmills.

The publication contains machinery and processes for conversion of logs into lumber as an industrial enterprise, including both the mechanical and business aspects. It does not include the processes of extracting logs from forests or the seasoning of products of sawmills. It is intended to be useful to those considering the establishment of a small sawmill business in foreign countries, and may be helpful to some of those already conducting such a business. The selection, erection, and operation of small circular sawmills of standard and traditional types are described. (Author)

### Lumber Seasoning.

Edward C. Peck, and John M. McMillen. Jul 61, 165p

Prepared in cooperation with Forest Products Lab.

**Keywords:** \*Wood, Aging(Materials), Deterioration, Shrinkage, Moisture, Drying, Manpower, Handling, Degradation, Heat, Insects, Air, Costs, Storage, Foundations(Structures), Structures, Tables, Safety.

The report deals with the seasoning of lumber, especially by comparatively simple means applicable throughout the entire world. Seasoning is important because the removal of moisture from green wood is generally necessary before the material can be safely stored or used to best advantage. For particular uses, drying to a low moisture content is required. While the main part of this report refers to methods and techniques of air drying and kiln drying lumber, such other phases are covered as basic properties of wood, principles of moisture removal, protection of green wood from attack by fungi and insects, and dry lumber storage.

### Plant Requirements for Manufacture of Cotton Dresses.

Revised ed.

Apr 59, 40p

## APPROPRIATE TECHNOLOGY ABSTRACTS

Prepared in cooperation with Methods Engineering Council, Pittsburgh, Pa.

**Keywords:** Industrial production, \*Clothing, Cotton textiles, Management engineering, Management control systems, Management planning, Manufacturing methods, \*Industrial plants, Site selection, Buildings, Power supplies, Industrial equipment, Fuels, Labor, Personnel, Costs, Money, Budgets, Safety, Training, Law, Machines, Commerce.

The cotton dress industry is described as one of the most competitive manufacturing businesses in the United States. For this reason, a great amount of effort has been applied to making the processes as efficient as possible. Despite rising costs of materials and labor, high productivity makes it possible to produce stylish, simple dresses that retail in the United States for three to four dollars. Most of these are produced in small and medium-sized factories such as the one described in this manual. (Author)

Jan 60, 36p  
Prepared in cooperation with Aries Associates, Inc., Stamford, Conn.

**Keywords:** \*Glass, Material forming, Manufacturing methods, Castings, Furnaces, Industrial production, \*Industrial plants, Management engineering, Costs.

The manufacture of glass products of artistic merit requires highly skilled and experienced artisans, not only for the design and execution of the finished articles, but for the formulation and manufacture of batches of fine glass and crystal of desired working properties and attractive color and lustre. This report emphasizes the process of making the glass batch itself, the plant and equipment required, and general procedures of furnace work and annealing, rather than the skilled techniques of blowing, pressing, cutting or engraving required to produce and decorate the finished article. The operation of the proposed plant consists essentially in the manufacture of batches of various types of glass, largely for inventory, and the working up of glass into finished articles in a sequence of operations, many of which proceed more or less independently of the glass manufacturing operation. Stanford Research Inst., Menlo Park, CA.

**Water, Mineral, and Forest Resources in Regional Economic Development.**

Robert K. Arnold, Ernest C. Harvey, Genie E. Willeke, and Joseph E. R. Carrier. Sep 66, 235p  
Contract C-300-66

Keywords: \*Natural resources, United States, Economics, \*Mineral products, \*Forestry, Water, Organizations, Fiberboard, Atmospheric precipitation, Evaporation, Industries, Metals, \*Water resources, Area planning and development, Regional economic development.

Extensive literature and numerous programs exist concerning the development of forest, mineral, and particularly, water resources in specific areas of the United States. Comparatively little of this work is directed specifically to the relation between development of resources and regional growth, much less to the specific programs and policies of a regional organization whose objectives are to maximize regional economic development. It is the purpose of the report to provide some guide by indicating the relevant sections of the literature. This is essentially a task of interpretation. The growth of income and employment in regions of the United States may be explained in terms of the location and growth of basic industries and their cumulative effect on other industries. Analysis of the future growth potential of any region may be viewed as the study of the future growth of individual industries, the factors that influence their location, and the interrelations among various industries. (Author)

**The Role of Small-Scale Manufacturing in Economic Development. The Experience of Industrially Advanced Nations as a Guide for Newly Developing Areas.**

Nov 57, 172p  
Prepared in cooperation with Stanford Research Inst., Menlo Park, Calif.

Keywords: Industries, Economics, Production, Growth, Training, Factories, Agriculture, Fishes, Commerce, Mobilization, Switzerland, Transportation, Textiles, Australia, USSR, United States, Japan, Sweden, Management engineering, \*Industrial development, \*Small businesses, Industrial management.

The manual is concerned with the appropriate structure of manufacturing in underindustrialized but developing countries. It is not concerned with the overall process of economic growth. It assumes that some degree of industrialization will occur in underindustrialized societies and inquires only as to the proper balance between large-scale and small-scale manufacturing units. More specifically, it examines the proposition that economic growth may be retarded by overemphasis upon large-scale industrial operations. (Author)

International Cooperation Administration, Washington, D. C. Technical Aids Branch.

**Improved Productivity in the Factory. A Jobbing Machine Shop.**  
Feb 58, 31p

Prepared in cooperation with Methods Engineering Council, Pittsburgh, Pa., and Creative Arts Studio, Inc., Washington, D. C.

Keywords: Management planning, Manufacturing methods, Human engineering, Design, Production, Maintenance, \*Machine tools, Machine shop practice, Safety, Quality control, Inventory control, Production control, \*Management techniques.

This brochure outlines some of the important factory conditions which lead to low efficiency. Its purpose is to show how step-by-step remedial action may be taken to correct these conditions, and improve productivity with no major expenditure for new machinery or equipment.

**PB-177 914/9** PC A03/MF A01  
International Cooperation Administration, Washington, D. C. Technical Aids Branch.

**Automobile Body Corrosion Prevention. Maintenance and Repair Procedure.**  
Jul 60, 29p

Keywords: Passenger vehicles, Corrosion inhibition, Cargo vehicles, Maintenance, Finishes and finishing, Epoxy plastics, Polyester plastics, Filling, Lead alloys, Specifications, \*Automobiles, \*Corrosion.

Contents: Introduction; Automobile body coatings; Failures of coatings and corrosion; Primary maintenance recommendations; Maintenance procedures; Suppliers; Tools and equipment used for repairs to metal automobile bodies; Bibliography of government specifications; Conclusion.

**PB-177 915/6** PC A05/MF A01  
International Cooperation Administration, Washington, D. C. Technical Aids Branch.

**Men's Work Shirts. Capabilities, Requirements, Techniques and Operations.**

1961, 76p  
Prepared in cooperation with Wolf Management Engineering Co., Chicago, Ill. A Reference for use in Planning New Industrial Facilities.

Keywords: \*Clothing, Industrial production, Costs, \*Industrial plants, Quality control, Management engineering, Standards, Manpower, Manufacturing methods, Employment, Production control, Industrial equipment.

The report is concerned with the inexpensive work shirt. Being a staple item of clothing and sold in great volume under highly competitive conditions, it must necessarily be produced efficiently, using the best methods and equipment, if the enterprise is to be successful. Fortunately, the processes are well defined and comparatively simple, and the machinery required is readily available at reasonable cost. The basic information and factual data required for consideration before engaging in the business are presented. (Author)

**Papermaking and Manufacture of Paper Products as a Small-Scale, Semi-Mechanized and Cottage Industry. Materials--Processes--Equipment Organization--Economics--marketing.**

J. Ben Lieberman. Jun 58, 251p  
Prepared in cooperation with Stanford Research Inst., Menlo Park, Calif.

Keywords: Paper industry, Economics, \*Paper, Manufacturing methods, Feasibility studies, Site selection, Industrial training, Natural resources, Organic materials, Materials, Agriculture, Test methods, Analysis, Sociology, China, Japan, \*Industrial plants.

This Manual is designed to provide a general picture of the factors which must be considered in establishing and operating a small-scale papermaking industry. It should prove useful in creating interest in the subject, and serve to give enough understanding of the related considerations to help government officials, other leaders and entrepreneurs determine whether the potential deserves more-detailed attention. Also, special segments of the Manual may serve as separate manuals or references for specific phases of the subject.

**PB-177 918/0** PC A03/MF A01

**Plant Requirements for Manufacture of Buckets, Pails and Pans.**

Revised ed.  
May 59, 38p  
Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, D. C.

Keywords: \*Containers, Industrial production, \*Kitchen equipment and supplies, Manufacturing methods, \*Industrial plants, Costs, Zinc coatings, Corrosion inhibition, Tin coatings, Costs, Labor, Industrial equipment, Personnel, Training.

Galvanizing is a process by which iron or steel is coated with zinc to render it rust-resistant. There are three general methods for accomplishing this. They are, (1) the hot-dip method; (2) the electro-galvanizing method; and (3) the 'Sherardizing' method. This manual describes the hot-dip method because it is the most widely used and because of its economic advantages over the other methods. The tinning process is accomplished by the same basic method. The galvanizing process is used in the manufacture of buckets, pails, wash tubs, water tanks and many industrial products. It cannot be used in any product which comes in contact with food, however, because the zinc will contaminate the food. Tinned products, on the other hand, are used extensively for food containers. There is very little tinning done by the hot-dip method in the United States due to the high cost of tin. In fact, many manufacturers are using aluminum, stainless steel, and copper for cooking utensils instead of tinplate. In other parts of the world, however, tin would probably be cheaper than other applicable materials. (Author)

**Plant Requirements for Manufacture of Ceramic Dinnerware.**

Revised ed.  
May 59, 41p  
Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, D. C.

Keywords: \*Kitchen equipment and supplies, Industrial production, Ceramic materials, \*Industrial plants, Industrial equipment, Manufacturing methods, Costs, Labor, Commerce, Standards, Personnel, Training, Safety, \*Ceramics, Dinnerware.

Dinnerware production in the United States ranges from very high production from highly mechanized factories to very small potteries which produce in small quantities. The smaller potteries generally depend on the unusual in design in marketing their ware, while the larger potteries rely heavily on competitive pricing. The products of the plant discussed in this report are those comprising a line of relatively heavy, serviceable, semi-vitreous dinnerware. A representative assortment of products consists of cups, saucers, 6-inch and 10-inch plates, salad bowls, and large serving bowls. (Author)

**PB-177 921/4** PC A03/MF A01  
International Cooperation Administration, Washington, D. C. Technical Aids Branch.

**Plant Requirements for Manufacture of Men's Socks.**

Revised ed.  
May 59, 33p  
Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, D. C.

Keywords: Socks, Industrial production, \*Industrial plants, Costs, Labor, Industrial equipment, Dyes, Budgets, Manufacturing methods, Training, Personnel, \*Clothing.

The purpose of this manual is to present basic information for establishing and operating a small plant for the manufacture of men's socks. Except for a small percentage all socks are made by the knitting process. There are about 4,000 knitting industries in the United States. A few of the products made in these industries include underwear, underwear and hosiery. However, this manual will be devoted exclusively to men's socks. The term sock used in this manual denotes a short stocking as distinguished from a hose that is longer. (Author)

**PB-177 922/2** PC A03/MF A01  
Agency for International Development, Washington, D. C. Communications Resources Div.

**Plant Requirements to Set Up and Operate a Plastic Molding Plant.**

Revised ed.  
Apr 59, 49p  
Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, D. C.

Keywords: \*Plastics, Industrial production, Plastics industry, \*Industrial plants, Industrial equipment, Manufacturing methods, Molding, Dies, Labor, Costs.

It is assumed, for this prospectus, that the market for the products of any plastic molding plant which might be established will be primarily non-industrial. It is also assumed that a hypothetical plan, if sound from the point of view of both economics and technical considerations, would be helpful. Accordingly, such a plan with the capital requirements limited to approximately \$240,000 is presented. (Author)

**PB-177 923/0** PC A03/MF A01  
International Cooperation Administration, Washington, D. C. Technical Aids Branch.

**Plant Requirements for Manufacture of Sanitary Ware.**

Revised ed.  
May 59, 39p  
Prepared in cooperation with Andrews (George H.) Associates, Inc., Washington, D. C.

Keywords: Toilet facilities, Industrial production, Ceramic coatings, Industrial equipment, \*Industrial plants, \*Sanitaryware, \*Foundries, Manufacturing methods. Iron, \*Casting, Costs, Labor, Standards.

The process of enameling cast iron sanitary ware imparts a hard, glossy surface to the object. This coating permits easy cleaning and presents a pleasing appearance. It is stain resistant, highly acid resistant, and, if properly applied and given reasonable care in usage, will last almost indefinitely. The type of plant described in this report is one which could be set up in almost any part of the world. The basic raw materials -- pig iron, scrap iron, and sand -- are ordinarily obtainable in all parts of the world. Where special skills would be required for the production of the ware, modern machinery has been substituted wherever feasible. In this way, the operation can be started more readily and quality standards can be reached sooner. (Author)

**Plant Requirements for Manufacture of Terry Cloth.**

Revised ed.  
May 59, 37  
Prepared in cooperation with Andrews (George H.) Associates, Inc., Washington, D. C.

Keywords: Textiles, Industrial production, Labor, Costs, Industrial equipment, \*Clothing, \*Textile industry, \*Industrial plants, Manufacturing methods, Cotton, Terry cloth.

Terry cloth is cotton fabric covered with loops on one or both sides. It requires two sets of warps and one set of filling; one set of warp threads is held taut while weaving, the other set is released to form the loops. When woven in linen (rare) or bleached cotton in narrow widths, terry cloth is called 'Turkish toweling.' This usually has two loops (called double-loop terry). It can also be made in checks, stripes, or plaid, or bleached and dyed. Uses include towels, wash cloths, robes, bath mats, bathing suits or sunsuits, linings for suits and coats, draperies, spreads, bedrolls, and potholders. Terry cloth readily absorbs and retains moisture, making it suitable for use as wash cloths and toweling. It is used in some applications because of its efficiency as an insulating medium and because it is readily washed when soiled. Due to the fact that the applications of single-loop terry cloth are numerous and in good volume, the discussion is concerned with the production of cloth of that type in a mill of minimum economic size. (Author)

International Cooperation Administration, Washington, D. C. Technical Aids Branch.

**Plant Requirements for Manufacture of Wood Tables and Chairs.**

Revised ed.  
May 59, 46p  
Prepared in cooperation with Andrews (George H.) Associates, Inc., Washington, D. C.

Keywords: \*Kitchen equipment and supplies, industrial production, Wood, Manufacturing methods, \*Industrial plants, \*Furniture, \*Wood products, Industrial equipment, Costs, Labor, Tables and chairs.

The purpose of this manual is to provide information for the establishment and operation of a small plant to manufacture low cost wooden tables and chairs. The table and chairs shown in this manual are designed for low cost production and are not intended for the luxury market. Local customs might require some change in the designs. However, design changes that will add substantially to the cost of the product should be avoided. (Author)

**PB-177 926/3** PC A04/MF A01  
International Cooperation Administration, Washington, D. C. Technical Aids Branch.

**Plant Requirements to Set Up and Operate a Meat Processing Plant.**

Revised ed.  
May 59, 54p  
Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, D. C.

Keywords: Meat, Processing, \*Industrial plants, Industrial equipment, Personnel, Production control, Labor, Costs, \*Food processing.

The purpose of this manual is to provide information about the establishment and operation of a small meat processing plant. The manual provides a description of the slaughtering and of the processing of meat products as these activities might be carried out in a small plant in United States. It includes a description of the plant layout, equipment and personnel and estimates of investment, operating costs and revenues. Local situations might make some changes desirable but the plant described is satisfactory for a considerable variation in materials and methods of processing and product without serious modification of the design and operation. **Plant Requirements to Set Up and Operate a Dry Cleaning Plant.**

Sep 57, 47p  
Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, D. C.

Keywords: \*Industrial plants, Cleaning, Textiles, Cleaning compounds, Solvents, Industrial equipment, Costs, \*Clothing, Driers(Apparatus), Presses(Machinery), Packaging, Safety, Dry cleaning.

The small dry cleaning plant described in this brochure is intended to clean and finish all types of clothing, bedding, draperies and many other kinds of household textile articles. Dry cleaning textile articles generally is done by washing them in petroleum solvent, such as benzene, or in synthetic solvent, such as perchlorethylene. The equipment for one of these processes cannot be used for the other process. The dry cleaning process carried out in a synthetic-solvent plant using perchlorethylene is described in this brochure. (Author)

International Cooperation Administration, Washington, D. C. Technical Aids Branch.

**Plant Requirements for Manufacture of Asbestos - Cement Pipe.**

Jun 60, 33p  
Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, D. C.

Keywords: \*Pipes(Tubes), Industrial production, \*Asbestos, Cements, Manufacturing methods, \*Industrial plants, Industrial equipment, Costs, Labor.

As indicated by the name, asbestos-cement pipe is made of asbestos fibre and Portland cement, usually in combination with some other material like silica. A curing agent may also be added but this is not always necessary. In the United States the market for asbestos-cement pipe is large and growing steadily. This favorable situation has grown from the fact that these products meet many of the needs for pipe with the physical characteristics of asbestos-cement products. They are inexpensive and with unusual resistance to various corrosive fluids found in many pipe systems. Asbestos does not burn and is a very poor conductor of electricity. (Author)

## APPROPRIATE TECHNOLOGY ABSTRACTS

**PB-177 933/9**

**PC A04/MF A01**

International Cooperation Administration, Washington, D. C. Technical Aids Branch.

**Plant Requirements for Manufacture of Soybean Oil and Meal.**

Sep 61, 62p

Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, D. C.

**Keywords:** \*Vegetable oils, Processing, \*Industrial plants, Industrial equipment, Phospholipids, Food, \*Food products, Glycerols, Acids, Yeasts, Colloids, Paints, Insecticides, Purification, Labor, Costs, \*Soybeans.

Soya beans, which are native to eastern Asia, are now grown extensively in all parts of the world. They thrive best in the temperate zone. The uses for the end product are many, at latest count numbering some 150 separate applications. The principal uses of the expelled crude soya oil include seven basic categories: (1) Technical refined oils; (2) Edible refined oils; (3) Edible lecithin; (4) Technical lecithin; (5) Medicinal lecithin; (6) Glycerine; (7) Acids. (Author)

**Plant Requirements for Manufacture of Chalk Whiting.**

Sep 61, 36p

Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, D. C.

**Keywords:** \*Mineral products, Industrial production, Limestone, Material separation, Particle size, Manufacturing methods, \*Industrial plants, Industrial equipment, Labor, Costs, Chalk whiting.

The report is primarily concerned with the absolute minimum operation for manufacture of true chalk whiting and, therefore, discusses the simplest manufacturing processes utilizing the crushing, grinding, and screening of high purity chalk. However, sources of raw material for the manufacture of true whiting are limited. This, and many other factors have led to the development of whiting substitutes with their alternate methods of manufacture and production. The CaCO<sub>3</sub> chemical industry that has grown up in the United States in recent years is an outstanding example of such a development. Before presenting the detailed description of the manufacture of true chalk whiting, sufficient information on whiting substitutes is included to present a basic concept of methods for their production and to offer to present a basic concept of methods for their production and to offer sources of information for further study of operations that may be adaptable to any locale and its available raw materials. **Plant Requirements for Manufacture of Ready-Mixed Concrete.**

Mar 62, 31p

Prepared in cooperation with Andrews (George H.) Engineering Associates, Inc., Washington, D. C.

**Keywords:** \*Concrete, Industrial production, Manufacturing methods, \*Industrial plants, Industrial equipment, Labor, Costs.

The purpose of this report is to present basic information for establishing a manufacturing plant in a foreign country to produce dry ready-mixed concrete in paper bags. Dry ready-mixed concrete is made of various mixtures of cement and aggregates and these mixtures are called by various names such as 'dry mix cement,' 'Ready mixed concrete' and 'ready mixed cement.' Some of the names used are trade names, such as 'homecrete' and 'sackerete.' Some of these may include additives or admixtures that are intended to produce certain desirable qualities in the final product. For the purposes of this report the product is called ready-mixed concrete. This product is made up of cement, sand and gravel, without any special additives. This ready-mixed concrete is intended for use by homeowners and others who need only a small amount of concrete at any one time and who cannot, therefore, buy the cement, the sand and the gravel separately, to their advantage. The ready-mixed concrete is kept on hand in retail hardware stores, paint stores, lumber yards, and building supply places. Thus it always will be convenient for any homeowner or other possible user who may wish to purchase small quantities for immediate use. (Author)

**Plant Requirements for Manufacture of Brooms.**

May 57, 14p

Prepared in cooperation with Thompson and Williams, Washington, D. C.

**Keywords:** Industrial production, Maintenance equipment, Costs, Buildings, Wages, Materials, Manpower, Quality control, Manufacturing methods, Industrial equipment, \*Industrial plants, \*Brooms.

The manufacture of brooms offers a profitable business opportunity adaptable to broad variation in initial investment required, locale, raw materials, labor requirements, climate, and market conditions. Existing buildings may in many cases be adapted to house a modern broom factory with little or no alteration. The principal requirements are adequate floor space, a source of power, and ventilation. Fireproof buildings are desirable especially for warehousing space since fire insurance rates in many locations are high for any operation involving combustible materials. (Author)

**Plant Requirements for Manufacture of Mechanical Springs.**

Revised ed.

Jul 62, 48p

Prepared in cooperation with Vitron Engineering Co., Washington, D. C.

**Keywords:** \*Springs, Industrial production, Manufacturing methods, \*Industrial plants, Industrial equipment, Production control, Specifications, Machining, Labor, Costs.

The purpose of this report is to present basic information relative to the establishment of a plant to manufacture mechanical springs in a foreign country. Springs may be produced in a wide variety of shape, such as coiled, spiral, flat, leaf, ring, and numerous special shapes. They may be of various types, depending upon their intended use, such as tension, compression, torsion, extension, cantilever, etc. The ends may be formed to most any shape desired, such as tightly coiled, looped, squared, hooked, open, etc. A plant may manufacture only stock type springs for general purpose use, or it may manufacture a wide variety of shapes, types, and sizes to a customer's individual specifications. The plant described herein has been planned and equipped to produce initially the six general groups of spring products listed under \*Product

Specifications. This production can be varied to suit local conditions. A plant of this type will require a substantial capital investment and a relatively skilled labor force. Obviously, an economically underdeveloped country could not profitably support a plant of this type, as a market for spring products will not exist until general industrial development is quite advanced. However, in a suitable environment, a plant such as this can realize substantial profits with efficient management, production controls, and sales effort. (Author)

**Silk Screen Printing on Textiles.**

Technical inquiry service.

Jul 60, 41p

Prepared in cooperation with Mayer (Frank) Engineering Co., Los Angeles, Calif.

Keywords: Textiles, Printing, \*Clothing, Fibers(Natural), Fibers(Synthetic), Dyes, Costs, Labor, Industrial equipment, Colors, \*Industrial plants.

Silk screen printing varies in complexity from a simple operation to a highly scientific art. If confined to the use of pigmented dyes, a satisfactory product can be produced for cottage industry with a minimum of equipment and without the need of highly trained and skilled color chemists and special equipment for dye setting and aging. It is basically a service industry since no product is produced; instead printing is done to supply the needs of other manufacturers for decoration of their products. One thousand to twelve hundred yards of material can be printed on five tables by six people in one eight-hour shift. (Author)

**Management Primer: Principles and Practices of Productivity - Records and Reports.**

May 62, 53p Rept no. Training manual-96

Keywords: Management planning, Reports, instruction manuals, \*Management techniques, Reports, Public opinion, Accuracy, Standardization, Classification, Manpower, Law, Records, Handling, Production, Costs, Money, Accounting.

Written records are the memory of management. They preserve facts and figures by setting them down in writing for future use. Without records and the experience they preserve there would be no scientific management today. Recorded experience helps management in the planning and scheduling of its operations. By comparing recorded performance with planned performance supervisors can control the progress of enterprise activities. And, by using records to obtain detailed information on all enterprise developments, businessmen can base their decisions on experience and thus reduce the risks of misjudging enterprise strength. Records also protect management against legal difficulties, because they create and preserve evidence on internal and external transactions that may be questioned by the public, by government, by the courts, or by other enterprises. **Investigation of Active Working Tools of Subsoil Irrigation Machines.**

V. P. Chalyi, and V. S. Burd. 28 Apr 68, 4p  
Trans. of Traktory i Selkhoz mashiny (USSR) n9 p30-1 1966, by William R. Gill.

Keywords: Earth-handling equipment, Irrigation systems, Agriculture, Rural areas, \*USSR, Water, Soil mechanics, Tractors, \*Irrigation, \*Agricultural machinery, Graphs(Charts), Translations.

Subsoil irrigation differs from the conventional method of irrigation in that water, together with fertilizers and chemicals, is introduced directly in the subsoil horizon with the help of a special tool. The working tool forms a fluctuating shaped mole cavity at a depth of 20-35 cm. Great depth of covering water by the accepted line of machines (4-6 rows) and the loosening of the compact subsoil horizon creates difficulty in matching subsoil irrigation machines with the manufactured lines of cultivator tractors because of inadequate tractive power. Therefore decreasing the tractive resistance of the working tool is a real problem. Proceeding from this it is expedient to use active working tools in subsoil irrigation machines. (Author)

**Determination of the Optimum Parameters of Rotary Tiller Cultivation Equipment.**

V. S. Surilov. 3 May 68, 13p  
Trans. of Vsesoyuznyi Nauchno-Issledovatel'skii Institut Mekhanizatsii Selskogo Khozyaistva, Moscow. Sibirskii Filial. Nauchnye Trudy (USSR) n3 p165-94 1966, by William R. Gill.

Keywords: Earth-handling equipment, Agriculture, Rural areas, Costs, Cost effectiveness, Economics, Tractors, Mathematical analysis, \*USSR, Soil mechanics, \*Agricultural machinery, Graphs(Charts), Rotary tillers, Translations.

The effectiveness of agricultural machines and tools depends on the extent their parameters suitably characterize the technological process of the worked media and the conditions of employment of a given machine. The basic parameters of rotary tiller row crop cultivators are: the width of cut B, forward speed V, and feed to the knife S. To supplement the parameters of the equipment we also take the mechanical efficiency and the coefficient of resistance to movement. The important qualities of the machine depend on the basic parameters of the equipment: the specific productivity, the specific cost, agrotechnical level of the treatment. (Author)

**Urban Planning in Developing Countries.**

Ideas and Methods Exchange No. 61

Lloyd Rodwin. 1966, 68p

Keywords: \*Urban planning, \*Venezuela, Management planning, Urban areas, Housing, Population, Transportation, Industries, Site selection, Terrain, Control, Natural resources, Petroleum, Roads, Buildings, Economics, Ciudad Guayana(Venezuela).

The study describes the job of the city planner in developing countries. It does this by examining a single case, the planning of Ciudad Guayana, a city being built in Venezuela, and it looks at this city planning endeavor from two points of view. It examines this still on-going enterprise from the standpoint of urban planning technique - how does the urban planner in such a setting do his work. - and in addition, it tries to suggest something of the functions which such an urban planning enterprise may have in a developing country. For while certain features of the case described are characteristic only of Venezuela, or of the problems of new cities, many of the problems confronted and tech-

**Plant Requirements for Manufacture of Building Bricks.**  
Jun 67, 34p

Keywords: \*Bricks, Manufacturing methods, \*Industrial plants, Costs, Labor, Specifications, Machine tools, Site selection, Buildings, Money, Budgets, Industrial production, Clay, Shale, Mud, Driers(Apparatus), Inventory, Economics, Tropical regions, Area planning and development.

The purpose of this report is to present basic information for establishing and operating a building brick plant in a country with a tropical or semi-tropical climate. The information includes general manufacturing methods, plant layout, and costs of materials, equipment, and labor. The plant described is considered to be the economic minimum in size which utilize suitable equipment and methods. Products are to be simple and varieties limited in order that costs may be kept to a minimum. (Author)

**Leader Training for Aided Self-Help Housing.**  
Keith H. Hinchcliff. May 63, 40p

Keywords: \*Housing, Construction, Leadership, \*Training, Management planning, Training, Design, Teaching methods, Motivation, Indonesia, Buildings, Roads, Costs, Construction materials, Foundations(Structures), Industrial training, Heat, Site selection, Area planning and development, Self-help housing, Community action programs.

More than half of the world's families live in totally inadequate dwellings. This contributes to ill health, low productivity, inertia, and unrest. In highly industrialized countries where a home is usually built by contractor-builders and where the family pays for having the house built for them, it is found that the cost for good shelter is, for many, too high. In areas where industrialization is just beginning and where most houses are built by the families themselves the result is often an unsanitary, short-lived, vermin-ridden hut. Neither of these techniques is the answer for many of the world's ill-housed. A technique which offers much promise is called 'aided self-help' and as its name implies, it is a method to use the unused leisure time of the ill-housed families (often enforced leisure because of seasonal unemployment) and to use this with some form of aid so that the families may build better homes than they ever could, alone and unaided. This manuscript outlines how effective leaders may be trained. The methods suggested by the author based upon considerable experience in Indonesia may, we believe, be effectively used by those who are attempting to introduce the principle of aided self-help in housing. (Author)

Department of Housing and Urban Development, Washington, DC. Div. of International Affairs.  
**Proposed Minimum Standards for Permanent Low-Cost Housing and for the Improvement of Existing Substandard Areas.**  
Harold Robinson. May 66, 107p\*

Keywords: \*Housing, Standards, Latin America, Buildings, Law, Performance(Engineering), Heating, Construction, Sanitary engineering, Electrical equipment, Fire safety, Public health, Management planning, Design, Underdeveloped countries, Area planning and development, Plumbing.

At the request of the Latin America Bureau, Agency for International Development, these proposed minimum standards were developed by the Division of International Affairs, Department of Housing and Urban Development, for use in Latin America. They are based principally on codes, ordinances and standards obtained from countries in Central and South America and the Caribbean Area, and on discussions with officials and technicians of selected countries in these regions. In so far as possible, they are performance standards, rather than specification standards and thus are generally applicable to the entire region. These standards are not to be construed as 'desirable standards', but rather are intended to meet only the minimum basic needs of families of low income. Their purpose is, however, to provide these families with a dwelling which is structurally safe, reasonably durable and which will not require excessive maintenance or repair during the life of the mortgage. They are also intended to provide a decent environment and to serve as a guide to improving, at least on a temporary basis, substandard areas which lack even the minimum of amenities, or a semblance of order.

Keywords: Urban areas, \*Housing, Social sciences, Law, Economics, Population, Public opinion, Sewage, Urban planning, Advanced planning, Costs, Safety, Site selection, Employment, Public health, Structures, State-of-the-art reviews, Area planning and development, Squatters.

The report discusses the world-wide problem of 'squatters' in urban slums. The legal and economic problems associated with squatter villagers are examined.

**PB-179 383/5** PC A03/MF A01  
Department of Housing and Urban Development, Washington, DC.  
**Sewage Lagoons for Developing Countries.**  
Ideas and Methods Exchange No. 62, 302/12/1 Sewage Lagoons.  
Thomas Callaway, and Bernard Wagner. Jan 66, 41p  
Prepared in cooperation with Department of State, Washington, DC. Agency for International Development.

Keywords: Urban planning, Wastes(Sanitary engineering), \*Sewage disposal, Sewage, Wastes(Industrial), Rural areas, Housing, Humans, Drainage, Irrigation systems, Water, Site selection, Soil mechanics, Evapotranspiration, Advanced planning, Public health, BOD(Biochemical oxygen demand), Area planning and development, Sewage lagoons.

Many cities in developing countries lack acceptable community sewage disposal systems. The failure to provide safe, effective means of disposing of human and other wastes present problems, the seriousness of which cannot be overestimated. The cost of constructing adequate treatment plants often discourages their installation in cities with limited budgets. However, treatment is possible by means of sewage lagoons which are usually less expensive than more conventional methods. (Author)

**PB-179 385/0** PC A06/MF A01  
Department of Housing and Urban Development, Washington, DC. Div. of International Affairs.  
**Manual on Design for Low-Cost and Aided Self-Help Housing.**  
Ideas and Methods Exchange No. 37  
Wolcott C. Waggaman, and Robert Dodge. Jun 67, 111p

Keywords: Housing, \*Houses, Construction, Handbooks, Management planning, Design, Costs, Central America, West Indies, Puerto Rico, Cambodia, Iran, Surinam, Industrial training, Chile, China, Greece, Specifications, Construction materials, Organizations, Area planning and development, Self-help housing, Low-cost housing, Community action programs.

Since World War II, the desires-and real needs-for better homes have intensified. For economic, social, and political reasons great interest has developed in improving shelter for the ill-housed majority of the people of the world. In many countries, families, except those in the higher income group, build the houses they occupy. Self-help is the accepted way to build a house using local, readily available materials and the labor of each family. The basic principles of good design for aided self-help are really no different than those of good design anywhere. Effective arrangement; simple construction techniques; and efficient use of labor and materials, all considered in proper relation to local conditions, customs, desires, and taboos, can go far toward providing durable, livable houses within available money resources. **Operation III: Loaves and Fishes. A Model Community Action Program to Provide Nutritious Low-Cost Meals to the Elderly.**  
Final rept.  
Geneva Mathiasen, and Jack Ossosky. 23 Jul 56, 34p  
Contract OEO-79

Keywords: Food, Adults, Costs, \*Food services, Sociology, Aging(Physiology), Employment, Training, Education, Nutrition, Costs, Loaves and fishes operation.

The major purpose of this project is to provide nutritious meals and footcloths at low cost to older persons living on marginal or poverty level incomes. Meals will be prepared so that they may be eaten where purchased, or packaged so they may be carried home or delivered to the homebound when necessary. In addition to providing meals, the project will seek to stretch the limited incomes of the elderly through implementation of surplus food programs, food stamp plans, and the development of marketing, home economics and related consumer education. Social action in connection with matters of consumer concern and protection will be encouraged. The project will provide employment opportunities for residents of the community being served, including the elderly, as well as opportunities for volunteer services by those who can afford to give of their time. Intensive community relations and case finding will be undertaken to insure maximum utilization of the program by the elderly. (Author)

**Feasibility Study for Establishing a Bicycle Manufacturing Plant in Puerto Rico.**  
Final rept.  
Dec 68, 44p  
Contract DC-8-35352

Keywords: \*Industrial plants, Vehicles, \*Puerto Rico, Feasibility studies, Economics, Commerce, Assembling, Production, Costs, \*Bicycles.

A study was made to establish the economic feasibility of manufacturing bicycles to satisfy the small but growing internal Puerto Rican market. However, during the course of the investigation, the Consultants became aware of a series of developments in the United States bicycle market that, upon further investigation, led them to broaden the original scope of the study to include an evaluation of the feasibility of producing bicycles in Puerto Rico for sale in this market and for shipment to the United States. Nonetheless, the original concept of a local market-oriented factory has been kept intact, so the study provides an evaluation of that possibility independently of an export market. (Author)

Johns Hopkins Univ., Baltimore, MD. Dept. of Sanitary Engineering and Water Resources.  
**An Evaluation of the Problems of Sanitary Sewer System Design.**  
Final rept.  
John C. Geyer, and John J. Lentz. Sep 64, 114p\*  
FHA-564  
Technical studies publication.

Keywords: Sanitary engineering, Sewage, \*Sewage disposal, Wastes(Sanitary engineering), Pipes, Water supplies, Housing, Maintenance, Costs, Urban areas, Rural areas, California, Maryland, Florida, Missouri, Evaluation, Sewer systems.

General problems facing sewer designers have been studied using field data collected in four U. S. communities. Analysis of these data indicates that basic causes of maintenance difficulties are tree roots, accumulations of debris in the absence of roots, other causes, and in areas having cohesionless sub-soil, sewer cave-ins. Proportionately fewer blockages occur when grades are moderate, and proportionately more occur at the upper terminals of the sewers. In eight-inch pipe, manhole spacing has little effect on the labor costs of stoppage relief. Emphasis is placed on statistical techniques for estimating domestic sewage flow. Flow of rainwater and groundwater was at times found to be excessive in all systems studied. Limited data on costs of operating and maintaining sewage pumping stations are reported and evaluated. Department of Forestry and Rural Development, Vancouver (British Columbia). Forest Products Lab.  
**Wood Species and Glues Influence Plywood Bond Durability.**  
Information rept.

P. L. Northcott. Aug 68, 24p\* Rept no. VP-X-42

Keywords: Plywood, Bonding, Wear resistance, \*Adhesives, \*Wood, Specifications, Thickness, Roughness, Classification, Exposure, Regression analysis, Degradation, Loading(Mechanics), Effectiveness, Graphs(Charts).

The research demonstrates that durability of 3/8 in., 3-ply plywood manufactured with a single glue is strongly dependent on the species of wood. Furthermore, the influence of species on durability tends to be different for each type of glue. Twelve 4'-square panels of plywood were manufactured from each of the combinations of six species of wood and ten glues. Plywood shear specimens were subjected to each of six bonding systems for times up to 160 days. (Author)

**Balsam Woolly Aphid-Infested Abies Wood as a Source of Pulp Fibre.**  
Information rept.  
K. Hunt. May 68, 25p\* Rept no. VP-X-39

Keywords: Hemiptera, \*Wood, Wood pulp,\*Pulp, Sources, Trees, Pest control, Chemicals, Life cycle, Damage, Eggs, Wind, Airborne, Climatology, Physical properties, Cell wall, Economics, Canada, Adelges piceae, Fir trees.

The life cycle of the balsam woolly aphid (*Adelges piceae* Ratzeburg) and its effect on trees and wood of various *Abies* species is briefly described. Several methods, natural and chemical, for controlling the pests are cited. The effect of advanced infestation on the quality of pulp produced from *Abies* wood by the different industrial processes is shown to include a reduction in yield of 10% and a decrease in strength of 20 to 30%. Recommendations regarding further pulp research are made in the light of various economic considerations. It is recommended that a detailed polysaccharide analysis be carried out on the aphid-infested wood of *Abies balsamea*. (Author)

**Conducting a Labor Force Survey in Developing Countries.**  
Sep 64, 183p Rept no. BLS-263

Keywords: Labor, Manpower studies, Statistical data, Collecting methods, Personnel management, Questionnaires, \*Employment, Classification, Data processing systems, Management planning, Sampling, Recruiting, Training, Developing countries, Interviews.

This manual is intended as a training guide for the professional staff which is conducting a labor force survey in developing countries. Such a survey is the best and cheapest method of obtaining dependable information on total employment, unemployment and underemployment. The manual describes procedures in non-technical language. It covers all phases of the survey from purpose to final publication and provides a substantial amount of reference material. (Author)

Contract HUD-H-1011

Compiled from Phase I reports prepared by Building Systems Development, Inc., Contract HUD-H-971; Westinghouse Electric Corp., Contract HUD-H-970; and Abt Associates, Inc., Contract HUD-H-969. See also Volume 2, PB-184 122 and Volume 4, PB-184 124.

