## PREFACE

This year's bike bibliography contains 1,102 references from around the world. Of special note to practicing cyclists is Section III that lists 104 Current Mail Order Catalogs. Of particular use to bikeway engineers, safety officials and teachers is Section V that holds 175 bikeway studies, accident reports, local tour guides, bike laws and instructional items. While 299 journal articles give broad exposure to medical, transportation, history, legal, and industrial topics in Section II, the reader may be equally surprised to see 125 miscellaneous foreign documents, conference proceedings, dissertations, and reports of professional societies in Section VI.

This new compilation of bike literature was made possible by additions and suggestions received from around the world. Special thanks to William Henry Stokes, Asst. Prof., Graduate School of Librarianship, Univ. of Denver, for his continued enthusiasm and criticism. Previous manuscripts were critiqued by Judy Houk, Library Reports & Research Service, Westminster, CO. Richard Presby, JHK & Assoc., San Francisco, provided bikeway and safety literature from his extensive library files. Professional staffs at many public and private libraries helped the compiler gain effective use of their collections, including those at the University of Missouri at Columbia, University of Colorado at Boulder, Auraria Library at Denver, and the Denver Public Library. Thank you all!

A special thanks to the editors of Library Journal, Bicycling! Magazine, Civil Engineering and many others who continue to promote this bibliographic series through their journals.

A very special thanks to Denver artist Eileen Bloustein for her cover illustration.

For an exciting new edition, see Book No. 5, page ii.

## PERIODICALS

Doctors, lawyers, engineers, teachers, scientists and racers have written the following 299 articles that show a remarkably diverse interest in some aspect of cycling. They provide us with a mounting supply of data about bicycling and its role in human activity. Please note that exclusively bike-oriented magazines are not indexed.

## 103 CURRENT AMERICAN MAIL ORDER

**CATALOGS\***

You may enjoy looking through mail order bike catalogs for new ideas and merchandise while dreaming about that European tour, weekend race or gift for a friend. It may be easier to buy from the local bike shop, but mail order suppliers offer a wider selection. And, there are a greater variety of suppliers to choose from. Touring Cyclists of Boulder takes pride in an inventory personally tested by management. Other suppliers offer volume without comment. Some give service and advice while others ignore all inquires. An occasional supplier may be in business to sell catalogs, not merchandise.

In a rapidly changing market place, suppliers may fall victim to the Christmas rush, production shortages in Europe, or rising postal rates. Delays and substitutions can occur. A catalog item may be dropped from the available list overnight. Therefore, it is difficult to judge the worth of a catalog by its size, price or quantity of items listed.

To overcome these problems, you may want to order ahead of time, write legibly, date all correspondence and keep a copy. Patience helps, too.

For additional mail order catalogs, see your local bike shop or advertisements in BICYCLING! and BIKE WORLD. When requesting "SAE" catalogs, be sure to include a stamped, self-addressed business-size envelope.

## FEDERAL DOCUMENTS

Two major efforts have occupied Federal bike efforts in recent years, bikeways & bike safety. Standardization of bikeway design and construction is reaching its final stages now. Procedures for funding and implementation are generally established now. Efforts to improve bike safety have been noticeably aimed through the Consumer Product Safety Commission (CPSC) regulations governing product standards applying to bikes sold across state lines. While CPSC regs may be controversial, their goal is widely applauded. As recreational and commuter bike facilities expand across USA, the technicians are trying to document its specific characteristics.

## STATE & LOCAL DOCUMENTS

The real fun of bike touring and bikeway building occurs at local levels where citizens from all walks of life come together to plan safer and more enjoyable biking. Policemen preach bike safety and pursue bike poachers. Teachers and cyclists demonstrate skilful cycling as the VFW and Kiwanis sponsor annual fish fries and tours. Commuters join rank with ecologists to plan bike routes in town. Planners, engineers and officials huddle over maps and bulldozers to consider their next interlocking bike trail along rivers, canals and historic corridors. Tour guides, bikeway studies, pamphlets and maps gush forth from each jurisdiction, proclaiming the virtues of each locality. 175 examples follow. Additional bike tours and bikeway studies may be seen: 7-8, 8-6, 10-8, 11-4, 8-8, 76-8.