Keywords: \*Housing, \*Urban planning, Housing projects, Construction, Urban areas, Design, Configuration, Materials, Structural parts, Manufacturing methods, Assembling, Cooling, Heating, Electrical equipment, Industries, Indexes, Modular construction, Low cost housing.

The objective of this report is to present for public information the useful data on technological innovation in low-cost housing collected by the three Phase I Contractors. During Phase I, a large file of data on innovative systems and components was accumulated. Some of these systems and components had been tested and others were in the design stage only. Some had been used in foreign countries but not in the United States. This file of data has been assembled in this volume for use as a general guide to those concerned with the planning and construction of low-cost housing. (Author)

**A Feasibility Study for a Small LOG Sawmill on the Fort Apache Indian Reservation in Central Arizona.**  
Apr 69, 137p\*  
Contract C-8-3529

Keywords: \*Wood, Cutting, \*Industrial plants, Arizona, Rural areas, Feasibility studies, Industrial production, Forestry, Sources, Costs, Configuration, Operation, Predictions, Economics, Sociometrics, Indian reservations, \*Sawmills, Fort Apache(Arizona).

The study investigated the feasibility of constructing an additional sawmill facility on the Fort Apache Indian Reservation to saw small logs which the existing mill cannot handle profitably. The study included a survey of the wood supplies and the selection of the optimum log conversion configuration to profitably convert the available small logs into saleable lumber and chips. Eight configurations were studied for converting the small logs to lumber. An in-depth analysis resulted in projected operating statements which indicate that this small log mill should be economically advantageous to the Tribe. (Author)

**Keywords:** \*Housing, Standards, Design, Specifications, Costs, Structural properties, Rural areas, Management planning, Decision making, Economics, Money, Law, Public health, Life expectancy, Sociology, Alaska, Low cost housing, Poverty, Ethnic groups, Indian reservations, Problem solving, Building codes.

This report, in three volumes, is the result of a study conducted by the Institute for Applied Technology of the National Bureau of Standards for the Department of Housing and Urban Development. This study investigated the following hypothesis: 'It is hypothesized that, if adequate performance standards for low-cost housing could be developed, and if they were broadly used, an important and fundamental way would have been opened to accommodate the introduction of cost-reducing innovations into the design of low-cost housing.' The report finds this hypothesis to be generally correct, but emphasizes the need for the development of the necessary knowledge to implement the performance concept. This volume contains appendices titled as follows: Needs of the rural poor in low cost housing; Housing of Indians on reservations and of Alaskan natives; Conceptual structure of low cost/low income housing; Nature of the problem; Implementation of the performance concept in regulatory and acceptance systems such as the minimum property standards.

**Study of Factors Affecting Feasibility of Low Head Hydroelectric Generation.**  
Final rept.  
Albert G. Mercer. Mar 69, 29p\* Rept no. CER68-69AGM26  
Contract DI-14-06-D-6586

**Keywords:** Power plants, Feasibility studies, \*Turbines, Hydraulic systems, Hydrostatics, Hydrodynamics, River currents, Electric power production, Site selection, Costs, Electrical equipment, Diffusers, Efficiency, \*Dams, State-of-the-art reviews, Europe, North America, \*Hydroelectric power, Low head hydroelectric power production, Hydraulic turbines, Turbogenerators, Head(Fluid mechanics).

The feasibility of generating electricity from hydropower developments having low heads depends on the characteristics and the cost of the available equipment as well as the cost of producing electricity from alternative sources. The recent development of the tubular turbine has resulted in many advantages for the economical development of low head hydropower. Many units with heads as low as 10 feet have been built in Europe. Twenty five feet appears to be the practical lower limit in North America. The flowing water of rivers provides a possible source of energy for generating electricity. This energy could be developed using turbines similar to some modern airfoil wind turbines but the economics are such that this source will probably never be exploited. Head, itself, is the most important factor affecting the feasibility of low head hydropower. Given two well designed low head plants of equal discharge capacity, the lower head plant will be less feasible because the kw output will be lower but the costs will be higher. The lower head plant will have larger, slower turning turbines and larger inlet and outlet passages. (Author)

Report on Identification of Irrigation Return Water in the Subsurface - Phase II.

Keywords: Water supplies, Hawaii, Irrigation systems, Quality control, Agriculture, \*Irrigation, \*Water quality, Water wells, Sampling, Nitrates, Phosphates, Bromides, Carbonates, Fluorides, Calcium compounds, Magnesium compounds, Silicates, Sulfates, Rainfall, Chemical analysis, Solids, Tropical regions, \*Irrigation, Pearl Harbor(Hawaii), Irrigation return water, Oahu Island.

A joint research effort was undertaken by the Water Resources Research Center and the Honolulu Board of Water Supply to investigate the physical and chemical characteristics of irrigation return water in Pearl Harbor-Waipahu, Oahu, an area used for tropical agriculture. The project was started in 1967 and was expanded in 1968 to include Kahuku, Oahu and Central and West Maui. Well samples and profile samples were obtained with a thief sampler in the Pearl Harbor-Waipahu area and composite samples were obtained mainly from pumping wells in other areas. In addition, both spring and stream waters in the Pearl Harbor-

Waipahu area were analyzed for a number of inorganic constituents. Stream waters in the main study area were observed to contain appreciable quantities of nitrate, phosphate, bromide, bicarbonate, and fluoride. Similar trends were observed with the spring samples including increases of calcium, magnesium, silica, sulfate, and nitrate. Well waters from the main study area were evaluated according to Visher and Mink's index constituents, silica, sulfate, and nitrate, and other significant ionic compositions. General analysis of major constituents evidenced a cyclical trend in concentration, either related to seasonal rainfall and irrigation practices, or both. (WRSIC abstract)

**An Experimental Cooperative Farming Plan in Chile.** William C. Thiesenhusen. Oct 65, 43p Rept no. LTC-8

Keywords: Agriculture, \*Chile, Management planning, Production, Organizations, Wages, Law, \*Agricultural cooperatives, Cooperative farming, Land reform.

The report describes the organization and first-year operations of a small cooperative farm created by the Catholic Church. The 16 farm families are under administrative guidance of a hired administrator. Credit and technical assistance are furnished by INPROA, the church's agency to administer land reform on church properties. Data on farm income and expenses indicate that families earned more during the first year of the cooperative than in previous years. They did not earn enough to make payments on land purchased. If management of the cooperative can be improved, the cooperative probably can become free of debt. However, trained or experienced managers are scarce. (Author)

**Integrating the Rural Market into the National Economy of Mexico.**  
Delbert T. Myren. Jun 68, 13p Rept no. LTC-46  
Trans. of Comercio Exterior (Mexico) v17 n9 p706ff Sep 67. Presented at the Primer Congreso Nacional de Mercadotecnia, 21-23 Jul 1966, Cuernavaca, Morelos, Mexico.

**Keywords:** Economics, \*Mexico, Rural areas, Commerce, Population, Sociometrics, \*Agriculture, Fertilizers, Money, Management planning, Reviews, Translations.

The document has classified Mexico's agriculture into three sectors: A modern, commercial farming sector which consists of 20 percent of the farm families, a growing transitional sector which includes a rough 45 percent of the farm families, and the traditional or subsistence sector - 35 percent of the farm families. No mass market for consumer goods will come into being, the author says, until 80 percent of the farmers sharply increase their purchasing power.

**PB-189 989/7** **PC A03/MF A01**  
Wisconsin Univ., Madison. Land Tenure Center.  
**Rural to Urban Migration: A Colombian Case.**  
Research paper  
William J. Flinn. Jul 66, 45p Rept no. RP-19

**Keywords:** Agriculture, Economics, \*Colombia, Population, Urban areas, Rural areas, Labor, \*Employment, Sociology, Housing, \*Migration.

The report presents the reasons for movement of farmers to urban areas. It discusses how rural to urban migration creates socio-economic development problems in both rural and urban sectors. The slum dwellers in shanty towns around cities believe that their housing, sanitation facilities, income, medical services, and education for children were better in the urban slums than in villages. Very few expressed a desire to return to rural areas. (AID abstract)

**Keywords:** \*Hydrology, Management planning, Storms, Urban areas, Drainage, Rural areas, Terrain, Floods, Control, Mathematical models, Programming(Computers), Storage, Dams, Deterrence, Design, \*Land use, Synthetic hydrographs, Flood routing, Surface water runoff, Watersheds.

Four synthetic hydrograph methods were applied on five watersheds in hopes of simplifying planning decisions for reserved space in valley bottoms of suburban headwaters. Both hydrograph and routing procedures were programmed for digital computer evaluation for the more than 300 cases considered. General conclusions include the following: (1) No simple rules can be given on width of floodways to planners. Each case must be individually investigated. (2) Computer methods greatly facilitate routing and synthetic hydrograph computations. (3) Generalizations are impossible because interactions occur between the method used, the return period, and the percentage of the watershed above the reservoir among others. (4) A great need exists for data-based methods for predicting suburban design hydrographs in ungaged situations. (5) A new course on urban hydrology was developed from the studies results. The course is designed to teach hydrologists the modern techniques which are being developed to solve this set of urban problems. (WRSIC abstract)

## APPROPRIATE TECHNOLOGY ABSTRACTS

Permeability, Hydraulic models, Floods, Storage, Rural areas, \*Kenya, Great Britain, \*Hydrology, Catchments, Surface water runoff, Culverts, \*Uganda.

The report describes networks of small rural catchments throughout Kenya and Uganda. The purpose of these is to provide data for the development of a design method for the estimation of waterway sizes for small bridges and culverts. The six catchments in each country are described. They have been sited to provide information on the effect on the runoff hydrograph of the following catchment parameters: (a) area, (b) spatial and temporal rainfall variability, (c) topography and soil type, (d) swamp. For each catchment a rainfall runoff correlation will be prepared, and unit hydrographs isolated. (Author)

**Formula for Growth: How to Make an Industrial Site Survey.**

Oct 69, 30p  
Paper copy available from Superintendent of Documents, GPO, Washington, D.C. 20402. as C48.8:IN2.

Keywords: Industries, \*Site selection, Urban areas, Industries, Terrain, Factor analysis, Urban planning, Rural areas, Mapping, Aerial photographs, Roads, Water supplies, Sanitary engineering, Hydrology, Law, Handbooks, Industrial sites, Economic development, Area planning and development, Zoning, Tax rates.

A firm seeking a location for a new plant needs a site ideal for both present use and future expansion. To back its efforts to attract new industry, a local economic development organization must be fully prepared to supply information on individual plant sites in the area and to point out the unique advantages of each site. The guide explains how to identify sites ideal for industry and how to assemble this information for use in attracting new and expanding companies.

**A Design Study on the Economic Use of Agricultural Wastes in Kansas.**

Kansas planning for development.  
Jan 69, 183p\* Rept no. 25  
Prepared in cooperation with Theracon, Inc., Topeka, Kans. and Kansas Economic Development Commission.

Keywords: \*Agricultural wastes, Utilization, Waste disposal, Effectiveness, Economic development, Kansas, Management planning, Benefit cost analysis, Research projects, Environmental engineering, Water pollution, Control, \*Waste recycling.

The report represents a study of agricultural wastes in Kansas and the technology available for economic utilization. The principal wastes that may provide raw materials for profitable utilization are identified and data on location and quantity of each waste are presented. The most important agricultural waste in Kansas comes from large cattle feedlots. Since disposal is costly to the cattle feeding industry utilization technology is sought to provide raw material for economic development. (Author)

**Study of Raw Material Costs for a Proposed Straw-Based Pulp Mill in the Vicinity of Moberge, South Dakota.**

Aug 70, 36p EDACOMM-70-001  
Contract C-9-35084

Keywords: Pulp mills, Cost estimates, Economic development South Carolina, Corrugating, Straw, Waste papers, Employment, Pulp, Feasibility, \*Pulp, \*Paper, \*Agricultural wastes, Straw based pulping, Technical assistance, Moberge(South Dakota).

The concept of establishing a mill to manufacture corrugating medium on land owned by the Standing Rock Sioux Indian Tribe in the vicinity of Moberge, South Dakota has been to take advantage of one of the area's abundant and relatively little-used resources, wheat straw, as a principal ingredient. The specific purpose of this study was to: (1) determine the availability of sufficient straw to support the proposed mill; (2) to determine various cost elements attendant to the col-

lection and storage of straw and the availability and procurement costs of the other principal ingredient of the mill's output - waste paper. (Author)

Jun 70, 110p\*  
Contract HUD-H-650

Keywords: Residential buildings, California, Rural areas, Construction management, Cost analysis, Construction materials, Drawings, Evaluation, Factor analysis, Statistical data, Time, \*Building materials, \*Houses, Low cost housing, Demonstration project..

The low income housing demonstration project is part of the search for means of developing housing to be utilized for low income domestic and often migratory farm workers in the western states. The objective was to study methods of construction, building materials and supplies, and building plans in three California areas which would produce inexpensive housing. A total of 26 units were built using a variety of construction techniques. Studies of the units and their occupants have been made and the results are recorded. The report reflects building costs and building construction features, as well as the amenities or undesirable features of these structures as seen through the eyes of professional building evaluators, housing authority officials, and the residents themselves. (Author)

**Water Measurement Procedures Irrigation Operator's Workshop.**

J. C. Schuster. Sep 70, 59p Rept no. REC-OCE-70-38

Keywords: \*Irrigation, Hydraulics, Water flow, Measurement, Manuals, Meetings, Instructions, Water meters, Discharge, Orifice meters, Venturi, Weirs, Flow meters, Ultrasonic radiation, Radiation measuring instruments, \*Water supply.

Water Measurement Procedures were written primarily as a teaching aid in presenting the fundamentals of water measurement to field personnel engaged in irrigation work. Technical material has been simplified to provide a clear understanding of water measurement devices and procedures. Basic hydraulics presented include the discharge equation, velocity head concept, orifice and weir relationships, and the effect of submergence. Factors affecting the accuracy of measurement such as work equipment, infrequent head measurement, and use of wrong measuring devices are analyzed. Commonly used devices and methods are discussed, including orifices, weirs, Venturi meters, Parshall and Venturi flumes, meter gates, constant head turnouts, and propeller meters; special devices and methods include vane deflection meters, acoustic and magnetic meters, and the dilution and radioisotope methods of measurement. Hints for troubleshooting poorly operating devices, suggestions to operators on how to do a good job, and a selected reading list for operators are given. (Author)

Contract DOT-OS-A9-003  
See also PB-195 292 and PB-195 293.

Keywords: \*Transportation, Developing countries, Economic development, Project planning, Economic analysis, Management methods, Highway transportation, \*Rail transportation, Factor analysis, Substitutes, Benefit cost analysis, Traffic engineering, Transportation models, \*Air transportation, Food transportation, Technology

The study was undertaken to assist developing countries in making economically rational choices in transport technologies--and thus to assist in their economic development and eventually to reduce the need for external capital assistance. The study uses cost simulation models for road, rail and air transport modes to develop guidelines for planners, taking account of the varying conditions of factor endowments (i.e., availabilities of labor, capital, and other resources) in the developing countries. Investment decisions involving choice of technology and mode may be expected to be sensitive to differences in prices of inputs. The sample problems of the report concern: A comparison of investment in a new rail facility and in a new road to serve a route between two traffic centers (nodes); and an evaluation of the various trade-offs involving vehicle technology and airport investment. (DOT abstract)

**PB-195 757/0** PC A04/MF A01

**Comprehensive Development Plan, Bath Charter Township.**

Apr 70, 64p

Keywords: Urban planning, Michigan, \*Land use, Education, Recreational facilities, Public buildings, Public utilities, Roads, Bath Charter Township(Michigan), Shopping centers.

The report contains an analysis of Bath Charter Township in terms of historical growth trends, existing situation, and projected needs. Specifically the report contains six major sections. The first of these is the Planning Perspective which denotes goals and policies as well as the Township's existing situation. Assumptions and projections are included in the second section termed Dimensions of Future Change. The third section portrays the Land Use Plan while the fourth and fifth sections assess the future needs for community facilities, utilities and streets, and provides necessary policies to guide their development. Implementation procedures such as zoning and capital improvement programs are discussed in the sixth section of the report. Projections and policies are made for the year 1990. (Author)

Rept. for Mar 66-Jun 67.  
1967, 474p

Keywords: Farm crops, \*Sierra Leone, Food, \*Marketing, Economic development, \*Vegetable oils, Nuts(Fruits) Root crops, \*Rice, Production, Consumption, Processing, Labor relations, Statistical data, Prices, Cost engineering, \*Crops, \*Peanuts, Palm oil, Ground nuts, Cassava, Retail trade, Wholesale trade.

The document covers the general economic environment in which the marketing system of Sierra Leone operates, how the market system is organized and how it functions, price changes over time and between areas, marketing costs, and ways of improving the marketing system so that it will contribute more effectively to the economic development of the country. Special attention is given to the marketing of rice, palm oil, groundnuts and cassava. (AID abstract)

**Artificial Recharge in Water Resources Management.**

Marvin J. Dvoracek, and Sam H. Peterson. 1970, 29p OWRR-B-041-TEX(4)

Keywords: Ground water recharge, Water supply, Arid land, \*Water resources, Management planning, Water conservation, Recharge wells, Semiarid land, Irrigation, Agriculture, \*Ground water, Sediments, Economic factors, Texas, Ogallala formation, Artificial recharge.

Water resources for arid and semiarid regions of the United States are only marginal at the present time

and new sources of water are no longer available. Artificial recharge techniques are presented as one method of partially alleviating the problem. Artificial recharge is presented in the context of the water depletion of the Ogallala formation on the High Plains of Texas. There, as in the United States as a whole, irrigated agriculture is the major water user. Several recharge mechanisms are discussed, such as recharge wells, shafts, holes, pits, trenches, rubble cones, and water spreading. All of the methods share the problem of sediment content in water used for recharge, but the problem is not insurmountable. In some cases economic value of artificially recharged water has already outweighed the limitations. (WRSIC-abstract)

**The Continued Development and Field Evaluation of the Aid Hand-Operated Water Pump.**

Final rept.

R. D. Fannon, Jr, and D. W. Frink. 28 Aug 70, 42p  
Contract AID/csd-2174

Keywords: Piston pumps, Design, Well pumps, Water distribution, Developing countries, Plungers, Valves, Bushings, Materials, Cost estimates, \*Water pumps, Hand operated piston pumps.

The document based on research carried out over a period of several years on the development of a simple, efficient, hand-operated piston pump for use in developing countries. It covers plunger-valve design, selection of optimum cup material, and the evaluation of cylinder coatings, foot valves, and handle pins and bushings. (AID abstract)

Joint Development Group, Saigon (Republic of Vietnam).

**Present Situation and Possibilities of Postwar Development of Inland-Fisheries in the Mekong delta.**  
Nov 68, 96p Rept no. Working Paper-42  
Contract AID/fe-291

Keywords: Aquaculture, Vietnam, Economic development, \*Fisheries, Fishing grounds, Hydrographic surveys, Ichthyosis, Rivers, Food processing, Agriculture, Mekong River, Mekong Delta, Fish marketing, \*South Vietnam.

The report describes the hydrographical and ichthyological features of the Mekong. Discusses the different methods of exploitation of natural water bodies and ponds, the processing and stocking of fishery products, the transportation and marketing aspects. Recommends the increase of fishing production to keep pace with population growth, raising the income of rural people, and strengthening the agricultural economy. Analyzes the interaction and integration of fisheries activities in the post-war development program. Appendices include a list of fish species in river and flooded areas of SVN and a check list of fish-culture species cultivated in SVN. A one-page bibliography is included. (Author)

**Water and Man's Health.**

Community water supply technical series  
Arthur P. Miller. Apr 62, 97p Rept no. CWS-TS-5

Keywords: \*Water pollution, Public health, \*Water resources, Public health, \*Diseases, Infectious diseases, Parasites, Water quality, Water supply, Radioactive wastes, Water consumption, Chemical compounds, Contaminants, Water chemistry, Toxicity, Humans, Water treatment, Mortality, \*Health.

Introductory sections of this booklet discuss the importance of water to human beings. Other sections consider parasites and water, relationship of water to other diseases and to chemical substances, particularly radioactive materials. (AID abstract)

**PB-196 352/9** PC A04/MF A01  
Joint Development Group, Saigon (Republic of Vietnam).

**A Description of Ocean Fish Marketing in Saigon.**  
Report for May-Jun 68

Nguyen Van Thuan, Nguyen Cao Dan, and Larry L. Pressler. Jun 68, 62p Rept no. Working Paper-24  
Contract AID/fe-291

Keywords: Marine fishes, \*Marketing, Economic surveys, \*South Vietnam, Commerce, Seafood, Cost engineering, Transportation, Cooperation, Interviews, Personnel, Economic development, \*Fishes, Saigon(South Vietnam), Wholesale trade, Retail trade, Cooperatives.

The report outlines the marketing aspects of ocean fish in the Saigon-Cholon urban complex based on four weeks of research visiting wholesale and retail markets, and interviews with dealers, boatowners, truckowners, police and consumers. It includes data on pricing, operations of wholesalers, transportation costs and retailers. Appendices contain information on the fishing cooperatives at Rach Gia and Ham Tan. (AID abstract)

**Fishculture Survey Report for Peru.**

R. O. Smitherman, and D. D. Moss. 30 Sep 70, 50p  
Contract AID/csd-2270

Keywords: Aquaculture, \*Peru, \*Fisheries, Surveys, Nutrition, Trout, Geography, Economic factors, Education, Bibliographies, Lake Titicaca.

The report surveys two regions to assess the status of trout fishery of Lake Titicaca and to provide technical advice on the development of warm-water aquacultures in the Amazonas Region. It includes data on geography, aspects of nutrition and economics, status of fisheries, government agencies responsible for fisheries, fisheries training and inland fisheries. Appendices include list of ornamental fishes exported from Amazonas and a list of fishes in the Iquitos area. (AID abstract)

**PB-197 157/1** PC A10/MF A01

**The Economics of Fish Protein Concentrate.**

J. W. Devanney, III, and G. Mahnken. 20 Nov 70, 202p\* Rept no. MITSG-71-3

Keywords: \*Fish protein concentrates, Economics, Nutrition, Developing countries, Feasibility, Econometrics, Benefit cost analysis, Cost effectiveness, \*Chile, Standards, Requirements, Analysis of variance, Sea Grant program.

The report examines the economic feasibility of fish protein concentrate in two contexts: as a nutritional supplement in the diet of a developing country, and as a competitive food additive in the United States. The report examines the subject with special reference to the role that the United States Government should play in the development of FPC. Fish protein concentrate designates any stable powder resulting from the removal of oil and water from fish which is aimed at human consumption. When we are referring to a particular variety of FPC, we will attempt to make this specialization clear either explicitly or by the context.

**Water Requirements of Sugarcane Under Irrigation in Lajas Valley, Puerto Rico**  
Roberto Vazquez. Jul 70, 42p Bull-224, UPRICO-WRRI-FR-71-5  
Also available as Rept. no. OWRR-A-005-PR(1).

Keywords: \*Sugarcane, Water supply, Irrigation, \*Puerto Rico, Soil water, Efficiency, Methodology, Fertilizers, Nitrogen inorganic compounds, Production, Lajas Valley.

Field experiments were conducted in Puerto Rico at the Lajas Substation to determine optimum soil moisture conditions necessary to produce maximum sugarcane and sugar yields. Twenty irrigation regimes were tested. Some of the plots were irrigated frequently and others were irrigated less frequently in the active root zone throughout the growing period. Nitrogen fertilizer treatments were tested at the rate of 200 and 300 pounds per acre per crop. Data were taken for a 13-month plant cane and two 12-month ratoons of sugarcane. The plant cane used more water than the ratoon crop. The mean consumption use per day was 0.160 inch for plant cane and 0.154 inch for ratoon in the frequently irrigated plots throughout the growing period. The average of the combined yields of a plant cane and two ratoons were 73.67 tons of sugarcane and 7.80 tons of sugar per acre in the frequently irrigated plots and 59.37 tons of sugarcane and 6.40 tons of sugarcane per acre in the less frequently irrigated plots. Water pollution control research series  
James P. Law, Jr. and Jack L. Witherow. Oct 70, 109p\* FWQA-13030-DYY-06/69

Keywords: \*Arid land, Water pollution, Nitrates, Sewage treatment, Water reclamation, Agricultural wastes, Irrigation, Denitration, Algae, Salinity, Desalting, \*Water quality, Industrial wastes, Ground water, Chemical removal (Water treatment).

An international conference entitled 'Arid Lands in a Changing World' sponsored by the American Association for the Advancement of Science Committee on Arid Lands and the University of Arizona, was held at Tucson in June, 1969. The report presents a selected

group of the papers presented at those sessions which should benefit those concerned with water quality management problems in arid regions. The title of the papers included in this report are as follows: Nitrate removal from agricultural wastewater; the effects of salinity standards on irrigated agriculture in the Colorado River basin; Problems of pollution of irrigation waters in arid regions; Water quality requirements and re-use of wastewater effluents; Salinity control in return flow from irrigated areas--a demonstration project; Water quality control problems in inland sinks; Natural pollution in arid land waters; Distillation of wastewaters: A water resource for arid regions; and Animal waste runoff--a major water quality challenge. Bureau of Commercial Fisheries, Washington, DC. Office of Foreign Fisheries (Translations).  
**Manual on the Biotechnology of the Propagation and Rearing of Phytophagous Fishes**  
May 71, 52p  
Trans. of Rukovodstvo po Biotekhnike Pazvedeniya i Vyrashchivaniya Rastitelnoyakykh Ryb, Moscow, 1970 72p, by Robert M. Howland.

Keywords: \*Fishes, Aquaculture, Manuals, Feeding habits, Nutrients, Algae, Phytoplankton, Breeding, Embryology, Physiology, Translations, Zooplankton, Phytophagous fishes, Cyprinidae.

The far-eastern phytophagous fishes - the white and variegated silver-carps, and the white amur - are new objects of fish culture. Despite the brief period of their propagation here and the fact that experimentation concerning their commercial adoption is far from complete, these fishes comprise an ever greater share of the fish production generated at fish farms. In such areas as the Krasnodar region and the Uzbek SSR, they now comprise about one-half of the market fish reared. Pond culture currently is undergoing a fundamental reorganization, transforming from the monoculture of carp to the more highly productive and economically profitable polyculture. This manual considers the cumulative experience and deals with the latest questions on the propagation and rearing of phytophagous fishes. (Author)

**A Technology Assessment Methodology. Volume I. Some Basic Propositions**  
Final rept.  
Martin V. Jones. Jun 71, 307p\* Rept no. MIR-6009-1  
Contract OST-26  
Also included in PB-202 778-Set, See also PB-202 778-2.

Keywords: Research, Assessments, Research management, Assessments, Forecasting, Social change, Cost effectiveness, Benefit cost analysis, Decision making, Social sciences, Project management, Methodology, \*Research and development, \*Technology assessment.

This is one of six reports on the subject of technology assessment prepared by MITRE for the Office of Science and Technology, Executive Office of the President. The purpose of this project was to develop a standard, structured method for making studies directed toward anticipating and influencing the societal impacts of new technology applications. This volume describes the standard methodology that was developed. The other volumes are 'pilot' assessment studies covering particular fields of technologies that were

conducted to help test, develop, and illustrate the standard assessment methodology. (Author)

**A Technology Assessment Methodology. Volume V. Mariculture (Sea Farming)**  
Final rept.  
Robert C. Landis. Jun 71, 205p\* Rept no. MTR-6009-5  
Contract OST-26  
Also included in PB-202 778-Set, See also PB-202 778-4 and PB-202 778-6.

Keywords: Aquaculture, Assessments, Developing countries, Benefit cost analysis, Forecasting, Environmental surveys, Economic analysis, Decision making, Methodology, Human nutrition, Cost effectiveness, International trade, Proteins, Water pollution, Infant nutrition, Social change, Models, Government policies, Fisheries, \*Technology assessment.

A general technology assessment methodology is used to determine the impacts of mariculture on the developing countries. The technology is confined to application in coastal and brackish waters. A quantitative impact analysis of economic and social factors is shown for the years 1975-1989. Various action options are offered and a revised impact forecast is given for increased impact on the malnutrition problem. The problems and constraints to accelerated mariculture application are analyzed, and a forecast of 20 million tons of mariculture production in 1985 is made. Also, a subjective probability of which countries will apply mariculture is given. (Author)

Contract OST-26  
Also included in PB-202 778-Set, See also PB-101 778-5 and PB-202 778-7.

Keywords: \*Sewage treatment, Assessments, Water pollution, Sewage, Benefit cost analysis, Septic tanks, History, Forecasting, Social change, Environmental surveys, Decision making, Methodology, Economic analysis, Government policies, Cost estimates, Soil chemistry, Abatement, Nutrients, Cost effectiveness, Chemical removal (Sewage treatment), Models, Land use, Ground water, \*Technology assessment.

A general technology assessment methodology is used to determine the impacts of widespread use of individual home sewage treatment technology during the 1970-1989 time period. The effects of varying rates of diffusion of this technology are analyzed in terms of selected measures of economic and environmental impact. Social and institutional impacts are discussed.

## APPROPRIATE TECHNOLOGY ABSTRACTS

Various action options available to identified interest groups are analyzed in terms of their effect upon technology diffusion rates and specific impact areas. The normative nature of this technology assessment called for the use of a dynamic interactive model of the technology diffusion process. (Author)

**Salinity Tolerances of Certain Tropical Soils and Relationships Between Sodium Ion Activities and Soil Physical Properties**

Research and development progress rept.  
S. A. El-Swaify, L. D. Swindale, and G. Uehara. Mar 69, 55p OSW-PR-419  
Contract DI-14-01-0001-673  
Paper copy available from GPO as 11.88:419.

Keywords: Soil properties, Tropical regions, Irrigation, \*Soils, Salinity, Deterioration, Demineralizing, Salt water, Sodium inorganic compounds, Calcium inorganic compounds, Magnesium inorganic compounds, Soil water, Physical properties, Ions, Acidity, Colloiding, Percolation, Hawaii, Tropical soils.

Two tropical soils from Hawaii were tested for salinity tolerances, the ability of the soils to resist physical deterioration by saline waters. Hydraulic conductivity measurements showed that presently permissible limits of salinity and sodium in irrigation water can be safely raised because significant hazardous physical conditions are not likely to occur. Both soils possess high resistance to detrimental capillary action even when exposed to extreme sodic conditions. The original acidities of soils are highly resistant to change under leaching. Neither soil had a tendency to accumulate soluble salts by extraction from percolating saline waters. The direct determination of ionic activities for sodium, calcium and magnesium ions as a new and more fundamental tool in soil salinity work is discussed. (Author)

**Water Quality Standards and International Development**

Oct 71, 44p Rept no. TA/OST-71-4

Keywords: \*Water quality, Standards, United States, Water quality, Developing countries, Potable water, Surface waters, Water supply, Chemical analysis, Bacteria, Radioactive contaminants, Water pollution, Control, Planning.

The report summarizes progress to date in establishing water quality standards in the United States and in developing countries. Its purpose is to assist those concerned broadly with environmental policies in developing countries to better understand past efforts and future needs in this field. (Author)

**PB-204 519/3** PC A06/MF A01

Illinois Inst. for Environmental Quality, Chicago.  
**Septic Tanks and the Environment**

Final rept.  
J. W. Patterson, R. A. Minear, and T. K. Nedved. Jun 71, 105p\* Rept no. IIEQ-71-2

Keywords: \*Septic tanks, Reviews, Public health, Water pollution, Performance evaluation, Legislation, Illinois, Standards, History, Environmental surveys, Sludge disposal, Nitrates, Soil properties, Percolation, Nitrogen inorganic compounds, Phosphorus inorganic compounds, \*Health, \*Sewage disposal.

The report reviews and evaluates the available literature on septic tanks, and influence of septic tanks on public health and environmental quality. The consistently poor performance of septic tanks indicates that other waste disposal methods are necessary in densely populated areas and that more rigorous regulation of design criteria, installation, and operation are required in sparsely inhabited areas suitable for septic tank installations. The report is intended to form the basis for appropriate administrative or legislative action in Illinois. Its bibliography contains 127 items. (Author)

 Contrib-78, OWRR-A-028-KAN(2)  
 Contract DI-14-01-001-1635

Keywords: Disinfectants, \*Water supply, Iodides, Disinfectants, \*Water treatment, Water pollution, Contaminants, Viruses, Bacteria, Bacillus, Anion exchanging.

Triiodide combined with strong base anion exchange resins forms stable, nearly insoluble, complexes that have remarkable disinfecting capabilities. Complete kills are effected with water suspensions of virus (both DNA and RNA) Gram negative and Gram positive bacteria (whether capsulated or not), and viability of sporulating Bacilli species is reduced up to 99.9%. Water to be treated is simply passed through a column of the resin-complex. The bacteria or virus, shown by 14C or 3H tracers, pass through the column and are not filtered out. Kill is immediate and irreversible. No I<sub>2</sub>, IO<sub>3</sub><sup>-</sup>, IO<sub>4</sub><sup>-</sup>, IO<sub>3</sub><sup>-</sup>, and IO<sub>4</sub><sup>-</sup> are detected when the cadmium iodide-linear starch reagent method was used. Iodide, the halide form, was found in amounts ranging from 0.2-0.5 PPM. This is well below the taste threshold and indeed may be considered beneficial in iodine deficient areas.

**Cooperative Housing, Ideas and Methods Exchange No. 52**  
 J. Robert Dodge. Jul 71, 76p

Keywords: \*Housing, \*Cooperatives, Urban planning, Residential buildings, Economic development, Classifying, Construction, Finance, Management planning, Income, Education, Organizations, Management, Cooperative housing.

Because the cooperative movement as an economic and social phenomena has grown and proliferated to such an extent that it has assumed world-wide importance and because of the interest in cooperative housing in developing countries, the subject has been explored in greater depth and from a different point of view than in an earlier publication. Ideas gleaned from experiences in both industrialized and developing countries have been included as a guide to those interested in undertaking cooperative housing programs. (Author)

**CENTO Symposium on Hydrology and Water Resources Development. Held in Ankara, Turkey, 7-12 February 1966**  
 Dec 66, 464p TA/OST-AN-66-2-1

Keywords: \*Hydrology, \*Water resources, Economic development, Economic factors, Ground water, Surface waters, Developing countries, Meetings, Turkey, Water resources development.

The document presents the papers delivered at a symposium on hydrology and water resources development held in Ankara, Turkey, 7-12 February 1966. It is felt that the meeting marked a step forward in considering the extent and need to develop knowledge of a region's water resources as a vital foundation for economic development programs. The general topics covered include water resources development, surface hydrology, groundwater hydrology, and agricultural and industrial problems. (Author)

**Manual on Book and Library Activities in Developing Countries**  
 Stanley A. Barnett, and Roland R. Piggford. Jun 69, 243p TA/OST-AN-69-6-1  
 Contract AID/csd-2156

Keywords: Books, Developing countries, \*Libraries, Economic development, Publishing, Printing, Manuals.

This guideline manual is intended to provide assistance to those interested in conceiving and framing sound and useful book activities for the enhancement of economic development. It is a compendium of ideas, techniques, and procedures regarding book and library activities that have been formulated and/or tested in developing countries during recent years. Specific areas of coverage include: The role of books in the national growth process; summaries of the major book needs in specific developing areas; summary of international book activities by government and private organizations; book subsidy programs and projects; library development activity and training; book and periodical procurement services; stimulating local book industries; regional book development or translation centers; textbook programs; building and strengthening book-related institutions; and financing book industry development.

**CENTO Conference on Engineering Education Held in Isfahan, Iran on November 7-13, 1966**  
 Nov 67, 389p TA/OST-AN-66-11-1

Keywords: Engineering education, \*Education, Meetings, Developing countries, Economic development, Engineering schools, Turkey, Iran.

The document is comprised of papers presented at a conference on engineering education. The purpose of the conference was to take cognizance of the fact that an adequate reservoir of well qualified engineers and technicians is basic to developed and developing industrial economies. Specific areas covered include: the need for engineers and technicians; present systems of engineering education; training of engineering technicians; undergraduate engineering curricula; teaching methods and aids; relations of engineering education with industries and government; professional programs related to a region's needs; graduate engineering education; role of research in engineering education; duties, qualifications and preparation of teachers.

 Apr 67, 322p TA/OST-AN-67-4-1  
 Contract AID/csd-1440  
 See also Volume 2, PB-206 550.

Keywords: \*Desalination, Desalting, Reviews, Manuals, Distillation, Freezing, Electrodialysis, Osmosis, Evaporation, Electric power plants, Nuclear power plants, Materials recovery, Brines, Industrial plants, Industrial engineering, Chemical engineering, \*Water supply, Feasibility, Design criteria, Developing countries, Electrodialysis desalination, Reverse osmosis desalination, Vertical tube evaporation, Multistage flash distillation, Vapor compression distillation, Solar distillation, Vacuum freeze vapor compression desalination.

The manual has been prepared as a guide in evaluating the feasibility of desalination in water-short areas where desalination may be competitive with other water sources. The manual is divided into two volumes, which may be used independently of each other. Volume I includes a discussion of the state of the art of the major desalination processes. Specific topics include: Saline water phenomena and definitions; state of the art of distillation, freezing and crystallization, electrodialysis, and reverse osmosis processes; description of typical plants; dual-purpose electric power generation-water desalination plants; recovery of chemicals as by-products; summary of major conceptual design studies.

Keywords: \*Desalination, \*Water supply, Desalting, developing countries, Water resources, Economic de-

velopment, Feasibility, Questionnaires, Cost estimates, Sea water, Brackish water, Solubility, Capital costs, Operating costs, Site surveys.

The report provides guidelines for the initiation of a program for defining and solving the water shortage problems of a particular nation or region using desalination. Its scope includes the formulation of a logical and feasible water development plan; the accomplishment of preliminary feasibility studies on the possible solutions, and the determination of the most promising course of action based upon the results of these studies; and the accomplishment of a detailed engineering feasibility and economic study of the possible alternatives. A series of estimating aids and nomographs for determining capital costs of desalination plant facilities is included. (Author)

Continental-Allied Co., Inc., Washington, D.C.  
**Five Industries for the Central African Republic**  
Erwin J. Sholton, and Edward A. Tenenbaum. Nov  
65, 267p TA/OST-AN-65-11-1  
Contract AID/afr-288

Keywords: \*Food products, \*Batteries, \*Asbestos, Developing countries, Industries, Economic development, Surveys, Profits, Investments, Demand(Economics), Capital, Marketing, \*Central African Republic.

Isolated by geography, lacking low-cost means of transportation, the Central Africa Republic earns comparatively little from her exports, and pays heavily for her imports. It is considered imperative that the C.A.R. reorient her economy towards manufacture of goods for her own market. A survey was made of private investment opportunities in industry and commerce in the C.A.R. Five possible new industries - storage batteries, asbestos cement, starch, reconstituted mild and ice cream, and tomato puree - were selected on the basis of this survey and studied in detail. In each case, it was found that the industry can operate to serve C.A.R.'s internal market, to reduce present prices, and to earn a profit of at least 25% per annum. (Author)

**CENTO Traveling Seminar on Farm Tools and Implements**  
Sep 68, 154p TA/OST-AN-68-9-1

Keywords: \*Hand tools, \*Agricultural machinery, Surveys, Developing countries, Handbooks, Pakistan, Iran, Turkey.

A survey was carried out in Pakistan, Iran, and Turkey to help determine what could be done to provide farmers of these countries with better farm tools and more power to help them increase farm production. Major emphasis was laid on the collection of information on tools and implements in current use. In addition, consideration was given to a number of tools and attachments which it was felt should be of wider use than at present. This report was prepared as a result of the survey. It is in the form of a handbook for use by agricultural technicians, extension workers, farmers, students, and producers of farm machinery as an aid in their work to promote practical, useable ideas which apply to their areas. **Report on Survey Team Projected AID Research Program on Improved Forest Products Utilization in Latin America**  
Alan D. Freas, B. Francis Kukachka, and Eugene F. Landt. Aug 65, 62p TA/OSTAN-65-8-1

Keywords: \*Pulp, \*Wood products, Utilization, \*South America, Economic development, Research projects, Wood pulp, Surveys, Inventories, Quality, Tests, Peru, Brazil, Colombia, Venezuela, Ecuador.

South America has the largest single forested area in the world, most of it inaccessible and remote from population centers and, hence, unused to a great extent. Most of the forest consists of heterogeneous stands with many species that so far have not found their way into the world market or into local utilization. This report presents recommendations for a group of research projects to improve the economic use made of Amazonian and other forest areas of Peru, Brazil, Colombia, Venezuela, and Ecuador. The general nature of the projects are as follows: Research on little known timber species of Latin American in relation to their utilization locally and abroad; studies on the preparation of high yield pulps; and forest products utilization and marketing in Venezuela. Contract AID/W-607

Keywords: \*Seeds, Processing, Handling equipment, Developing countries, Handbooks, Seed processing.

Seeds are processed to remove contaminants, to size-grade for plantability, to remove damaged or deteriorated seed, and to apply seed treatment materials. This handbook was prepared as an introduction to seed processing and handling. Various types of equipment are considered. The main features and component parts, principles of separation, uses, and operational procedures are discussed for each machine. Emphasis is placed on the concept of the 'processing line', that is, the combination, proper sequence and arrangement of machines, conveyors, and procedures required for handling and processing seeds. **Industrialized Housing. The Opportunity and the Problems in Developing Areas, Ideas and Methods Exchange No. 66**  
Ian Donald Turner, and John F. C. Turner. Jan 72, 80p\*  
Sponsored in part by the Department of Housing and Urban Development, Washington, D.C.

Keywords: Residential buildings, Mass production, Developing countries, Reviews, Building, Industries, Automation, Construction, Prefabrication, Feasibility, Errors, Standards, Manufacturing, Expenses, Asia, Africa, South America, \*Housing, Industrialized housing.

The problem of providing suitable shelter in the world's less developed nations is one of critical urgency. While this problem grows more and more acute, the industrialized nations of North America and Europe are struggling to meet their own housing needs through an increasingly advanced technology. It is a natural consequence of this process for housing manufacturers, technicians and public officials to seek possible applications of this advanced technology in less developed countries. In recent years, HUD's Office of International Affairs has increasingly been called upon to advise domestic housing producers and, through AID, foreign governments and developers on the appropriateness of industrialized techniques abroad. It has attempted to correct widely held misconceptions, while witnessing the costly failures of many attempts to develop criteria to assess the value of existing industrialized systems abroad, and at the same time to assist in the design of new systems created specifically for that market. ## APPROPRIATE TECHNOLOGY ABSTRACTS

**Industrializing at the Grass Roots Level in the Philippines**  
 Rept. for 1959-1963  
 Kenneth P. Sheldon. 1963, 63p TA/OST-AN-63-13-1

**Keywords:** Developing countries, Industries, Economic development, Developing countries, \*Philippines, Economic development, Surveys, Natural resources, Agriculture, \*Industrial development, Tarlac(Philippines).

The establishment of a first industry in an underdeveloped region stimulates others into being; a small beginning is enough to set up a chain reaction. This principle has been demonstrated time and again in the Philippines and in other developing countries. The document shows how this start was made in the highly agricultural provinces in the Philippines and the proper way for it to develop. In addition to a general discussion of principles and procedures, the document contains, for the purpose of providing a concrete example, a detailed report of a survey made of a single Philippine province (Tarlac) to obtain practical information concerning its resources, natural advantages, and the desires of its people regarding industrialization. (Author)

**Project Colorado. Feasibility Studies. Preliminary Designs**  
 Harry F. Troxell, and Carlos E. De Sa. 1964, 61p TA/OST-AN-64-13-1  
 Prepared in cooperation with Bahia Univ., Salvador (Brazil).

**Keywords:** \*Industrial development, Economic development, Developing countries, Industries, Brazil, Industrial mobilization, Feasibility, Food industry, Ceramics, Colorado project, Ceramics industry.

Project Colorado is a program of cooperation for industrial development in the State of Bahia, Brazil. The ob-

jectives, to develop new small, rural industries and to train business and engineering leaders, are accomplished by utilizing faculty and students from the University of Bahia and Colorado State University. The industrial development activities are based on a thorough analysis of the advantages and opportunities the region has to offer. Feasibility studies, followed by preliminary designs, were made for the following industries: Poultry and egg; ceramic products; peanut oil extraction; slaughterhouse for cattle and hogs; mandioca processing; and fruit processing. The document contains detailed reports of each of these industrial prospects by the personnel who contributed to the general evaluation, the marketing data, and the production requirements.

**Report on Small Industry Programs in Turkey**  
 Ross D. Davis. 15 Feb 65, 41p TA/OST-AN-65-2-2

**Keywords:** \*Industrial development, \*Small businesses, \*Turkey, Industries, Economic development, Developing countries, Planning, International trade, Evaluation, Small industry.

The report sets out observations based on a visit to Turkey made in January 1965 by the Executive Administrator of the U. S. Small Business Administration. The purpose of the visit was to evaluate certain plans of the Government of Turkey designed to modernize small-scale industry, to promote its integration into a balanced pattern of industrial development, and to create in small industry a significant capacity for import substitution and export activities. The topics covered in the report include: Role of small industry in Turkey; planning for small industry; current activities to support small industry; some useful principles to guide the development and operation of small industry programs; comments on the small industry programs in Turkey; an agency for small industry programs. **Architectural Research on Structural Potential of Foam Plastics for Housing in Underdeveloped Areas**  
 Research rept. 1962-1965  
 Stephen C. A. Paraskevopoulos, Harold J. Borkein, J. Sterling Crandall, James L. Haecker, and Willard A. Oberdick. Nov 65, 295p TA/OST-AN-65-11-2

**Keywords:** \*Foam plastics, \*Building materials, Houses, Cellular plastics, Developing countries, Homes, Structural plastics, Structural engineering, Marketing, Plastics industry, Structural forms, Structural analysis, Construction, Laminated plastics.

A feasibility study, reported in PB-206 799, established the desirability of investigating the use of foam plastics as structural materials, in the belief that such a development could contribute towards a resolution of housing problems throughout the world. This report describes a research program aimed at exploring the structural potential of these materials for housing in underdeveloped areas. A review is provided of plastics from the standpoint of physical properties, raw materials resources, production, and marketing. A detailed description is given of a structural investigation of foam plastics, and a number of demonstration structures are analytically described. (Author)

**Feasibility Study of an Expanded Leather and Shoe Industry in West Africa to 1980**  
 Research rept.  
 Konrad Biedermann. 29 Jul 66, 57p TA/OST-AN-66-7-1

**Keywords:** \*Footwear, Economic development, Developing countries, Industries, \*Africa, \*Leather, Shoes, Industrial mobilizing, Leather industry, Shoe industry.

Cooperative economic-development planning on a basis that includes the entire West African sub-region promises to result in an industrial development pattern that might contribute to a more effective and economic utilization of African resources and to improvement in living standards. This requires, however, obtaining an overview of what a feasible industrialization pattern for

specific industries within the sub-region might be over a period of 10 to 15 years. An attempt is made, in the report, to answer some of the basic questions along these lines for the leather and shoe industry in West Africa. Consideration is given to West African markets for leather and shoes, current production capabilities, feasible expansion of leather and shoe production to 1980, and the potential importance to economic development of West Africa.

**Pre-investment Study. Meat Packing Industry for Entente Guaranty Fund**  
 Nov 67, 177 TA/OST-AN-67-11-1  
 Contract AID/af-496

**Keywords:** \*Food products, Food industry, Meats, \*Africa, Livestock, Economic analysis, Economic development, Market research, Developing countries, Investments, United States, Meat packing industry.

Livestock are among the principal resources of the West African Savanna zone, and surplus livestock have, for centuries, supplied some of the consumption needs of the populous Coastal cities many hundreds of miles to the south. It is believed that this traditional livestock trade can be rationalized principally by more slaughterhouses in the producing zone, and subsequent shipment of meat to the consuming areas. This procedure would tend to add more value to the products of the stock raising countries, while providing better and cheaper meat to consumers. Accordingly, an economic and technical analysis was undertaken aimed at inducing U. S. private investment in the livestock industry in Niger and Upper Volta to serve markets in Ivory Coast, Togo, Dahomey, Ghana, Nigeria, and other appropriate markets. Consideration was given to availability of livestock in Niger and Upper Volta, and type of existing potential consumer markets.

**Feasibility of Ipecac Extraction Plant**  
Final rept.  
Eugene H. Payne. Apr 66, 45p TA/OST-AN-66-4-1  
Contract AID/csd-239, PIO/T-511-049-3-20346

Keywords: \*Medicinal plants, Drug industry, \*Industrial plants, Developing countries, \*Drugs, \*Plants(Botany), Alkaloids, Extraction, Economic development, Cephaelis ipecacuanha, \*Ipecac, \*Bolivia.

\*Brazilian ipecac is the rhizome and root portions of the low growing vine Cephaelis (Uragoga) ipecacuanha. It is the source of emetine and several other alkaloids. The report presents the results of a study undertaken to determine the feasibility of establishing facilities to distill ipecac in Bolivia. It was found that such a facility would be economically sound only under one or both of two conditions: (1) that the cultivation of this source plant be encouraged; and (2) that it be operated in conjunction with the extraction of other products, such as cocillana, achiote, and cinchona.

Geological Survey, Reston, VA.  
**Techniques for Assessing Water Resources Potentials in the Developing Countries, with Emphasis on Streamflow, Erosion and Sediment Transport, Water Movement in Unsaturated Soils, Ground Water, and Remote Sensing in Hydrologic Applications**  
Preliminary rept.  
George C. Taylor, Jr. Dec 71, 73p  
Grant PASA-TA(IC)-9-72

Keywords: \*Water resources, Developing countries, \*Hydrology, Research, Stream flow, Soil erosion, Sediment transport, Ground water, Remote sensing, Probes, Soil water.

The preliminary report describes techniques for assessing water-resource potentials in the developing countries, most of which lie in the tropics. Techniques or methodology for measuring or evaluating hydrologic parameters are described in the categories of streamflow, erosion and sedimentation, water movement in unsaturated soils, ground water and remote sensing in hydrologic applications. Selected bibliographies of each of these categories are included. (Author)

Inter-American Geodetic Survey, Fort Clayton, Canal Zone. Natural Resources Div.  
**Natural Resources-Cadastral Inventory. Nicaraguan Pilot Project**  
Report for 1965-1966.  
Mar 66, 126p TA/OST-AN-66-3-I

Keywords: Land surveys, \*Nicaragua, Developing countries, \*Natural resources, Geology, Geomorphology, Climatology, \*Hydrology, Soils, \*Land use, Land titles, Cadastral surveys.

In preparation for a comprehensive cadastral and natural resources survey of Nicaragua, a pilot survey was

undertaken in an agricultural area in the vicinity of Leon. The primary purpose was to provide orientation for those Nicaraguan specialists expected to occupy leading roles in the planning and execution of the comprehensive survey. This report presents a description of the geology, geomorphology, climatology, hydrology, soils, land use, and cadastral aspects of the region as determined by the survey. (Author)

Contract AID/csd-1810

Keywords: \*Laterites, \*Soils, Soil properties, \*Southeast Asia, \*Roads, Construction, Landing fields, Classifications, \*Soil stabilization, Flexible pavements, Performance, Geomorphology, Structural design, Specifications, Durability, Foundations, \*Thailand, Lateritic soils.

There are a number of soils, principally those referred to as laterites and lateritic soils, which are found in southeast Asia and other tropical environments, but are essentially unknown in countries of the temperate zones. This document provides the results of field studies carried out in Thailand on lateritic soils. Included are reports on background studies of the literature and of geology, the development of a classification system for the soils pavement evaluation studies, and special studies on durability, stabilization, and dynamic properties. May 70, 382p TA/OST-AN-70-5-1

Keywords: Community development, Rural areas, Developing countries, Handbooks, Economic development, Crafts, Water resources, Sanitary engineering, \*Irrigation, \*Roads, Construction materials, Food, Snails, Washing, Heating, \*Housing, \*Food storage, \*Solar water heating, \*Technical assistance, \*Sewage disposal, \*Water supply, \*Handicrafts, Village technology.

Village development takes on special importance in the light of the fact that 80% of those who live in less developed countries live in villages. This handbook is aimed at helping villagers to master the resources available to them. The general topics covered include water transport; storage, and purification, latrines, bilharziasis control, irrigation and road-building, poultry raising, silage, storing food at home, storing vegetables and fruit for winter use, how to salt fish, concrete construction, bamboo construction, glues, solar water heater, washing machines, cookers and stoves, home soap making, and bedding.

**Rural Housing Manual**  
 William A. Schott. Mar 71, 378p\*  
 Sponsored in part by the Department of Housing and Urban Development, Washington, D.C.

**Keywords:** \*Housing, Residential buildings, Rural areas, Regional planning, Manuals, Community development, Surveys, Project planning, Financing, Cooperation, Legislation, Land use, Classifications, Management planning, Housing cooperatives.

The key to success in a housing program lies in the ability and desire of the local rural leadership to attain good low-cost housing. To accomplish this goal, personnel must be adequately informed and trained. It is intended that this training manual, along with technical assistance will provide rural electric cooperatives with the information they need.

**Report on Potential Growth of Aquatic Plants of the Lower Mekong River Basin, Laos-Thailand**  
 Mark L. Nelson, Edward O. Gangstad, and Donald E. Seaman. Feb 70, 125p TA/OST-AN-70-2-1

**Keywords:** \*Aquatic plant control, Aquatic weeds, River basins, River basin development, Developing countries, Multiple purpose reservoirs, \*Weed control, Irrigation canals, Plant growth, \*Laos, \*Thailand, Pa Mong project, Mekong River.

The Pa Mong project is a hydroelectric power and irrigation system on the Mekong River, in Laos and Thailand. Concern has been expressed as to what extent aquatic vegetation, such as water hyacinth, will interfere with the operation and maintenance of the project. This document is the report of a team that was assembled to assess problems, evaluate present methods of dealing with these problems, and make design and research recommendations relevant to multi-purpose water resource projects in the Lower Mekong Basin. Included in the report are a section on growth potentials describing a number of local factors bearing on the aquatic weed problem. (Author)

**Planning Sites and Services Programs. Ideas and Methods Exchange No. 68**  
 Alfred P. Van Huyck. Jul 71, 75p TA/OST-AN-71 7-1

**Keywords:** \*Housing, \*Site selection, Residential buildings, Site surveys, Project planning, Developing countries, Urbanization, Policies, Neighborhoods, Foreign countries. Socioeconomic status, Low income families, Lessons learned, Dwelling services projects.

Housing sites and services projects are not a new idea, but the adoption of the concept on a massive scale is only just now gaining credibility as the most feasible method for dealing with the vast numbers of low-income people seeking land and shelter in the developing world. This document analyzes reasons that sites and services projects should be a major part of the urbanization program of the developing countries. It also discusses the lessons to be learned from previ-

ous worldwide experience with the sites and services concept. A method is proposed for planning the sites and services project, and suggestions are given as to how the individual project should be viewed in the context of a national program.

**Beginning Science Curriculum for English Speaking Tropical Africa (African Primary Science Program)**  
 Final rept., 1960-71.  
 1 Dec 71, 125p TA/OST-AN-71-12-1  
 Contract AID/csd-772

**Keywords:** \*Education, Developing countries, \*Africa, Ghana, Kenya, Malawi, Nigeria, Sierra Leone, Tanzania, Uganda, Science education, Curricula.

The African Primary Science Program, which was established in 1960 as part of the African Education Program, has operated widely in English-speaking African countries. Science centers have been established with program assistance in seven of these: Ghana, Kenya, Malawi, Nigeria, Sierra Leone, Tanzania, Uganda. Its goals have been centered on changes in Pedagogy, but it has also sought to influence the role of education in developing countries. The report records and documents the Program's development, its changing structure, and its efforts to respond to the needs of the countries involved and developing African initiative.

 Lyon Associates, Inc., Baltimore, Md.  
**Laterite and Lateritic Soils and Other Problem Soils of Africa. Development of Engineering Standards and Criteria for the Usage of Laterite, Lateritic Soils, and Other Problem Soils in Connection with the Construction of Roads, Highways and Airfields**  
 Jun 71, 308p TA/OST AN-71-6-1  
 Contract AID/csd-2164

**Keywords:** Soil properties, \*Africa, \*Roads, Developing countries, \*Laterites, Clay soils, Soil stabilization, Tropical regions, Ghana, \*Soils, Lateritic soils.

Roadway design practices in the tropics have evolved, by and large, from American and European experience. The adequacy of these procedures, which were devised through experience with temperate zone soils, have never really been evaluated for the climatic conditions, the soils, and the traffic patterns of tropical Africa. It was therefore decided that lateritic materials, so plentiful in tropical areas, should be studied in a thorough research program. This document represents the results of such a study carried out in tropical Africa, with emphasis on Ghana. A review of the pertinent literature is provided for both lateritic soils and tropical black clays, and the engineering properties of both types are described. (Author)

**Wood in the Construction of Mass-Produced Houses**  
Geza Iju, and E. George Stern. Aug 71, 28p

Keywords: \*Houses, \*Wooden structures, \*Building materials, Structural members, Structural timber, Residential buildings, Mass production, Mechanical properties, Strength weight ratio, Life(Durability), Cost engineering, Foundations, Structural design, Low cost housing.

The properties and characteristics of wood, that are important in its engineered use in building and construction and, especially, in the mass-production of low-cost houses, are presented in an up-to-date approach by means of specific examples in a two-part presentation: Part I deals with the properties of wood which make it especially suitable for construction. The principal topics covered are strength-weight relationships and durability. Part II covers recent developments in the use of wood in the prefabrication and mass production of low-cost houses with particular reference to their foundations.

**PB-207 862/4** MF A01  
Department of Transportation, Washington, DC.  
**Preparation and Appraisal of Transport Projects**  
Rept. for 1964-65  
Jun 68, 107p TA-OST-AN-68-6-1  
Paper copy available from GPO as Stock No. TD1.2:T68/6.

Keywords: Developing countries, \*Transportation management, Project planning, Evaluation, Handbooks, Concepts, Methodology, Economic analysis, Engineering standards, Traffic, Systems analysis, Benefit cost analysis, Decision making.

The report is drawn largely from existing economic and engineering knowledge to provide a guide for making transport investment decisions in the less developed countries. Specific topics include specifying transport problems and identifying alternative courses of action, design of a transport study, analysis of present and potential traffic, capacity of an existing transport system, estimating benefits from transport investments, appraisal of costs and determination of alternative technical solutions, and decision criteria for choosing among alternative investment possibilities.

Road Research Lab., Crowthorne (England).  
**A Review of Rural Traffic-Counting Methods in Developing Countries**  
J. D. G. F. Howe. 1972, 25p Rept no. RRL-LR427

Keywords: \*Traffic engineering, Traffic surveys, Developing countries, Vehicular traffic, Rural areas. Counting, Data acquisition, Reviews, Questionnaires, Methodology, Automation, Recommendations, Traffic counting methods.

The report reviews methods of rural traffic counting currently used in developing countries and examines the accuracy of the resulting flow estimates. The re-

sults of a questionnaire surveys among a sample of developing countries suggest that decisions on the duration, frequency, and timing of counts are at present arbitrary. It is suggested that for increase in the accuracy of rural traffic estimates automatic traffic counters be used on a wider scale than at present.

**Desalting**  
Final rept. 1969-1971  
Victor A. Koelzer. May 72, 133p\* Rept no. NWC-EES-72-045

Keywords: \*Desalination, Desalting, Reviews, \*Water supply, History, Distillation, Freezing, Osmosis, Ion exchanging, Electrodialysis, Economic analysis, Cost estimates, Capital costs, Operating costs, Electric power demand, Waste disposal, Brines, Marketing, Water costs.

Based on a comprehensive review of desalting literature and interviews with experts in the field, the report evaluates the state of the art of desalting technology, it summarizes program on desalting technology, and describes applicability of distillation, crystallization, membrane and chemical processes. In an attempt to evaluate the markets for desalted water, the report looks at water costs, economies of scale and other marketing factors. Applications of desalting technology are considered for incremental supply, to improve quality of supply, for intermittent operations, in dual-purpose plants, to renovate water for reuse, and for agriculture. The report concludes that desalting is presently a technically feasible source of new water for situations of specialized need, and makes research recommendations. (Author)

**The Role of the Agency for International Development in the Field of Natural Resources Planning and Management**

Apr 72, 153p Rept no. TA/OST-72-8

**Keywords:** \*Natural resources, Management, Developing countries, Economic development, Meetings, Natural resource management.

The report is one of the results of a Workshop on Natural Resource Planning and Management which was held on 21 January 1972 at Washington, D. C. It describes the key issues, significant observations, and major findings and conclusions which emerged from that session, as well as from documentation presented by U. S. technical agencies and multilateral institutions both in advance of and subsequent to the workshop. Some of the subjects covered include: Significance of natural resources to economic growth; constraints on natural resources development; current role of governments, development assistance agencies, and private industry; special capabilities of the United States for international assistance; activities and perspectives of U. S. technical agencies and international development institutions. (Author)

**Scientific and Technical Information for Developing Countries**

Apr 72, 92p\* TA/OST-AN-72-4-1  
Contract AID-csd-2584

A report of an Ad Hoc Advisory Panel of the Board on Science and Technology for International Development of the National Academy of Sciences.

**Keywords:** \*Information services, Information, Developing countries, Research, Information retrieval, Information systems, Transfer of technology, Information resources, Technical assistance.

Scientific and technical information is an essential element in the economic development process. A rationale is needed to guide the formulation of assistance programs addressed to the problem of information resources in less developed countries. This report is intended as a first step toward meeting this need. The first portion elaborates the need for more effective use of scientific and technical information in development efforts, and then outlines a rationale for increased technical assistance in this area. A review is provided of the functions of the information transfer process and the necessary components of the information infrastructure. Consideration is given to specific information requirements of the developing countries in the areas of industrial technology, natural resources, and the scientific and technical disciplines. Finally, a series of recommendations are presented encompassing policy, priorities, programming, administration, and suggested action programs for technical assistance in scientific and technical information. **Research Methods for Housing and Urbanization Studies in Developing Countries**

Margaret E. Woods, and Earl W. Morris. 30 Jun 69, 479p TA/OST-AN-69-6-5  
Contract AID/csd-817

**Keywords:** Residential buildings, \*Puerto Rico, Urban development, Latin America, Demographic surveys, Developing countries, Research, Sociometrics, Economic factors, Political systems, Family relations, Socioeconomic status, Improvement, Project planning, \*Housing, San Juan(Puerto Rico).

A pilot study of urban housing was undertaken in San Juan, Puerto Rico, to design and test methodological tools for the conduct of housing research in the urban areas of Latin America. Social, economic, demographic, and political aspects of urban housing were studied, and the document is based on the findings of that study. The first portion provides a broad survey of methods of survey research and their applicability to the conduct of sample surveys in the urban areas of developing nations. Next, methodology and techniques are presented for measuring housing characteristics and quality, socioeconomic and demographic characteristics of families, attitudes, aspirations, and value orientations with respect to housing, and two means by which a housing situation may be improved.

**Prolonging Life of Wood in Houses**

Ideas and methods exchange  
J. Robert Dodge. Jun 67, 43p IME-47, TA/OST-AN-67-6-1  
Revision of reports dated Jul 63 and Dec 57.

**Keywords:** Wooden structures, \*Wood preservatives, Residential buildings, Tropical regions, Protection, Curing, Damage, Termites, Coal tar, Creosote, Phenol, Naphthenates, Copper organic compounds, Chlorine aromatic compounds, Drying, Poisons, \*Houses, Wood preservation, Phenol/Pentachloro, Copper naphthenates.

Dwellings constructed entirely or in part of wood frequently deteriorate rapidly due to readily avoidable errors in the design of the structures and in the curing, use, or protection of the wood. This is especially true in the humid tropical areas with a high incidence of insect infestation. This document contains the most widely accepted information on the protection of wood. It is intended to serve as a reference and check list for housing technicians. The topics include: Sources of damage; protection against damage; wood preservatives; methods of treatment; soil poisons; air drying lumber; boilerless dry kilns; drying by solar radiation. (Author)

**Care and Maintenance of Farm Machinery. A Handbook for Farm Operations in Tropical Agriculture Areas**

Norwin Braun. Jun 68, 49p TA/OST-AN-68-6-2  
Prepared in cooperation with Nigeria Univ., Nsukka.

**Keywords:** \*Agricultural machinery, Handbooks, Developing countries, Maintenance, Farms, Safety, Preventive maintenance, Tropical regions.

A functional farm workshop is a most valuable asset to any university farm. It is even more important in developing countries that are remote from ready access to machinery replacements, spare parts, and company field men. In order to keep machinery in the best working condition, a thorough preventive maintenance program must be developed and closely adhered to. This handbook is intended as a guide for such a program. The first portion concerns itself with farm machinery safety; this is followed by a discussion of the structure and role of the mechanic section of a farm operations department. (Author)

**Development and Change in a Bengal Village**  
Research rept.

Ajit Kumar Danda, and Dipali Ghosh Danda. May 68, 266p RR-20, TA/OST-AN-68-5-2

Report on the Diffusion of Innovations in Rural Societies. Prepared in cooperation with Michigan State Univ., E. Lansing. Dept. of Communication.

**Keywords:** \*Social change, \*India, Social communication, Developing countries, Attitudes, \*Agriculture, Community relations, West Bengal(India), Technological change.

The report presents a study of the process of planned change in a village of West Bengal, India. It describes in general terms the positive and negative reactions of farmers toward specific agricultural programs. The special emphasis is on the determination of the causes of rejection of an improved agricultural practice. The communication process of conveying modern ideas and practices to the villagers was also examined. The report describes the physical setting of the village, community structure, development and change, and adoption of innovations. (Author)

**Plant Requirements for Manufacture of Wallboard**  
Jun 67, 63 TA/OST-AN-67-6-2

**Keywords:** \*Wallboard, Manufacturing, Industrial engineering, \*Industrial plants, Developing countries, Operating costs, Requirements, Economic analysis.

The term 'wallboard' is applied to those construction materials which may be made from one of several types of fibrous residues, including bagasse, cereal straws, and cornstalks. These sheets are used in many ways in building construction, and the raw materials of which they can be made are to be found all over the world. This document provides a guide for the establishment and operation of a wallboard manufacturing plant. The topics covered include: Principles of wallboard manufacturing; the manufacturing process; building requirements; materials requirements; equipment requirements; labor requirements; overhead rate; unit cost of manufacturing; capital requirements; sales revenue; and projected profit and loss. Detailed operation sheets are given for each major step in the manufacturing process. (Author)

**Communication in India. Experiments in Introducing Change**

Joseph E. Kivlin, Prodipto Roy, Frederick C. Fliegel, and Lalit K. Sen. May 68, 64p TA/OST-AN-68-5-1

**Keywords:** Social communication, \*India, \*Social change, Developing countries, Literacy, \*Education, Radio communication, Technological change.

## APPROPRIATE TECHNOLOGY ABSTRACTS

An often encountered difficulty experienced by development programs involves gaining acceptance of beneficial changes by the populace. This document reports the results of a communication experiment which attempted to induce adoption of modern agricultural, health, and family planning practices by the inhabitants of a number of villages near Lucknow, Uttar Pradesh, India. The study sought to evaluate the continuing effects of two communication treatments: radio farm forums, and literacy training classes. The results indicate that while knowledge of the practices spreads rather quickly, adoption is slow and at low levels. Some progress was made, however, and clear cut differences in the effectiveness of the communication treatments were exhibited. (Author)

 Agency for International Development, Washington, DC. Office for Private Overseas Programs.  
**The VITA International Inquiry Service. An Evaluative Review**  
 Richard Morse. Mar 72. 156p\* Rept no. TA/OST-AN-72-3-1

**Keywords:** Information centers, Evaluation, Developing countries, Information retrieval, \*Information services, Transfer of technology.

Volunteers for International Technical Assistance (VITA), operates a correspondence service which seeks to provide answers to technical inquiries from individuals in developing countries. Such inquiries are usually assigned to one of 5,500 volunteer experts in the U.S. and other nations for answer. This document is a result of a study undertaken to gain a better insight into present and potential achievements and problems of this voluntary approach to responding to technical information needs. It is intended for those interested in the task of adapting and transferring technical knowledge effectively; and for those specifically interested in VITA as a privately managed program through which individuals can contribute to overseas development.

 Contract AID/csd-762  
 See also Volume 2, PB-210 593.

**Keywords:** Developing countries, \*Transportation, Management, Construction, Manpower, Capacity, Vehicles, Maintenance, Economic development, \*Pipeline transportation, Highway transportation, Rail transportation, Air transportation, Water transportation, Passenger transportation, \*Cargo transportation, \*Waterway transportation, \*Road transportation, Technology, Modal choices, Intermodal cargo transportation.

This report provides background information on the technology of various transportation modes and their capabilities. It is intended primarily for use by economists, program officers, general engineers, and others in the economic development field. Information is included on the broad capacities of particular modes to handle freight and passenger traffic; major features and the advantages and limitations of each mode in terms of technical capabilities; levels of technological sophistication that can be adopted within each mode; and the 'inputs' of right-of-way preparation and construction, materials, vehicles, equipment, maintenance, and manpower required at each level to produce an 'output' of transport service. Volume One contains sections on: Intermodal factors of choice in transportation; highway transportation; railway transportation; conventional air transportation; V/STOL aircraft; inland waterway transportation; oceanway transportation; pipeline transportation; and intermodal freight exchange.

 National Fertilizer Development Center, Muscle Shoals, Ala.  
**Economic Comparison of Overseas Manufacture and Importation of Anhydrous Ammonia**  
 Mar 69, 29p TA/OST-AN-69-3-1

**Keywords:** \*Ammonia, International trade, Developing countries, \*Fertilizers, Economic analysis, India, South Vietnam, Uruguay, Cost estimates, Production, Chemical engineering, Imports.

Ammonia is the principal form in which fixed nitrogen is used in the manufacture of fertilizer materials. The production of ammonia by reacting hydrogen with atmospheric nitrogen is the basis of the modern nitrogen fertilizer industry. The report compares the economics in developing countries of importing ammonia from suppliers having large plants and low-cost feedstocks with those of producing the material under local conditions. Three countries, India, South Vietnam, and Uruguay, are used as a basis of the comparison. As these countries have widely divergent needs for fertilizer materials, the costs applicable to them should be representative of many other developing countries with similar needs and resources.  Foreign Agricultural Service, Washington, DC.  
**Technological Change in Agriculture. Effects and Implications for the Developing Nations**  
 Dana G. Dalrymple. Apr 69, 88p TA/OST-AN-69-4-2

**Keywords:** \*Agricultural economics, Developing countries, Mass production, Grain crops, Agricultural machinery, Policies, Economic development, Project planning, Technological change.

The effects of technological changes in agriculture in the less developed countries are a matter of increasing concern. As efforts to expand agricultural production begin to pay off, the many and complex ramifications of technological change become more and more evident. This document provides an introduction to some of the major effects of technological change in agriculture. Included among the topics considered are: The nature of technological change; adoption process for agricultural technology; impact of changes in agricultural technology; high-yielding varieties of grain; mechanization of agriculture; and policy implications of technological change. (Author)

**PB-210 597/1** **PC A08/MF A01**  
 Foreign Economic Development Service, Washington, DC.  
**An Analysis of the Potentials and Prospects of Increasing Edible Oil Production in West Pakistan**  
 Frederic A. Coffey, D. M. Yermamos, J. R. Wilcox, B. M. Waddle, and P. F. Knowles. Sep 71, 170p FEDS-Field-11, TA/OST-AN-71-9-2

**Keywords:** \*Vegetable oils, Developing countries, Production, Cottonseed, \*Soybeans, \*Peanuts, Safflower oil, Sesame oil, Oilseeds, West Pakistan, \*Sunflower.

The report represents one phase of a study on the potential for increasing oilseed production in West Pakistan. It provides a review of research, production potential, and problems of oilseed production and processing in Pakistan and in the United States and other

countries where relevant. It includes a general economic analysis as well as detailed discussions on the production of safflower, sesame, peanuts, soybeans, sunflowers, and cottonseed. (Author)

**Engineering Evaluation of Selected Fertilizer Production Facilities in Colombia**  
 I. W. McCamy, and D. R. Waggoner. Aug 70, 43p  
 Bull-Y-10, TA/OST-AN-70-8-1

**Keywords:** \*Fertilizers, Developing countries, \*Industrial plants, Evaluation, Production methods, Flow charts, Operating costs, Investments, Blending, Handling equipment, \*Colombia.

The report is the result of a study by a team of experts of two segments of the Colombian fertilizer industry: (1) the facilities of Fertilizantes Colombianos, S.A. (FERTICOL), and (2) a sampling of small bulk-blending plants. The first part of the report provides general information about the fertilizer situation in Colombia. The results of the analysis of the FERTICOL plant are then presented. This includes flow diagrams of alternative production schemes, and projections of investment and operating costs. Similarly, operating problems are identified and alterations in equipment, raw materials, and procedures to improve operations are suggested for the bulk-blending plants. (Author)

 Iowa State Univ., Ames. Center for Agricultural and Rural Development.  
**Future Alternatives Affecting the Agricultural Demand for Water and Land: The Effects of Soy Protein Meats and Nitrogen Fertilizer Restrictions on Future Water and Land Use**  
 Final rept.  
 Howard C. Madsen, Earl O. Heady, Stanley H. Hargrove, and Kenneth J. Nicol. Jun 72, 93p\* NWC-F-72-054  
 Contract NWC-72-012

**Keywords:** \*Land use, \*Agriculture, \*Water resources, Food supply, Substitutes, \*Fertilizers, Utilization, Soybeans, Meat, Proteins, Nitrogens, Irrigated land, Water consumption, Mathematical models, Forecasting, Linear programming, Soy protein concentrate.

The study evaluates the impact on land and water needs and farm prices if either soy protein meat analogs and extenders were substituted for part of the beef consumption in the year 2000 or nitrogen fertilizer application in the year 2000 were restricted to 100 pounds per acre and 50 pounds per acre. The study is based on a large-scale linear programming model of U.S. agriculture. Results of the soy protein meats policy models indicate that with soy protein meats accepted by consumers, productive capacity of U.S. agriculture would surpass any level previously experienced in this nation. Results of the two fertilizer limitation policy models indicate that a mild restriction on the use of nitrogen fertilizer would not strain the productive capacity of U.S. agriculture. A severe restriction, however, would reduce the supply capacity of U.S. agriculture considerably. (Author)

## APPROPRIATE TECHNOLOGY ABSTRACTS

**PB-211 473/4** PC A04/MF A01  
North Carolina Univ. at Chapel Hill. Dept. of Environmental Sciences and Engineering.  
**Engineering Measures for Control of Schistosomiasis**  
Frederick E. McJunkin. Sep 70, 71p TA/OST-AN-70-9-2  
Contract AID/csd-2487

Keywords: \*Schistosomiasis, Control, Environmental engineering, irrigation canals, Water quality, Parasitic diseases, Infectious diseases, Tropical regions, Developing countries, Bibliographies, \*Diseases.

The water-related disease schistosomiasis (or bilharziasis) infects more people today than ever before in history, perhaps as many as 200 million people. Its increasing incidence and widespread prevalence are due in large measure to tropical irrigation and hydroelectric projects, implemented by engineers. This report provides background information on schistosomiasis and its control to enable engineers to work effectively with other professionals in design and operation of schistosomiasis control programs. It also seeks to improve understanding on the part of epidemiologists, malacologists, physicians, and others of the role of engineers in control of schistosomiasis. The present status of engineering measures for schistosomiasis control is summarized, and some possible approaches and opportunities for more effective control of schistosomiasis by engineers are outlined. A bibliography of relevant publications is included.

**PB-211 487/4** PC A03/MF A01  
National Academy of Sciences-National Research Council, Washington, D.C. Office of the Foreign Secretary.  
**The Central American Workshop on the Environment and Development. Antigua, Guatemala, July 25-30, 1971**  
Jul 71, 37p TA/OST-AN-71-7-3  
Contract AID/csd-2584

Keywords: Economic development, \*Central America, \*Ecology, Developing countries, \*Environmental impacts, Meetings, Costa Rica, El Salvador, Guatemala, Honduras, Nicaragua, Agriculture, Industries, Services, Regional planning, Education.

The primary goals of the Workshop were: to stimulate awareness of environmental factors in economic development among leaders in Central America; and to lay the groundwork for concerted actions within the established framework of the Common Market countries (Costa Rica, El Salvador, Guatemala, Honduras, and Nicaragua). This document records the issues discussed and the conclusions reached. The focus of the workshop was upon the industrial, agricultural, and service industry factors. Consideration was also given to the human environment (principally population pressures), to planning at the regional level, and to educational consequences of environmental problems. (Author)

National Fertilizer Development Center, Muscle Shoals, Ala.  
**Training Manual for Fertilizer Plant Operators**  
Oct 70, 247p\* Circular-Z-17, TA/OST-AN-70-10-4

Keywords: \*Fertilizers, Chemical plants, Manuals, Chemical engineering, Operators(Personnel), Developing countries, Conveyors, Dust collectors, Weight measurement, Fork trucks, Sampling, Packagings, Pumps, Compressors, Valves, Fluid filters, Chemical reactors, Centrifugal classifiers, Comminution, Refrigerating machinery, Maintenance, Safety, \*Training.

The purpose of the manual is to assist in the training of fertilizer plant operators in the developing countries. It is an effort to share with the chemical industries in these countries experience that has been obtained over many years of operation at the National Fertilizer Development Center. Simple instructions, accompanied by abundant diagrams, are provided for all types of equipment to be found in most fertilizer plants. The topics covered include: Conveyors, elevators, crushers, screens, bins, tanks, dust collectors, weighing equipment, forklifts, front-end loaders, sampling, packaging, pumps, compressors, valves, pipeline flows, filtering equipment, absorption and spray tower, agitation, overhead cranes, common instrumentation, burners, centrifuges, heating and cooling equipment, granulating equipment, neutralization and reaction

equipment, concentration equipment, refrigeration equipment, preventive maintenance, lubrication, and safety. (Author)

National Fertilizer Development Center, Muscle Shoals, Ala.  
**Technical and Economic Evaluation of Fertilizer Intermediates for Use by Developing Countries**  
G. C. Hicks, R. D. Young, J. J. Stumpe, M. M. Norton, and M. J. Richards. Mar 70, 56p Bull-Y-3, TA/OST-AN-70-3-1

Keywords: \*Fertilizers, Developing countries, International trade, Economic analysis, Liquid ammonia, Nitrogen inorganic compounds, Liquids, Phosphoric acids, Phosphorus, India, Vietnam, Uruguay, South Vietnam.

In the past comparatively little emphasis has been placed on the position of fertilizer intermediates in supplying the fertilizer needs of the developing countries. This document provides an economic analysis of the prospects for fertilizer intermediates in the developing countries. An effort is made to rationalize the economic and practical examples by hypothetical planning exercises for the case of a few typical countries (India, South Vietnam, Uruguay) with large and small needs for fertilizers. The intermediates of primary concern are anhydrous liquid ammonia, low or nonpressure nitrogen solutions, phosphoric acid, and elemental phosphorous. (Author)

**Low-Cost Wood Homes for Rural America - Construction Manual**  
L. O. Anderson. May 69, 114p A/OST-AN-69-5-1  
Paper copy available from GPO as A1.76:364.

Keywords: \*Houses, Wood, Construction, Manuals, Rural areas, \*Wooden structures, Cost factors, \*Building materials.

Improved housing for rural families means, in many cases, a home that is low in first cost, easily maintained and equipped for good family living. This manual provides details on the construction of such housing, with special reference to methods and materials which will hold down costs, but will insure quality. It gives step-by-step information on every phase of house construction, from the construction of the foundation or supporting units to the final painting and finishing. The manual may be particularly useful to those who plan rural housing efforts; the contractors and skilled and unskilled laborers who will be concerned with the actual construction. (Author)

**Proposed Cooperative Fishery Program for Ecuador**  
H.S. Swingle. 25 May 71, 44p TA/OST-AN-71-5-1

Keywords: Fisheries, \*Ecuador, Projects, Aquaculture, Fishes, Shrimps, Reviews, Developing countries, \*Fishery cooperatives.

The report is a result of a survey which was undertaken to determine how the U. N. Food and Agriculture Orga-

nization and the U.S. Agency for International Development could best coordinate their fisheries programs to provide joint assistance of most benefit to Ecuador. Some of the topics discussed are: Reorganization of the Departamento Piscicultura; soils, water, and fish in the Oriente; the coastal area near Esmeraldas; and introduced species of fishes in Ecuador. In addition, an outline is provided for a proposed coordinated fisheries program. (Author)

**Fishculture Survey Report for Costa Rica**  
R. T. Lovell, and D. D. Moss. 1 May 70, 42p TA/OST-AN-70-5-2

Keywords: Aquaculture, \*Costa Rica, Developing countries, Surveys, \*Fisheries, Education, Capital, Research.

The report presents observations and recommendations which are made as a result of a survey of the inland fisheries of Costa Rica. The survey was undertaken for the purpose of providing technical advice on freshwater fisheries research programs in the country and on developing programs for the production of fish for food by farmers or commercial investors. The topics covered in the report include: General conditions in Costa Rica which may affect fishculture considerations; government divisions responsible for fisheries development; fishculture research and training; and available sources of capital, land and feedstuffs. (Author)

**The Marketing Challenge. Distributing Increased Production in Developing Nations**  
Martin Kriesberg. Dec 70, 104p FEDS-7, TA/OST-AN-70-12-4

Keywords: \*Marketing, Developing countries, Food, Meetings, Proceedings, Policies, Socioeconomic status, Project planning, Nutrition, Systems analysis, Problem solving, Surveys, \*Food supply, Technical assistance.

Inadequate transportation and storage, poor market information, lack of capital, and other chronic marketing problems in developing countries have been dramatized by recent production increases. The document is based on a symposium which was organized to focus attention and resources on food marketing in developing nations. Topics covered include: Key considerations in marketing policies; marketing enterprises and the flow of resources into marketing functions; nutrition and marketing food for the needy; efficiency in the marketing system; regional experiences in marketing problems and priorities; and approaches to technical assistance.

## APPROPRIATE TECHNOLOGY ABSTRACTS

**PB-211 669/7** PC A13/MF A01  
Stanford Research Inst., Menlo Park, CA.  
**Marketing of Staple Food Crops in Tropical Africa: Overall Analysis and Report**  
Final rept.  
William O. Jones. Jun 69. 280p TA/OST AN-69-6 6  
Contract AID/csd-801

Keywords: Food, Developing countries, \*Marketing, Supply(Economics), Urban areas, Commerce, Diets, Efficiency, \*Subsaharan Africa, Kenya, Nigeria, \*Food supply, Sierra Leone.

The report is an end product of a study undertaken to identify practical methods for increasing the efficiency with which staple foodstuffs are marketed in tropical Africa. It describes the structure of selected food marketing systems in tropical Africa in terms of product flow, exchange levels, personnel, and marketing; it appraises the performance of the system; and it identified measures that might be adopted to improve its efficiency. The specific subjects of the report are the trade in staple foodstuffs in the supply hinterlands of four major cities: Nairobi, Kenya; Enugu, Nigeria; Ibadan, Nigeria; and Freetown, Sierra Leone. Auburn Univ., Ala. International Center for Aquaculture.  
**Aquacultural Developments in Peru**  
D. C. Moss. 30 Apr 72. 57p TA/OST-AN-72-4-2

Keywords: \*Aquaculture, \*Peru, Developing countries, Fisheries, Personnel development, Research.

As part of an overall effort to reduce the outlay of foreign exchange for the importation of beef, the Government of Peru is striving to develop to the fullest extent the country's fisheries resources. An important part of this effort involves aquaculture. This report reviews the present status of aquaculture in Peru and provides a series of recommendations for future development. Some of the topics covered include the potential for coldwater and warmwater fishculture; a proposed project for culturing fish in pens; a proposed warmwater aquacultural research station; organizational structure of the Ministry of Fisheries; existing fisheries stations and equipment; and fisheries personnel and their training. **Corn Fortification: A Field Demonstration Model**  
Leonardo J. Mata, Ricardo Bressani, Paul A. Lachance, and Miguel A. Guzman. 12 Jun 71. 45p TA/OST-AN-71-6-3

Keywords: Nutrition, Developing countries, Corn, Additives, Nutritional deficiencies, Proteins, Experimental design, Guatemala, Central America, \*Food fortification.

Protein deficiency is a major problem in Central America, as it is in most societies throughout the world that occupy similar ecosystems. An apparent measure to correct this deficiency in utilizable protein would be to increase the production and consumption of animal protein, but the approach has very serious economic and socio-cultural limitations. A nutrition improvement approach that appears to be feasible is the fortification of a food that is normally part of the regular diet to a level sufficient to correct the protein deficiency. In the Central American countries corn, which is consumed primarily in the form of tortilla, would seem to lend itself well to this technique. This document outlines a proposed field methodology to determine the feasibility of the corn fortification approach at the community level. (Author)

**A Fertilizer Program for Bolivia**  
D. A. Russel, R. J. Ballew, J. I. Bucy, and D. A. Waitzman. Jun 70. 114p Bull-Y-9. TA/OST-AN-70-6-7

Keywords: \*Fertilizers, Developing countries, International trade, Wheat, Productivity, Marketing, Potatoes, Rice, Fruit crops, Coffee trees, Oilseed crops, Sugarcane, Benefit cost analysis, Tables(Data), \*Bolivia.

Bolivia annually imports over \$23 million of agricultural products, including wheat, edible oils, fibers, and dairy products. Wheat is by far the most costly of these imports, and it also seems the most amenable to increased domestic production through the use of new varieties and fertilizers. With lower costs, fertilizer could also be profitably used on such crops as corn, quinoa, rice, cotton, and sugarcane. This document provides a review of the fertilizer program in Bolivia, evaluates its need for fertilizer plans, and analyzes the possibilities for fertilizer marketing. (Author)

**The Feasibility of Harvesting, Processing and Marketing Tuna in Pakistan**

Alvin M. Morgan, S. A. Jallil, Masood A. Burney, Douglas M. Jones, and James G. Unti. 1970. 96p TA/OST AN-70-13-3  
Prepared in cooperation with Government of Pakistan, Dept. of Fisheries.

Keywords: Fisheries, Developing countries, \*Pakistan, Tunas, \*Food processing, Fishing grounds, Coasts, \*Marketing, Economic development, Canning, Freezing, \*Fishes.

The geographical locale of Karachi, with access to known productive tuna fishing areas along with a coastal population of traditional fishermen, are favorable considerations in the development of a deep sea tuna fishing industry for Pakistan. There is an increasing world demand for both frozen and canned tuna, especially in the highly industrialized nations of the world. This market offers the opportunity for Pakistan to earn foreign exchange for such other goods that are required for industrial expansion and economic development. This report is primarily concerned with two aspects of tuna fishery development: a fishery fleet, and a fish cannery. (Author)

**A Literature Search and Critical Analysis of Biological Trickling Filter Studies - Volume I**

Water pollution control research series.  
Dec 71. 330p EPA-17050-DDY-12/71-1  
Contract FWPCA-14-12-474  
See also Volume 2, PB-211 910.  
Paper copy available from GPO as EP2.10:17050DDY12/71.

Keywords: Trickling filtration, Reviews, \*Sewage treatment, Industrial waste treatment, History, Design, Maintenance, Performance evaluation, Research, Patents, Cost estimates, Ecology, Aerobic processes, Trickling filters, Chemical industry, Food processing, Laundries, Water pollution, Agricultural wastes, Metal industry, Drug industry, Fermentation, Paper industry, Radioactive waste processing, Textile industry, \*Water pollution, Biological industrial waste treatment, Brewing industry, Military facilities, Poultry processing, Tanneries, Water pollution control.

## APPROPRIATE TECHNOLOGY ABSTRACTS

A two volume compilation, review and critique of the literature on biological trickling filter studies and related pollution abatement processes have been made. In the report, the literature review and critical analysis, is divided into: Introduction, definitions, history and background theory of the trickling filter process; Plant design, materials of construction, operation, maintenance and performance; Trickling filter research and development approaches; ecology, and patents, and Applications of trickling filter to specific industrial wastes. Based on the review, several general conclusions were drawn. There is no well-defined theory of design and operation. Much published work was redundant, and European efforts were not readily accepted in the United States, and vice versa. The literature reflects cycles of interest in trickling filters. The process is not applicable to all pollution problems, but its shock survival capabilities and rapid flow-through time are definite advantages which cannot be overlooked in any design of a waste treatment facility.

Keywords: \*Fish protein concentrates, \*Chile, Developing countries, Food industry, Feasibility, Systems engineering, Marketing, Organizations, Competition, Financing, Proteins, Cost analysis, Investments, Food processing.

The report analyzes the feasibility of commercial production of fish protein concentrate (FPC) in Chile. This first Part consists essentially of summaries and condensations of the significant portions of the study, with enough detail to enable it to stand as an independent document. The topics covered include: The Chilean food system and the potential market for FPC; the isopropyl alcohol process and possible competitors; cost of FPC production; company organization and financing structure for an FPC enterprise in Chile; and alternative protein sources.

**Introduction to Record Keeping in a Small Enterprise**  
 R. F. Bruckart. May 68, 154p TA/OST-AN-68-5-3  
 Prepared in cooperation with the Industrial Development Center, Zaria (Nigeria).

Keywords: Records management, Manuals, Industrial plants, \*Nigeria, Management engineering, Commerce, Developing countries, Supervisors, Statistical data, \*Management techniques, \*Small businesses.

Much experience is available on the fundamental methods employed by managers of small businesses in industrially developing countries who have developed profitable operations. Effective record-keeping, it has been found, is one of the methods. The document introduces basic record-keeping methods similar to those that managers of small industries throughout the world have found useful. The topics covered include: Recording daily transactions; planning and controlling production; records of material or supplies; quality control records; employee records; and how the manager uses records. The document was prepared for use by small-enterprises in Northern Nigeria, but it should be generally applicable elsewhere.

**Hydrology and Water Resources Development in Nepal**  
 Open file rept.  
 W. W. Evett. Jun 69, 112p TA/OST-AN-69-6-7

Keywords: \*Nepal, \*Water resources, \*Hydrology, Ground water, Economic development, Rivers, \*River basin development, Developing countries, South Asia.

Water has long been recognized as one of Nepal's most promising resources. Yet, prior to 1960 little had been done to investigate and appraise the resource. By 1969, a nationwide network of hydrological stations had been established, and a ground-water exploration effort had begun. Furthermore, the Department of Hydrology and Meteorology had been established, staffed, and equipped to conduct investigations. The report discusses the history of hydrological investigations in Nepal, and the relation of these investigations to the social and economic problems of water-resources development and management. The general hydrology of the more important river systems of the country is described in detail. (Author)

**Plant Protection Problems in Southeast Asia**  
 Edward H. Glass, Roy J. Smith, Jr, Ivan J. Thomason, and H. David Thurston. 1971, 74p TA/OST-AN-71-13-1  
 Contract AID/csd-3296  
 Prepared in cooperation with East Asian Pest Management Study Team, and California Univ. Sponsored in part by Agricultural Research Service, Washington, DC.

Keywords: Plants(Botany), Pest control, \*Southeast Asia, Insect control, Crop weeds, Plant diseases, \*Pesticides, Developing countries, \*Crops.

Improved crop protection can do little to reduce the population explosion in East Asia, but it can make important contributions toward assuring an adequate food supply until populations become stabilized through family planning and birth control. This document is the report of a study team which has as its objective the appraisal of the nature and the scope of pest problems affecting food production in the Philippines, Thailand, Malaysia, Taiwan, Hong Kong, Singapore, and Japan. An effort was also made to determine whether the local environment and public health are endangered by improper use and lack of management of pesticides on food and other major crops. Specifically, consideration is given to the status and needs of crop protection in Tropical East Asia; economic and environmental implications of crop protection; possible approaches to solutions of crop protection problems; some international and foreign agencies in plant protection activities in tropical East Asia; and pesticides in public health activities.

 Water pollution control research series rept.  
 Feb 71, 356p EPA-WQO-12090-ECS-02/71  
 Paper copy available from GPO as EP2.10:12090-ECS-02/71.

Keywords: \*Textile industry, Industrial waste treatment, \*Water pollution, \*Industrial wastes, Reviews, Bibliographies, Inventories, Synthetic fibers, Natural fibers, Lagoons(Ponds), Activated sludge process, Trickling filtration, Detergents, Dyes, Sludge disposal, Industrial engineering, Cost estimates, Legislation, State government, Government policies, Textile finishing, Sizing materials, Cotton fabrics, Woolen textiles, Rayon, Acetate fibers, Polyester fibers, Acrylic fibers, Public law, \*Waste treatment, Water pollution control, Biological industrial waste treatment, Tertiary sewage treatment, Water pollution abatement.

A study has been made of waste treatment methods and practices used in the textile industry. Information was obtained from people working in the textile processing industry, designing waste treatment plants, and enforcing state and federal regulations on waters discharged to streams and natural reservoirs. To supplement this information the literature was reviewed and an annotated bibliography prepared. The report contains sections on the following: characteristics of textile waste, waste treatment techniques, treatment methods in use, effects of textile wastes on receiving waters, the cost of waste treatment operations, and state and federal regulations governing discharge waters. Areas of needed research are recommended. The annotated bibliography contains references on synthetic fiber manufacturing wastes, detergent waste treatment, instrumentation, plant design, water treatment for plant use as well as articles pertaining specifically to textile waste treatment.

Miner (Thomas H.) and Associates, Inc., Chicago, Ill. **Industrial Development and Feasibility Study. Pulp and Paper Manufacturing in South Vietnam. Book 1** Apr 70, 382p TA/OST-AN-70-4-1  
Contract AID/VN-54  
See also Book 2, PB-212 633.

Keywords: Pulp mills, Paper industry, \*South Vietnam, Feasibility, Developing countries, Market research, Expenses, \*Pulp, \*Paper, \*Industrial plants.

Vietnam has a variety of fiber resources which in total constitute an adequate raw material for a pulp and paper industry. The present paper industry was built with only the domestic market in mind, and currently it is entirely dependent on import of pulp. Under these circumstances of small size and imported raw material, the paper industry in Vietnam suffers from high costs. This study examines the feasibility of developing a viable pulp and paper industry in Vietnam in the early post-war period. The scope of the study includes: A review of the existing industry, including facilities, capacities, capabilities, and cost factors; a survey of present and possible future markets, both domestic and in neighboring Southeast Asian countries; a survey of indigenous fibrous raw materials, including types, amounts available, location, and cost; a proposal of location, number, type, and capacity of new facilities; and a calculation of grade costs, net realization, and financial soundness of the proposed facilities.

Yale Univ., New Haven, Conn. Economic Growth Center. **The Role of the Industrial Sector in Korea's Transition to Economic Maturity** Gustav Ranis. Oct 71, 37p EGC-DP-125, TA/OST AN-71-10-4  
Contract AID/csd-2492

Keywords: Economic development, Industries, \*South Korea, Developing countries, Economic analysis, Unskilled workers, Japan, Taiwan, \*Industrial development.

Korea belongs to the category of developing country which have small, therefore open, labor surplus dualistic economies, characterized by a relative lack of natural resources and an abundance of unskilled labor at the outset. This paper begins with a definition of the 'ideal' growth pattern for this type of economy. A review is then provided of the actual Korean experience relative to this ideal. Korean performance in this respect is contrasted to two other countries belonging to the same family; i.e. Japan, historically, and Taiwan in the post-war period. Consideration is given to the initial conditions and to the similarities and differences of the transition processes in the countries. Finally, the implications of this analysis with respect to further research and policy are discussed.

**PB-212 749/6** PC A04/MF A01  
Harvard Univ., Cambridge, Mass. Center for International Affairs. **Equitable Distribution of Benefits in Integration Schemes Among the Less Developed Countries: The Andean Group** David Morawetz. Apr 72, 67p Economic Development-216, TA/OST AN-72-4-3  
Contract AID/cds-1543

Keywords: Economic development, Treaties, Developing countries, Distribution systems, Commerce, Inequalities, Agreements, Economic analysis, Bolivia, Chile, Colombia, Ecuador, Peru, \*Socioeconomic status, Economic integration, Andean Group customs union.

All economic integration schemes among less developed countries which have been established to date have floundered on the problem of how to equitably distribute the benefits arising from the existence of the scheme. The Cartagena Agreement of the Andean Group customs union (Bolivia, Chile, Colombia, Ecuador, and Peru) includes several measures bearing on this problem. The paper provides a theoretical analysis of the benefit distribution problem, and an evaluation of the benefit distribution provisions of the Cartagena Agreement. Consideration is given to the definition of an 'Equitable' benefit distribution, some problems in measuring net benefits, and the presumptions as to whether benefits are likely to be equally or unequally distributed in integration schemes. A number of schemes which have been proposed and/or adopted to achieve equitable benefit distribution are then examined from a theoretical viewpoint. The measures contained in the Cartagena Agreement are analyzed in the light of this examination, and of the experience of other integration schemes with the benefit distribution problem.

Nathan (Robert R.) Associates, Inc., Washington, DC. **An Evaluation of Recent Private Industrial Development in Nicaragua** Jan 71, 109p TA/OST-AN-71-1-1  
Contract AID/La-650

Keywords: \*Industrial development, \*Nicaragua, Economic development Foreign aid, Financing, Developing countries, Industries, Investments, Capital, Small businesses.

In the mid-1960's, the Agency for International Development decided that the Nicaraguan industrial sector needed access to investment capital to finance a backlog of projects. AID met this need by making \$17

million available to create and strengthen intermediate credit institutions to mobilize capital, both foreign and domestic. This report provides an assessment of the efficacy of the AID programs to the private industrial sector of Nicaragua and suggests changes that might improve them. Specifically, consideration is given to the following: Past rate of growth; prospects for industry in Nicaragua; strategic factors in industrial expansion; shortage of working capital and the debt/equity problems; cost of AID capital; investment climate in the industrial sector; aid contribution to meeting long-term capital needs; strengthening the capacity of the National Development Institute (INFONAC); creation of a new private investment bank; AID loan program as a stimulant to domestic savings; loans to small businesses and artisans; providing technical assistance; performance and impact of the industrial sector in recent years.

Agency for International Development, Washington, DC. Office of Program and Policy Coordination. **A Firsthand Study of Industrial Management and Economic Development in India** Dec 69, 368p TA/OST-AN-69-12-1

Keywords: Industrial management, \*India, Economic development, Developing countries, Management, Environments, Benefit cost analysis, \*Industrial development, Transfer of technology.

The document represents an effort to develop guidelines that can serve as a basis for effective action by managements of individual Indian enterprises in their attempts to adapt to and reduce the impact of negative environmental conditions on their performance. It also seeks to determine the extent to which managerial practices, techniques, concepts, policies, principles, and general know-how which tend to be effective on a relatively widespread scale in U. S. industry can be transferred and/or applied successfully to a developing country such as India. Consideration is given to the costs and benefits involved in the transference process, and to the degree that the Indian environment seriously constrains or prevents such transference. In addition, attention is given to the development of guidelines and meaningful priorities that indicate what action might best be taken by public authorities in dealing with environmental constraints which seriously hinder managerial performance and productive efficiency at industrial enterprises.

Stanford Research Inst., Menlo Park, CA. **Costs of Urban Infrastructure for Industry as Related to City Size in Developing Countries. India Case Study** Om Prakash Mathur, Richard Morse, and M. C. K. Swamy. Oct 68, 453p TA/OST-AN-68-10-2  
Contract AID/csd-802

Prepared in cooperation with School of Planning and Architecture, New Delhi, India, and Small Industry Extension Training Institute, Hyderabad, India.

Keywords: Urban development, \*India, Industries, Economic development, Benefit cost analysis, Developing countries, Municipalities, Magnitude, Populations, \*Industrial development, Urban infrastructure.

The document provides the details of a study which was designed to measure the direct costs of equipping cities of different size for industrial development, including the costs of social infrastructure for new urban industrial employees and their families. It is orientated primarily to the situation in developing economics and is centered on the industrial growth requirements of selected cities in the states of Punjab, Haryana, and Uttar Pradesh, in northern India. An examination is made of the widely held belief that unit costs of incremental infrastructure for new industry tend to be relatively high in smaller cities, to decrease over some intermediate range of city sizes, and to rise significantly beyond some large city size. Consideration is given to both the effect of city size on costs, and to the combined effect of costs when composition of industry varies with city size.

## APPROPRIATE TECHNOLOGY ABSTRACTS

International Standard book no. 0-309-02030-1. Library of Congress catalog card no. 72-77533. Sponsored in part by Research Corp. of New York and the Department of Agriculture, Washington, D. C. Paper copy available from National Academy of Sciences, 2101 Constitution Ave., Washington, DC. 20418.

**Keywords:** Plant genetics, Plant diseases, Farm crops, Fungus diseases, Plant pathology, Epidemiology, Corn plants, Wheat plants, Rice plants, Leguminous plants, Soybean plants, Cotton plants, Vegetable crops, Economic analysis, \*Wheat, \*Rice, \*Vegetables, \*Soybeans, \*Crops, Corn blight.

The report provides the scientific community and the general public with a description of the circumstances surrounding the 1970 corn blight epidemic, and assessment of the genetic bases of other food and fiber crops, and an evaluation of their potential susceptibility to severe epidemics. This informative study presents the views of plant breeders and pathologists, geneticists, entomologists, plant physiologists, economists, and investigators knowledgeable in the production of major crops. These experts suggest ways to deal with the challenges that genetic uniformity in crops pose to the scientific community and the nation.

**Soils of the Humid Tropics**  
Jun 72, 229p

Library of Congress Catalog Card no. 78-189475. International Standard Book No. 0-309-01948-6. Paper copy available from the National Academy of Sciences, Printing and Publishing Office, 2101 Constitution Ave., N. W., Washington, DC. 20418.

**Keywords:** \*Soils, Tropical regions, Arable land, Soil surveys, Mapping, Soil structure, Soil classification, Fertilizers, Porosity, Soil chemistry, PH, Cation exchanging, Soil fertility, Aluminum, Potassium inorganic compounds, Phosphorus inorganic acids, Sulfur oxides, Silicon dioxide, Manganese, \*Latin America.

Throughout the world there are approximately 1.6 billion hectares of potentially arable land that is not now under cultivation. Half of this uncultivated land lies in the tropics where climatic and soil conditions offer a high potential for crop production. If only 2 percent of this land could be cultivated under modern technological principles, enough food would be produced to feed the current population of Latin America. A committee of soil scientists under the auspices of the Agricultural Board of the National Research Council has prepared **Soils of the Humid Tropics**, a report that identifies research priorities and offers recommendations for better use of this agricultural resource. Johns Hopkins Univ., Silver Spring, Md. Applied Physics Lab.  
**A Universal Solar Kitchen**  
C. J. Sweet. Jul 72, 27p\* Rept no. APL/JHU-CP-018

**Keywords:** \*Kitchen equipment and supplies, \*Solar energy, Solar radiation, Cooking devices, Water heaters, Cost, Performance (Engineering), Tracking (Position), Heat transfer, Convection, Solar kitchens.

The widespread domestic use of solar energy would significantly reduce air pollution and conserve vital resources, especially in populous developing regions where many families burn foraged firewood, vegetable waste, or dung. However, currently available solar cookers, ovens, and water heaters have failed to gain general acceptance where they are needed most, mainly because of their limited utility and poor compatibility with traditional life styles. Recent studies indicate that these shortcomings can be largely removed by innovative applications of existing technology. It now appears possible to produce at reasonable cost a universal solar kitchen that can satisfy most of the usual domestic requirements for thermal energy. The basic design is adaptable to a wide variety of ethnic and regional domestic practices, is readily transportable, and requires no special skills for installation or use. A conceptual approach to the design of universal solar kitchens is presented, with nonrigorous indications of feasibility performance, producibility, and cost. Two possible embodiments are described, with primary emphasis on the collection of the solar energy and its delivery to a convenient point of use or storage. (Author)

**Determination of the Rate of Biodegradation in Some Polluted Tropical Waters and in Some Types of Liquid Wastes Common in Puerto Rico**  
Completion rept.  
Luis A. del Valle. Sep 72, 85p OWRR-A-023-PR(1)

**Keywords:** \*Puerto Rico, Biochemical oxygen demand, Tropical regions, \*Water pollution, Sewage, Biodeterioration, Industrial wastes, Reaction kinetics, Temperature, Computer programs, Sewage treatment effluent.

The first part of the study evaluates methods for the determination of deoxygenation (biodegradation) rates of polluted waters in Puerto Rico. The experimental part of the study was divided into three phases. The first phase consisted in working with the waste as it came from the particular source to determine its value of K (biodegradation constant) in its original state. The second and third phases of the study consisted in diluting the waste with natural river and sea water to simulate the condition of the waste when discharged into a natural body of water. The degree of dilution does not seem to have any significant effect. On the other hand, when the dilution water is sea water the value of K tends to be higher than when the waste is diluted in fresh water. (Author)

**Impregnation of Concrete Pipe**  
Jun 71, 78p EPA-11024-EQE-06/71  
Contract EPA-14-12-835

**Keywords:** Concrete pipes, Impregnating, \*Corrosion, Sewers, Permeability, Polymers, Coal tar, Linseed oil, Sulfur, Urea, Formaldehyde, Exposure, \*Pipes (Tubes), \*Concrete.

The program was undertaken to investigate methods to increase the corrosion resistance, increase the strength, and reduce the permeability of concrete used in sewer line applications by impregnating the concrete pipe with relatively low cost resins such as asphalt, coal tars, linseed oil, sulfur, urea-formaldehyde, and others. Methods to accomplish this end were achieved and the materials, techniques of application, test results and economics are presented in this report. (Author)

Grant G06-EC-00080  
Prepared in cooperation with Illinois Univ., Urbana.  
Paper copy available from GPO as EP3.2:AG8.

**Keywords:** Sludge disposal, \*Irrigation, Fertilizing, Plant growth, Performance evaluation, Lysimeters, Farm crops, Trace elements, Soil chemistry, Nutrients, \*Sewage disposal, Sewage irrigation, Liquid waste disposal.

The project studied involved the possible agricultural benefits and environmental changes that would result from applying digested sewage sludge liquid to field crops. In addition, criteria are developed that can be used in selecting sites for this method of sludge disposal. The report discusses the progress made after three year's work. Since agronomic field studies require a minimum of three years to integrate seasonal effects with measured parameters, the longer the duration of a field study, the greater the confidence level of the results. Therefore, only one year of data--detailed climatic measurements, runoff and drain water analyses, and sludge applications--were collected from a lysimeter facility.

**Keywords:** Nuts (Fruits), \*Proteins, Food processing, Fruits, Nutritive value, Developing countries, \*Food products, \*Coconuts.

Coconuts represent a potential new indigenous protein source in the coconut producing countries of the world. This report provides the results of an effort to generate fundamental scientific and technological information basic to the practical exploitation of this protein source, and to evaluate the state of the art of processing fresh coconuts for food use. The evaluation is based on both a survey of the literature and personal contacts with those involved with research and development efforts. Results of basic investigations in the following areas are reported: The ultrastructure of coconut meats; physical processing methods for maximum extraction of fat and protein; the amount of heat treatment coconut meat and meal can tolerate without adverse effects on product quality; identification of major classes of protein in coconut meats; characteristics of each class of protein.

## APPROPRIATE TECHNOLOGY ABSTRACTS

Results are given of a research program which was undertaken to develop processes for manufacturing soy-based foods on a scale and of a simplicity appropriate to the socio-economic requirements of relatively small population centers in countries such as the Philippines. Flavor, acceptability, economy, and nutritional value were of primary concern. The report describes research conducted in the following areas: Development of a simple procedure for manufacture of a bland soy beverage and other products that could be easily produced without the use of elaborate and expensive equipment; introduction of the soy beverage to selected groups of Philippine school children; engineering studies on unit operations in soy product manufacturing; nutritional evaluation of the products and the nutritional effects of the unit processes involved; basic laboratory research on physical and chemical qualities of soy products and components to lay a scientific basis for improvement of the products and unit processes involved in their manufacture.

**Improving the Nutrient Quality for Cereals. Report of Workshop on Breeding and Fortification. Held at Annapolis, Maryland, 7-9 December 1970**  
Jun 71, 107p TA/OST-AN-71-6-6

Keywords: Grains(Foods), Developing countries, Cereal products, Food processing, Meetings, Plant genetics, Quality, Human nutrition, \*Food products, \*Food fortification.

There is a great potential for effecting improvement in diet through the breeding of higher protein content and quality in staples and through fortification of such staples during the milling process. The report presents papers from a Seminar on Breeding and Fortification held at Annapolis, Maryland from December 7-9, 1970. The papers concern progress, problems and potential for the improvement of various crops, including wheat, rice, corn, sorghum and millet. Recommendations are given for future operations and research.

**The Food Industry in Asia, Its Potential for Providing Low Cost Nutritious Foods. Proceedings of Singapore Workshop, 1-5 November 1971**  
Summary rept.  
Nov 71, 24p TA/OST-AN-71-11-2

Keywords: Food industry, \*Asia, Developing countries, Economic development, Human nutrition, Cost factors, Food processing, Meetings, \*Food products.

The Singapore Workshop was convened to provide a forum where Asian private food industry businessmen could discuss the potential of the food industry for providing low cost nutritious foods. This report summarizes the discussions of these businessmen during the week-long meeting. Special emphasis is given to the constraints which were identified as being the ones which hinder the progress of low-cost nutritious foods. Equivalent emphasis is also given to the recommendations for action which the participants felt could help overcome these constraints.

**Extending Protein Concentrates for Child Feeding by Addition of Inexpensive Simple Nitrogen Sources**  
Final rept.  
Nevin S. Scrimshaw, Oct 71, 63p TA/OST-AN-71-10-5  
Contract AID/csd-1441

Keywords: Food additives, \*Nitrogen, Food additives, \*Milk, Proteins, Amino acids, Nutrition, \*Children, \*Food fortification.

A series of studies has been undertaken to determine the extent to which the concentration of essential amino acids in dried milk can be extended by the addition of non-specific nitrogen without influencing the nutritional value of the protein. The results of the studies, which were conducted in children and young men, are summarized in this report. The non-specific nitrogen source used was a mixture of glycine and diammonium citrate. The results support the conclusion that at any time that it is necessary to extend the 'protein' content of milk supplies for the supplementary feeding of population groups, inexpensive non-specific nitrogen sources may be used to an extent of at least 10% without impairing the ability of the milk to meet any normal protein needs.

Dec 72, 15p W73-03907  
Contract DI-14-31-0001-3008, DI-14-31-0001-3208  
Sponsored in part by Research contract DI-14-31-0001-3508.

Keywords: Soil moisture, Barrier materials, Water consumption, Vegetable crops, \*Asphalt, Efficiency, Nitrogen inorganic compounds, Sands, Leaching, Yield, Productivity, Rainfall, Delaware, \*Soils, \*Vegetables, Asphalt moisture barriers, \*Water use.

The effectiveness of a subsurface asphalt moisture barrier in increasing yields of vegetable crops grown on loamy sand soils was investigated. Six vegetable crops were grown under conditions of irrigation and no irrigation with and without a barrier. Average yield increases of all crops over the barrier without irrigation were 46%, 58% and 55% for 1967, 1968 and 1969 respectively. With irrigation, yield increases were 35%, 16% and 30% for 1967, 1968 and 1969. Yield increases were due to a combination of increased water

retention and a reduction in nitrate leaching due to excessive rainfall. The barrier increased the water holding capacity of the soil in top 2 feet by approximately 1.25 inches or an additional 70% in available water. In laboratory leaching studies with simulated barriers using high rates of nitrogen, 2 1/2 times as much nitrate remained in the top 2 feet of the soil compared to no barrier with a 5 inch application of water. A summary of yields by crop and graphs of the movement of nitrate, ammonium and potassium are included. The asphalt moisture barrier has proven to be an effective production practice with sandy soils where irrigation is not feasible. (Author)

**Nonpoint Rural Sources of Water Pollution**  
Shundar Lin. 1972, 40p\* Rept no. ISWS-73-CIR1111  
Prepared in cooperation with Illinois State Dept. of Registration and Education.

Keywords: Surface water runoff, \*Water pollution, Rural areas, Nutrients, Agricultural wastes, Reviews, Fertilizers, Nitrogen, Phosphorus, Illinois, Soil erosion, Sources, Livestock, Industrial waste treatment, Pesticides, Subsurface drainage, Feedlot wastes, Manure, Water pollution control.

A literature survey was made to gather information for defining the quantity and characteristics of nonpoint water pollution sources from rural areas. Major constituents of such pollution include fertilizers, pesticides, erosion and sediment, and animal wastes. Studies showed that nitrogen and phosphorus from surface runoff and subsurface drainage are often greater in concentration than that from sewage effluents. Pesticides are only slightly soluble in water, and about 5 percent of that applied may enter waterways through surface runoff and erosion. With the exception of sediment transport, farm animal wastes can be the most serious sources of pollution from farm lands. Control techniques are discussed.

William A. Xanten, and Ralph J. Van Derwerker. Nov 53, 46p  
Prepared in cooperation with the American Public Works Association, Chicago, Ill.

Keywords: Communities, \*Waste disposal, Planning, Solid waste disposal.

Surveys have shown that many small communities do not follow sanitary refuse practices. There are many reasons why these communities have not taken steps to protect the health and welfare of their citizens. Predominant among the basic causes, however, is the belief that adequate service is too expensive, and a lack of information on how to establish and operate a satisfactory system. It has been clearly demonstrated many times, that urban fly control and rodent control

must be based upon adequate storage, collection, and disposal of community wastes. A practical refuse control program is within the means of any community. This publication proposes to describe certain factors which needs to be considered in establishing sanitary refuse practices, and to present representative operational and cost data in such manner that they may be interpreted to meet local conditions.

**Residential Solid Waste Generated in Low-Income Areas**

Samuel Hale, Jr. 1972, 17p Rept no. EPA-SW-83TS

Keywords: \*Waste disposal, Socioeconomic status, Urban areas, Distribution(Property), Characteristics, Trends, Residential buildings, Economically depressed areas, Disadvantaged groups, Low income groups, Poverty areas, Solid waste disposal.

Variations inherent in the generation of solid wastes make it extremely difficult to predict quantities that can be expected from a dwelling within a residential neighborhood. Some possibly influencing factors are climate, season, socioeconomic level, and dweller density. The objective of the study was to examine the quantities and critical factors involved in the generation of solid wastes in low-income residential neighborhoods. The results are presented in order that a better understanding of waste quantities and characteristics may be obtained. (Author)

**Controlling Factors in Methane Fermentation.**  
Summary of research progress rept. 1 Sep 62 - 1 Sep 64  
R. E. Speece, and R. S. Engelbrecht. 1964, 46p  
Grant FWPCA-WP-00394

**Keywords:** Anaerobic processes, Process variables, \*Sewage treatment, Fermentation, Metabolism, Nutrients, Digestion(Decomposition), \*Methane, \*Biocconversion, Methane bacteria.

A number of approaches have been taken in attempting to evaluate the important factors which control the rate of methane fermentation in anaerobic digestion. The ultimate goal of the research has been to determine the chemical, physical, and biochemical requirements which will enable the methane fermentation to proceed at rates on the order of one magnitude greater than commonly observed in conventional anaerobic digestion. A considerably detailed study was conducted to assay the methane fermentation stimulation potential of six compounds which had shown promise in a previous study conducted by the principal investigator. Next, a series of studies was designed to evaluate the influence of many physical and chemical factors involved in digestion. Following this, the methane fermentation requirements for trace organics, such as vitamins and amino acids was studied. Combinations of individual amino acids, and vitamins as well as mixtures, e.g. casein hydrolyzate (enzymatic), yeast extract, and fortified vitamin B complex, were assayed for their stimulation potential. The surface charge on the microorganisms was altered by inorganic and organic coagulating agents while observing the acetate utilization rate.

In developing regions like Central America there are appearing signs, sometimes alarming, of environmental contamination and degradation of natural resources. The first Central American Workshop on Development and the Environment examines in depth the regional environmental problems, and provides the planning directors and governmental officials with the necessary criteria for incorporating environmental aspects into their development programmes. The focus of the Workshop was on the industrial, agricultural, and service industry sectors. Included in the report are background papers and the recommendations of the Workshop.

## APPROPRIATE TECHNOLOGY ABSTRACTS

**Planning Korea's Agricultural Development. Analyses and Recommendations for the Third Five Year Plan**

William R. Gasser, James P. Cavin, Richard S. Magleby, Edward S. Micka, and Troy Mullins. Aug 70, 110p FEDS-Field-5, TA/OST-AN-70-8-2

**Keywords:** \*Agricultural economics, \*South Korea, Economic development, Livestock, Grains(Food), Marketing, Income, Planning, Demand(Economics), South Korea.

The population of the Republic of Korea is expected to exceed 35 million by 1976, a gain of about 13% over the 1969 figure. In the same period, the Gross National Product in real terms is projected to increase more than 80%, with income per capita showing a gain of about 78%. This population and income growth will generate a rapid rise in the demand for food, requiring an expansion of 25% to 30% in the total supply of farm products. This report contains a series of recommendations concerning steps that may be taken to effect this expansion in the areas of agricultural production and marketing. Consideration is given to the general improvement of long-range projections, livestock improvement plans, problems relating to grains, evaluation of marketing needs, and proposed reorganization for economic research. **A Deflection Survey Technique for Pavement Evaluation in Developing Countries**

H. R. Smith. 1973, 40p Rept no. TRRL-LR-525

**Keywords:** Flexible pavements, Deflection, Highways, Developing countries, Tropical regions, Design, Surveys, Evaluation, Covering, Test methods, \*Malaysia, \*Zambia, Great Britain, \*Roads, \*Pavements.

The role of deflection beam surveys in the evaluation of flexible pavements is discussed. Deflection studies in Malaysia and Zambia are described from which a suitable survey method for use on tropical roads, for the purpose of designing strengthening overlays or pavement reconstruction, has been developed. Testing at 100m intervals in both wheel-tracks is recommended with provision for a higher density of testing if the road deflection is variable, if the road surface has areas of visible distress, or if there are occasional very high deflection values. Deflection values of roads tend to exhibit skewed distributions but it is concluded that this is not necessarily a significant factor from the point of view of survey analysis for practical overlay design. **Keywords:** Catch basins, Surface water runoff, \*Water supply, \*Arid land, Playas, Lakes, Erosion control, Crude oil, Precipitation(Meteorology), Slopes, Cost estimates, Economic analysis, Simulation, Mathematical models, Texas, \*Hydrology, Lubbock(Texas), Amarillo(Texas), Texas High Plains.

Water harvesting is a potential source of water for arid and semi-arid lands. The objectives were to determine combinations of land surface treatments and land forming which result in efficient but inexpensive water harvesting catchments and to determine the optimum shape of catchments. In laboratory studies with inexpensive materials, crude oils exhibited the best sealing properties. However, by six months after application, 750 gal per ac of crude oil has no apparent effect on runoff from field plots. Water harvesting catchments constructed by grading the soil to form V-shaped valleys and then compacting the surface yielded runoff equal to 31 to 43 percent of all precipitation. After rains, sand blown from such catchments may damage tender downwind vegetation. Some water erosion occurred, but, after two years, the basic shape and the performance of the catchments had not been damaged by erosion. Chemical weed control is recommended. **Keywords:** Farm crops, Soil fertility, \*Fertilizers, Agricultural economics, \*Peru, Potatoes, Production capacity, Recommendations, Nitrogen, Phosphorus, Potassium, Theses, \*Soils, \*Crops, Production functions.

The problem examined in this study is the derivation of a generalized crop-fertilizer production function describing the response relation between measured soil characteristics, applied nutrients, weather and crop yield. It is hypothesized the function can be used to generate specific fertilizer recommendations to farmers based on soil analysis. The data come from potato-fertilizer experiments conducted on 65 farm locations over a seven year period in the Sierra Region of Peru. A quadratic model was chosen as the most appropriate form to describe the response relationships in these data. (Author Modified Abstract)

**Keywords:** \*Agricultural economics, Developing countries, Credit, Economic analysis, \*Brazil, Banking business, Policies, Problem solving, Recommendations, Small farmers.

The authors discuss major credit distribution problems on the supply side of credit in Brazil as they affect the problem of extending credit to small farmers. They suggest that adjustments in current policies might substantially increase the flow of credit to small farmers through regular banking channels. Information from Brazil is used to illustrate the contention. The following topics are considered: background on agricultural credit in Brazil; interest rate policy; institutional agricultural credit; results from credit and interest rate policies; reasons for loan concentrations; conclusions; and policy recommendations. **Keywords:** Agriculture, Developing countries, Marketing, Economic analysis, India, Prices, Production rate, Growth, Grains(Food), Regulations, Incentives, International trade, \*Agricultural economics, Imports.

The author states that agricultural production growth of most of the developing countries in the last 3-4 years has very considerably decreased their dependence on imports, especially food grains. This shift from heavy dependence on imports to fast-increasing internal surpluses has created the need for new government regulations governing the control and operation of markets so that the domestic market becomes fully responsive to the production changes and at the same time keeps up the incentives for higher and better production. **Keywords:** Rice plants, Farms, Farm management, \*India, Yield, Prices, Plant genetics, Cost comparison, Manpower, \*Rice, Small farms, Thanjavur District(India), Mehsana District(India), Rice ADT-27, Agricultural development, AIDH.

In order to evaluate farmers' response to the new rice and bajra varieties, the Indian Institute of Management at Ahmedabad undertook an intensive study of two districts-Mehsana District in Gujarat for a study of hybrid bajra, and Thanjavur District in Tamil Nadu, for a study of ADT-27, a new high yielding rice variety. In each district, use of inputs, yields and prices were collected from approximately 60 farmers who had adopted the new varieties of seed on some part of their acreage, and approximately 40 who had grown only the traditional varieties. A regression framework is used to examine factors affecting the extent of adoption of ADT-27 in Thanjavur. This is supplemented by comparative production function analysis of ADT-27 and traditional rice varieties. Hybrid and local bajra are compared, again with production function analysis. Finally, an assessment is made of ADT-27 and hybrid bajra as to their suitability for the small farmer. (Author Modified Abstract)

Occasional paper, Jun 69-Feb 72  
Dale W. Adams, and Joseph L. Tommy. 11 Feb 72, 10p Occasional Paper-61, AID-BR-332.71-A211  
Contract AID/csd-2501

Keywords: \*Brazil, Credit, Surveys, Banking business, Policies, Statistical data, Economic analysis, Classifications, \*Agricultural economics, Small farmers, Non-bank credit.

The paper summarizes the results of a study in southern Brazil which was focused at determining the characteristics of farmers who received additional bank credit during the period 1965 to 1969. Information is also presented on change in use of non-bank credit among farmers over the same period. Data were drawn from two sample surveys covering farm operation in 1965 and 1969 for 289 farms in southern Brazil. All of the units had 124 acres or less. Principle economic activities on the farms included various mixed enterprises of corn, beans, rice, wheat, hogs and dairy. Inducing banks to loan in a more socially efficient manner appears to be a major challenge. (Author Modified Abstract)

Presented at Woodrow Wilson School, Princeton Univ., 20-23 Sep 72, and At Council for Asian Manpower Studies at Penang, Malaysia, 3-5 Jan 73.

Keywords: \*Agricultural machinery, Design, Rice plants, Cultivation, Efficiency, Production capacity, \*Southeast Asia, Philippines, \*Rice.

The Institute recognizes the urgent need for suitable farm machines for tropical agriculture and the catalytic role that machinery design and development activities can play in the establishment of an indigenous farm equipment manufacturing industry in the South and

South-East Asian region. The IRRRI program of machinery development is therefore sharply focused towards providing designs of agricultural machines for the production and processing of rice with two major objectives in mind. One, the machines must meet the requirements of the 2-to 10-hectare farmers who can neither afford to use imported mechanization technology nor work efficiently with traditional methods. Two, the machinery designs must use to a maximum extent, locally available manufacturing methods, materials, labor and other resources of the region. (Author Modified Abstract)

Keywords: \*Wheat, Proteins, Cereals, Nutrition, Flours(Food), \*Soybeans, Oats, Diets, Lysine, \*Food products, \*Food fortification.

Much of the effort directed at improving the diets of needy people is centered on the improvement of the protein content and quality of cereals by the addition of protein-rich foods, protein concentrates, or essential amino acids. The combination of wheat and soy flours makes much sense as the second should correct the lysine deficiency of the first. Such a mixture is now being made available by our government in its international programs as WSB, or wheat-soy-blend. The study reports its evaluation in the diet of convalescent malnourished and normal infants and children. Included are results obtained with another wheat-soy blend and with an oat-soy blend. Keywords: \*Grains(Food), Storage, Buildings, Evaluation, Surveys, Facilities, Kansas, Developing countries, West Africa, Problem solving, Silos, \*Food storage.

A four day tour of grain storage facilities for Entente Fund officials was conducted by Kansas State University. Fundamental principles concerning condensation and problems related to condensation in metal storage buildings were discussed. The following aspects were considered to be important in reducing the possibility of condensation in metal storage facilities for bagged grains: (1) adequate ventilation (2) white paint used to paint the exterior, (3) do not stack grain bags against the walls, and (4) cover the grain pile with a plastic sheet, or put insulation on the roof inside of the storage building, thus creating at least a twenty-degree F. temperature differential between the interior and exterior air. Presented at Kasetsart University, Bangkok, Thailand. Feb 1-4, 1972.

Keywords: Rice plants, Farms, Farm management, \*Thailand, Production capacity, Selection, Cost factors, Rural areas, \*Rice.

The research paper discusses field research in Thailand on certain economic aspects of new rice technology, particularly the new high yielding rice varieties and associated inputs. The actual location of the study

area was in Suphan Buri Province, some 100 kilometers northwest of Bangkok, Thailand. A total of 153 rural households in six villages cooperated in the study. Forty of the rice farms were located in a deep water, broadcasted area where floating rice varieties are grown. The remaining 90 farms were in a transplanted rice area where many farmers were growing the new high yielding rice varieties. The authors provide summary tables on the following topics: table of farms; planted area and varieties grown; farmers growing new varieties; area and variety planted for the 1970 and 1971 seasons. They include summary discussions of high yielding varieties other new rice technology, research and costs of production. (Author Modified Abstract)

Contract AID/csd-2167  
Presented at National Ground Water Symposium, Sao Carlos, Sao Paulo, Brazil, 27 Nov-1 Dec 72.

Keywords: \*Irrigation, Agricultural economics, \*Ground water, \*Brazil, Design, Cost estimates, Drainage, Arid land, Farm crops, Soybean plants, Wheat plants, Forage crops, Cotton plants.

Typical examples of economic analysis of ground water development in Brazil are discussed, citing specific data for Bolivian conditions with conversion to Cruzeiro values, but without a detailed knowledge of commodity prices and costs in Brazil. Use of ground water can produce both irrigation and drainage benefits -- pumping from underground reservoirs has alleviated many drainage problems. Typical irrigation systems were selected, designs developed, and costs estimated. From theoretical considerations, and from available crop, moisture - yield relationships developed in other areas, the supply of adequate moisture properly distributed throughout the growing season should at least double production for cotton, sugar cane, soy beans, wheat, forage crops, and others with similar water requirements. Irrigation costs are analyzed. (Author Modified Abstract)

In the fall of 1969, a team of scientists from the University of Georgia was commissioned by the Technical Assistance Bureau of the Agency for International Development to (1) compile on a systematic basis the available information about cassava and related research now in progress; (2) synthesize, appraise, and analyze the information gathered and to determine as near as possible the broad limitations and potential of cassava as a food and feed crop; and (3) to prepare a list of research needs in their order of importance, for the orientation of future research on cassava. This team, consisting of ten men, represented the areas of Agronomy, Animal Nutrition, Botany, Economics, Food Science, Genetics, Horticulture, Human Nutrition and Plant Pathology. Each of their reports appear as a separate chapter in this manuscript and in each case represents their own view on cassava in their particular area of speciality. (Author)

## APPROPRIATE TECHNOLOGY ABSTRACTS

Pedro A. Sanchez. Oct 71, 47p AID-LAT-633.18-S211

Contract AID/csd-2806  
Presented at Seminar on Rice Policies for Latin American Centro Internacional de Agricultura Tropical, Cali, Colombia, 11 Oct 71.

**Keywords:** Rice plants, Cultivation, \*Latin America, Seasonal variations, Climate, Soil fertility, Weed control, Irrigation, Plant growth, Production capacity, Fertilizers, \*Rice.

The purpose of this paper is to illustrate the varietal response to specific cultural practices as examples of the kind of information needed for optimizing yields in each rice growing area in Latin American countries. Time of planting in relation to weather patterns is discussed for upland rice and irrigated rice. Planting systems, seed density and spacing are explained for upland rice systems, direct seeded-irrigated systems, and transplanted systems. Nitrogen response and response to other nutrients are described under rice fertilization. Weed control and harvest timing are included as important cultural practices. Examples of cultural practices interactions, total production costs and revenues and the effects of nitrogen levels are provided under economic considerations. The author concludes that the possibility of increasing rice yields throughout the different cropping systems in Latin America seem excellent if proper agronomic practices are adopted. (Author)

Report on Food Grain Drying, Storage, Handling and Transportation.

**Keywords:** \*Grains(Food), Storage, Environmental tests, Humidity, Developing countries, Environment simulation, Corn, Containers, Desiccants, Silica gel, Test chambers, Observation, Fungus deterioration, Time, Effectiveness, Adsorbents, \*Food storage, Humid regions.

The development of a simple, inexpensive grain storage unit and storage method which can be used at farm and local levels in humid areas in order to preserve the quality of grain is discussed. Losses result from inadequate facilities and improper handling of food grains. Efforts are devoted to the development of storage that would not require electricity, and that could be easily maintained and operated by unskilled labor. Materials, methods, time and partial results are discussed. The grain used in this preliminary report was corn. A silica-gel adsorbent appears feasible, but cheaper drying agents are needed. (Author modified abstract)

**Keywords:** \*Agricultural machinery, Design, Rice plants, Cultivation, Production, Field tests, Test methods, \*Philippines, \*Rice.

The major objectives of the contract continue to be the design, development, testing and extension of agricultural machinery for use by small- and medium-scale rice producers and processors in the tropics. Response from manufacturers now producing and those contemplating production of the 4-6 hp power tiller has been encouraging. Two manufacturers are now building a total of 200 power tillers a month in the Philippines. Evaluation of various machine concepts for the application of non-selective herbicides in rice and upland crops was initiated. The design of the axial-flow thresher neared completion. High output, multicrop use, simplicity in design, and ease of local manufacture should make it widely acceptable in most Asian countries. The second prototype of the PTO thresher

is approaching completion. Following final testing and evaluation, it will be released to manufacturers for production. Simple lifting-finger mechanisms for harvesting lodged crops were installed on the stripper harvester. Field trials with the stripper harvester indicate that grain losses with the field machine have been reduced to 6 percent. Additional modifications should further reduce these losses. (Author)

Contract AID/csd-2501

**Keywords:** \*Agricultural economics, Capital, Farm management, \*Brazil, Surveys, Economic analysis, Production, Productivity, Statistical data, Prices, Classifications, Income, Consumption, Savings, Investments, Financing, San Paulo(Brazil), Government credit programs, Land tenure, Technical assistance.

The focus of the research paper is on the capital formation process on Brazilian farms, with special emphasis on the role of credit and technology in bringing about rapid changes in agricultural production and/or productivity. An agricultural survey was made of 383 farms in the state of Sao Paulo, Brazil, in 1970 in order to obtain the necessary farm level data. Several homogeneous groups were identified which reflected farm characteristics of size, type, technology, tenure, market orientation, management level and mechanization. Analyses were made of farm organization, income, consumption, savings, investment and other distinguishing characteristics to show the production-income-growth process for each group. Report on \*Malaria Program.

**Keywords:** \*Malaria, Disease vectors, Culicidae, Ecology, Insect control, Antimalarials, Insecticides, Public health, Epidemiology, Parasitic diseases, \*Central America, \*Diseases.

Central America was selected as the site for a research station because the malaria programs of the region had been facing numerous problems. Among the first work initiated by CAMRS were intensive studies on the ecology of the malaria vectors. The information from these continuing studies on activity patterns, breeding cycles and habitats, and vector associations with man has guided the selection and timing of anti-mosquito activities including dry-season larviciding of river habitats, water-management practices in coastal estuaries, exterior spraying of houses, ULV spraying, and release of sterile male mosquitoes. The results of a pyrimethamine-primaquine mass distribution field trial enabled CAMRS to recommend against an expensive change-over of drugs and, in addition, yielded information on the reasons for the low acceptance in mass drug distribution programs.

**Keywords:** Farm management, \*Africa, \*Rice, \*Sierra Leone, \*Agricultural economics, Production, Manpower, Capital, Management methods, Land use, Output,

Mathematical models, Estimating, Cost analysis, Model farms.

The paper describes experiences in collecting data in West Africa for planning as well as other purposes. Suggestions are made as to how some methodological problems can be handled. Lessons are drawn mainly from a study of rice production in Sierra Leone. A stratified area sampling technique involving 240 farmers was used to secure input-output data for a linear programming study of the rice industry. General recommendations are made on methods of farm management and production. (Author modified abstract)

Contract PASA-TA(QA)6-69

**Keywords:** \*Fertilizers, Developing countries, Evaluation, Ureas, Phosphate inorganic acids, Phosphate deposits, Sulfates, Tropical regions.

The report presents a brief summary of tests recently made or in progress for production of several potential fertilizer materials that may have application in developing countries. Such materials include urea-phosphate rock, urea-single superphosphate based materials, urea-ammonium sulfate, granulated rock phosphate and improved urea. Emphasis is placed on the use of urea since it is now and will continue to be the most important nitrogen source in developing countries. Tests thus far are promising for development of a coating material which will improve the physical characteristics of urea used under tropical conditions. (Author Modified Abstract)

Contract AID/csd-2780

**Keywords:** \*Aquaculture, \*Japan, Fisheries, Oysters, Shrimps, Shellfish, Water pollution, Cost factors, Evaluation.

The purpose of this survey was to assess the value of Japan's aquacultural methods in terms of direct or indirect application in other countries, and to evaluate present and future status of aquacultures in Japan. The aquacultures discussed are: Ayu, Japanese eel, Yellowtail, Japanese oyster, and the Japanese Kuruma shrimp. Japan is faced with serious problems in most of its aquacultures. Only few of the methods of culture developed can be applied in other countries. If present methods are continued, many cultures will suffer limited growth and some may decline. The most serious problem and the ultimate limiting factor is the cost of production. Feed and labor are the two primary cost items of all cultures. Pollution is another problem. Another problem is having to depend on natural populations for young animals for stocking. A potential disease problem results from the feeding of uncooked trash fish also, and this particular problem has manifested itself in the yellowtail culture. Various stocking

Many countries are considering alternative methods for increasing the output of fertilizers and fertilizer intermediates. Numerous studies have been made for various countries surveying alternative production schemes which could be utilized. The report gives details of granulation process based on the ammoniation of superphosphates with ammonia-urea solution in a rotary-type drum granulator. Granulation is a process whereby rounded or spherical particles are produced through a fusion, solution, crystallization, or cementing process between various materials. To obtain spherical particles, it is necessary to impart a rolling-type action to nuclei; these nuclei serve as a base for building larger particles which grow to product size. Information for this report is based on actual experience during startup and operation of a plant in Porto Alegre, Brazil. The ammoniation-granulation plant there consists of a volumetric-type solid feed system, ammonia-urea solution feed system, TVA drum ammoniator-granulator, dual pan granulators, dryer, cooler, and screening system. Data are given to illustrate the possibility of grades that can be made for a plant of this type. (Author modified abstract)

Report on International Soil Fertility Evaluation and Improvement Program.

Keywords: Soil fertility, Nitrogen, Grains(Food), Soil fertility, \*Fertilizers, Plant growth, Rainfall, Production capacity, Soil properties, Availability, Nitrites.

Nitrogen use in modern agriculture has increased greatly with the growth of population and in turn the need for increased food production. Of all the soil elements essential for plant growth, nitrogen is the most likely to limit crop growth. Attention is focussed on some of the principles affecting nitrogen availability and use which provide for maximum efficiency in the production of cereal crops. In forecasting fertilizer nitrogen needs, several use factors are collectively evaluated. Crop requirements are determined first. The kind of crop, expected yield, amount of nitrogen absorbed and used by the plants at the projected yield level. Expected yield levels depend mostly on soil properties and climatic factors. The amount of nitrogen expected from the soil and natural resources are assessed through mineralization, biological fixation, and additions from rainfall. An evaluation of all these processes are obtained by measuring the yield of a crop when no nitrogen fertilizer has been applied. (Author Modified Abstract)

Keywords: Industrial relations, \*Colombia, Productivity, Scale(Ratio), Plants(Industries), Magnitude, Economic surveys, Statistical analysis, Development, Efficiency, Labor relations, Policies, Predictions, \*Industrial development, \*Small businesses, Technological development,

There is a shortage of documented information on Colombia's small scale industry. An approach utilized here focuses on, (1) the historical development (with emphasis on the last 20 years) of small scale production, (2) management performance in terms of the actual and potential efficiency with which converts resources into output, (3) the growth tendencies of plants and firms over a period of time according to their sizes, (4) the relative factor productivity compared to larger industry, and (5) possible strategies for the success of this form of production. The data indicate that small and medium plants are on somewhat higher output/capital ratios than larger ones. (Author Modified Abstract)

**More Wheat from Fallow Farming. (Tu-633.11-H529).**

Research rept.

Homer M. Hepworth. Jan 73, 55 AID-TU-633.11-H529

Keywords: \*Wheat, Production capacity, Soil water, Water storage, Conservation, Soil erosion, Weed control, \*Fertilizers, Climate, Cultivation, Statistical data, Agronomy, Turkey, \*Soils, Fallowing.

Statistics show that wheat production varies widely even in areas of the same climatic conditions. Research conducted by National Wheat Improvement Center provides necessary information and production sources for optimum wheat production in the shortest possible time. It is observed that moisture conservation in soil (fallow system) with other improved agronomic practices can produce the optimum yield capacity. An effective fallow system involves storing water when it comes as rain or snow and minimizing losses prior to planting the crop. Research and training programs are designed to adapt improved technology to local conditions. Also presented is an analysis of the approach taken to facilitate the transfer of technology to local conditions in Turkey. (Author Modified Abstract)

Keywords: Soil surveys, \*Latin America, Tropical regions, \*Soils, Reviews, Soil properties, Investigations, Soil classification, Morphology, Food, Farm crops, Soil

fertility, Cultivation, Acidity, Soil texture, Fertilizers, Nitrogen, Phosphorus, Potassium.

The publication is a comprehensive review of the available literature on soils research in the American tropics. This area comprises all countries of Latin America and the Caribbean excluding Argentina, Chile and Uruguay. A search was made of biological abstracts for work in the region. Approximately 1,000 abstracts were obtained on research published since 1960. Additional materials were obtained from Tropical Abstracts, the Latin American Bibliography of Agriculture and the authors' personal files. Emphasis is placed on the main food and feed crops of tropical America grown by small and medium sized farmers. The review covers the following topics of soil research: soil genesis, morphology and classification; soil physical properties; soil management under shifting cultivation; soil nitrogen in the tropics; nitrogen fertilization; soil acidity and liming; potassium; phosphorus; sulfur; and micronutrients. Keywords: Soil properties, Tropical regions, \*Puerto Rico, Soil surveys, Soil horizons, Regression analysis, Soil chemistry, Soil profiles, Soil water, Cation exchanging, Tables(Data), \*Soils.

In an investigation of the extent to which predictive soil property relationships can be relied upon in characterizing soils of the tropics classified at the reconnaissance level, 9 to 15 soil properties, of 370 horizons, from 84 Puerto Rican profiles, were studied by correlation and multiple linear regression. The soils represented six orders of the new U.S. Soil Taxonomy (7th Approximation): Vertisols, Mollisols, Alfisols, Inceptisols, Ultisols, and Oxisols. Multiple regression equations were formed from the data of each order, with 1.5-bar moisture content, CEC, organic carbon, extractable iron, and base saturation as dependent variables. The results indicate that, although it is possible to eliminate certain properties from tropical soil data acquisition and still adequately characterize the soil, the specific properties that can be successfully eliminated depend on the soil order. Keywords: \*Seeds, Selection, Farm management, \*India, Farms, Production, Irrigation.

The study explores the relationship that exists between adoption of the new seed varieties and size of farm for the small farmer in India. In this analysis a farmer is defined to have 'adopted' if he has put any part of his acreage under the new varieties. Tables are provided summarizing the results of the linear regression between proportion of farmers adopting the farm size for 70 cases. This analysis has been largely oriented to the adoption problems of the small farmer. Particular in the rice areas, among adopting farmers, the larger farmers seem to adopt on a smaller proportion of their acreage than the smaller farmers. The authors also discuss tenancy, irrigation, credit and uncertainty as factors affecting adoption. (Author Modified Abstract)

Contract AID/csd-2492

Keywords: Unemployment, Developing countries, Urban areas, Mathematical models, Population migrations, Rural areas, \*Employment, Underemployment.

A formal theoretical model is presented, with which the equilibrium allocation of the labor force between labor markets is analyzed. Following the model of Harris and Todaro, the focus is on the voluntary movement of workers between labor markets as the equilibrating force, instead of the more conventional mechanism of wage adjustment. Four additional factors are considered: a more generalized account of the process of search for urban jobs; favoring of educated workers over uneducated workers by employers in hiring; the possibility of unemployment in the so-called 'murky sector'; and recognition of labor turnover in a multiperiod framework. Results are compared with predictions by Harris and Todaro. Urban unemployment rates were found to be considerably lower than predicted by the Harris-Todaro model. The theory of quantity adjustment being the equilibrating mechanism in labor markets is considered. Results presented demonstrate that the resulting framework gives predictions that are closer to actual experience than the Harris-Todaro model.

Contract AID/csd-2494

Keywords: \*Water supply, Developing countries, Water resources, Community development, Management, Economic models, Benefit cost analysis, Demand(Economics), Supply(Economics), Construction, Central America.

The research included two principal objectives: (1) develop a theoretical planning model for deciding water supply timing and scale in small communities of developing countries; (2) initiate field studies to obtain data on the parameters of the model to make it operational. The work of model development had to focus on several communities instead of only one. Additionally, time in the model had to be made discrete because budgets are imposed at fixed points in time. Finally, the model had to include the considerations of Manne's model pertinent to developing countries: economies of

scale, water supply benefits, increasing demand, the discount rate, etc. While the first research objective is theoretical, the second is primarily applied. It was proposed to obtain at least preliminary information on water demand patterns in small communities, costs of water system construction, the economies of scale of water systems abroad, and by imputing, the benefits of publicly supplied water. All of the field data were obtained from Central America. (Author)

Keywords: \*Agricultural economics, Developing countries, \*Land use, Economic analysis, Reviews, Economic development, Production, Uncertainty principle, Allocations, Policies, Labor relations, Sharecropping, Tenancy, Resource allocation, Land reform.

An economic development report reviews the analytics of share tenancy for land reform and other aspects of agricultural policy in the developing nations. Section 1 discusses the comparative statics of resource allocation under share-cropping, fixed rent tenancy, and capitalist production using wage labor. The implications of production uncertainty are treated in section 2 and are related to the conclusions of the previous section. Production uncertainty is shown to modify the comparative static conclusions on resource allocation and to provide an explanation for the existence of share-cropping despite its alleged inefficiency. Keywords: Farm management, \*Employment, \*India, Agricultural machinery, Expenses, Fertilizers, Seeds, Rice plants, \*Agriculture, Agricultural development.

The 'green-revolution' has come to Asia, but Indian workers have nothing to fear from technology. This study finds increased use of modern purchased inputs generates an increase in the amount of labor employed per farm. The various inputs investigated are: (1) farm size, (2) irrigation expenses, (3) investment in farm machinery, (4) bullock labor, (5) expenses for seed and fertilizer, (6) percentage of high-yield varieties used, (7) price of the dependent variable, and (8) the amount of human labor employed other than that included in the dependent variables. These factors were applied to Ferozepur and Thanjavur in the States of Punjab and Tamil Nadu, respectively, because of their similarity to other regions in India. (Author modified abstract)

Contract DI-14-31-0001-3202, DI-14-31-0001-3502

Keywords: Sludge drying, Freezing, \*Sewage treatment, Dewatering, Sludge disposal, Design criteria, Sand filtration, Aeration, Activated sludge process, Cost estimates, Water pollution, Sludge treatment.

A sludge disposal process consisting of modified sand drying beds in combination with the freeze-thaw technique utilizing natural refrigeration was evaluated. The purpose of freeze-thawing of sewage sludge is principally to condition the sludge such that it is readily dewaterable and, subsequently, results in a reduced volume of solids to be further processed. The study consisted of three separate evaluations using three model drying beds for each respective run. Two of the beds were studied at sludge depths of six inches, and the third bed was evaluated at an eighteen-inch sludge depth. Settled activated sludge for placement on the model beds was obtained from the sedimentation tank of a local activated sludge plant.

**Removal of Algae from Waste Stabilization Pond Effluents - A State of the Art**  
V. Kothandaraman, and Ralph L. Evans. 1972, 13p\*  
Rept no. ISWS-72-CIR-108

Keywords: \*Algae, \*Waste treatment, Harvesting, Lagoons(Ponds), Precipitation(Chemistry), Filtration, Clarification, Flotation, Centrifuging, Dewatering, Fertilizing, Feeding stuffs, Manufactured gas, Methane, Drying, Concentrating, Sewage treatment, Industrial waste treatment, Microstraining, Anaerobic lagoons, Aeration ponds, Water pollution control.

Treatment of municipal, industrial, and agricultural wastes employing stabilization ponds or lagoons has found increasing application within the past 20 or 30 years. Regardless of whether the lagoon is an oxidation pond, an anaerobic cell followed by an aerobic polishing pond, or a facultative lagoon, the effluent from each facility is likely to contain a significant concentration of algae. With the adoption of wastewater effluent standards by water pollution abatement agencies, particularly with respect to suspended solids and biochemical oxygen demand, it becomes imperative either to design the oxidation pond facilities on a total wastewater retention basis or to provide means for separating the algae from pond effluents and disposing of the harvested residue. This report summarizes the investigations of other research workers concerning methods of harvesting algae and disposing of that harvest, and should be helpful to consulting engineers and stream pollution abatement agencies. Since several of the separation techniques employed in these investigations are physicochemical processes, a brief introduction to the algal cell wall characteristics is presented before discussing the algal removal methods. **Keywords:** Solid waste disposal, \*Cellulose, Fermentation, \*Agricultural wastes, Food processing, Bagasse, Proteins, Biodegradation, Drying, Process variables, Cost estimates, Pilot plants, Utilization, Sugarcane, \*Waste recycling, \*Food fortification, Food supplements, High protein supplements, Hyperfiltration.

The need for protein feed and the need to dispose of waste cellulose are problems being studied to develop a feasible method for the direct conversion of cellulosic wastes to microbial protein—a single cell protein to be used as an animal feed supplement. This report presents data on the process and summarizes research in large-scale production. The economics and techniques of the conversion process are compared with work done by petroleum companies on the fer-

mentation of hydrocarbons. Controlling variables used in the process are defined and significant goals necessary to achieve success in the field are described. The research deals mainly with the alkali treatment and fermentation parts of the process. Different micro-organisms from which single cell protein can be produced are given. Research in the areas of cell flocculation, flotation, or hyperfiltration are recommended to improve the most costly single step of the process—drying the cells. Methods of decreasing the degree of crystallinity are also included. The practicality of complete acid hydrolysis of cellulose to a soluble substrate for conversion to yeast protein and partial acid hydrolysis of the cellulose followed by microbial consumption is discussed. An economic analysis is given of the potential markets and the competitive cost with other proteins. (Modified author abstract)

**Keywords:** Bicycles, Research, Medical services, Trailers, Potable water, \*Water treatment, Urban planning, Research, Design, Roads, Central city, Medical equipment, Osmosis, Urban areas, Rural areas, \*Health, \*Water supply.

The report includes final results of project presented in the December 17, 1971 publication, The New City, which addresses the useful application of technology to solving urban problems. Topics include: (1) Human Powered Transit - examines elements of a human powered system: human power output, vehicle design, roadway design, and potential areas for the system such as a CBD, campus, and planned community; (2) Remote Medical System - develops a conceptual design of a system using mobile vans, paramedics and telecommunication to provide health services in geographically remote or in inner city areas and includes a bibliography; (3) Water Treatment System - designs and builds an inexpensive water treatment system using the principle of reverse osmosis to provide safe drinking water in rural areas. This system will be introduced by Peace Corps and Vista workers in appropriate areas.

 Byron F. Miller. Jun 73, 82p\* EPA-670/2-73-09  
 Grant EP-00262

**Keywords:** Agricultural wastes, Solid waste disposal, Materials recovery, Poultry, Feeding stuffs, Muscidae, Feeding stuffs, Biodegradation, Temperature, Humidity, Chickens, Chemical analysis, Air pollution, Water pollution, Amino acids, Larvae, Utilization, Metabolism, \*Bioconversion, \*Animal wastes, \*Waste recycling, \*Manures, Catabolism, Musca domestica.

As part of studies to determine how living organisms may be used to catabolize poultry manure, larvae of house flies (*Musca domestica*) were used to process poultry manure, with the pupae being used as a feed supplement. Temperature and relative humidity conditions were determined to produce an optimum yield of dry pupae. Three feeding trials were conducted to evaluate fly pupae and catabolized poultry manure residue as protein sources for growing chickens. White Leghorn chicks, White Plymouth Rock chicks, and New Hampshire and Indian River broiler chicks were fed the various diets and differences in body weight and feed conversion were recorded. The results indicated that fly pupae have potential as a protein supplement in chick starter and broiler diets; the protein quality was found to be similar to that of meat and bone meal or fish meal, and superior to soybean oil meal.

**Pulping of Tropical Hardwoods: Individual and Mixed Species, Wood and Paper Properties, Resource Assessment**  
 H. G. Higgins, F. H. Phillips, A. F. Logan, and V. Balodis. 1973, 25p Rept no. Technological paper-70 International Standard Book no. 0-643-00071-2.

**Keywords:** Wood pulp, Hardwoods, Resources, Tropical regions, Evaluation, Sampling, Test methods, Simulation, Density(Mass/volume), Kraft paper, Containers, Papers, Australia, \*Pulp, \*Paper, \*Wood, Papua(New Guinea), Rain forests.

Mixed tropical hardwoods from Papua New Guinea provide unbleached pulps suitable for use in linerboards, bag and sack papers, wrapping paper, and corrugating medium, and bleached kraft pulps from some resources may be suitable also for high-grade printing and writing papers. In forest sampling the resource should be stratified on the basis of a forest inventory. Three approaches to evaluation have been adopted: (1) pulping tests on a representative wood sample, (2) tests on a simulated sample from the major species, and (3) construction of a 'theoretical' sample from measurements of basic density and pulping results on individual species.  Grant FWPCA-WPRD-25-01  
 Paper copy available GPO as EP-1.23/2-73-209.

**Keywords:** Industrial waste treatment, Tanning materials, \*Water pollution, Activated sludge treatment, \*Leather, Design, Performance evaluation, \*Water treatment, Tanneries, Water pollution control, Biological industrial waste treatment.

The Caldwell Lace Leather Co. of Auburn, Kentucky, a small tannery using primarily alum tanning but some chrome and vegetable tanning, received a demonstration grant to investigate and demonstrate methods of treating tannery wastes for discharge to a small stream. A research contract with Vanderbilt University produced findings which have previously been reported and are reviewed herein. A modified completely mixed activated sludge plant was constructed, along with facilities to handle specific problem wastes. After it had been operating for a year, an EPA survey team conducted a study which showed that the plant was performing as predicted by the research phase, except for solids carryover from the secondary clarifier due to mechanical problems. After the problems were corrected, the plant began producing an effluent which more than met expectations, removing 97% of the suspended solids and 95% of the BOD. The report reviews the characteristics of the wastes and discusses the treatment process.

**Keywords:** \*Wood wastes, Utilization, Bark, Solid waste disposal, Materials recovery, Industrial wastes, Chemical composition, Pelleting, Fertilizers, Physical properties, Plastics, Solvent extraction, \*Wood products, \*Waste recycling.

The problem of bark waste that is generated by the forest products industry in the United States has become increasingly important. The major overall goal of the work covered in this report was to use physical and chemical sciences in coordinated studies to promote economic uses of bark in order to relieve pollution created by present methods of disposal. Physical utilization research included: investigating the preparation of bark pellets from bark; determining the components responsible for 'self-bonding' of bark; and investigating potential products from or applications of bark wastes obtained from production sources. Chemical utilization research included: preparing, for chemical studies, natural bark, bark that had been ammoniated to contain 4 percent nitrogen, and bark that had been

## APPROPRIATE TECHNOLOGY ABSTRACTS

molded into pellets and then broken down into small particles; and investigating the chemical composition of each type of bark prepared.

Contract EP-00250

**Keywords:** Solid waste disposal, Composts, \*Fertilizers, Composts, Refuse disposal, Plant growth, Germination, Nitrification, Grain sorghum plants, Tomatoes, \*Waste disposal, Cranberry beans, Pearl millet, Tur-nips.

Processed residential refuse from four municipal composting plants was evaluated as a source of plant nutrients and as a soil amendment. Indicator plants were turnip, pearl millet, cranberry beans, tomato, and sorghum. Three of the composts used were high in carbon and low in nitrogen, which resulted in delayed nitrification accompanied by poor plant growth. Total soluble salts in those composts were relatively high and could affect seed germination. Extracts of compost (160 g/500ml H<sub>2</sub>O) greatly reduced germination in radish and turnip seed, and extracts from 320 g compost/500ml H<sub>2</sub>O reduced germination to 0 in turnip and radish seed and to about 40 percent in oat and millet seed. After a period of time in the soil, compost applications above 32 metric tons/ha increased plant yields and improved soil cation exchange capacity and water-holding capacity. In laboratory studies with compost incorporated at various levels in Arredondo sand, almost no nitrification occurred. When mixed with cow manure in equal parts, compost effectively curtailed nitrification in the cow-manure almost 100 percent. (Modified author abstract)

**Keywords:** Solid waste disposal, Industrial waste treatment, \*Agricultural wastes, Water pollution, Farms, Sewage treatment, Liquid waste disposal, Algae, Lagoons(Ponds), Sludge disposal, Feeding stuffs, Drying, Water reclamation, Materials recovery, Anaerobic processes, Fermentation, Pilot plants, Digestion(Decomposition), Performance evaluation, Houses, \*Waste recycling, \*Waste disposal, \*Bioconversion, Water pollution control, Manure, Aeration ponds.

The overall objective of this study was to develop a system with which a large fraction of the wastes produced by agricultural industries could be converted into a useful material without imposing an unacceptable burden on the environment. Specifically, the project involved a detailed study of the basic characteristics of an integrated anaerobic fermentation and algae growth system for agricultural solid and liquid wastes on a laboratory and small pilot plant scale, with special attention being devoted to the reaction kinetics of the system. A substantial degree of nutrient recovery and recycle was also attained in the system.

Science and Industry Contrib-776.

Keywords: Nutritive value, Proteins, Food supplements, Millet, Sorghum, Maize, Diets, Fish protein concentrates, Milk, Vegetable proteins, Soybeans, \*Food fortification.

Nutritive value of the protein of millets (Bajra and Ragi), sorghum, and maize was studied by amino acid analyses, by growth of rats and calculations of PER using diets containing the grains, unsupplemented or supplemented with lysine, tryptophan, or four protein concentrates. Ragi protein was highest in essential amino acids (EAA) except leucine, and compared to the FAO reference pattern, no amino acid in Ragi was limiting except lysine was marginal. Bajra protein was deficient in lysine; sorghum and maize were deficient in three or more amino acids. On several protein-quality scores, Ragi ranked first and Bajra second; both ranked considerably higher than sorghum or maize. Among unsupplemented diets, Bajra caused greatest weight gain in rats and had the highest PER. Supplementing Bajra and Ragi diets with lysine increased both gains and PER. Lysine improved sorghum and tryptophan improved maize diets; together lysine and tryptophan markedly improved both diets. Fish protein concentrate was the most effective supplement with sorghum and Ragi, dried milk with maize, and isolated soybean protein with Bajra.

Keywords: Credit, Farms, Finance, Financing, \*Agricultural economics, Small business, Loans.

For the Review, AID was able during the period June 1972 thru January 1973 to assemble a large number of comparable case studies drawn from different parts of the world, to analyze them, and to report on the lessons of experience. The research focused on three principal themes: The role of institutional credit in small farmer development; the major institutional alternatives for delivering small farmer credit; and certain policy issues, such as interest rates, that appear to be critical to the success of these programs. The tentative conclusions drawn from the research were refined during a series of ten field workshops in the spring of 1973 and are presented in summary form in this volume. The entire evaluation is limited by the fact that

credit is only one of the factors in a small farmer development strategy, and, though the study found a handle on the broader subject, it cannot, in itself, recommend an overall solution to the small farmer problems.

### Capital Formation of the Ecuadorian Frontier: A Study of Human Investment and Modernization in the Riobambenos Cooperative

Peter M. Gladhart. Apr 72, 78p A.E.Res-72-5, AID-EC-3338.1-G542  
Contract AID/csd-2823

Keywords: \*Ecuador, \*Agricultural economics, Food supply, Farms, Income, Production, \*Cooperatives.

The agricultural production activities of spontaneous settlers is described in detail, with special focus upon the determinants of family income and investment and rate of capital formation. The cooperative Riobambenos del Rio Chilimpe was selected for extensive study. Production processes and family income structure was analyzed for 22 farmers for calendar year 1967. The most important sources of income for the majority of farmers were, in order: crop sales, livestock sales, and timber sales. 59% of family receipts for the average farmer were provided by crop sales. The most important crop was plantain. Important developmental benefits of land settlement in Santo Domingo de Los Colorados include: economic integration, redistribution of income, and creation of a modern agricultural sector.

### Un Modelo de Fortificacion del Maiz con Harina de Soya, Lisina y Otros Nutrientes, en una Comunidad Rural de Bajo Nivel Socioeconomico (From the Study: A Model for Corn Fortification with Soy Bean Flour, Lysine and Other Nutrients in a Low Socioeconomic Rural Community)

Leonardo J. Mala. Mar 72, 18p AID-GT-613.28-M425a  
Contract AID/csd-3357

Text in Spanish.  
Pub. in Memorias de la Conferencia sobre el Mejoramiento Nutricional del Maiz, Instituto de Nutricion de Centro America y Panama (INCAP) 1972. Text in Spanish.

Keywords: \*Food fortification, \*Nutrition, \*Soybeans.

A long term prospective study in a highland community where corn provides 70% of proteins and calories, revealed that: (a) 40% of babies have low birth weight; (b) most infants exhibit physical growth retardation; (c) infant mortality is very high; and (d) certain infectious diseases have a greater severity and longer duration than usual. In this village, 'nixtamal' (lime-cooked corn) is ground in mechanical mills; a supplement is added to nixtamal during milling. The supplement provides 7.82 percent soy bean flour, 0.1 percent lysine, and 0.08 percent of a mixture of vitamins A, B sub 1, B sub 2, and niacin, and iron. Field trials showed that the supplement does not effect the taste of the tortillas. Effects of the intervention could be noticeable in fetal growth, weight curves in the first year of life, infant mortality, and duration of disease. It is expected that the nutritional intervention will have a measurable beneficial effect on the parameters studied when the first data analysis is made in 1974.

**Progress Report on Fisheries Development in Northeastern Brazil. I. Aquaculture**  
N. B. Jeffrey. Aug 72, 11p AID-BR-639.20981-J46  
Contract AID/csd-2270

Keywords: Fresh water fishes, Food processing, Aquatic biology, Aquaculture, \*Brazil, Research projects, Marketing, Proteins, Management, \*Fisheries.

The United States Agency for International Development has been providing assistance to the Government of Brazil in freshwater fisheries since 1966. The project goal established for this assistance is to create a freshwater fisheries group capable of planning and conducting practical research programs in the fields of

food technology, fish culture, and fisheries biology. The purpose is to increase fish production in Northeast Brazil through proper management of the freshwater fisheries, improvement of fish processing methods, and the introduction of intensive fishculture techniques. Once these purposes are achieved, general well-being of the people can be improved by increasing the amount of protein available for human consumption and by creating opportunities for capital investment. This report summarizes and evaluates USAID assistance in fisheries biology, and provides a brief description of the Drought Polygon of Northeastern Brazil, the reservoir fisheries, the marketing systems and sections on past and present strategy, project status, and recommendations for future action.

### Oil Seed Production in the Tropics and Sub-Tropics

Technical series paper no. 6.  
Feb 72, 70p Rept no. AID-633.85-A265

Keywords: Oilseed crops, Tropical regions, Soybean plants, Cotton plants, Plant culture, Cultivation, Acclimatization, Production, Exports, Food preparation, Sesame oil, Cottonseed oils, Safflower oil, Soybean oil, \*Vegetable oils.

The study is intended to survey the importance of annual (vegetable) oilseed crops in developing countries and to provide certain basic information as to the characteristics and utility of the more important types. The species considered included groundnuts, sesame, sunflower, safflower, cottonseed, soybeans, and castorbeans. This study deals with each of the seven annual oil seed crops, as to their respective plant characteristics; ecological adaptation; uses; cultural practices for higher levels of productivity; world production centers; and world trade in the oil seeds, their extracted oils, and the cake or meal derived from extraction of the oil.

Keywords: Feeding stuffs, Proteins, Livestock, Meetings, Grains(Food), Forage crops, Food processing, Meat, Blood, Oilseeds, Fish protein concentrates, Agricultural wastes, Industrial wastes, Quality, Utilization, Evaluation, Animal nutrition, \*Poultry, \*Animal husbandry, Animal waste.

For the benefit of livestock and poultry producers, feed manufacturers and scientists and researchers in animal husbandry, this report reviews potential sources of protein and considers ways to increase the quantity and improve the biological value of protein for animal production. Some of the symposium papers presented in the report explore measures for enhancing protein supplies from known proteinaceous feeds, while others identify and evaluate some new or under-utilized sources. In discussions of known sources of protein, the report considers ways to improve the quantity and quality of protein in cereal grain, separate protein from fiber in forage crops, improve the processing and utilization of animal by-product proteins, increase production of oilseed protein, change utilization patterns. New sources of protein discussed include such less-utilized oilseeds as sunflower and sesame, the grain legumes, whole fish protein, single-cell protein from industrial wastes, and recycled animal wastes.

Text in Spanish.

Keywords: Livestock, \*Bats, \*Pest control, Anticoagulants, injections(Medicine), Blood, Poisons, Vampire bats, Diphenadione.

Two different chemical methods for reducing populations of vampire bat populations are described. Both methods are based on an anticoagulant, diphenadione. The chemical is either injected into the rumen of cattle or applied directly to the back of vampire bats captured near livestock. The blood of treated cattle is poisonous to vampire bats for about three nights following treatment. Vampire bats with the anticoagulant applied to their backs return to their roost where the chemical is passed from one to several others by contact and mutual grooming. One treated vampire bat can carry sufficient chemical to poison 20 other vampire bats. (Available in English and Spanish)

fectiveness, Farms, Rice plants, \*Southeast Asia,  
Small farms, \*Rice, \*Agriculture.

The development of a low-cost farm drying and pro-  
cessing equipment that would be suitable for use and  
manufacture in the developing countries is of urgent  
necessity. Such equipment could be used by the  
medium-size farm holdings of 2 to 10 hectares which  
contribute a large portion of the land under paddy cul-  
tivation in Southeast Asia. Very few attempts have been  
made by private manufacturers on the development of  
small drying and processing equipment. Research and  
development on low-cost drying and processing equip-  
ment for small-scale operation is one of the important  
areas of activities at the Agricultural Engineering de-  
partment of the Institute.

The report discusses the economics of hand tractor  
ownership and operation. The objectives are to ana-  
lyze input-output data on various types of hand tractors  
and to define the relationship between tractor use and  
costs via average cost curves. The first section con-  
tains a technical description of hand tractors used on  
Philippine rice farms. Information on why the tractors  
were bought and what criteria were used in choosing  
them are given in the second section. The third section  
is devoted to a comparative economic evaluation of  
power tillers and the fourth is an attempt to establish  
the conditions under which hand tractor repayments  
can be made. The last section examines the impact of  
devaluation on hand tractor use.

The information base and the views expressed in this  
paper have been derived from a marketing research  
and development project (LAMP - Latin American Mar-  
keting Planning Center) through which a Michigan  
State University group has carried out studies in Puerto  
Rico, Northeast Brazil, Bolivia and Colombia in co-  
laboration with local governments and their related  
agencies. The material being presented in this paper  
represents an accumulation of experience over a  
period of approximately seven years by the Michigan  
State University group. The primary purpose of this  
effort has been to conduct diagnostic studies of inter-  
nal marketing systems linking large urban centers with  
their rural supply area and to formulate recommenda-  
tions for marketing improvements. This activity has  
centered upon agricultural marketing broadly defined  
to include not only agricultural product marketing but

also the distribution of farm inputs and consumer  
goods.

held in Kathmandu (Nepal), on 21-24 Feb 72.

Keywords: \*Marketing, Agricultural products, Agricul-  
tural economics, Distribution systems, Food industry,  
Productivity, \*Agriculture.

The purpose of this paper is to discuss the design of  
improved agricultural marketing systems as a means  
of stimulating economic development. This implies two  
propositions: (1) that the marketing system can be an  
active element in the development process and (2)  
that high performance marketing systems do not de-  
velop automatically in response to the needs of a par-  
ticular situation. Marketing is often neglected in de-  
velopment planning because one or the other or both of  
these propositions are implicitly rejected. The theme of  
this paper has been that improved organization and  
coordination of food production-distribution systems is  
critical in the effective transformation from a traditional  
agricultural economy with low productivity to a scienti-  
fic industrial one with high productivity.

Technical bulletin  
Pedro A. Sanchez. Nov 72, 33p TB-213, AID-633.18-  
S211  
Contract AID/csd-2806

Keywords: Rice plants, Nitrogen, \*Fertilizers, Tropical  
regions, Oxidation reduction reactions, Flooding, Soil  
properties, \*Rice.

Rice is the main food crop in the tropics. It is the only  
important crop capable of growing in flooded soils be-  
cause of its ability to oxidize its rhizosphere. Rice re-  
sponds almost universally to nitrogen fertilization. Ni-  
trogen reactions are markedly affected by oxidation-  
reduction status of the soil, which largely depends on  
water management and soil physical conditions. Tem-  
porary flooding in most tropical areas causes loss of  
native or applied nitrogen. The responses of rice to ni-  
trogen are minimal when tall varieties are used. In con-  
trast, the responses are large and economical when  
higher rates are applied to short-statured varieties. Ni-  
trogen recommendations for flooded rice are based on  
soil properties, plant type, solar energy, temperature,  
water management, and spacing.

Keywords: Grinding mills, \*Rice, Philippines, Upgrad-  
ing, Cost analysis, Design criteria, Improvement, \*Agricultural  
machinery.

The paper addresses itself specifically to the problems  
of modernizing and upgrading the rice milling industry.  
More precisely, it is an attempt to critically assess the  
efficiency and economics of existing rice milling tech-  
nologies. The objectives are to determine the potential  
for technical improvements in existing systems and,  
where feasible, the efficacy of initiating activities to  
design and develop new technologies which will in-  
crease efficiency and reduce losses. The analysis is  
confined principally to milling equipment and does not  
include an evaluation of issues relating to storage or  
drying.

Agricultural Areas in Low Income Nations--Some  
Results from Comilla, Bangladesh. (BG-  
301.34095492-S845)**  
Staff paper  
Robert D. Stevens. Jun 72, 29p AID-BG-  
301.34095492-S845  
Contract AID/csd-2826

Keywords: \*Agricultural cooperatives, \*Bangladesh.

The paper provides an outline and analysis of three  
effective models of programs for small farm agricul-  
tural areas based upon ten years experience in Bangla-  
desh. The models are for (1) effective agricultural co-  
operatives, (2) the improvement of rural government,  
and (3) for a social science institution which conducts  
pilot operations, training, and research in rural devel-  
opment. In a broader social science framework, devel-  
opment programs require analysis in the framework of  
cultural and economic change. The role of models  
such as the three analyzed here is to provide ways to  
accelerate change at a productive rate toward desired  
goals.

Keywords: Economic analysis, Regional planning,  
\*Water resources, Growth, Measurement, Invest-  
ments, Factor analysis, Benefit cost analysis, Interac-  
tions, Regions, Requirements, Community relations,  
Concepts, Demography.

Innovative approaches are explored for measuring and  
identifying benefits to area economic development  
through water resource improvements. A new ap-  
proach was developed and tested, and some signifi-  
cant methodological conclusions were reached. Gen-  
eral conclusions of the analysis relating water re-  
source projects and other public expenditures to eco-  
nomic development are: (1) water-related investments  
affect both the level of economic activity and its  
growth; (2) water resource developments viewed as  
factors of production can be examined for their substi-  
tution relationships with non-water production factors;  
and (3) the effect of water on economic growth de-  
pends on (a) the state of the regional economy in  
which the investment is made, and (b) other non-water  
investments.

Presented at a Workshop on 'Agricultural Credit for  
Small Farmers in Less Developed Countries', held in  
Arlington, Va., on 6-7 Apr 71.

## APPROPRIATE TECHNOLOGY ABSTRACTS

**Keywords:** Credit, Financial management, Farms, Finance, Agriculture, Financing, \*Agricultural economics, \*Agricultural cooperatives, \*Bangladesh, Cooperatives, Small business, Loans.

After some introductory remarks providing a framework within which this analysis is made, the paper focuses in Part II on the effectiveness of the Comilla Cooperative System in providing credit to small farmers. The third part of the paper examines the operating procedures and economic stability of the Comilla Agricultural Cooperatives Federation. In the fourth part, some conclusions and discussion of special issues are offered.

**Individual Home Aerobic Wastewater Treatment Systems**  
Master's thesis  
Robert Norman McBride. 1972, 121p\* OWRR-A-021-COLO(2)

**Keywords:** Houses, \*Sewage treatment, Aerobic processes, Statistical data, Design, Biochemical oxygen demand, Septic tanks, Evaluation, Tests, Theses, Residential buildings.

A system that has an economic advantage over septic tanks under certain soil conditions is the aerobic system. The use of aerobic systems is described including unit functions, types of units available, and problems and recommendations for improvement. Aerobic units under experimental conditions were observed to produce a better effluent than a septic tank. However, the performance as claimed by the manufacturers, could be misleading to homeowners. The results of tests run on the units located in the field show that the units are meeting the manufacturers standards about 20% of the time. These units only average about a 44% reduction in BOD. This is assuming an incoming BOD of 250 mg/liter. In some cases the tests showed an influent BOD greater than this.

**The Natural Resource Potential for Regional Development of Limon Province: A Preliminary Survey**  
Oct 73, 162p  
Contract AID/csd-3391

**Keywords:** \*Natural resources, \*Costa Rica, Economic development, Economic surveys, Regional planning, Industrial relations, Agriculture, Transportation, Livestock, Wildlife, Developing countries, Limon Province(Costa Rica), Tourism.

The study is part of a larger study to understand the appropriate role of science and technology in the development of a small country like Costa Rica. The Limon survey may be described as a broad brush survey of the natural resources existing in the region. This effort comprised gathering data relevant to the survey, evaluating the data and suggesting studies for formulating policies for regional development. The study was made by a team from Cornell University in cooperation with Costa Rican consultants.

Report on Project Safeguard: Safe Pesticide Practices.

**Keywords:** Toxic diseases, \*Pesticides, Diagnosis, Therapy, Drug therapy, Antidotes, \*Diseases.

With the DDT ban, effective January 1, 1973, the use of a variety of other chemicals must be increased to substitute for DDT in the control of insects. Replacement chemicals will probably include among others: organophosphates; carbamates; chlorinated hydrocarbons; and botanicals. Chemicals replacing DDT will be less persistent in the environment than DDT. Some replacement chemicals will be more acutely toxic to man and, therefore, will present greater potential hazards. An intensive short-term educational program, Project Safeguard, is underway to train the farmer in the safe use of these replacement chemicals, and this program should minimize the hazards from improper use. The potential still exists, however, for an increased incidence of toxic exposure and resulting clinical illness, in which accurate diagnosis and prompt treatment could mean the difference between life and death.

Prepared in cooperation with Auburn Univ., Ala. School of Business Research Series 3.

**Keywords:** \*Water resources, Economic development, Economic analysis, Economic models, Water pollution, Fisheries, Regional planning, Hydroelectric power generation, Alabama, Mercury(Metal), Plant location, Thermal pollution, Input output analysis.

This collection of articles emphasizes the value of determining the costs associated with water-borne externalities. Pecuniary, technical, marginal and inframarginal externalities are defined and their effects on societies' production possibilities are examined. A survey was made to determine the loss of commercial fishing income arising from a fishing ban on an Alabama lake caused by mercury pollution. Total income loss to fishermen was mitigated by shifting their resources to other uses; as a result, it appears that only 15 commercial fishermen suffered income losses. The effect of production, consumption and disposal decisions on level and form of residuals was also examined. The modeling effort illustrates the flow of residuals and costs arising from power generation from either coal or nuclear fuel. The effect of water quality on regional growth was examined using an input-output model. A decrease in usable water was traced to show its composite effect on income, consumption, and governmental expenditures and revenues.

Also available in set of 56 reports as PB-243 125-SET, PC E99/MF E99.

**Keywords:** \*Sawmills, Industrial accidents, Personnel, Sawing, \*Woodworking, Injuries, Safety engineering, Industrial hygiene, Statistical data, Statistical analysis, Occupational safety and health.

The report contains the results of a study of over 1,200 accidents which involved circular saws. Portable circular saws and large circular saws used in sawmills were excluded. State safety inspectors investigated any accident within the scope of the study which they found in the course of performance of their regular duties. Only accidents which occurred during 1951 or 1952 were included. Information about the number of injuries by nature of injury, part of body injured, agency (source) of injury, type of accident, hazardous condition, unsafe act, and activity of injured (feeding, off bearing, etc.) is presented. Descriptions of 22 typical accidents with recommendations for preventing them are included.

Contract DI-14-31-0001-3729

**Keywords:** \*Deserts, \*Land use, Bibliographies, \*Arid land, \*Climatology, \*Drought, Precipitation(Meteorology), Land reclamation, Soil erosion, Reforestation, Agriculture, Grazing land, Reviews.

An annotated bibliography is presented of 252 references, computer-produced from the University of Arizona's Arid Lands Information System (ALIS), with accompanying text that reviews briefly both cause and effect of world desertification. Causes fall into two categories: long-term (in the geologic sense) climatic change as supported by meteorological, archaeological, geomorphological, vegetational, palynological, and dendrochronological evidence in the literature; and those activities of man's historic occupation of arid and semiarid regions that have contributed to degeneration of marginal lands: agricultural and irrigation practices, grazing, fire, nomadism, and sand stabilization and reforestation. Beyond these two categories, there is a third: climatic fluctuation -- short-term weather patterns induced by uncertain rainfall and followed by cyclic droughts from which marginal areas may not recover is subjected to continued attempts at intensive use that cannot be sustained by a dry year or a succession of dry years. Portions of this document are not fully legible.

Waste Glass Utilization. Cumulative Volume  
30 Jun 73, 222p\* Rept no. TAC/WGS-74-301

**Keywords:** \*Glass, Solid waste disposal, Reclamation, Aggregates, Paving, Foam, Grinding(Comminution), Crushing, Economics, Cement additives, Regulations, Abstracts, Symposia, Construction materials, \*Waste recycling, Glass recycling.

Glass, as a by-product of the total recycling process, may soon be available in quantities sufficient not only for the manufacture of more glass, but for use in a wide variety of secondary products. These products may range from resurfacing materials which can be used under a greater variety of environmental conditions than asphalt, to glass wool and construction panels. To explore these new products, a 'Symposium on the Utilization of Waste Glass in Secondary Products' was held in Albuquerque, January 24-25, 1973. This document is an updated version of a state-of-the-art survey on the use of glass in secondary products, first prepared for the Symposium.

Technological Opportunities for Tropical Forestry Development  
Gordon D. Fox, Nov 73, 37p TA/OST-73-21, AID-ARC-634.0-F791

**Keywords:** Tropical woods, Technology transfer, Forest industry, Developing countries, Economic development, Forestry management, United States, Project planning, Utilization characteristics, Socioeconomic conditions, Political objectives, Institutional implications, Improvement, Criteria, \*Forestry.

The paper is intended to identify the highest pay-off opportunities for the application of U.S. technology to the needs of developing countries for sound management and utilization of forest resources. Specifically the paper includes: (1) development of criteria for determining whether the political-socio-economic and in-

stitutional framework in an LDC is sufficiently favorable so that technological inputs will meaningfully improve forest utilization and management; (2) identification of appropriate countries; and (3) examination of a limited number of countries to illustrate how specific technological inputs can be matched with priority needs, and assessment of likely pay-offs.

Factors Influencing the Utilization of Tropical Wood Species  
Final rept.  
Alan D. Freas, Martin Chudnoff, Robert C. Koepfen, and S. Blair Hutchinson, Nov 73, 34p AID-ARC-634.9-F849  
Grant PASA-TA(AJ)-2-73

**Keywords:** Tropical woods, Utilization, Constraints, Reviews, Factor analysis, Economic development, Developing countries, \*Wood.

A.I.D. has been concerned, for an extended period of time, over the deleterious practice, in many tropical countries, of concentrating on a relatively limited number of species of tropical woods for exploitation. This investigative report, through review of available literature and on-the-ground consultation in selected countries, attempts to determine whether lack of knowledge of secondary species characteristics is the primary deterrent to their increased use, or whether there are other equally and perhaps more important factors to be considered.

**Keywords:** Solid waste disposal, Materials recovery, \*Methane, Meetings, Digestion(Decomposition), Anaerobic processes, Refuse disposal, Garbage dispos-

al, Sewage disposal, Manufactured gas, \*Waste recycling, \*Bioconversion, Methane digestion.

The two-day conference addressed itself to the question of biological conversion of waste and feedlot materials to methane. The specific objectives of the conference were: to exchange recent research information between engineers and scientists on research accomplishments and problems related to bioconversion studies; to contribute to the long-range planning of the funding agencies and research workers in the field; to provide improved communications between the research community and the users' groups; to identify the processes and technology important to the production of methane from waste and feedlot materials; to identify the important economic factors associated with bioconversion processes. These proceedings consist of the summary statements provided by each principal speaker at the conference, together with a transcript of essentially all of the tape-recorded question-and-answer period that followed each presentation.

### PB-231 207/2 PC A04/MF A01

Processing, Chemical Composition and Nutritive Value of Aquatic Weeds  
L. O. Bagnall, R. L. Shirley, and J. F. Hentges, 16 Nov 73, 59p W/RRC-Pub-25, W74-06502  
Contract DI-14-31-0001-3209, DI-14-31-0001-3509

**Keywords:** \*Aquatic weeds, Feeding stuffs, Water pollution control, Animal physiology, Acceptability, Chemical composition, Digestion(Biology), Composts, Cost estimates, Dewatering, Animal nutrition, \*Water hyacinth, \*Water pollution, Eichhornia crassipes, Hydrilla verticillata, Silage.

As an alternative to chemical control, water hyacinth (Eichhornia crassipes) and hydrilla (Hydrilla verticillata) can be converted to agriculturally useful products. Whole or chopped plants can be readily composted to create an organic material for potting plants. The 90 to 95% moisture content plants can be pressed to remove 75% of the water with a modest energy input. The pressed plants can be ensiled with suitable additives or dried to make animal feed. Animal acceptability of properly made hyacinth silage was very good. Animal utilization of protein was poor and that of other nutrients was fair for both dried and ensiled water hyacinth.

Rural Transfer and Modified Landfill. A Comparison of Cost Indicators for Low Volume Rural Solid Waste Disposal Methods  
Dec 73, 45p

**Keywords:** Solid waste disposal, Rural areas, Management planning, Costs, Transportation, Oregon, \*Waste disposal, Sanitary landfills, Lane County(Oregon), Waste transfer stations.

One of the key considerations in selecting a system of solid waste management is the relative costs of the available alternative systems. This report was prepared in order to provide public officials and solid waste management planners with information upon which they can base estimated costs of operating a rural transfer system as well as a modified landfill system. The suggested estimating techniques are comparable and permit comparison of the estimated costs of these two alternative management systems. The experience of the Lane County, Oregon Solid Waste Division provided the basis for development of the cost estimating techniques outlined in this report.

**The Compaction of Soils and Stabilized Bases on Road in East Africa**  
M. P. O'Reilly. 1974. 75p Rept no. TRRL-LR-600

Keywords: Pavement bases, Soil compacting, \*Roads, \*Soil stabilization, Soil water, Tropical regions, Construction, Test methods, Sands, Clay soils, Gravel, Porosity, Africa, Great Britain, Sub-Saharan Africa, \*Pavements, \*East Africa.

As part of a study of aspects of normal road-building practice in tropical countries, the states of compaction achieved in road bases and earthworks were investigated at ten road construction schemes in East Africa. In addition, where possible, controlled compaction trials were carried out. The most significant conclusion from the investigation is that the states of compaction achieved in the field correspond quite closely with those obtained in full-scale compaction tests carried out at the Transport and Road Research Laboratory. The study showed that the states of compaction commonly specified for tropical roads can be attained under normal working condition. (Modified author abstract)

The research project was designed to provide a set of analytical tools for water resource planners and decision-makers to assist them in measuring and evaluating the market and non-market benefits and costs of water resource systems. The techniques are designed to be sufficiently flexible to analyze all types of water development and management policies. The report describes: (1) the techniques developed to measure the economic, environmental, and social impacts of water policy alternatives, and (2) the application of these techniques to a test case of three existing reservoirs to determine the method's efficacy. The analyses are conducted in three major areas: economic, environmental, and social. (Modified author abstract)

**Improvement of Treatment of Food Industry Waste**  
Environmental protection technology series  
Sidney B. Twiner. May 74, 76p EPA-660/2-74-035

Keywords: \*Dairies, Industrial waste treatment, Food processing, Activated carbon treatment, Byproducts, Flotation, Oxidation, Carbohydrates, Material recovery, Proteins, Electrolysis, \*Waste treatment, Whey, Water pollution control, Chemical oxygen demand, Froth flotation, Cheese whey.

Laboratory studies were conducted to determine the feasibility of reducing the COD demand of cheese whey waste generated from dairy processing plants. Three primary processing variables were studied: Agitation, temperature, and current density. Results indicate electrolytic oxidation efficiency was best at 70C, agitation at 6 feet per second and a current density of 9.5 amperes per square foot (equivalent to 6 amperes in the test cell investigated). Concentration of 60 percent of the whey protein was also possible by collection of the froth produced during electrolysis. This mechanism of COD reduction could afford recoverable protein from the whey. Carbon adsorption of the electrolyzed whey was also shown to be extremely effective in reducing the COD. The carbohydrates after oxidation to carboxylic acids are very readily adsorbed, the carbon loading being in excess of that expected for secondary effluents. The feasibility of combining the electrolytic oxidation with froth collection and carbon adsorption is proposed as a possible attractive procedure for recovery of values from the whey.

Grant EPA-S-800747  
Prepared in cooperation with National Environmental Research Center, Corvallis, Oreg.

Keywords: Fermentation, Dairy products, Feeding stuffs, Industrial waste treatment, Pilot plants, Proteins, Cheeses, Byproducts, Livestock, Cost estimates, Amino acids, Investments, Food processing, \*Waste treatment, \*Food products, Cheese whey, Water pollution control.

From the operation of a demonstration pilot plant over extended periods of time, it has been shown that yeast may be grown on an acid whey or sweet whey medium in a continuous, deep tank aerated fermentor. Variations in fermentation conditions, strain selection, and medium composition produced cell concentrations of several billion cells per milliliter. By a process of evaporation and spray drying the whole fermented whey mass and the utilization of the evaporator condensate to dilute incoming condensed whey, a high grade, non-toxic, protein feed material may be produced without any effluent streams. Amino acid analyses and protein efficiency ratios are presented for this feed material. This whey fermentation is one means of converting large quantities of a potential environmental pollutant into a useful and needed product.

EPA-600/2-74-046  
Grant EPA-R-800746

Keywords: Catfishes, Aquaculture, Water pollution, Feeding stuffs, Agricultural wastes, Beef cattle, Water quality, Animal nutrition, Diets, Food processing, Ponds, \*Fishes, Water pollution effects(Animals), Paur:ch manure, Slaughtering house wastes.

Part A of the report examines the feasibility of using dried paunch at 10, 20, and 30% levels in feed for pond-rearing yearling channel catfish to market-size, and at a 10% level for cage-culture of yearling catfish. Part B describes the effects of fish culture, using standard feeds and paunch-containing feeds, on water quality of fish ponds. In all, one physical, one bacteriological, and fifteen chemical parameters were measured. Regardless of feed type, pond-reared fish grew faster than the cage-reared fish. There was no significant difference in final weights attained by fish given standard, and 10 and 20% paunch feeds but fish given 30% paunch were significantly smaller. Neither the pond culture nor the cage culture caused deterioration in water quality in any of the ponds to any appreciable degree in one growing season of 24 weeks. (Modified author abstract)

Keywords: Training programs, Passenger transportation, Personnel development, Motor vehicle operators, Maintenance personnel, Bus lines, Specialized training, Mass transportation, Job analysis, Training needs, Cost effectiveness, \*Transportation, \*Training, \*Buses(Vehicles).

The report is the first of a five-volume series summarizing the findings, conclusions, and recommendations of a study of urban mass transit training needs. This study includes a detailed analysis of the training requirements; a discussion of the availability of training programs to meet the needs of the industry; an outline of supplementary material needed to bring training programs up to an acceptable standard; and proposals for programs to upgrade the standard of training as it currently exists. Specifically, this volume summarizes the results of an inquiry into industry needs for standardized programs regarding training of (1) bus operators, (2) bus operator instructors, (3) bus mechanics, (4) bus mechanic instructors, and (5) rapid transit rail car repairmen. Following a description of programs currently in use at transit properties, the general contents of the respective standardized programs are outlined, the role of the Federal government in funding is examined, alternative methods of delivering programs are discussed, and costs of development and demonstration are estimated.

Grant NSF-GB-43996

Keywords: \*Food supply, Food consumption, Farm crops, Nutrition, Production, Corn, Rice, Wheat, Potatoes, Fertilizers, Farm management, \*Energy, \*Environmental surveys, Energy conversion efficiency, Energy requirements.

With overpopulation, energy shortages, and environmental degradation the world's population is fast losing its capacity to feed itself. To produce more food to feed the rapidly growing world population will require intensifying crop production on limited arable land. This will, in turn, place a greater demand upon the already scarce energy resources. Hence, a need clearly exists to make more effective use of the world's known energy and land resources. Discussed are research needs concerning energy inputs in crop production, alternatives in food production for effective use of energy and environmental resources, and estimates of energy needs to increase world food production.

Keywords: Land development, Developing countries, Services, Urban areas, Urban planning, Public administration, Reviews, Recommendations, Management guidelines, \*Land use, Government agencies.

The report examines the crisis in urban land from the perspective of one instrument available to the public sector - the Land Development Agency - through which the public interest can be represented in the urban land market. It is not intended to be an exhaustive study of world experience, but rather a basic review of the key issues of concern and the preparation of recommendations and guidelines for the establishment and administration of Land Development Agencies. Its purpose is to stimulate interested persons to undertake further studies leading to the improvement of land development agencies in the developing countries.

Grant NSF-GI-40457

Keywords: Solar heating, Residential buildings, Design criteria, Construction, Specifications, Drawings, Engineering drawings, Heat exchangers, Heat pumps, Lithium bromide, Water heaters, Performance evaluation, Computerized simulation, Cost estimates, Antireflection coatings, \*Buildings, \*Solar cooling systems, \*Solar heating systems, \*Solar water heating, Solar air conditioning, Solar collectors, Solar water heaters.

The first integrated system providing heating and cooling to a building by use of solar energy has been designed and installed in a residential-type building at Colorado State University. The system provides liquid supplies for air circulating in the building and to a lithium bromide absorption air conditioner. Service hot water is also provided. Approximately two-thirds of the heating and cooling loads are expected to be met by solar energy, the balance by natural gas. The report contains details of design and principles of operation. A breakdown of costs of equipment and its installation is provided.

Grant NSF-GI-29729, NSF-GI-34991

Keywords: \*Methane, Manufactured gas, Gas production, Plants(Biology), Digestion(Decomposition), Fermentation, Newsprint, Absorbent papers, Grasses, Garbage, Chloroella, Algae, Fertilizers, Wastes, Feeding stuffs, Mud, \*Agricultural wastes, Effluents, Anaerobic processes, Digesters, Fresh water, Brackish water, Sea water, Production rate, Alkalinity, Carbon dioxide, Nitrogen, Carbon, Solar energy, Chemical analysis, Photosynthesis, Biodeterioration, \*Bioconversion, Solar energy conversion.

The formation of methane by biological conversion of a number of organic materials has been examined. The materials exposed to the anaerobic fermentation process included paper, grass, household garbage, fresh water algae, water hyacinth, seaweed, cattle manure, dry manure, dry dog food. These materials have been examined separately and in various combinations. During operation of the digester, the amount and composition (methane and carbon dioxide) of the gases produced by the fermentation were determined and extensive chemical analyses of the composition of the liquid contents of the digesters were carried out. Similar chemical analyses of the various materials fed to the digester were carried out as well as analyses of the sea water used in several of the studies.

**Rum Distillery Slops Treatment by Anaerobic Contact Process**  
Environmental protection technology series

T. G. Shea, E. Ramos, J. Rodriguez, and G. H. Dorion. Jul 74, 109p EPA-660/2-74-074  
Grant EPA-R-800935

Keywords: Anaerobic processes, Industrial waste treatment, \*Distilleries, Digestion(Decomposition), Cost estimates, Process charting, Settling, Suspended sediments, Design, Performance evaluation, Reaction kinetics, Digestion(Decomposition), Waste water, Cost effectiveness, Methane, Byproducts, Pilot plants, \*Waste treatment, \*Bioconversion, Rum distilleries, Water pollution control, Chemical oxygen demand, Biological industrial waste treatment.

The general objectives of the present study were to develop an anaerobic digestion process for the treatment of the rum distillery slops stream at the pilot scale, and to establish design criteria for the full-scale application of the process. Both bench and pilot-scale experimental studies were conducted with the anaerobic contact process flow sheet (incorporating biomass recycle) to permit determination of the Monod kinetic constants and the kinetic relationships describing the anaerobic treatment of the slops. The process kinetics were used to examine the operating and performance characteristics of a plant-scale application. A process flow sheet was established and design criteria developed as the basis for estimating the cost of a plant-scale installation. The process kinetic relationships and the economic analysis were used to structure a cost-performance relationship to examine tradeoffs between cost, performance, and selected design variables.

**Guidelines for Land Disposal of Feedlot Lagoon Water**  
Research rept.  
William L. Powers, Russell L. Herpich, Larry S. Murphy, David A. Whitney, and Harold L. Manges. 1974, 9p OWRT-A-045-KAN(2)  
Contract DI-14-31-0001-3516

Keywords: Industrial waste treatment, \*Agricultural wastes, Irrigation, Waste water, Lagoons(Ponds), Nutrients, Salts, Water quality, Inorganic nitrates, Inorganic phosphates, Kansas, Farms, \*Waste treatment, Feedlot wastes, Water quality data.

Guidelines are provided for feedlot operators who dispose of lagoon water on agricultural lands. The design of lagoon, pumps, and irrigation systems are not discussed. Because lagoon water contains such plant nutrients as nitrogen, phosphorus, and potassium, its application on agricultural land, in correct amounts, can increase crop yields. However, because it also contains salts of sodium, calcium, and magnesium, too much lagoon water can pollute the soil. The salt accumulation from lagoon water is most likely to occur in dry areas where precipitation is not adequate to leach the salts downward below the root zone. Guidelines on how to dispose of such lagoon water to minimize the chance of reducing the land's productivity are given. The guidelines are based on present irrigation-water-quality standards and on data collected from various feedlots in Kansas.

Keywords: Aquatic weeds, \*Weed control, Florida, Plant growth, Fungi, Plant pathology, Culture media, Morphology, Microorganisms, Pest control, \*Aquatic plant control, Aquatic weed control, Hydrilla verticillata, Eichhornia crassipes, Water hyacinth, Deuteromycetes (Imperfect fungi), Alternaria, Biological weed control, Biological pest control.

Laboratory studies were conducted to determine optimal growth conditions of *Hydrilla verticillata* and *Eichhornia crassipes* on both entire plants and detached leaf cultures. Techniques were then developed for surface sterilization of both the entire and plant parts for both species. Numerous weed infested habitats in Florida were examined for signs of aquatic plant diseases. These studies indicated various environmental factors as well as possible microbial pathogens as a source of plant tissue debilitation. No significant microbial pathogen was observed for *H. verticillata*, however, a pathogenic species of a Deuteromycete was isolated from a leaf spot on *E. crassipes*. Characterization of this fungus revealed it to be an *Alternaria* species of the order Moniales. Infection was produced via agar block techniques and aerosol spore suspensions. Experiments are described concerning the virulence and host range for these fungal pathogens.

Keywords: \*Pesticides, Industrial hygiene, Personnel, Protective clothing, Protective masks, Industrial atmospheres, Safety devices, Dust control, Ventilation, Materials handling, Accidents, Safety engineering, Meetings, Warehouses, Storage, Transportation.

The report presents papers concerning safety and hygiene in the pesticide industry. Topics include: Effects of different kinds of pesticide exposures on man as determined through laboratory testing; protection of individuals who mix or apply pesticides in the field; protective clothing, goggles, gloves and foot coverings-their value during handling and use of pesticides; effectiveness of respirators and similar gear for protection against inhaling pesticides; ventilation and dust control systems to protect workers in enclosed areas; innovations in pesticide application equipment that protect workers from exposure to pesticides; and where protective clothing and safety equipment must be available; occupational health and safety standards that apply to pesticide exposure situations, regulations governing hazardous chemicals in loading and transportation operations, rules for workers in warehouses, attitudes and practices of pesticide applicators; pesticide worker accidents; acceptance of safety programs; and concern of the Federal Government. Eight recommendations for Federal interdepartmental action were made by the Safety Panel.

111p TR-18, OWRP-B-007-MD(1)  
Contract DI-14-31-0001-3089

Keywords: \*Water pollution, Management planning, \*Water resources, \*Air pollution, Economic development, Economic models, Mathematical models Statistical methods, Classifications, Sources, Residues, Waste disposal, Economic analysis, Water pollution abatement, Environmental models, \*Environmental management, Formats.

A theoretical model is presented of interrelationships between economic and environmental models useful for water management, together with basic data on 130 types of pollutants from 70 different industries. The purpose is to get good data and analytic methods needed to improve environmental management. The first step has been to devise a materials balance accounting structure to provide a format for emissions. The collected and internally developed data have been used to create a simple two-stage model of the emissions process. High priority in environmental research appears appropriate for the evaluation of damage functions associated with various reported emissions levels. Integration of this additional information with the data on hand should lead to the improvement desired in environmental management.

Contract DI-14-31-0001-4121  
Also available as Oregon State Univ., Corvallis. Agricultural Experiment Station. Special rept. no. 416.

Keywords: \*Agricultural wastes, Manufactured gas, Heat recovery, Solid waste disposal, Feeding stuffs, Algae, Cooling water, Electric power plants, \*Methane, Byproducts, Digestion(Decomposition), Digestors, Anaerobic processes, \*Bioconversion, \*Waste heat utilization, High protein supplements, \*Manures.

Society faces many problems related to its growth in numbers and standard of living. Of major concern is environmental degradation resulting from pollution and the consumptive use of non-renewable natural resources. An animal waste management scheme was developed on the premise that one solution to these problems is the development of integrated production systems with recycled sources. The waste product of one industry must become the raw material for another. The feasibility of using waste heat from steam electric plants to sustain a food-producing complex which recycles nutrients is analyzed. Specifically, it is proposed to use microorganisms to convert animal waste into a high protein animal feed and a methane-rich fuel gas. Waste heat from steam electric plants is used as a low cost source of energy for maintaining stable, elevated temperatures in anaerobic digestion and single cell protein production units. Benefits to society include: improved efficiency of energy use and food production, recycling of raw materials, and conservation of non-renewable resources.

Prepared in cooperation with Bartle Wells Associates, San Francisco, Calif., and Garretson, Elmendorf, Zinor, and Reibin, San Francisco, Calif. Report on Humboldt County Solid Waste Demonstration Project. See also PB-212 398.

Keywords: Solid waste disposal, Refuse disposal, Containers, Collection, Rural areas, Storage, Management planning, Cost analysis, Trucks, Earth fills, Hauling, Compacting, Financing, California, \*Waste disposal, Waste transfer stations, Sanitary landfills, Humboldt County (California).

This report describes the development and financing of a county solid waste collection system for rural areas. The objective of the system was to substitute an environmentally sound method of solid waste disposal for the unsound practice of using small, random, burning dumps. The report shows that this can be accomplished. It presents a detail description of the storage and collection containers used, the construction of the container sites, and an economic analysis of the advantages/disadvantages of the use of small and large

containers. The report also presents a comprehensive analysis of the development of the County financial plan.

Prepared in cooperation with Commonwealth Scientific and Industrial Research Organization, Victoria (Australia). Div. of Building Research, and Department of Science, Canberra (Australia).

Keywords: \*Urban planning, Urban development, Meetings, \*Land use, Urban growth, Developing countries, Community development, Citizen participation, United States, Australia.

In June, 1974 the First Binational (U.S./Australian) Symposium on Urban Systems Research was held in Washington, D.C. There was 29 presentations made by experts from the two countries. These covered such areas as (1) land use models (Lowry-type, NBER, PLUM, EMPIRIC, the Direct Trip Allocation Model, System Dynamics), (2) growth allocation techniques, (3) growth management, (4) the experience of practitioners with models, (5) urban problems and practices in developing countries, (6) the United Nations' Habitat '76 Program, (7) organizing government, (8) community involvement, (9) gaming, (10) land use law, and (11) national growth policies. It was concluded from the symposium that much more work needs to be done in urban modeling, especially because of rapid changes in uncontrollable, external factors.

Contract DI-14-31-0001-3947, Grant NSF-GI-39193

Keywords: \*Aquatic weeds, Harvesting, Cost analysis, \*Agricultural machinery, Design, Production, Test methods, Efficiency, Vegetation, Dewatering, Separation, Distillation, Utilization, Feeding stuffs, Nutrients, Mulches, \*Aquatic plant control.

Research was conducted to reduce the cost of aquatic plant harvesting by increasing harvester productivity through high-speed harvesting, by reducing the handling costs of the harvested vegetation, and/or by improving the potential for economic utilization of the vegetation. Also described are the design, construction, and testing of a craft for concentrating and col-

lecting pre-cut, floating aquatic vegetation at speeds several times those of conventional harvesters. Recommendations are made for increasing the mechanical efficiency of this machine. A moisture prediction function was developed for aquatic vegetation subjected to pressure. Presented are data on the chemical constituents of the vegetation which were compared to conventional forage materials. Possible uses of the cut vegetation are enumerated.

**Agricultural Resources Consumed in Beef Production**  
William Lockeretz. Jun 75, 48p\* Rept no. CBNS-AE-3  
Grant NSF-GI-043890

**Keywords:** Beef, Irrigation, Fertilizers, Feeding stuffs, Farm crops, Water supply, Production, Food consumption, Natural resources, Arid land, Forage grasses, Proteins, Food supply, Wheat plants, Soybean plants, Correlation techniques, \*Food products.

The consumption of energy, fertilizer, water, and cropland has been calculated for nine different beef production systems. These systems vary with respect to region, type of pasture and cropland, and feeding program. Among the nine systems, there is a considerable range of resource intensiveness, depending on factors such as type of pasture, type of cropland (irrigated vs. dryland) and kinds of roughages and protein supplements. Data are also presented on the consumption of the same resources in the production of wheat and soybeans in the same regions, on comparable land to that used to raise cattle feeds. In all cases, the resource consumption for beef is very much greater than for a wheat/soybean mixture of equivalent protein value.

**The Winged Bean; A High-Protein Crop for the Tropics**  
1975, 50p  
Contract AID/csd-2584

**Keywords:** Leguminous plants, Food, Nutritive value, Proteins, Oils, \*Food products, \*Plants (Botany).

Edible legumes are excellent sources of dietary protein and oils. Many nutritionists expect them to play an increasing role in meeting food needs in this time of food shortages and widespread malnutrition. In addition to the major cultivated edible legumes--soybeans, peanuts (groundnuts), peas, and beans--there are more than 50 minor tropical legumes that have received little scientific attention (mainly because researchers have concentrated on more conventional crop species, especially cereals). This report focuses on the exceptional promise offered by one of these: the winged bean.

**Alternate Energy Sources for Hawaii**  
Report of the Committee.  
Feb 75, 276p NSF/RA/G-75/003  
Grant NSF-ISR71-03844-A03  
Prepared in cooperation with Hawaii State Dept. of Planning and Economic Development, Honolulu, and Hawaii Natural Energy Inst., Honolulu.

**Keywords:** Energy sources, Hawaii, Energy conversion, Waste disposal, Plants(Botany), \*Hydroelectric power, Wind power, Nuclear power, Geothermal energy conversion, Solar energy conversion, Solar sea power plants, Waterwave energy conversion, Coal, Energy storage, Environmental impacts, Economics, Energy policy, \*Geothermal energy, \*Solar energy, \*Tidal energy, \*Bioconversion, \*Wind energy, \*Energy source development, Solid wastes.

This is a report of the Committee on Alternate Energy Sources for Hawaii, which was established by the Governor's State Advisory Task Force on Energy Policy to help respond to problems created by the Arab oil embargo. Fourteen studies were undertaken -- ten on alternate energy sources, and four more general studies. Included as appendices to the report are all the studies on the potential of different energy sources to minimize the State's near-total dependence on seaborne petroleum. These alternate sources of energy are: solid waste; bioconversion; hydroelectric; wind; geothermal; solar collectors; ocean thermal energy conversion; waves, tides, currents, osmosis; coal; nuclear.

**A Comparison of the Production, Economic Returns, and Energy Intensiveness of Corn Belt Farms That Do and Do Not Use Inorganic Fertilizers and Pesticides**

William Lockeretz, Robert Klepper, Barry Commoner, Michael Gertler, and Sarah Fast. Jul 75, 68p\* Rept no. CBNS-AE-4  
Grant NSF-GI-043890

**Keywords:** Farms, Livestock, \*Fertilizers, Pesticides, \*Agricultural economics, Corn plants, Production, Inorganic compounds, \*Pest control, Market value, Crop value, Correlation techniques, Probability theory, Regression analysis, Working time, Farm crops, Corn Belt, Organic farming.

The report compares crop production on a sample of 16 mixed crop-livestock farms in the Corn Belt on which no inorganic fertilizers and almost no pesticides are used, to that of a matched sample that uses conventional fertilization and pest control practices. In the 1974 crop year, the market value of the crops raised per acre was slightly higher on the conventional sample (an average of 8%), but this difference was not statistically significant at the 90% probability level. There was no difference between the two group's crop production returns, that is, value of production less operating costs. The energy intensiveness (defined as energy input divided by value of production) on the farms that do not use fertilizers is an average of one-third as much as that of the conventional group.

**The Development of a High Protein Isolate from Selected Distillers By-Products**

Final rept.  
James J. Kendrick. Jul 75, 122p NSF/RA/T-75-021  
Grant NSF-GI-42036, NSF-AER-74-10456-A1

**Keywords:** Proteins, Grains(Food), Food, Economic analysis, \*Distilleries, Tables(Data), Corn, Wheat, By-products, Materials recovery, Extraction, Nutritive value, Toxicity, Chemical properties, Operating costs, Feeding stuffs, Food processing, \*Food fortification.

Using an alkaline extraction procedure, a human-consumable protein concentrate can be obtained from corn and wheat distillers by-products. The recovery process yielded approximately 54% and 36% of the original protein (as a protein concentrate) from corn and wheat distillers by-products, respectively. Nutritional and functional tests on the distillers concentrate indicated that it can be used in the fortification of cereal-based snacks, cookies and bread, and as an emulsion binder/extender in emulsified meat products. The alkaline extraction of distillers by-products also yielded new forms of animal feeds, i.e. from corn, a 12% protein high-fiber feed, a 4% protein - 33% carbohydrate syrup, and a 6% protein - 20% carbohydrate whey fraction.

**Recent Advances in Foliage Utilization**

J. L. Keays, and G. M. Barton. Feb 75, 105p\* Rept no. VP-X-137  
Summary in French.

**Keywords:** Vegetation, Feeding stuffs, Food supplements, Veterinary medicine, Decision making, Medicine, Food supply, Value, Food consumption, Cost analysis, Food processing, Utilization, Assessments, Food industry, Canada, \*Food fortification, Muka, Global, Cosmetics, Foliage.

The primary purpose of the report to draw attention, at the decision-making level, to a little-known and neglected field of massive opportunity - foliage utilization. Foliage derivatives can be used in a wide range of products utilized in animal feeds, cosmetics, medicine, and veterinary practice. Of greatest immediate interest is the conversion of foliage to muka, used as a vitamin supplement in animal feeds. Of greatest importance on a global basis is the fact that every ton of foliage used in animal feeds can release one ton of grain to increase world food stocks. Foliage can be converted to muka in a few simple processing steps, at costs which should be competitive with alternative animal feed supplements. The potential value of muka manufactured in Canada could be in the hundreds of millions of dollars per year, and the addition to world food stocks in the millions of tons per year. In the case of muka manufacture and use, the problem is primarily one of assessment, recognition of opportunity, and application of developed technologies.

## APPROPRIATE TECHNOLOGY ABSTRACTS

planning, Classification, Toxicity, Water pollution control, Dust, \*Waste disposal, Liquid waste disposal, Pesticide spills.

This study has compiled and organized information that will be useful to responsible authorities in advising the layman (particularly the homeowner and small farmer) how to dispose properly of small amounts of surplus and unwanted pesticides and pesticide containers, and in treating pesticide spills. The report brings together available information on pesticide disposal methods and on over 550 individual pesticides, and evaluates this information in terms of the experience and equipment that the average layman has. Fourteen pesticide disposal procedures are described and procedures for disposal of containers and cleanup and treatment of spills are included. Preferred and alternate disposal procedures are recommended for over 550 pesticides. The report includes a cross-index of over 1,600 pesticide names, tables showing the chemical composition and properties pertinent to disposal of the selected pesticides and bibliography of 166 references.

**Engineering Field Manual for Conservation Practices**  
Final rept.  
Apr 75, 1075p\* Rept no. SCS/ENG/FM-E

Keywords: Soil conservation, Water conservation, Surveys, Civil engineering, Manuals, Hydraulic structures, Irrigation, Drainage, Maintenance, Design criteria, Levees, Hydraulics, \*Soil erosion, Terracing, Earth work, Strip cropping, Construction, Ponds, Construction materials, \*Soil stabilization.

The manual was developed to provide guidance in the use of basic engineering principles, techniques and procedures for the planning, design, installation and maintenance of soil and water conservation practices. The material is limited to the types of conservation practices used most often and does not cover the more complex practices. The manual is intended primarily for use at the SCS field office level and is appropriate for both engineers and technicians. Standard survey practice is presented. A method of estimating runoff including necessary charts is included. Basic hydraulics and soil mechanics are discussed. Water disposal systems for erosion control and drainage are included. Development of water supplies by ponds, wells and springs is thoroughly covered. Construction and construction materials are also discussed. Each chapter includes appropriate tables, charts, curves and forms used in solving planning and design problems.

Keywords: Water consumption, Rural areas, Design criteria, Water supply, Dairies, Industrial water, Demand(Economics), Pumping, Oklahoma, \*Water use, Water districts, Payne County(Oklahoma), Dairy industry.

Data were obtained on Rural Water District No. 3, Payne County, Oklahoma. There was a significantly different pattern of usage for three classes of customers. The average monthly usage per tap ranged from 8768 to 19183 gallons for dairies, 4357 to 11983 gallons for Class A taps, and 2537 to 4160 gallons for Class B taps. The average monthly usage per person ranged from 1424 to 2821 gallons for Class A taps and from 989 to 1664 gallons for Class B taps. Optimal design values for peak demand ranged from: 1.0 to 1.5 gallons per minute per tap; 1.3 to 1.8 gallons per minute per Class A tap; 0.6 to 0.9 gallons per minute per Class B tap; 0.6 to 0.8 gallons per minute per person; 0.5 to 0.7 gallons per minute per person, Class A tap; and 0.3 to 0.6 gallons per minute per person, Class B tap. The optimal period off-peak pumping time is from 10 p.m. to 7 a.m., a period of 9 hours.

Keywords: \*Water supply, \*Water management, Bibliographies, information retrieval, Watersheds, Forest land, Land use, Vegetation, Arid land, Evapotranspiration, Wildlife, Environmental impacts, Arizona, Water yield.

Development of the Watershed Management Information System (WAMIS) began in 1972. WAMIS is designed to serve a variety of users who are interested in water and natural resource research in Arizona. WAMIS is a computerized bibliographic reference retrieval system which provides literature searches for users, in the form of individualized computer printouts of citations and abstracts, based upon a user's special interests. The literature covered in WAMIS includes effects of land management practices and vegetation management on water and other related resources, such as forage production, wildlife habitat, timber production, and recreational use. Research done in Arizona has been emphasized. General procedures used in banking and retrieval are described. Types of search requests have varied, including topics such as wildlife use of ponderosa pine forests, environmental and vegetation effects on evapotranspiration, hydrologic modeling, Arizona water quality data, the effect of timber cutting practices on runoff, and revegetation of treated pinyon-juniper vegetation.

A five-year study in the Southern High Plains (annual rainfall of 16 inches) using combinations of bare micro-watershed and growing bed widths resulted in increased crop yields on the growing beds as the proportion of micro-watershed was increased. However, yields for the entire area (including both bed and shed) decreased. Limited work indicated the possibility of also cropping the shed areas and it was concluded that this would be a more practical way of utilizing micro-watersheds. Grain sorghum and sunflowers were successful dryland crops on both beds and sheds while wheat was more suitable as a crop on the sheds rather than on the beds. The use of an antitranspirant (atrazine) gave promising results on grain sorghum but further work is needed.

Keywords: Erosion control, Sedimentation, Highways, Developing countries, Slopes, Construction, Manuals, \*Soil erosion, Diagrams, Efficiency, Latin America, \*Roads.

The manual was prepared as an aid to field personnel engaged in the construction of highways in Latin America. It provides suggestions on the most efficient ways of providing emergency care against erosion and sedimentation by prompt treatment of the slopes. The booklet contains 24 pages of diagrams of various types of problems and methods of controlling them. The report was designed for distribution to the governments of Latin American countries through the cooperation of the Agency for International Development.

## APPROPRIATE TECHNOLOGY ABSTRACTS

Salmon, Catfishes, Fiber crops, Public health, Disease vectors, Shellfish, Metals, Risk, Toxicity, \*Fibers, \*Waste water reuse, Water utilization, Heavy metals, Sewage irrigation, Public health.

An interdisciplinary group of about 200 persons met to review the present base of scientific knowledge relating to benefits and constraints of using wastewaters for production of food and fiber. There were 27 papers presented by representatives from the fields of public health, engineering, agriculture, aquaculture, and other related scientific disciplines. Papers in two sections on potential restraints cover topics such as historical instances of disease transmission, possible transport of microbial pathogens through the food chain, legal implications, and sociological reactions. The aquaculture section deals primarily with experimental studies including such diverse approaches as culture of daphnia, salmon smolts, and water hyacinth. The agriculture section emphasizes the use of wastewater for crop production and the papers presented include case histories for long-term operating systems, as well as data from experimental studies. In addition to those papers presented at the conference, nine others have been included to make a total of 36 papers in the conference proceedings.

Keywords: \*Sewage treatment, Waste water reuse, Rural areas, \*Septic tanks, Mountains, Aerobic processes, Residential buildings, Colorado, Domestic wastes.

Disposal of wastewater from isolated homes in mountain and rural locations in Colorado presents unique and difficult problems. The purpose of the study was to evaluate the flow and pollution patterns from individual homes and to evaluate existing and potential treatment methods. Field evaluation of home wastewater flow and pollution characteristics was accomplished. Data for individual fixtures and appliances were obtained with measurement of many pollutional parameters. A brief evaluation of the home treatment methods was accomplished.

Rept nos. UILU-ENG-74-2027, Structural Research Ser-412  
Grant NSF-GI-299934

Keywords: Concrete structures, \*Reinforced concrete, Earthquake resistant structures, \*Buildings, Framed structures, Columns(Supports), Beams(Supports), Earth movements, Design criteria, \*Concrete, \*Earthquake engineering, Ground motion.

From the observation that the inelastic response to earthquakes of reinforced concrete elements could be represented by a linear-response model, a procedure was developed in another report which incorporated the effects of inelastic energy dissipation to determine the design force for a single-degree-of-freedom structure using the ordinary linear-response spectrum. The substitute-structure method extends this procedure to multi-degree-of-freedom structures. The proposed method can be used to determine earthquake design-force requirements for individual elements of a R/C structure given a design linear-response spectrum and explicit decisions about tolerable inelastic response, with the option of different limits of inelastic response in different structural elements. The paper includes a numerical example demonstrating the determination design forces in a three-story frame and a series of analytical tests of the method using two- to ten-story frames.

Prepared by Massachusetts Univ., Amherst. Dept. of Civil Engineering.

Keywords: Wind power, \*Thailand, \*Philippines, Windpowered pumps, Wind power generation, Windpower utilization, Windmills, Solar sea power plants, Irrigation, Electric power generation, Design, \*Wind energy.

This work was performed in an attempt to answer the question: 'Could windpower be used by the peasant farmer in Thailand or the Philippines to improve the quality of his life.' It was found that windpower was being used to a very limited extent in Thailand to move water, thus relieving either a backbreaking manual labor task, or a very expensive out-of-pocket expenditure for fuel for engine driven pumps. No evidence of existing wind pumping could be found in the Philippines.

Keywords: Research, \*Information services, Communications management, Distributing, Information systems, Improvement, Technology innovation, Publishing, Periodicals, Journalism, Computer programming, Errors, Automation, Design, Byproducts, Management methods, Printing, Reproduction(Copying), Marketing, Cost engineering, Trends, Requirements, \*Research and development, Alternatives, Scientific communication.

The Guide's focus is on the 'primary' dissemination of scientific information: the technical journal or its equivalent. In other words, it deals with the initial recorded transmission of information. The Guide's contents are organized into sections, according to the degree of departure from conventional journal and monographic publishing. Each section is made up of a number of individual entries, describing particular innovations. So far as possible, these systems are separated into their individual components for treatment in separate entries, so that the reader who wishes to avoid radical change will not be forced to consider innovation in terms of conversion to a totally new system.

**Nondestructive Testing System for Retreads**  
Final rept.  
Henry H. Bessler, Stephen N. Bobo, Manuel J. Lourenco, and William R. Wade. Nov 75, 94p. DOT-TSC-NHTSA-75-4, DOT-HS-801-736

Keywords: \*Tires, Nondestructive tests, Ultrasonic tests, Test equipment, Inspection, Detection, Deterioration, Separation, Treads, Coverings, \*Industrial plants, Ultrasonic inspection systems, Tire retreading, Retreaded tires, Tire casings.

An important problem in retreading tires is the assurance of a satisfactory casing. Since 1972 the National Highway Traffic Safety Administration has had under development an air-coupled through-transmission ultrasonic inspection system for finding anomalies in casings. The report describes the results of this development in sufficient detail to permit its reproduction by a reasonably competent electronics manufacturer. The reader is cautioned that the equipment described will not find all anomalies in every casing, and that system cost effectiveness depends heavily on the way the equipment is used, the tires it inspects, and the types of anomalies considered to be detrimental to retreading.

Grant NOAA-04-4-158-5, NSF-GI-43884  
Sponsored in part by Grant NOAA-04-5-158-8.

Keywords: \*Sewage treatment, \*Waste water reuse, \*Aquaculture, \*Algae, Shellfish, Oysters, Lobsters, Flatfishes, Sea grasses, Nitrogen, Tropical regions, Feeding stuffs, Marine fishes, Diatoms, Field tests, Pilot plants, Sea Grant program.

A combined waste recycling-marine aquaculture system capable of complete nitrogen removal from treated domestic wastewater has been developed and tested on a pilot-plant scale over a one-year period. Effluent from secondary sewage treatment, mixed with seawater, is used to grow unicellular marine algae in large, continuous-flow, outdoor mass cultures. Harvest from the algae cultures is fed to oysters and other filter-feeding bivalve molluscs and to secondary crops of flounders or lobsters. Dissolved wastes produced by the animals are assimilated by cultures of commercially-valuable seaweeds. Successful cultures of unicellular algae, mostly diatoms, and seaweeds have been sustained over long periods of time (months) with only minor problems. Bivalve mollusc culture was unsuccessful during the first year of operation. An alternative nitrogen-removal system consisting only of seaweeds fed a continuous flow of secondary sewage effluent mixed with seawater has also been evaluated. Year-round operation would be possible in tropical to semi-tropical climates. In temperate climates, operation of the system is possible only on a seasonal basis.

The widespread use of chemical fertilizers and pesticides has been credited with the high productivity of the U.S. farmer, but recent increases in the prices of these chemicals and concern about their ultimate environmental effect has raised questions about our continuing reliance on them. The paper reports a preliminary investigation of the crop production, profitability, and energy consumption of 16 organic and 16 matching conventional farms in the Corn Belt. This paper is a condensed version of a more detailed report, 'A Comparison of the Production, Economic Returns, and Energy Intensiveness of Corn Belt Farms That Do and Do Not Use Inorganic Fertilizers and Pesticides.' This report outlines the background of the problem, research methods, findings, results and implications of the study.

Sanitary engineering, Project planning, Ocean environments, Financing, Sea Grant program, Environmental protection.

The article details the proceedings of the southeastern conference on Water Supply and Wastewater in Coastal Areas. The Conference was conducted to review the state of the art of proper planning and management of water supply and wastewater disposal in coastal areas. Special attention was paid to defining technological and institutional alternatives, their relation to land use planning and environmental protection, and to identifying those water and wastewater problems of significance in coastal areas. A major problem that was discussed at the conference is associated with increasing population growth and economic development in these areas is the provision of safe and adequate water supplies and management of wastewater discharges in a manner consistent with public health and welfare and environmental protection. Both the presentations and discussion sessions are included in the report.

As part of Georgia Tech's five-year program (US/AID-funded) to expand its existing capabilities in employment generation through small-scale industry development, a cooperative relationship was established with Soong Jun University in Korea. One of the first projects to be initiated by the two institutions was a joint staff research study of a small labor-intensive industry to determine how its productivity could be increased without displacing employment. Because of Soong Jun University's interest in starting an industrial engineering curriculum in its engineering school, it was decided the project team would take an industrial engineering approach in conducting this research effort.

22 Mar 74, 50p  
Contract AID/csd-3175  
See also Annual rept. no. 2, PB-248 349, and PB-248 347.

Keywords: \*Employment, Developing countries, Industrial relations, Project, Universities, International relations, Organizations, Cooperation, United States, Asia, Africa, South America, Communicational, Economic development, Objectives, Grants, Financing, Industries, Businesses, \*Small businesses, Georgia Institute of Technology.

The primary objective of this program is to strengthen Georgia Tech's demonstrated capability in employment generation through the expansion of the small industry sector. A major effort was made to seek out, establish, and maintain counterpart and communications networks. To this end, formal agreements to work cooperatively on programs of mutual interest were signed between Georgia Tech, five counterparts in Asia, Africa, and South America. It is intended that these counterpart organizations will provide data and a

real-world laboratory for testing and validating industrialization methodologies, relevant training programs, applied small industry research, and the like.

The primary objective of this two-year-old program is to strengthen Georgia Tech's demonstrated capability in employment generation through the expansion of the small industry sector. This capability is particularly relevant to massive unemployment and rural-to-urban migration problems in many developing countries. The program is integral to the institutional commitment to international education and development.

**Environmental Aspects of a Large Tropical Reservoir - A Case Study of Volta Lake, Ghana**

Peter H. Freeman. Sep 74, 360p  
Contract AID/csd-2608  
Errata sheet inserted.

## APPROPRIATE TECHNOLOGY ABSTRACTS

**Keywords:** Multiple purpose reservoirs, Developing countries, Volta Lake, \*Environmental impacts, Economic development, Cost engineering, Project planning, Tropical regions, Power supplies, Rivers, Electric power plants, Surveys, Hydrogeology, Sewage treatment, Water supply, Food chains, Aquatic plants, Weed control, Sedimentation, Seismology, Water flow, Bathymetry, Mineral deposits, Salinity, Irrigation, Plankton, Fishes, Africa, \*Lakes, \*Ghana.

During 1973 the Smithsonian Institution's Office of International and Environmental Programs undertook a case study of the Volta Lake in Ghana. This was one of a series of case studies, carried out for the U.S. Agency for International Development, designed to better understand the environmental impacts of various development projects or situations. The purpose of these studies was to extract lessons which could be translated into guidelines to orient future development, in order to prevent costly and avoidable environmental impacts. The case study approach was chosen in view of the proven advantages of obtaining detailed understanding of a specific development. The Volta Lake was seen to constitute an excellent case study opportunity for a review of the environmental impacts of impounding a tropical river. Impacts in the impoundment area have been well researched and documented, and they are not dissimilar from the known impacts of other African man-made lakes. And like other hydropower schemes, the benefits have been very substantial.

This report consists of a series of tabular displays of data on the area to be served by the Education Foundation of South Santa Catarina (FESSC.) The data include an identification of existing industry by classification, size, number of firms, number of workers, and total sales. Detailed information by industrial classification is provided for South Santa Catarina, and the cities of Tubarao, Braco do Norte, and Laguna. Industry totals (number of firms, number of employees, and sales of industrial establishments) are given for each city within each of the two municipal association areas. In addition, population and land area data are listed for municipal association areas of Santa Catarina and for all cities within the two municipal association areas comprising the FESSC service area.

The Agency for International Development (AID) funded a contract through which the Industrial Development Division (IDD) of the Engineering Experiment Station at the Georgia Institute of Technology was charged with the responsibility of implementing a specific program of work in the area of 'Stimulating Growth of Small-Scale Industry' by providing technical assistance grants to two counterpart institutions. The administrative portion of the contract was assigned the project number A-1600 by the contracting office at the Georgia Institute of Technology. This is the final report of Year 1 of this project which has been implemented in two different geographic regions of the world. The two selected counterpart institutions were Soong Jun University, Seoul, Korea, and the Fundacao Educacional do Sul de Santa Catarina, Tubarao, Brazil.

The guide, developed by FEA and food industry representatives, offers energy-saving suggestions for all types of food service operations: schools and hospitals, fast food operators, coffee shops, restaurants, cafeterias, hotels, and motels. Energy conservation steps are identified for food preparation and storage, lighting, heating, ventilating, and air conditioning, and sanitation. The potential for savings are listed, with emphasis placed on increasing the efficiency of presently used equipment. Detailed steps to enable a food service manager to chart his fuel usage and monthly energy consumption, and to analyze the results of his conservation efforts are given.

J. Cauquil. 1975, 152p\* Rept no. TT-75-55027  
Trans. of Cotton et Fibres Tropicales (France), v28 n2,3,4 1973, by Margaret Duggan Saidi, and Lunde Paul. Sponsored in part by National Science Foundation, Washington, DC. Special Foreign Currency Science Information Program.

**Keywords:** \*Cotton plants, \*Pest control, Fungus diseases, Bacterial diseases, Damage assessment, Fungi, Cell wall, Penetration, Resistance, Plant genetics, Vulnerability, Cell morphology, Fungus deterioration, Developing countries, Africa, Translations, France, Books, \*Plants (Botany), Gossypium hirsutum, Boll Rot.

In recent years, progress in the cultivation of cotton has been very marked, thanks to the creation of productive varieties with good industrial qualities, and the use of chemical fertilizers and of the increase in the area of land protected against insects. Growers, however, remain defenseless against the damage caused by boll rot, which affects, on an average 10 to 20% of the fruit. The object of this study conducted mainly at the Central Station of the Research Institute for Cotton and Exotic Textiles at Bamperi (Central African Republic) is to perfect a method of control to limit this damage. The present study proposes to define the different type of damage suffered by the fruit, to identify the organisms responsible and their mode of penetration, to define the obstacles the boll presents to the attack of parasites, and the principles of a method of control.

BuMines-OFR-36-76  
Contract H0133047

Keywords: \*Coal mining, Dust control, \*Sprayers, Face preparation (Mining), Spray nozzles, Plugging, Fluid filters, Mining equipment.

Causes of water spray nozzle clogging on coal mine face machines were investigated and determined. This led to the design, development, and subsequent successful field testing and demonstration of a non-clogging water spray system. The non-clogging system was installed on three different continuous-mining machines. Followup tests showed that nozzle clogging was reduced by more than 90 percent. Also, on one section respirable dust concentrations were measured before and after the two periods, there was significantly more coal mined after the system was in operation.

Contract AID/csd-3175  
See also PB-250 628.

Keywords: \*Employment, Ecuador, Economic surveys, Businesses, Manpower utilization, Income, Production, Project planning, Stimulation, Industries, \*Small businesses, Artisans.

This case history represents some 18 months of research carried out by the author on site in Ecuador in an attempt to get a first hand picture of the situation.

Among the findings of this study are the following: Artisan enterprises and cottage activities employ well over 200,000 persons, who, in general, manage to earn enough to provide for a precarious existence. In most cases, the artisan performs his activity to generate additional income for his family needs. These persons would be better off with an industrial job if jobs were available. Great confusion and misunderstanding exist in the interpretation of the existing laws which govern artisans and small-scale industries. There is need for a well-reasoned, logical, pragmatic action plan which will address the present situation and assure obtainable goals over the next decade.

Final rept.

H. Steffen Peiser, and Robert S. Marvin. Feb 76, 171p Rept no. NBS-SP-438  
Library of Congress catalog card no. 76-608023. Proceedings of a Regional Seminar held at the Regional English Language Centre and International House, Singapore on May 19-20, 1975.

Keywords: \*International trade, Exports, Developing countries, Meetings, Standards, Industries, Regulations, \*South Asia, Singapore.

A regional seminar sponsored by the Singapore Institute of Standards and Industrial Research, the National Bureau of Standards, and the Agency for International Development was held in Singapore in May of 1975. The participants represented most of the countries in south Asia concerned with increasing their exports, and concentrated on various problems connected with the testing and certification of such exports. Most of the prepared papers reviewed the practice and future plans of these countries. During the discussion a number of specific problems and issues were raised, with a good deal of attention focused on the extent to which the standards and certification of goods by an exporting country can be and are recognized by the importer. This report includes both the prepared papers and a mildly edited version of the discussions following each.

Keywords: Tropical cyclones, Houses, Design criteria, Construction, Construction materials, Wind tunnel models, \*Wind pressure, Technology transfer, Philippine Islands, Building codes, Developing countries, \*Buildings, Natural disasters, Low rise buildings.

This report represents the major accomplishments conducted during the third phase (FY75) of a three year project to develop improved design criteria for low-rise buildings in developing countries to better resist extreme winds. The research study sponsored by the Agency for International Development commenced in March 1973. Two other reports were prepared; NBSIR 74-582 FY73 Progress Report (first phase of the research--4 months) and NBSIR 74-567 FY74 Progress Report (second phase of the research--12 months). During FY75, 6 major tasks were completed (instrumentation of fifth and sixth of six test houses to collect full scale field wind data, continuation of technician training at the field sites and at the wind tunnel facility, analyzed of extreme wind data, development of draft improved design criteria reports, participation in regional conferences in Manila and scheduling of regional dissemination of project results conference in Jamaica for November 1975). Research activities will be completed in December 1975. A final report will be published by the end of FY76.

**The Social Well-Being and Quality of Life Dimension in Water Resources Planning and Development**

Wade H. Andrews, Rabel J. Burdge, Harold R. Capener, W. Keith Warner, and Kenneth P. Wilkinson. Jul 73, 218p OWRT-X-125(3752)(1)  
Contract DI-14-31-0001-3752  
Proceedings of the Conference of the University on Water Resources held at Logan, Utah on 10-12 Jul 73.

Keywords: \*Water resources, Regional planning, Social effect, Meetings, Quality of life, Objectives, Government policies, Organizations, Management methods, Guidelines, Information systems, Project planning, Models, Rural areas, Urban areas. \*Socio-economic status.

Papers by academicians are reported dealing with concepts, measurements, and research findings, plus response papers from representatives of government and private organizations. Topics include the background of development of social wellbeing as a relevant value in planning and evaluation of water resources; problems in the political process in adopting social indicators and problems of organizing for needed research of a national character with thinly scattered personnel; methodology and some results in research relating to social goals; quality of life and water resources; an overview of theoretical and conceptual issues; and finally a synthesis of these elements concerning possibilities and conditions related to dealing with social well-being as a functional account in planning and evaluating water resources development.

Iowa State Univ., Ames. Dept. of Economics.  
**Management of Water Quality Through Selected Institutions and Instruments**  
Doctoral thesis  
Philipus Hendrik Spies. 1973. 346p OWRT-B-015-IA(5)

Keywords: Water quality management, Rural areas, Skunk River Basin, Allocations, Social effect, Decision making, Cost analysis, Water rights, Sediments, Economic factors, Erosion control, Prices, Theses, Iowa, \*Water quality, Institutional framework.

The importance and interrelationships of planning, organization-coordination, and control of water quality management are analyzed as applicable to the water quality problem in a rural area. Spillover effects on water quality management are identified and evaluated in terms of efficiency and equity, by analyzing resource allocation within market and property systems. A model was developed for maximizing social benefits subject to specific water quality restrictions and applied to the Upper Skunk River Basin in Central Iowa. An institutional framework for water quality control was developed. Water quality planning may be simplified by application of charges to point source pollutants and standards to diffused pollutants. To allow for optimal planning and allocation of water qualities over time, it may be necessary to specify rights in water qualities by tenure contracts between public and user.

**Precipitation Management for Reclamation of Overgrazed Areas in Arid and Semi-Arid Regions**

Completion rept.  
Neil S. Grigg. Jan 76, 13p OWRT-A-026-COLO(1)  
Contract DI-14-31-0001-5006

Keywords: Mine waters, Spoil, Vegetation, Precipitation(Meteorology), Strip mining, \*Arid land, Semiarid land, Feasibility, \*Environmental impacts, Land reclamation, Economic development, Wildlife, Social effect, Cost analysis, Management, Revegetation, Strip mine wastes.

An investigation was made of the feasibility of using precipitation management as a method for the vegetative restoration of strip mine spoils in arid and semi-arid areas, and for the economic and environmental improvement of reclaimed mine spoils. The procedure is believed to be capable of producing vegetative systems of higher economic and wildlife habitat value than exists naturally on these same lands or might be produced by other non-irrigated methods. It would appear that the cost of the necessary R and D program would be minimal, particularly when compared with the potential economic, environmental and social benefits which would accrue.

Keywords: Fishing, \*Mexico Gulf, Marketing, Marine fishes, Value engineering, Prices, Marketing, Cost estimates, Merchant ships, Cost analysis, Shrimps, \*Fishes, Sea Grant program, Finfishes.

The report presents estimates of the cost of operating several alternative systems for holding and landing finfish caught incidental to shrimp trawling operations. Freezer units, brine immersion tanks, an on-board fish meal plant, and extra crew member and a mother-ship concept are the systems evaluated. Break-even prices are estimated that would be necessary to cover operating costs and a 10 percent return on investment. Additionally, problems in traditional work patterns, crew incentives, and institutional arrangements are discussed. Comparison of estimated break-even prices with recent market prices indicate that none of the proposed systems are viable except under very restrictive conditions. The mother-ship or tender vessel concept shows the most economic potential but is plagued with problems of coordinating a large number of vessels in an industry where independence of operation is valued highly. The analytical model presented may be used to evaluate other systems not considered directly in this study.

**Evaluation of Small Modular Incinerators in Municipal Plants**  
Final rept.  
1976, 155p EPA/530/SW-113c  
Contract EPA-68-01-3171

Keywords: Air pollution, Incinerators, Solid waste disposal, Monitoring, Refuse disposal, Heat recovery, Steam heating, Cost analysis, Management planning, Urban planning, Fuels, Combustion, \*Waste disposal, Air pollution sampling.

This report describes in detail the results of monitoring three small municipal incinerators, including one that incorporates steam recovery. The three incinerators tested were all under 50 TPD design capacity per furnace and were burning typical municipal solid waste. Cost information was accumulated for each facility and, where applicable, revenue from steam sales was included. Operational, performance, and environmental analyses were performed for all units involved. This report is the latest state-of-the-art report on small incineration, should serve as a guide for municipalities considering such a system, and can be used for comparison purposes in future solid waste system evaluations.

David W. York, Benjamin C. III Dysart, and Lawrence W. Gahan. May 75, 224p\* WRR-55, W76-05840  
Prepared by Clemson Univ., N.C. Dept. of Environmental Systems Engineering.

Keywords: \*Water resources, Recreation, Economic development, Water supply, Industries, Water consumption, Benefit cost analysis, Mathematical models, Optimization, Management, Mineral deposits, Manufacturing, Mining, Great Santee Swamp, South Carolina, \*Water management, Competing uses.

A mathematical model of multiple-use in natural areas was developed. The model represents a unified system for the evaluation of cases where traditional forms of economic development such as industrial manufacturing, suburban residential expansion, or mineral extraction are proposed for relatively natural areas having significant environmental amenity values. The model system is a unique benefit-cost analysis that allows for a rational comparison of the costs and benefits associated with both developmental and environment-related activities. The option value has been incorporated into the analysis, and methods have been devised for the estimation of desirability. The model was applied to a study of multiple-use management of the Great Santee Swamp in South Carolina.

**Decentralized Tomato Processing: Plant Design, Costs, and Economic Feasibility**  
Final rept. for 1974  
E. V. Jesse, W. G. Schultz, and J. L. Bomben. Dec 75, 62p Rept no. USDA/AER-313

Keywords: Canneries, Tomatoes, Food processing, Design criteria, Economic factors, Industrial plants, Sites, Mathematical models, Size determination, Feasibility, Decentralization(Dispersal), Cost analysis, Investments, Industrial waste treatment, Operating costs, California, \*Vegetables, \*Food products.

Decentralized tomato processing merits consideration as an alternative to the conventional centralized operation, which processes fresh tomatoes into a finished product in a single factory. A study was made to determine savings that would be made if the cleaning and juicing operations were done at satellite locations in rural tomato growing areas and the final processing operations completed at existing canneries. The study used typical California growing, distribution, and factory methods. Economic feasibility was evaluated for satellites processing 50 tons per hour of fresh tomatoes into a pasteurized juice; the study used a modified Stollsteimer model for determining optimal size, number of plants, and location of the processing facilities.

**Natural Products for Sri Lanka's Future. Report of a Workshop Held at Colombo, Sri Lanka, on 2-6 June, 1975**  
1975, 61p  
Contract AID/csd-2584  
Prepared in cooperation with National Science Council of Sri Lanka, Colombo.

**Keywords:** Economic development, Developing countries, Ceylon, Meetings, \*Natural resources, Planning, Project planning, Horticulture, Food industry, \*Medicinal plants, Oils, Seasonings, Drugs, Recommendations, Workshops, \*Sri Lanka, Essential oils, Spices, Underutilization, Exotic plants.

This final report is the product of a workshop jointly sponsored by the National Science Council of Sri Lanka (Ceylon) and the National Academy of Science of the U.S. The workshop's purpose was to identify scientifically sound projects that exploit natural products, that are realistic for Sri Lanka, and that can significantly contribute to the nation's economic and scientific development. This report, which has resulted from the joint deliberations of the Ceylonese and American workshop participants, presents a number of suggestions for improvement of ongoing programs, for marshalling latent resources, and for experimenting with new food and export crops. Suggestions and recommendations have resulted from the pooled knowledge and experience of all participants and are presented in several chapters that reflect the subject matter of the working sub-groups of the workshop.

**Systems Analysis and Operations Research: A Tool for Policy and Program Planning for Developing Countries**  
1976, 107p\*  
Contract AID/csd-2584

**Keywords:** Management engineering, Developing countries, Operations research, Economic development, Industrial engineering, Technical assistance, Theories, Operations, Definitions, Management methods, Organizations, Personnel development, Project planning, Facilities, Training, Social change, Economic factors, Technology transfer, Cybernetics, Regional planning, Policies, \*Management techniques.

The report seeks answers to the questions: Do systems analysis and operations research (SA/OR) have relevance to the problems of developing countries. If so, how is an indigenous SA/OR capability developed. Accordingly the report attempts to provide an explanation of systems analysis methodology and limitations, illustrative applications of SA/OR in decision making, requirements for implementing SA/OR organization in developing countries, processes for training and criteria for producing needed personnel, and technical assistance opportunities.

**Underexploited Tropical Plants with Promising Economic Value**  
1975, 194p  
Contract AID/csd-2584  
Attached summary in French and Spanish.

**Keywords:** \*Plants(Botany), Developing countries, Tropical regions, Market value, Nutritive value, Grasses, Grain crops, Vegetables, Bean plants, Fruit crops, Oilseed crops, Forage crops, Feeding stuffs, Livestock, Root crops, Leguminous plants, Requirements, Underexploited plants.

The report is on plants that shows promise for improving the quality of life in tropical areas. The report aims to provide a brief introduction to the plants selected. It is neither a textbook nor a comprehensive survey of tropical botany. The report does not detail how to introduce the plants to new areas. Readers should appreciate that achieving this goal may be complex and difficult. Many plants discussed in this report have defied dissemination (or domestication) for a century or more. Plant introduction cannot be divorced from plant management; a lack of horticultural knowledge or experience will frequently cause a plant introduction to fail. Differences in elevation, soil type, temperature, day length, and rainfall present other complications. Sometimes newly introduced plants prove to be too aggressive and become weeds. Even if all these problems are overcome, the plant will be successful only if a market exists or can be created.

**The Effect of Land Use On the Chemical and Physical Quality of Surface and Ground Waters in Small Water Sheds**  
Martin E. Weeks, Sep 74, 13p Completion 74-7, Pub-41, OWRT-A-040-MASS(1)

**Keywords:** \*Land use, Agricultural wastes, \*Water pollution, South River Watershed, Inorganic nitrates, Fertilizers, Inorganic phosphates, Ground water, Surface waters, Nitrification, Cattle, \*Water quality, Humus, Sewage, Lysimeters, Septic tanks, Massachusetts, Denitrification, Manure.

Results obtained from monitoring surface and ground waters gave only a qualified answer to the question of how to obtain some initial estimate of the effects of different land use patterns on water quality in the small watershed of South River. Agricultural wastes come largely from manure produced by the nearly 1100 head of cattle on the farms in the area, and from crop residues, and, to a lesser extent, from fertilizers used. The houses of residence, including those in Ashfield and Conway centers, contribute most of the effluents from septic tanks and considerable raw sewage directly to the South River. Eight stations were located at different places along the stream; water samples from the river at each of these stations were taken on a monthly basis for analysis. Low ground water phosphate concentrations were always found in lysimeters located in an area of the watershed where different soil management practices could be studied. No evidence of leaching was found from three field sites receiving moderate to sometimes heavy applications of manure and fertilizers.

**Residential Hot Water Solar Energy Storage Subsystems**  
Final rept.  
Ellis E. Pickering. Jan 76, 117p\* NSF/RA/N-75/095  
Contract NSF-C905

Keywords: Heat storage, Residential buildings, Hot water heating, Water tanks, Storage tanks, Water storage, Insulation, Solar space heating, Solar air conditioning, Corrosion prevention, Design, Construction, Cost estimates, \*Buildings, \*Solar water heating.

Low-cost, efficient, and practical hot water solar energy storage subsystems for heating and cooling of residences are discussed. Both new and innovative vessel materials and configurations are investigated, together with insulation materials. Storage subsystem locations considered include basement, crawl-space, living space, garage, attic, surface exterior and underground exterior. Performance requirements for residential hot water storage systems are investigated. A matrix of advantages and disadvantages is constructed considering vessel material and configuration and location and type of residential construction. Other matters considered are corrosion control, costs, and development requirements.

Keywords: Solid waste disposal, \*Pesticides, Industrial waste treatment, Degradation, Detoxification, Hazardous materials, Chlorine organic compounds, Phosphorus organic compounds, Nitrogen organic compounds, Classification, \*Waste disposal, Hazardous materials disposal, Liquid waste disposal.

This study is concerned with utilizing chemical degradation/detoxification methods for the disposal of small quantities of pesticide wastes. A primary objective of the study is to develop procedures to advise pesticide users of safe, readily available chemical methods for pesticide disposal. Another objective is to delineate the hazards associated with pesticide disposal by chemical methods, and warn the layman against the indiscriminate use of chemical disposal methods based on incomplete knowledge of the degradation products or the hazardous nature of the detoxifying reagents. Chemical degradation information on twenty different pesticides, representing each of the major pesticide classes, is discussed. Chemical degradation procedures that can be used by the layman are described for naled, diazinon, Guthion, malathion, carbaryl, captan, and atrazine, but not for Dursban, methyl parathion, maneb, alachlor (Lasso), diuron, picloram, trifluralin, methoxychlor, chlordane, toxaphene, 2,4-D, amiben(chloramben), and pentachlorophenol.

**Preliminary Experimentation in the Development of Natural Food Analogues for Culture of Detritivorous Shrimp**  
Steven Y. Newell, and Jack W. Fell. Jul 75, 130p  
Sea Grant Technical Bull-30, NOAA-76031605  
Grant NOAA-04-5-158-14

Keywords: Shrimps, Feeding stuffs, Fungi, Wheat, Fermentation, Bagasse, Animal nutrition, Aquatic microbiology, Proteins, Food chains, Aquaculture, \*Fishes, Sea Grant program, Penaeus duorarum, Penaeus setiferus.

A three year research program is described that has tested whether agricultural by-products can be inexpensively converted into fungal materials simulating the micro-bial-detrital complexes naturally eaten by several estuarine animals of commercial food value, including penaeid shrimp. If successful, a low-price feed could be developed to enhance commercial productivity of the shrimp. Fungal fermentations of agricultural by-products were conducted and attempts were made to optimize fungal protein production. Resultant artificial detrital feeds were tested on a proto-commercial scale in outgrowth of penaeid shrimp. Yields of shrimp ranged from very poor to encouragingly high, considering conditions imposed. Screening was begun of fungal capability to degrade the least expensive types of agricultural by-products, when these were modified to reduce lignin-associated refractoriness.

**Chemical Safety - Pesticides**  
Homer R. Wolfe. 19 Jul 74, 24p  
Prepared in cooperation with Colorado State Univ., Fort Collins. Inst. of Rural Environmental Health. Proceedings of the Annual Conference of Environmental Chemicals - Human and Animal Health (3rd), Held at Fort Collins, Colorado, July 15-19, 1974.

Keywords: \*Pesticides, Industrial hygiene, Hazards, Toxicology, Toxicity, Personnel, Education, Safety, Industrial atmospheres, Protective clothing, Protective coverings, Protective masks, Human factors engineering, Respirators, Exposure, Skin(Anatomy), Respiratory systems, Chemical industry, Occupational safety and health, Toxic substances.

People who become involved in activities requiring exposure to pesticides should be aware of the potential hazards involved as a result of absorption of toxic compounds. If a person is knowledgeable about such hazards and understands the importance of taking proper precautions, he can do much to insure the safety of himself and others. Although illnesses resulting from over-exposure to toxic compounds do occur among applicators and other workers, most are a result of carelessness or accident. Experience has shown that if proper precautionary measures are observed and directions on the pesticide label are followed, even the more toxic compounds can be used safely. Exposure to less toxic compounds should not be ignored.

Keywords: \*Buildings, Subsurface structures, Meetings, Environmental engineering, Cost analysis, Psychological effects, Ordinances, Building codes, Design standards, Esthetics, \*Energy conservation, Energy consumption, Earth covered buildings.

## APPROPRIATE TECHNOLOGY ABSTRACTS

These proceedings describe the conference held at the University of Texas in Arlington on the subject of the use of earth covered buildings to provide energy efficient buildings as well as a better physical environment. The potential for energy conservation by underground construction is great because of the need for fuel conservation due to depleting resources, and an increase in fuel consumption. Topics include: Historical Perspectives; Economics; Environmental Psychology; Energy and Materials; Examples of Earth Covered Buildings; City Patterns; Political and Legal Considerations; Technical Considerations. In addition, an extensive Bibliography on earth covered buildings is presented.

Report on Areawide Waste Treatment Management Report Program. See also PB-254 378. Prepared in cooperation with Environmental Protection Agency, Washington, DC, Div. of Water Planning, and Linton and Co., Inc., Washington, DC.

Keywords: Water resources, \*Water quality, Water supply, Regional planning, Urban areas, Rural areas, Population growth, Employment, Land use, Solid waste disposal, Sewage treatment, Industrial waste treatment, Flood plains, Runoff, Legislation, Financing, Reviews, Ohio, Miami Valley Region(Ohio), Institutional framework.

The critical factors - experience, institutional arrangement, and legal and fiscal capabilities - for water quality management, previously discussed in separate reports, are brought together to describe the existing situation in waste treatment, water supply, land use controls, solid waste, storm water, and flood plain control in the Miami Valley (Ohio) area. The information, presented in a narrative with accompanying tables and matrices, is used in the development of the Section 208 (PL 92-500) Areawide Waste Treatment Management Plan.

**Regional Seminar on a System of Standardization and Metrology for Latin America**  
Final rept.  
H. Steffen Peiser, and Robert S. Marvin. Feb 76, 100p Rept no. NBSIR-76-988  
Grant PASA-TA(CE)-5-71

Keywords: \*Metrology, Units of measurement, \*Latin America, Meetings, Standards, Standardization, Information systems, Bolivia, Brazil, Networks, Telecommunication, Ecuador, Quality control, International relations, Food, Technical assistance, Thailand, Industries, Chemical analysis, Developing countries, Personnel development, Foreign countries.

This report contains the papers presented at the first of a series of Regional Seminars, organized under the technical guidance of NBS and sponsored by the U.S. Agency for International Development and the Dirección General de Normas y Tecnología de Bolivia. The Seminar was held at La Paz on the 24th and 25th of June, 1974, with participants from Bolivia, Brazil, Chile,

Ecuador, Korea, Peru, Turkey, Thailand, and the United States of America. The Seminar was organized into four sessions, each of one half day duration, covering: Session 1, 'Interactions for Information'; Session 2, 'Interactions for Standards'; Session 3, 'Interactions for Solutions to Technical Problems'; and Session 4, 'Interaction for Training'. Portions of this document are not fully legible.

**Common Environmental Terms. A Glossary**  
Gloria J. Studdard. Nov /4, 25p

Keywords: \*Environmental impacts, Dictionaries, Environments, Taxonomy, Pollution, Terminology, Definitions, Problem solving, Handbooks, Glossaries.

The words and terms included in this glossary are used in discussing and writing about the environment. Included are certain common words which, while not peculiar to the environment, occur frequently in environmental literature and are important to a student's understanding of pollution problems. The glossary also explains the meaning of words such as dust and abatement as they apply to the environment even though definitions of such words are found in ordinary dictionaries. The object is to make available a single listing to compile and define the most common words and terms essential to the study, understanding and solution of environmental problems.

**Light Engineering Project for the Adult Blind**

Final rept.  
1965, 31p SRS-19-58120-001  
Grant SRS-19-58120

Keywords: \*Vocational guidance, Blindness, \*Rehabilitation, Adults, India, Industries, Education, Projects, Handicapped persons, Vocational rehabilitation.

To encourage blind persons to become more independent from traditional charity and to enable them to participate in the rapid industrial development occurring in the Madras area of Tamil Nadu State, India, a 6-month rehabilitation program trained a total of 121 workers in shop and factory techniques. During the 4-year existence of the project, 51 trained clients obtained industrial jobs at salaries comparable to sighted workers. The project included workshop and 'on-the-job' training as well as training in travel and independent living skills.

Kansas Water Resources Research Inst., Manhattan.  
**Swine Waste Digestion Enhancement with Nutrient Separation**

Project completion rept. 1 Jul 74-30 Jun 75  
Lawrence A. Schmid, and Ralph I. Lipper. Jun 76, 37p Contrib-173, OWRT-A-063-KAN(1)  
Contract DI-14-31-0001-5016

Keywords: \*Agricultural wastes, Digestion(Decomposition), Swine, Industrial waste treatment, Anaerobic processes, Waste water, Mixing, Separation, Ammonia, Stripping(Distillation), Removal, Carbon dioxide, Methane, pH, Anaerobic bacteria, Nutrients, \*Bioconversion.

A swine waste anaerobic digester receiving the waste from 80 boars was operated for a period of ten months. Digester mixing and nutrient removal were accomplished by the recirculation of digester gases through two stripping units. Phosphoric acid was used to strip ammonia from the recirculated gas stream. Caustic solutions, primarily lime, were used to strip carbon dioxide. The removal of carbon dioxide resulted in an elevation of digester pH to 8.0. At the elevated pH ammonia was more readily stripped. A system specific ammonia desorption coefficient was determined which may be used for selecting gas flow rates. The selection of the proper gas flow rate can provide the required degree of ammonia removal to reduce ammonia concentrations to levels non-toxic to anaerobic bacteria.

**Some Aspects of the Construction of Industrial Projects in Developing Countries - Based on Hungarian Experience**

Analysis of development, science organization, informatics bulletin  
E. Csorba. 19 Dec 74, 15p Rept no. Bull-17

Keywords: Construction, \*Technical assistance, Developing countries, Economic surveys, Economic factors, Manpower, Shortages, \*Hungary, Prefabrication, Reinforced concrete, Planning, Design criteria, Technology transfer, \*Buildings.

The need of developing countries for developing the industrial construction sector and obtaining technical assistance to achieve this objective in the fastest and most effective way is a well-known fact. Though there is a big variety in the conditions of various developing countries in different parts of the world, certain common factors appear in almost all cases. Many of these factors were characteristic for Hungary in the past three decades, and it can be helpful to see what could be used from the Hungarian experience in this field.

**Coastal Zone Pollution in Indonesia - A Reconnaissance Survey**  
Apr 74, 203p  
Contract AID/csd-2608

**Keywords:** \*Water pollution, Oil pollution, \*Coasts, \*Indonesia, Developing countries, Ocean environments, Ecology, Fisheries, Estuaries, Harbors, Vulnerability, Sedimentation, Pesticides, Industrial wastes, Sewage, Dredging, Oil spills, Offshore drilling.

A number of catastrophic marine oil spills in the 1960's and in 1970 alerted the world to the hazards and impacts of marine oil pollution. In the same period, the emergence of other serious kinds of pollution sparked pollution control initiatives in many countries of the world. Environmental impacts associated with international development led to the undertaking of the present joint study on oil and other pollution in Indonesia's coastal waters. A survey was made of the impact of offshore oil exploitation.

**Small Business in the Metals Industry: A Background Study**  
Final rept.  
24 May 76, 88p NSF/RA-76017  
Contract NSF-Order-76-SP-0871

**Keywords:** Metal industry, Businesses, Economic surveys, Extractive metallurgy, Technology innovation, Management planning, Marketing, Reviews, Data acquisition, District of Columbia, Government policies, Commodity management, Metalliferous ores, Mining, Beneficiation, Raw materials, Foundries, Materials recovery, Solid waste disposal, \*Steel industry, \*Casting, Waste recycling, High technology industries, Service companies, Secondary materials industry, \*Small businesses.

The objective of this study is to identify the principal small business roles in, and innovations of particular importance to, the metallurgical industry, together with associated planning and policy issues, marketing issues, and institutional arrangements. The scope of this study is confined primarily to the extraction and processing phases of the metals cycle. Extraction includes all stages prior to metal processing: mining, beneficiation of ores, reduction, smelting, and refining of the pure metals. Processing includes alloying, heat treating, rolling, casting, and fabrication. The role of small business in metals recycling and substitution is also considered but with less emphasis. The approach of the study combines literature review and letters of inquiry with personal interviews in the Washington, D.C. area. Three broad areas were identified in which small business is actively involved: high technology, service companies, and secondary recovery. A list of the individuals and institutions contacted is included in Appendix A, and a selected bibliography in Appendix B.

See also PB-255 881. Prepared in cooperation with Charles F. Kettering Research Lab., Yellow Springs, Colo. Sponsored in part by Energy Research and Development Administration, Washington, D.C., and Department of Agriculture, Washington, D.C.

**Keywords:** \*Food supply, Farm crops, Meetings, Production, Agricultural economics, Manpower, Plant genetics, Nitrogen fixation, \*Pest control, Nutrition, Nitrogen, Carbon, Plant reproduction, Proteins, Microclimatology, Protection, Plant diseases, Soil water, Photosynthesis, \*Fertilizers, \*Crops.

An exploding population and an increasingly affluent society impose a more acute challenge to agriculture than ever before. The proceedings of this international conference reveal a concern for the continued adequacy of our food supply. The focus is on the fundamental biological processes that control productivity of economically important food crops. The proceedings continue with the discussions by four speakers on: 'World Productivity: Challenges to Science', 'Rice Responds to Science', 'Agricultural Productivity and World Nutrition', and 'Shooting At A Moving Target'. The conference work is conducted by six working groups. They address issues involving: Nitrogen input; Carbon input; Water, Soil, and Mineral input; Plant Protection From Pests; Environmental Stress; and Plant Development Processes.

Keywords: Housing planning, \*Bangladesh, Residential buildings, Socioeconomic status, Urban areas, Rural areas, Surveys, Requirements, Wind(Meteorology), Damage, Records, Foreign countries, \*Buildings, \*Wind pressure, Wind damage, Low cost housing, Low rise buildings.

This report furnishes information on socio-economic factors, the present conditions of urban and rural housing, and housing needs in Bangladesh for the next ten years. It also provides data on available wind speed records and wind damage statistics and discusses some special problems unique to Bangladesh.

**PB-256 827/7** PC A06/MF A01  
Southern Illinois Univ., Carbondale. Fisheries Research Lab.

**Use of Zooplanktophagic Fishes in Channel Catfish Production Ponds**

Completion rept. 16 Dec 74-15 Dec 75  
William M. Lewis. Apr 76, 101p NOAA-76051206

Keywords: Catfishes, \*Aquaculture, \*Ponds, Zooplankton, Oxygen, Monitoring, Feeding stuffs, Abundance, Temperature, Biochemical oxygen demand, Depletion, Fresh water fishes, \*Fishes, Ictalurus punctatus, Lepomis macrochirus, Ctenopharyngodon.

On basis of a report in the literature, and a previous study, it was postulated that unusually high populations of zooplankters might trigger oxygen depletion in catfish production ponds. To investigate this hypothesis, six ponds were stocked with fingerling channel catfish at a rate of 74, 130 fish/ha. The hybrid sunfish were added as zooplanktophagic fish on the supposition that they would prevent the development of a dense population of zooplankton and the effect of this could be measured by chemical monitoring. The hybrid sunfish appeared to have caused a change in the composition of the zooplankton, but their presence did not prevent oxygen from reaching critical levels. There is some evidence that they did affect the oxygen regime of the ponds, although not necessarily favorably. The most valuable observation resulting from the study related to oxygen production-consumption analyses based on sunrise-sunset readings. In general, it appeared impractical to stabilize oxygen in catfish production ponds without resorting to artificial oxygenation at selected times.

**Potential Increases in Food Supply Through Research in Agriculture. Constraints on Increasing Agricultural Production in the Tropics: Research and Implementation Needs**  
Final rept.

Edwin B. Oyer, Charles E. Hanrahan, Glenn H. Beck, J. Ritchie Cowan, and H. David Thurston. 31 May 76, 57p\* NSF/PRA-4  
Contract NSF-STP75-13988

Keywords: \*Agriculture, Tropical regions, \*Food supply, Research projects, Universities, Farms, Technology transfer, Soils, Natural resources, Plant growth, Inventories, Constraints, Water supply, Fertilizers, Seeds, Pesticides, Feeding stuffs, Animal diseases, Production, Tropical agriculture.

The report centers on researchable constraints which can be addressed immediately and, with reasonable inputs, be expected to produce production-increasing results in 5-10 yrs. Enhancement of prospects for technological innovation employing a described global network of agricultural research institutions is suggested. Techniques which will foster farmer-researcher participation in planned and structured research on farming systems of the tropics are called for as a means of increasing food production. Enhancement of efforts in the following areas are recommended: (1) evaluation and utilization of available germplasm in cropping systems, (2) inventory of soil resources and determination of amendments needed to produce adapted plants, (3) improvement of water and pest management practices and seed technology, and (4) utilization of ruminant animals in farming systems with attention to feed supplies, protection from diseases and increased productivity of the animals.

N. L. VanDemark, Jun 76, 108p NSF/PRA-3  
Contract NSF-STP75-13987

**Keywords:** Livestock, \*Animal husbandry, \*Food supply, Research projects, Feeding stuffs, Animal nutrition, Range grasses, Grains(Food), Production, Quality, Fossil fuels, Output, Mathematical models, Systems analysis.

There is a need for continuing emphasis on animal research since animal products contribute about half the nutrients in the US diet. Two-thirds of the feed energy used in producing these products come from inedible substances. Animal agriculture utilizes large acreages of range and other land unsuitable for crops for human consumption and uses huge tonnages of by-products and wastes that could be troublesome environmental pollutants. Excess food grains can be used when they are not needed for human consumption. Research is needed to (1) optimize the number of productive animal units, (2) increase food output per animal unit, (3) develop low fossil-energy subsidy methods of livestock production, (4) develop new feed resources, (5) improve animal product quality, and (6) evaluate animal production and biological systems by simulation modeling and systems analysis.

**Front End Recycling: A Study of the Economics of Recycling by Source Separation and Its Application for Fairfield County, Connecticut**  
Ronald Fattibene, and Irving Moy. Jun 76, 94p EDA-76-043

Prepared by Action for Bridgeport Community Development, Inc., Bridgeport, Conn.

**Keywords:** Solid waste disposal, Materials recovery, Separation, Management planning, Feasibility, Economic analysis, Glass, Cans, Tin coatings, Steels, Metal scrap, Aluminum, Newsprint, Questionnaires, Personnel, Connecticut, \*Waste recycling, Secondary materials industry.

A one-year grant from the EDA to the Connecticut Resources Recovery Authority was allocated to the CRRRA to examine the economics of recycling by source separation in Fairfield County. The purposes of the project was to assess the feasibility of a technology system for recycling by source separation and to determine the practicability of instituting such a system and the resulting economic impact of such an enterprise in Fairfield County. Factors to be explored in the course of the study were creation of new jobs, new business, cost benefits from the sale of recycled materials, and cost savings to communities. Conclusions and recommendations reflect the system as it existed at this writing.

**Land Application of Wastewater in Australia. The Werribee Farm System, Melbourne, Victoria**  
Technical rept.

Belford L. Seabrook. May 75, 88p Rept nos. EPA/430/9-75/017, EPA/MCD-16

**Keywords:** \*Sewage treatment, \*Irrigation, Farms, Municipalities, Soil properties, \*Land use, Rainfall, Arid land, Operating costs, Fertilizing, Waste water, \*Australia, Flood irrigation, Sewage irrigation, Werribee Farm, Melbourne(Australia).

The report concerns the Werribee Farm soil treatment area operated by the Melbourne and Metropolitan Board of Works (MMBW). The Board (MMBW) was constituted in 1890 by an Act of the Parliament of Victoria to develop and operate a system of main and general sewerage for the metropolis. James Mansergh, an eminent sanitation engineer from London, submitted eight alternative schemes, five of which involved treatment by land. Mansergh stated that the Werribee site was situated for land purification of sewage because it was exceptionally dry and had an abnormally low rainfall compared with surrounding districts. His recommendation, based on proven success in England, and on the benefit of irrigation in an area of low rainfall, was for disposal by flood irrigation on prepared land without prior treatment of the sewage. Even today raw sewage

is used at the Werribee Farm. The Werribee Farm soil treatment system is the outstanding project in Australia from the standpoints of the lowest annual operating costs, success, size and extent of experience with the use of wastewater effluents.

Prepared in cooperation with Arizona Water Resources Research Center.

**Keywords:** \*Water resources, Information retrieval, Data processing, Information systems, Hydrologic cycle, Ground water, Water quality, Systems analysis, Water supply, Data storage, Project planning, Abstracts, Regional planning, Colorado River Basin, Arizona, California, Nevada, \*Information services, Hydrologic data.

The Arizona Water Information System (AWIS) was developed for storage and retrieval of water resources data and for dissemination of water resources information pertaining to the state of Ariz. Collectively, the AWIS system contains a number of distinct elements. The Activity File is a listing of water resource activities and projects dating from 1961, which can be accessed by keywords or by agency to retrieve abstracts and information on approximately 1,000 projects; the file recently was updated and additional projects covered in a regional program pertaining to the Lower Colo. River Basin portions of Ariz., Calif., and Nev.

**Model Facility Plan for a Small Community, Supplement to: Guidance for Preparing a Facility Plan, Municipal Wastewater Treatment Works Construction Grants Program**

Sep 75, 45p Rept no. EPA/MCD-08

**Keywords:** \*Sewage treatment, Municipalities, Project planning, Facilities, Construction, Models, Grants, Federal assistance programs, Handbooks, Guidelines, Public utilities, Hypothetical communities, Application making, Federal Water Pollution Control Act Amendments of 1972.

Under the Federal Water Pollution Control Act Amendments of 1972, a municipality must prepare a facility plan as part of its Step 2 grant application for the construction of a wastewater treatment works. This model plan for a fictitious small, rural community supplements the Guidance for Preparing a Facility Plan, published in May 1975. The plan is provided for illustrative purposes only and should not be read as an ironclad guide to facility planning for small, rural communities.

**Improving Rural Solid Waste Management Practices**

Theodore L. Goldberg. 1973, 91p Rept no. EPA-SW-107

**Keywords:** Solid waste disposal, Rural areas, Management methods, Technology, Improvement, Recommendations, Effectiveness, Environmental surveys, Collecting methods, Processing, Storage, Organizing, Objectives, Transferring, Sanitary landfills, Equipment, Financing, Citizen participation, \*Waste disposal, Household wastes.

This report surveys what has been done and can be done to raise the quality of solid waste management in rural America through existing technology. The aspects covered include planning for solid waste management; types of collection, processing, and disposal methods; means of financing systems; and citizen support. Although the priority in the report deals with handling wastes from rural residences, any methods discussed can be incorporated into handling commercial, industrial, or institutional wastes in rural counties and communities. Two problem wastes--agricultural wastes and abandoned vehicles--are not covered.

**Cracking and Leakage Characteristics of Ferrocement Water Tanks**

Interim rept.

Antonio J. Guerra, Antoine E. Naaman, and Surendra P. Shah. Sep 76, 62 Rept no. 76-3  
Contract NSF-ENG74-20829

**Keywords:** Water tanks, Mortars(Material), Portland cements, Reinforcing materials, Wire cloth, Cracking(Fracturing), Leakage, Cost comparison, Cylindrical bodies, Structural analysis, \*Ferrocement.

Cylindrical ferrocement tanks were subjected to increasing internal water pressures to study the influence of the reinforcing parameters on their cracking and leakage behavior. Based on the information generated in this investigation, allowable tensile stresses of about 30,000 psi in the steel are recommended for the design of virtually watertight ferrocement tanks. This allowable stress - which is almost twice higher than that recommended by the ACI Committee on reinforced concrete sanitary engineering structures - is used in a cost comparison study of water tanks made with ferrocement, reinforced concrete and steel. It is found that for current U.S. prices, properly dimensioned and designed ferrocement water tanks of up to 300,000 gallon capacity are cost competitive with reinforced concrete and steel tanks and would have at least equal performance.

## APPROPRIATE TECHNOLOGY ABSTRACTS

### Implementing 'Best Management Practices' for Residuals: The Waste Exchange

Alan K. Vitberg, Michael L. Rucker, and Christopher H. Porter. Jun 76, 31p Rept no. EPA/440/9-76/019

**Keywords:** Materials recovery, Benefit cost analysis, Utilization, Exchanging, Economic development, Residues, Solid waste disposal, Technology, Salvage, Water pollution abatement, Incentives, Industrial wastes, \*Waste recycling, State planning.

This document presents an overview of a mechanism which can be used to facilitate the exchange of wastes, as is, from a generator to a user and its possible role in state and areawide residuals planning efforts. The premise is that many wastes contain valuable materials, some of which are in short supply. Extraction of materials from these wastes makes sense from both the conservational and the environmental points of view. Industry can dispose of its unwanted wastes and perhaps receive a monetary bonus. The waste receiver can potentially reduce costs for materials. In addition, the environment is saved from the introduction of potential pollutants from land and water disposal methods.

**The Seismic Behavior of Critical Regions of Reinforced Concrete Components as Influenced by Moment, Shear and Axial Force**  
Mehmet Bilgin Atalay, and Joseph Penzien. Dec 75, 250p Rept no. EERC-75-19  
Grant NSF-AEN73-07732-A02

**Keywords:** \*Buildings, \*Concrete, Earthquakes, Columns(Supports), Girders, Loads(Forces), Deformation, Stiffness, Mathematical models, \*Reinforced concrete, \*Earthquake engineering.

Building response caused by moderate to severe earthquake excitation is often in the inelastic range; thus, to enable reliable predictions of overall performance, the energy absorption and failure characteristics of individual components must be established. For reinforced concrete frame buildings, the critical or yielding regions may occur in either or both the girders and columns subjected to various combinations of bending, shear, and axial load. To determine the characteristics and modes of failure of columns under excitations causing degradations in stiffness, strength, and energy absorption, a series of twelve members simulating a column between inflection points above and below a floor level were designed and tested dynamically. The variable parameters introduced were (1) magnitude of applied axial load chosen to represent lower, intermediate, and upper story columns, (2) lateral reinforcement percentage chosen to study the influence of confinement on ductility, and (3) history of controlled lateral displacement chosen to determine the effects of rate and sequence loading.

### Integrated Energy Vocabulary

1976, 459p\*  
Sponsored in part by National Science Foundation, Washington, D.C. Prepared in cooperation with Battelle Columbus Labs., Ohio, Energy Research and Development Administration, Washington, D.C., and California Univ., Berkeley. Lawrence Berkeley Lab.

**Keywords:** Subject index terms, \*Energy, Terminology, Words(Language), Thesauri, Information: retrieval, \*Information services, Data bases.

The Integrated Energy Vocabulary is a compilation of some 30,000 scientific and technical terms covering the broad subject of energy R&D. Ten different information system vocabularies were used as sources of terms. The date of coverage was through 1973. The primary purpose of this vocabulary is to assist seekers of energy information with: (1) Search strategy formulation using energy terminology appropriate to the data base(s) to be searched (finding the right term); and/or (2) Determining which data base(s) or information system(s) to search with a given energy term (finding the right data base). This product should be useful in the following additional applications: (1) As a guide for indexing energy-related documents; (2) As a reference tool for developing microthesauri on energy R&D; (3) As a reference tool for further studies of vocabulary compatibility and convertibility.

Contract FEA-CO-04-50217-00  
(PC A09/MF A01)

**Keywords:** \*Electric motors, \*Energy conservation, Electric power consumption, Utilization, \*Industrial plants, Selection, Trends, Efficiency.

The report identifies areas of greatest energy conservation potential in electric motor use in the industrial and commercial sectors of the economy; assesses and projects the technological potential and economic trends that might influence the use of more efficient electric motors; and outlines possible Government strategies encouraging such use. It reports that the 1- to 125-HP polyphase motors were the predominant energy consumers, accounting for about 26 percent of the total electric power generated in the U.S. Estimates of their potential for increased efficiency, coupled with possible replacement rates of lower to higher efficiency motors, indicated potential savings by 1990 of 35 billion kWh/year--or 60 million barrels of oil.

### Wind-Powered Hydrogen Electric Systems for Farm and Rural Use

Final rept. May-Dec 75  
Raymond R. Tison, Nicholas P. Biederman, Timothy Donakowski, Robert H. Elkins, and Jon B. Pangborn.  
Apr 76, 171p ERDA/NSF-00772/75/1  
Grant NSF-AER75-00772

**Keywords:** Wind power generation, Systems analysis, Systems engineering, Farms, Rural areas, Electric power consumption, Electric power demand, Electrochemical power generation, Storage batteries, Hydrogen-based energy, Fuel cells, Electrolysis, Hydrogen, Inverters, Energy storage, Computerized simulation, Computer programs, FORTRAN, \*Wind energy.

Preliminary designs for wind-energy conversion systems supplying the total energy needs of selected farms and a rural home are synthesized. The concept is a fully dedicated system whose components and subsystems are off-the-shelf technology. The principal subsystems and components are: (1) input (wind turbine, electrolyzer, and rectifiers); (2) storage (batteries, and storage tanks of hydrogen and hot water); and (3) output (inverter, motor generator, engine generator, and fuel cell). Two methods of energy storage are evaluated for use and subsequently form the bases upon which each design is optimized. It is shown that wind-energy systems based on battery-storage systems are: (1) simpler to construct and maintain; (2) more efficient; and (3) less expensive than those based on hydrogen-storage systems. Further, the relative economics of each wind-energy system are heavily dependent on wind availability, number of days of energy storage required, and the match between the wind energy available and the energy requirement of the load. Of all the energy requirements characterized, the cash grain operation is shown to be the least adaptable to wind-energy systems.

Iowa State Univ., Ames.  
**Estimating Staffing and Cost Factors for Small Wastewater Treatment Plants Less Than 1 MGD. Part II. Estimating Costs of Package Wastewater Treatment Plants**  
George E. Lamp, Jr., E. Robert Baumann, Keith L. McRoberts, and C. E. Smith. Jun 73, 106p  
Grant EPA-5P2-WP-195-0452  
Also available in set of 2 reports as PB-259 511-SET, PC E99/MF E99.

Keywords: \*Sewage treatment, Cost analysis, Municipalities, Industrial plants, Classifications, Operating costs, Cost engineering, Manufacturers, Estimates, Tables(Data), Capitalized costs, Regression analysis.

Effective and efficient wastewater treatment is a function of both the quality of treatment and the cost of treatment. Although the actual quality and cost of treatment cannot be known until after a plant is in operation, estimates of both are needed at various times during the process of planning and designing a wastewater treatment system. The report describes costs, cost factors, data from manufacturers, and operating package plants.
